An assessment of tree canopy cover citywide provides the data and information to develop goals and strategies relating to tree planting, preservation, tree equity, and risk management along with the data to support community outreach and education. These urban tree canopy assessments, referred to as "UTC Assessments" or "Tree Canopy Assessments" and "TCA's" provide the information for long-term planning and serve as a measurement of change and progress over time.

This information can be utilized with other city planning efforts for sustainability, equity, human health, climate resiliency, stormwater management, water quality, wildlife preservation and enhancement, air quality improvements, and development guidelines among many others.

UTC assessments provide a baseline understanding of existing canopy cover across the entire city. In addition, these assessments provide an analysis of possible planting areas citywide and by various planning boundaries. This assessment for Fayetteville represents an important step in better understanding current conditions of the urban forest, its tree canopy distribution and value, and the importance of urban forestry during planning processes. This baseline assessment should be utilized in measuring progress resulting from implementing this Plan.

URBAN TREE CANOPY (UTC) FINDINGS - OVERVIEW

A consultant provided an analysis and a report with recommendations on Fayetteville's tree canopy cover change from 2002 to 2010, and in 2020, the City's Geographic Information System (GIS) Department assessed the existing tree canopy and possible planting areas citywide using imagery from 2013, 2015, 2017, and 2019. The historical imagery and related assessments provide information on the canopy change over time though this section focuses on the most current assessment from 2019. The summaries below provide an overview of the baseline conditions relating to urban tree canopy cover and possible planting area in the City. For more information on GIS methodology, see GIS Study

2019 UTC Findings – Citywide The City of Fayetteville is 55.8 square miles in size. Tree canopy covers 22.0 square miles of this area (39.4%) according to 2019 imagery

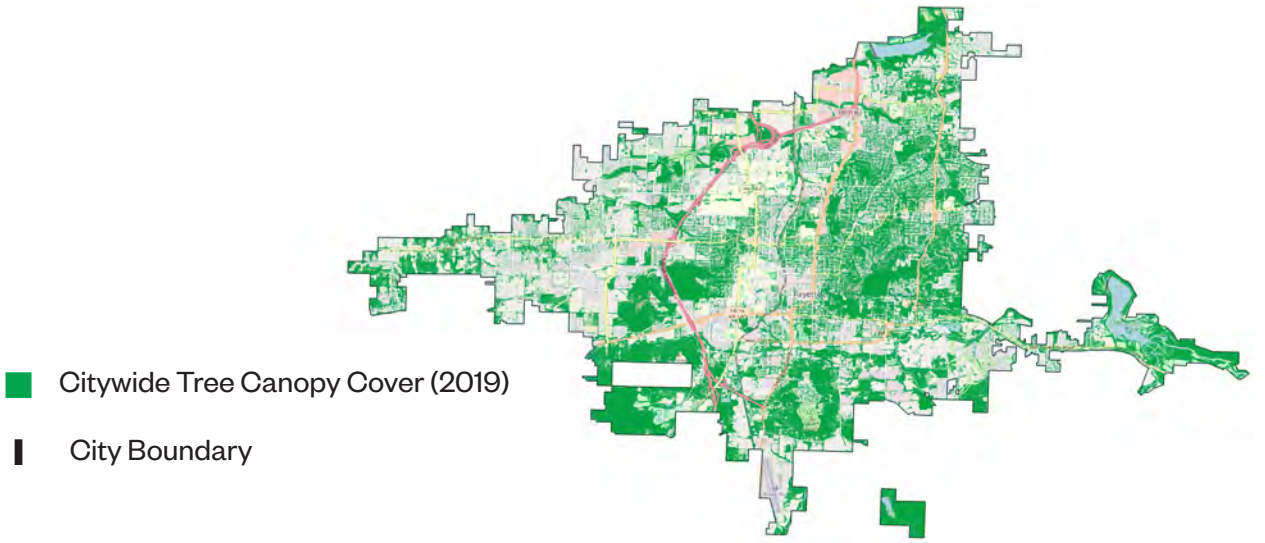

Figure 8. Map displaying the tree canopy mapped from 2019 imagery.

Figure 10. Examples of the land cover classes.

SPECIAL CONSIDERATIONS AND VULNERABILITIES

By measuring changes in tree canopy cover, city planners, urban forest managers, and policymakers can understand how changes and regulations in the urban landscape are affecting the health and vitality of the City, as well as the quality of life of residents. Secondly, tree canopy cover is a key indicator of urban forest health. Urban forests are dynamic systems that are impacted by a variety of factors, including urbanization, climate change, and invasive species. By analyzing changes in tree canopy cover over time, planners can take action to address the underlying causes of tree canopy loss or tree health decline.

Change in tree canopy cover can also be used to inform future policy and decision-making. For example, by tracking changes in tree canopy cover over time, city planners can identify areas where new trees may need to be planted to maintain or increase overall canopy cover. The information can also be used to inform land-use planning and development decisions, such as determining where to locate new parks or green spaces.

In Fayetteville, the Urban Forester within Development Services actively monitors and tracks tree canopy cover change through development regulations and is supported by the Urban Forester in Parks, Natural Resources and Cultural Affairs. Comprehensive worksheets and data are utilized to track on a monthly and yearly basis. The tracking includes forecasting the future canopy growth and loss.

In addition to this extensive tracking system, the City completed tree canopy assessments for four time periods—2013, 2015, 2017, and 2019. The following provides a summary of the canopy cover change that was utilized to inform the long-term canopy goals and priority planting areas discussed in the following section.

LAND COVER CHANGE OVER TIME*

From 2013 to 2019, the canopy cover decreased from 43.0% to 39.4% and the land cover classified as field decreased from 41.0% to 33.2%. Urban land cover increased by 3.5% going from 20.0% to 23.5%. This is an increase of 1,400 acres or 2.2 square miles of urban land since 2013. The data is representative of the changes occurring in the City over time as development increases.

* Note: Technology (e.g., data, imagery, resolution) for canopy assessments continues to improve. The 2019 data is the most accurate. For this comparison, GIS used the same city boundaries from 2013 to 2019. (For more informaion see GIS Study)

Figure 11. Examples of the land cover classes analyzed as part of the 2019 tree canopy study.

CANOPY REQUIREMENTS IN CHAPTER 167 TREE PRESERVATION AND PROTECTION ORDINANCE

Chapter 167 of Fayetteville's Code of Ordinances regulates and monitors tree canopy cover change in the City. The chapter addresses canopy cover preservation, afforestation, and mitigation and the regulations and procedures vary depending on factors and considerations such as the zoning designation, the type or size of a project, and the quality of the tree canopy removed.

The table below summarizes the tree minimum canopy cover requirements by zoning designation that are factored into the canopy goals recommended in the Urban Forestry Management Plan. Note, the zoning designations in the table below are consolidated into generalized categories. Specific zoning designations and details for each are available in Table 1 of Chapter 167.04.C.

REGULATING TREE CANOPY COVER

Zoning Designation (consolidated)	Percent Minimum Canopy
Residential (includes single-family, residential office, residential intermediate, multi-family)	15-25% (depending on designation)
Neighborhood Services (includes limited and general)	20% (for both sub-categories)
Neighborhood Commercial	20%
Community Services	20%
Thoroughfare (includes commercial and urban thoroughfare)	15% (for both categories)
Central Business Commercial	15%
Downtown Core	10%
Main Street Center	10%
Downtown General	10%
Neighborhood Conservation	20%
Heavy Commercial & Light Industrial	15%
General Industrial	15%
Institutional	25%
Planned Zoning District* (Hillside/Hilltop Overlay District, "HHOD")	25% (30%)
All residential zoning districts and C-1 districts within the Hillside/Hilltop Overlay District shall have their percent minimum canopy requirements increased by 5% to a total requirement of either 30% or 25%.	

Table 3. Minimum canopy requirements by zoning designation according to The Tree Preservation and Protection Ordinance.

TREE CANOPY EQUITY

Tree canopy is often not distributed equitably across city landscapes and ownership types. The American Forests organization created the Tree Equity Score (TES, www.treeequityscore.org) tool to measure tree equity across 150,000 U.S. neighborhoods and 486 municipalities in urban areas. Each community's TES indicates whether there are enough trees for everyone to experience the health, economic, and climate benefits that trees provide. The scores are based on how much tree canopy and surface temperature align with income, employment, race, age, and health factors. A 0- to-100-point system makes it easy to understand how a community is doing.

With the knowledge the score provides, Fayetteville's community leaders, tree advocates, and residents alike can address climate change and public health through the lens of social equity, attract new resources, factor the scores into technical decisions, guide implementation of the 2023 Urban Forestry Management Plan, and track progress toward achieving tree equity.

A score of 100 represents tree equity. Based on a 2022 analysis, Fayetteville's overall tree equity score is 87 out of 100. Based on the nationwide dataset for 197,505 U.S. Census-defined urban areas, the average score is 85 (as of 2023).

EQUITY IN TREE CANOPY COVER (TREE EQUITY SCORE TOOL)

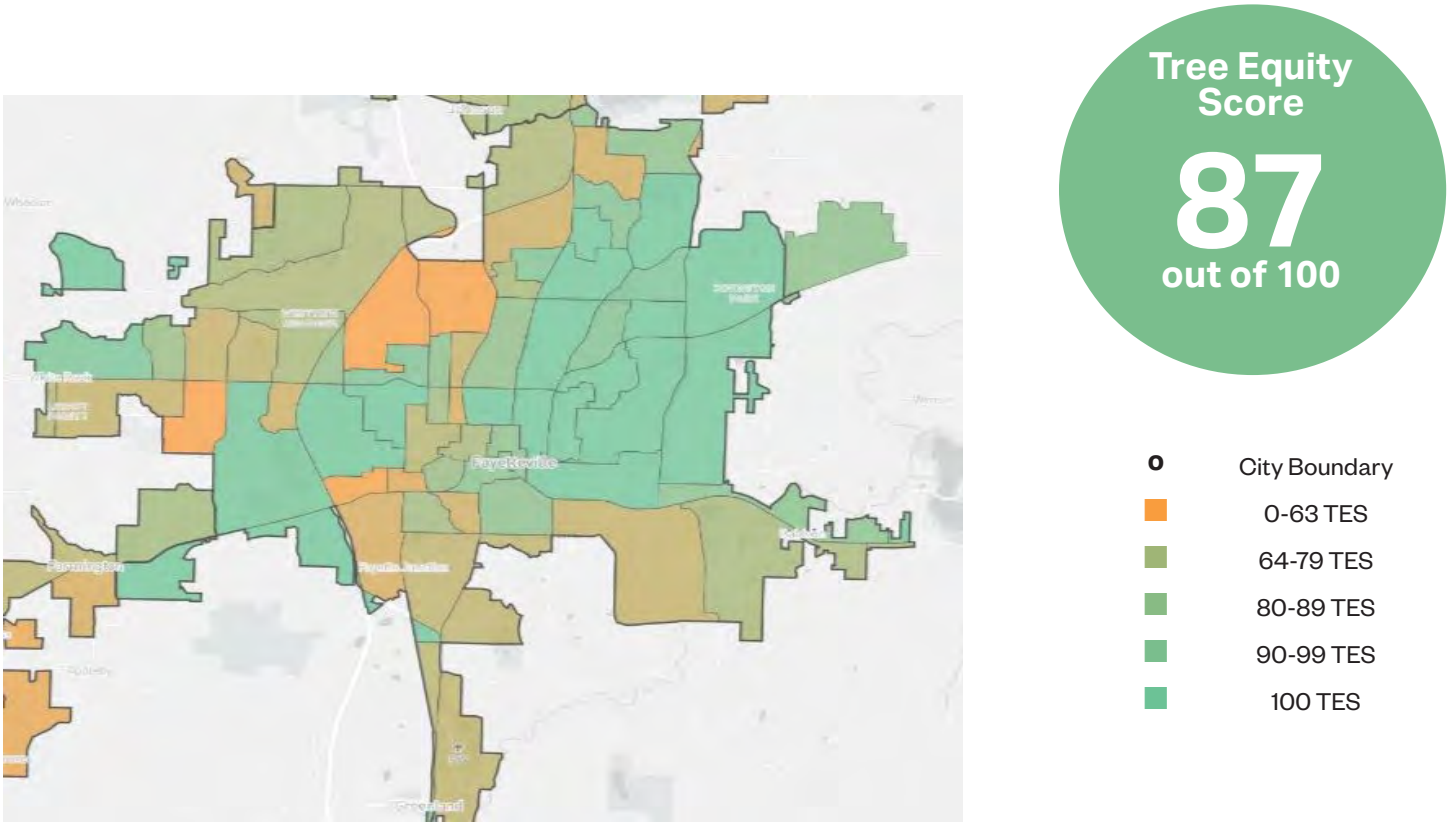

Figure 12. Map showing the Tree Equity Scores for Census Block Groups in Fayetteville. Source: American Forests' Tree Equity Score Tool

The map above displays the Tree Equity Scores for each U.S. Census Block Group within the City of Fayetteville based on the data inputs listed in the figure above.

Compared to other cities in the state, Fayetteville's Tree Equity Score of 87 is the second highest score out of 10 Arkansas cities in the study (see figure on the next page) and has the fourth highest score out of eight U.S. cities commonly used in comparing Fayetteville (see figure on the following page). This score for Fayetteville is based on a combination of metrics listed in the figure above for 47 Census Block Groups (CBG) comprising the City and averaged for a combined total score.

TREE EQUITY DISCUSSION

In the past few years, regional partners are increasingly acknowledging and confronting the past practices, current perceptions, and accelerating progress to ensure that communities, landscapes, and policies are more intentional about enhancing historically disinvested areas.

Driven in part by Fayetteville's Urban Forestry Management Plan and other City/regional initiatives, ambitious goals to increase tree canopy in areas of greatest need are taking hold. Although the City would oversee and monitor these canopy goals, the effort would inevitably require extensive support from all City departments, community-based organizations, and others aiming to prepare for a hotter and drier climate while development increases.

Figure 15. An example of higher tree canopy cover east (right) of North Gregg Avenue in the center of the image compared to areas west of the route. Source: Google Earth 2021 imagery

EASEMENTS

City easements refer to the legal rights granted to a city, utilities, or municipality to use certain portions of private property for public purposes, such as the installation of utilities or the construction of public infrastructure like sidewalks or roads. In Fayetteville, city easements can lead to the loss of tree canopy cover if not managed properly or if regulations do not adequately preserve and protect the existing trees.

When the City constructs public infrastructure like sidewalks or roads, they may need to remove trees that conflict with the design and function. In some cases, easements may restrict the planting of trees or other vegetation that could interfere with the infrastructure or utilities that are installed. This restriction can limit the ability to plant new trees and thus limit the potential for future tree canopy cover. Also, the installation of underground utilities in City easements can damage tree roots, which can lead to tree decline or death. When trees are damaged or killed due to City easement activities, the tree canopy cover can be significantly reduced. In addition, maintenance activities such as pruning or tree removal may be necessary in easements to ensure the proper functioning of public infrastructure. However, if not done properly, these activities can result in the loss of tree canopy cover.

Easements where canopy is vulnerable were analyzed to determine the existing tree canopy cover within to support the strengthening of regulations, monitoring, and management efforts guided by this Plan. An analysis of tree canopy within Fayetteville's easements was conducted in 2023 utilizing the City's 2019 tree canopy data. The City contains a number of different types of easements ranging from access, avigation, conservation, drainage, utilities (e.g., gas, sewer, and water), grading, landscape, private, sidewalk, telephone, trail, tree preservation, and vacated. The potential for tree canopy gains and losses largely depends on the intended use of the easement, responsible parties, and the regulations.

CITY EASEMENT TYPES

- Conservation
- Tree Preservation
- Drainage
- Utilities

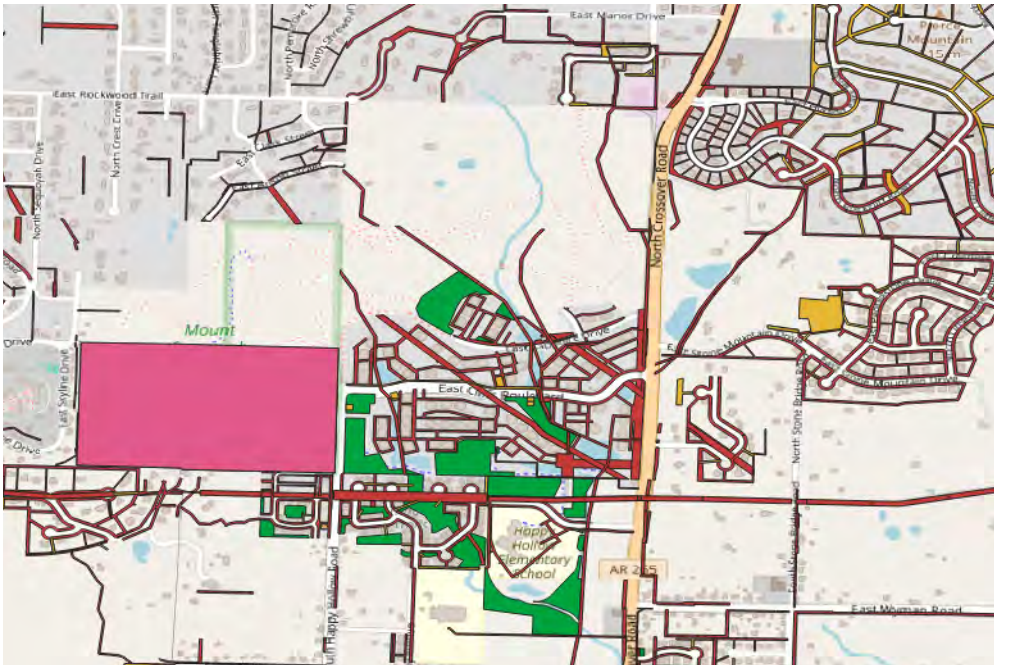

Figure 16. Examples of the types of easements found in the City of Fayetteville.

The table and map below describe the easement types vulnerable to canopy loss.

Canopy Likely Preserved	Canopy At Risk ("Vulnerable Easements")	Areas to Proactively Preserve Canopy
Conservation, Tree Preservation	Access, Null, Avigation, Drainage, Utilities, Grading, Landscape, Private, Sidewalk, Telephone, Trail, Vacated	Access, Landscape, Sidewalk, Trail, Vacated

Table 4. Potential vulnerability to canopy loss by easement type.

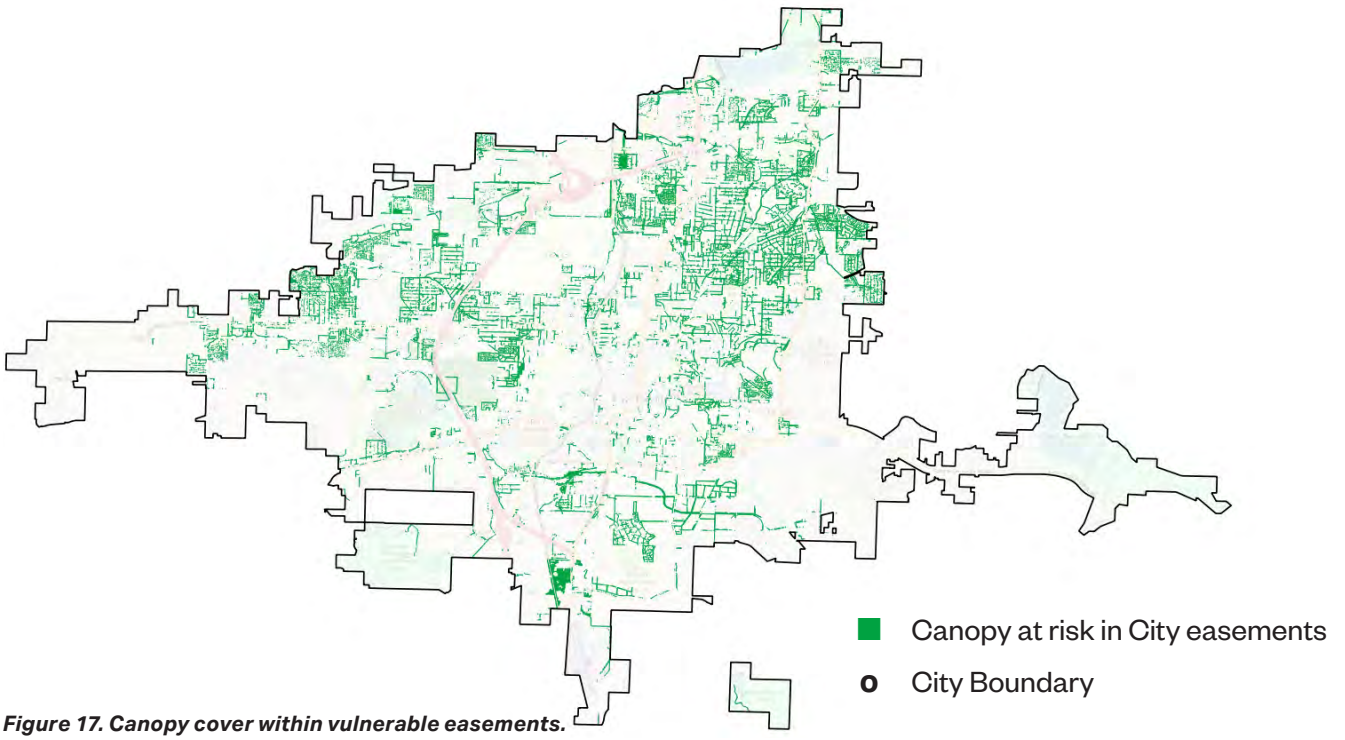

Figure 17. Canopy cover within vulnerable easements.

Acres of Vulnerable Easements	Acres of Canopy in Vulnerable Easements	% Canopy of Vulnerable Easements	Impact on Citywide Canopy Cover
3,981 total acres of vulnerable easements	1,015 acres of canopy in vulnerable easements	25% canopy within vulnerable easements	2.6% potential loss (39.4% reduced to 36.8%)

Table 5. Summary of vulnerable canopy in City easements.

Based on these categories, the vulnerable easements amount to a total of 3,981 acres and within that area, there are a total of 1,015 acres of canopy or 25%. The 1,015 acres of canopy represents 7.2% of the total citywide canopy cover (14,081 acres). This means that if the trees in these easements are not protected and canopy is removed, the City's canopy cover of 39.4% would be reduced to 36.8%.

NATIVE PRAIRIE

Photo of Wilson Springs Preserve, a 121-acre preserve with the largest wetland remnant in Fayetteville and one of the last tall grass prairies in the region. Source: City of Fayetteville

Fayetteville's native prairie land is a rare and valuable ecosystem that is home to a diverse array of plant and animal species. Historically, areas of the City were covered in tallgrass prairie, which supported a variety of grasses, wildflowers, and other plants, as well as large grazing mammals like bison and elk.

Today, much of Fayetteville's native prairie land has been converted to other land uses, such as agriculture, urban development, and transportation infrastructure. However, there are still some remnant prairie areas in and around the City that provide important habitat for native plant and animal species.

One example of a native prairie area in Fayetteville is the Wilson Springs Preserve, a 121-acre site that is the largest wetland remnant in Fayetteville and one of the last tall grass prairies in the region (Northwest Arkansas Land Trust). In considering a plan for Fayetteville's urban forest and goals to increase tree canopy cover, it is important to evaluate areas of the City where it may not be preferable or permitted to plant trees. While some native prairie lands have been lost to development and other areas are being restored, it's important to consider the native habitats and ecosystems and whether they support growing trees that survive and thrive.

Based on GIS maps provided by the Northwest Arkansas Land Trust (NWALT) and the City of Fayetteville, there are areas of the City that may lend themselves to prairie restoration. The following map provides an overview of these native prairie lands.

CANOPY COVER IN HISTORIC NATIVE PRAIRIE LAND

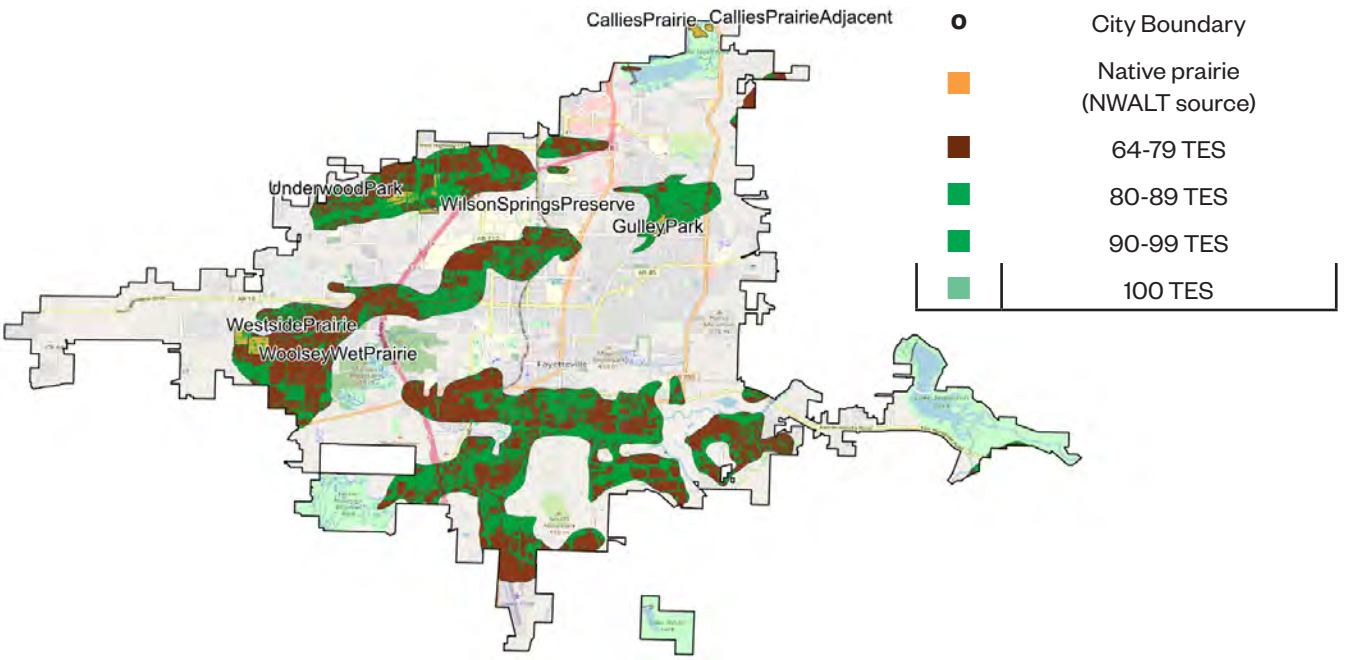

Figure 18. Map of the canopy within native and restored prairie land.

Total Prairie Acres	Total Canopy in Prairies	% of Canopy within Prairies
9,769 total native prairie land acres	1,957 total canopy acres in native prairie land	20% canopy in native prairie land

Table 6. Summary of the land acres and the canopy cover within native prairie land.

Protected Prairie-related Areas	Acres*
Woolsey Farmstead and Wet Prairie Sanctuary	50
Westside Prairie	40
Wilson Springs Preserve	121
Underwood Park	5 (estimated)
Callies Prairie	33
Gulley	3
TOTAL	**252 acres**

Table 7. Summary of the protected prairie-related areas. Source: City of Fayetteville

* Total acres may include land area that is not prairie, for example, Wilson Springs Preserve and Underwood Park

As shown in the map and tables above, the City has nearly 10,000 acres of land that was native prairie land. 20% of the native prairie land contains tree canopy which amounts to 1,957 acres of canopy. Over time, the City and organizations have actively restored and protected or preserved portions of this native prairie land as shown in the previous table.

Based on the figures provided by the City, 252 acres of prairie have been restored and/or protected while other native prairie land has been reshaped by development or is vulnerable. In Appendix A priority planting areas are explored with a consideration to preserve or restore native prairie land by not introducing trees into the landscape.

UNIVERSITY AND INSTITUTIONS

Aerial phote view of the University of Arkansas campus. Source: University of Arkansas

The University of Arkansas located in Fayetteville owns and manages the urban forest within its campus, while the City of Fayetteville manages the urban forest within its jurisdictional boundaries. The goals of managing the urban forest at the University may differ from those of the City. The University may prioritize aesthetics, education, and research, while the City focuses more on public safety, stormwater management, improving air quality, reducing the loss of canopy due to development, and improving human health and well-being.

While the urban forest within the University grounds contributes benefits to all city residents, the environment, and local economies, the City does not have authority to determine how canopy is preserved, expanded, or reduced. Therefore, an analysis was conducted to look at the amount of canopy on University grounds and the section of this Plan that discusses priority planting areas considers excluding these areas within the University.

TREE CANOPY COVER WITHIN THE UNIVERSITY OF ARKANSAS

University Acres	Canopy Area (Ac)	Canopy %
377 campus acres	22 acres of canopy on campus	6% canopy on campus

Citywide Acres	35,712
Citywide Canopy Acres	14,081
Citywide Canopy %	39.43%
Citywide Canopy Acres Excluding University	14,059
Citywide Canopy % Excluding University	39.37%

Table 8. Canopy within University of Arkansas property

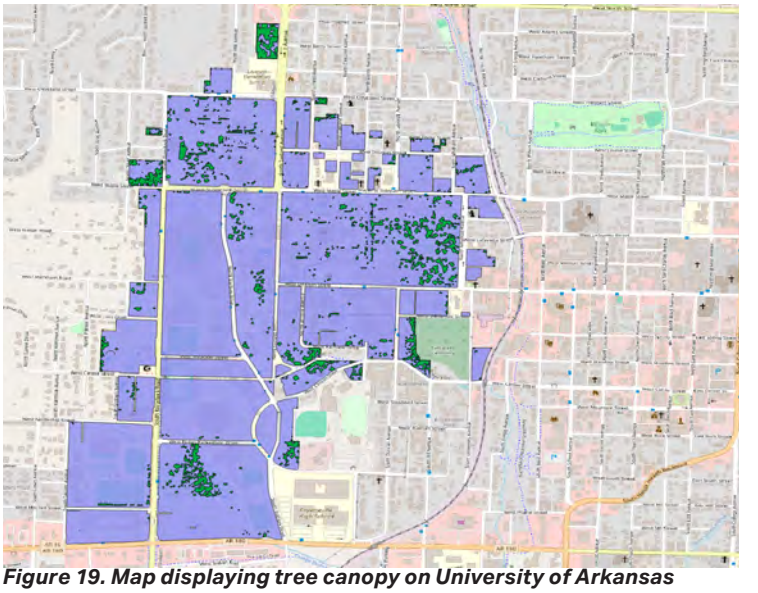

Figure 19. Map displaying tree canopy on University of Arkansas property within the urban core.

University of Arkansas property in urban core

Canopy within University of Arkansas property

As shown in the map and table above, an analysis of tree canopy cover within the University of Arkansas (UA) property in the urban core (excludes the UA Department of Food Science properties to the north) was completed as part of the study. A total of 377 acres of University property were mapped and it was found that within those areas, there are a total of 22 acres of canopy resulting in a 6% canopy for the University of Arkansas.

Hypothetically, if all trees were to be removed on the University property, the citywide tree canopy cover would be reduced from 39.43% to 39.37%. While the loss is not significant, the benefits the canopy provides to students, visitors, and residents warrant continued coordination and communication with institutions and stakeholders in the community. City development regulations, including for tree preservation, do not apply to the University of Arkansas as it is State property.

CURRENT TREE MANAGEMENT IN FAYETTEVILLE

The City of Fayetteville has a wide range of existing policies, regulations, and programs that are used to manage the City's urban forest. City departments engaged in Fayetteville's urban forest planning effort each bring important expertise, perspective, and resources to this commitment—to the tune of nearly $700,000 ($6.66 per capita) to manage approximately 42,000 public trees of which an estimated 25,000 trees are in maintained areas of streetscapes, parks, and properties.

Fayetteville is a leading city in urban forestry, having been recognized as a Tree City USA for 28 years, the fifth longest running designation in Arkansas. Fayetteville has also received more Growth Awards than any other city in the state, with 10 awards as of 2023.

PROGRAMS FOR MANAGING FAYETTEVILLE'S TREES

Department	Division	Count of FTEs*	Title	Certifications
Development Services	Development Review	1.00	Urban Forester	ISA** Certified Arborist
Parks, Natural Resources and Cultural Affairs	Parks Planning & Urban Forestry	1.00	Urban Forester	ISA Certified Arborist, ISA Municipal Specialist, ISA TRAQ***
Public Works	Park Maintenance	6.00	Urban Foresters	3 ISA Certified Arborists

Table 9. Summary of the departments and staff involved in urban forest management in Fayetteville.

* Full-time employee or full-time equivalent, ** International Society of Arboriculture, *** Tree Risk Assessment Qualification

SUMMARY OF PROGRAMS AND SERVICES

The Parks, Natural Resources and Cultural Affairs Department was reimagined and restructured in late 2021/early 2022 to give more focus to natural resources, arts, and culture in addition to the quality programming, greenspaces, and facilities it already provides. Prior to restructuring, it was referred to as the Parks and Recreation Department. A new 10-year Park and Recreation System Master Plan was completed in late 2022. This plan identifies themes set forth by the community to guide the growth and development of parks and it supports the goals of this Urban Forestry Management Plan.

The City's Urban Forestry Program within the Parks, Natural Resources and Cultural Affairs Department is overseen by one of the Urban Foresters and supports public street tree maintenance crews, the Urban Forester in Development Services, and the City's Urban Forestry Advisory Board.

Development Services' Urban Forester provides services related to development plan reviews and other supporting services. Specifically, the Urban Forester administers, reviews, and monitors regulations within Chapter 167 of Fayetteville's Unified Development Code titled, "Tree Preservation and Protection" and Chapter 177 "Landscape Requirements Code."

Public Works has six Urban Foresters in Public Works Park Maintenance for public street tree and park tree management. The Parks Maintenance Division was integrated into Public Works in 2021 and continues to support Parks, Natural Resources and Cultural Affairs in operations, facility improvements, and tree activities.

Sharing public tree maintenance and management responsibilities across departments can yield many benefits, such as utilizing limited resources efficiently. It is critical that workflows are clear and understood. Fayetteville's urban forest continues to grow and change, public awareness of the City's urban forest and its programs is increasing, and the beneficial impacts of trees to mitigate climate change are understood better than ever. In turn, it is anticipated the service demands will continue to rise, especially as the City implements the Plan's strategies to increase tree canopy cover. As service demand continues to increase so does the need to find methods to increase capacity and efficiency under strained fiscal support.

STAFFING LEVELS FOR URBAN FOREST MANAGEMENT

Many cities struggle to maintain adequate staffing and resource allocation. Available resources may cover short-term needs while neglecting important initiatives necessary to sustain long-term urban forest management. Determining and maintaining optimal staffing levels is critical to a program's efficiency. Optimal staffing depends on several factors including the number of public trees, how authority and responsibility is defined in the municipal code, internal and external expectations, customer service (i.e., the public), operations, and existing programs.

The City of Fayetteville's commitments to public health and safety, combating climate change, and addressing inequities translates into a growing demand for both long-term initiatives, and the staff to operate them. The growing urban forest will require increased staffing levels to achieve and maintain urban forest goals. Public Works and Development Services need to add full time employess to maintain the current level of services. As the City grows these positions will need to grow.

Some capacity and efficiencies for existing workloads can be improved through clarifications of roles, responsibilities, and workflows among City departments and divisions. Periodically examining program structures, staffing needs, and levels of service may identify ways to improve efficiencies, communications, and workflows within and among departments. Cities often consider consolidating their tree programs into one division or section to achieve these outcomes. Establishing a strong organizational structure with clear operating procedures is foundational in reducing future costs and addressing increased service demands.

TREE-RELATED PLANS AND REGULATIONS IN FAYETTEVILLE

Evaluating the alignment of existing policies and plans in Fayetteville with urban forest management elements ensures a strong connection among the programs that manage the urban forest and the projects and initiatives that support them. Proper alignment of urban forestry program recommendations reduces the risk of wasting resources and enables success of key projects that support urban forestry goals. Plans cannot live in isolation, therefore, cross-examining various plans and documents brings to light any projects or initiatives that are a misplacement of resources and time. Tree regulations in the City provide the foundation from which tree canopy cover can be preserved, protected, and expanded while aligning with industry standards and best practices. Regulations for trees on private property are the primary tools for urban foresters to guide private landowners and developers in sustainable practices.

RELEVANT PLANS AND STUDIES

Several documents and resources were reviewed and indexed as part of the information discovery process to develop the Urban Forestry Management Plan. These documents included:

City Plan 2040 (2020 update): The City of Fayetteville adopted its first comprehensive plan in 1970. The plan, and all of its subsequent updates and revisions, seek to establish a framework of goals, policies, and guidelines to direct future physical, economic, and social development.

Energy Action Plan (2018): This plan is structured around one overarching goal: reducing greenhouse gas emissions (GHG) for activities occurring in Fayetteville. While GHG reduction is the guiding goal, a host of co-benefits accompany these actions. The plan outlines ways that the City can increase energy efficiency, transition to cleaner fuel sources, improve public health outcomes, build more resilient local businesses, among other core principles.

Active Transportation Plan (updated February 2023): The plan serves as a guiding document for Fayetteville infrastructure and program development related to active transportation. It outlines a network of sidewalks, trails, and bicycle facilities to provide walkers, cyclists, and other users with clear pathways and connections to important city destinations.

Park and Recreation System Master Plan (2023): This plan was in development during the planning stage of the Urban Forestry Management Plan. In February 2023, the Park and Recreation System Master Plan was completed. It exemplifies the City's values in providing a thriving park system for all ages, abilities, and activities. The strategic plan will guide the future of Parks and Recreation for the next decade. It evaluated the existing conditions of the park network and identified areas for growth, improvement, and preservation.

Climate Action Plan: The goal of the Climate Action Plan will be to inform future policies, programs and actions undertaken by the City and to assist the City in its efforts to remain resilient to the anticipated changes in the climate to preserve the quality of life for those who live, work and play in Fayetteville.

The relevant plans and studies are summarized above to demonstrate the parallels among urban forestry and other planning efforts in the City. The Urban Forestry Management Plan's long-term framework aims to complement goals and policies within these City plans and studies that pertain to trees in Fayetteville. This evaluation of existing resources serves to reduce conflicting priorities in the City.

Tree Canopy Assessments (2002, 2010, 2013, 2015, 2017, 2019) and Studies (2020):

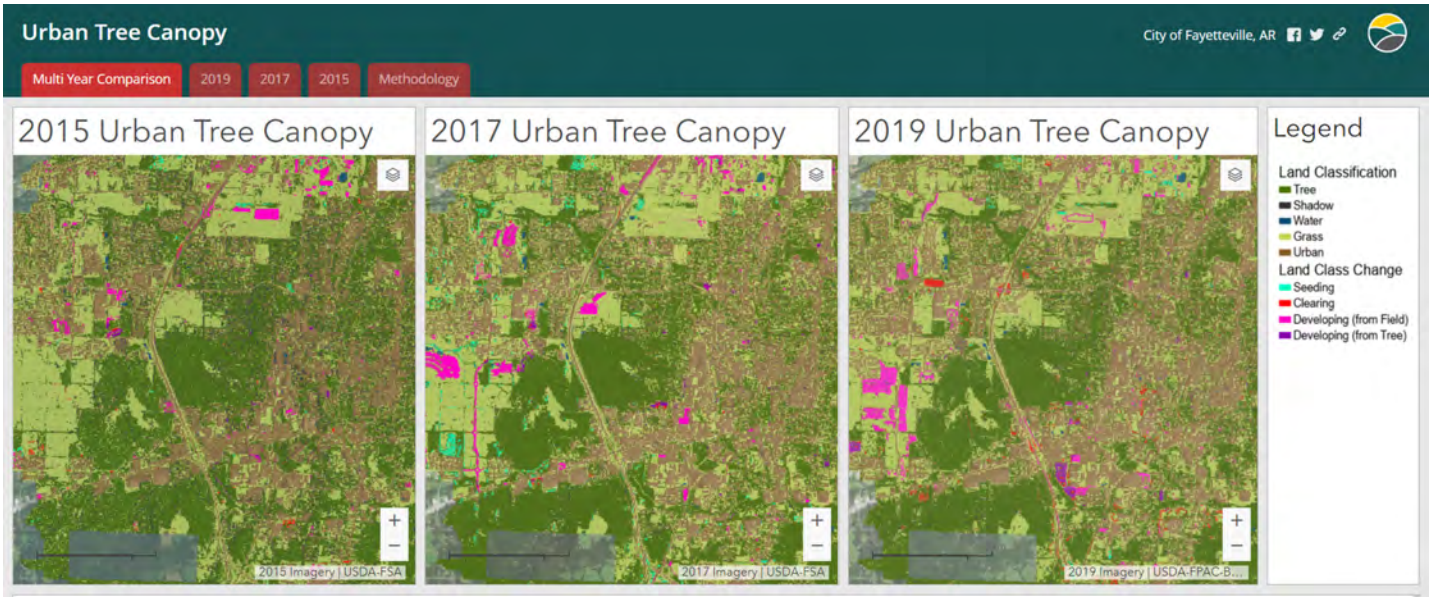

Figure 20. Comparison of canopy in 2015, 2017 and 2019

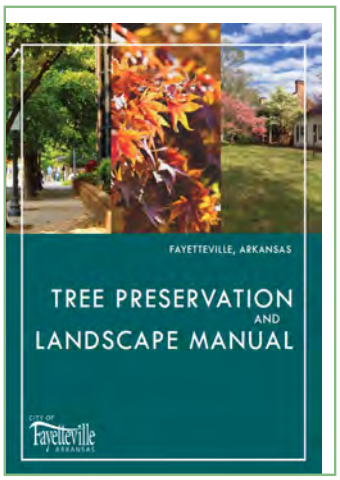
High-resolution GIS assessments of land cover were completed to identify the extent and opportunities for urban tree canopy cover. The City conducted these assessments based on 2002, 2010, 2013, 2015, 2017, and 2019 imagery to analyze canopy cover change. A consultant provided an analysis and report on the City's tree canopy cover change from 2002 to 2010 (in 2012), and in 2020, the City's GIS Department completed the Tree Canopy Cover and Environmental Equity study, report, and supporting web map for the 2013, 2015, 2017, and 2019 time periods to examine the correlations between canopy cover and socioeconomic data. (Tree Study)

The difference may be a result of canopy increase, improvements in technology, or as stated in the accuracy assessment for the 2012 UTC Assessment Report "The Producer's accuracy of 92% can be interpreted as up to 8% of the overall landscape may be tree cover but was classified as another land cover category. Conversely, the User's accuracy of 99% indicates that if a pixel is classified in the classification map as Tree Canopy, there is 99% confidence that the pixel is tree canopy in the reference map. When combined, these two figures indicate that 36.0% likely underestimates the true canopy percent (and that the Green Vegetation category probably contains some actual tree canopy). The accuracy assessment uses concepts defined as Quantity and Allocation disagreement (Pontius, et al., 2011) to estimate true land cover percent values based on statistical results" (see the "COF_Classification_Accuracy_Assessment_Document" PDF provided to the City in 2012 for more details). Therefore, 36% is likely underestimating the amount of tree canopy in 2010 by up to 8% meaning the canopy in 2010 could have been as high as 44%.

As shown in the previous figure, Fayetteville has demonstrated a proactive commitment to urban forest management by assessing tree canopy cover over several time periods and implementing the recommendations as resources allow. By monitoring the state of tree canopy cover, the City can better understand the urban ecosystem's health and make informed decisions. Fayetteville has also made strides in public and developer education on the significance of trees within the cityscape. Resources and guidance are provided to ensure responsible tree care and development practices, emphasizing the importance of preserving and enhancing the urban tree canopy. Additionally, the Urban Forestry staff have recognized policies and regulations that need to be updated to align with contemporary urban forestry standards, prioritizing the protection and growth of this vital green infrastructure. Furthermore, Fayetteville has invested in planting resilient tree species, making its urban forest more adaptive to climate challenges. These efforts reflect the City's commitment to enhancing the quality of life for its residents while fostering a greener, more sustainable future.



While Fayetteville's urban forestry efforts have made commendable progress, the 2024 Urban Forestry Management Plan builds on the progress and guides the City toward a long-term vision. The City must continue its commitment to reassessing canopy cover over time and expanding public education efforts to ensure a sustainable and thriving urban tree canopy. By successfully implementing the Plan, Fayetteville can bolster its urban forestry programs and grow a resilient urban forest.

TREE ORDINANCES IN FAYETTEVILLE

Chapter 167, Tree Preservation and Protection: This preservation ordinance within Fayetteville Code of Ordinances preserves and protects trees and natural areas in the City based on the type of project and its location. The regulations require a tree preservation plan and canopy cover retention or the planting of trees to meet minimum canopy cover requirements by zoning designation for proposed development projects.

Chapter 177 Landscape Regulations: In 2007 the Urban Forester (then titled Landscape Administrator) collaborated with other City staff to consolidate landscape requirements found throughout multiple sections of the Unified Development Code into this single ordinance (Chapter 177). The intention of consolidating requirements was to help meet the needs of those applying for development review. The ordinance aimed to meet the following goals: a greener, more attractive city with reduced heat, noise and air pollution; and increased property values. The City of Fayetteville requires developers to include landscaping in their building plans to beautify property, provide shade, and screen the perimeters of parking lots, utilities, incompatible uses, and vehicular use areas.

Tree Preservation and Landscape Manual (2016): The original manual was created in 1999, updated in 2006, and was condensed in 2016 in coordination with the Parks and Recreation Division and the Sustainability and Resilience Department. It was then approved by the Urban Forestry Advisory Board. The updated manual's primary purpose is to provide developers, engineers, architects, landscape architects, and contractors with the City's requirements for tree preservation and protection and landscape installation. The manual corresponds with the requirements detailed in the City of Fayetteville Unified Development Code Chapter 167: Tree Preservation and Protection and Chapter 177: Landscape Regulations.

Figure 21. Fayetteville's Tree Preservation and Landscape Manual provides the tree-related regulations and standards for entities involved in private development design and construction.

A cursory review of existing tree-related ordinances in Fayetteville was conducted based on industry tools and resources, comparisons of findings from benchmarking research, input gathered from internal stakeholders, and a cross-examination of regulations compared to industry standards and best practices. This integrated approach aims to balance goals for tree canopy cover, development, and other priorities in the future.

Appendix C provides a summary of the evaluation of Fayetteville's tree-related ordinances.

SUMMARY OF FAYETTEVILLE'S KEY URBAN FORESTRY PROGRAMS AND RESOURCES

- The Urban Forestry team in Public Works performs tree maintenance on street trees not adjacent to private property. They also maintain trees in parks and along the trails.
- Tree preservation and protection for new development is performed by the Urban Forester in Development Services. Residential reviews are performed by the Urban Forester in Parks, Natural Resources and Cultural Affairs.
- Development Services administers Chapter 167 of the Unified Development Code to ensure Fayetteville maintains, enhances, and preserves trees and the City's natural beauty.
- The City's Urban Forestry Advisory Board advises the City Council and the Mayor on urban forestry issues.
- Fayetteville Code of Ordinances Chapter 167 Tree Preservation and Protection to preserve and expand the City's urban forest. Chapter 177 regulates landscape for developments.
- Volunteer opportunities for tree stewardship and education.
- Tree City USA accreditation and Arbor Day celebrations.
- Amazing Trees of Fayetteville program and online inventory.
- Celebration of Trees Event and other events celebrating and educating attendees about Fayetteville's urban forest.
- The City has an invasive plant ordinance, encourages Ozark native trees, and discourages trees found to have issues.

STAKEHOLDER FEEDBACK ON CURRENT CONDITIONS

Internal and external engagement is critical to the success of an urban forestry management plan. By engaging with Fayetteville's staff, residents, businesses, and other stakeholders, urban forestry staff are given a better understanding of the needs and concerns of the community. Engagement was conducted throughout the development of Fayetteville's Urban Forestry Management Plan. The feedback and input gathered was used to shape a plan that is representative of the needs of all stakeholders in the City. The engagement conducted throughout the development of the Plan also helps to build support for Fayetteville's urban forest and to ensure the Plan is implemented effectively.

Internal Stakeholder Feedback

In August and September 2022, engagement with City staff in various departments to develop the Urban Forestry Management Plan began with an online survey to identify workflows, measures of success, concerns, priorities, and shared goals and outcomes as it relates to trees in the City. A total of 28 of the 59 (47%) invited staff and board / commission members participated in the survey and follow-up interviews as desired.

Staff participants represented the departments of Parks, Natural Resources and Cultural Affairs; Public Works; Environmental; and Development Services. In addition, members from the Urban Forestry Advisory Board, Parks, Natural Resources and Cultural Affairs Advisory Board, Environmental Action Committee, Planning Commission, and Keep Fayetteville Beautiful participated.

The figure on the following page provides a graphic summary of responses. Most respondents serve as advocates for public trees and park improvements, over 60% support community recreation and engagement, and half are involved with City planning. Over half of the respondents noted the staffing levels as a challenge, along with needed improvements as they relate to ordinances and infrastructure conflicts (50% each). 46% feel there is more to be done in terms of preparedness planning as well as 46% concerned with the sustainability of ecosystems.

The respondents noted their top priorities to address in the Plan as procuring funding for the City to purchase land for tree preservation and canopy expansion, supporting local businesses and others in the community to cooperatively grow and maintain the urban forest, and increase funding to purchase trees to be planted to support canopy goals.

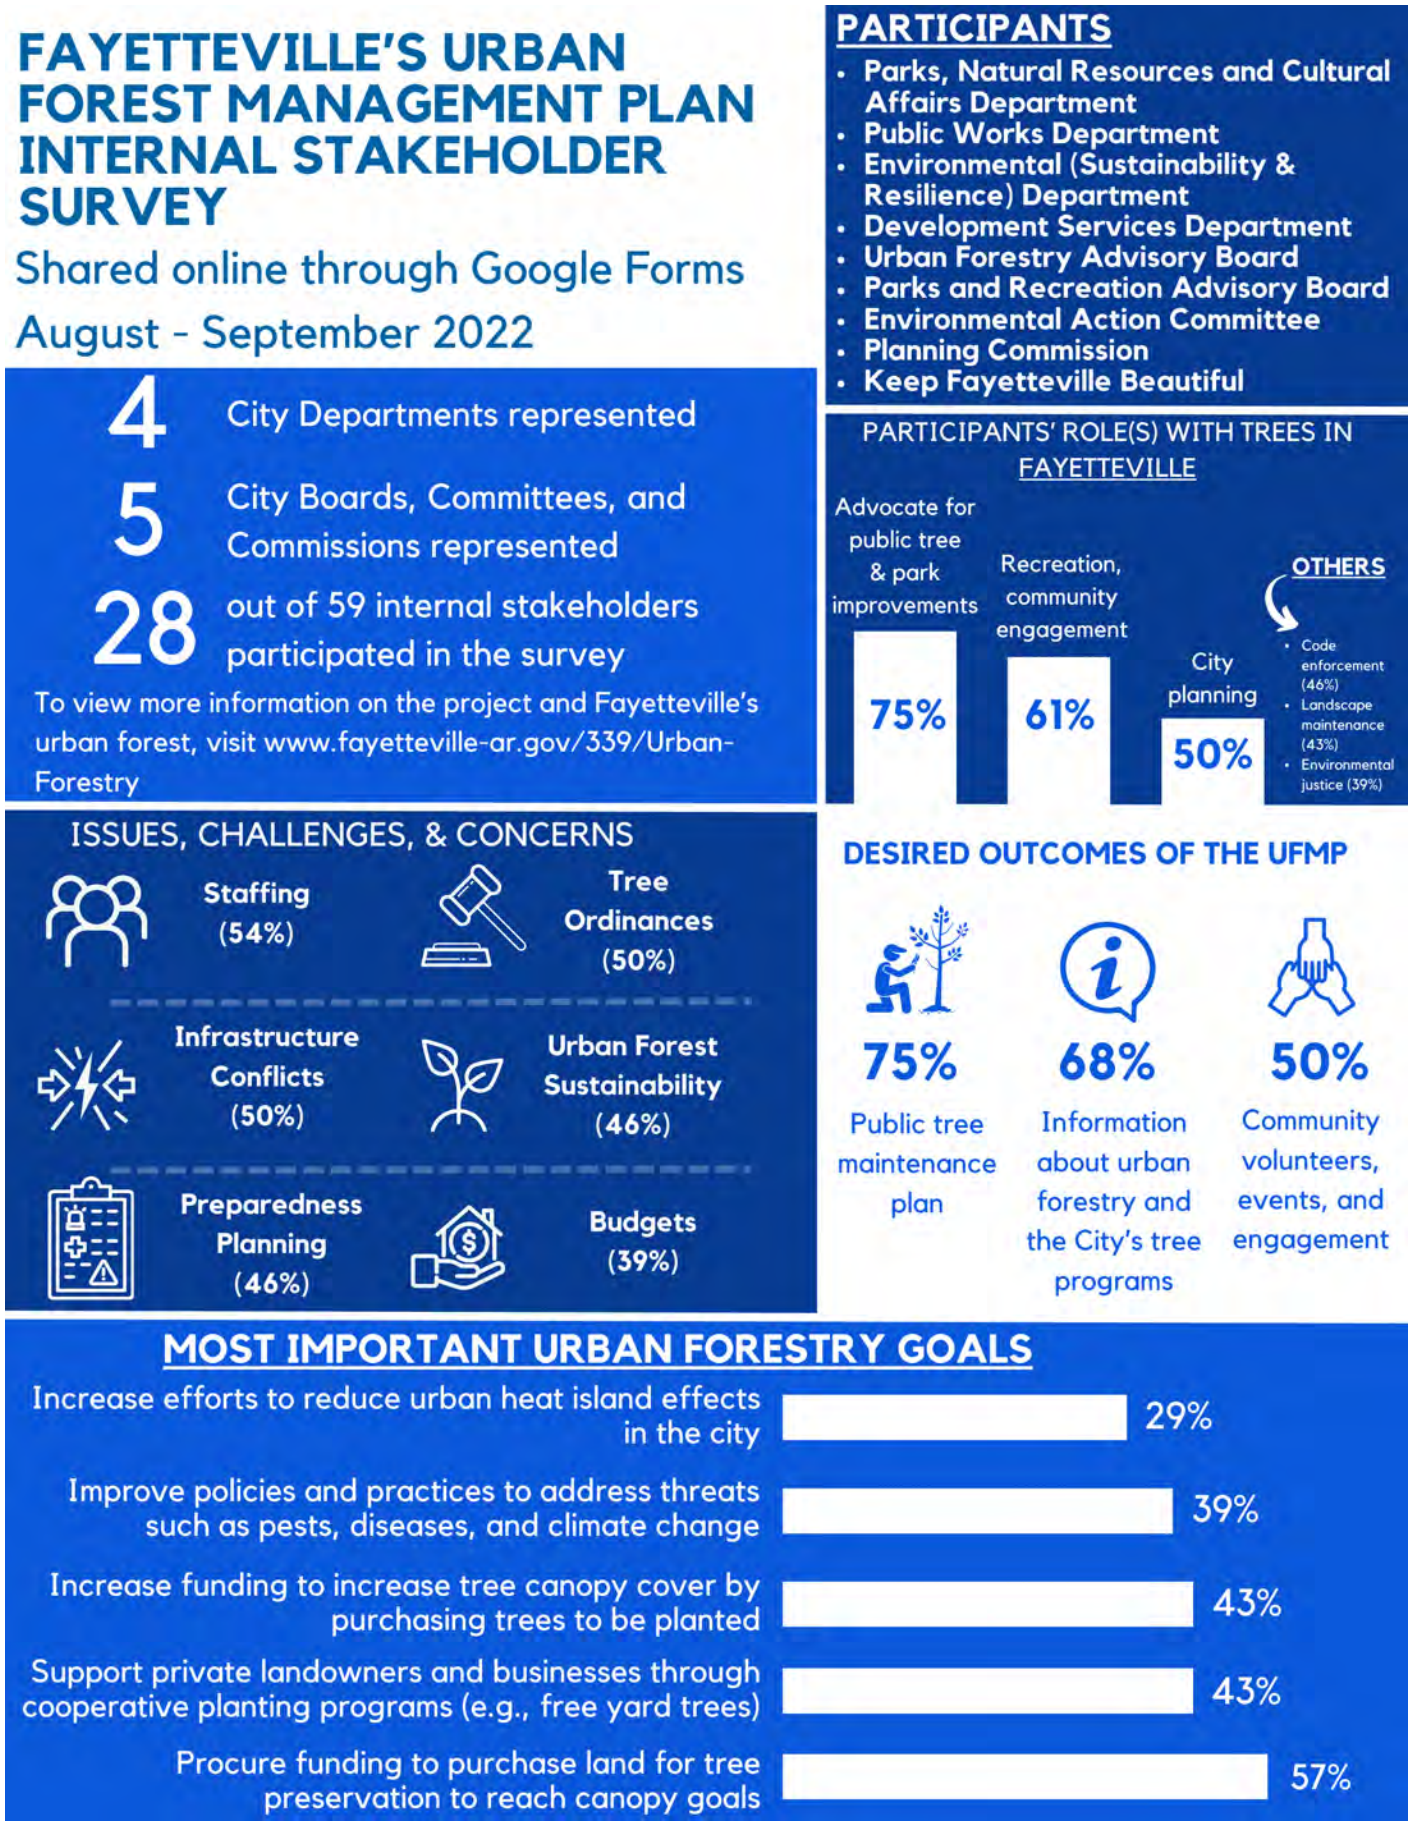


Figure 22. Summary of the feedback received from internal stakeholders.

EXTERNAL ENGAGEMENT

Project Website

To support the development of the Urban Forestry Management Plan's vision, goals, and recommended actions, the urban forestry consultants met with Urban Forestry staff to develop strategies for community education, outreach, and engagement. The project team utilized the City's "Speak Up Fayetteville" website (speakup.fayetteville-ar.gov) to share information about the project and opportunities for engagement. To raise awareness and encourage engagement in the project, the website included background information and resources, project timelines, draft outcomes, and the platform for launching the public survey.

Media and Messaging

Throughout the development of the Plan, information was shared about the project and the City's urban forest through various mediums including news outlets, City website content, press releases, and social media.

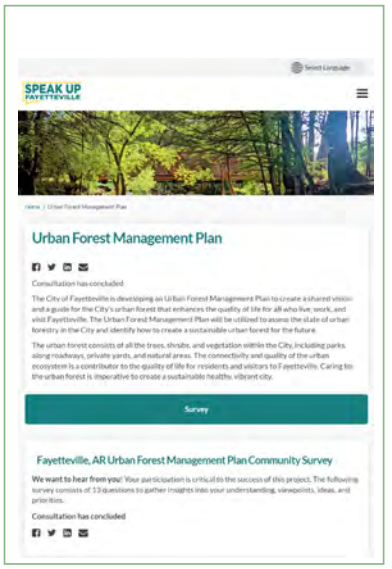

Figure 23. Example of the outreach conducted throughout the planning process.

Community Survey

From December 2022 through mid-January 2023, a 14-question online survey was launched on the City's Speak Up Fayetteville website to learn how trees impact the lives of Fayetteville's community members, to gather feedback on canopy goals and priority planting areas, to identify where the City should prioritize resources and investments, and to recognize the benefits and services provided by trees that the community values most.

A total of 169 responses were received. The following provides an overview of the engagement garnered from the effort followed by a summary infographic.

The majority of respondents own a home in Fayetteville (61%) and are between 25 and 35 years old (28%).

Respondents are engaged with their urban forest in that they understand and appreciate trees providing shade and reducing surface temperatures (62%) and would like to see trees planted where there is historically less canopy coverage (50%). The trees planted should be resilient to pests and diseases, changing climates, limited space, and storm events (40%). To improve public tree health, respondents support setting and achieving canopy goals that are based on reducing heat, improving ecosystems, expanding canopy cover in underserved communities, and increasing the benefits trees provide (74%). They would also like to see more trees and preservation incorporated into development projects (66%) and planting trees that can coexist with sidewalks and underground utilities (41%). Future resources and investments that result from the Plan should be focused on strengthening ordinances for private development

Figure 24. The project website for Fayetteville's Urban Forestry Management Plan.

(70%), purchasing land for conservation (54%), planting trees on public property (51%), and partnering with private property owners to plant trees on private property (41%). To achieve canopy goals, respondents would like to see parks and greenways prioritized (69%), followed by planting trees along streets (68%), on commercial and industrial property (60%), and on school and campus grounds (40%). The kinds of trees respondents would like to see planted include trees and priority areas that are climate-based (56%) and location-based using the right tree right place principle and replanting trees that were removed (25%). Most respondents support watering the street trees adjacent to their property during periods of drought (73%).

The success of this engagement effort is largely attributed to the City's commitment to share the survey and conduct outreach. The survey was announced on the City's website, the Speak Up Fayetteville project webpage, social media posts, press releases, news media, and shared throughout relevant partner networks.

As noted in the Introduction, Fayetteville's trees face multiple challenges from various sources. The urban forest is vulnerable to changing conditions due to urbanization, extreme weather, and pests and diseases.

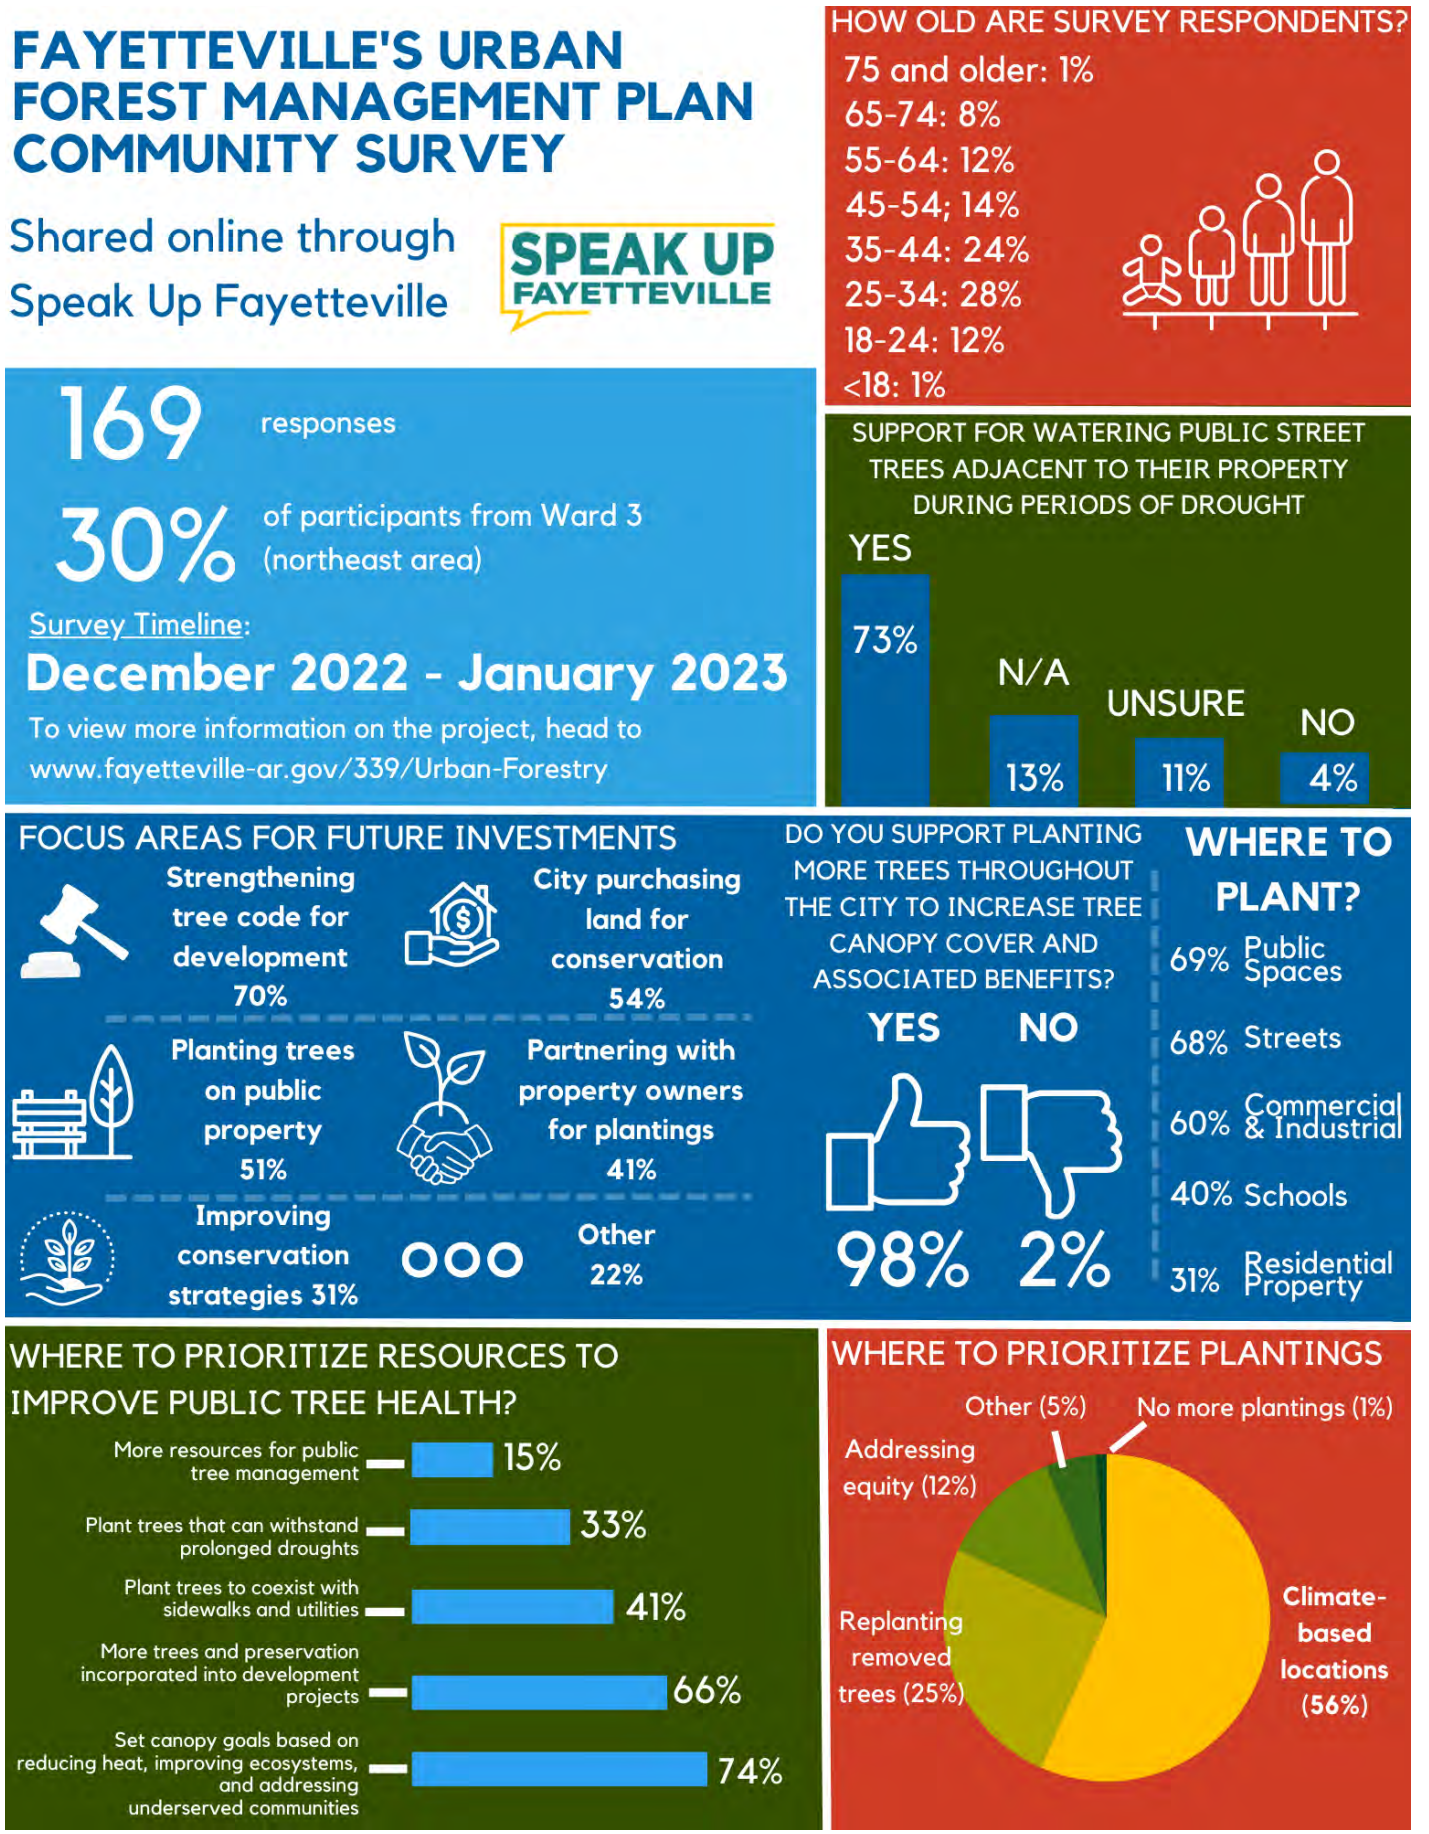

Figure 25. Infographic summary of the public's priorities and viewpoints regarding the urban forest

URBAN FOREST VULNERABILITIES DEVELOPMENT AND LAND USE CHANGE

The Northwest Arkansas Regional Planning Commission (NWARPC) estimates that Fayetteville will grow to a population of 142,496 by the year 2040. This will be an increase of an additional 48,547 people added to the most recent U.S. Census Bureau estimated population of 93,949 in 2020. Planning and anticipating the location, form, and function of land use and growth patterns enables the City and the existing residents to guide where and in what pattern this growth will occur. Relative to neighboring cities, Fayetteville has a large percentage of undeveloped land including swaths of canopy cover and native prairie land. However, according to the City's Urban Forestry Program, Fayetteville lost 35 acres of tree canopy cover in 2022 due to development. While the City's tree ordinances do require tree preservation, protection, and planting to mitigate canopy loss, it is projected that there will be a net loss of 20 acres of canopy solely for those development projects reported in 2022. Additionally, existing urban areas rezoned for more dense development reduce available space for trees and greenspace.

Fragmentation

Development often results in fragmentation of tree canopy, creating isolated populations that are less likely to cross-pollinate. This can reduce biological and genetic diversity of the ecosystem and change the species composition (Fahrig, 2003). It may also result in the loss of buffering potential, such as vegetative stabilization of stream banks. As sites become fragmented and the amount of ecosystem space is reduced, many plants and animals that rely on connected habitats may disappear from the region (Saunders, et al., 1991).

Altered Soils

Urban trees must often survive in compacted soils that have been altered for the built environment. A good growing medium for trees contains approximately 50% pore space (which allows the root system access to the air and water it needs to survive) and a layer of organic matter. In contrast, construction soils typically have less than 25% pore space and organic matter combined.

Competition for Space

Conflicts with hardscapes and utilities often occur when trees are not provided adequate space for root and canopy growth. In rights-of-way, trees may compete for space with signs and streetlights, underground utilities, and overhead electric and telephone lines. As trees outgrow available space, their roots can raise sidewalks as they search for water, air, and growing space. The resulting sidewalk repairs may require removal of the tree or application of alternative sidewalk solutions. The City has regulations and best management practices (BMPs) for addressing these situations.

The prevention of future conflicts requires streetscape design that considers the mature size of trees being planted as well as available technologies that allow trees to thrive in this environment. Examples of these unique designs are provided in the graphic below:

EASEMENTS

ROOT BARRIERS

SUSPENDED PAVEMENT

STRUCTURAL SOILS

Figure 26. Examples of the potential streetscape design solutions for preventing or mitigating tree and infrastructure conflicts.

To prevent and address negative impacts from development, the City of Fayetteville coordinates efforts to ensure projects adhere to City requirements such as tree canopy cover, stormwater management, public safety, and accessibility.

CLIMATE CHANGE IMPACTS

As the effects of climate change take hold, already stressed trees will decline more rapidly, and healthy trees will have to endure multiple stressors to survive and thrive. The extreme heat and drought will reduce water availability, the plant hardiness zone will shift and introduce invasive plant species, stronger storms will occur resulting in more downed trees and limbs due to the canopy declining, and existing and introduced tree pests and diseases will flourish as trees continue to weaken.

If the City does not commit to a long-term proactive approach and disciplined investment to improve the health and reliability of the public trees, Fayetteville will fight a costly, reactive and escalating battle against failing trees— which will have a detrimental impact to public safety, budgets, tree crews, road closures, and utility reliability. The negative environmental, public well-being and scenic impacts will also be significant.
With a quarter of Fayetteville's public street trees in fair or worse condition, and with climate change altering the types of species that thrive, the City's tree canopy is at considerable risk.

Figure 27. Emerald ash borer (EAB) insect (top), dieback (left), larvae (bottom left), borer holes (right), and larvae galleries (bottom right). Source: AR Department of Agriculture

URBAN TREE PESTS AND DISEASES

Pests and diseases add to the existing stresses faced by trees in an urban environment. Stressed trees are more vulnerable to insects and diseases, although some pests and diseases pose an equal threat to healthy trees. Climate change can create conditions that are favorable for the spread of pests and diseases. Also, prolonged drought stresses trees causing them to be more susceptible to pests and diseases.

Though emerald ash borer (EAB) was found in Arkansas in 2002, it is still a concern for the ash (Fraxinus) trees across the City. From the sample inventory of public trees in 2022, it is estimated that 2% (600 trees) are ash trees. Currently, the City does not treat any ash trees on public land, but ash trees are no longer planted or recommended.

The insect attacks and kills healthy as well as stressed trees, causing catastrophic loss to all ash species. Its impact on the structural integrity of host trees can cause these trees to become safety hazards.

Sudden oak death (SOD) is caused by Phytophthora ramorum, a fungus-like microorganism. At least 90 species of trees and woody ornamentals are hosts for SOD. Changing climates may cause SOD to become more widespread and harder to control. The disease produces rapid decline in oaks; death may occur within months to years later. Symptoms include bleeding cankers on the lower trunk. Other symptoms include leaf spots with dark margins and stem cankers. Control of SOD is focused on early detection and eradication of infected plants.

Figure 28. Sudden oak death (SOD) wood and bark discoloration (top) and lesions and discoloration of leaves (bottom). Source: AR Department of Agriculture

Dutch elm disease (DED) is caused by a fungus (Ophiostoma ulmi) that infects the vascular system of elm (Ulmus) trees. The disease propagates on a number of different elm species but the majority of cases in Arkansas have been found on American elm (Ulmus americana).

Figure 29. American elm identifying features (left), leaf flagging symptom of Dutch elm disease (middle), and gallery of bark beetles that are the vector for the Ophiostoma ulmi fungus. Source: University of Arkansas Cooperative Extension Service

Bacterial leaf scorch (BLS) is a systemic disease caused by the bacterium Xylella fastidiosa that disrupts the transportation of water through the tree. It is commonly transmitted by insects with piercing mouthparts, impacting sycamore, sweetgum, American elm, and various maple, oak, and other tree species. With higher temperatures and drought predicted, the impact of BLS on Fayetteville's trees is likely to increase.

A B C D

Figure 30. Bacterial leaf scorch observed on oak (A), redbud(B), elm (C), and maple (D) leaves. Source: University of Arkansas Cooperative Extension Service

There are other pests and diseases to monitor such as the jumping oak gall disease affecting white oak trees, tent caterpillars with a wide range of hosts, oak wilt, red oak borer insect, thousand cankers disease, laurel wilt disease, and the threat of Asian long-horned beetle that prefers maples but also has a wide range of preferred host tree species. Additional information regarding tree pests and diseases can be found at the University of Arkansas Cooperative Extension Service.

Urban Heat

Like many urban areas, Fayetteville is experiencing the detrimental effects of excessive summer heat. Urban heat is a phenomenon that describes the higher air and surface temperatures in urban areas compared to surrounding rural areas. The temperature difference is largely due to the prevalence of buildings, roads, and other elements of the built environment that absorb and retain heat. Increased emissions of greenhouse gases and reduced tree canopy serve to magnify these impacts. Without strategic intervention, urban heat threatens the well-being and health of the community, particularly vulnerable populations lacking the cooling shade of trees.

With urban heat rising, the concern of tree decline is at the forefront of planning in urban areas. To understand Fayetteville's urban forest vulnerability to urban heat, analyses were conducted to measure and project potential impacts on its trees. These impacts include:

- **Increased stress on trees:** Urban heat adds to stress trees are already facing from factors such as air pollution, drought, and pests, making it more difficult for trees to survive and thrive.
- **Reduced tree growth:** Urban heat can slow down tree growth, which can lead to a decline in the overall health of the urban forest.
- **Increased tree mortality:** Urban heat increases the risk of tree loss, which can lead to gaps in the urban forest.
- **Reduced air quality:** Urban heat tends to hold pollutants in the atmosphere, worsening air quality. This places an additional burden on trees' air purifying capabilities while also having a negative impact on human health and the environment.
- **Changes in plant communities:** Urban heat can lead to changes in the composition of plant communities, as some species are more tolerant of heat than others. This can lead to a loss of biodiversity in the urban forest

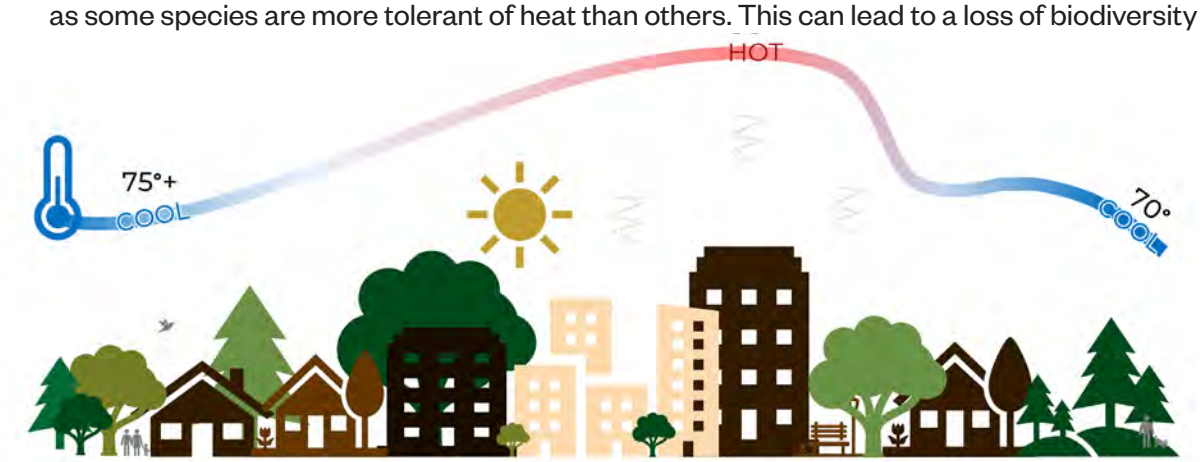

Figure 31. Illustration of the temperature difference in urban areas due to the urban heat island effect.

Changes in Plant Communities

Climate change will have a dramatic impact on the tree species that can survive and thrive in Fayetteville. To inform the Plan's recommendations, the USDA Forest Service Climate Change Tree Atlas was utilized to model habitat changes for tree species growing in the southeast region of the United States, which includes Arkansas. However, some native species are not currently modeled in the Tree Atlas and no cultivars or exotics are included (Iverson, et al., 2019).

The tables below list tree species that may be found growing in Fayetteville and their predicted vulnerability to habitat loss due to changing conditions. It also includes the proportion of those tree species that are currently in Fayetteville's public tree population based on the 2022 sample inventory. The percentages are then extrapolated to represent a public tree population of 25,000 trees (estimated).

SPECIES HABITAT PREDICTED TO INCREASE

Predicted Habitat Change	Tree Species Common Name	Percent of Fayetteville's Street Trees
Species Habitat Predicted to INCREASE Note: this list is not all inclusive or a recommendation, it is an ever-evolving list.	Princeton Elm	7%
	Post oak	6%
	Willow oak	6%
	Blackgum	4%
	New Harmony Elm	3%
	Red maple	3%

SPECIES HABITAT PREDICTED TO DECREASE

Predicted Habitat Change	Tree Species Common Name	Percent of Fayetteville's Street Trees
Species Habitat Predicted to DECREASE Note: this list is not all inclusive or a recommendation, it is an ever-evolving list.	Pin oak	5%
	Northern red oak	3%
	Sugar maple	3%
	Serviceberry	2%
	Bur oak	1%
	Silver maple	0.4%
	Shagbark hickory	0.4%
	American basswood	0.3%
	Black oak	0.2%
	Ohio buckeye	0.1%
	Black locust	0.1%
Total		**16% or 3,899 Trees**

Table 12. USDA Forest Service Climate Change Atlas for tree species habitat in Arkansas predicted to decrease (low emission scenario).

Figure 32. Summary of the climate change vulnerability of Fayetteville's public street trees. Source: USDA Climate Change Atlas

Important Note: The USDA Forest Service Tree Atlas models predict habitat change for 134 native tree species in the eastern United States. The research is then modeled for tree species in the southeast U.S. including Arkansas. Some native species are not currently modeled in the Tree Atlas and no cultivars or exotics are included. With limited data currently available on the resilience and vulnerability of native Arkansas tree species, this table provides a glimpse of how the species' composition of Fayetteville's urban forest may change.
Web source: www.fs.usda.gov/nrs/atlas/tree/

Habitat Increase	No Habitat Change	Habitat Decrease
51%	12%	16%
or 12,703 public street trees	or 2,913 public street trees	or 3,899 public street trees

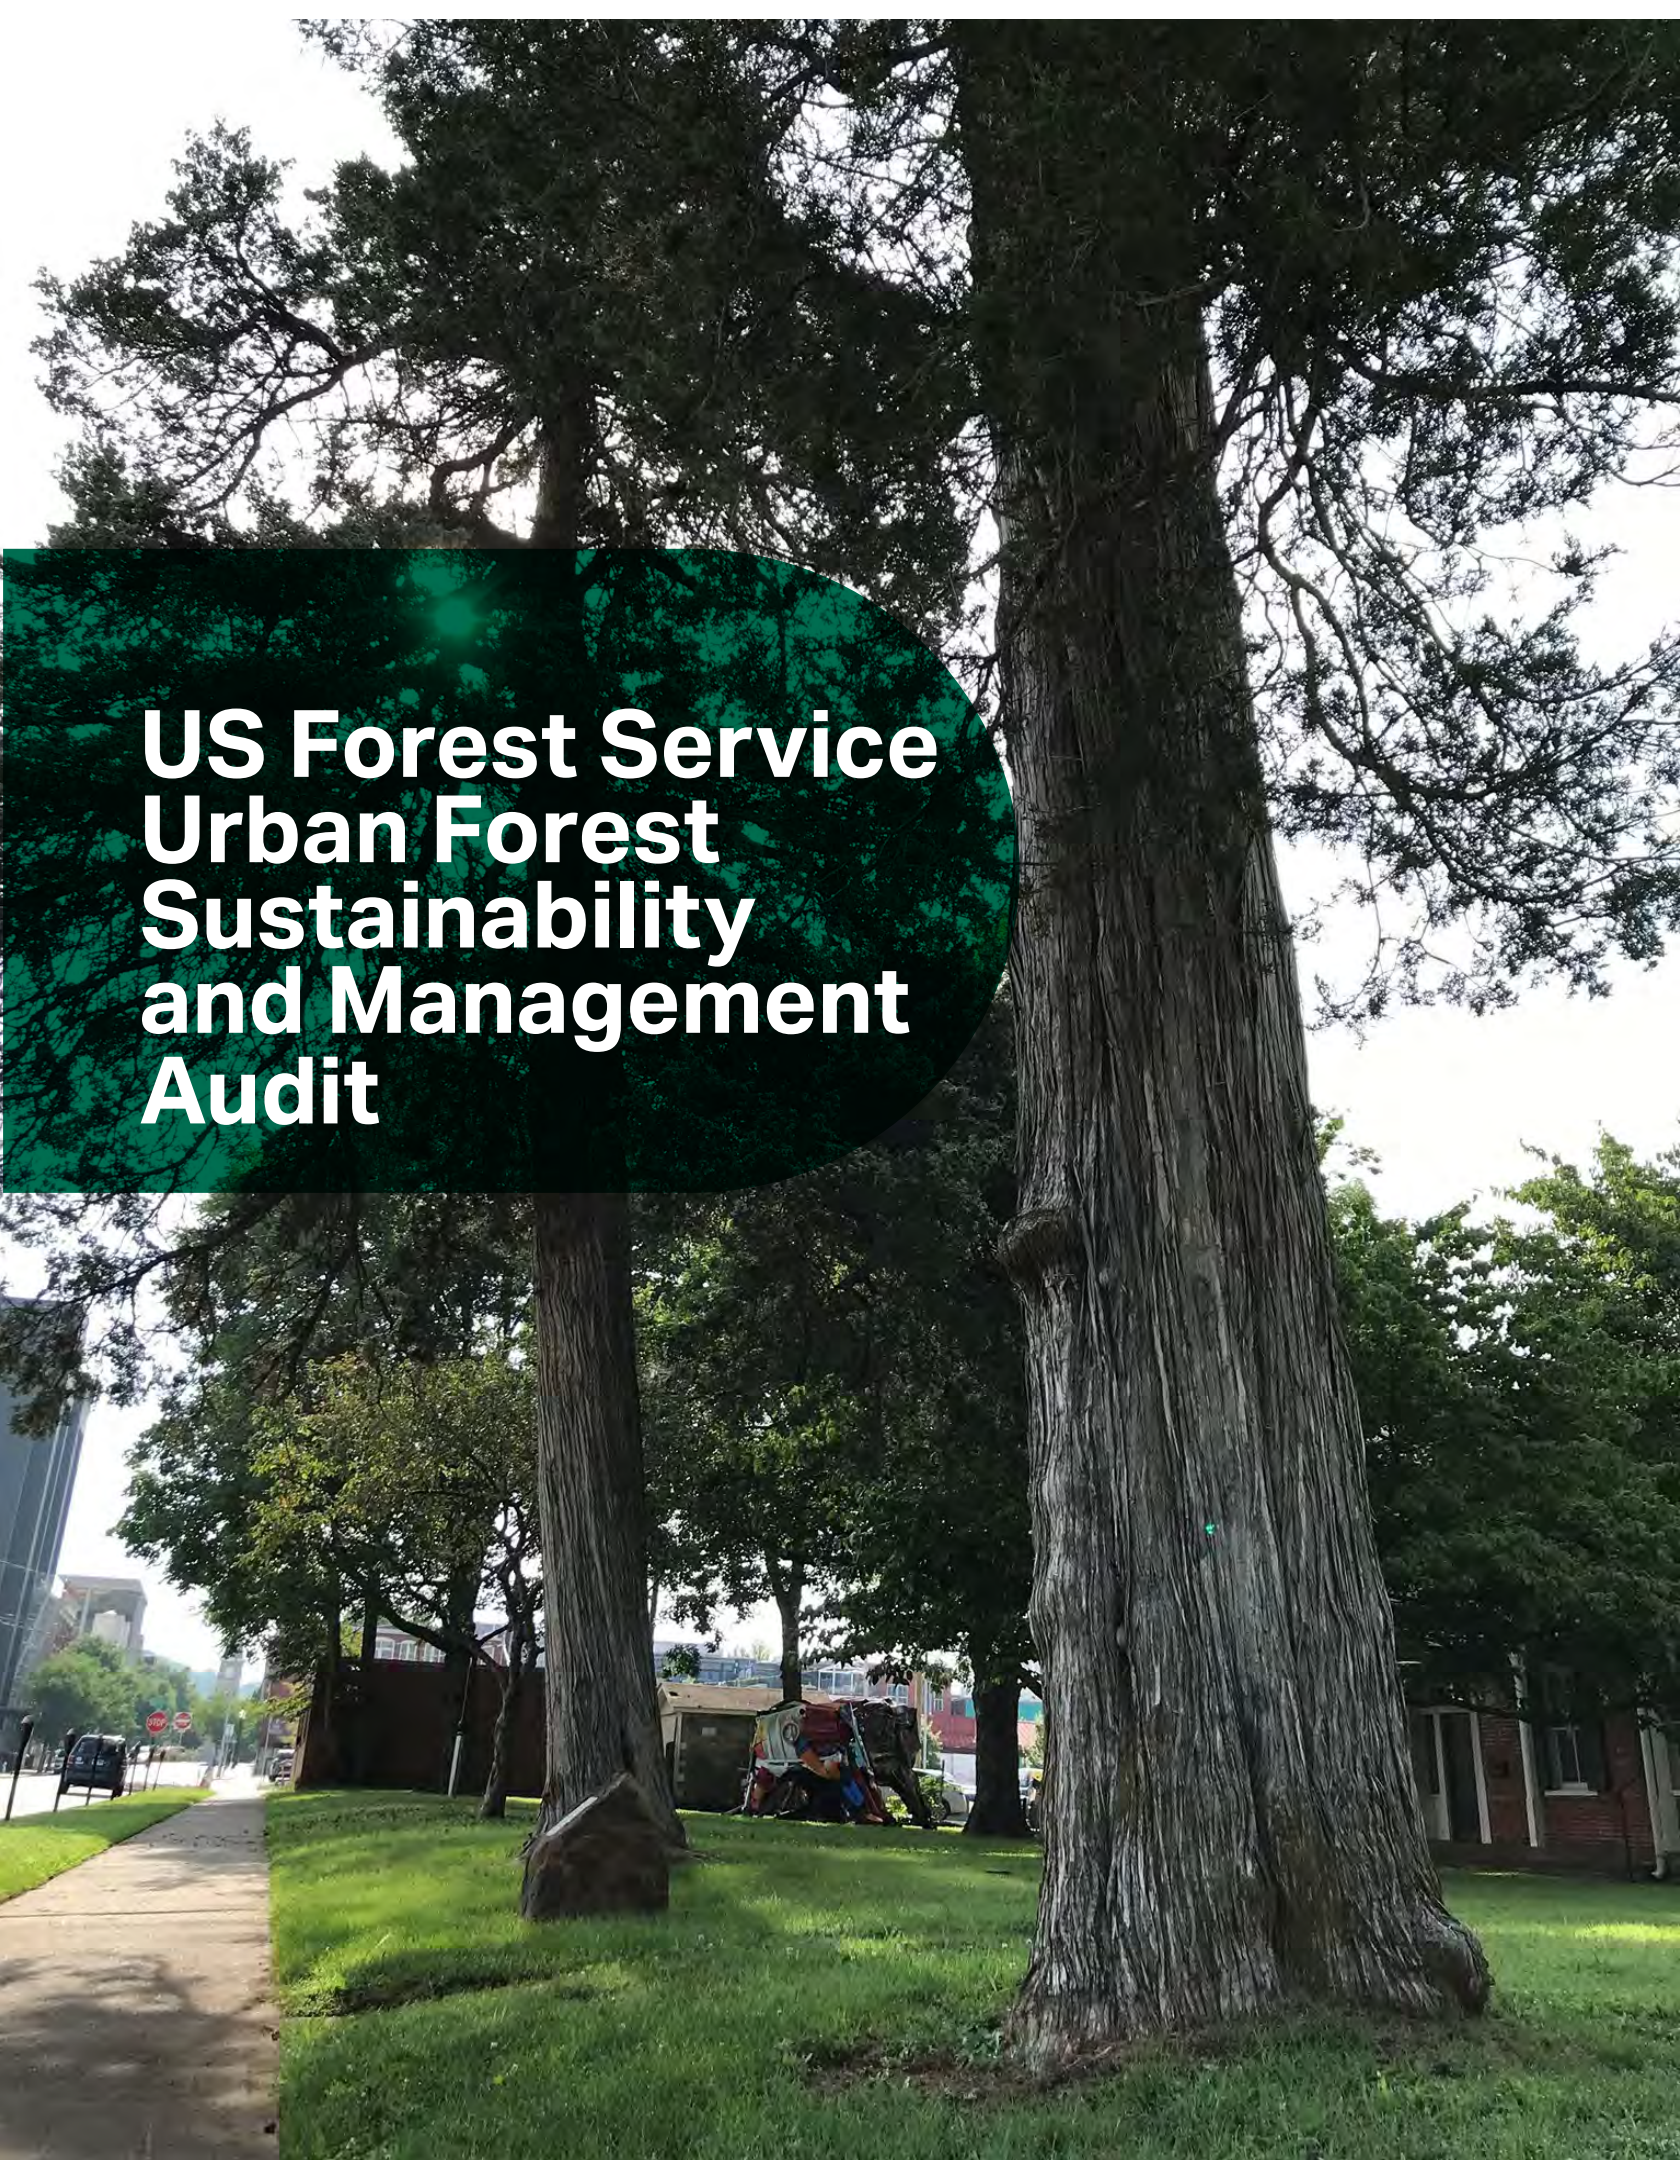

Table 13. Summary of the climate change vulnerability of Fayetteville's public street trees. Source: USDA Climate Change Atlas

According to the Climate Change Atlas and based on the 2022 sample inventory of Fayetteville's public street trees, 51% or an estimated 12,703 trees are expected to have their growing conditions and habitat improve and increase due to climate change. 12% or 2,913 public trees in Fayetteville are predicted to not be impacted by changing climates and 16% or 3,899 trees are predicted to be negatively impacted by climate change and experience habitat loss.

SUMMARY OF URBAN FOREST VULNERABILITIES

In summary, the key issues or challenges facing Fayetteville's urban forest that are addressed with the Urban Forestry Management Plan include:

- Managing the urban forest for sustainability and resiliency
- Addressing street tree maintenance needs
- Tree risk management
- The need for updated tree-related regulations
- Development pressure and construction / infrastructure conflicts
- Limited resources to address climate change impacts
- Strategic tree planting programs and initiatives
- Equitably expanding tree canopy cover, associated benefits, and levels of service
- Revitalizing and strengthening community tree stewardship

US Forest Service Urban Forest Sustainability and Management Audit

INDICATORS OF A SUSTAINABLE URBAN FOREST

Methodology

To assess the current state of Fayetteville's urban forest, the programs that manage it, and the community that shapes and benefits from it, a comprehensive evaluation was conducted using the framework of the U.S. Forest Service's Urban Forest Sustainability and Management Audit (Abbot, et al., 2015).

The framework was adapted from the Model of Urban Forest Sustainability (Clark, et al., 1997) and subsequent iterations. The primary objectives of the evaluation of Fayetteville's urban forest are defined by the authors and adapted by the Fayetteville Urban Forestry Management Plan consulting team:

- Engage the full spectrum of the organizations' management team
- Provide program direction for ongoing professional training
- Conduct a gap analysis of management practices and the health of urban forests
- Provide strategic direction to improve the health of the urban forest
- Optimize management for environmental justice and equitable distribution of resources

A sustainable system can be defined as one that survives or persists. In the context of urban forests, the objective can be stated as attempting to achieve the maximum long-term benefits over the greatest amount of time. Clark's framework provides specific criteria to evaluate sustainability along with measurable indicators. Social and economic factors as well as natural science are considered, as sustainability is often viewed as the "overlap between what is ecologically possible and what is societally desired by the current generation". Recognizing that both conditions will change over time, sustainability is addressed as a process rather than a goal (Clark, et al., 1997).

Clark's framework categorizes urban forest sustainability indicators in terms of the trees (or resource), the management, and the people who benefit from the urban forest. Within each category, a series of urban forestry industry standards and best management practices were used to evaluate Fayetteville's current performance level. Indicators were rated as low, medium, or high based on available data and information provided by stakeholders. Assessment results were used to identify areas where Fayetteville's urban forest can be improved and to develop recommendations.

The complete Urban Forest Audit for Fayetteville conducted in 2023 is available in Appendix B. The following provides a summary of the evaluation:

RESULT

Based on the analysis of findings from the needs assessment, Fayetteville scored a 73% in terms of urban forest sustainability and management as defined by the U.S. Forest Service, partners, and planning consultants. Based on similar audits completed by the urban forestry consultants, of the 16 audits, the average score is 64%. The City of Fayetteville scored relatively high when compared to other urban forestry audits completed by the consultants for other communities of similar size. Overall, the City scored highest in Professional Capacity and Training, Community, Green Asset Management, and Risk Management— all of which are at or above 75%. The Urban Forestry Management Plan provides guidance to maintain these strengths and to address shortcomings as opportunities.

Fayetteville's Urban Forest Audit Results (2023)

Figure 33. Summary of the 2023 Urban Forest Audit completed for Fayetteville's Plan.

URBAN FOREST AUDIT SUMMARY DISCUSSION

The main purpose of the urban forest audit is to apply the research and findings gathered throughout the planning effort to inform the Plan's goals, strategic actions, and targets. This audit or "gap analysis" enables the City's Urban Forestry Program to control different aspects of its program with data. This gap analysis identified the shortcomings that the program should overcome and by quantifying them, the program can make improvements. It also enables effective monitoring of Plan goals in that the audit categories and elements can be revisited at key intervals in the implementation process to measure progress and adapt strategies accordingly. For the comprehensive evaluation of all subcategories within the Urban Forest Audit, see Appendix B.

INTERPRETING THE URBAN FOREST AUDIT SCORES

The Urban Forest Audit System should serve as a baseline assessment from which progress can be measured and strategies can be adjusted using an adaptive management approach. Overall, Fayetteville scored a 73 out of 100 based on the consultants' evaluation. The scores resulting from the evaluation are informative but should not be considered a definitive assessment or a reason for excessive action due to a currently low score or inaction due to a high score. The following provides an interpretation of the scores for the City to consider when implementing the Plan's corresponding actions.

See Appendix B for details regarding scores for each Audit category and the criteria or indicators to improve scores for each category.

Category	Findings
Management Policy and Ordinances Rating of 71%	The City scored relatively average in this category due to the existing tree ordinances, development standards, and the Tree Preservation and Landscape Manual. The Tree-related Plans and Regulations section of this Plan summarizes existing tree ordinances and Appendix C provides a summary of an evaluation of these ordinances based on industry standards and best practices. The City's Comprehensive Plan includes urban forestry and tree canopy as a vital component in addressing climate change.
Professional Capacity and Training Rating of 89%	Staff have industry certifications, qualifications, and training. The Urban Forestry Program has staff for park and trail tree maintenance and to administer tree preservation and protection for new development. In addition, the program works with other departments, partners, and contractors to plant trees. In recent years, staffing levels increased but capacity should be evaluated periodically to ensure it aligns with the goals of this Plan and the service demands.
Funding and Accounting Rating of 67%	The City's adopted budgets have specific line items for the Urban Forestry Program and staff. The City's Tree Escrow accoun historically was the primary funding source for urban forestry activities. The figures reported for Arbor Day Foundation Tree City USA accreditation incorporate budgets from other departments but do not include the urban forestry budgets for Public Works' programs responsible for planting trees. Those programs in Parks, Natural Resources and Cultural Affairs are now funded primarily through the general funds.
Decision and Management Authority Rating of 63%	An Urban Forestry Advisory Board exists to advise on urban forestry matters. Currently, urban forest management is distributed across three groups in three different departments. The delineation of responsibilities is unclear and there is no single department or staff person designated as a point of contact for urban forestry. It is likely that communications and workflows could be improved with an adjusted program structure. Unique to other cities, Fayetteville's Urban Forester in Development Services has direct authority and oversight on tree preservation and protection for new development.
Tree-related Inventories Rating of 65%	Fayetteville completed a sample inventory of public trees and planting spaces along with a private tree sample inventory. In addition, the City conducted GIS analyses of urban tree canopy cover over four time periods and examined the correlation of tree canopy to socio-demographic data. Also, the Urban Forester actively tracks canopy gains and losses occurring on development projects— one of the most robust tracking systems the urban forestry consultants have seen. Within the City, the University of Arkansas has an inventory of its trees through its Arboretum Mapping Project.
Tree-related Plans Rating of 54%	Tracking and reporting of urban forest management activities, this Plan, and urban forestry referenced in the Comprehensive Plan and canopy goals in the Energy Action Plan resulted in higher than average scores for certain elements within this category. The City completed a Tree Canopy Cover and Environmental Equity Story Map and supporting reports.
Risk Management Rating of 78%	The Urban Forester in Parks, Natural Resources and Cultural Affairs is trained in tree risk assessments and the City has an adopted standard of care. The City completed a sample public tree inventory in 2022 to inform management strategies. The City also has an Emergency Operations Plan, actively manages invasive plant species and pests and diseases, and has lists and resources for recommended and prohibited trees.

Disaster Planning Rating of 64%	The City's maintenance staff and contractors address downed trees and limbs and collaborate when extensive response is needed.
Standards, and Best Practices Rating of 73%	Fayetteville has an average rating for this category though its strengths include tree ordinances, the Tree Preservation and Landscape Manual, Comprehensive Plan, Standard Details such as the Tree Preservation detail, clear guidance on the City's website relating to regulations and best practices, tree species lists, and tree protection requirements for construction and development.
Community Rating of 89%	Fayetteville has been a Tree City USA city consecutively since 1995, demonstrating the value placed on urban forests. This Plan included a public survey and has engaged and informed the public through an interactive project website— Speak Up Fayetteville. The City conducts Arbor Day events, has an Urban Forestry Advisory Board, engages the public through social media, website, and other platforms, addresses service requests, conducts the annual Celebration of Trees event, has an online resource for Amazing Trees in Fayetteville, provides education resources and trainings, and works closely with other community partners.
Green Asset Management Rating of 80%	The sample public tree inventory determined there are 54 unique tree genera and 111 unique tree species resulting in no tree species exceeding the recommended diversity thresholds. The size classes of public trees are in line with an ideal distribution and the majority (75%) of public trees are in good condition. Also, only 6%of trees are recommended for removal and the primary maintenance need is clearance pruning (8%). Most importantly, the City's Park Maintenance right-of-way crews proactively prune approximately 4,000 public trees per year resulting in an estimated 5.7-year rotation and the Urban Forestry Program conducts public park and trail tree maintenance.

Table 14. Interpretation of the 2023 Urban Forest Audit scores

The information provided in the table above describes the current conditions of Fayetteville's urban forest, the programs that manage it, and the community framework. As recommended in the Plan's monitoring methods, the City should use this framework to evaluate implementation progress, report successes, and inform changes to Plan actions. Many of the urban forest audit elements were given a rating of "In Development" as they previously did not exist but are addressed in this Urban Forestry Management Plan. This means that the City is already well underway in advancing its program and its Urban Forest Audit score.

Section 3: Vision for the Future and Recommendations

INTRODUCTION

This section provides guidance and recommendations for the City of Fayetteville to continue to provide high levels of service now and into the future over the next 10 years. The Urban Forestry Management Plan's recommendations include those that may only take a few months and others that will require a coordinated effort that may need to continue on beyond the 10-year timeframe.

PLAN VISION STATEMENT

"Healthy Trees, Healthy City: To cultivate a thriving, diverse, and well-maintained tree canopy that enhances the livability, health, and sustainability of our community for current and future generations."

Vision

What does the urban forest and its programs look like 10 years from now?

The vision guides direction on where Fayetteville is headed and helps guide recommendations for the future.

Guiding Principles

What are we aspiring to achieve?

These are the aspirations for the City over the next 10 years. They are key themes for organizing the Plan and include a citywide canopy cover goal.

Goals

How do we achieve our principles and vision?

The goals are specific opportunities for the City to move toward the 10-year vision.

Strategies

What is the approach to take?

Strategies provide the general direction or method to take to achieve the goals.

Priority Actions

What is the next step?

This is the prioritized list of steps to take.

GUIDING PRINCIPLES, GOALS, STRATEGIES, AND ACTIONS

A series of guiding principles supported by goals, strategies, and actions are provided to serve as a 10-year roadmap toward the urban forest vision.

GUIDING PRINCIPLES AND GOALS OVERVIEW

Fayetteville's Urban Forestry Management Plan was designed to guide the City in managing, protecting, and growing its urban forest. The goals, strategies, and priority actions were developed based on research and analysis of available data, extensive internal and external engagement, and an evaluation of urban forest sustainability criteria. The resulting goals and recommendations address the current conditions, existing and potential challenges, and shared priorities described in Section two of the Urban Forestry Management Plan. The Plan's long-term framework supports the shared vision for Fayetteville's urban forest.

To achieve the vision for the urban forest, a citywide canopy cover goal 44.4 % over 30 years was established as the cornerstone metric for tracking progress in implementing the Urban Forestry Management Plan. The canopy goal embodies the City's commitment to sustainability and community well-being. This metric can be used by the City for tracking and monitoring the urban forest and it resonates with residents, creating a tangible and shared vision of a lush and vibrant urban environment. Moreover, the canopy cover goal aligns with other goals and priorities in the City such as environmental stewardship, climate change resilience, public health, air quality enhancement, and temperature moderation. By using canopy cover as an overarching measure, Fayetteville ensures a comprehensive approach that not only improves the urban ecosystem but also fosters a sense of pride, unity, and responsibility among its residents.

Fayetteville's Tree Canopy Cover Goal

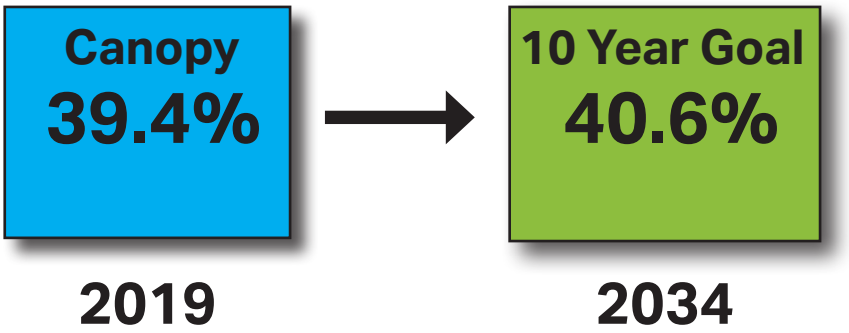

Figure 34. Fayetteville's 10-year canopy goal milestones and targets.

The 2023/2024 Urban Forestry Management Plan is a testament to Fayetteville's unwavering commitment to urban forestry. The overall 30-year goal is to increase canopy from 39.4% to 44.4%. The first step in achieving the 30-year goal is to focus on the actions necessary for the next ten years. The ten-year goal is to increase canopy by 1.2% to 40.6%.

To reach the 10-year goal, an average of 1,850 trees must be planted annually. The approach to reach this number is flexible and allows adjustments so that staff only plant trees they can be maintained to maturity. Planting trees that will reach maturity is a key aspect of this plan and goal for Urban Forestry staff.

There are three contributing tree planting sources: city-led planting, public planting through tree giveaways, and development of tree plantings.

City Plantings

Public Works Urban Forestry staff has maintained information that lets us know how many trees our maintenance staff can care for each year. Newly planted trees require regular watering, structural pruning, mulching, and monitoring for pests and diseases. After 3-5 years, the regular maintenance is lower and requires pruning every few years as needed. We use a 90% survival rate for our newly planted trees. Communication from Public Works Urban Forestry is key to knowing what our annual tree planting will be for the following year. The number of trees planted by the City will fluctuate based on the maintenance capacity of our Public Works Urban Forestry staff.

Development Plantings

It is estimated from available data that approximately 3,728 trees are planted annually due to development activities. The tree planting numbers presented in this plan are based on a no net canopy loss, meaning the number of trees removed, principally due to development, are replaced. Development activities that remove the canopy must be mitigated to reach the canopy goals, which is part of the standards and purpose in 177.01 B1: "Promoting reasonable conservation and replenishment of valued tree canopy and vegetation." Urban Forestry staff suspects this is insufficient to replace the lost canopy from development. Canopy has increased from 2012 to 2019, possibly due to the replacement canopy from development or more accurate imagery. More data is needed to study this information.

Public Plantings

Current tree giveaway programs such as "Celebration of the Trees" and "Invasive Bounty" provide about 1,350 trees annually. The survival rate for the trees given away is around 65%. This rate shows that approximately 75% (Roman 2014) of trees get planted, and minus 10% for our standard survival rate, it comes to a 65% survival rate.

Urban Forestry Staff has created a pilot program that works directly with property owners and homeowners' associations to add trees on streets, in lots, or around detention areas. These programs are currently adding

approximately 100 trees to the canopy. The survival rate for these trees is estimated at 90% since the homeowners will be planting them directly and maintaining trees on their property. The annual number of these types of plantings is targed to grow.

Below is an overview of initial planting efforts. Large trees are targeted for development and city plantings, but a mixture of tree sizes is used in the calculations. For calculations, it is assumed that 60% of trees will be large, 30% will be medium, and 10% will be small. Calculations use an average tree canopy diameter of 40 feet (~ 20 years), which equals 1,257 square feet of canopy per tree. The chart below indicates general city-wide efforts before implementing this plan and is used for estimating baseline conditions.

Planting sources	Annual Planting	Survival Rate	Net trees
City Planting	450	90%	405
Citizen Planting (Give Away)	1,350	65%	877
Citizen Planting (Neighborhood Planting)	100	90%	90
Total trees			1,373

The annual goal is 1,850 trees planted, and the City is currently adding 1,373 net trees (survive the first three years) annually. With increased effort, this goal can be achieved. These numbers will grow, as indicated in Appendix A. In five years, staff will reexamine the goals for tree planting as data from development, NAIP GIS Maps and new programs are established, giving more data to update planting goals.

Using this integrated approach, along with preservation and mitigating the loss of canopy, the City of Fayetteville can be confident this ambitious goal is achievable.

PRIORITY PLANTING AREAS

Maintaining and selecting locations for trees to reach maturity requires careful planning and consideration of the location. The following maps are recommended to be used when selecting tree planting areas, these areas are high priority and can have the biggest impact. Social, economic, and environmental considerations go into locating areas for tree planting projects.

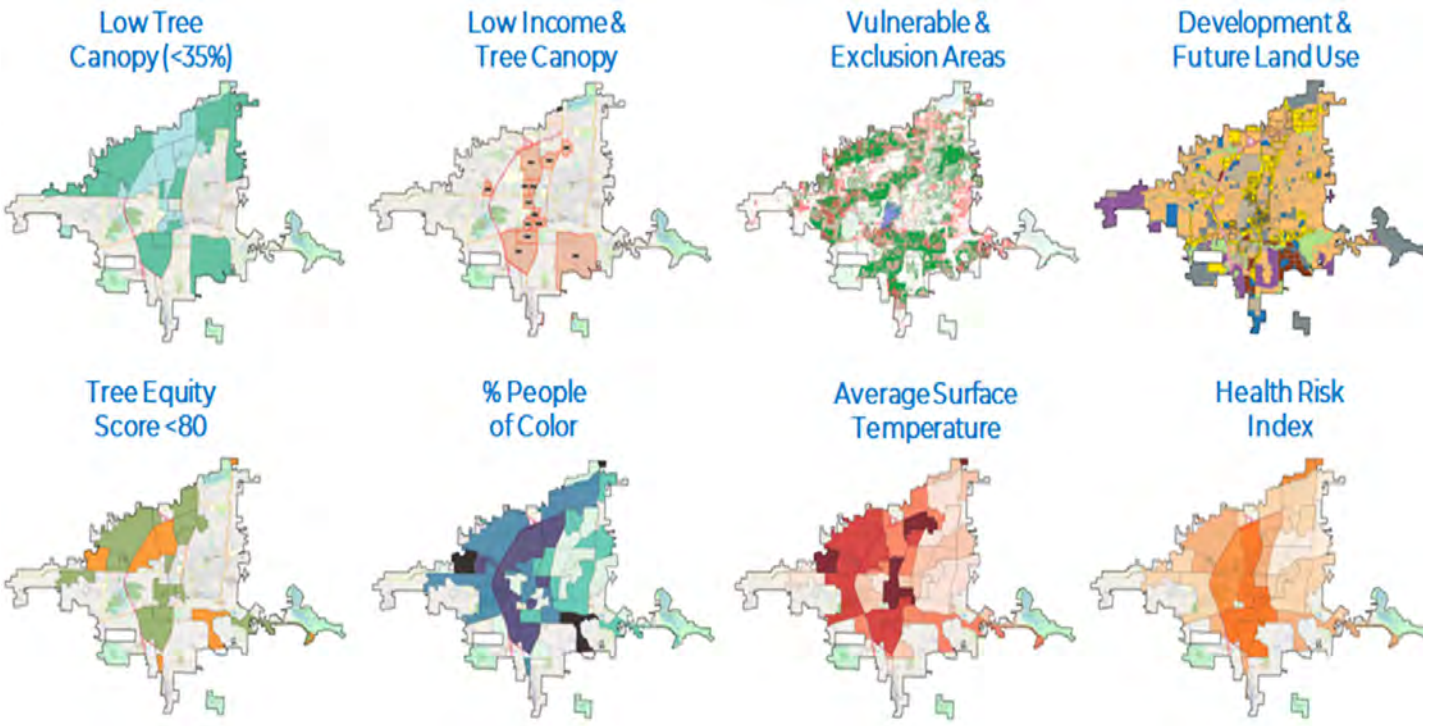

Figure 35. Scenqarios for priority planting areas to achieve canopy goals and the Plan's outcomes.

By identifying priority planting areas to achieve the canopy goal, tree planting and maintenance can be strategically targeted where trees will have the most beneficial impact. The figure above provides an illustration of the priority areas for consideration and Appendix A provides the criteria going into the priorities along with larger maps.

STAKEHOLDER- DRIVEN GUIDING PRINCIPLES AND GOALS

During the analysis of data, collection of information, and gathering of internal and external stakeholder input, a series of overarching guiding principles emerged that helped to set the Plan's direction and solidify its foundation. The following five principles summarize the community's priorities and are reinforced by the feedback received from internal stakeholder engagement sessions. These priorities along with the Urban Forest Audit and the Indicators of Sustainable Urban Forestry (detailed in Section 2) established the foundation of the Plan.

	Guiding Principles	Goals
A 	**Equitable and Resilient Canopy Cover** We value and appreciate the benefits and services provided by the trees in our community. These benefits and services should be maximized and equitably distributed across the City by growing an urban forest that is sustainable and resilient to current and future challenges.	**Goal A1:** Increase tree canopy cover citywide beginning in priority areas and purchased land. **Goal A2:** Implement a cooperative tree planting program with businesses, institutions, organizations, neighborhoods, and property owners. **Goal A3:** Plant trees that are resilient to current and future challenges such as climate change and tree pests.
B 	**Maintenance and Management** We care for our trees and the citywide urban forest to ensure the benefits are available for current and future generations. Our operations and investments prioritize sustainability, fiscal responsibility, and equity.	**Goal B1**: Prioritize public tree maintenance and tree risk management. **Goal B2:** Reduce conflicts between trees and other infrastructure such as sidewalks and utilities. **Goal B3:** Manage harmful tree pests and diseases that are present or expected to impact the urban forest. **Goal B4:** Conduct ongoing industry and professional training for City staff interacting with trees in Fayetteville.
C 	**Tree Preservation and Protection** Our existing tree canopy cover and the investments made in planting and caring for the urban forest are preserved through sound but fair policies and regulations that align with shared priorities in the city and best practices.	**Goal C1:** Establish or update policies and practices to reduce the urban forest's vulnerability to tree pests, diseases, and climate change impacts. **Goal C2:** Update or amend tree-related ordinances to support the citywide canopy cover goal and other goals in the Plan. **Goal C3:** Monitor and enforce tree-related ordinances.
D 	**Funding and Levels of Service** The programs and staffing involved with the trees in our community have the resources necessary to meet current and future demands and challenges.	**Goal D1**: Procure funding for the City to purchase land for tree preservation and planting and to achieve other City goals. **Goal D2:** Increase funding to purchase trees to be planted and supporting infrastructure in support of the canopy cover goal. **Goal D3:** Evaluate the staffing levels, structure, and resources for tree-related programs and adjust as needed to meet the goals of the Plan and growing demands of the urban forest.
E 	**Community Education, Engagement, and Stewardship** A sustainable urban forest requires a shared commitment from the City and the community. We will foster tree stewardship in our community through equitable and impactful community education and engagement.	**Goal E1:** Continue to achieve Tree City USA status and other industry recognitions. **Goal E2:** Create and implement an engagement strategy for all demographics and stakeholders in the community. **Goal E3:** Provide inclusive program offerings such as events, education, and training to meet the needs of all.

Figure 36. Guiding principals and goals.

A) EQUITABLE AND RESILIENT CANOPY COVER

We value and appreciate the benefits and services provided by the trees in our community. These benefits and services should be maximized and equitably distributed across the City by growing an urban forest that is sustainable and resilient to current and future challenges.

Stakeholder Input and Support

Experts and stakeholders stressed the importance of setting and achieving local and citywide canopy goals to support the long-term health and sustainability of the urban forest. For example, planted trees must be resilient to drought and extreme weather events while supporting biodiversity in the urban ecosystem. A diverse mix of tree species is necessary to ensure the ability of the urban forest to survive pest and disease outbreaks. Success is predicated on planting trees matched to the site in terms of soils, water availability, space, and desired function. Post-planting care is required for trees to become established and thrive in the urban environment.

GOAL A1: INCREASE TREE CANOPY COVER CITYWIDE BEGINNING IN PRIORITY AREAS AND PURCHASED LAND.

Goal A1 Strategies
a) Procure funding to purchase land for the City to preserve and plant trees.
b) Review and refine the priority planting areas provided by the Plan.
c) Continue to offer free trees to citizens.
d) Plant a minimum of 1,850 trees per year for 10 years and reassess citywide canopy cover.
e) Coordinate with other City plans and programs.
Goal A1 Priority Actions
Review, refine, and finalize the canopy cover goals and planting priorities. Consider the status of recommendations outlined in the 2012 Urban Tree Canopy Assessment Report (see Table 9 in the Urban Forestry Management Plan).
Develop a neighborhood-level and citywide planting plan to achieve the canopy goals. Align efforts with the Climate Action Plan, Energy Action Plan, the 2023 Park and Recreation System Master Plan, and other initiatives.
Fully integrate tree plantings into City projects. Use the recommendation to inform the annual tree planting plan for parks as recommended in Goal E3 of the 2023 Park and Recreation System Master Plan.
Continue to offer tree care information especially in the priority neighborhoods.
Monitor progress toward achieving the canopy goals and planting targets. Use high-resolution imagery to assess and monitor canopy cover every two years. At minimum, reassess canopy cover citywide and by planning boundaries by 2029 for a 10-year canopy change assessment.

GOAL A2: IMPLEMENT A COOPERATIVE TREE PLANTING PROGRAM WITH BUSINESSES, INSTITUTIONS, ORGANIZATIONS, NEIGHBORHOODS, AND PROPERTY OWNERS.

Goal A2 Strategies
a) Identify existing and potential stakeholders.
b) Collaborate and share resources to identify program funding opportunities.
c) Track progress and recognize successes.
d) Conduct pilot programs to determine efficient ways to assist private land owners with tree plantings.
Goal A2 Priority Actions
Draft a list of existing and potential stakeholders with input from multiple departments.
Create a task force or utilize the Urban Forestry Advisory Board to collaborate on program design, priority planting locations, funding, tree selection, and ongoing maintenance.
Utilize data management software to track the plantings and recognize partnerships and program success possibly during Arbor Day celebrations.

GOAL A3: PLANT TREES THAT ARE RESILIENT TO CURRENT AND FUTURE CHALLENGES SUCH AS CLIMATE CHANGE AND TREE PESTS.

Goal A3 Strategies
a) Use data and research to make decisions on approved tree species for planting.
b) Select the right tree for the right site.
c) Provide ongoing tree care and monitor the condition of tree plantings.
Goal A3 Priority Actions
Utilize the Climate Tree Atlas study in the Plan to adjust approve tree species lists.
Evaluate the composition of the urban forest to inform changes to tree species selection for planting to maintain diversity.
Provide watering and irrigation for public tree plantings.
Evaluate measures to improve the enforcement of regulations for post-planting maintenance within Chapters 167 and 177 of Fayetteville's Code of Ordinances.

B) MAINTENANCE AND MANAGEMENT

We care for our trees and the citywide urban forest to ensure the benefits are available for current and future generations. Our operations and investments prioritize sustainability, fiscal responsibility, and equity.

Stakeholder Input and Support

The community would like to see more shade trees along streets and sidewalks, recognizing that this will require additional resources. Participants in the engagement to develop the Plan stated that they would like the City to maintain street trees in a routine, proactive manner. City staff are in support of cooperative planting programs with businesses, institutions, organizations, and individuals where trees can be planted in yards to shade sidewalks. The staff engaged in the planning effort also support improving policies and practices for better public tree maintenance addressing concerns such as tree pests, diseases, and climate change impacts.

GOAL B1: PRIORITIZE PUBLIC TREE MAINTENANCE AND TREE RISK MANAGEMENT.

Goal B1 Strategies
a) Assess the public tree population for maintenance needs and potential risks.
b) Develop a public tree maintenance plan.
c) Continue to assess and possibly increase Urban Forestry Staff in Public Works.
d) Stay current with industry research, tools, technology, standards, and best practices.
e) Focus on planting strategies and designs that produce long-lived trees.
Goal B1 Priority Actions
Periodically conduct sample inventories or windshield surveys of public trees to identify changes to maintenance and risk management priorities.
Create annual work plans and seek funds to implement those plans using the actions within Goal D3.
Track maintenance records for public trees. Continue to add assets and management data to databases that track total asset management for more efficient maintenance planning.
Acquire and maintain industry certifications and trainings for Urban Foresters.
Continue to manage invasive plant species on public properties and within public rights-of-way. Support controlled burns to manage invasives and wildlife on public properties.
Strengthen or establish public tree risk assessment and mitigation protocols.
Analyze the work plans in relation to staffing and possible contracting work.

GOAL B2: REDUCE CONFLICTS BETWEEN TREES AND OTHER INFRASTRUCTURE SUCH AS SIDEWALKS AND UTILITIES.

Goal B2 Strategies
a) Assess public trees for current and potential infrastructure conflicts.
b) Identify existing and potential alternative solutions to infrastructure conflicts.
c) Coordinate with internal and external stakeholders.
d) Ensure trees are planted with the proper soil volume as shown in City details.

Goal B2 Priority Actions
Establish or improve protocols and checklists for evaluating current and potential infrastructure conflicts which includes potential alternative solutions to the conflict.
Establish regular meetings and protocols with internal and external stakeholders for improved coordination during infrastructure and utility planning, design, construction, and maintenance phases.

GOAL B3: MANAGE HARMFUL TREE PESTS AND DISEASES THAT ARE PRESENT OR EXPECTED TO IMPACT THE URBAN FOREST.

Goal B3 Strategies
a) Identify the primary tree pests and diseases of concern.
b) Provide information for identifying tree pests and diseases.
c) Monitor public trees and the urban forest for tree pests and diseases of concern.
d) Create a preliminary emerald ash borer (EAB) plan.
Goal B3 Priority Actions
Develop and implement an integrated pest management or plant health care plan for public trees.
Integrate tree pest and disease education into the community education strategy (Goal E1 – E3).
Focus on education and technical assistance with large private landowners.

GOAL B4: CONDUCT ONGOING INDUSTRY AND PROFESSIONAL TRAINING FOR CITY STAFF INTERACTING WITH TREES IN FAYETTEVILLE.

Goal B4 Strategies
a) Identify the staff and training needs and secure the annual budget required.
b) Conduct internal cross-training and document training materials and protocols.
c) Continue involvement with state wide boards and commisisons.
Goal B4 Priority Actions
Utilize free and available online trainings and materials where appropriate.
Support the Urban Forestry Advisory Board in attending the free online Tree Board University program developed by the U.S. Forest Service.

C) TREE PRESERVATION AND PROTECTION

Our existing tree canopy cover and the investments made in planting and caring for the urban forest are preserved through sound but fair policies and regulations that align with shared priorities in the City and best practices.

Stakeholder Input and Support

Preservation and protection of existing trees was identified as a high priority. Existing mature trees have an outsized impact on sustainability, environmental justice, wildlife and ecosystems, and human health. Exploring changes to the tree ordinances was raised in most engagement activities and sessions. Preservation and planting requirements should be robust but not unduly burdensome to developers. They should also be tailored to the biome, e.g., different standards for natural prairies compared to forested areas. Trees planted or protected should survive post-development and be replaced if they die. City staff are in support of procuring funding to purchase land for tree preservation in order to maintain and increase tree canopy cover.

GOAL C1: ESTABLISH OR UPDATE POLICIES AND PRACTICES TO REDUCE THE URBAN FOREST'S VULNERABILITY TO TREE PESTS, DISEASES, AND CLIMATE CHANGE IMPACTS.

Goal C1 Strategies
a) Quantify the urban forest's role in climate change mitigation.
b) Maintain tree regulations to minimize urban forest vulnerabilities.
c) Assesss development workloads and increase Urban Forestry Staff in Development Services.
Goal C1 Priority Actions
Calculate the carbon sequestration, storage, and avoided carbon generated from the citywide urban tree canopy cover and the public tree population using industry tools such as i-Tree. Utilize the data to build support and inform climate-related plans.
Update the Tree Preservation and Landscape Manual with any changes to tree-related ordinances.
As needed, update tree lists that prioritize native and climate-resilient tree species. Consider updates based on the diversity of the urban forest and existing / potential pests and diseases. At minimum, maintain a list of prohibited tree species reflective of the latest research and concerns.

GOAL C2: UPDATE OR AMEND TREE-RELATED ORDINANCES TO SUPPORT THE CITYWIDE CANOPY COVER GOAL AND OTHER GOALS IN THE PLAN.

Goal C2 Strategies
a) Monitor and track tree plantings and removals.
b) Adopt a no-net-loss policy for public trees.
c) Review and implement recommended changes to tree ordinances.
Goal C2 Priority Actions
Identify the departments, roles, and workflows (i.e., City Engineering and Transportation) and track public tree removals and plantings in a data management program.
Analyze the potential causes for canopy cover gains and losses as identified in the canopy assessments of four time periods.
Strengthen the mechanisms for tracking tree preservation, removals, plantings, mitigation, and canopy percentages for development projects. Use the tracking to inform potential changes to minimum canopy requirements for zoning designations as needed to support the canopy goal.

Review and refine the tree ordinance evaluation worksheet completed as part of the Plan (see Appendix C). Gather feedback from internal and external stakeholders before significant changes to ordinances are made. For example, develop incentives to preserve existing canopy instead of opting for mitigation and consider updating the penalties for illegal removal of protected trees.
Conserve open space and protect areas of significant riparian benefit, tree canopy, prairie, and other environmental resource through cluster development provisions, density controls, protective easements, and/or other development tools.
Update design standards to be more accommodating to trees and the necessary soil volume while balancing the needs for development.

GOAL C3: MONITOR AND ENFORCE TREE-RELATED ORDINANCES.

Goal C3 Strategies
a) Distribute information and resources regarding changes to tree regulations.
b) Establish a protocol when tree regulations are changed.
c) Recognize exemplary tree preservation practices and projects.
Goal C3 Priority Actions
Update information on the City's website and in materials as tree regulations change.
Consider developing a protocol for scheduled inspections, random spot checks, and recordkeeping.
Develop a program that recognizes exemplary and innovative development projects that preserve and expand tree canopy cover.

D) FUNDING AND LEVELS OF SERVICE

The programs and staffing involved with the trees in our community have the resources necessary to meet current and future demands and challenges.

Stakeholder Input and Support

During engagement exercises, concerns were raised regarding limited resources, staffing, funding, and time to address the current climate challenges. Additional resources in Development Resources, where code compliance officers are located, are needed to inspect, monitor, and enforce tree regulations. Proactive maintenance in Public Works is needed to water, plant new trees, and monitor new trees that will mitigate the impact of climate change. Stakeholders largely supported allocating additional resources to ensure the availability of urban forest resources now and in the future. City staff support increasing funding to purchase trees to plant towards a citywide canopy cover goal.

GOAL D1: PROCURE FUNDING FOR THE CITY TO PURCHASE LAND FOR TREE PRESERVATION AND PLANTING AND TO ACHIEVE OTHER CITY GOALS.

Goal D1 Strategies
a) Identify potential areas for land acquisition that meets Urban Forestry goals and City goals.
b) Coordinate with partners for land acquisition and management.
c) Lead by example and distribute information about land acquisition program.
Goal D1 Priority Actions
Review with internal partners the priority areas for tree planting and preservation to identify opportunities for land acquisition. Consider vacant land as an initial step and utilize the City Plan 2040's Enduring Green Network map and data.
Develop a multi-year program and allocate funding for land acquisition. Build support from land trusts and other organizations.
Implement best management practices and share information for private landowners to learn about the opportunities for urban forest stewardship on their own property(s).
Develop management plans for the properties purchased.

GOAL D2: INCREASE FUNDING TO PURCHASE TREES TO BE PLANTED AND SUPPORTING INFRASTRUCTURE IN SUPPORT OF THE CANOPY COVER GOAL.

Goal D2 Strategies
a) Identify the funding gap and funding source(s).
b) Communicate the benefits of a robust planting effort.
c) Develop and implement a tree planting program aligned with the canopy goal.
Goal D2 Priority Actions
Determine the funding gap to meet the goal of 1,850 per year.

Quantify the benefits and services provided by the 1,850 trees planted per year to communicate the future value added to Fayetteville's ecosystem, community, and economy.
Secure the necessary funding to meet the annual tree planting targets.
Provide bi-annual reports on canopy goal progress to justify continued funding for tree plantings.
Develop communications with local tree nurseries concerning the availability of the tree species for planting to reduce costs and address tree species diversity goals.

GOAL D3: EVALUATE THE STAFFING LEVELS, STRUCTURE, AND RESOURCES FOR TREE-RELATED PROGRAMS AND ADJUST AS NEEDED TO MEET THE GOALS OF THE PLAN AND GROWING DEMANDS OF THE URBAN FOREST.

Goal D3 Strategies
a) Track and report program activities and Plan implementation progress.
b) Analyze the organization of departments involved with trees in Fayetteville.
c) Conduct cost-benefit analyses and evaluate growing service demands and evaluate in house staffing levels, and their ability to meet the goals of this plan.
Goal D3 Priority Actions
Share with City departments and stakeholders the progress made in implementing the Plan by using the Monitoring section's guidelines. Successes and shortcomings build awareness and supporting for changes to staffing and program structure(s).
Evaluate staffing and contractor resources required to effectively plant trees aligned with canopy goals and to provide post-planting care.
Consider the benefits for consolidating tree programs into one department, section, or division to improve efficiencies and levels of service.
Consider the need and framework for establishing a City section specific to managing natural areas and open space (e.g., wetlands, bottomlands, prairies).
Secure funding to implement a tree watering program for newly planted public trees. Continuously explore avenues to ensure diverse funding sources and advocate for increased operations and capital funding to address priority tree maintenance and care needs.

E) COMMUNITY EDUCATION, ENGAGEMENT, AND STEWARDSHIP

A sustainable urban forest requires a shared commitment from the City and the community. We will foster tree stewardship in our community through equitable and impactful community education and engagement Stakeholder Input and Support.

Participants reported a perception of conflicting policies and priorities regarding the City's trees. City departments, partners, developers, and the community must have a common understanding of the challenges and opportunities surrounding the urban forest to develop a shared vision for addressing them. A public communications plan stemming from a citywide coordinated effort was seen as a necessary step in bringing clarity to the roles of City departments involved with the urban forest and tree care. Half of the internal stakeholders engaged support bolstering community engagement and volunteer efforts.

GOAL E1: CONTINUE TO ACHIEVE TREE CITY USA STATUS AND OTHER INDUSTRY RECOGNITIONS.

Goal E1 Strategies
a) Continue to track program activities and budgets.
b) Explore the opportunities and requirements for other recognition programs.
Goal E1 Priority Actions
Continue to track and annually report urban forestry activities of all partners and continue to maintain Arbor Day Tree City USA designation. Strive to continue to achieve Arbor Day Foundation Growth Awards and Sterling Tree City status.
Achieve an award from the American Public Works Association's Awards Program for innovative programs and outcomes resulting from this Plan.
Conduct a follow-up benchmarking exercise toward year 10 of this Plan to compare program budgets and activities to other Tree City USA communities in the region.

GOAL E2: CREATE AND IMPLEMENT AN ENGAGEMENT STRATEGY FOR ALL DEMOGRAPHICS AND STAKEHOLDERS IN THE COMMUNITY.

Goal E2 Strategies
a) Identify and collaborate with stakeholders to draft the strategy.
b) Implement the strategy as a coordinated effort.
c) Review and adapt the strategy as changes occur.
Goal E2 Priority Actions
Finalize a community outreach strategy and a communications plan to garner support, spur behavior change, and increase participation from the community. Use the data and recommendations from this Plan.
Increase outreach and marketing for improving and expanding tree canopy for the public good.
Implement the outreach strategy as a coordinated citywide effort by convening with other City departments and stakeholders. Gather input and feedback from the Urban Forestry Advisory Board.
As outlined in the community outreach strategy, gather input and feedback from the public regarding implementation of this Plan and changes to urban forestry programs.
Identify existing and potential partners and organizations to support community outreach and engagement that is inclusive and equitable.

GOAL E3: PROVIDE INCLUSIVE PROGRAM OFFERINGS SUCH AS EVENTS, EDUCATION, AND TRAINING TO MEET THE NEEDS OF ALL.

Goal E3 Strategies
a) Continue to implement programs and services through the lens of environmental stewardship.
b) Coordinate with new and existing community and regional partners.
c) Develop strategies for open participation that is inclusive .
Goal E3 Priority Actions
Use the outreach strategy from Goal E2 to identify community groups that represent all neighborhoods.
Identify low tree canopy neighborhoods for targeted engagement.
Coordinate with partners and secure funding for regular public events, training, and educational materials as outline in the outreach strategy.
Make the data and information from this Plan accessible to the public online.
Gather feedback for continual improvements to events, education, and trainings.

Table 15. Details of goals and strategies

Section 4: Implementation

IMPLEMENTATION

The framework of the goals and actions in the Urban Forestry Management Plan provides the City of Fayetteville with the means to measure progress and adapt to an ever-changing environment and availability of resources. Each of the goals align with the U.S. Forest Service's Urban Forest Audit System described and summarized in Section 2 of this Plan. The actions are intended to guide the City towards improvements in ranking for each of the nearly 130 elements within the 11 categories of urban forest management. As actions are implemented, the City may conduct new iterations of the Urban Forest Audit to gauge success, evaluate progress, and adjust accordingly. View the Evaluate section (page 100) of the Monitoring Plan for more information.

Based on the assessment of Fayetteville's urban forest resource, the programs that manage it, and the community that shapes and benefits from it, the following implementation summary is recommended. Implementing the Plan in this manner will effectively and efficiently address the City's shared challenges and priorities using available resources. As the Plan progresses, more resources will become available to implement the longer-term actions.

IMPLEMENTATION SUMMARY

A) Equitable and Resilient Canopy Cover			
Guiding Principle	We value and appreciate the benefits and services provided by the trees in our community. These benefits and services should be maximized and equitably distributed across the City by growing an urban forest that is sustainable and resilient to current and future challenges.		
Audit Category	Policy & Ordinances; Standards & Best Practices		
Goals	**Goal A1:** Increase tree canopy cover citywide beginning in priority areas and purchased land.	**Goal A2:** Implement a cooperative tree planting program with businesses, institutions, organizations, neighborhoods, and property owners.	**Goal A3:** Plant trees that are resilient to current and future challenges such as climate change and tree pests.
Strategies	a) Procure funding to purchase land for the City to preserve and plant trees.	a) Identify existing and potential stakeholders.	a) Use data and research to make decisions on approved tree species for planting.
	b) Review and refine the priority planting areas provided by the Plan.	b) Collaborate and share resources to identify program funding opportunities.	b) Select the right tree for the right site.
	c) Continue to offer free trees to citizens.	c) Track progress and recognize successes.	c) Provide ongoing tree care and monitor the condition of tree plantings.

	d) Plant 1,850 trees per year for 10 years and reassess citywide canopy cover.	d) Conduct pilot programs to determine efficient ways to assist private land owners with tree plantings.	
	e) Coordinate with other City plans and programs.		
Priority Actions	Review, refine, and finalize the canopy cover goals and planting priorities. Consider the status of recommendations outlined in the 2012 Urban Tree Canopy Assessment Report (see Table 9 in the Plan).	Draft a list of existing and potential stakeholders with input from multiple departments.	Utilize the Climate Tree Atlas study in the Plan to adjust approve tree species lists.
	Develop a neighborhood-level and citywide planting plan to achieve the canopy goals. Align efforts with the Climate Action Plan, Energy Action Plan, the 2023 Park and Recreation System Master Plan, and other initiatives.	Organize workshops or seminars that focus on the importance of the program.	Evaluate the composition of the urban forest to inform changes to tree species selection for planting to maintain diversity.
	Fully integrate tree plantings into City projects. Use the recommendation to inform the annual tree planting plan for parks as recommended in Goal E3 of the 2023 Park and Recreation System Master Plan.	Create a task force or utilize the Urban Forestry Advisory Board to collaborate on program design, priority planting locations, funding, tree selection, and ongoing maintenance.	Provide watering and irrigation for public tree plantings.
	Continue to offer tree care information especially in priority neighborhoods.	Utilize data management software to track the plantings and recognize partnerships and program success possibly during Arbor Day celebrations.	Enforce the post-planting regulations regarding maintenance within Chapters 167 and 177 of Fayetteville's Code of Ordinances.
	Monitor progress toward achieving the canopy goals and planting targets.		
	Reassess canopy cover citywide and by planning boundaries by 2029 for a 10-year canopy change assessment.		

Maintenance and Management			
Guiding Principle	We care for our trees and the citywide urban forest to ensure the benefits are available for current and future generations. Our operations and investments prioritize sustainability, fiscal responsibility, and equity.		
Audit Category	Green Asset Management; Tree Inventories; Tree Plans		
Goals	Goal B1: Prioritize public tree maintenance and tree risk management.	Goal B2: Reduce conflicts between trees and other infrastructure such as sidewalks and utilities.	Goal B3: Manage harmful tree pests and diseases that are present or expected to impact the urban forest.
Strategies	a) Assess then need for more public works Urban Foresters.	a) Assess public trees for current and potential infrastructure conflicts.	a) Identify the primary tree pests and diseases of concern.
	b) Develop a public tree maintenance plan.	b) Identify existing and potential alternative solutions to infrastructure conflicts.	b) Provide information for identifying tree pests and diseases.
	c) Develop a plan for maintaining trees that are planted toward the canopy goal.	c) Coordinate with internal and external stakeholders.	c) Monitor public trees and the urban forest for tree pests and diseases of concern.
	d) Stay current with industry research, tools, technology, standards, and best practices.	d) Ensure trees are planted with the proper soil volume.	d) Create a preliminary emerald ash borer (EAB) plan.
	e) Focus on planting strategies and designs that produce long-lived trees.		
Priority Actions	Periodically conduct sample inventories or windshield surveys of public trees to identify changes to maintenance and risk management priorities.	Establish or improve protocols and checklists for evaluating current and potential infrastructure conflicts which includes potential alternative solutions to the conflict.	Develop and implement an integrated pest management or plant health care plan for public trees.
	Create annual work plans and seek funds to implement those plans using the actions within Goal D3.	Establish regular meetings and protocols with internal and external stakeholders for improved coordination during infrastructure and utility planning, design, construction, and maintenance phases.	Integrate tree pest and disease education into the community education strategy (Goal E1 – E3).
Goals Continued	Goal B1: Prioritize public tree maintenance and tree risk management.	Goal B2: Reduce conflicts between trees and other infrastructure such as sidewalks and utilities.	Goal B3: Manage harmful tree pests and diseases that are present or expected to impact the urban forest.

Priority Actions Continued	Track maintenance records for public trees. Continue to add assets and management data to databases that track total asset management for more efficient maintenance planning.		Focus on education and technical assistance with large private landowners.
	Acquire and maintain industry certifications and trainings for Urban Foresters.		
	Continue to manage invasive plant species on public properties and within public rights-of-way. Support controlled burns to manage invasives and wildlife on public properties.		
	Strengthen or establish public tree risk assessment and mitigation protocols.		
	Develop a framework and approach to utilize more biomass resulting from public tree maintenance, removals, and post-storm cleanup. Expand efforts beyond mulching by including logs for wood products for local craftsmen.		

Tree Preservation and Protection			
Guiding Principle	Our existing tree canopy cover and the investments made in planting and caring for the urban forest are preserved through sound but fair policies and regulations that align with shared priorities in the City and best practices.		
Audit Category	Policy & Ordinances; Standards & Best Practices; Capacity & Training; Authority		
Goals	Goal C1: Establish or update policies and practices to reduce the urban forest's vulnerability to tree pests, diseases, and climate change impacts.	Goal C2: Update or amend tree-related ordinances to support the citywide canopy cover goal and other goals in the Plan.	Goal C3: Monitor and enforce tree-related ordinances.
Strategies	a) Assess development workloads and increase Urban Forestry in Development Services.	a) Monitor and track tree plantings and removals.	a) Distribute information and resources regarding changes to tree regulations.
	a) Quantify the urban forest's role in climate change mitigation.	b) Adopt a no-net-loss policy for public trees.	b) Establish a formal protocol.
	b) Maintain tree regulations to minimize urban forest vulnerabilities.	c) Review and implement recommended changes to tree ordinances.	c) Recognize exemplary tree preservation practices and projects.
Priority Actions	Calculate the carbon sequestration, storage, and avoided carbon generated from the citywide urban tree canopy cover and the public tree population using industry tools such as i-Tree. Utilize the data to build support and inform climate-related plans.	Identify the departments, roles, and workflows (i.e., City Engineering and Transportation) and track public tree removals and plantings in a data management program.	Update information on the City's website and in materials as tree regulations change.
	Update the Tree Preservation and Landscape Manual with any changes to tree-related ordinances.	Analyze the potential causes for canopy cover gains and losses as identified in the canopy assessments of four time periods.	Consider developing a protocol for scheduled inspections, random spot checks, recordkeeping, an on-site education.

	As needed, update tree lists that prioritize native and climate-resilient tree species. Consider updates based on the diversity of the urban forest and existing / potential pests and diseases. At minimum, maintain a list of prohibited tree species reflective of the latest research and concerns.	Strengthen the mechanisms for tracking tree preservation, removals, plantings, mitigation, and canopy percentages for development projects. Use the tracking to inform potential changes to minimum canopy requirements for zoning designations as needed to support the canopy goal.	Develop a program that recognizes exemplary and innovative development projects that preserve and expand tree canopy cover.
		Review and refine the tree ordinance evaluation worksheet completed as part of the Plan (see Appendix C). Gather feedback from internal and external stakeholders before significant changes to ordinances are made. For example, develop incentives to preserve existing canopy instead of opting for mitigation and consider updating the penalties for illegal removal of protected trees.	
Goals Continued	Goal C1: Establish or update policies and practices to reduce the urban forest's vulnerability to tree pests, diseases, and climate change impacts.	Goal C2: Update or amend tree-related ordinances to support the citywide canopy cover goal and other goals in the Plan.	Goal C3: Monitor and enforce tree-related ordinances.
Priority Actions Continued		Conserve open space and protect areas of significant riparian benefit, tree canopy, prairie, and other environmental resource through cluster development provisions, density controls, protective easements, and/or other development tools.	
		Update design standards to be more accommodating to trees and the necessary soil volume while balancing the needs for development.	
		Establish a policy for reassessing the citywide tree canopy cover at regular intervals to monitor the canopy goal.	

Funding and Levels of Service			
Guiding Principle	The programs and staffing involved with the trees in our community have the resources necessary to meet current and future demands and challenges.		
Audit Category	Green Asset Management; Community		
Goals	Goal D1: Procure funding for the City to purchase land for tree preservation and planting and to achieve other City goals.	Goal D2: Increase funding to purchase trees to be planted and supporting infrastructure in support of the canopy cover goal.	Goal D3: Evaluate the staffing levels, structure, and resources for tree-related programs and adjust as needed to meet the goals of the Plan and growing demands of the urban forest.
Strategies	a) Identify potential areas for land acquisition.	a) Identify the funding gap and funding source(s).	a) Track and report program activities and Plan implementation progress.
	b) Coordinate with partners for land acquisition and management.	b) Communicate the benefits of a robust planting effort.	b) Analyze the organization of departments involved with trees in Fayetteville.
	c) Lead by example and distribute information about the program.	c) Develop and implement a tree planting program aligned with the canopy goal.	c) Conduct cost-benefit analyses and evaluate growing service demands.
Priority Actions	Review the priority areas for tree planting and preservation to identify opportunities for land acquisition. Consider vacant land as an initial step and utilize the City Plan 2040's Enduring Green Network map and data.	Determine the funding gap for planting 1,850.	Develop a mission and vision statement for urban forest management in the City that align with the goals in this Plan.
	Develop a multi-year program and allocate funding for land acquisition. Build support from land trusts and other organizations.	Quantify the benefits and services provided by the 1,850 trees planted per year to communicate the future value added to Fayetteville's ecosystem, community, and economy.	Share with City departments and stakeholders the progress made in implementing the Plan by using the Monitoring section's guidelines. Successes and shortcomings build awareness and supporting for changes to staffing and program structure(s).
	Implement best management practices and share information for private landowners to learn about the opportunities for urban forest stewardship on their own property(s).	Secure the necessary funding to meet the annual tree planting targets.	Evaluate staffing and contractor resources required to effectively plant trees aligned with canopy goals and to provide post-planting care.

	Develop management plans for the properties purchased.	Provide annual reports on canopy goal progress to justify continued funding for tree plantings.	Determine the need for consolidating tree programs into one department, section, or division to improve efficiencies and levels of service.
Goals Continued	Goal D1: Procure funding for the City to purchase land for tree preservation and planting and to achieve other City goals.	Goal D2: Increase funding to purchase trees to be planted and supporting infrastructure in support of the canopy cover goal.	Goal D3: Evaluate the staffing levels, structure, and resources for tree-related programs and adjust as needed to meet the goals of the Plan and growing demands of the urban forest.
Priority Actions Continued	In the long-term, consider utilizing land acquired for pilot projects such as testing new tree species for the region and in-house tree production (i.e., tree nursery).	Coordinate with tree nurseries the tree species for planting to reduce costs and address tree species diversity goals.	Consider the need and framework for establishing a City section specific to managing natural areas and open space (e.g., wetlands, bottomlands, prairies).
			Secure funding to implement a tree watering program for newly planted public trees. Continuously explore avenues to ensure diverse funding sources and advocate for increased operations and capital funding to address priority tree maintenance and care needs.

Community Education, Engagement, and Stewardship			
Guiding Principle	A sustainable urban forest requires a shared commitment from the City and the community. We will foster tree stewardship in our community through equitable and impactful community education and engagement.		
Audit Category	Community		
Goals	Goal E1: Continue to achieve Tree City USA status and other industry recognitions.	Goal E2: Create and implement an engagement strategy for all demographics and stakeholders in the community.	Goal E3: Provide inclusive program offerings such as events, education, and training to meet the needs of all.
Strategies	a) Continue to track program activities and budgets.	a) Identify and collaborate with stakeholders to draft the strategy.	a) Implement programs and services through the lens of environmental justice.
	b) Explore the opportunities and requirements for other recognition programs.	b) Implement the strategy as a coordinated effort.	b) Coordinate with new and existing community and regional partners.
		c) Review and adapt the strategy as changes occur.	c) Develop strategies to remove barriers to participation.

Priority Actions	Continue to track and annually report urban forestry activities of all partners and continue to maintain Arbor Day Tree City USA designation. Strive to continue to achieve Arbor Day Foundation Growth Awards and Sterling Tree City status.	Finalize a robust community outreach strategy and a communications plan to garner support, spur behavior change, and increase participation from the community. Use the data and recommendations from this Plan.	Use the outreach strategy from Goal E2 to identify community groups that represent all neighborhoods.
	Achieve an award from the American Public Works Association's Awards Program for innovative programs and outcomes resulting from this Plan.	Increase outreach and marketing for improving and expanding tree canopy for the public good.	Identify low tree canopy neighborhoods for targeted engagement.
	Conduct a follow-up benchmarking exercise toward year 10 of this Plan to compare program budgets and activities to other Tree City USA communities in the region.	Implement the outreach strategy as a coordinated citywide effort by convening with other City departments and stakeholders. Gather input and feedback from the Urban Forestry Advisory Board.	Coordinate with partners and secure funding for regular public events, training, and educational materials as outline in the outreach strategy.
		As outlined in the community outreach strategy, gather input and feedback from the public regarding implementation of this Plan and changes to urban forestry programs.	Make the data and information from this Plan accessible to the public online.
		Identify existing and potential partners and organizations to support the implementation of the community outreach strategy and support engagement that is inclusive and equitable.	Gather feedback for continual improvements to events, education, and trainings.

MONITORING PLAN

This Urban Forestry Management Plan will be updated every ten years as outlined in the code. Revisions can be made in five years, and canopy data will be collected from GIS every two years and revised periodically. Better data will help reflect changes in the urban forest and incorporate changes in industry standards. Also, community response and industry recommendations should be considered to reach the established goals. This process should be overseen by an urban forestry working group consisting of community members with various skill sets and backgrounds. Examples include the City's Urban Forestry Program, Urban Forestry Advisory Board members, other City staff, and stakeholders. The monitoring of the plan should follow the evaluation, monitoring, reporting, and Revising methodology. Knowing how the City and its partners are doing will require a continual evaluation process. This section presents examples of how to monitor, analyze, and revise the Plan, which will keep stakeholders informed of the status of the Urban Forestry Program. To monitor progress toward implementing the Plan recommendations, an evaluation similar to the U.S. Forest Service's Urban Forest Audit (details below in the Evaluate section) conducted to develop the initial Plan should be completed. This evaluation will identify progress and shortfalls compared to the baseline audit.

In addition, a report card could be created based on the audit's outcomes and distributed to the public periodically. This will measure progress toward implementing the Plan's actions. The Report section provides a suggested structure for measuring and reporting success toward accomplishing each goal. Other indicators to measure progress may need to be developed to ensure a thorough and accurate evaluation.

EVALUATE

The U.S. Forest Service's Urban Forest Audit System provides a framework for routine evaluations of the urban forest, the programs that manage it, and the community that shapes and benefits from it. The deliverables to this Urban Forestry Management Plan project include guidance for completing an update to the audit completed in 2023 to develop the Plan. This audit system consists of 11 categories of urban forest management, sustainability, and community. Within the 11 categories are approximately 130 subcategories or elements. Each element was ranked or scored based on the consultants' evaluations in 2023 for the Urban Forestry Management Plan. It is recommended the City's urban forestry working group (or similar) complete a bi-annual audit to inform any alterations to actions and strategies.

About the Urban Forest Audit

The primary objectives of the audit are defined by the Urban Forest Audit System authors and adapted by the City's urban forestry consulting team to engage the full spectrum of the organizations' management team, provide program direction that increases the level of professionalism in management, conduct a gap analysis of management practices and the health of urban forests, provide strategic direction to improve the health of the urban forest, and optimize management for environmental justice and equitable distribution of resources.

7) Risk Management
8) Disaster Planning
9) Standards and Best Practices
10) Community
11) Green Asset Management

Table 16. Categories for evaluation using the U.S. Forest Service's Urban Forest Audit System.

Urban Forest Audit Process

The process of analyzing the urban forest involved extensive information and document gathering and research to identify policies, practices, programs, and standards pertaining to categories of urban forest sustainability and management as defined by Clark et al. (1997), Kenney et al. (2011), and the Forest Service. The categories are listed in Table 16.

Each category has a series of subcategories pertaining to the specific category. As an example, the subcategories listed in Table 17 are in the Management Policy and Ordinances category:

1.01) Climate Change (Sustainability)
1.02) No Net Loss
1.03) Risk Management
1.04) Tree Canopy Goals
1.05) Tree Protection
1.06) Utility
1.07) Human Health
1.08) Wildlife Diversity/Habitat/Protection
1.09) Performance Monitoring
1.10) Private Tree Ordinances
1.11) Public Tree Ordinances
1.12) Development Standards
1.13) High-Conservation Value Forests
1.14) Urban Interface (WUI)

Table 17. List of subcategories within the Management Policy and Ordinances category of the audit

All available documents and plans were reviewed and tallied in the audit worksheet as part of the information discovery phase. Based on the evaluation of the documents and outcomes of all planning processes (i.e., research, City staff interviews, urban forest benchmarks, data analyses, and community engagement) each subcategory within the 11 categories was "ranked" using the following system:

0) Not Practiced - Component doesn't exist or is not practiced; 0 points
1) In Development - Component is in development as part of or aside from this Plan; 1 point
2) Adopted Practice - Component is routinely practiced; 2 points
3) Exceeds Adopted Practice - The component is exceeded; 3 points

The points were then totaled for an overall rating to provide a summary of the City's level of achieving each category of urban forest management and sustainability.

Urban Forest Audit Results for Fayetteville

#	Category	SOC* (% Achieved)	Base** (% Achieved)	Overall Rating	Overall (% Achieved)
1	Management Policy, Ordinances	50%	67%	20	71%
2	Professional Capacity and Training	100%	NA	16	89%
3	Funding and Accounting	75%	NA	8	67%
4	Decision, Management Authority	50%	100%	5	63%
5	Tree-related Inventories	NA	56%	17	65%
6	Tree-related Plans	NA	50%	13	54%
7	Risk Management	83%	50%	14	78%
8	Disaster Planning	NA	67%	9	64%
9	Standards and BMPs***	75%	69%	44	73%
10	Community	100%	NA	25	89%
11	Green Asset Management	NA	NA	16	80%
TOTAL		**76%**	**65%**	**187**	**73%**

*Standard of Care (SOC) elements represent the minimum group of urban forestry management "best practices" that a municipality should consider for implementation. SOC refers to the degree of prudence and caution required of an individual who is under a duty of care (i.e., legal obligation of the controlling authority, owner, or manager) to minimize risk. Neither state, regional, nor national minimum management components have been established for SOC but these are interim recommendations for consideration. (NA = not applicable)

**Base Practices (BP) elements represent additional urban forest management activities or components that may effectively expand a program beyond the SOC group (see footnote above). These elements are typically precursors to other "non-core" elements in the category. (NA = not applicable)

***Best Management Practices (BMPs)

Table 18. Outcomes of the urban forest audit completed in 2023 for Fayetteville's Plan.

Urban Forest Audit Summary Discussion

The main purpose of the urban forest audit is to apply the research and findings gathered throughout the planning effort to inform the Plan's goals, strategies, and actions. This audit or "gap analysis" enables the Urban Forestry Program to control different aspects of its program with data. This gap analysis identified the shortcomings that the Urban Forestry Program should overcome and by quantifying them, the program can make improvements. It also enables effective monitoring of Plan strategies in that the audit categories and elements can be revisited at key intervals in the Plan implementation process to measure progress and adapt strategies accordingly. For the comprehensive evaluation of all subcategories within the Urban Forest Audit, see Appendix B.

The information provided in the table above describes the current conditions of Fayetteville's urban forest, the programs that manage it, and the community framework. As recommended in the Plan's monitoring methods, the City should use this framework to evaluate implementation progress, report successes, and inform changes to Plan actions. Many of the urban forest audit elements were given a rating of "In Development" as they previously did not exist but are addressed in this Urban Forestry Management Plan. This means that the City is already well underway in advancing its program and its Urban Forest Audit score.

Figure 37. Results of the 2023 urban forest audit to utilize in Plan monitoring.

EVALUATE

Measuring accomplishment of the actions will require ongoing analysis. The outcomes of the Urban Forest Audit System in the Evaluate section can be used to monitor change over time. These benchmark values should be tracked, and a state of the urban forest report should be prepared and distributed to the public every 2 to 5 years. Analysis may include an updated public tree inventory, i-Tree benefits analyses, or urban tree canopy assessments. The state of the urban forest report should include the benchmark values as reported in the Plan and the Urban Forest Audit System as of 2023, so that the City can measure and compare changes to the urban forest. The report should reflect changes to the audit system that are measured.

The following table provides a summary of the benchmark values that can be used to monitor and report on Plan progress.

Primary Urban Forest Benchmark Values to Measure Plan Progress

2019 Urban Tree Canopy (UTC) Cover (Assessed in 2022)	
Tree Equity Score (2022)	87 out of 100
Urban Tree Canopy	39.4%
Short-term Canopy Goals	39.9% by 2029 (1,850 trees/year) 40.6% by 2034 (1,850 trees/year)
Long-term Canopy Goals	44.4% by 2054 (3,000 trees/year)
Total Trees to Reach 10-year Goal	18,500 trees by 2034 (1,850 trees/year)
Total Trees to Reach 30-year Goal	91,000 trees by 2054 (3,000 per year avg.)
Public Tree Counts (2022 estimates)	
Total Public Trees (alive or dead)	42,000 (estimated)
Total Public Street Trees	25,000
Total Public Street Planting Sites	TBD
Total Public Open Space Trees	Unknown
Tree Benefits (2022 estimates)	
Citywide (UTC Assessment)	2019: $76.5 million (total)
Ecosystem Benefits of Public Trees	2022: $4.2 million (annual estimate)
Tree and Budget Distribution (2021)	
Public Trees (street and park) per Capita	0.44
Budget per Capita	$6.66
Urban Foresters (3 departments)	8.00 (2023)
Total Public Trees per Staff	5,000 trees for every 1.0 FTE
Management Activities (2023)	
Public Trees Pruned	To be recorded at the end of the year
Public Trees Removed	To be recorded at the end of the year
Public Trees Planted	To be recorded at the end of the year
Number of Volunteers and/or Hours	To be recorded at the end of the year
Urban Forest Audit System (Total Score of 2023): 73%	
Management Policy and Ordinances	71%
Professional Capacity and Training	89%
Funding and Accounting	67%
Decision and Management Authority	63%
Tree-related Inventories	65%
Tree-related Plans	54%
Risk Management	78%
Disaster Planning	64%
Standards and Best Management Practices	73%
Community	89%
Green Asset Management	80%
Public Perception (2022)	
Tree-related priorities	62% want trees for shade
Preference for improving public tree health	74% for setting canopy goals, 66% for more trees and preservation in development
Where to prioritize future investments	70% for improved tree code for development

Table 19. Fayetteville's primary urban forest benchmark values to measure Plan progress.

REPORT

Based on the evaluation of Plan implementation progress, the City's urban forestry (or similar) should track, record, and report on the metrics described below that are measures or indicators of success based on the Urban Forest Audit utilized in developing the Plan's goals.

POLICY AND ORDINANCES

Urban forest policies are the foundation for preserving the environmental benefits, resiliency, and the character of Fayetteville's urban forest.

- List all City-led planning efforts.
- Describe related City-led tree planting efforts.
- Communicate citywide canopy goals.
- List recommended changes to City Code, policies, and manuals.
- Distribute any recommended tree list to city staff, partners, and residents.

CAPACITY, TRAINING, AND AUTHORITY

Fayetteville has the capacity and expertise to provide optimal levels of service for sound urban forest management.

- List the existing staff and supporting departments and partners.
- Summarize roles and responsibilities of the Urban Forestry Advisory Board.
- Describe existing and needed certifications, qualifications, and training.
- Report the number of volunteers and volunteer hours.

BUDGET AND FUNDING

Funding and resources enable comprehensive and sustainable urban forest management for the preservation and enhancement of tree benefits.

- Report the proportion of public trees to the City population.
- Report the number of volunteers and volunteer hours.
- List the unfunded urban forestry needs.
- Report the budget, and donations.

ASSESSMENTS AND PLANNING

A thorough understanding of the urban forest ensures data-driven decisions, sustainable and comprehensive planning, and amplified tree benefits.

- Report the number of public trees planted, pruned, and removed.
- Report the number of trees assessed for risk.
- Provide a summary of existing tree canopy cover citywide every two years.

	COMMUNITY ENGAGEMENT Sustainable urban forest management and equity is achieved through a partnership with the City and its residents resulting in improved well-being, human health, and local economies. • List existing and potential partners. • Report the number of planting events and trees planted. • Report the history/count of Tree City USA and supporting awards. • Report the number of volunteers, events, and volunteer hours. • Report the results of public surveys. • Report on the activities of the Urban Forestry Advisory Board.
	GREEN ASSET MANAGEMENT Fayetteville proactively manages the public trees, continues to grow and expand a healthy canopy, effectively mitigates climate change impact. List the existing and potential outreach platforms and initiatives. • Report the number of public trees pruned, removed, and planted. • Report the number of mitigation plantings and stormwater plantings. • Report progress towards canopy goals and tree planting targets. • Provide a map of planting areas for upcoming year. • Report on Urban Forestry Audit score every 5 years.

Table 20. Evaluation, monitoring, and reporting techniques to achieve the urban forestry goals.

REVISE

Completion of this Plan is a critical step towards meeting the vision for Fayetteville's urban forest. Continual monitoring, analysis, and reporting will help to keep urban forest partners involved and focused on accomplishing the actions. Plans are typically revised every 10 to 15 years; hence, the Plan will need formal revision to respond and adapt to changes as they develop. Formal revision of the Plan should coincide with the update of the City's Comprehensive Plan, Park and Recreation System Master Plan, Energy Action Plan, Tree Preservation and Landscape Manual, climate/sustainability and stormwater plans, and other relevant planning efforts. Recommendations and goals of each should be compared. Revisions to the Plan should occur with major events, such as newly discovered pests or diseases, changes in program budget and resources, or significant changes to industry standards or legal codes.

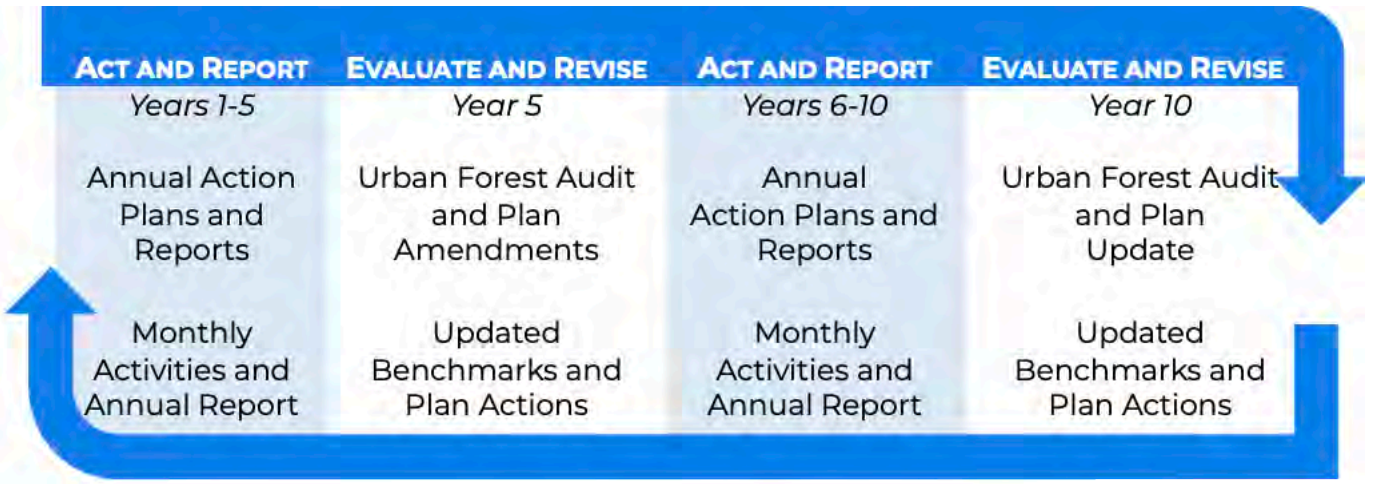

Figure 38. Example of the plan implementation, evaluation, and revision process.

Applying the Urban Forest Audit to Revise the Plan

The Urban Forest Audit can serve as the tool for the City to effectively Evaluate, Monitor, Report, and Revise the Plan as part of the implementation and monitoring protocols. As found in the 2023 Urban Forest Audit completed to develop the Plan, there are areas of urban forest management where the City is performing at a high level and other areas where improvements are needed. The goals and actions in the Plan address both these strengths and challenges. The following summarizes the relationship of the Plan's actions to the categories in the Urban Forest Audit. Each action in the Plan includes a reference to the Audit's category and subcategory (see Appendix B).

Ranking	Count	%	% of Total
1) In Development	63	25%	49%
2) Adopted Common Practice	62	48%	48%
0) Not Practiced	4	0%	3%
Category Total	**129**	**73%**	**100%**

Table 21. Summary count of the evaluations completed in the 2023 Urban Forest Audit.

Out of the nearly 130 elements (or subcategories) within the Audit, the majority (63 elements or 49%) ranked "1) In Development" followed by 62 (48%) elements ranked as "2) Adopted Common Practice". Most of the elements given the "In Development" ranking was a result of the outcomes from the Urban Forestry Management Plan or the strategic actions within the Plan to be implemented. As the Plan is being implemented, the status or score of the categories within the audit should change.

Conclusion

CONCLUSION

Trees are an integral part of the community and the ecological systems in which they exist. They provide significant economic, social, and ecological benefits, such as carbon sequestration, reduction of urban heat islands, energy savings, reduction of stormwater runoff, improvement of water quality, enhancement of human health and wellness, and increase the value of properties. Planting and maintaining trees helps Fayetteville become more sustainable and reduces the negative impacts on the ecosystem from urban development. Trees are as necessary as water, infrastructure, and energy to sustain healthy communities. The health of the urban forest is directly linked to the health of the region.

The Urban Forestry Management Plan is a roadmap for a strategic approach to manage Fayetteville's urban forest. The Plan contains goals and supporting actions that are critical to the long-term vitality of the forest. However, in order for the Plan to actually have an impact on the forest resource, it requires stewardship and financial resources to begin implementation. Further, it needs to be institutionalized as a document requiring implementation with a sense of urgency to get things started. Completion of the Urban Forestry Management Plan clearly demonstrates that City leadership understands that a healthy urban forest is critical to guaranteeing the long-term health and vitality of the community.

In order to accomplish the goals, the City should consider the following commitments:

- **Recognize that the trees of the urban forest are more than aesthetic enhancements.**
- **Recognize trees as the backbone of the urban ecosystem and an essential part of the community's green infrastructure.**
- **Promote the health and growth of the urban forest by following scientifically established best management practices for tree selection, planting, watering, and pruning.**
- **Promote a robust urban forest through policies and practices that reduce its vulnerability to known diseases or pest infestations, and future threats, including the anticipated effects of climate change.**
- **Engage in a continuous process of long-range planning for the growth and maintenance of the urban forest.**
- **Promote public appreciation of the urban forest through educational outreach programs.**
- **Support local businesses, institutions, organizations, and individuals in their efforts to grow and maintain the urban forest through community education.**
- **Proceed in a manner that is inclusive and transparent.**

Successful implementation of actions in this Plan will bring Fayetteville to a higher level of service that is more equitably distributed across the City resulting in a sustainable and thriving urban forest that benefits all residents and future generations— ultimately achieving the Plan vision: Healthy Trees, Healthy City: Fayetteville's urban forest is to cultivate a thriving, diverse, and well-maintained tree canopy that enhances the livability, health, and sustainability of our community for current and future generations.

Supplement 9- Urban Tree Canopy Assessment Project 2012

APPENDIX A. CANOPY GOALS AND PLANTING TARGETS

Canopy Goal Assumptions Data from Fayetteville's tree canopy cover assessments (2019) and the American Forests Tree Equity Score (TES) tool were analyzed to identify a feasible canopy goal and to develop strategies to achieve it. The draft canopy goal was refined by examining the available land area, resources, other ongoing city priorities, future land use, land ownership types, opportunities to mitigate urban heat, and preservation of native prairie land. Other considerations were our climate, elevations, historic canopy coverage for the regions, topography, survey results, climate change atlas, invasive species, and development patterns. The goals were set to be achievable and flexible so that staff could take different strategic approaches to planting trees.

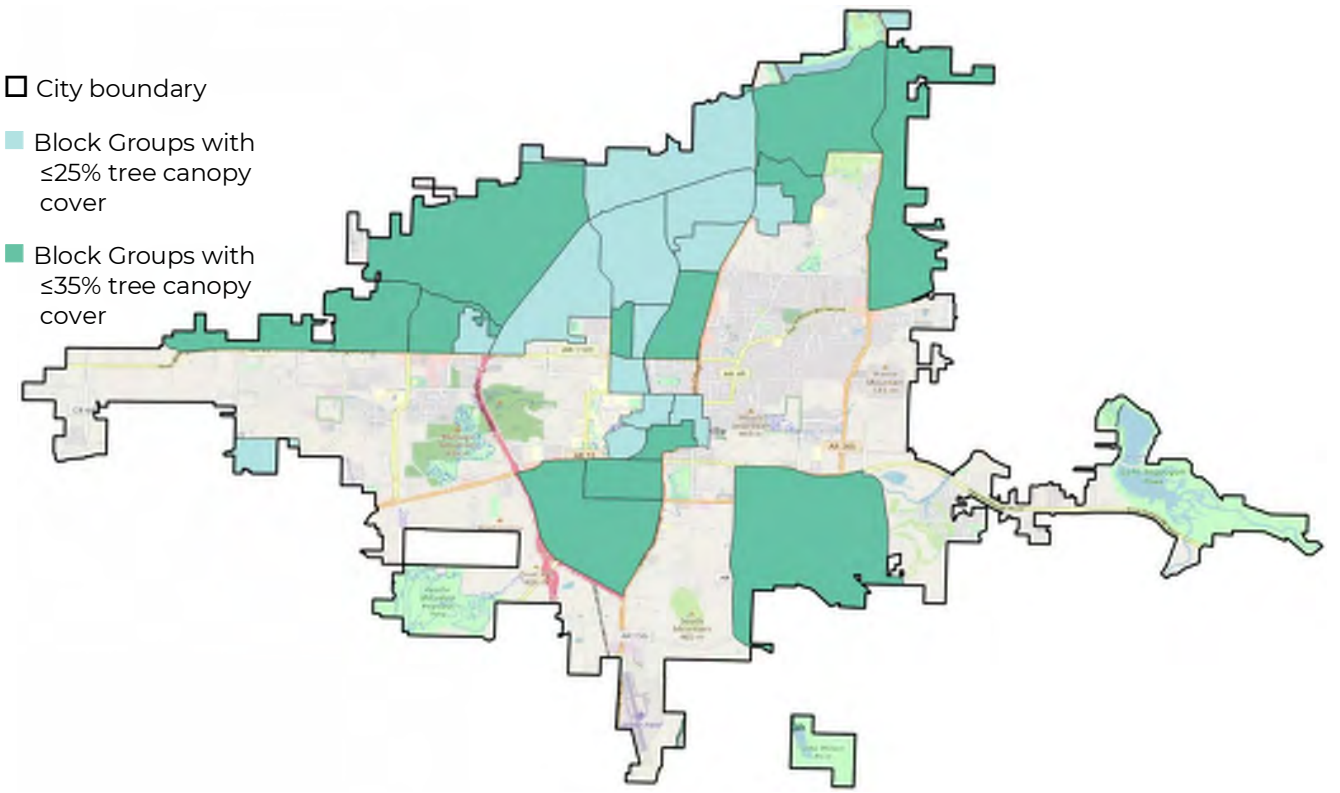
Using this integrated approach, the City of Fayetteville's ambitious and achievable goal is 44.4% tree canopy in 30 years— up from 39.4% based on 2019 imagery. To achieve this, the City and partners must preserve the existing canopy to the greatest possible extent, mitigate the lost canopy, and increase canopy coverage by planting trees.

- Existing tree canopy cover is based on imagery from 2019.
- Promote growing trees to maturity rather than focusing on a number.
- A no-net-loss strategy is sought, meaning the number of public trees removed for internal municipal projects and encouraging mitigation on private property.
- Development projects must continue to mitigate tree removal, dedicate tree preservation easements, and add street trees.
- Most new large neighborhoods are in previous pasture land.
- Supporting citizens and growing trees in existing neighborhoods with POA/HOA support.
- Trees that grow into large canopy trees are planted wherever feasible.
- The City will need to plant public street planting sites and consider converting impervious surfaces to planting sites and planting in parks and natural areas.
- Assumes a potential for young tree mortality post-planting is 10% with POA/HOA projects and City projects (the standard for Fayetteville is 10%).
- Assume a potential for trees given away with a mortality rate of 65% (10% is our mortality rate, and studies show around 75% make it into the ground from tree giveaways combined. The mortality rate is an optimistic 65%).
- $408 per tree is the average cost for contracted tree planting.
- Emphasis should be placed on planting native and highly adaptable trees that support strategies for climate resiliency and tree species diversity.

Priority Planting Areas to Achieve Canopy Goals and Tree Equity

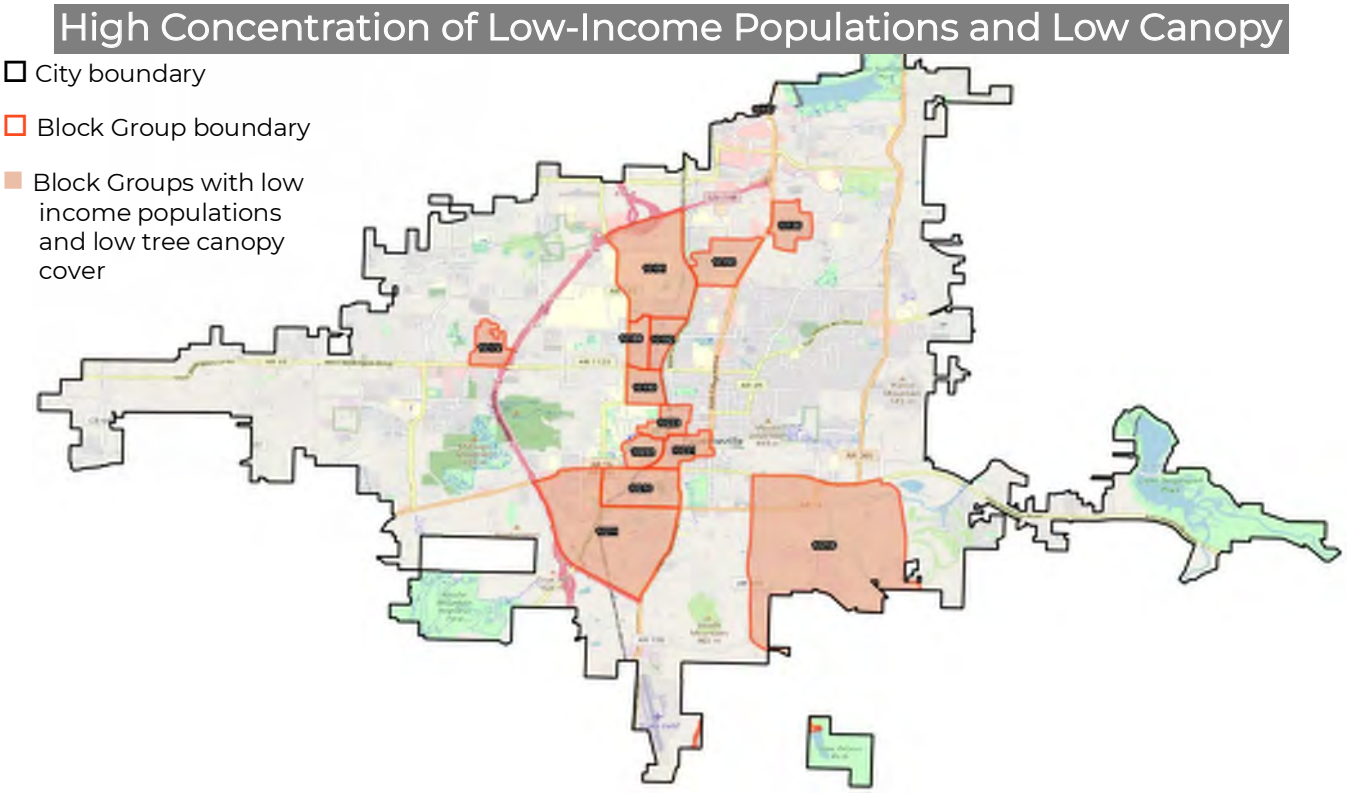
Once the City finalizes local and citywide tree canopy goals, it is recommended to establish priority areas based on a variety of themes and community needs. Themes may include ownership type (public and private), areas of low existing tree canopy, Tree Equity Scores (TreeEquityScore.org), and greatest amount of available planting space while other themes may address air quality, stormwater reduction, water quality, and preserving native land cover (e.g., native prairie land). Others may evaluate opportunities to address disadvantaged areas, densely populated regions, loss due to development, and human health factors such as asthma cases, median age, and mental health. In any planting prioritization scenario, the scale may include U.S. Census Bureau Census Block Groups, Future Land Use Classes, neighborhoods, ownership (public, private, campus and institutional), and citywide.

Using the results from the 2019 Urban Tree Canopy Assessment and an analysis of canopy change over four time periods and analyses in a Geographic Information System (GIS), a series of recommended prioritization techniques is provided. The description of the prioritization techniques and scenarios is provided below followed by a series of corresponding priority maps.



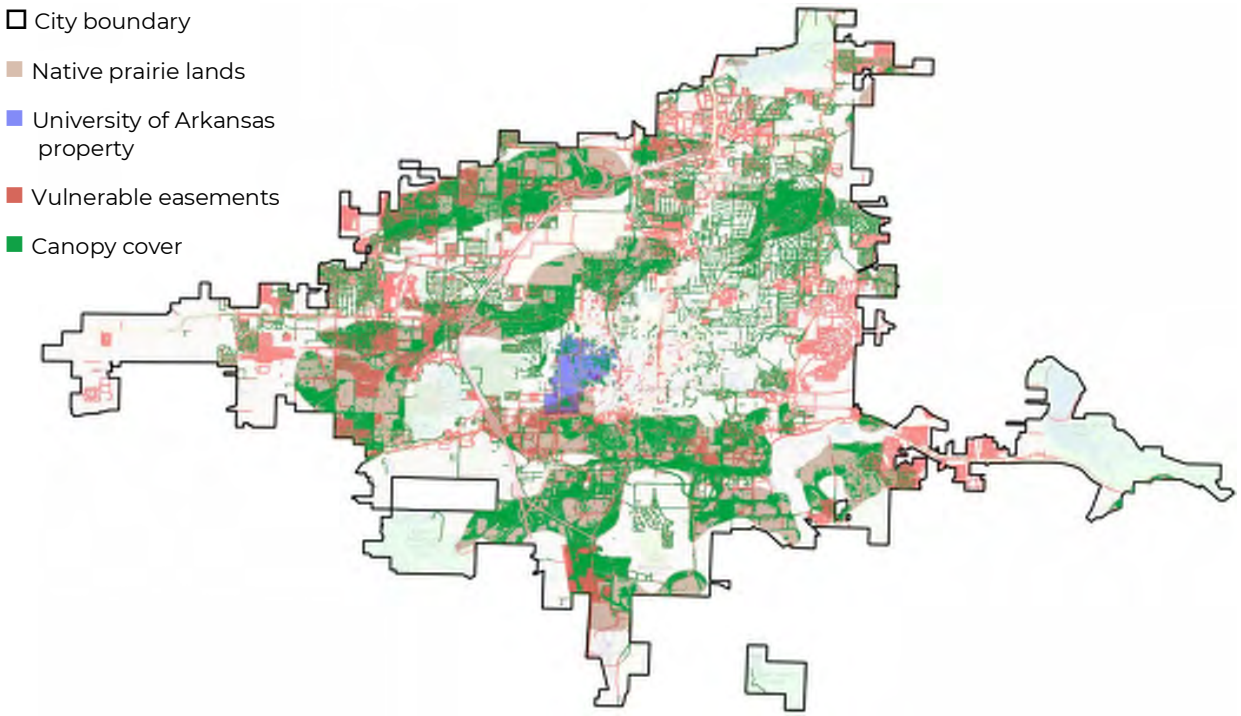
- **Low Tree Canopy:** It is important to understand the existing distribution of existing tree canopy across the City. This scenario shows Census Block Groups (CBGs) that are low in canopy cover (less than 35% canopy cover).
- **Low Income and Tree Canopy:** This scenario shows the CBGs with a high proportion of low-income populations and low amounts of tree canopy cover (less than 35%).
- **Vulnerable and Exclusion Areas:** Certain areas of the City may not be preferable to plant trees such as in native prairie land. Other areas are outside of the City's jurisdiction such as the University of Arkansas. And other areas such as easements have tree canopy that is vulnerable to change such as the removal of trees for a utility easement.
- **Development and Future Land Use:** With robust tree regulations in place, tree plantings in future land use areas can be considered to support a citywide canopy goal.
- **Tree Equity:** The American Forests' Tree Equity Score tool evaluates the correlation between tree canopy cover, surface temperatures, and socioeconomic data. Priority areas may include CBGs that have less than the citywide score of 87 out of 100.
- **Percent People of Color:** Redressing tree canopy cover inequities requires multiple facets of urban forest management though identifying canopy cover and the proportion of people of color within CBGs can assist in determining priority areas for plantings.
- **Average Surface Temperature:** Trees and green spaces have been proven to lower surface temperatures and mitigate urban heat island effects. Data from USGS Landsat 8 imagery, thermal bands.
- **Health Risk Index:** Research shows trees can improve human health through air quality improvements and encouraging physical activity. Priority areas are based on self-reported poor mental health, poor physical health, asthma, and coronary heart disease from the Centers for Disease Control.

View the maps on the following pages for examples of the listed planting priority techniques.

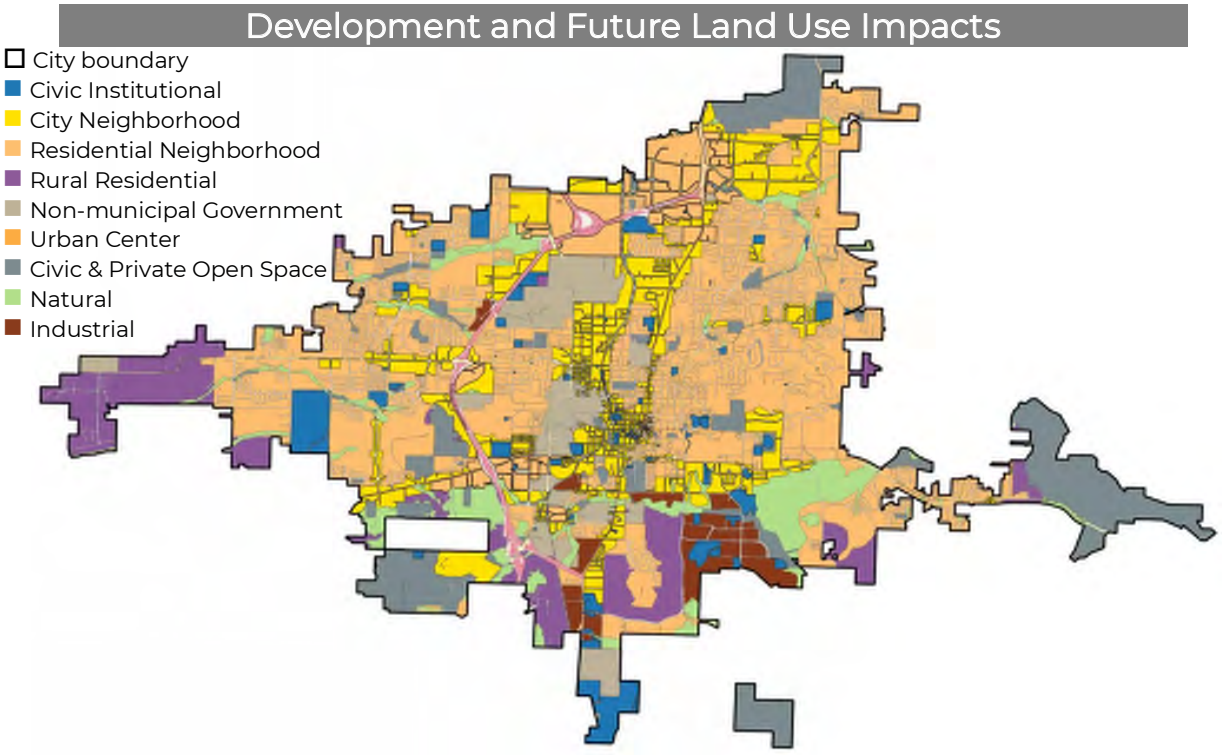


Priority Planting Maps by Theme

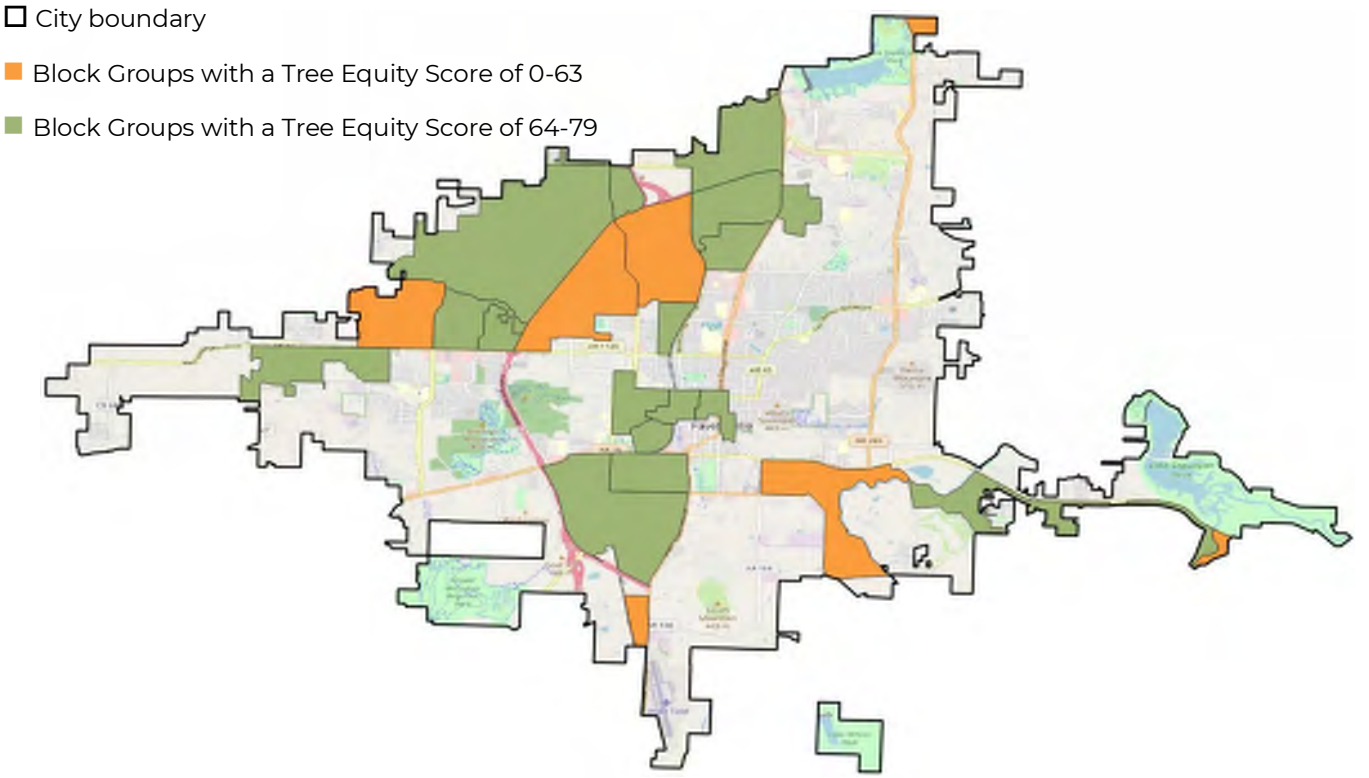
Figure 50. Priority planting maps by planting theme.



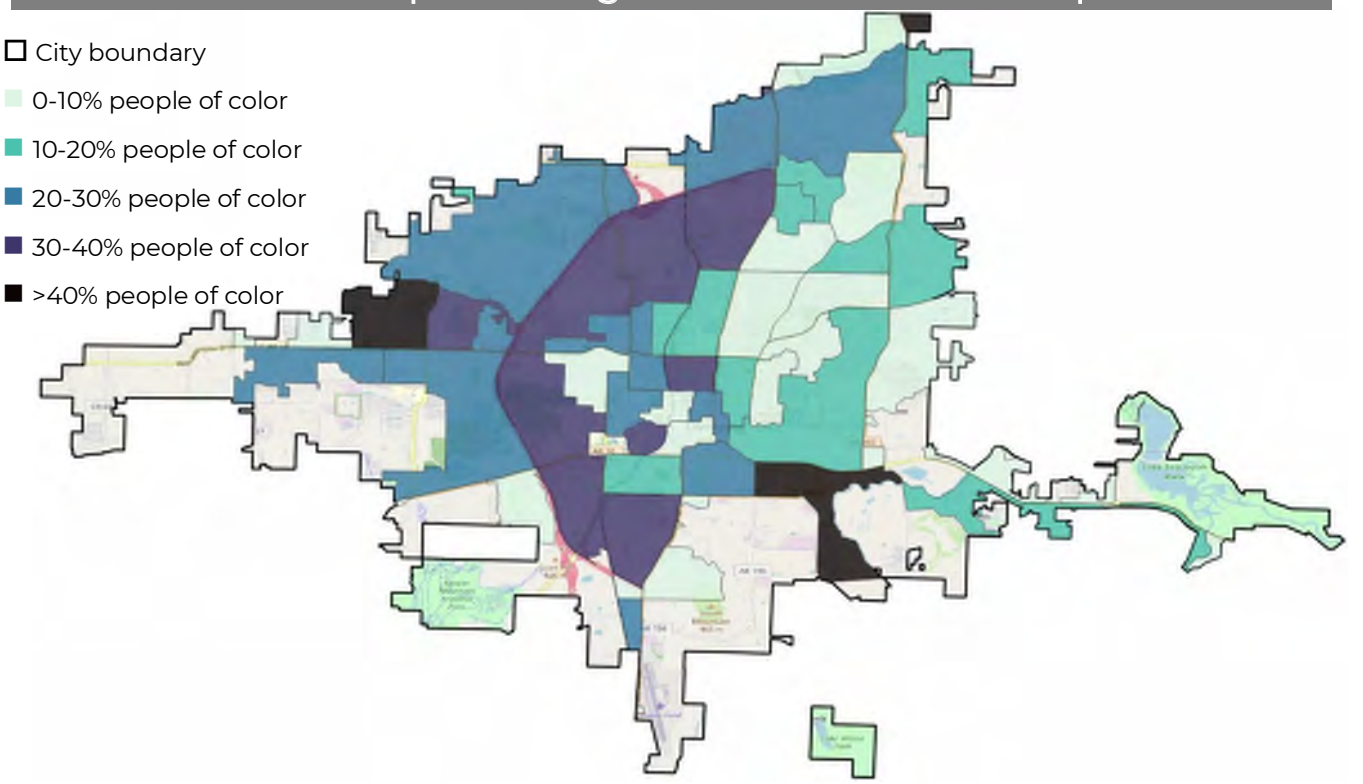
Areas with Low Tree Canopy Cover (<35%)



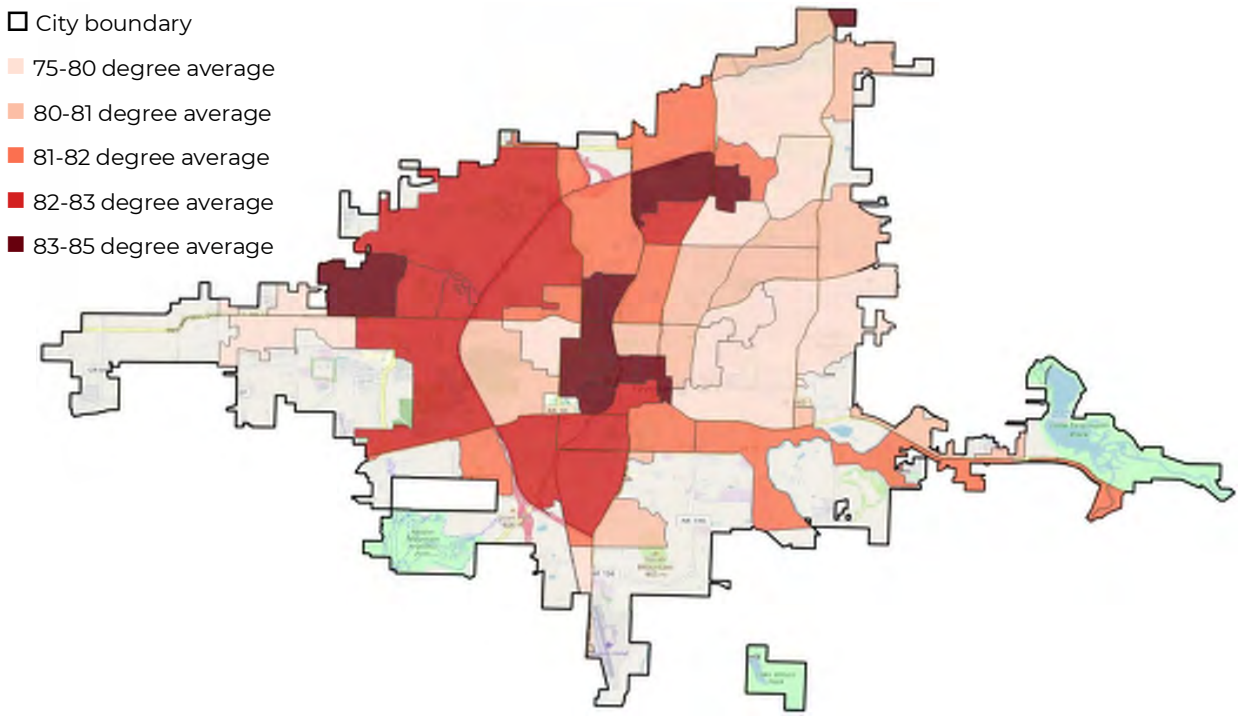
High Concentration of Low-Income Populations and Low Canopy



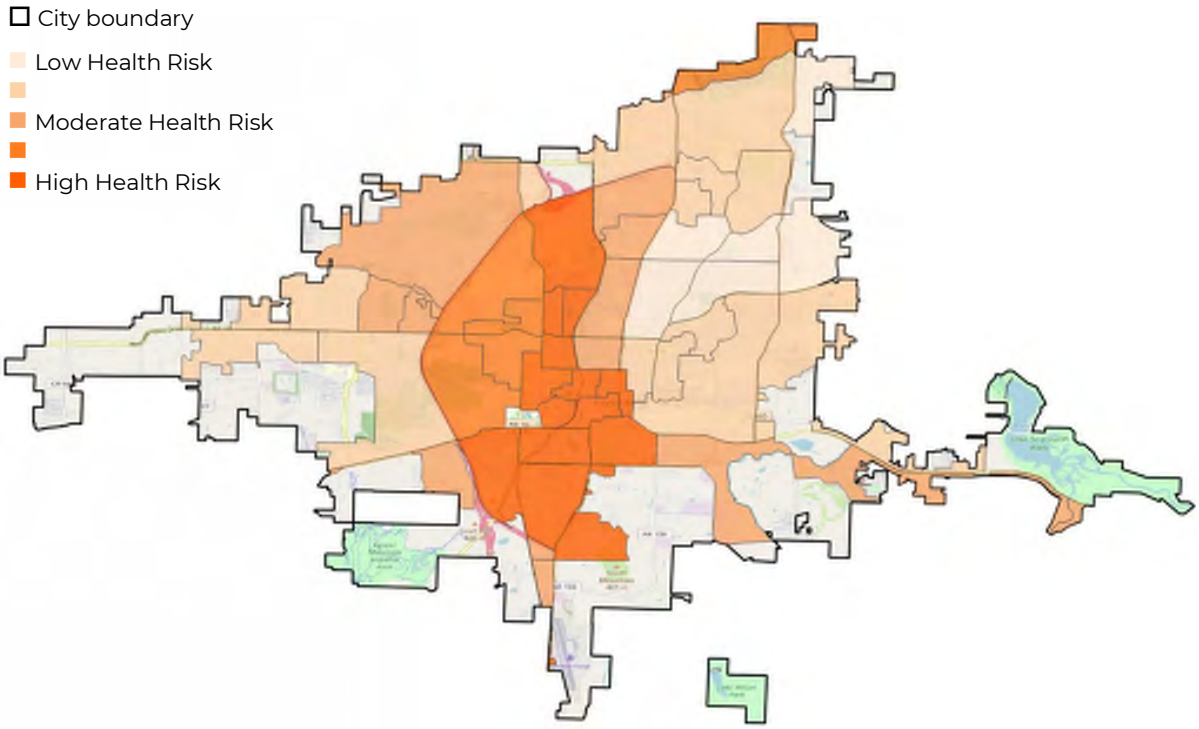
Vulnerable and Exclusion Areas



Development and Future Land Use Impacts



Areas with Tree Equity Scores Less Than 80 out of 100



Census Block Groups with High Concentrations of People of Color

Areas with Higher than Average Surface Temperature

Health Risk Index Based on the Centers for Disease Control

APPENDIX B. 2023 URBAN FOREST AUDIT RESULTS

Urban Forest Audit Scoring Key

Not Practiced (0)	In Development (1)	Adopted Practice (2)

Table 21. Results of the 2023 Urban Forest Audit.

Management Policy

Category	Component Evaluated	Description or Criteria for Evaluation
1.00	Approved Policy Statements	Written policy statements approved by a governing body.
1.01	Climate Change (Sustainability)	Also referred to as Sustainability. With reference to urban trees. Addresses the long-term health and productivity of the natural resource.
1.02	No Net Loss	Can refer to trees, basal area, or canopy.
1.03	Risk Management	Should reference: ANSI A300 Part 9, ISA BMP, and prioritization funding mechanisms.
1.04	Tree Canopy Goals	Overall community/campus goal, or by designated "zone".
1.05	Tree Protection	Construction and/or landscape maintenance.
1.06	Utility	Utility pruning, planting, and installation policy (e.g. boring vs. trenching).
1.07	Human Health – Physical & Psychological	Recognizes and addresses the human health benefits of the natural resource (e.g., exercise, air quality, stress management, shade). Could also include Urban Heat Island (UHI) policies.
1.08	Wildlife Diversity/Habitat/Protection	Mammals, birds, or reptiles.
1.09	Performance Monitoring	Recognizes the annual or biennial calculation of metrics (e.g. some component of ecosystem services) for the purpose of tracking management performance.
1.10	Ordinance (Private)	Tree protection and management for trees on private property.
1.11	Ordinance (Public)	Tree protection and management for public trees.
1.12	Development Standards	US Green Building Council's LEED® rating systems (or similar internationally) LEED v4 BD+C (Sustainable Sites) LEED 4 ND (Neighborhood Pattern & Design, Green Infrastructure) ASLA's SITES® Rating System
1.13	High-Conservation Value Forests	Programs or policies for identification, acquisition, and/or protection of groups of trees or forests that provide unique public benefits.
1.14	Urban Interface (WUI)	Programs or policies that improve management of the urban interface for fire and/or invasive species.

Capacity and Training

Category	Component Evaluated	Description or Criteria for Evaluation
2.00	Professional Management	Provision for professional consultation.
2.01	Certified Arborist - Staff	International Society of Arboriculture
2.02	Certified Arborist - Contracted	International Society of Arboriculture
2.03	Certified Arborist - Other Resource	International Society of Arboriculture
2.04	Other Professional - Advising/directing UF management	This could be a professional in an allied field like Landscape Architecture.
2.05	Municipal Forestry Institute	Graduate of Society of Municipal Arborist's MFI program or similar
2.06	USFS Urban Forestry Institute or similar	Attendance at USFS UFI or similar
2.07	Campus/city arborist – ISA CA instructor for CEUs	Arborist routinely provides ISA CEU presentations/workshops.
2.08	Tree Board University or similar	On-line training modules from Oregon U&CF for Tree Board/Advisory Council or similar
2.09	Organizational Communications	Process, procedures, and protocol for cross-professional communications within the organization (all departments "touching" trees).

Funding and Accounting

Category	Component Evaluated	Description or Criteria for Evaluation
3.00	Urban Forestry Budget	
3.01	Budgeted Annually	Budget authorized/required for tree board, tree maintenance, and/or tree planting.
3.02	Contingency Budget Process	A protocol is in place to prioritize urban forestry management activities during budget shortfalls; e.g. during times of limited funding for: 1) risk management, 2) young tree care, 3) mulching.
3.03	Funding Calculated from Community Attribute	Budget in terms of per capita, per tree, or for performance (e.g. per tree weighted by size class or age.
3.04	Funding Based on Performance Monitoring	Budget connected with/based on ecosystem service (ES) monitoring and performance.
3.05	Urban Forestry Line Item	Is the budget specific to urban forest management?
3.06	Green Asset Accounting	Maintain green infrastructure data in the "unaudited supplementary disclosure of an entity's comprehensive annual financial report (CAFR)". GASB 34 implementation for municipalities.

Authority

Category	Component Evaluated	Description or Criteria for Evaluation
4.00	Authority	
4.01	Urban Forest Manager	Professional urban forest manager with authority over the program and day-to-day activity. Including designated budget line item.
4.02	Staff Authority	Designated staff with authority over the program and day-to-day activity. Including designated line item.
4.03	Communication Protocol	Established protocol and mechanism(s) for communication among all members of the urban forest management "community" in your municipality or organization (e.g. manager, department under control, advisory board, finance, field operations, public, NGOs, business community, developers).
4.04	Tree Board, Commission, or Advisory Council	Establishes a board for public participation (advisory or with authority).

Tree-related Inventories

Category	Component Evaluated	Description or Criteria for Evaluation
5.00	Inventories and Assessments	
5.01	Canopy Inventory (UTC)	Periodic (≤5 year) canopy inventory and assessment. Public & private.
5.02	Ecosystem Services	Recent (≤5 year) ecosystem services (ES) inventory & assessment? Public: 100% or street trees; Public & Private: Sample; or Campus. Or, are ES calculated annually or biennially based on partial re-inventory and projected growth as a monitoring tool.
5.03	Public Trees 🡻	🡻 Evaluate below 🡻
5.04	Street Trees	Is there a recent (5 year) inventory?
5.05	Parks/Riparian Areas	Is there a recent (5 year) inventory?
5.06	Other Public Trees	Public facility landscaped areas, Industrial parks, green space.
5.07	Continuous inventory on a cycle (≤5 years; i.e. panel)	Partial re-inventory to support continuous forest inventory, growth projections, and the calculation of ecosystem services for the purpose of long-term monitoring of urban forest management performance (e.g. carbon or leaf surface).
5.08	Private Trees 🡻	🡻 Evaluate below 🡻
5.09	Campus (Educational)	Is there a recent (5 year) inventory?
5.10	Corporate	Is there a recent (5 year) inventory?
5.11	Other Private Property	Is there a recent (5 year) inventory?
5.12	Continuous inventory on a cycle (≤5 years; i.e. panel), inventory software	Partial re-inventory to support continuous forest inventory, growth projections, and the calculation of ecosystem services for the purpose of long-term monitoring of urban forest management performance (e.g. carbon or leaf surface).
5.13	Green Stormwater Infrastructure (GSI)	BMP stormwater mitigation practices and locations (e.g. Washington DC)
5.14	Spatial	Inventory data includes Lat/Long (i.e. GIS). Should address the spatial relationship between the natural resource and people (i.e. residents, visitors, activities) that would help manage the resource for benefits associated with proximity (air quality, recreation, stress mitigation, improved educational opportunity).
5.15	Maintenance and Planting Records Maintained	Planting details (nursery, species, size, cost, contractor, etc.) maintained with inventory or as separate database or recordkeeping system. Also pruning and removal histories.

Tree-related Plans

Category	Component Evaluated	Description or Criteria for Evaluation
6.00	Management Planning Activities	
6.01	Annual Maintenance Calendar	An annual calendar that defines typical activity by season. To support scheduling.
6.02	Public Trees ↓	↓ Evaluate below ↓
6.03	Street Tree Management	Is there a recent (5 year) plan for street trees?
6.04	Parks/Riparian Area Management	Is there a recent (5 year) plan ?
6.05	Other Public Trees	Public facility landscaped areas, Industrial parks, green space.
6.06	Private Trees ↓	↓ Evaluate below ↓
6.07	Campus (Educational)	Is there a recent (5 year) plan for Campus trees?
6.08	Corporate	Is there a recent (5 year) plan?
6.09	Other Private Property	Is there a recent (5 year) plan?
6.10	Green Infrastructure	Is there a plan for green infrastructure (i.e. nodes & linkages)? Large-scale projects.
6.11	Other Written Plans	Other natural resource plans (e.g. tree canopy). May be a component of another plan.
6.12	Tree Planting	Is there a recent (3 year) tree planting plan?). May be a component of another plan.
6.13	UF as Part of a Comprehensive Plan	Is any UF management plan referenced in the comprehensive plan (i.e. county or municipality) or master plan (i.e. Campus)?
6.14	Urban Forest Planning and Management Criteria and Performance Indicators	Criteria and indicators based on *A Model of Urban Forest Sustainability* (Clark, J.R., Matheny, N.P., Cross, G., and Wake, V. 1997 Journal of Arboriculture.) or on work of W.A. Kenney, P.J.E. van Wassenaer, and A.L. Satel in *Criteria and indicators for strategic urban forest planning and management*. (2011)

Risk Management

Category	Component Evaluated	Description or Criteria for Evaluation
7.00	Risk Management Activities	
7.01	TRAQ Attained	At least one staff or consultant is TRAQ.
7.02	Annual Level 1 (ANSI A300 Part 9 & ISA BMP)	All trees in high occupancy areas visited annually.
7.03	Mitigation Prioritization	A protocol for prioritizing mitigation following Level 1 and Level 2 assessments. Reflects the controlling agency's threshold for risk.
7.04	Occupancy Areas Mapped	Has TRAQ staff/consultant discussed/mapped occupancy levels with controlling authority?
7.05	Recordkeeping, Reporting, and Communications	A process has been put in place to maintain records on requests, inspections, evaluations, and mitigation of risk; and on the communications among the managers related to those risk assessments.
7.06	Standard of Care Adopted	Controlling authority has adopted a Standard of Care (SOC) or risk management policy.
7.07	Tree Risk Specification	Is there a written specification that meets requirements of ANSI A300 (Part 9)? And, has it been discussed with the controlling authority with relevance to the controlling authority's threshold for acceptable risk?
7.08	Urban Tree Risk Management	The community has prepared and follows a comprehensive program for urban tree risk management.
7.09	Invasive Management	Plan to address and manage invasive: plants, insects, and disease.

Disaster Planning

Category	Component Evaluated	Description or Criteria for Evaluation
8.00	Disaster Planning Activities	
8.01	Response/Recovery Mechanism	Staff knowledge of the municipality's protocol for requesting disaster resources through the county or state with access to mutual aid and EMAC.
8.02	Urban Forestry as part of the County Disaster Plan	The UF plan (8.3) is incorporated into the county/municipal disaster plan; specifically in reference to debris management and risk mitigation.
8.03	Urban Forestry Disaster Plan	A separate/specific plan within the urban forestry management program (i.e. who to call, priorities).
8.04	Pre-disaster Contracts	Contracts are in place for critical needs.
8.05	Mitigation Plan	A mitigation plan has been developed for pre-disaster, recovery, and post-disaster.
8.06	EMAC Mission Ready Packages (MRP)	Municipality has published disaster resources with state EM and participates in inter-state Mutual Aid to support Urban Forest Strike Teams (UFST).
8.07	Urban Forest Strike Team	Participation in the UFST project.

Standards and Best Management Practices

Category	Component Evaluated	Description or Criteria for Evaluation
9.00	ANSI Standard & BMP Activities	
9.01	ANSI Standards	Reference and adherence to ANSI Standards for arboricultural practices (A300), safety (Z133), or Nursery Stock (ANSI Z60.1) (any or all).
9.02	Ages/Diameter Distribution	Specific management for the development of an age-diverse tree population
9.03	Arborist Standards	Standards of practice for arborists (i.e. Certification).
9.04	Best Management Practices (BMPs)	Establishes or references tree maintenance BMPs (i.e. written comprehensive standards & standards).
9.05	Fertilization and Mulching	Fertilization or mulching standards required for conserved & planted trees.
9.06	Lightning Protection Systems	BMP written to the ANSI A300 Standard.
9.07	Planting	Planting and transplanting standards required/specified.
9.08	Pruning	Pruning standards required for conserved & planted trees.
9.09	Removal	Infrastructure damage, stump grinding, etc.
9.10	Support Systems (Guying and Bracing)	BMP written to the ANSI A300 Standard.
9.11	Tree Risk	Tree risk assessment procedures; ISA BMP or equivalent.
9.12	Construction Management Standards	Written standards for: tree protection, trenching/boring in CRZs, pre-construction mulching, root or limb pruning, watering (any or all).
9.13	Design Standards	Standards for design that specifically require trees; standards for tree placement (i.e. location), soil treatment, and/or drainage.
9.14	Genus/Species Diversity	Suggests or requires diversity of plant material.
9.15	Green Stormwater Infrastructure (GSI)	BMPs for site level GI practices like rain gardens and swales. Small-scale projects.
9.16	Inventory Data Collection	Community has adopted or developed applicable standards for local urban tree inventory data collection to support QA/QC.
9.17	Minimum Planting Volume	Minimum required root zone volume.

Standards and Best Management Practices (continued)

Category	Component Evaluated	Description or Criteria for Evaluation
9.00	ANSI Standard & BMP Activities	
9.18	Minimum Tree Size	Minimum caliper for tree replacements, and/or minimum size of existing trees to receive tree density or canopy credit.
9.19	Root Protection Zone (CRZ)	Defines adequate root protection zone; Critical Root Zone (CRZ).
9.20	Safety	Safety logs, trainings, reference to ANSI Z133 Safety Standard
9.21	Topping	Prohibits topping or other internodal cuts (public & private).
9.22	Tree Species List	Identifies and publishes a list of the most desirable, recommended, and/or preferred species (may include native and non-native species); alternatively, a list of species prohibited.
9.23	Tree Quality Standards	Written standards for tree selection at nursery in addition to Z60.1.
9.24	Utility Right-of-Way (ROW) Management	Requirements for planting, pruning, and/or removal of trees within a utility ROW.
9.25	Urban Agriculture	Enabled urban food forestry practices.
9.26	Wood Utilization	Larger diameter material is processed for wood products.
9.27	Third-party forest products certification compliance	Examples: American Tree Farm System (ATFS), Forest Stewardship Council™ (FSC®).
9.28	Energy generation	Local or regional use of chips or other woody debris for co-generation facilities (an efficient process that uses one fuel to generate two types of energy— electrical and thermal).
9.29	Composting of Leaf and/or Other Woody Debris	Leaves and small woody debris are captured and used on-site or processed by someone by composting for reuse.
9.30	Watering Standards	

Community

Category	Component Evaluated	Description or Criteria for Evaluation
10.00	Activities that Build Community	
10.01	Social Media Website or Similar	Does your community/campus use social media platforms or similar to document and publicize your urban forestry program, activity, or events?
10.02	Education	The urban forest is used as an educational laboratory for class activity; Kids in the Woods, PLT, high school, or college level.
10.03	Private Property Tree Program	Does your community sponsor this program locally?
10.04	Public-facing Tree Inventory and Management Software	Public access to the community tree resource via an on-line mapping program (i.e. any Web Map Service; WMS).
10.05	Public Perception	Is public management consistent with private property requirements for tree protections and care? Does the Campus/public tree management reflect neighborhood norms?
10.06	Recognition Programs	Programs that raise awareness of trees or that use trees to connect the community to significant events or activities.
10.07	Arbor Day Celebration	Whether or not associated with Tree City USA.
10.08	Arboretum designation	Internal or third party arboretum designation.
10.09	Significant trees	For example: size, history.
10.10	Memorial/Honorarium	Tree planting or tree care programs than honor/memorialize individuals, organizations, or events.
10.11	Social Media	Does your community/campus make use of Twitter, Facebook, Blogs for internal or external outreach?
10.12	Active Communications	Press releases, regular news articles (print), “State of the Urban Forest” reports, periodic analysis of threats and opportunities.
10.13	Tree Care	Are volunteers trained and used for basic tree care (e.g. mulching, pruning, planting).
10.14	Tree Campus USA®, Tree City USA®, Tree Line USA®	Community/campus meets current qualifications for any of these programs.
10.15	Volunteer Opportunities	Ad hoc or scheduled. Any/all age groups. Tree Campus USA student activities.

Green Asset Management

Category	Component Evaluated	Description or Criteria for Evaluation
11.00	Observed Outcomes (Activity, Health)	
11.01	Deadwood	Look for evidence of periodic or ad-hoc deadwood removal (i.e. lack of dead limbs ≥ 2" in the trees or on the ground).
11.02	Genus Diversity	No genera exceed 20% of population; make specific observations for *Acer*, *Quercus*, *Fraxinus, Ulmus* and other local species of concern.
11.03	Mature Tree Care	Mature trees are retained in the landscape, and are of acceptable risk; i.e. veteran tree management.
11.04	Mulching	Evidence of adequate (i.e. spatial extent, depth, and material) roots zone mulching for all age classes.
11.05	Planting Site Volume Optimization	Are species & sites matched for optimization of above ground canopy; right tree in the right spot concept.
11.06	Rooting Volume Optimization	Are species & sites matched for optimization for below ground rooting volume; right tree in the right spot concept.
11.07	Species Diversity	No species/cultivars exceed 10% of population; make specific observations for *Acer*, *Quercus*, *Fraxinus, Ulmus* and other local genera of concern. Also evaluate the role of regionally local native species.
11.08	Soil Compaction	Observe evidence of soil compaction by users or staff during maintenance. Include "desire" lines and construction activity at time of evaluation.
11.09	Tree Health	Rate the overall tree health in all size (age) classes; look for crown dieback, decay, foliage density & color.
11.10	Young Tree Pruning	Look for evidence of periodic (e.g. every 3 years to year 9) structural pruning (e.g. subordination cuts, dominant central leader, co-dominant stems lower that 20').

APPENDIX C. TREE ORDINANCE EVALUATION

The following considerations are provided for Chapter 167 Tree Preservation and Protection and Chapter 177 Landscape Regulations of Fayetteville's Code of Ordinances. The evaluation is based on a checklist shown in the table on the following page. Considerations for changes may also pertain to City design standards, protocols, and manuals such as the Fayetteville Tree Preservation and Landscape Manual (referred to as the Tree Manual in this section). Based on this approach, the following summary provides the City with considerations for tree regulation changes in the future.

- Prior to any significant change(s) to tree ordinances, it is recommended that the City engage with internal and external stakeholders and the general public to gather input and feedback.
- Include references to the Urban Tree Canopy (UTC) assessments and the amount of tree canopy cover (39.4% based on 2019 imagery) and associated ecosystem benefits. Begin by updating section 167.01 Purpose and section 177.01 Purpose with these references and expand on the purpose to include the benefits of trees in mitigating climate change and other benefits and services not currently listed such as the human health and social benefits.
- Consider creating a section within Chapter 167 ("Definitions") that specifically defines and clarifies urban forestry-related terms. An example of a clarification could include descriptions and criteria for "significant trees", "priority trees" (listed in section 167.04.E.3), and trees within the "Tree Registry". As an alternative, the definitions could be listed in the Tree Manual and referenced in Chapter 167.
- Identify changes to resources needed to provide adequate staffing for administration, monitoring, and enforcement of tree-related ordinances. Update Code language accordingly.
- Consider a more nuanced approach to tree mitigation requirements for private development. For example, large mature and/or specimen trees that are approved for removal should have a greater requirement in terms of mitigation, replacement plantings, and/or fees. Explore mitigation and penalties for the unauthorized removal of private protected trees (Chapter 167) and public trees (Chapter 177). Periodically review and update canopy goal requirements as needed.
- Gather feedback to determine if any changes are necessary for public and private tree variances to the regulations. Develop incentives and regulations for projects to meet the canopy cover requirements (%'s) rather than defaulting to mitigation.
- During the periodic update to the Tree Manual, review the recommended tree species for planting and revise as needed based on the latest research and goals for tree species diversity. Periodically revisit the invasive plant species list in section 177.09 of Fayetteville's Code of Ordinances and update as needed based on the latest research, presence of species of concern, and the emergence of favorable habitats for new invasives to the region due to changing climates.
- Clarify roles and responsibilities for public street trees planted as part of private development projects (Chapter 177). Consider updating regulations for public street trees that are not planted as part of private development projects.
- Clarify regulations for trees in proximity or in conflict with overhead utilities.
- Review the evaluation table on the following page to finalize a scope of potential changes to tree-related ordinances.

Table 22. Tree ordinance evaluation checklist. Source: PlanIT Geo

Priority Level Key: 1 = High Priority, 3 = Low Priority " –" = adequate regulations in place

Topic	Addressed (X)	Chapter & Section	Comments	Priority Level
Credentials				
Requires certified arborist for paid private tree work	X	167.07		-
Requires certified arborist for public tree work	X	167.07		-
Requires licensing of private tree care firms	X	167.07		-
Defines official authority for public tree management	X	Throughout Ch. 177		-
Public Tree Management and Protection				
Establishes/authorizes Urban Forester to regulate public trees	X	Throughout Ch. 177		-
Establishes/Authorizes City position (e.g., Mayor, City Administrator, DPW Director) to regulate public trees	X	177.02.B	Defines the authority and role of the Urban Forestry Advisory Board	-
Requires annual public tree work plans				2
Identifies formula for determining monetary tree value				1
Establishes responsibility for public tree maintenance (e.g., City, adjacent property owner)	X (Limited)	177.05 177.10	Chapter 177 does not define responsibility beyond those street trees planted as part of private development	1
Requires regular public tree maintenance	X (Limited)	177.10	Provided only for street trees planted as part of private development (3 years)	1
Requires particular types of maintenance (e.g., pruning)	X	167.06.A		-
Requires adherence to ANSI A300 standards and best management practices	X	167.06.A		-
Establishes permit system for work on public trees				3
Establishes provisions for penalties for non-compliance				2

Topic	Addressed (X)	Chapter & Section	Comments	Priority Level
Public Tree Management and Protection (continued)				
Restricts public tree removal	X	167.06.C		-
Permit or approval required for tree removal, pruning or excavating near public trees				1
Prohibits damage to public trees (e.g., attaching ropes, signs, wires, chemicals, storing materials, excavation etc.)	X	177.01 167.06.D	"Damage" should be defined and prohibited rather than "remove and replace damaged landscape"	-
Restricts burning of solid wood waste				3
Establishes a wood utilization program				2
Establishes an insect/disease control strategy			Address pests/diseases of concern. Consider ability to remove diseased trees on private property if a hazard	1
Defines tree maintenance requirements on public property	X (Limited)	177.10	Only applies to street trees as part of private development	1
Prohibits tree topping	X	167.06.E		-
Regulates abatement of hazardous or public nuisance trees	X	167.08		-
Regulates removal of dead or diseased trees	X	167.08		-
Tree Fund	X (Limited)	177.10.A.5.b	Only applies to street trees as part of private development. Consider adjusting $250 fee-in-lieu and $425 3-year maintenance fees to align with industry and comparable cities' rates	1
Public Tree Planting				
Regulates tree species which may or may not be planted on **private** property (approved tree list)	X	167.04.I.6	Update periodically based on research and trends	-
Requires replacement of removed publicly owned trees	X (Limited)	177.01	Only applies to private development street trees	2
Regulates tree species which may or may not be planted on **public** property (approved tree list)	X	177.09 167.06	Revisit species list periodically and update as needed	-

Topic	Addressed (X)	Chapter & Section	Comments	Priority Level
Private Tree Protection and Preservation				
Requires tree planting around reconstructed parking lots	X	177, 167.04 Ch. 167 Table 1		-
Requires tree plantings around new parking lots	X	167.04 Ch. 167 Table 1	Required for lots with 5 or more spaces	-
Requires tree plantings around new developments	X	167.04.I.4 Ch. 167 Table 1	Plantings are regulated in terms of canopy retention and high or low priority canopy	-
Restricts tree removal on private property	X (Limited)	167.04.L.3	Consider fees / fines for violation(s). Only restricted in tree preservation easements	-
Permit or approval required for tree removal on private property	X (Limited)	167.04	Only restricted in tree preservation easements	-
Requires preservation of trees during development on private property	X	167.04	Mitigation is an option and should be a last resort to preservation	-
Prohibits damage to preserved/protected trees	X	167.05		-
Prohibits damage or removal of trees on another person's property	X (Limited)	167.05	Mitigation is the only penalty though. Consider changes	3
Inventory of trees on site required	X	167.04	Requires a preservation plan	-
Identification of forests/woodlands required	X	167.04		-
Specific species and/or size of trees regulated (e.g., heritage/significant trees)	X (Limited)	167.04.E	Revisit periodically to determine if sizes reflect species significance and value. Needs more protection in Code	2
Location of Critical Root Zone/Dripline required	X	167.05	Specification provided in Tree Preservation and Landscape Manual	-
Minimum canopy coverage requirement set	X	167.04.C	Table 1 Consider updating canopy requirements using the canopy assessment data and canopy goals as needed	-

Topic	Addressed (X)	Chapter & Section	Comments	Priority Level
Private Tree Protection and Preservation (continued)				
Identification of riparian buffers, natural areas, preservation zones	X	167.04.E.2		-
Tree protection/preservation plan required	X	167.04		-
Identification of prohibited activities in dripline/critical root zone	X	167.05	Also in Tree Preservation and Landscape Manual	-
Tree protection fencing required	X	167.04.H.2 167.04.H.3 167.05.B	Chain link or orange fence required	-
Location/type of other tree protection measures (e.g., root pruning, aeration, vertical mulching, trunk/soil protection, irrigation,) on development plans (e.g., site plans, construction plans, etc.)	X	167.04.H.2 167.04.H.3 167.05.B		-
Provide incentives for tree preservation	X (Limited)	167.04.I 167.04.J	On- and off-site mitigation offered, fee-in-lieu toward Escrow account. Reevaluate for additional incentives to preserve canopy rather than mitigate. No credits considered	1
Landscape plan with proposed landscaping and mitigation trees to be planted	X	167.04		-
Requires Grading plan to include protected/preserved trees	X	167.04.A.10		-
Utility plan with trees to include protected/preserved trees	X (Limited)	167.06.J	Consider referencing industry standards for utility pruning and to consult with Urban Forester for pruning or removing trees encroaching utilities (above and below ground, including proposed lights)	1

Topic	Addressed (X)	Chapter & Section	Comments	Priority Level
Private Tree Protection and Preservation (continued)				
Tree planting requirements for removal of regulated trees	X	167.04.C	Consider a 2:1 replacement ratio for significant, specimen, special / priority trees or mitigation that is based on the diameter inches of tree(s) removed	-
Fee in Lieu of planting mitigation trees	X	167.04.J.4	Determine if Escrow Account fee per tree required and 3-year maintenance fee is adequate	-
Tree mitigation survival requirements	X	167.10	Binding 3-year maintenance and monitoring plan	-
New tree planting survival requirements	X	167.10	Binding 3-year maintenance and monitoring plan	-
Fine for removal of regulated trees			No penalties, fees, or fines listed. Only tree mitigation (planting) currently	1
Penalties established for damage and removal of preserved/saved trees			No penalties, fees, or fines listed	1
Bonding utilized to discourage tree removals			A tree bond requires a land developer to deposit a certain amount of money with the local authority during development. If the identified tree or trees are not present and healthy after the development, the funds are forfeited.	1
Tree Fund	X	167.04.J.4	City's Tree Escrow	-

BACKGROUND AND OVERVIEW

Background

The purpose of Urban Forest Benchmarking is to understand the level of effort and capacity necessary to satisfy the City's adopted goals, to identify industry trends and best practices, and to ensure urban forest sustainability. Benchmarks help to gauge the City's investment in its urban forest compared to other communities facing similar issues in urban forest management. The results of the benchmarking exercise enable the urban forestry planning consultants to develop realistic strategies and achievable targets that align with comparable communities and industry standards. It will also serve as one platform and tool for monitoring implementation of Fayetteville, AR's Urban Forest Management Plan (in development as of January 2023).

BENCHMARKING DATA SOURCES

Several data sources were reviewed and compiled to evaluate how Fayetteville's urban forest and associated programs compare to industry standards and communities of a similar size or geographic location and how its own operations have changed over time.

Phase I of the benchmarking process uses the Arbor Day Foundation's Tree City USA 2021 dataset and compares statistics provided by the City of Fayetteville and as reported to Arbor Day for Tree City USA accreditation. The dataset includes program metrics for over 3,700 communities and the data is used to identify cities of similar size, location, and program structure that also participate in the Tree City USA program. Using this dataset helps better understand how Fayetteville's urban forestry budget and activities compare to relevant cities. Relevant cities are determined by 1) proximity (within 50 and 100 miles of city center), 2) population size (percent difference and cities with more than 90,000 but less than 200,000 people), and cities outside of these parameters but are areas of interest. The Tree City USA dataset is largely focused on urban forestry budgets, per capita funding information, and volunteer hours. The number of trees planted, removed, and pruned are also summarized. The budget from Tree City USA application includes all departments, equipment, vehicles, and volunteer hours. It does not represent the budgeted amount for Urban Forestry Tree plantings.

Phase II of benchmarking involves comparing Fayetteville's urban forestry operations to findings from an in-depth study conducted by researchers Richard Hauer and Ward Peterson (2014). In this study, researchers interviewed urban forestry programs in various regions across the U.S. and among varying population classes. A total of 670 communities participated in the census. Specific study focus areas include community and staff profiles, funding, tree management policy and planning, volunteers and partnerships, contracting tree care activities, community tree populations, tree operations and management, and assistance programs. Data from this study was compared to data obtained from the City of Fayetteville for the purposes of determining program health as compared to accurate data across a range of scales and locations.

Phase III of benchmarking is comprised of presenting the findings to the City and allowing time for any further data collection or clarifications in order to ensure the highest quality analysis. This phase also includes internal quality controls to ensure data comparisons are as accurate as possible. Information gathered during this process will inform the development of realistic and attainable goals and strategies in the City's Urban Forest Management Plan.

PHASE I BENCHMARKING RESEARCH

Summary of Communities for Benchmarking Research

Understanding the urban forest policies, management approaches, budgets, and programs of comparable communities and nationwide averages provides comparative data to benchmark the City's performance, present and future. While existing tree data describes the current conditions, benchmarks offer guidance to bring Fayetteville's urban forestry policies and practices into alignment with similar-sized cities in Arkansas and nationwide, enhancing urban forest management. A summary of the cities used for benchmarking Fayetteville can be found in (Table 1) below.

COMPARISON CITIES & COMPARISON GROUPS

Table 1. Communities benchmarked for the Fayetteville, AR Urban Forest Management Plan

Comparison Criteria	Community	County	Pop.*	Difference	Distance**
STUDY AREA	**Fayetteville**	**Washington**	**93,580**	**0**	**0.0**
AR Cities >25k Pop	Springdale, AR	Washington/Benton	87,609	-5,971	8.9
AR Cities >25k Pop	Rogers, AR	Benton	71,112	-22,468	22.7

Lawrence, KS	$1,137,388	$11.58
Columbia, MO	$549,998	$4.34
Springfield, MO	$2,388,206	$14.07
Topeka, KS	$830,663	$6.59
Norman, OK	$2,190,578	$17.10
Champaign, IL	$1,014,789	$11.18
Asheville, NC	$480,394	$5.15
Edmond, OK	$1,195,387	$12.76
Reading, PA	$258,054	$2.71
Fishers, IN	$366,906	$3.70

Table 3. Summary of urban forestry budgets compared to city populations (per capita) in 2021

PHASE II BENCHMARKING RESEARCH

Note: The following comparisons use Fayetteville's 2021 metrics whereas the metrics for the comparison populations are based on 2014 data. The urban forestry planning consultants will need 2014 metrics from the City or data from the US Forest Service for 2021 in order to finalize the Phase II benchmarking. The following study is a preliminary exercise intended for internal use and for initial comparisons from which strategies may be developed.

URBAN FORESTRY BUDGETS

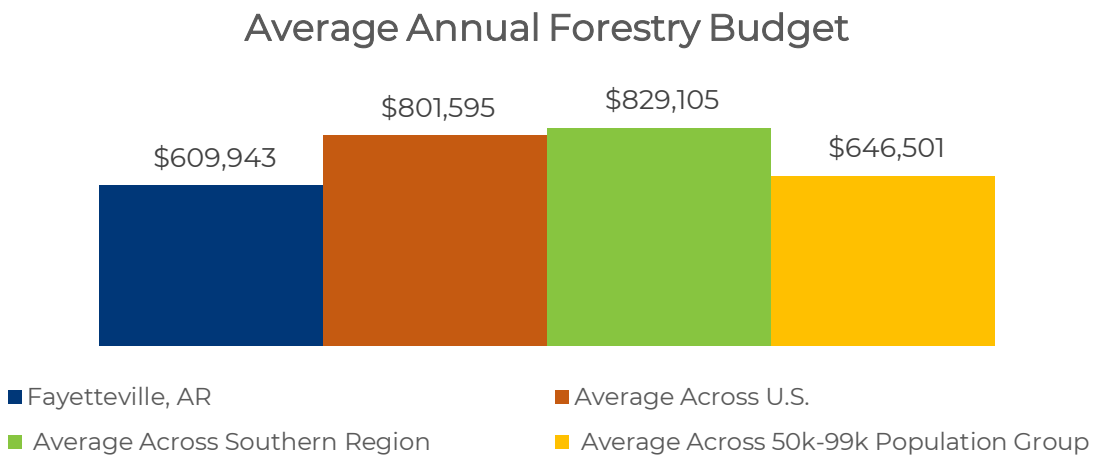

Figure 13. Comparison of urban forestry budgets (Hauer, 2014)

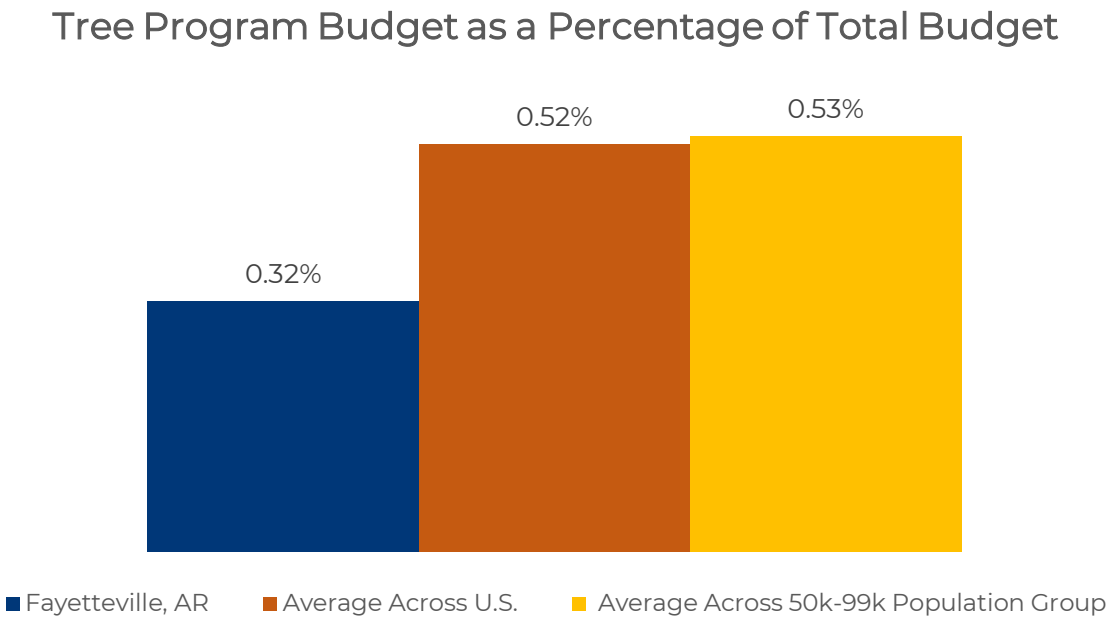

Figure 14. Urban forestry budget compared to the total municipal budget (Hauer, 2014)

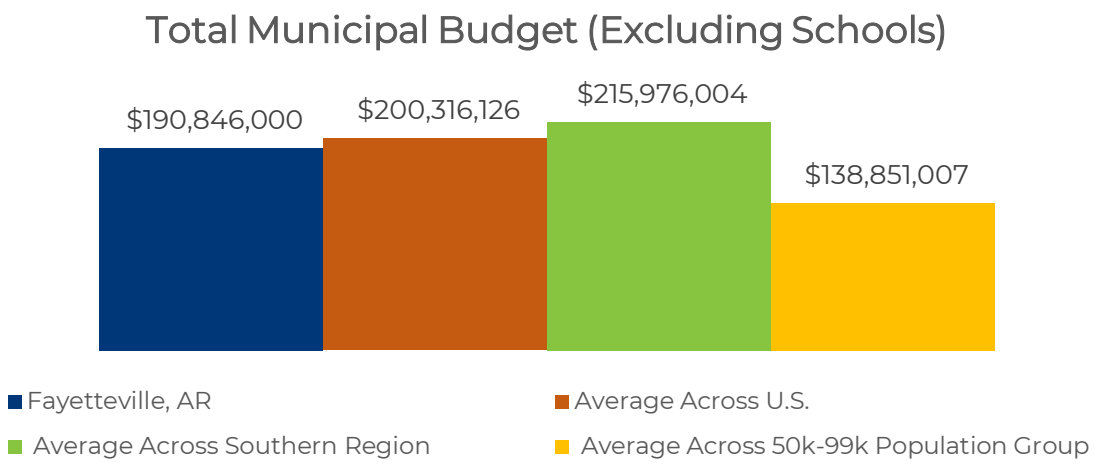

Figure 15. Total municipal budgets (Hauer, 2014)

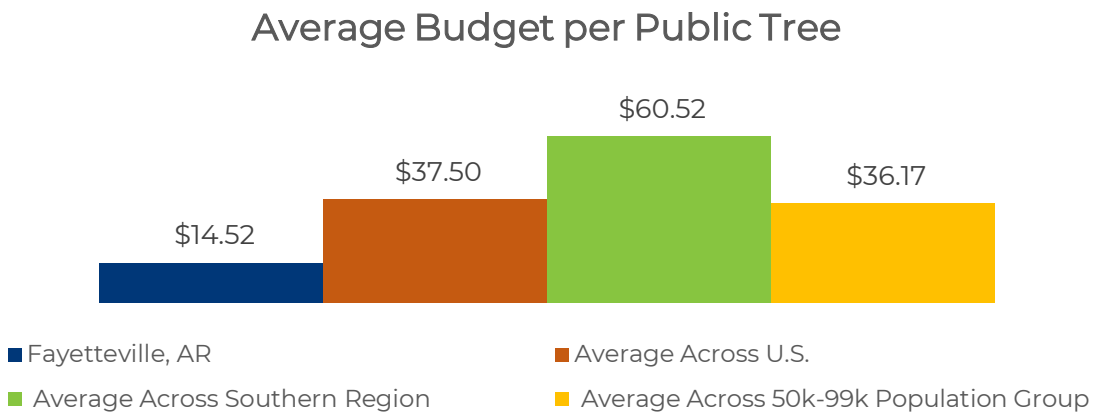

Figure 16. Average budget per public tree (Hauer, 2014)

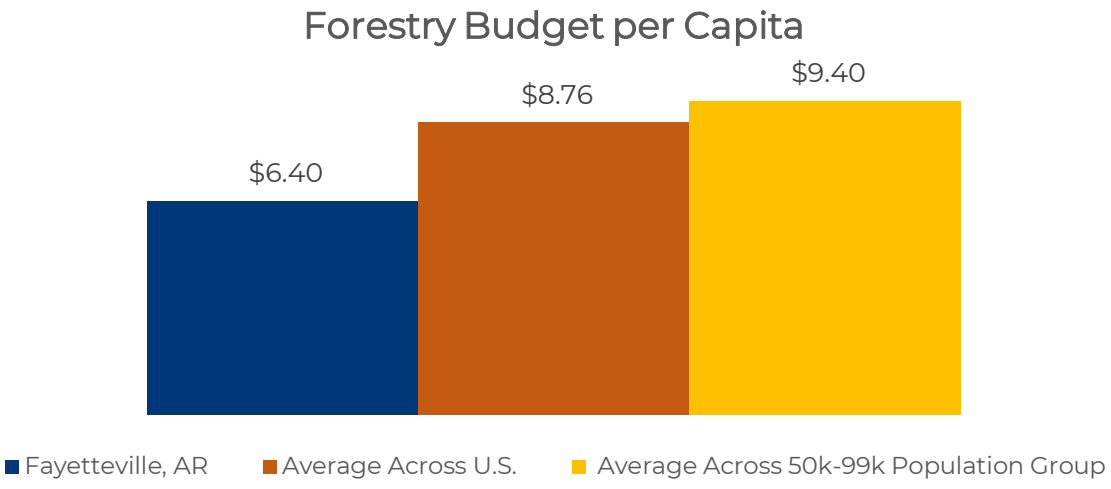

Figure 17. Comparison of urban forestry budget per capita (Hauer, 2014)

COMPARISON OF PUBLIC TREE COUNTS, DISTRIBUTION, AND VALUE

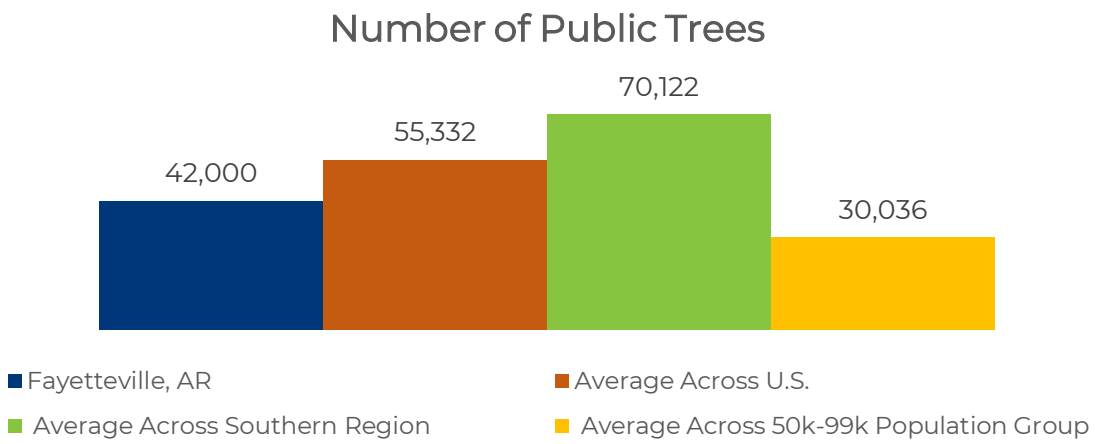

Figure 18. Comparison of the number of public trees (Hauer, 2014)

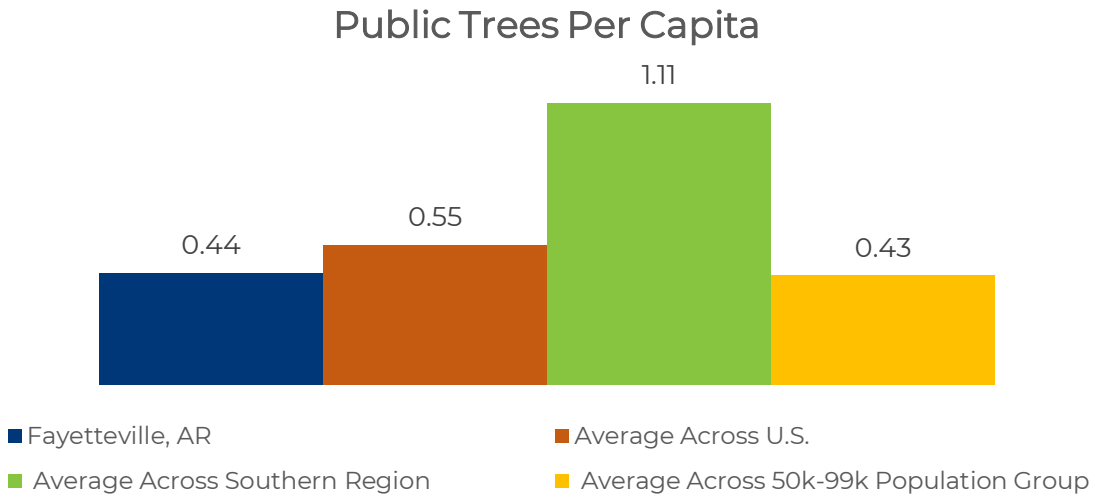

Figure 19. Comparison of public trees per capita (Hauer, 2014)

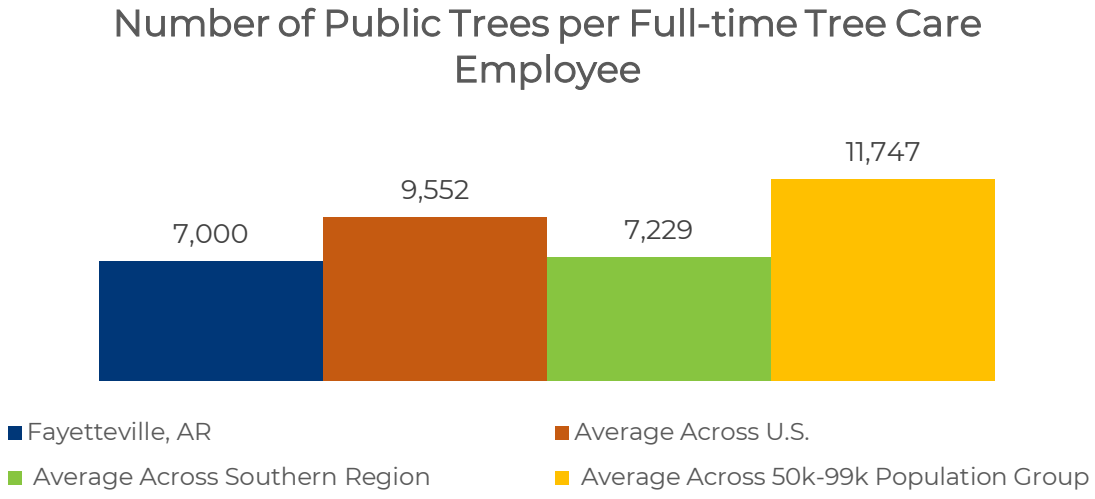

Figure 20. Comparison of the number of public trees per full-time tree care employee (Hauer, 2014)

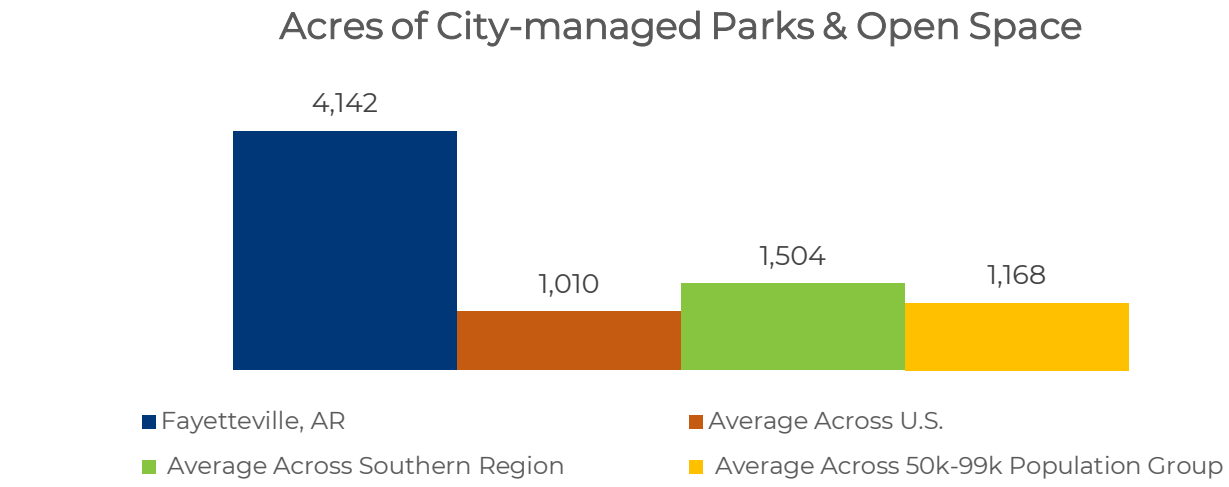

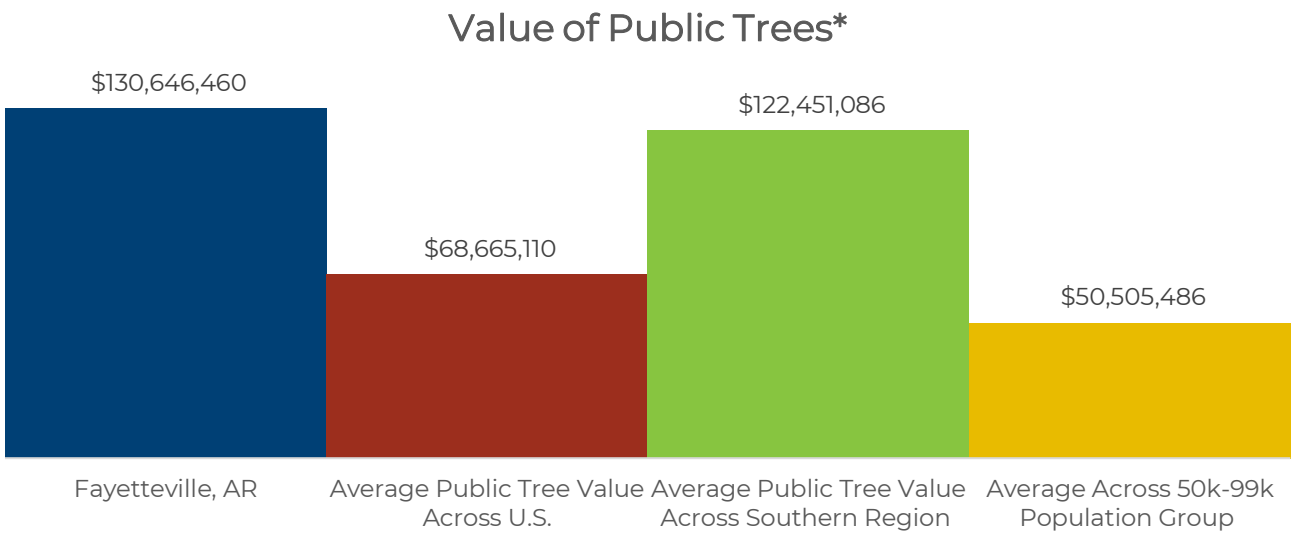

Figure 21. Comparison of the acres of public parks and open space (Hauer, 2014)

** Value of Fayetteville's public trees is based on the $1.3 million in ecosystem benefits and services ($110.63 per tree on average) plus the structural value of public trees estimated at $3,000 per tree on average based on regional research.*

Figure 22. Comparison of the value of public trees (Hauer, 2014)

Fayetteville, AR

URBAN FORESTRY MANAGEMENT PLAN

Canopy Goal Setting & Priority Areas

August 2023

Canopy Goals for Consideration

Milestones	Year Range	City Acres	Starting Canopy Ac	Total New Canopy Ac	Starting Canopy %	New Canopy %	Total Trees Added	Total Added Benefits	Total Carbon Seq. (lbs)
Year 1	2023	35,712	14,081	14,105	39.4%	39.5%	1,000	$18,559	149,592
Years 2-5	2024-2027	35,712	14,105	14,244	39.5%	40%	6,000	$111,354	897,552
Years 6-8	2028-2030	35,712	14,244	14,396	40%	40%	6,500	$120,634	972,348
Years 9-10	**2031-2032**	**35,712**	**14,396**	**14,512**	**40%**	**40.6%**	**5,000**	**$92,795**	**747,960**
Years 11-15	2033-2037	35,712	14,512	14,815	41%	41%	13,000	$241,267	1,944,696
Years 16-18	2038-2040	35,712	14,815	15,025	41%	42%	9,000	$167,031	1,346,328
Years 19-20	2041-2042	35,712	15,025	15,165	42%	42.5%	6,000	$111,354	897,552
Years 21-25	2043-2047	35,712	15,165	15,619	42%	44%	19,500	$361,901	2,917,044
Years 26-28	2048-2050	35,712	15,619	15,969	44%	45%	15,000	$278,385	2,243,880
Years 29-30	2051-2052	35,712	15,969	16,202	45%	45%	10,000	$185,590	1,495,920
TOTAL	30 Years			2,120	45.4%	5.9%	91,000	$1,688,869	13,612,872

Minus 10% cumulative canopy loss = 44.4% in 30 years (2023 – 2052). Considers 10% will be small canopy trees, 30% medium canopy, and 60% large canopy trees.

A 10-year goal requires a total of 18,500 trees with an average of 1,850 trees per year

If pursuing a 30-year goal, 91,000 total trees needed with an average of 3,000 trees per year needed.

Scenario B) Detailed Planting Targets to Establish a 10-year Canopy Goal

Milestone	Year	Total City Acres	Canopy Ac (2019)	Canopy % (2019)	Planting Scenarios (# of Trees)	New Canopy Acres Added	Total Canopy Acres	New % Canopy	Total Added Ecosystem Benefits	All Plantings: Future Carbon Sequestered by Large Trees (249.32 lbs/tree)	All Plantings: Total Future Carbon Sequestered
Year 1	**2023**	**35,712**	**14,081**	**39.4%**	**1,000**	**23.3**	**14,105**	**39.5%**	**$18,559**	**149,592**	**149,592**

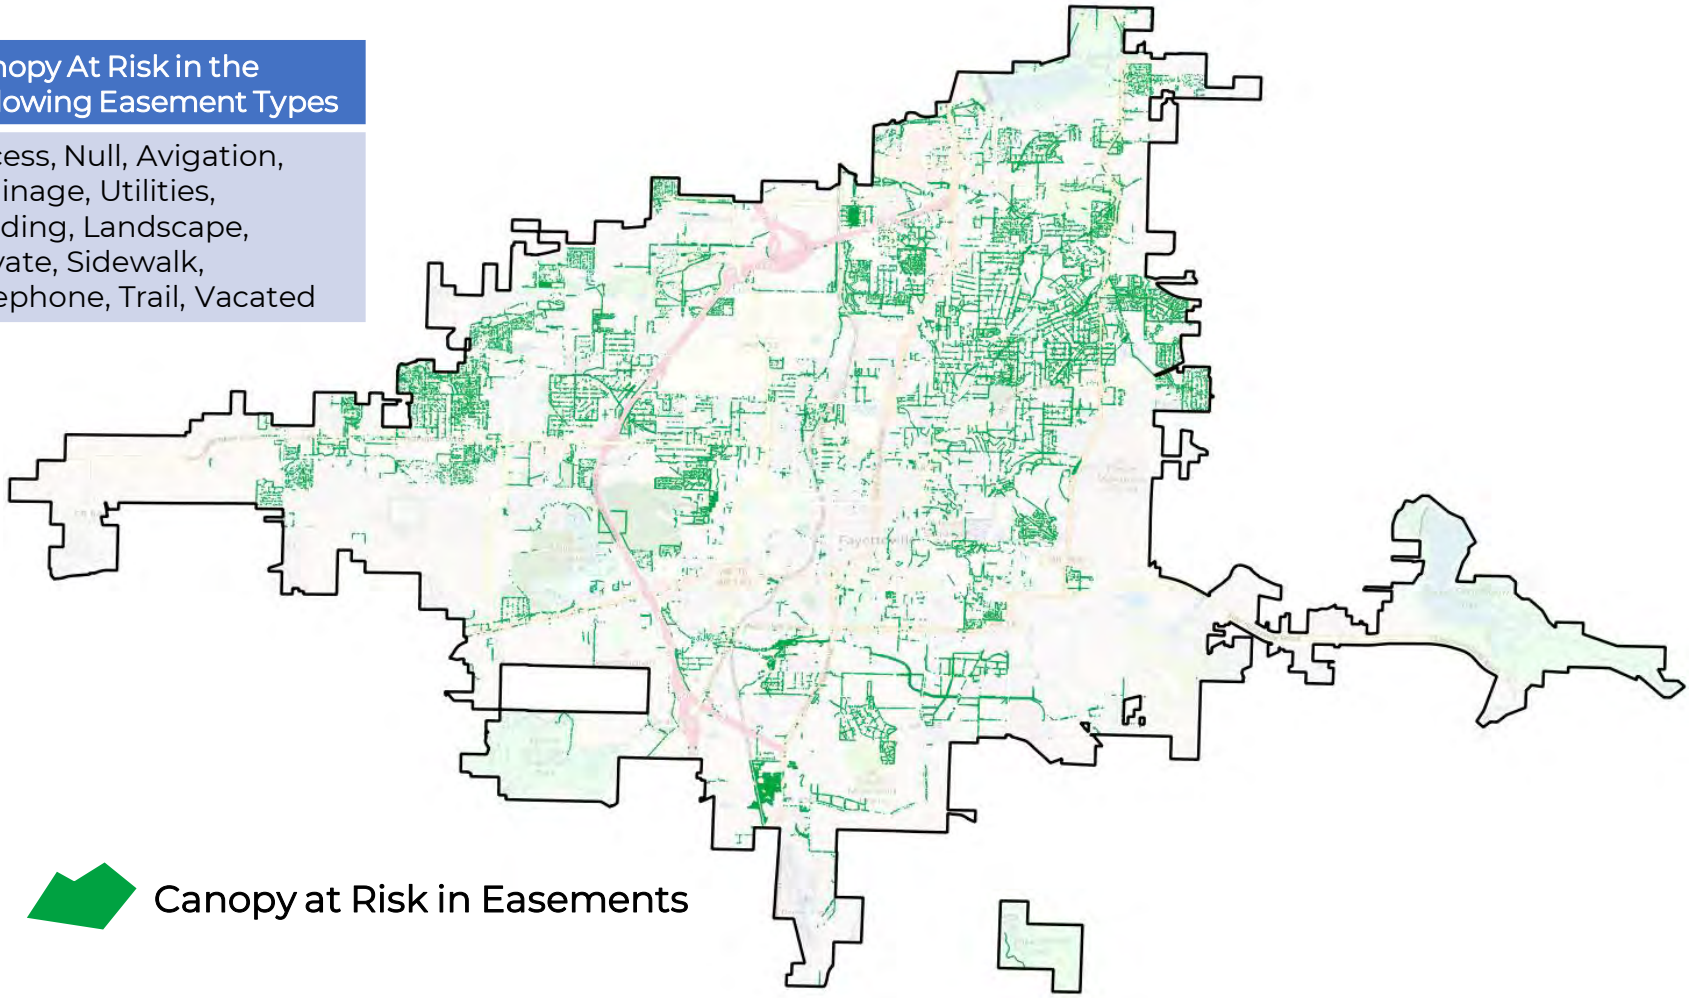
Easements Example



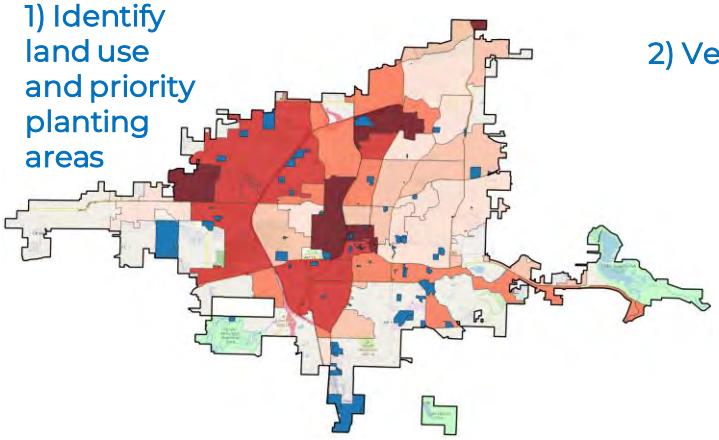
Canopy Likely Preserved	Canopy At Risk ("Vulnerable Easements"	Areas to Proactively Preserve
Conservation(?), Tree Preservation	Access, Null(?), Avigation, Drainage, Utilities, Grading, Landscape, Private, Sidewalk, Telephone, Trail, Vacated	Access, Landscape, Sidewalk, Trail, Vacated

Canopy in At Risk Easements

Acres of Vulnerable Easements	Canopy Acres of Vulnerable Easements	% Canopy of Vulnerable Easements
3,980.6	1,015.0	25%

Canopy At Risk in the Following Easement Types

Access, Null, Avigation, Drainage, Utilities, Grading, Landscape, Private, Sidewalk, Telephone, Trail, Vacated

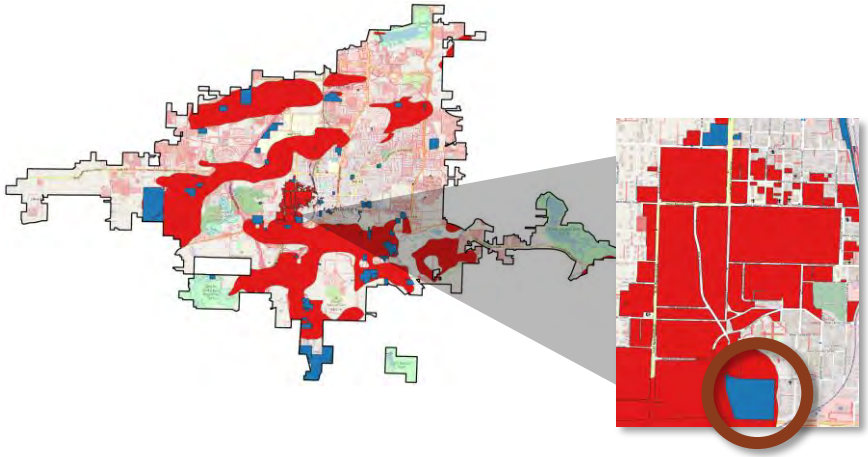


Canopy at Risk in Easements

Applying Canopy Goals & Priority Planting Areas with Consideration of Exclusion Areas

Priority Planting in Civic Institutional Land Use Areas to Achieve Canopy Goals

1) Identify land use and priority planting areas



Average Surface Temperature

- City Boundary
- Civic Institutional Land Use
- 75 – 80
- 80 – 81
- 81 – 82
- 82 – 83
- 83 - 85

2) Verify and confirm the canopy goal and number of trees to plant for the land use

Future Land Use	Current Canopy %	Modeled Canopy %	Timeframe (years)	# of Trees per Year
Urban Center	16%	16%	30	1
City Neighborhood	30%	31%	30	106
Residential Neighborhood	41%	46%	30	1,050
Rural Residential	48%	53%	30	1,032
Non-Muni Government	17%	19%	30	55
Civic Institutional	30%	32%	30	74
Civic & Private Open Space	62%	65%	30	202
Natural	62%	65%	30	480
Industrial	30%	30%	30	3
Citywide	39%	44.7%	30 Years	3,003

3) Identify and remove non-plantable areas (university, easements, prairie)

Legend

- City Boundary
- Civic Institutional Land Use
- University grounds, vulnerable easements, and prairie
- Not plantable

4) Identify Possible Planting Area in priority area for the land use and determine planting locations

5) Continue to identify possible planting areas in priority areas for the land use to strategize how and where to plant 74 trees per year for 30 years to reach the 32% canopy goal for the Civic Institutional land use as shown in the table above in step #2

TREE INVENTORY OVERVIEW

About

In October 2022, a sample inventory of public and private trees in Fayetteville, Arkansas was conducted by PlanIT Geo's Certified Arborists accredited by the International Society of Arboriculture. The scope of the public and private tree sample inventory was prepared as part of the City's Urban Forest Management Plan ("UFMP" or "Plan") project that is currently underway as of November 2022. The tree inventory is intended to gather data that informs the current extent, structure, characteristics, and maintenance needs of the urban forest that can be addressed in the UFMP.

Due to limited funding, a comprehensive inventory was not conducted though sampling methods were used in order to extrapolate the data to represent the total public and private tree populations, respectively. To do this, a sample inventory of public trees along approximately 5 percent of linear road miles (25 miles) was conducted. For public trees in parks, approximately 10 percent of City park acres were inventoried. The locations for the public tree inventory were determined by the City's Urban Forester and PlanIT Geo's Field Services team. For the private tree sample, an inventory of trees on private property was conducted when adjacent to public trees being inventoried. Data collection for private trees was not conducted on or within private property— the inventory was conducted within public rights-of-way (i.e., sidewalks) to provide a snapshot of the extent, structure, and characteristics of private trees. In addition to trees, possible available public planting sites were also inventoried based on criteria provided by the City's Urban Forester.

In November 2022, the Consulting Team developing the UFMP reviewed and analyzed the tree inventory datasets and provided summary worksheets and this draft summary report. The following details the draft outcomes of the analysis. Additional analyses such as ecosystem benefits and extrapolating the data to represent the Citywide urban forest remains to be done as part of the UFMP project.

Note, the public and private tree sample inventory analysis was conducted in the months of November and December 2022. Due to ongoing tree maintenance and the dynamic characteristics of trees, changes such as condition, tree size, and maintenance needs may have changes since the analysis.

PUBLIC TREE SAMPLE INVENTORY SUMMARY

Includes public street, median, park, and trail trees

Public Data Highlights (Sample Inventory)

Field	Value
Data Points	2,740 public data points
Alive & Dead Trees	2,568 (95%) Alive 144 (5%) Dead
Adjacent Land Use	68% Park/Vacant/Other 15% Single Family
Primary Growing Space Type	Other (Maintained): 39% Planting Strip: 27%
Primary Planting Site Width	Class II (medium) 6-10 feet: 42% (1,151 trees) Class III (large) 11+ feet: 36% (964 trees)
Number of Unique Tree Genera	54
Most Common Tree Genera	*Quercus*: 31% (838 trees) *Ulmus*: 15% (411 trees) *Acer*: 8% (213 trees)
Proportion of Top 10 Tree Genera	Top 10 comprise 74% of public trees
Number of Unique Tree Species	111
Most Common Tree Species	Princeton elm: 7% (189 trees) Post oak: 6% (175 trees) Willow oak: 6% (165 trees)
Proportion of Top 10 Tree Species	Top 10 comprise 44% of public trees
Tree Size Classes	55% 0-6in DBH (1,499 trees) 19% 6-12in DBH (516 trees) 14% 12-18in DBH (367 trees) 6% 18-24in DBH (158 trees) 4% 24-30in DBH (122 trees) 2% >30in DBH (50 trees)
Average Diameter / Largest Tree	8.1 inch average / 62 inch baldcypress
Tree Condition	0.04% Excellent (1 tree) 75% Good (2,043 trees) 15% Fair (394 trees) 5% Poor (130 trees) 5% Dead (144 trees)
Observations	30% Crown Dieback (813 trees) 6% Cavity Decay (174 trees)
Recommended Tree Work	Clearance Prune: 8% (217 trees) Remove Tree: 6% (162 trees) Utility Prune: 3% (72 trees)
Wire Conflicts	Wires present & conflicting: 72 trees (3%)
Clearance Conflicts	Pedestrian: 2% (53 trees) Building: 1% (37 trees)
Ecosystem Benefits	$7,767 Overall Annual Value

Table 8. Summary of possible public planting sites inventoried in 2022

ESTIMATED CHARACTERISTICS OF ALL PUBLIC TREES

Methodology

Based on a total of 470 (500) linear road miles in the City and the inventory of public trees along 5% of roadways, the urban forestry consultants utilized research data from the 2014 Urban & Community Forestry Census of Tree Activities (Hauer, et al.) to estimate the total public tree population. For communities of similar size, population, population density, and linear road miles, the average public tree population is 25,000 trees. Based on these estimates, the sample public tree data (2,712 alive or dead trees) was extrapolated to represent 25,000 public trees. The following summaries provide estimates of public tree extent, growing space, structure, characteristics, and maintenance needs:

Public Tree Status

ESTIMATED CHARACTERISTICS OF ALL PRIVATE TREES

Methodology

A total of 850 private trees were inventoried as a sample. These trees were located in private parcels adjacent to public streets that were visited during the public tree inventory. According to Fayetteville's Mobility Plan, there are a total of 470 linear road miles and the inventory crews inventoried along a total of 25 linear road miles or approximately 5% of roadways. The private parcels included in the sample inventory had a total acreage of 342 acres. Using the City's Zoning classifications and GIS data, a total of 32,150 acres exist across the City. Therefore, the inventory crews visited 1% of all private parcels. Based on these figures, it is estimated that there are a total of 79,884 private trees, or approximately 80,000 private trees in maintained areas of properties. The following summaries provide estimates of private tree extent, growing space, structure, characteristics, and maintenance needs:

Private Tree Status

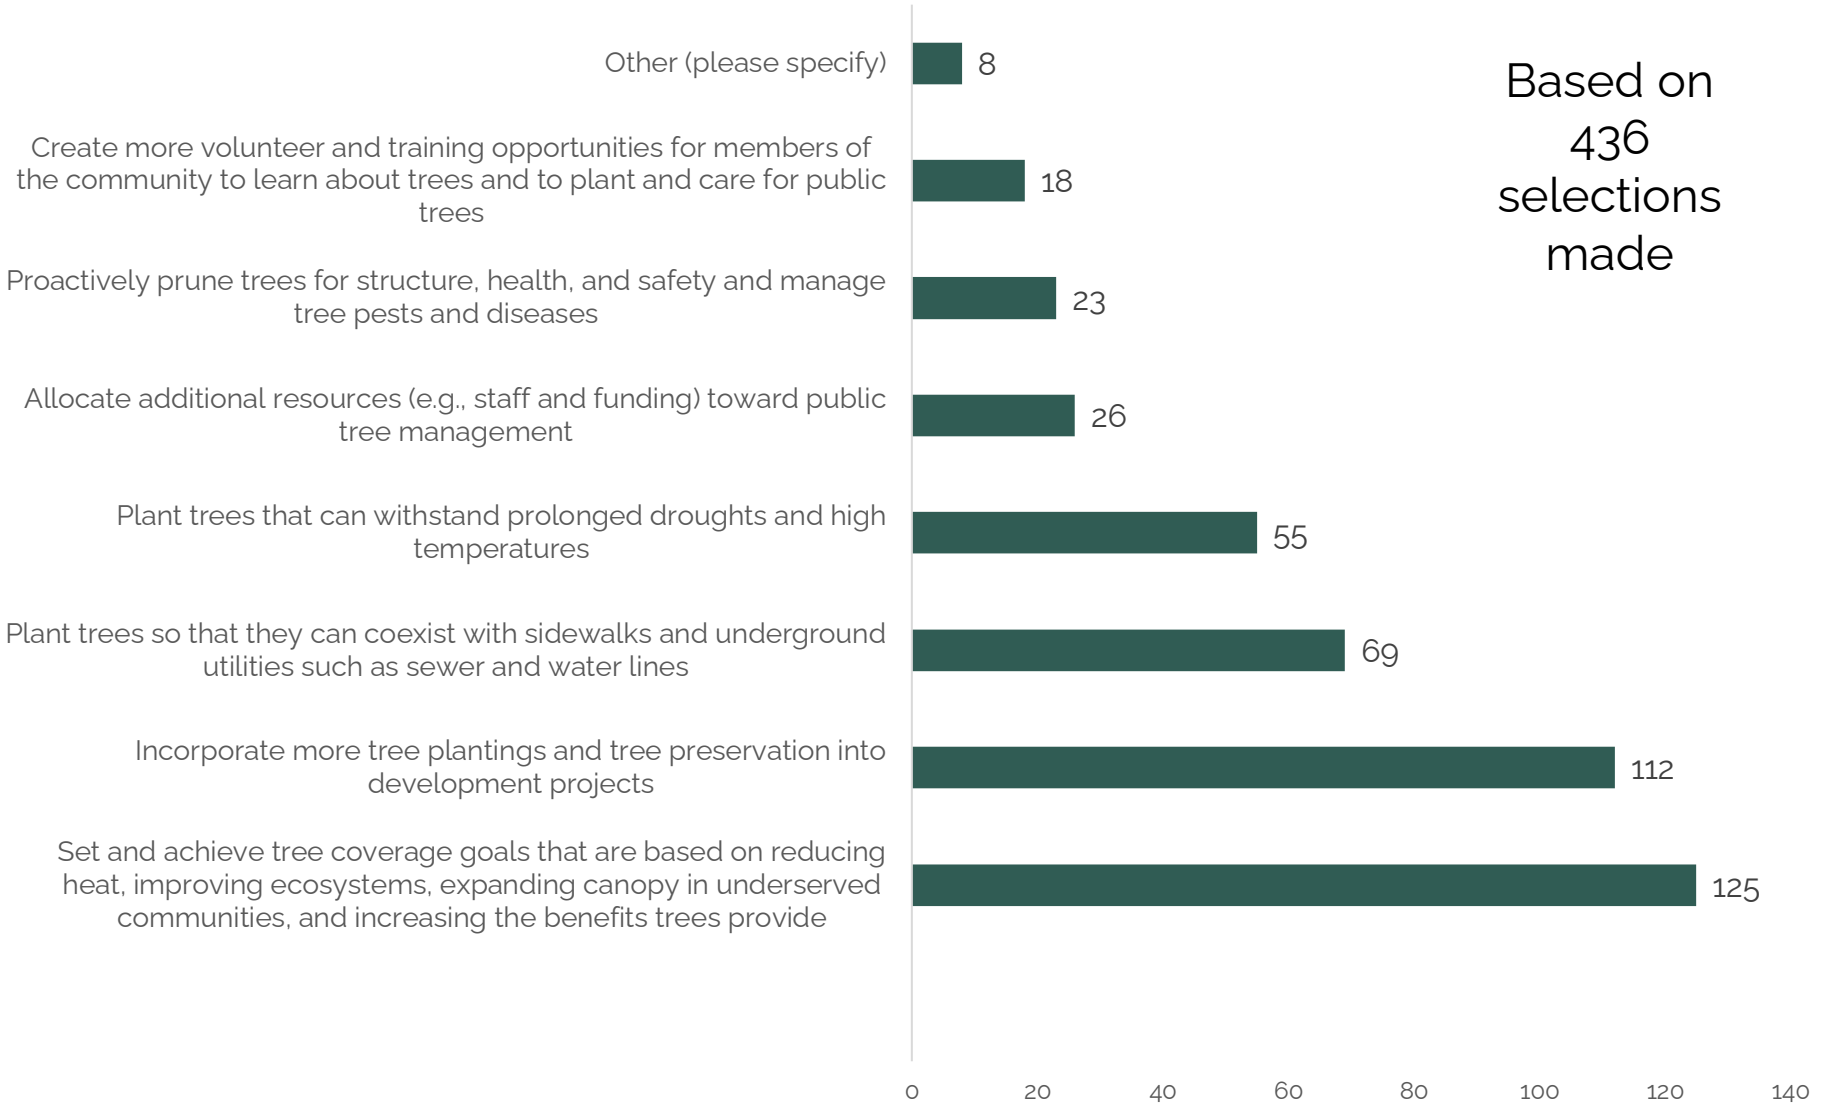
QUESTION #1



Q1: What do you consider most important for the trees in Fayetteville? (Select your top two options)?
I envision something different than what is listed above (please describe):
11
More volunteer and training opportunities to plant and care for trees in my neighborhood
13
A city program that proactively maintains our public trees for safety and to maximize the benefits they provide
38
Healthy trees that are resilient to pests, diseases, prolonged drought, urban heat and changing climates, limited space, and storm events
67
Increased number of trees where there is historically minimal tree coverage
84
Trees providing shade and reducing surface temperatures where I park, walk, and play

QUESTION #2

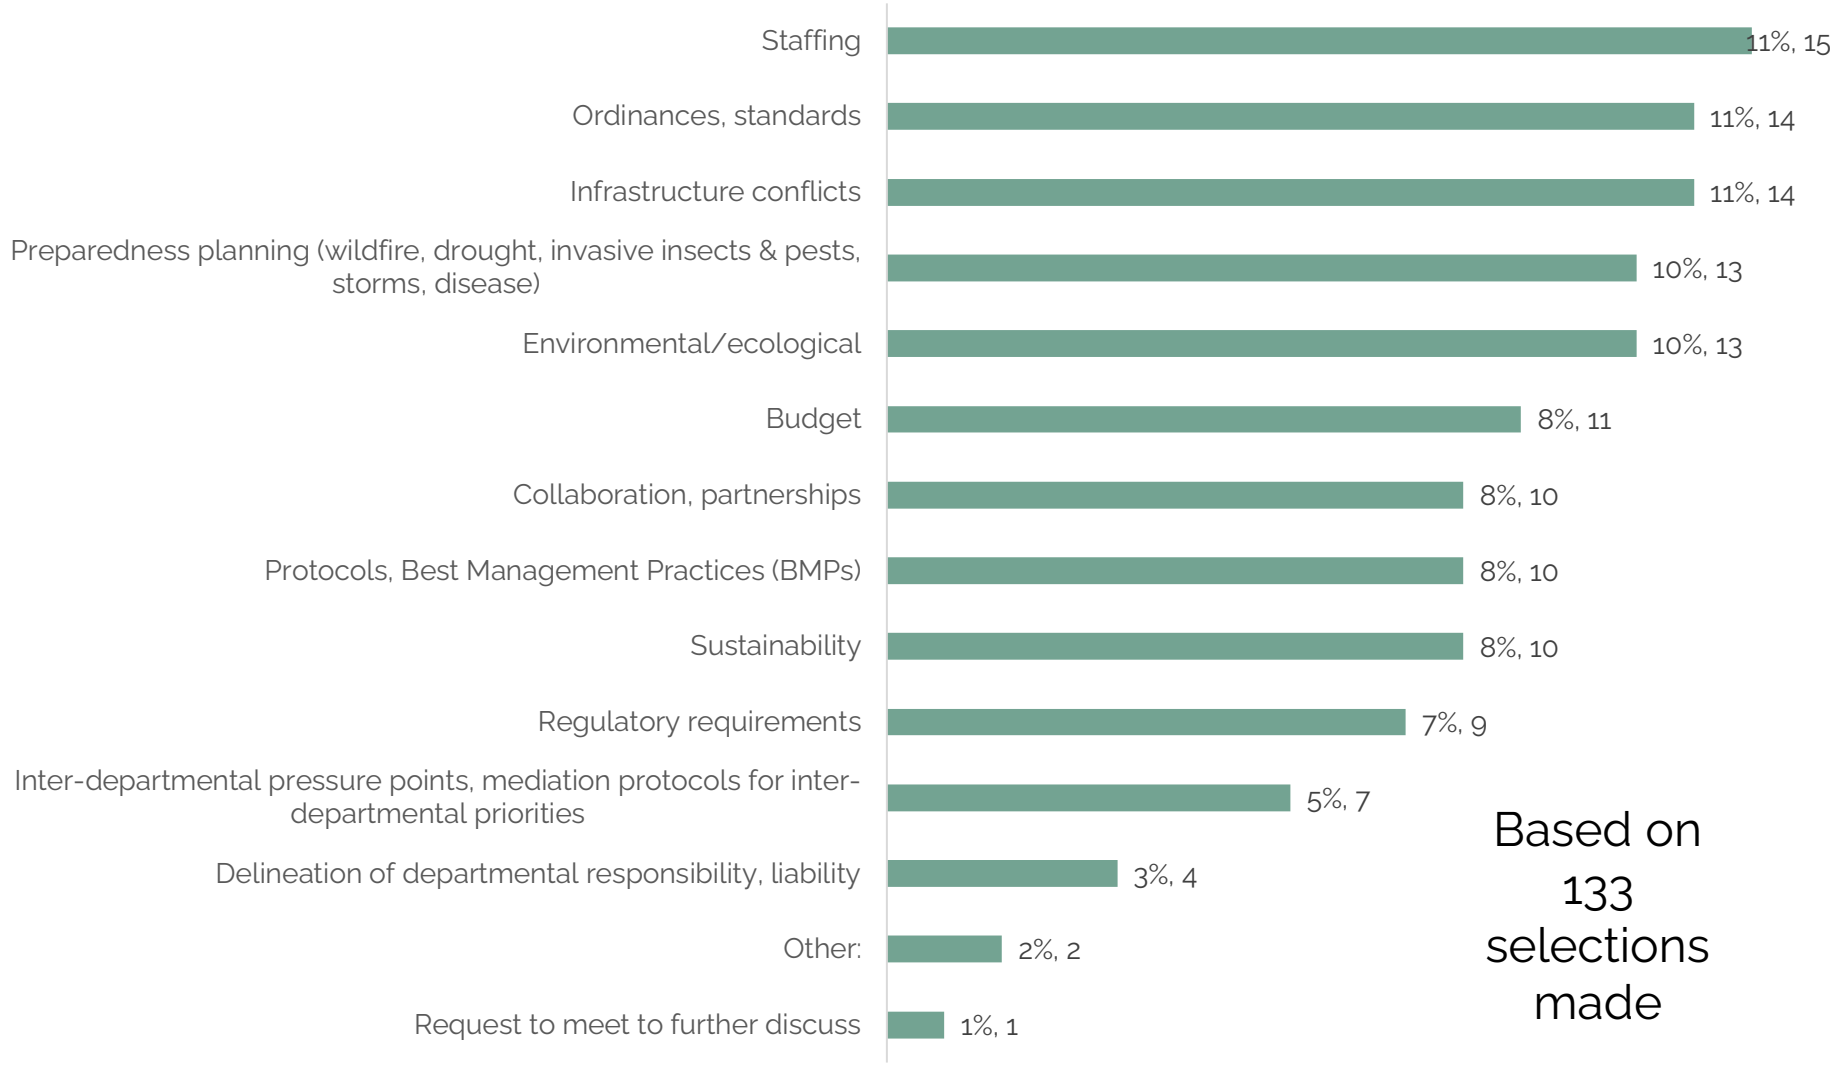
2. How does your work or role impact or influence the urban forest, individual trees, natural areas, and/or the landscape in Fayetteville?

Based on 137 selections made

QUESTION #2

2. How does your work or role impact or influence the urban forest, individual trees, natural areas, and/or the landscape in Fayetteville?

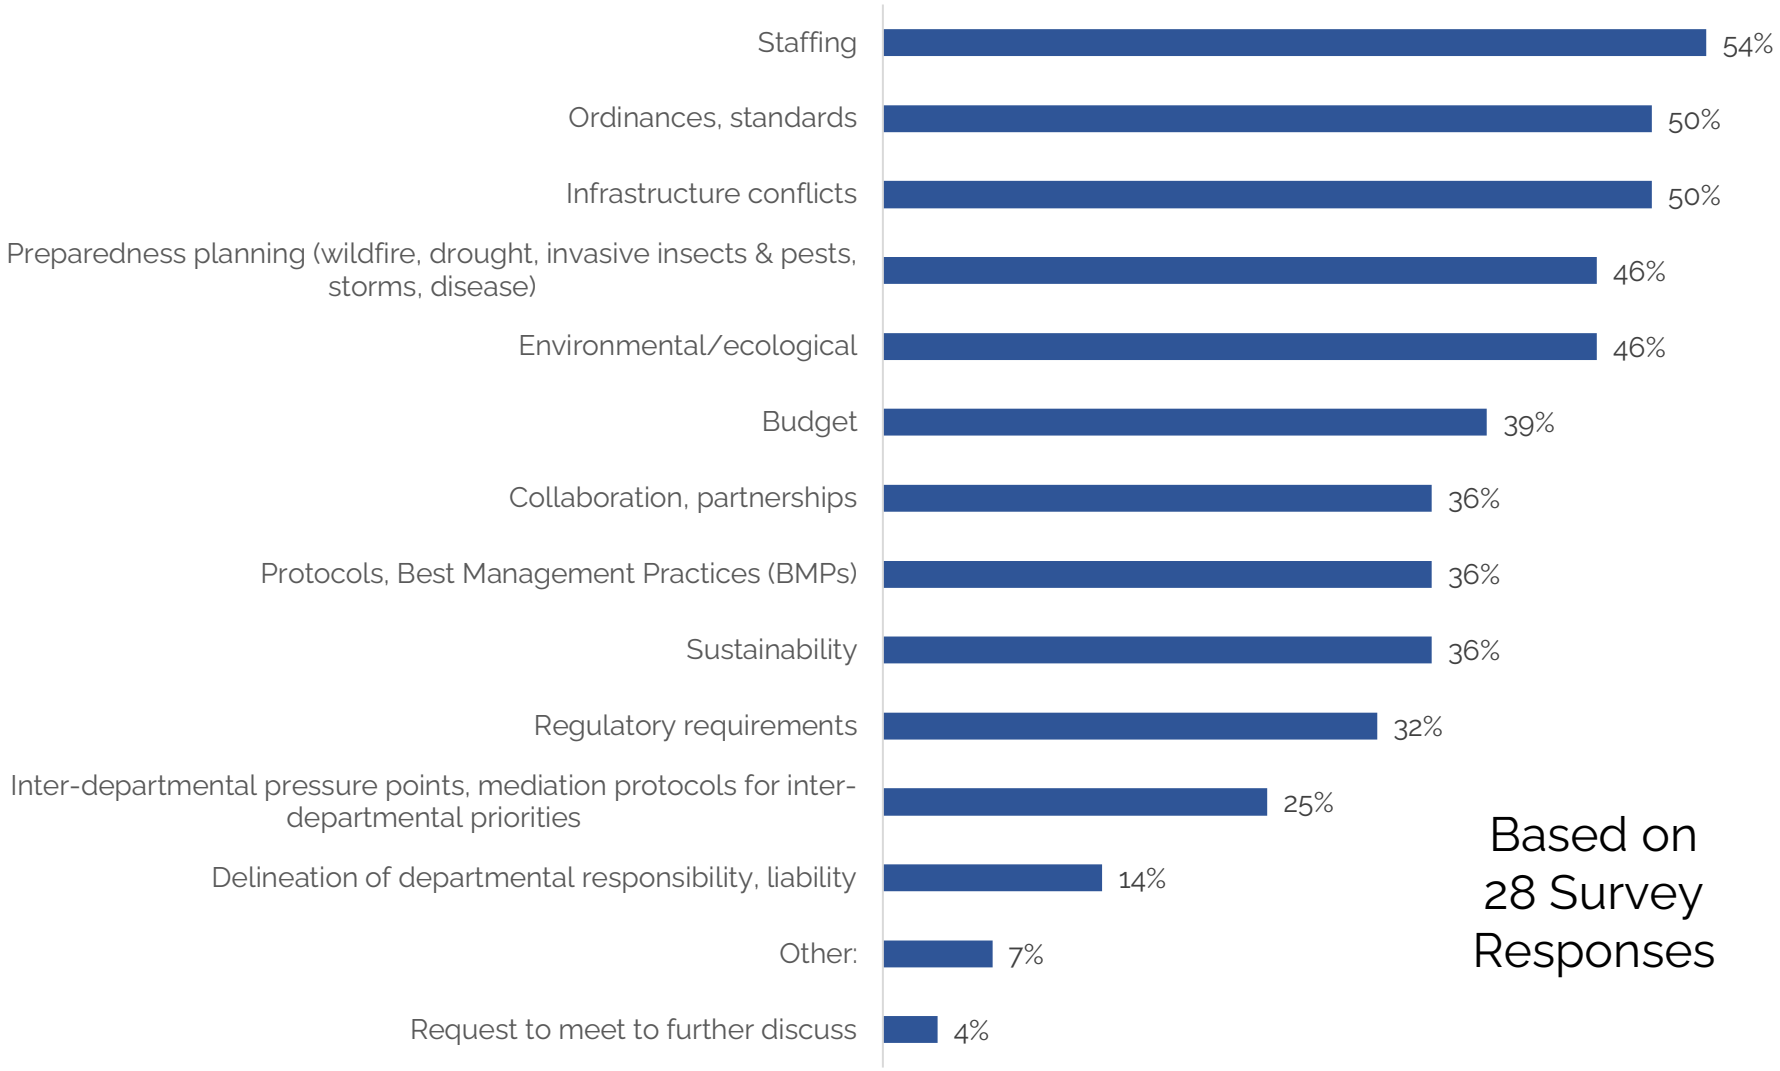


Based on 28 Survey Responses

Question #2 Comments

Name	Comment(s)
	Member of PRAB
	Citizen at large on EAC committee
	use the platform of an outdoor retailer to advocate for public lands and environmental stewardship
	EAC has advisory role to City Council
	Voice for urban forestry goals and missed opportunities in city planning decisions.

QUESTION #3



3. What are the current issues, concerns, challenges, information/resource gaps, or inefficiencies experienced or seen, if any, as it relates to your work/role described in #2?

Based on 133 selections made

QUESTION #3

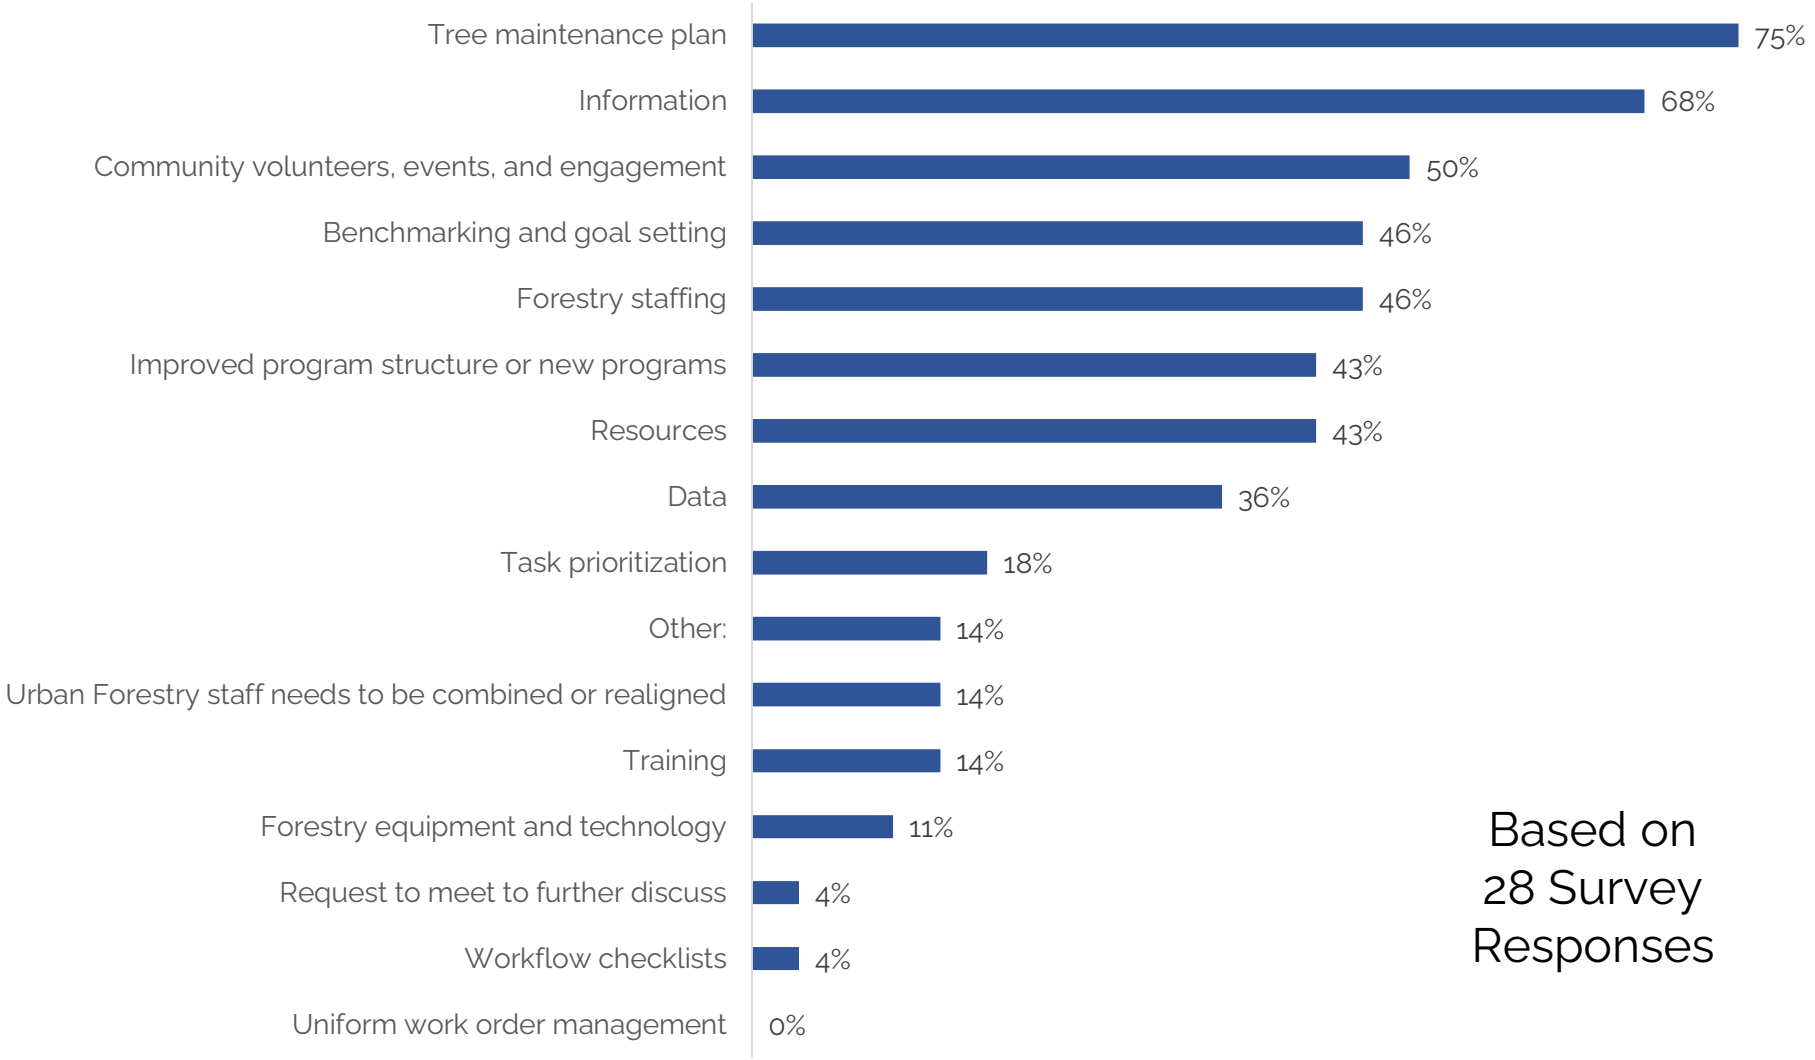
3. What are the current issues, concerns, challenges, information/resource gaps, or inefficiencies experienced or seen, if any, as it relates to your work/role described in #2?

Based on 28 Survey Responses

Question #3 Comments

Name	Comment(s)
	Poor inventory management
	Replacement of street trees in existing neighborhoods

QUESTION #4

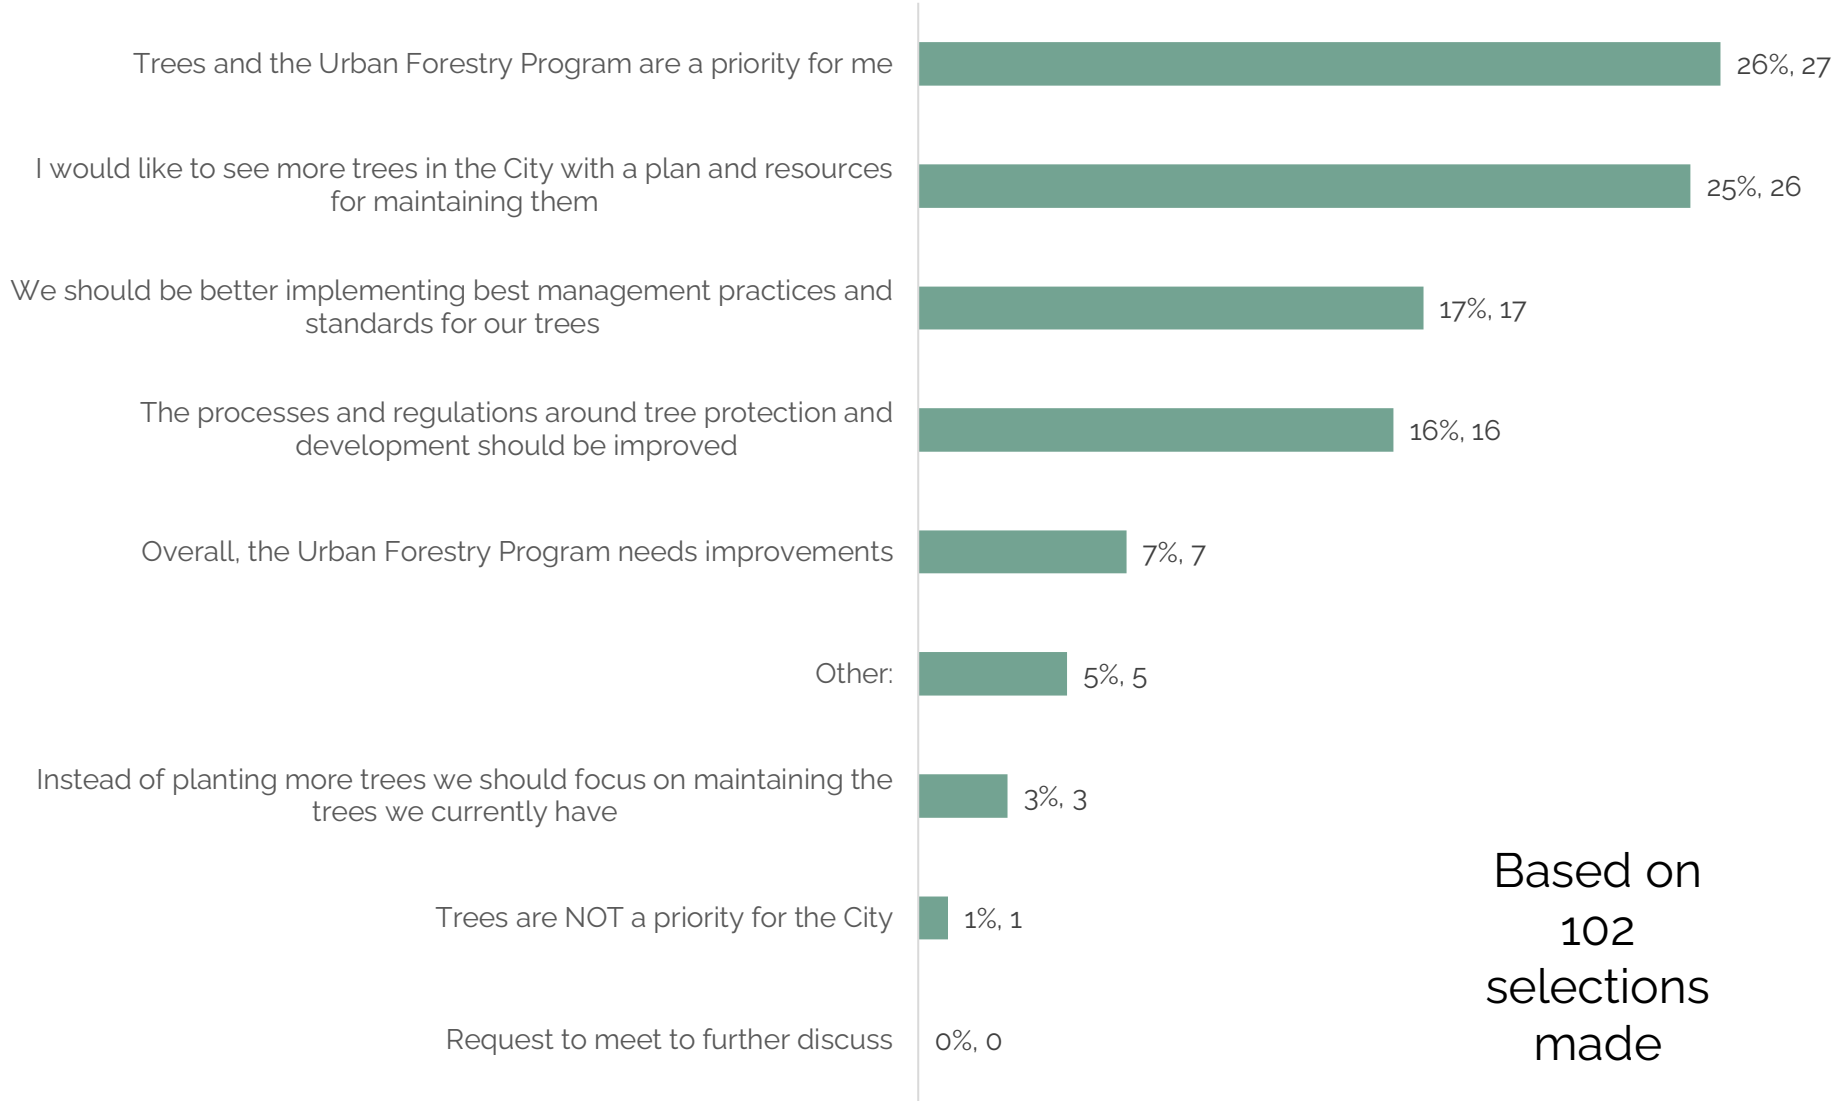


4. What results and outcomes of the UFMP would you like to see to assist and support your work or role as it relates to the trees and related services in Fayetteville?

Based on 136 selections made

QUESTION #4

4. What results and outcomes of the UFMP would you like to see to assist and support your work or role as it relates to the trees and related services in Fayetteville?

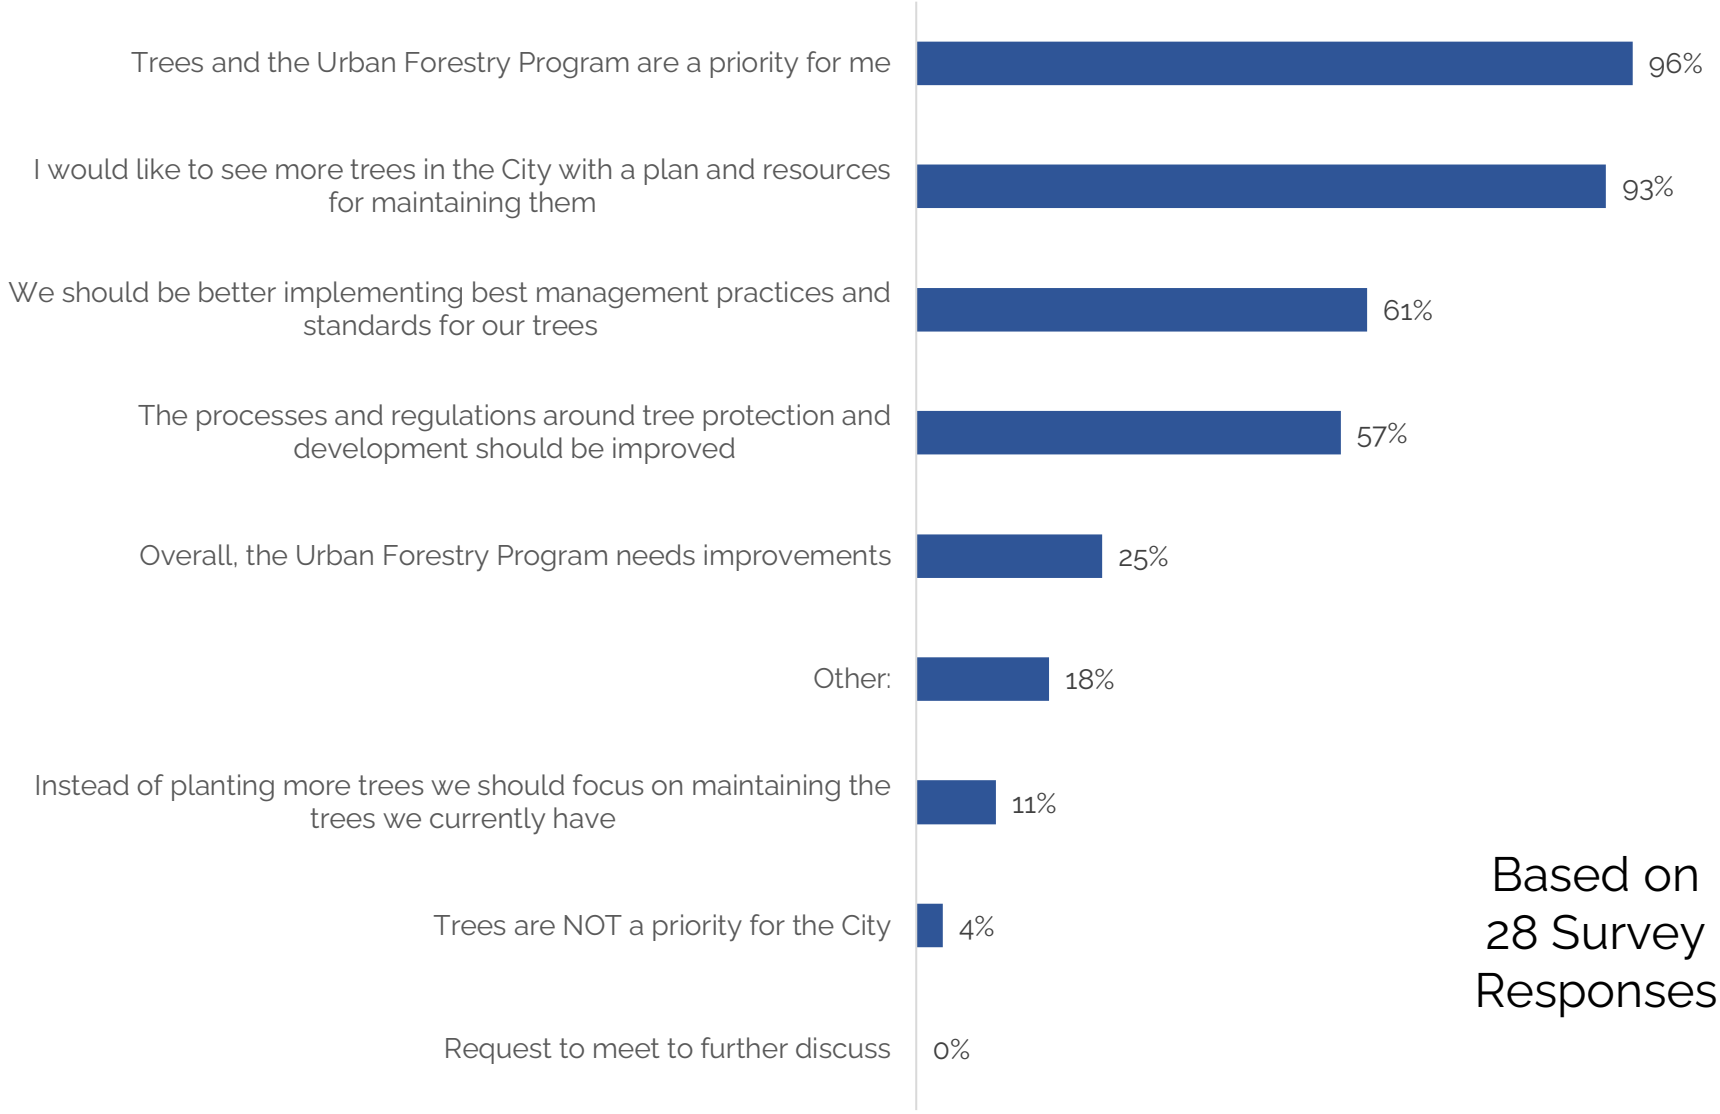


Based on 28 Survey Responses

Question #4 Comments

Name	Comment(s)
	Expand to be "urban ecology"
	Supporting current Forestry activities and preservation/landscaping standards
	Clear understanding of where efforts should be focused and what benefits will be received by increased efforts is warranted.
	Prioritize planting trees that will have the greatest positive impact on other species. For example, prioritize native oaks over Liriodendron (tulip tree)

QUESTION #5

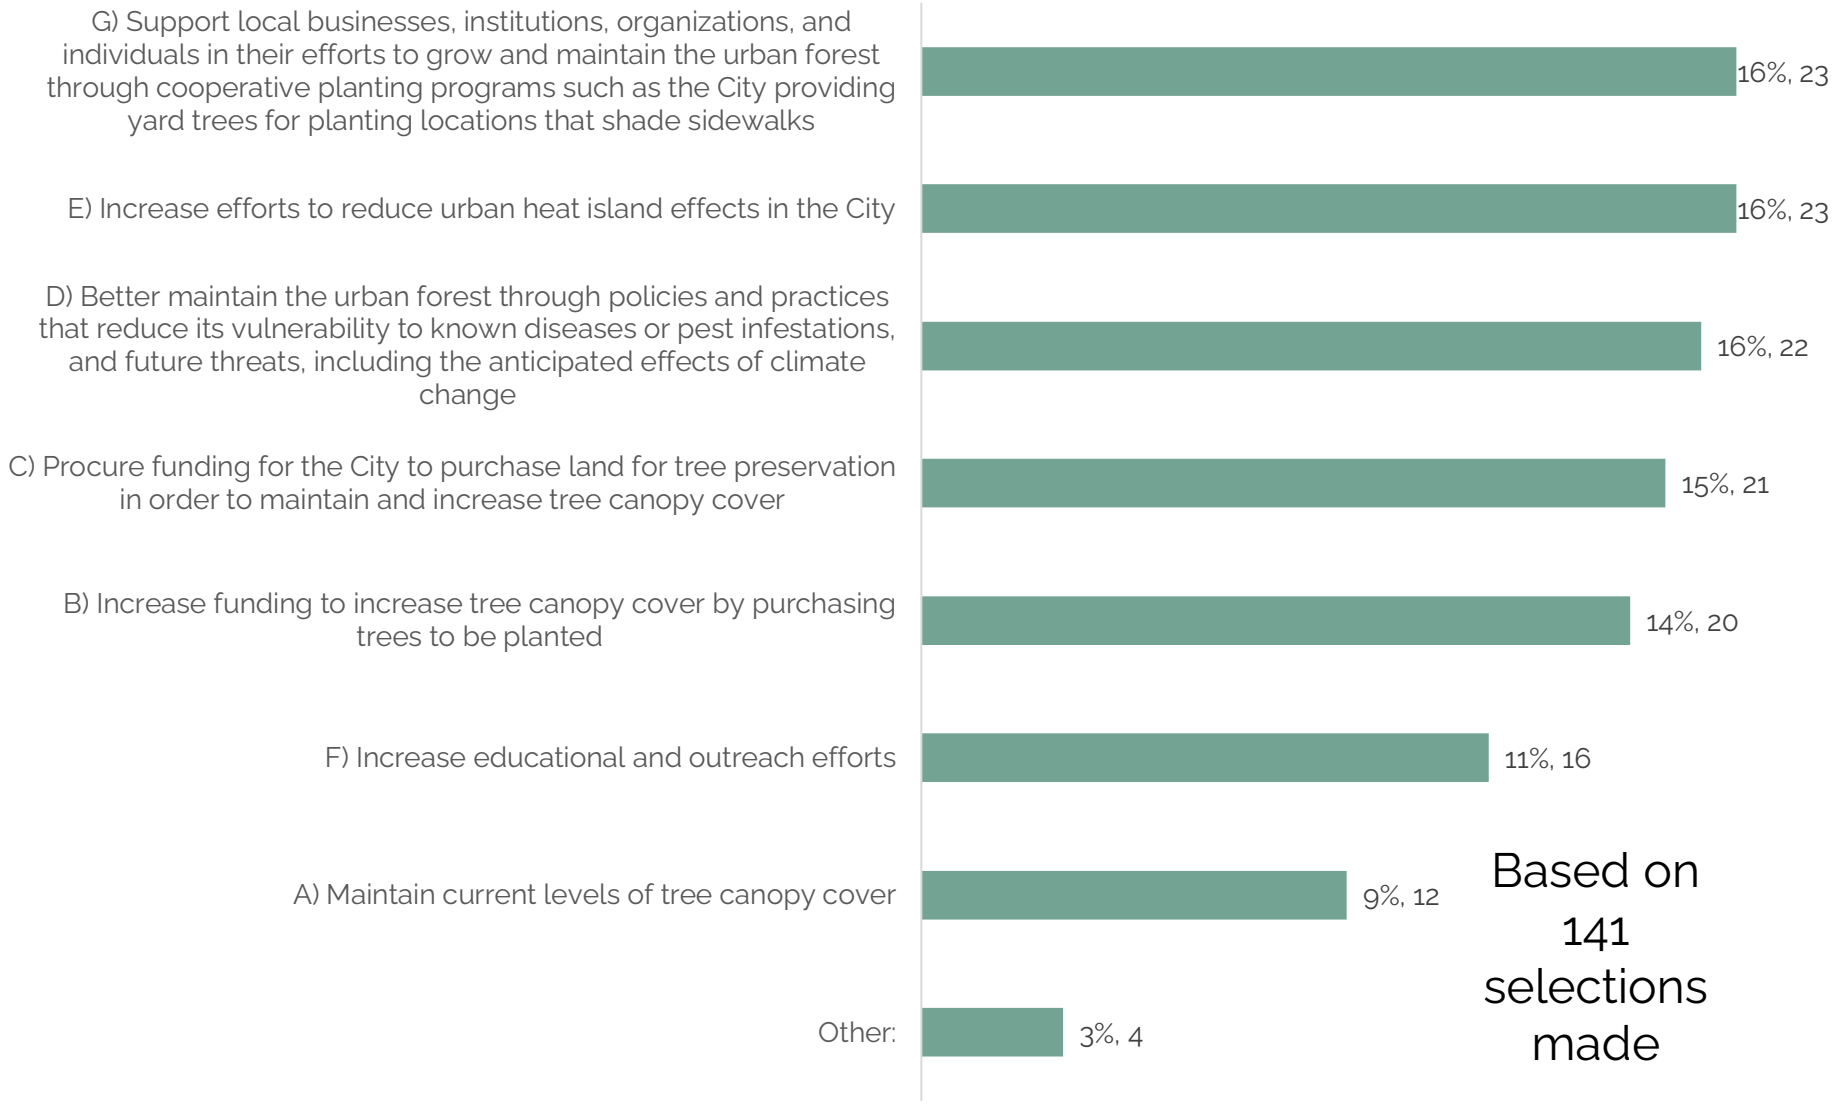


5. Please select from the following to summarize your viewpoints and priorities relating to trees and the urban forest in the City.

Based on 102 selections made

QUESTION #5

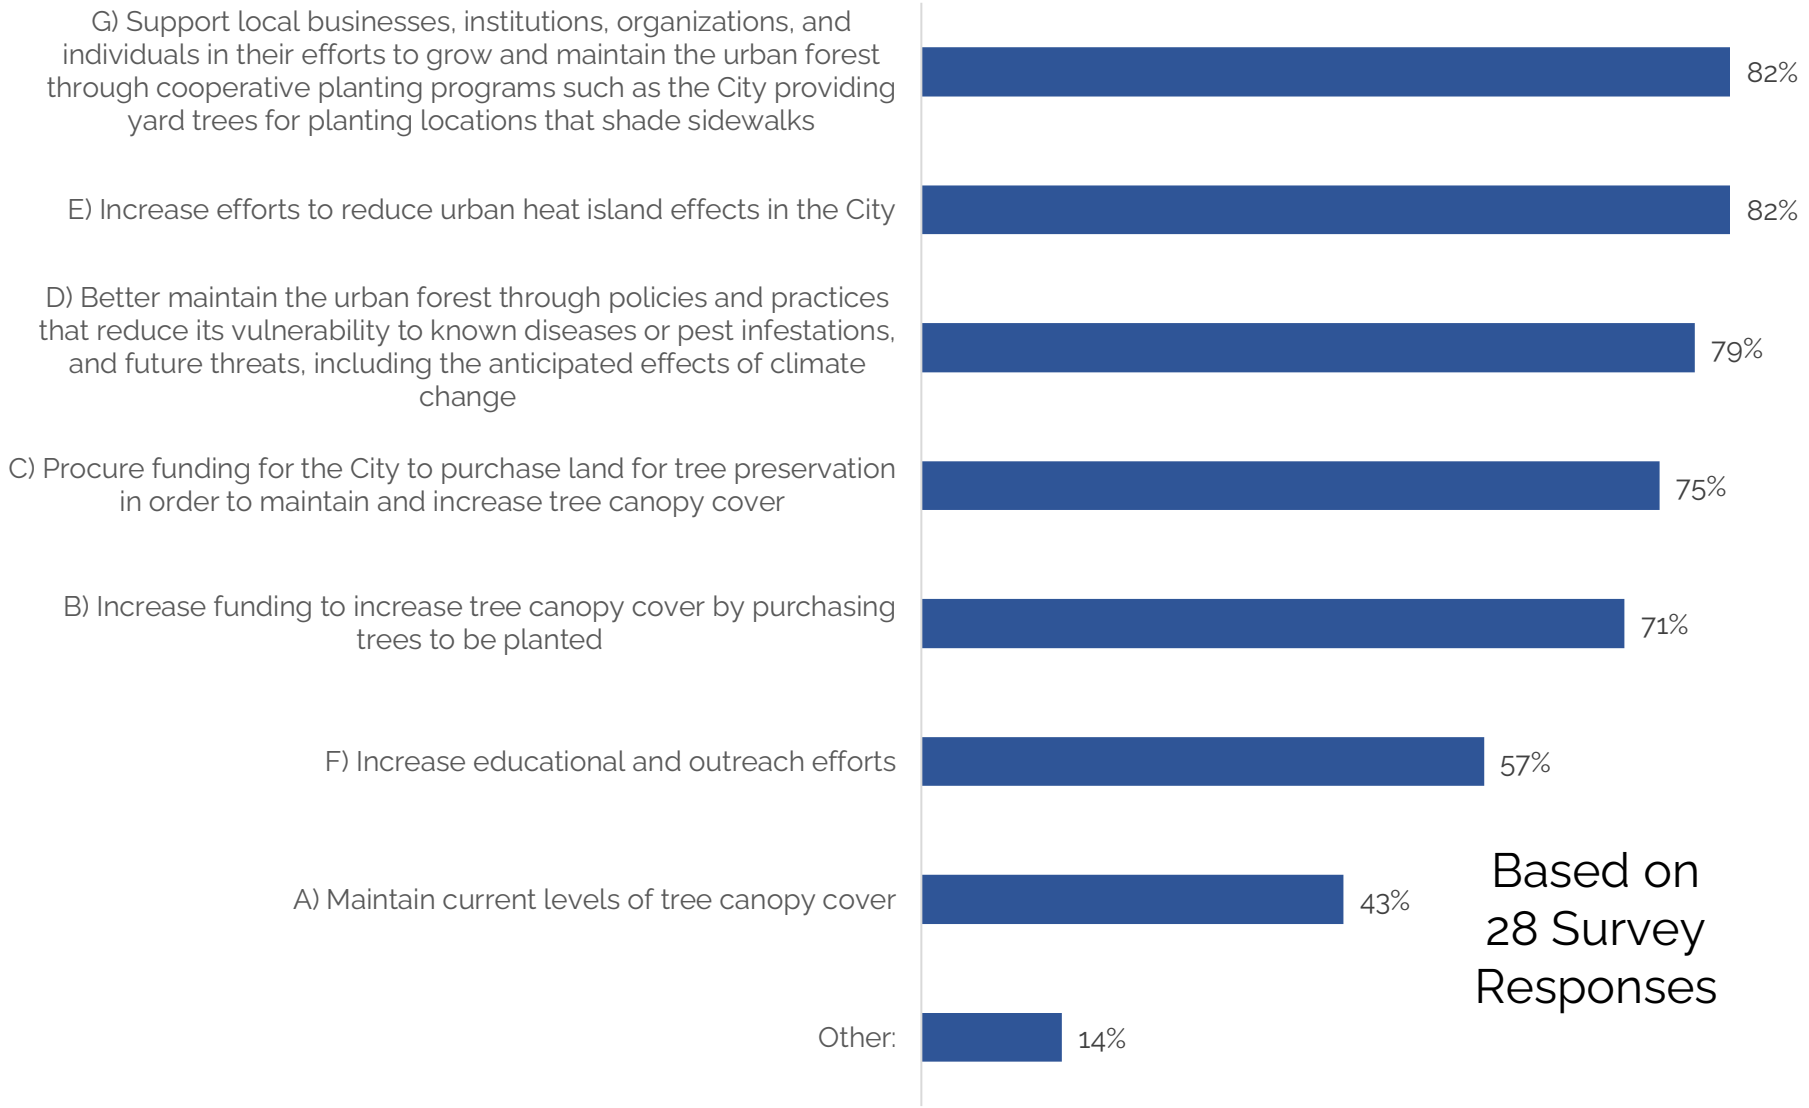
5. Please select from the following to summarize your viewpoints and priorities relating to trees and the urban forest in the City.



Based on 28 Survey Responses

Question #5 Comments

Name	Comment(s)
	I picked 3 and 4 because I like the idea of more trees but we lack a proper maintenance plan
	Expand to include broader ecological issues
	Street sections need to be reviewed. We are placing trees in spaces that are too confined for long term health of tree and infrastructure.
	We should not just be counting trees on properties that are about to be developed. We should identify large trees with significant environmental value.
	Yes, the Urban Forestry program needs improvements - it needs more resources, more vocal recognition of its value, and deeper integration with utilities and infrastructure and management that reflects that value

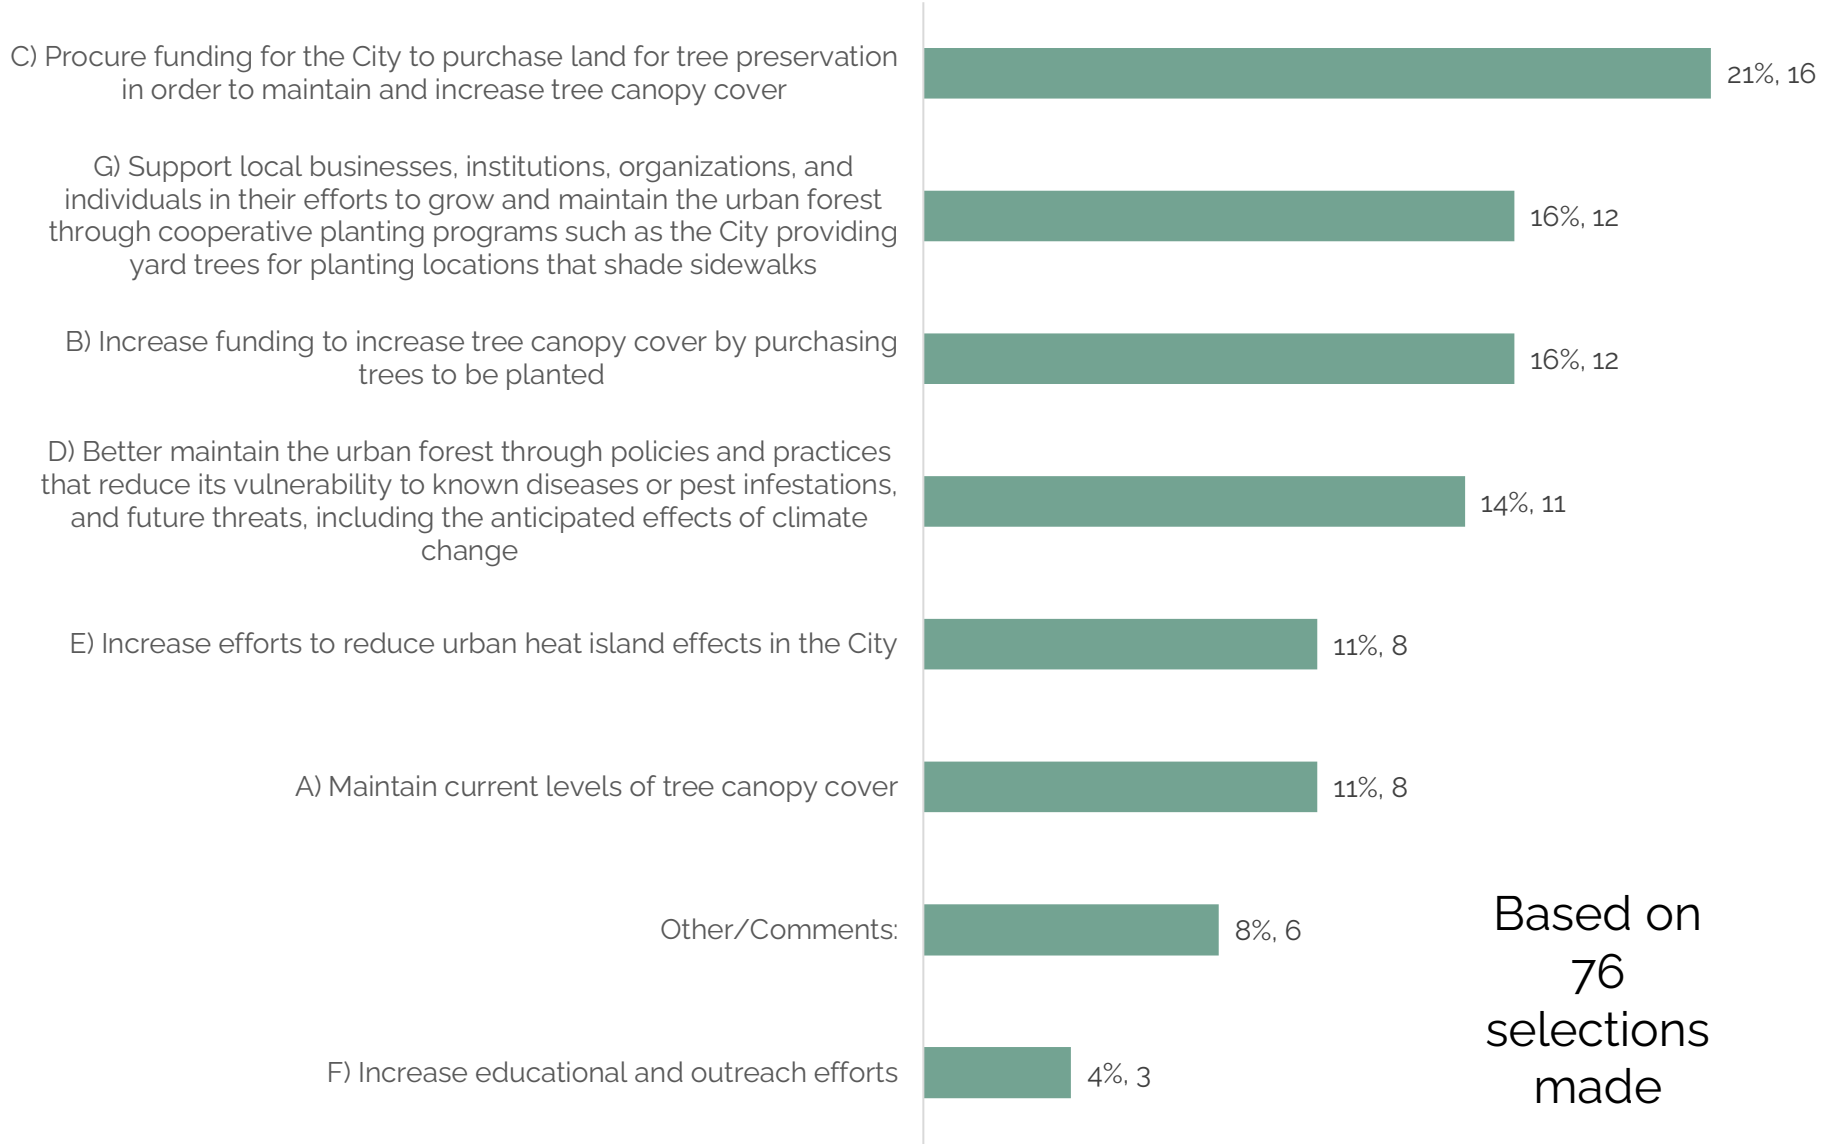


QUESTION #6

6. Overall, what do you feel are the most important goals for the City in regards to urban forestry?

QUESTION #6

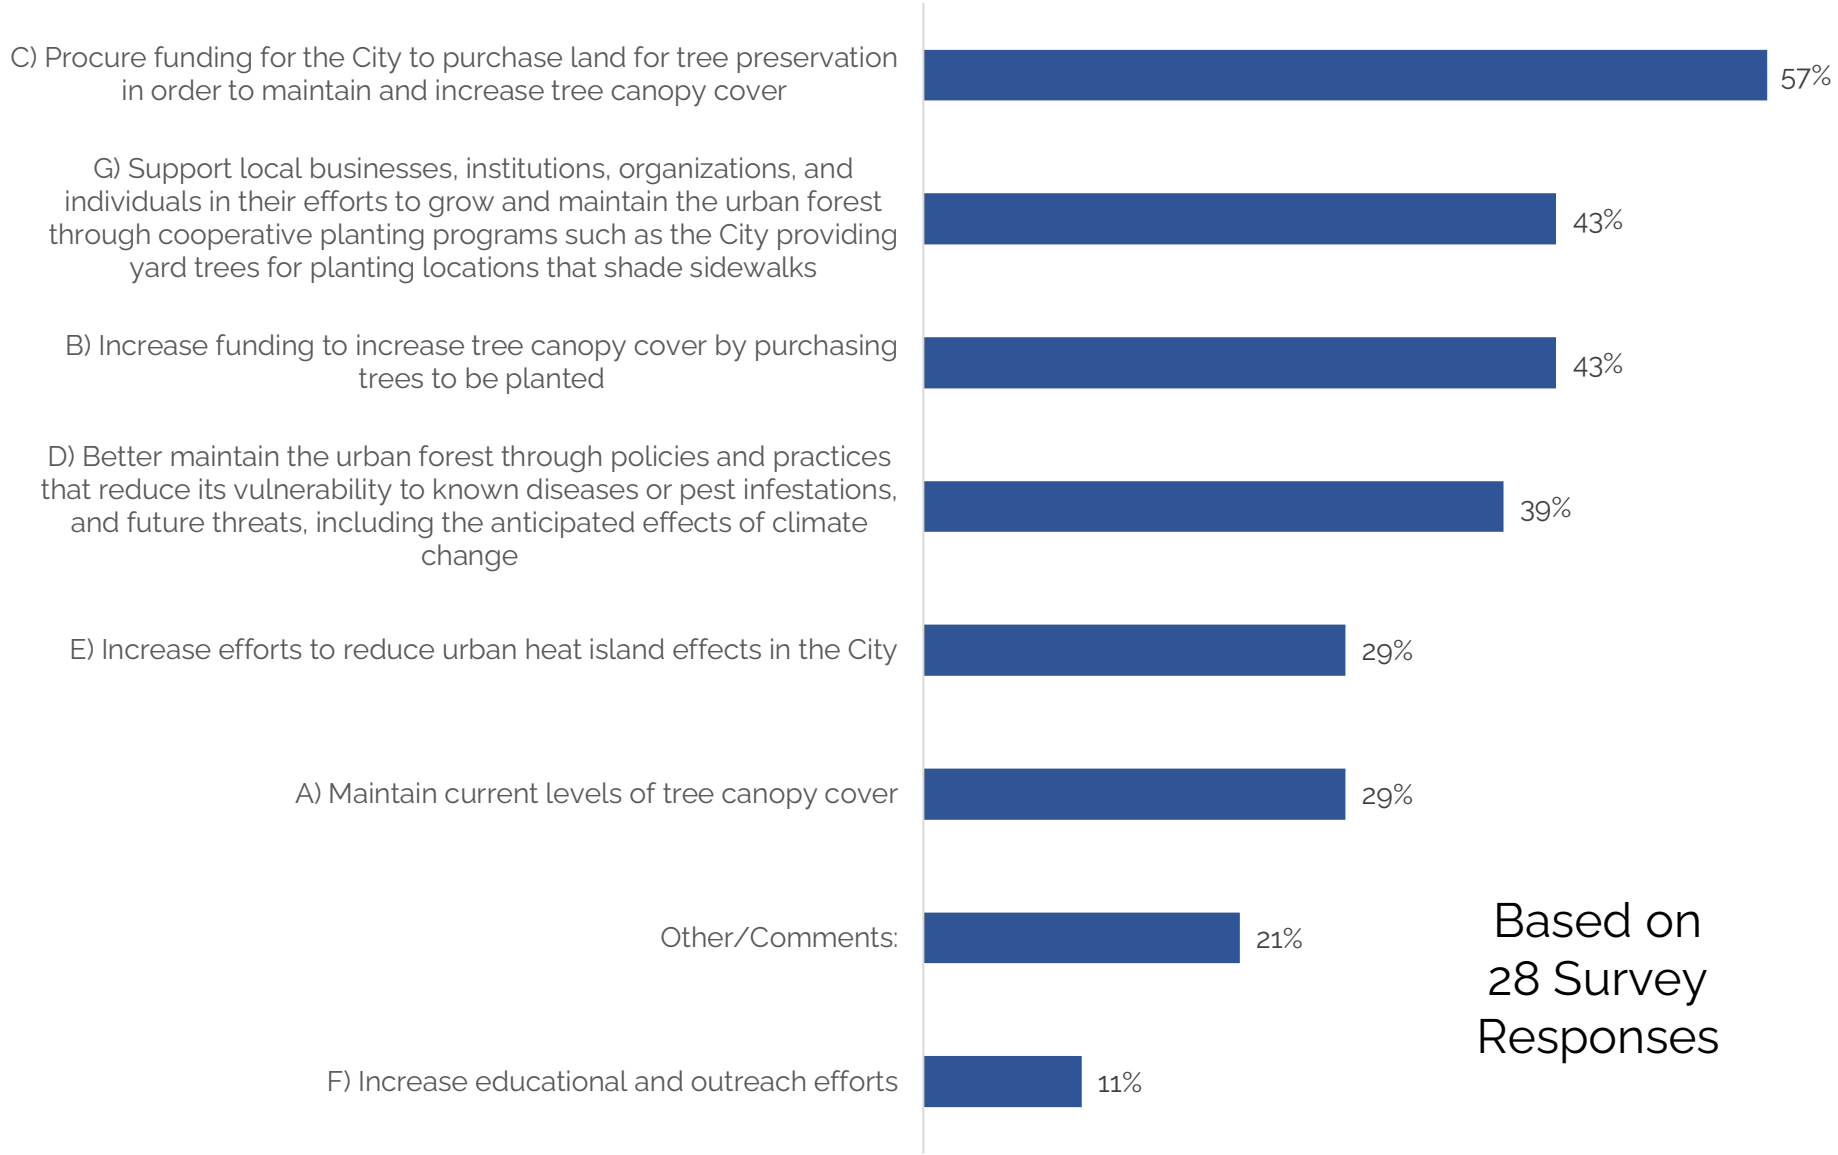
6. Overall, what do you feel are the most important goals for the City in regards to urban forestry?



Question #6 Comments

Name	Comment(s)
	Make sure that underserved areas, and those with few trees receive priority for planting urban forests.
	I agree with A) as a percent of the City under canopy, but not necessarily the existing canopy.
	Determine what is a reasonable canopy goal for the city based on land use, growth, and evnironmental/health benefits.
	Integration of urban ecology, of which forestry is a subset, into the value decisions of the mayor and city council, into budgeting and staffing, and into workflows of utilities and engineering

QUESTION #7



7. From the list above, what are the three (3) most important goals (list letter)?

Based on 76 selections made

QUESTION #7

7. From the list above, what are the three (3) most important goals (list letter)?

Based on 28 Survey Responses

Question #7 Comments

Name	Comment(s)
	Large gap between C (procure funding…) and G (support local businesses…)
	Make sure that underserved areas, and those with few trees receive priority for planting urban forests.
	and B (increase funding…)
	and F (increase educational…)
	I agree with A) (maintain current levels of UTC…) as a percent of the City under canopy, but not necessarily the existing canopy.
	Other: Integration and expansion of Urban Forestry through the city's organization

Fayetteville Urban Forestry Management Plan

US Forest Service Urban Forest Audit
~ Adapted for Fayetteville, AR ~

CITY OF FAYETTEVILLE ARKANSAS

PlanITGeo™ developers of TreePlotter

August 2023

URBAN FOREST AUDIT SYSTEM: OVERVIEW

U.S. Forest Service's
Urban Forest Sustainability & Management Audit System

Information Gathering & Discovery

- Measure City's readiness for improved urban forest management, use of the Discovery Matrix
- Document Index of discovered resources
- 11 Categories, 129 planning elements
  1) Management Policy & Ordinances
  2) Capacity and Training
  3) Funding and Accounting
  4) Decision & Authority
  5) Tree Inventories
  6) Urban Forest Plans
  7) Risk Management
  8) Disaster Planning
  9) Standards and Best Practices
  10) Community
  11) Green Asset Evaluation

Audit Process (example only)

Category & Element	Count
Management Policy and Ordinances	30
Professional Capacity and Training	3
Funding and Accounting	4
Decision and Management Authority	3
Inventories	14
Urban Forest Management Plans	13
Risk Management	4
Disaster Planning	4
Standards & Best Management Practices (BMPs)	39
Community	28
Green Asset Evaluation	10

Category: Management Policy & Ordinances		
#	Subcategory	Document/Resource
1.02	Climate Change (Sustainability)	Tree Policy Manual Sustainable City Plan
1.03	No Net Loss	Tree Policy Manual
1.04	Risk Management	Tree Policy Manual
1.05	Tree Canopy Goals	Sustainable City Plan General Plan

URBAN FOREST AUDIT SYSTEM: DOCUMENT INDEX

Documents Evaluated and Recorded in the Index

#	Resource	Information Gathered / Application
1	City Plan 2040 Comprehensive Plan	Public survey conducted, tree canopy section 8.3 (p89), climate change and canopy, urban forest benefits, ordinance, UFAB (formerly Tree and Landscape Advisory Committee est. in 1993)
2	Tree Preservation & Landscape Manual	Contains recommended tree list
3	Code of Ordinances - Chapter 167 Tree Preservation and Protection	
4	Code of Ordinances - Chapter 177 Landscape Regulations	Contains list of invasive plant species
5	Tree Preservation Standard Detail	
6	Tree List from Arkansas Native Plant Society	
7	Significant Trees List & Classifications	
8	Tree Canopy Cover and Environmental Equity	
9	Adopted Annual Budget & Work Program	Contains statement on 40% canopy goal (based on Energy Action Plan), lists trees planted, lists trees mitigated and preservation acres
10	2022 Q1 Executive Management Report	Nothing to report
11	Adopted Five Year Capital Improvements Plan 2021-2025	
12	"Fayetteville First" Strategic Plan	
13	Energy Action Plan	Chapter 1 Greenhouse Gas Reduction & Climate Change; Chapter 3 Buildings, Strategy #5 - UHI mitigation (p40); Chapter 3 Buildings Strategy 2, Make Existing Single-family & Multi-family Dwellings More Efficient; Ch 3 Buildings Strategy 4, Conduct a Community-Wide Tree Canopy Assessment and Set a Tree Canopy Coverage Percentage Goal (p39); Ch 3 Cross-Sector Strategy 1, Integrate Resilience and Adaptation Considerations into Planning and Policy Decisions -- investigate feasibility of a stormwater utility to improve green infrastructure
14	Master Street Plan (excerpt from City Plan 2040)	
15	City Plan 2040 Public Survey	Q11) "please help the City understand which of the following amenities, characteristics, or public improvements should be prioritized in association with infill" -- responses greatly supported making the neighborhood they want to live in, projects are friendly to pedestrians, and public amenities (traffic calming, pathways, open spaces)

Example of the resources reviewed and documented in the Document Index

A total of 66 documents were gathered for the research and information discovery phase of the UFMP project. Based on the research, there were a total of 326 instances where elements in the Audit were referenced in the 66 documents. An example of the document index is provided above. For a complete listing, see the “Fayetteville Urban Forest Audit” spreadsheet.

Urban Forest Audit System: Discovery Matrix

Example of the Documents and References to Audit Elements

Management Policy and Ordinances	
Climate Change (Sustainability)	City Plan 2040 Comprehensive Plan Adopted Annual Budget & Work Program Adopted Five Year Capital Improvements Plan 2021-2025 "Fayetteville First" Strategic Plan Energy Action Plan Active Transportation Plan Mobility Plan Fayetteville Downtown Master Plan Walker Park Neighborhood Master Plan Weddington Corridor Plan Economic and Labor Force Analysis - Appendix B Draft Fayette Junction Master Plan Tomorrow's Corridor - Rethinking 71B University of Arkansas Office for Sustainability - Plants - Current Projects
No Net Loss	Tree Canopy Cover and Environmental Equity
Risk Management	Code of Ordinances - Chapter 167 Tree Preservation and Protection Adopted Annual Budget & Work Program Mobility Plan
Tree Canopy Goals	City Plan 2040 Comprehensive Plan Tree Preservation & Landscape Manual Code of Ordinances - Chapter 167 Tree Preservation and Protection Tree Canopy Cover and Environmental Equity Adopted Annual Budget & Work Program Adopted Five Year Capital Improvements Plan 2021-2025 Energy Action Plan Mobility Plan Fayette Junction Master Plan Tomorrow's Corridor - Rethinking 71B City Website Urban Forestry/Tree Preservation and Landscape Regulations (letter from the Urban Forester) Urban Forestry/Tree Preservation and Landscape Regulations (letter from the Urban Forester)

Discovery Matrix example for Fayetteville documents relating to Management Policy

Once the documents were indexed, each of the 66 resources were reviewed and cross-examined with the Audit's Discovery Matrix categories (11) and elements (130). An example of the process is shown on the left. For the "Management Policy and Ordinances" category, documents are listed in the green cells that mention or relate to the category's elements including "Climate Change", "No Net Loss", "Risk Management", and "Tree Canopy Goals". Any reference to the element within a document was given a "1" to enable a count of the total references to urban forestry per document, per element.

Audit Category	Documents with Reference
Management Policy and Ordinances	104
Professional Capacity and Training	4
Funding and Accounting	10
Decision and Management Authority	40
Inventories	18
Urban Forest Management Plans	7
Risk Management	12
Disaster Planning	2
Standards & Best Management Practices (BMPs)	109
Community	20
Green Asset Evaluation	N/A
TOTAL COUNT	**326**

URBAN FOREST AUDIT SYSTEM: PROCESS

RESEARCH DEEP DIVE: Existing plans, ordinances, practices

CITY CONSULTATIONS: Workflows, operations, services, best practices, standards, challenges, opportunities

EXISTING CONDITIONS: Inventory analysis, ecosystem benefits, trends, maintenance needs, planting, preservation

BENCHMARKING: Establish baseline metrics for comparison and monitoring ($ per tree, staff per tree, etc.)

COMMUNITY ENGAGEMENT: Existing and potential partners, recommendations, public meeting

URBAN FOREST AUDIT: Systematic evaluation from which goals and actions are developed and can be monitored

URBAN FOREST AUDIT SYSTEM: PROCESS

Category: Management Policy & Ordinances			
Element	*Subcategory*	*Description or Criteria for Evaluation*	*Assigned Status**
1.01	Climate Change (Sustainability)	With reference to urban trees, addresses the long-term health and productivity of the natural resource.	Score: 2 "Adopted Common Practice"
1.02	No Net Loss	Can refer to trees, basal area, or canopy.	Score: 2 "Adopted Common Practice"
1.03	Risk Management	Should reference: ANSI A300 Part 9, ISA BMP and prioritization funding mechanisms.	Score: 2 "Adopted Common Practice"
1.04	Tree Canopy Goals	Overall community/campus goal, or by designated "zone".	

EXAMPLE

0) Not Practiced
1) In Development
2) Adopted Common Practice
3) Exceeds Common Practice

*For each subcategory that is evaluated, 0 points are attributed if the component doesn't exist or is not practiced; 1 point is given if the component is in development; 2 points are given if the component is routinely practiced; and 3 points are given if the practice is exceeded. The points can then be totaled for an overall score.

URBAN FOREST AUDIT SYSTEM: OUTCOMES

#	Category	SOC (% Achieved)*	Base (% Achieved)**	Overall Rating	Overall (% Achieved)
1	Management Policy and Ordinances	75%	50%	15	54%
2	Professional Capacity and Training	100%	NA	13	81%
3	Funding and Accounting	100%	NA	6	50%
4	Decision and Management Authority	100%	50%	7	88%
5	Inventories	NA	25%	12	46%
6	Urban Forest Management Plans	NA	50%	11	46%
7	Risk Management	100%	100%	16	89%
8	Disaster Planning	NA	100%	13	93%
9	Standards and BMPs	100%	69%	44	73%
10	Community	100%	NA	24	86%
11	Green Asset Evaluation	NA	NA	17	85%
Total		**96%**	**63%**	**178**	**70%**

EXAMPLE

*Standard of Care (SOC) elements represent the minimum group of urban forestry management "best practices" that a municipality should consider for implementation.

**Base Practices (BP) elements represent additional urban forest management activities or components that may effectively expand a program beyond the SOC group (see footnote above). These elements are typically precursors to other "non-core" elements in the category.

Urban Forest Audit System: Score Key

Color	Rank	Description	Ranking Rationale / Considerations
Blue	Category and element description		
Light Red	0) Not Practiced	No mention of the audit element in any documents, nothing uncovered during staff consultations, not in development as part of the UFMP project.	Describes the considerations that influenced the ranking
Yellow	1) In Development	The audit element is either mentioned in various documents but needs improvements or it is being addressed as part of the UFMP project.	Describes the considerations that influenced the ranking
Green	2) Adopted Common Practice	The audit element is mentioned in various documents, and it aligns with industry standards and best practices.	Describes the considerations that influenced the ranking

URBAN FOREST AUDIT SYSTEM: MANAGEMENT POLICY

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
1.00	**Policy**	**Written policy statements approved by a governing body.**	
1.01	Urban Heat (Sustainability)	Also referred to as Sustainability. With reference to urban trees. Addresses the long-term health and productivity of the natural resource.	Most documents that mention sustainability relate to development not trees though Chapter 167 Tree Preservation & Protection ordinance exists
1.02	No Net Loss	Can refer to trees, basal area, or canopy.	Not specifically mentioned but ordinances have mitigation requirements
1.03	Risk Management	Should reference: ANSI A300 Part 9, ISA BMP, and prioritization funding mechanisms.	No document specifically calls out standards, protocols, or staff trained for tree risk management
1.04	Tree Canopy Goals	Overall community/campus goal, or by designated "zone".	Energy Action Plan has a stated goal of 40%
1.05	Tree Protection	Construction and/or landscape maintenance.	Ordinances, critical root zone mentioned in various permit documents, construction standards
1.06	Utility	Utility pruning, planting, and installation policy (e.g. boring vs. trenching).	No policy in place for utility pruning was found but permits require identifying location of underground utilities
1.07	Human Health – Physical & Psychological	Recognizes and addresses the human health benefits of the natural resource (e.g. exercise, air quality, stress management, shade). Could also include Urban Heat Island (UHI) policies.	Benefits of trees are stated in various documents but less emphasis on heat reduction and human health
1.08	Wildlife Diversity / Habitat / Protection	Mammals, birds, or reptiles.	Comprehensive Plan and other plans have strategies and policies for preserving and conserving natural resources for wildlife
1.09	Performance Monitoring	Recognizes the annual or biennial calculation of metrics (e.g. some component of ecosystem services) for the purpose of tracking management performance.	Performance metrics in budget documents. Specific KPIs to be developed as part of the UFMP
1.10	Ordinance (Private)	Tree protection and management for trees on private property.	Ordinances are in place but will be reviewed with recommendations as part of the UFMP. City has the Tree Preservation & Landscape Manual
1.11	Ordinance (Public)	Tree protection and management for public trees.	Chapter 167 Tree Preservation & Protection is for private development. Similarly for Chapter 177 Landscape Regulations
1.12	Development Standards	US Green Building Council's LEED® rating systems (or similar internationally) LEED v4 BD+C (Sustainable Sites) LEED 4 ND (Neighborhood Pattern & Design, Green Infrastructure) ASLA's SITES® Rating System	Chapter 167 Tree Preservation & Protection is for private development. Similarly for Chapter 177 Landscape Regulations
1.13	High-Conservation Value Forests	Programs or policies for identification, acquisition, and/or protection of groups of trees or forests that provide unique public benefits.	The Comprehensive Plan focuses heavily on conservation and easements
1.14	Urban Interface (WUI)	Programs or policies that improve management of the urban interface for fire and/or invasive species.	Wildfire management is not covered in the documents but invasive species management is

URBAN FOREST AUDIT SYSTEM: CAPACITY & TRAINING

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
2.00	**Professional Management**	**Provision for professional consultation.**	
2.01	Certified Arborist - Staff	International Society of Arboriculture	Urban Foresters in Parks, Public Works, and Development
2.02	Certified Arborist - Contracted	International Society of Arboriculture	Chapter 167 identifies and recognizes ISA Certified Arborists
2.03	Certified Arborist - Other Resource	International Society of Arboriculture	Supporting staff with ISA credentials
2.04	Other Professional - Advising/directing UF management	This could be a professional in an allied field like Landscape Architecture.	City to provide input
2.05	Municipal Forestry Institute	Graduate of Society of Municipal Arborist's MFI program or similar	City to provide input
2.06	USFS Urban Forestry Institute or similar	Attendance at USFS UFI or similar	City to provide input
2.07	Campus/city arborist – ISA CA instructor for CEUs	Arborist routinely provides ISA CEU presentations/workshops.	City to provide input, trainings and resources are available on the website ("Citizen Tree Care Resources")
2.08	Tree Board University or similar	On-line training modules from Oregon U&CF for Tree Board/Advisory Council or similar	Unsure of the training and background of members on the Urban Forestry Advisory Board, Environmental Action Committee, or the Keep Fayetteville Beautiful Committee
2.09	Organizational Communications	Process, procedures, and protocol for cross-professional communications within the organization (all departments "touching" trees).	City to provide input but improvements will be recommended in the UFMP

URBAN FOREST AUDIT SYSTEM: FUNDING & ACCOUNTING

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
3.00	**Urban Forestry Budget**		
3.01	Budgeted Annually	Budget authorized/required for tree board, tree maintenance, and/or tree planting.	Urban Foresters and programs clearly listed in budget line items
3.02	Contingency Budget Process	A protocol is in place to prioritize urban forestry management activities during budget shortfalls; e.g. during times of limited funding for: 1) risk management, 2) young tree care, 3) mulching.	City to provide input
3.03	Funding Calculated from Community Attribute	Budget in terms of per capita, per tree, or for performance (e.g. per tree weighted by size class or age.	City to provide input. The inventory with ecosystem benefit calculations is a starting point
3.04	Funding Based on Performance Monitoring	Budget connected with/based on ecosystem service (ES) monitoring and performance.	City to provide input. The inventory with ecosystem benefit calculations is a starting point
3.05	Urban Forestry Line Item	Is the budget specific to urban forest management?	Line items for the Urban Forestry staff, clear line items for Forestry & Habitat plus events, and Tree City USA reporting documents
3.06	Green Asset Accounting	Maintain green infrastructure data in the "unaudited supplementary disclosure of an entity's comprehensive annual financial report (CAFR)". GASB 34 implementation for municipalities.	City to provide input

Urban Forest Audit System: Authority

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
4.00	**Authority**		
4.01	Urban Forest Manager	Professional urban forest manager with authority over the program and day-to-day activity. Including designated budget line item.	"Urban Forester" mentioned frequently in documents stating authority, role, and communications protocols
4.02	Staff Authority	Designated staff with authority over the program and day-to-day activity. Including designated line item.	Clearly defines the role of the Urban Forester
4.03	Communication Protocol	Established protocol and mechanism(s) for communication among all members of the urban forest management "community" in your municipality or organization (e.g. manager, department under control, advisory board, finance, field operations, public, NGOs, business community, developers).	City to provide input
4.04	Tree Board, Commission, or Advisory Council	Establishes a board for public participation (advisory or with authority).	Urban Forestry Advisory Board

URBAN FOREST AUDIT SYSTEM: INVENTORIES

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
5.00	**Inventories and Assessments**		
5.01	Canopy Inventory (UTC)	Periodic (≤5 year) canopy inventory and assessment. Public & private.	2012, 2013, 2015, 2017, 2019 canopy assessments
5.02	Ecosystem Services	Recent (≤5 year) ecosystem services (ES) inventory & assessment? Public: 100% or street trees; Public & Private: Sample; or Campus. Or, are ES calculated annually or biennially based on partial re-inventory and projected growth as a monitoring tool.	The sample inventory and canopy data were collected / provided to conduct the analysis as part of the UFMP
5.03	Public Trees ↓	↓ Evaluate below ↓	↓
5.04	Street Trees	Is there a recent (5 year) inventory?	Guidance to be provided in the UFMP
5.05	Parks/Riparian Areas	Is there a recent (5 year) inventory?	No inventory located except for the public/private sample inventory in 2022
5.06	Other Public Trees	Public facility landscaped areas, Industrial parks, green space.	No inventory located except for the public/private sample inventory in 2022
5.07	Continuous inventory on a cycle (≤5 years)	Partial re-inventory to support continuous forest inventory, growth projections, and the calculation of ecosystem services.	Guidance to be provided in the UFMP
5.08	Private Trees ↓	↓ Evaluate below ↓	↓
5.09	Campus (Educational)	Is there a recent (5 year) inventory?	University of Arkansas has a tree inventory and online map
5.10	Corporate	Is there a recent (5 year) inventory?	Guidance to be provided in the UFMP
5.11	Other Private Property	Is there a recent (5 year) inventory?	Guidance to be provided in the UFMP
5.12	Continuous inventory on a cycle (≤5 years)	Partial re-inventory to support continuous forest inventory, growth projections, and the calculation of ecosystem services).	Guidance to be provided in the UFMP
5.13	Green Stormwater Infrastructure (GSI)	BMP stormwater mitigation practices and locations (e.g. Washington DC)	Water Master Plan but not specific to green infrastructure or stormwater. Energy Action Plan has a strategy to investigate feasibility of a stormwater utility to improve green infrastructure
5.14	Spatial	Inventory data includes Lat/Long (i.e. GIS). Should address the spatial relationship between the natural resource and people (i.e. residents, visitors, activities) that would help manage the resource for benefits associated with proximity (air quality, recreation, stress mitigation, etc.	Canopy Assessments and tree inventory provide spatial data. Guidance to be provided in the UFMP
5.15	Maintenance and Planting Records Maintained	Planting details (nursery, species, size, cost, contractor, etc.) maintained with inventory or as separate database or recordkeeping system. Also pruning and removal histories.	City to provide input

URBAN FOREST AUDIT SYSTEM: PLANS

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
6.00	**Management Planning**		
6.01	Annual Maintenance Calendar	An annual calendar that defines typical activity by season. To support scheduling.	City to provide input
6.02	Public Trees ↓	↓ Evaluate below ↓	↓
6.03	Street Tree Management	Is there a recent (5 year) plan for street trees?	Guidance to be provided in the UFMP
6.04	Parks/Riparian Area Management	Is there a recent (5 year) plan ?	Parks Master Plan in development as of January 2023
6.05	Other Public Trees	Public facility landscaped areas, Industrial parks, green space.	Guidance to be provided in the UFMP
6.06	Private Trees ↓	↓ Evaluate below ↓	↓
6.07	Campus (Educational)	Is there a recent (5 year) plan for Campus trees?	TBD whether University of Arkansas is a Tree Campus USA campus
6.08	Corporate	Is there a recent (5 year) plan?	Guidance to be provided in the UFMP
6.09	Other Private Property	Is there a recent (5 year) plan?	Guidance to be provided in the UFMP
6.10	Green Infrastructure	Is there a plan for green infrastructure (i.e. nodes & linkages)? Large-scale projects.	Energy Action Plan mentions stormwater utility for green infrastructure
6.11	Other Written Plans	Other natural resource plans (e.g. tree canopy). May be a component of another plan.	Comp Plan, Energy Action Plan, Parks Master Plan (in progress), neighborhood plans
6.12	Tree Planting	Is there a recent (3 year) tree planting plan?). May be a component of another plan.	Guidance to be provided in the UFMP
6.13	UF as Part of a Comprehensive Plan	Is any UF management plan referenced in the comprehensive plan (i.e. county or municipality) or master plan (i.e. Campus)?	Section 8.3 of the Comprehensive Plan is "Tree Canopy" and describes the role urban forests play in climate change, stormwater, etc.
6.14	Urban Forest Planning and Management Criteria and Performance Indicators	Criteria and indicators based on *A Model of Urban Forest Sustainability* (Clark, J.R., Matheny, N.P., Cross, G., and Wake, V. 1997 Journal of Arboriculture.) or on work of W.A. Kenney, P.J.E. van Wassenaer, and A.L. Satel in *Criteria and indicators for strategic urban forest planning and management*. (2011)	Guidance to be provided in the UFMP. Conducting this Audit is one approach to Criteria & Indicators

URBAN FOREST AUDIT SYSTEM: RISK MANAGEMENT

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
7.00	**Risk Management Activities**		
7.01	TRAQ Attained	At least one staff or consultant is TRAQ.	City to provide input
7.02	Annual Level 1 (ANSI A300 Part 9 & ISA BMP)	All trees in high occupancy areas visited annually.	City to provide input
7.03	Mitigation Prioritization	A protocol for prioritizing mitigation following Level 1 and Level 2 assessments. Reflects the controlling agency's threshold for risk.	City to provide input
7.04	Occupancy Areas Mapped	Has TRAQ staff/consultant discussed/mapped occupancy levels with controlling authority?	City to provide input
7.05	Recordkeeping, Reporting, and Communications	A process has been put in place to maintain records on requests, inspections, evaluations, and mitigation of risk; and on the communications among the managers related to those risk assessments.	City to provide input
7.06	Standard of Care Adopted	Controlling authority has adopted a Standard of Care (SOC) or risk management policy.	City to provide input
7.07	Tree Risk Specification	Is there a written specification that meets requirements of ANSI A300 (Part 9)? And, has it been discussed with the controlling authority with relevance to the controlling authority's threshold for acceptable risk?	City to provide input
7.08	Urban Tree Risk Management	The community has prepared and follows a comprehensive program for urban tree risk management.	City to provide input
7.09	Invasive Management	Plan to address and manage invasive: plants, insects, and disease.	10 documents mention invasive management, prohibited trees, recommended trees, Arkansas Native Plant Society tree list, among others

URBAN FOREST AUDIT SYSTEM: DISASTER PLANNING

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
8.00	**Disaster Planning Activities**		
8.01	Response/Recovery Mechanism	Staff knowledge of the municipality's protocol for requesting disaster resources through the county or state with access to mutual aid and EMAC.	City to provide input, Fayetteville Emergency Operations Plan is in place
8.02	Urban Forestry as part of the County Disaster Plan	The UF plan (8.3) is incorporated into the county/municipal disaster plan; specifically in reference to debris management and risk mitigation.	Nothing found at the county level, City to provide input
8.03	Urban Forestry Disaster Plan	A separate/specific plan within the urban forestry management program (i.e. who to call, priorities).	No plan identified, City to provide input
8.04	Pre-disaster Contracts	Contracts are in place for critical needs.	City likely has a structure in place, City to provide input
8.05	Mitigation Plan	A mitigation plan has been developed for pre-disaster, recovery, and post-disaster.	City to provide input
8.06	EMAC Mission Ready Packages (MRP)	Municipality has published disaster resources with state EM and participates in inter-state Mutual Aid to support Urban Forest Strike Teams (UFST).	City to provide input
8.07	Urban Forest Strike Team	Participation in the UFST project.	City to provide input

URBAN FOREST AUDIT SYSTEM: STANDARDS & BMPS

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
9.00	**Standards & BMPs**		
9.01	ANSI Standards	Reference and adherence to ANSI Standards for arboricultural practices (A300), safety (Z133), or Nursery Stock (ANSI Z60.1) (any or all).	Tree ordinances reference standards, website lists standards, Tree Preservation Manual, Tree Preservation Standard Detail
9.02	Ages/Diameter Distribution	Specific management for the development of an age-diverse tree population	No specific mention about age diversity but species diversity is recognized
9.03	Arborist Standards	Standards of practice for arborists (i.e. Certification).	Tree ordinances reference standards, website lists standards, Tree Preservation Manual, Tree Preservation Standard Detail
9.04	Best Management Practices (BMPs)	Establishes or references tree maintenance BMPs (i.e. written comprehensive standards & standards).	Tree ordinances reference best practices, website lists standards, Comprehensive Plan lists BMPs, Tree Preservation Manual, Tree Preservation Standard Detail
9.05	Fertilization and Mulching	Fertilization or mulching standards required for conserved & planted trees.	Ordinances list requirements, City website has resources, Structural Soil Detail includes guidance
9.06	Lightning Protection	BMP written to the ANSI A300 Standard.	Nothing listed, minor recommendation to consider in the UFMP
9.07	Planting	Planting and transplanting standards required/specified.	Listed in ordinances, Tree Preservation Standard Detail, website, Tree Planting on Slope Detail
9.08	Pruning	Pruning standards required for conserved & planted trees.	Listed in ordinances, Tree Preservation Manual, Tree Preservation Standard Detail, City website
9.09	Removal	Infrastructure damage, stump grinding, etc.	Guidance listed in Chapter 167 and City website
9.10	Support Systems (Guying and Bracing)	BMP written to the ANSI A300 Standard.	Nothing listed, minor recommendation to consider in the UFMP
9.11	Tree Risk	Tree risk assessment procedures; ISA BMP or equivalent.	Risk mentioned in Ch. 167 but should be evaluated as part of the UFMP
9.12	Construction Management Standards	Written standards for: tree protection, trenching/boring in CRZs, pre-construction mulching, root or limb pruning, watering (any or all).	Critical root zone, tree protection zones, critical root zone addressed in ordinances, Tree Preservation Manual, City website, and Tree Preservation Standard Detail
9.13	Design Standards	Standards for design that specifically require trees; standards for placement, soil treatment, and/or drainage.	18 documents have standards listed for development that impacts trees and landscaping (Comp Plan, Tree Manual, Ordinances, Active Transportation Plan, neighborhood plans, others)
9.14	Genus/Species Diversity	Suggests or requires diversity of plant material.	City website has a list and references the Arkansas Native Plant Society Tree List

URBAN FOREST AUDIT SYSTEM: STANDARDS & BMPS CONT.

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
9.00	**ANSI Standards & BMPs**	**CONTINUED**	
9.15	Green Stormwater Infrastructure (GSI)	BMPs for site level GI practices like rain gardens and swales. Small-scale projects.	Energy Action Plan recommends stormwater utility for green infrastructure, other plans reference stormwater management and GI
9.16	Inventory Data Collection	Adopted or developed standards for tree inventory data collection	Guidance to be provided in the UFMP
9.17	Minimum Planting Volume	Minimum required root zone volume.	Tree Preservation & Landscape Manual provides standards and BMPs
9.18	Minimum Tree Size	Minimum caliper for tree replacements, and/or minimum size of existing trees to receive tree density or canopy credit.	Tree Preservation & Landscape Manual notes the 2" minimum caliper
9.19	Root Protection Zone (CRZ)	Defines adequate root protection zone; Critical Root Zone (CRZ).	Tree Preservation & Landscape Manual plus 5 other documents note this
9.20	Safety	Safety logs, trainings, reference to ANSI Z133 Safety Standard	No specific standards for safety around trees. Guidance to be provided in the UFMP
9.21	Topping	Prohibits topping or other internodal cuts (public & private).	Chapter 167 restricts topping
9.22	Tree Species List	Identifies and publishes a list of the most desirable, recommended, or preferred species (native and non-native species); alternatively, a list of species prohibited.	Tree Preservation & Landscape Manual, ordinances, significant trees list, City website, and others list the recommended or required trees
9.23	Tree Quality Standards	Written standards for tree selection at nursery in addition to Z60.1.	Tree Preservation & Landscape Manual notes the ANSI standard for nursery stock
9.24	Utility Right-of-Way (ROW) Management	Requirements for planting, pruning, and/or removal of trees within a utility ROW.	Chapter 167 and City website mention utility management but could be expanded as part of the UFMP
9.25	Urban Agriculture	Enabled urban food forestry practices.	Guidance to be considered for the UFMP
9.26	Wood Utilization	Larger diameter material is processed for wood products.	Guidance to be considered for the UFMP
9.27	3rd party forest certification	Examples: American Tree Farm System (ATFS), Forest Stewardship Council™	Guidance to be considered for the UFMP
9.28	Energy generation	Local or regional use of chips or other woody debris for co-generation facilities.	Guidance to be considered for the UFMP
9.29	Composting of Leaf and/or Other Woody Debris	Leaves and small woody debris are captured and used on-site or processed by someone by composting for reuse.	No mention of debris management, guidance to be considered for the UFMP
9.30	Watering Standards		Various documents state the watering requirement post-planting. Additional guidance to be provided in the UFMP

URBAN FOREST AUDIT SYSTEM: COMMUNITY

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
10.00	**Community Building**		
10.01	Social Media Website or Similar	Does your community/campus use social media platforms or similar to document and publicize your urban forestry program, activity, or events?	City website, social media, Speak Up Fayetteville
10.02	Education	The urban forest is used as an educational laboratory for class activity; Kids in the Woods, PLT, high school, or college level.	Resources on City website, Tree Manual
10.03	Private Property Tree Program	Does your community sponsor this program locally?	To be addressed in the UFMP
10.04	Public-facing Inventory Software	Public access to the community tree resource via an on-line mapping program (i.e. any Web Map Service; WMS).	2022 sample tree inventory used a public facing software program but trial subscription ended. City does have online portal of canopy assessment maps
10.05	Public Perception	Is public management consistent with private property requirements for tree protections and care? Does the Campus/public tree management reflect neighborhood norms?	Comprehensive Plan included a survey. Ongoing public feedback recommendations to be provided in the UFMP
10.06	Recognition Programs	Programs that raise awareness of trees or that use trees to connect the community to significant events or activities.	Arbor Day events, spring and fall planting, Celebration of Tres, Amazing Tree
10.07	Arbor Day Celebration	Whether or not associated with Tree City USA.	Arbor Day events, spring and fall planting, Celebration of Tres, Amazing Tree
10.08	Arboretum designation	Internal or third party arboretum designation.	University of Arkansas tree inventory and Arboretum Mapping Project, Botanical Garden of the Ozarks
10.09	Significant trees	For example: size, history.	No Heritage or Significant Tree Ordinance but City has Significant Trees on website
10.10	Memorial/Honorarium	Tree planting or tree care programs than honor/memorialize individuals, organizations, or events.	City to provide input. City has tree giveaways, and tree donations
10.11	Social Media	Does your community/campus make use of Twitter, Facebook, Blogs for internal or external outreach?	Several posts about urban forestry but additional guidance to be provided in UFMP
10.12	Active Communications	Press releases, regular news articles (print), "State of the Urban Forest" reports, periodic analysis of threats and opportunities.	Additional guidance to be provided in the UFMP
10.13	Tree Care	Are volunteers trained and used for basic tree care (e.g. mulching, pruning, planting).	Volunteer program and events, invasive species removal, City website with resources for tree care
10.14	Tree City USA®	Community/campus meets current qualifications for any of these programs.	27 years as TC USA with 9 Growth Awards
10.15	Volunteer Opportunities	Ad hoc or scheduled. Any/all age groups. Tree Campus USA student activities.	Volunteer programs and events

URBAN FOREST AUDIT SYSTEM: GREEN ASSET EVALUATION

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
11.00	**Observed Outcomes**	**Based on an analysis of tree inventories**	
11.01	Deadwood	Look for evidence of periodic or ad-hoc deadwood removal (i.e. lack of dead limbs ≥ 2" in the trees or on the ground).	To be evaluated with the 2022 tree inventory and guidance provided in the UFMP
11.02	Genus Diversity	No genera exceed **20%** of population; make specific observations for *Acer*, *Quercus*, *Fraxinus, Ulmus* and other local species of concern.	Based on the sample inventory in 2022, 31% are oaks, 15% elms, 8% maples. Guidance to be provided in the UFMP
11.03	Mature Tree Care	Mature trees are retained in the landscape, and are of acceptable risk; i.e. veteran tree management.	Based on the sample inventory in 2022, the highest percent of recommended tree work is pruning for clearance (8%). Guidance to be provided in the UFMP
11.04	Mulching	Evidence of adequate (i.e. spatial extent, depth, and material) roots zone mulching for all age classes.	To be evaluated with the 2022 tree inventory and guidance provided in the UFMP
11.05	Planting Site Volume Optimization	Are species & sites matched for optimization of above ground canopy; right tree in the right spot concept.	Only 6% of the trees inventoried in 2022 have a clearance conflict (2% pedestrian, 1% building, 1% light, 1% sign or signal). Guidance to be provided in the UFMP
11.06	Rooting Volume Optimization	Are species & sites matched for optimization for below ground rooting volume; right tree in the right spot concept.	Only 0.3% of trees inventoried in 2022 were noted as causing sidewalk damage. Guidance to be provided in the UFMP
11.07	Species Diversity	No species/cultivars exceed **10%** of population; make specific observations for *Acer*, *Quercus*, *Fraxinus, Ulmus* and other local genera of concern. Also evaluate the role of regionally local native species.	Based on the sample inventory in 2022, no species exceed the 10% threshold. 7% are Princeton elms, 6% post oaks, 6% willow oaks, 5% pin oaks, and 4% blackgums. Guidance to be provided in the UFMP
11.08	Soil Compaction	Observe evidence of soil compaction by users or staff during maintenance. Include "desire" lines and construction activity at time of evaluation.	To be evaluated with the 2022 tree inventory and guidance provided in the UFMP
11.09	Tree Health	Rate the overall tree health in all size (age) classes; look for crown dieback, decay, foliage density & color.	Based on the sample inventory in 2022, 75% of public trees are in good condition, 15% in fair condition, 5% poor, and 5% dead. Guidance to be provided in the UFMP
11.10	Young Tree Pruning	Look for evidence of periodic (e.g. every 3 years to year 9) structural pruning (e.g. subordination cuts, dominant central leader, co-dominant stems lower that 20').	Based on the sample inventory in 2022, only 3 trees (0.1%) require structural pruning at a young age. Guidance to be provided in the UFMP

URBAN FOREST AUDIT SYSTEM: SUMMARY

Final Audit Results

Note, the audit may be kept internal and is only meant to serve as a preliminary evaluation to support the development of the Plan's goals and strategies though it may serve as a UFMP implementation monitoring tool

#	Category	SOC (% Achieved)*	Base (% Achieved)**	Overall Rating	Overall (% Achieved)
1	Management Policy and Ordinances	50%	67%	20	71%
2	Professional Capacity and Training	100%	NA	16	89%
3	Funding and Accounting	75%	NA	8	67%
4	Decision and Management Authority	50%	100%	5	63%
5	Inventories	NA	56%	17	65%
6	Urban Forest Management Plans	NA	50%	13	54%
7	Risk Management	83%	50%	14	78%
8	Disaster Planning	NA	67%	9	64%
9	Standards and BMPs	75%	69%	44	73%
10	Community	100%	NA	25	89%
11	Green Asset Evaluation	NA	NA	16	80%
Total		**76%**	**65%**	**187**	**73%**

*Standard of Care (SOC) elements represent the minimum group of urban forestry management "best practices" that a municipality should consider for implementation.

**Base Practices (BP) elements represent additional urban forest management activities or components that may effectively expand a program beyond the SOC group (see footnote above). These elements are typically precursors to other "non-core" elements in the category.

Urban Forest Audit System: Source

The original audit and supporting spreadsheet were developed by Urban Forestry South (USDA Forest Service, Region 8, SRS-4952, Athens, Georgia). The spreadsheet was based on the current Urban Forest Sustainability and Management Review Checklist developed in cooperation with Agnes Scott College Office of Sustainability and the ASC Arboretum Advisory Council and the City of Austin (TX)

CLIMATE IMPACTS IN FAYETTEVILLE

Urban areas around the world are facing dramatically intensifying extreme weather and climate impacts including drought, long-term water shortages, flooding, extreme weather events, and prolonged heat. Urban trees can play a significant role in making Fayetteville resilient to weather and climate extremes, and in protecting human and ecosystem health and safety. View Appendix A for the Climate Adaptation Report generated for the southeast United States from the Climate Adaptation Workbook.

Increased temperatures and prolonged heat have a dramatic effect on urban trees. Urban trees already face many struggles of the urban environment, including competition for space, elements of an urban environment, vandalism, and harmful pests and diseases. Some of Fayetteville's established trees are unlikely to survive the changes in the climate and weather patterns over the next 50-75 years. Planting the right trees for Fayetteville today and in the future will play a vital role in the resiliency of the City's urban forest as well as overall community sustainability.

In pursuit of a sustainable and resilient urban forest, the City of Fayetteville seeks to apply climate adaptation strategies to urban forest management planning. Building toward this objective, the City maintains a recommended tree list of small, medium, and large trees prepared by the Arkansas Native Plant Society. The following provides an analysis of the changing climate and considerations for new tree species to integrate into Fayetteville's urban forest over time.

FAYETTEVILLE'S CURRENT TREE LIST AND PLANTING PRACTICES

Recreated from the City of Fayetteville's website— www.fayetteville-ar.gov/3979/List-of-Recommended-Native-Trees-and-Shr

Overview

Urban Forestry Staff reviews, recommends and selects trees for a variety of sites and growing environments. Staff evaluates each place for site-specific variables when selecting the most appropriate trees for a site. Not every tree is right for every location, and the Urban Forestry staff uses our extensive tree knowledge, research and site evaluation when selecting trees, mindful of how each tree and each site may change in the short- and long-term future.

This list of trees contains recommendations for trees planted in Fayetteville, including ideal locations and notes on each tree. It highlights how many species of butterflies and moths each of these trees can host. The list does not include all the insects, birds, reptiles and small mammals that a tree can host. The Arkansas Native Plant Society was the catalyst for this updated list, and the Urban Forestry Advisory Board assisted with information.

Urban Forestry Staff is continuously researching and contemplating the use, space, species and varieties of trees, shrubs and plants used throughout the City. We seek expert advice in our community and are lucky to have professional connections with the Horticulture, Landscape Architecture, and Plant Pathology Departments at the University of Arkansas. We also have a healthy relationship with the Arkansas Forestry Commission and the Arkansas Native Plant Society. We utilize the wealth of knowledge surrounding us to benefit the City by helping Staff and residents choose the right tree for the right space.

The Danger of Single Species Planting

Historically, the use of a single species of street trees has had negative consequences. In the early 1900s, the American Chestnut, a popular and heavily planted street tree, was devastated by the chestnut blight. The blight caused large swaths of trees in the American streetscape to perish and left large gaps in the American landscape. A similar incident occurred with the spread of Dutch Elm disease. Due to the monoculture planting of elm trees as street trees, the impact was even more noticeable on streetscapes throughout the country. For these reasons and other global issues with plant disease, pests and pathogens, Fayetteville's Urban Forestry Staff encourages and recommends a diverse planting palette. Using native species trees is vital because it benefits the local ecosystem and saves the City money and time. Native species are well suited for our climate and prosper in Northwest Arkansas's soils because they originated here.

Criteria for Selection for the List

The City Urban Forestry Staff carefully selects species of trees as each location offers unique challenges. The overall criteria include:

- Native or native cultivars first
- Trees tolerant of pollution, drought and harsh conditions (salt/sand from winter and winds)
- Trees that create litter problems or produce large fruit are not used as street trees
- Tree shape – to ensure limbs are not too low and could create a visibility issue
- Small trees under power lines
- Trees with seasonal interest: fall color or blooms
- Amount of sun and shade in the existing conditions
- Speed of traffic
- Pedestrian intensity
- Visibility for traffic
- Maintenance issues
- Pest problems
- Longevity of the tree
- Type of Street Tree location:
    - Urban tree well
    - Large median (over six feet wide)
    - Small median (usually the green space between a curb and sidewalk, less than six feet wide)

Street Tree Planting Scenarios

Urban Tree Well

Trees planted in urban tree wells have the most difficulty surviving and thriving for several reasons: the structured soils do not offer the same nutrients as a forest; space for the root systems is limited; and exposure to pollutants. The tree's shape also has to be considered for pedestrian visibility, automobile visibility, and not interfering with buildings.

Large Medians

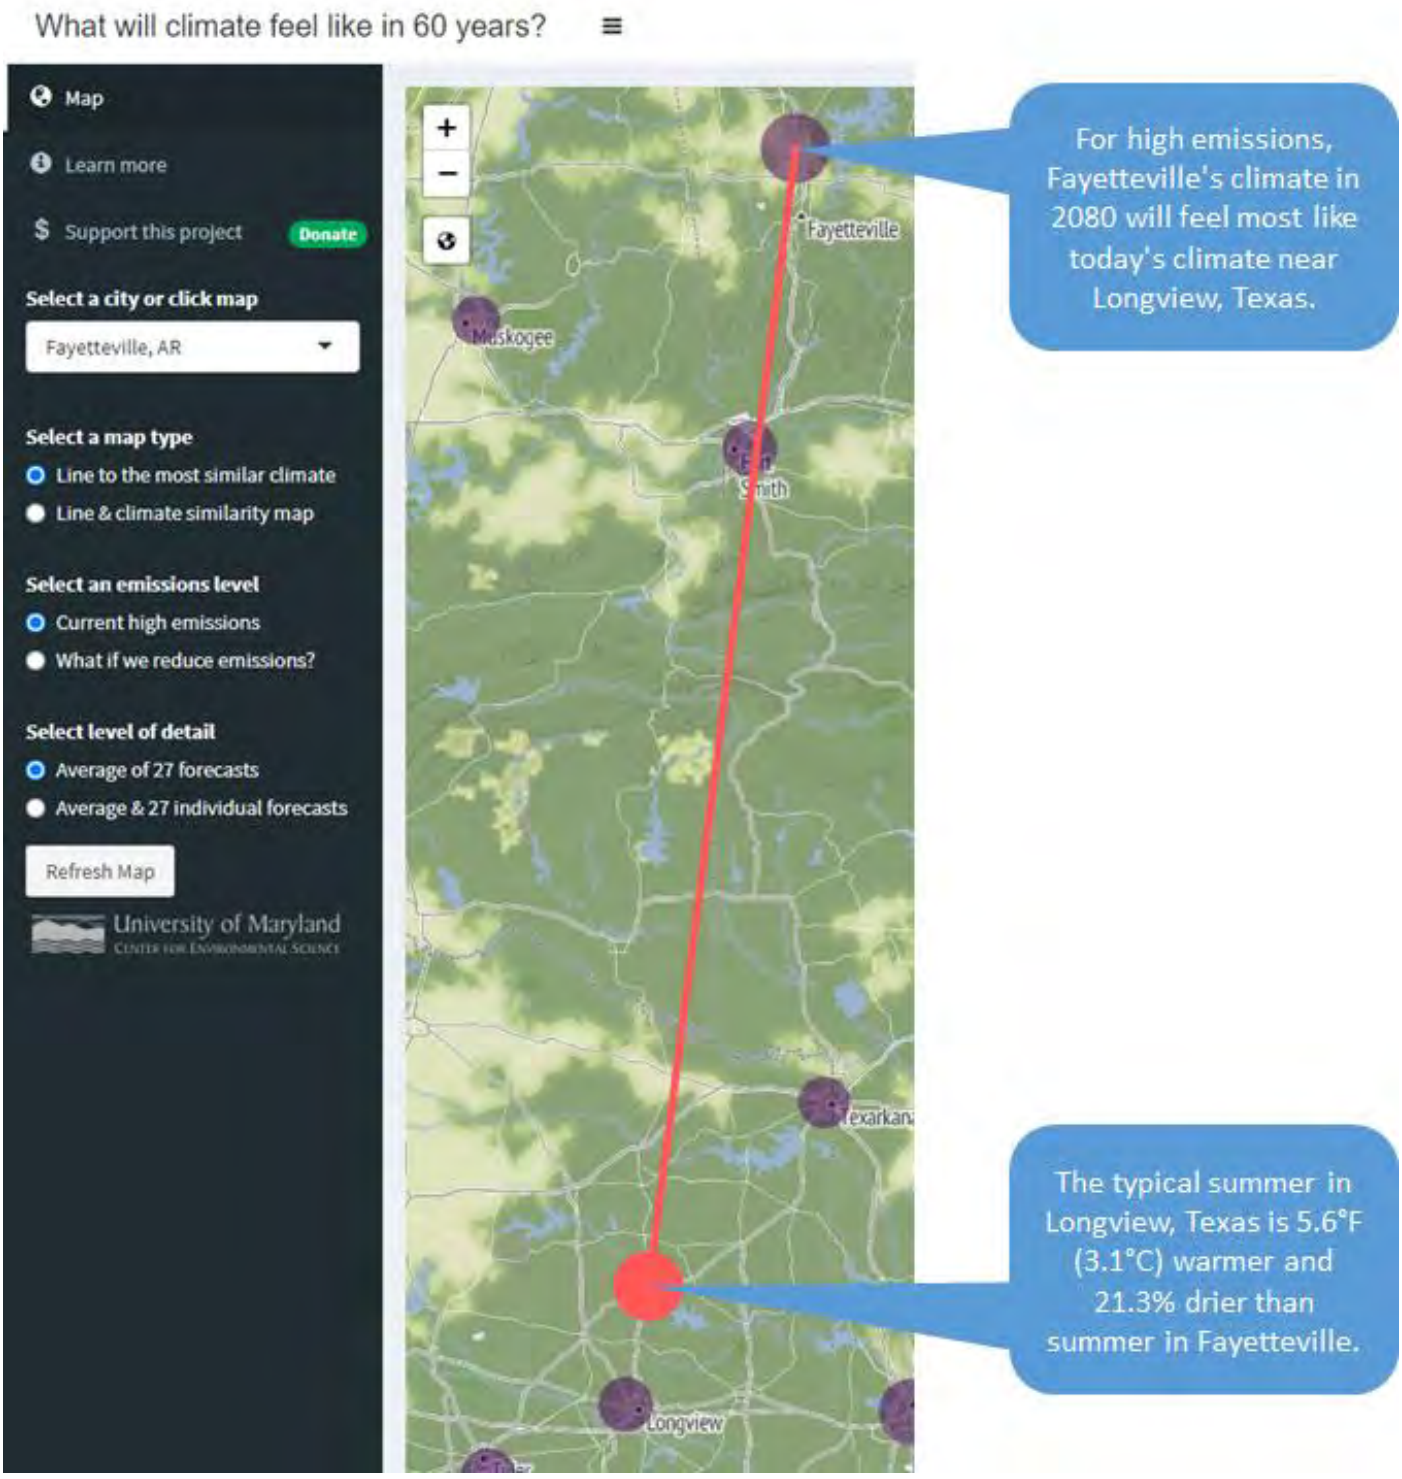
Large median spaces vary in size from six to 10 feet wide. The space is adequate for most trees, and Staff considers maintenance needs when choosing a tree to be planted in the medians. Trees that produce less litter and fruit are ideal for large medians. Finally, visibility is another characteristic when choosing a large median tree. Urban Forestry staff selects trees that allow for visibility under and through the canopy to increase vehicular safety.

Small Medians - Trees between Curb and Sidewalk (Tree Lawn less than Six feet)

Small medians are the green spaces between the curb and the sidewalk, typically less than six feet wide. In these cases, Staff prioritizes maintaining the structural integrity of the sidewalk and curb. Other factors included in choosing the right species for this condition are sightline visibility for vehicles and pedestrians, sun and shade conditions, the appropriate size for location in town (residential, commercial, downtown), watering needs, amount of litter produced, and environmental benefits.

This list does not contain every tree used in Fayetteville. Urban Forestry Staff does consider other trees not listed as viable options and will examine all proposed trees. There are construction techniques that allow larger trees in small locations. Staff will consider these techniques with appropriate construction details.

LARGE SPECIES - Mature ht. 45' or above



Species	Common Name	Street Tree Recommendation Types of Street tree conditions. Tree well, Large median (6' or more) small median (6' or less)	Number of butterfly and moth species tree can host (Does not include other insects, birds, reptiles and small animals that live in trees.)	Ideal Location	Notes
Acer rubrum	Red Maple	None	199	Trunk shaded in morning and afternoon	Grows poorly in compacted soil. Not a good street tree, sun scald is big problem with this as a street tree.
Acer saccharum	Sugar Maple	None	199	Trunk shaded in morning and afternoon	Grows poorly in compacted soil. Not a good street tree, sun scald is big problem with this as a street tree.
Betula nigra	River Birch	None	221		Extended dry soil leads to leaf drop. Avoid high pH. The three trunk species is overused in landscapes.
Carya cordiformis	Bitternut Hickory	None	220	Woods/Property Perimeter	Nuts -plant away from storm drains. Nut trees do not make good street trees due to litter.
Carya illinoinensis	Pecan	None	220	Woods/Property Perimeter	Nuts -plant away from storm drains. Nut trees do not make good street trees due to litter.

Figure 1. Excerpt from the City of Fayetteville's recommended tree list showing the attributes and a sample of large species trees in the list

FAYETTEVILLE'S SISTER CLIMATE CITY

The Future Urban Climates tool, created and maintained by University of Maryland Center for Applied Sciences, is a mapping tool that matches and displays similar climates for cities across the United States. The comparisons are based on minimum and maximum temperatures and seasonal precipitation in each city.

The closest area where current climate data is available is the Springdale, Arkansas area, just 10 miles north of Fayetteville. Results for a high emissions scenario show that the climate in 2080 for the Fayetteville region will feel most like today's climate near Longview, Texas—approximately 130 miles east of Dallas, Texas. The typical winter in Longview, Texas is 10.7°F (5.9°C) warmer and 40.8% wetter than winter in Fayetteville.

Sister Climate City Tree List Comparisons

Based on the climate projections, Longview, Texas (Sister Climate City) currently has a climate that is similar to Fayetteville's projected climate and plant hardiness zone. The Sister Climate City's approved tree planting list was researched and compared with Fayetteville's "2020 Tree List From Arkansas Native Plant Society" list. After online research, no recommended tree list exists or was found for Longview, TX's urban forestry program. Therefore, the City of Dallas, Texas's recommended tree list was utilized given Dallas is only 130 miles west of Longview and the urban forestry consultants conducting this SCCA study have extensive experience in the Dallas-Fort Worth area.

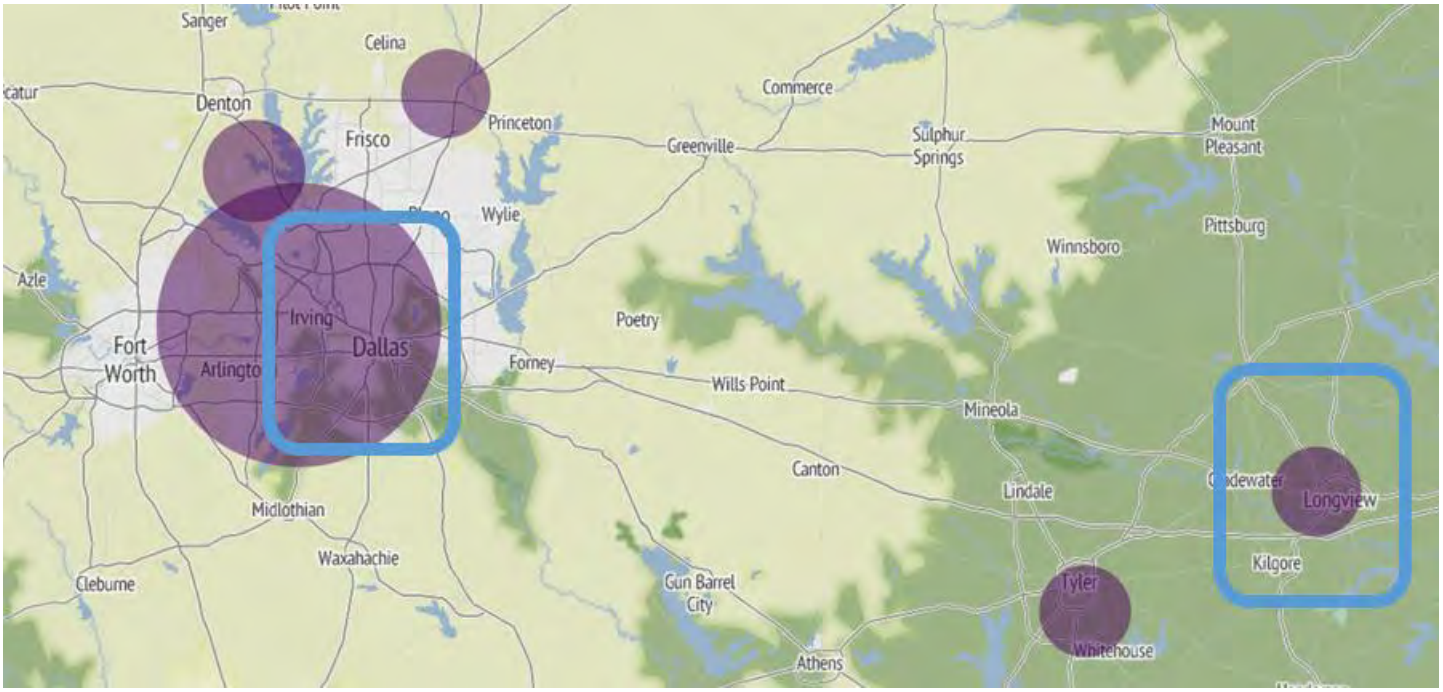


Figure 2. Map displaying the Sister Climate City of Longview, TX and the City of Dallas, TX which was utilized for comparing recommended tree lists

Fayetteville, AR and Dallas, TX Tree List Crosswalk - Results

A total of 38 of 74 (51%) tree species in Fayetteville's tree list are in the "Approved Tree List" for Dallas, TX. The majority (24 tree species) are in the "Large" category, four are in the "Medium" category, and nine are in the "Small" category. The table below details Fayetteville's tree list (shrubs excluded) and an indicator of the species that is also in the Dallas tree list.

Table 1. Summary of tree species in the Fayetteville, AR and Dallas, TX recommended or approved tree lists

COMPARISON OF FAYETTEVILLE TREE LIST TO SISTER CLIMATE CITY TREE LIST		
Fayetteville Tree List (ordered by Scientific Name)	**Common Name**	**Dallas, TX Tree List?**
Acer rubrum	Red Maple	Yes
Acer saccharum	Sugar Maple	
Aesculus glabra	Ohio Buckeye	
Aesculus pavia	Red Buckeye	Yes
Amelanchier arborea	Serviceberry	
Aronia arbutifolia	Red Chokeberry	
Asimina triloba	Pawpaw	
Betula nigra	River Birch	Yes
Carpinus caroliniana	Hornbeam or Musclewood	
Carya cordiformis	Bitternut Hickory	
Carya illinoinensis	Pecan	Yes
Carya ovata	Shagbark Hickory	
Catalpa speciosa	Northern Catalpa	
Celtis laevigata	Sugarberry	Yes
Celtis occidentalis	Hackberry	
Cercis canadensis	Redbud	Yes
Chionanthus virginicus	Fringe Tree	Yes
Cladrastis kentuckea	Yellowwood	
Cornus alternifolia	Alternate Leaved Dogwood	
Cornus florida	Flowering Dogwood	Yes
Corylus americana	Hazelnut	
Cotinus obovatus	American Smoketree	Yes
Crataegus crus-galli	Cockspur Hawthorn	
Crataegus crus-galli var. *inermis*	Thornless Cockspur Hawthorn	Yes
Crataegus viridis	Green Hawthorn	Yes
Diospyros virginiana	Persimmon	
Fagus grandifolia	American Beech	
Gleditsia triacanthos	Thornless Honeylocust	Yes
Gymnocladus dioicus	Kentucky Coffeetree	Yes
Hamamelis vernalis	Ozark Witch Hazel	
Hamamelis virginiana	Common Witch Hazel	
Ilex decidua	Deciduous Holly	Yes
Ilex opaca	American Holly	Yes
Ilex vomitoria *	Yaupon Holly	Yes
Ilex X *attenuata* 'E.Palatka'*	East Palatka Holly	
Ilex X *attenuata* 'Eagleston' *	Eagleston Holly	
Ilex X *attenuata* 'Fosteri' *	Foster Holly	

Juglans nigra	Black Walnut	Yes
Liquidambar s. 'Rotundifolia'	Sweetgum (fruitless)	Yes
Liquidambar styraciflua	Sweetgum	Yes
*Liriodendron tulipifera**	Tulip Tree	
Maclura pomifera	Osage Orange	Yes
Magnolia grandiflora 'Bracken's Brown Beauty'*	Bracken's Brown Magnolia	Yes
*Magnolia grandiflora**	Southern Magnolia*	Yes
*Magnolia virginiana**	Sweet Bay Magnolia	
Nyssa sylvatica	Black Tupelo	
Ostrya virginiana	Hophornbeam	
Pinus echinata	Shortleaf Pine	
*Pinus strobus **	Eastern White Pine*	
Platanus occidentalis	Sycamore	Yes
Quercus alba	White Oak	Yes
*Quercus bicolor **	Swamp White Oak	
Quercus falcata	Southern Red Oak	Yes
Quercus imbricaria	Shingle Oak	
Quercus macrocarpa	Bur Oak	Yes
Quercus muehlenbergii	Chinquapin Oak	Yes
Quercus nigra	Water Oak	
Quercus phellos	Willow Oak	
Quercus rubra	Northern Red Oak	
Quercus shumardii	Shumard Oak	Yes
Quercus velutina	Black Oak	
Rhamnus caroliniana	Carolina Buckthorn	Yes
Sapindus saponaria var. *dummondii*	Soapberry	Yes
Sassafras albidum	Sassafras	
*Taxodium distichum **	Bald Cypress*	Yes
*Thuja occidentalis**	Eastern Arborvitae	
Tilia americana	American Linden	Yes
Ulmus americana ' Valley Forge'	Valley Forge Elm	Yes
Ulmus americana 'Lewis & Clark'	Lewis & Clark Elm	Yes
Ulmus americana 'New Harmony'	New Harmony Elm	Yes
Ulmus americana 'Princeton'	Princeton Elm	Yes
Ulmus americana 'Jefferson'	Jefferson Elm	Yes
Viburnum prunifolium	Blackhaw Viburnum	
Viburnum rufidulum	Rusty Blackhaw	Yes

* See original tree list for notes on the respective species

Summary of Matching Tree Species

Table 2. Summary of matching tree species from Fayetteville, AR and Dallas, TX's recommended or approved tree lists

SUMMARY OF TREE SPECIES MATCHES

* See original tree list for notes on the respective species

** USDA Forest Service Climate Change Atlas for tree species habitat in Arkansas predicted to decrease (low emission scenario).

Important Note: The USDA Forest Service Tree Atlas models predict habitat change for 134 native tree species in the eastern United States. The research is then modeled for tree species in the southeast U.S. including Arkansas. Some native species are not currently modeled in the Tree Atlas and no cultivars or exotics are included. With limited data currently available on the resilience and vulnerability of native Arkansas tree species, this table provides a glimpse of how the species' composition of Fayetteville's urban forest may change. Web source: www.fs.usda.gov/nrs/atlas/tree/

Summary of Trees in the SCCA List and Favorable with Climate Change

** USDA Forest Service Climate Change Atlas for tree species habitat in Arkansas predicted to decrease (low emission scenario).
Important Note: The USDA Forest Service Tree Atlas models predict habitat change for 134 native tree species in the eastern United States. The research is then modeled for tree species in the southeast U.S. including Arkansas. Some native species are not currently modeled in the Tree Atlas and no cultivars or exotics are included. With limited data currently available on the resilience and vulnerability of native Arkansas tree species, this table provides a glimpse of how the species' composition of Fayetteville's urban forest may change. Web source: www.fs.usda.gov/nrs/atlas/tree/

SUMMARY

Fayetteville's tree planting recommendations are in line with industry standards and best practices since the City utilizes the Arkansas Native Plant Society list and therefore, generally plants and recommends planting trees native to the region.

The effects of climate change are already taking hold in the City and Fayetteville recognizes the challenges that lie ahead. Some of the experienced and anticipated effects include prolonged periods of high temperatures and drought, extreme weather events, changes in the duration of seasons, favorable conditions for harmful tree pests and diseases, among other impacts. To grow a sustainable and resilient urban forest, the City should continue to examine the performance of trees planted and the species of trees that are recommended for planting.

To develop plans and strategies relating to tree planting for climate change, a Sister Climate City Analysis (SCCA) was conducted. This SCCA examined the predicted climate of Fayetteville 60 years from now and identified a city with a current climate that matches the projected climate of Fayetteville. The City of Longview, Texas was identified but no city-approved or recommended tree list was found. Therefore, a neighboring city, the City of Dallas, Texas was utilized given the location and the urban forestry consultant's experience working with Dallas. From the SCCA, it was found that 51% of Fayetteville's trees on the Arkansas Native Plant Society tree list are also in the City of Dallas's approved tree list. This means that those trees in Fayetteville's list may favor well with changing climate since the Sister Climate City of Dallas currently approves and is planting those tree species.

In addition to the Sister Climate City Analysis, the U.S. Forest Service's Climate Change Atlas was utilized to examine the predicted habitat change due to climate change. From this study, it was found that 44 trees in Fayetteville's list are in the Climate Change Atlas study. Of the 44 trees, there are 28 species where it is predicted that the habitat will increase due to climate change. A total of 8 species have habitats that may decrease and 8 species have habitats that may not change with climate change. A full report is provided in the 2023 Urban Forestry Management Plan.

When combining the SCCA results and the Climate Change Atlas, a total of 24 of the 74 (32%) tree species in Fayetteville's list are on the Dallas, TX approved tree list and are predicted to have habitats either increase or not change.

This analysis shows the City of Fayetteville is on track for planting a resilient urban forest but the City should be mindful of the diversity of species, the associated benefits of the trees planted, the maintenance needs, and other considerations beyond what is covered in this summary report. The results of this analysis are not meant to serve as a definitive guide for tree species selection. Instead, it provides an analysis of what is currently being planted compared to the effects of climate change and offers general guidance on the species of trees that should continue to be planted while considering other goals and standards such as species diversity.

APPENDIX A. CLIMATE ADAPTATION REPORT

Climate Change Impacts for Southeast

Source: Adaptation Workbook, Developed in partnership with the U.S. Department of Agriculture (USDA), the USDA Forest Service, the Northern Institute of Applied Climate Science, and American Forests.

Climate Change Impacts for Southeast research report by: Carter, L., A. Terando, K. Dow, K. Hiers, K.E. Kunkel, A. Lascurain, D. Marcy, M. Osland, and P. Schramm, 2018: Southeast. In Impacts, Risks, and Adaptation in the United States: Fourth National Climate Assessment, Volume II [Reidmiller, D.R., C.W. Avery, D.R. Easterling, K.E. Kunkel, K.L.M. Lewis, T.K. Maycock, and B.C. Stewart (eds.)]. U.S. Global Change Research Program, Washington, DC, USA, pp. 743–808. doi: 10.7930/NCA4.2018.CH19

This region was defined in the National Climate Assessment (2014) and includes the states of Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia.

National Climate Assessment (2018) - Southeast

Temperatures in the Southeast are projected to increase by 4.4 to 7.7 degrees Fahrenheit by late-century (2071-2100).
All climate models agree that temperatures are projected to increase over the 21st century across the Southeast. The spatial variations are projected to be relatively small across the region, with the largest temperature changes occurring in the northwest part of the region (Arkansas, Kentucky, Mississippi, and Tennessee), the smallest variations occurring in southern Florida. Temperature increases will be the greatest in summer. The greatest warming during summer is expected in the northwest portion of the region. Compared to all other seasons, winter temperature increases are projected to be more mild.

R.S. Vose, D.R. Easterling, and others. 2017. Climate Science Special Report: Temperature Changes in the United States. U.S. Global Change Research Program.

The Southeast is expected to experience between 5 and 30 more days per year with a maximum temperature exceeding 95 degrees Fahrenheit by the middle of the century.
The smallest increase of 4 days per year is expected in areas with a currently low number of 95-degree days, including the highest elevation areas along the spine of the Appalachians where historically days above 95-degrees occur fewer than 10 days out of the year. The largest increase in the number of 95-degree days per year (35 days) is expected in south-central Florida, where these kinds of hot days are already common. The western portion of the region is expected to experience the largest number of consecutive 95-degree days, with as many as 16-20 additional days by mid-century.

L. Carter, A. Terando, and others. 2018. Fourth National Climate Assessment: Southeast. U.S. Global Change Research Program.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

The Southeast is expected to experience between 0 and 14 fewer days per year with a minimum temperature below 10 degrees Fahrenheit by the middle of the century.
The largest decreases are expected in Kentucky, Virginia, Tennessee, North Carolina and the northern part of Arkansas. The smallest decreases in cold days are expected along the coastal and southern areas, where these kinds of cold days rarely occur. Similarly, the Southeast region is expected to have more than 20 fewer days with a minimum temperature below 32 degrees by the middle of the century.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

Average annual precipitation is projected to increase slightly in the northeast portion of the Southeast, but may decrease in the southwest half of the region.
There is uncertainty between different climate scenarios for future precipitation projections in the Southeast. Generally, there is a southwest-to-northeast gradient in annual precipitation projections. The greatest increases are projected in North Carolina and Virginia (3-9% increase by the end of the century), and the greatest decreases are projected in Louisiana and Arkansas (3-12% decrease by the end of the century). Overall changes in precipitation for the Southeast are projected to be slight and comparable to current year-to-year variations. Daily precipitation totals in the Southeast have increased substantially in the fall season, and this trend is expected to continue.

D.R. Easterling, K.E. Kunkel, and others. 2017. Climate Science Special Report: Precipitation Change in the United States. U.S. Global Change Research Program.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

The number of days per year with more than 1 inch of precipitation will increase across the Southeast by the middle of the century, and double the number of heavy rainfall events are projected by late century.
Extreme rainfall events have increased in frequency and intensity in the Southeast, and will continue to increase in the future. Most of the region is projected to experience 6% to 25% more days each year with more than an inch of precipitation by the middle of the century. The largest increases (up to 25% increases) in extreme precipitation are expected across the Appalachian Mountains. The smallest increases (less than 10%) are expected across Arkansas, Louisiana and Mississippi. Days with more than 2 inches, 3 inches, and 4 inches of precipitation are also expected to occur more frequently by the middle of the century. Under a high emissions scenario, projections indicate approximately double the number of heavy rainfall events (2-day precipitation events with a 5-year return period) and a 21% increase in the amount of rain falling on the heaviest precipitation days (days with a 20-year return period) by late century. Heavy precipitation associated with hurricanes and tropical storms could result in more flooding and damage to coastal forests, and contribute to an increase in inland flooding as well.

L. Carter, A. Terando, and others. 2018. Fourth National Climate Assessment: Southeast. U.S. Global Change Research Program.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

A majority of climate models suggest that precipitation in the Southeast will increase in the winter, spring, and fall by the end of the century, but summer is generally expected to become drier.
Simulated changes in summer precipitation by the end of the century range from a 0-10% decrease, with the largest decreases occurring in southern Florida and Arkansas and Tennessee. The means of several climate models indicate that winter and spring precipitation may increase around 15% by the end of the century, particularly in the northern part of the region. Daily precipitation totals in the Southeast have increased substantially in the fall season; this trend is expected to continue, with the greatest expected increases along the Gulf Coast. Overall, only minimal change or slight increases in precipitation are projected along much of the Atlantic and Gulf Coasts. These projections are averaged outputs from a climate scenario with higher emissions (A2), and under mild climate scenarios changes are generally expected to be smaller.

L. Carter, A. Terando, and others. 2018. Fourth National Climate Assessment: Southeast. U.S. Global Change Research Program.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

The annual freeze-free season is expected to increase by 20 to 30 days in the Southeast by 2055. The freeze-free season lengthens by more than a month by the late 21st century in climate simulations based on a high emissions scenario.
The freeze-free season is defined as the period of time between the last spring frost (daily minimum temperature below 32 degrees F) and the first fall frost. The length of the annual freeze-free season has been increasing since the 1980s, and all climate models agree that it will continue to increase in the future across the Southeast. The largest increases of 25-30 days are mainly expected in Louisiana, Tennessee, Kentucky, Virginia, and North Carolina. The smallest changes are expected in southern Florida, which is not surprising because freezing events are already rare in this part of the Southeast.

L. Carter, A. Terando, and others. 2018. Fourth National Climate Assessment: Southeast. U.S. Global Change Research Program.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

Red spruce, balsam fir, and eastern hemlock are projected to decline substantially across the Southeast by the end of the century, and conditions for pines may also deteriorate.
Red spruce and eastern hemlock are already declining in some areas, and these species are projected to be extirpated from the southeast by 2100 as a result of the combined stresses of warming, air pollution, and insects. If temperature continues to increase and precipitation becomes more variable, conditions for pine growth may begin to deteriorate. Even if regional forest productivity remains high for pine species, the center of forest productivity could shift northward into North Carolina and Virginia, causing significant economic and social impacts.

J. Vose, D. Peterson, and others. 2012. Effects of Climate Variability and Change on Forest Ecosystems: A Comprehensive Science Synthesis for the U.S. Forest Sector.. USDA Forest Service Pacific Northwest Research Station.

Climate change will amplify many existing stressors to forest ecosystems in the Southeast, such as invasive species and insect pests.
Forest ecosystems throughout the Southeast Region are exposed to a range of natural, introduced, and anthropogenic stressors. Stressors such as invasive plants, forest pests, and diseases are expected to become more damaging under climate change, and these factors may interact in unpredictable ways. The southern pine beetle is already the most destructive pest in the region's forests, and longer growing seasons could allow populations of the pest to expand more rapidly. Cogongrass and kudzu are expected to expand into new territory under climate change, and both of these species have cascading effects on disturbance regimes and diversity.

J. Vose, D. Peterson, and others. 2012. Effects of Climate Variability and Change on Forest Ecosystems: A Comprehensive Science Synthesis for the U.S. Forest Sector.. USDA Forest Service Pacific Northwest Research Station.

Wildfire risk is projected to increase across the Southeast by the end of the century.
Rising temperatures and increases in the duration and intensity of drought are expected to increase wildfire occurrence and also reduce the effectiveness of prescribed fire in the Southeast. While this region experiences the highest number of wildfires in the country, prescribed fire is currently more common than wildfire in Southeastern forests. However, as fire seasons lengthen in the future, the window for prescribed burning may decrease because of increased fuel flammability. Decades of wildfire suppression has increased the potential for crown fires, and model projections indicate that wildfires are likely to occur more frequently in the Southeast in the future. Annual fire probability, calculated solely with climate data and physical principles, is projected to increase by 20% to 80% across the Southeast by the end of the century, with the greatest increases in the southern Appalachians. The incidence of atmospheric conditions that contribute to large and erratic fire behavior, measured by the Haines Index, is also projected to occur more 8 to 11% more frequently by the end of the century. The limitation for these sorts of projections is that they do not account for changes in land use, fire suppression rates, or vegetation changes.

R. Guyette, F. Thompson, and others. 2014. Future Fire Probability Modeling with Climate Change Data and Physical Chemistry. Forest Science.

Damage from hurricanes and sea-level rise is expected to increase in the Southeast by the end of the century.
Global sea level rise is projected to rise between 1 and 4 feet by the end of the century. Sea level rise and related increases in storm surges pulsing farther inland will continue to exacerbate ongoing land loss in low-lying coastal areas and may result in excessive saltwater inundation of coastal forests. The number of Category 4 and 5 hurricanes has increased since the 1980s, and this trend can be attributed both to natural variability and climate change. High-intensity hurricanes such as the 2017 Hurricane Irma are expected to become more common in the future. Rapid intensification of storms is also more likely as the climate warms, even though there is also some historical evidence that the same conditions that lead to this intensification also act to weaken hurricane intensity near the U.S. coast, but it is unclear whether this relationship will continue as the climate warms further. Damage from these kinds of storms can be intense and extend for hundreds of miles inland, including windthrow and blowdown, inundation, damage to infrastructure on land, and significant ecological impacts to terrestrial and freshwater ecosystems due to saltwater intrusion and altered hydrology.

L. Carter, A. Terando, and others. 2018. Fourth National Climate Assessment: Southeast. U.S. Global Change Research Program.

L. Carter, J. Jones, and others. 2014. National Climate Assessment – Southeast. U.S. Global Change Research Program.

Low-diversity systems are at greater risk from climate change.
Studies have consistently shown that diverse systems have exhibited greater resilience to extreme environmental conditions and greater potential to recover from disturbance than less diverse communities. This relationship makes less diverse communities inherently more susceptible to future changes and stressors. The diversity of potential responses of a system to environmental change (response diversity), is a critical component of ecosystem resilience. Response diversity is generally reduced in less diverse ecological systems. Genetic diversity within species is also critical for the ability of populations to adapt to climate change, because species with high genetic variation have better odds of producing individuals that can withstand extreme events and adapt to changes over time.

A. Hoffman and C. Sgrò. 2011. Climate change and evolutionary adaptation. Nature.

Systems that are more tolerant of disturbance have less risk of declining on the landscape
Disturbances such as wildfire, flooding, and pest outbreaks are expected to increase in the future. Forests that are adapted to gap-phase disturbances, with stand-replacing events occurring over hundreds or thousands of years, may be less tolerant of more frequent widespread disturbances. Mesic hardwood forests can create conditions that could buffer

against fire and drought to some extent, but these systems are not expected to do well if soil moisture declines significantly. Forest systems that are more tolerant of drought, flooding, or fire are expected to be better able to withstand climate-driven disturbances. This principle holds true only to a given point, because it is also possible for disturbance-adapted systems to experience too much disruption. For example, dry pine forests and woodlands might benefit from drier conditions with more frequent fire, but these systems might also convert to savannas or open grasslands if fire becomes too frequent or drought becomes too severe.

G. Nowacki and M. Abrams. 2008. The Demise of Fire and "Mesophication" of Forests in the Eastern United States. BioScience.

E. Gustafson and B. Sturtevant. 2013. Modeling Forest Mortality Caused by Drought Stress: Implications for Climate Change. Ecosystems.

Species in fragmented landscapes will have less opportunity to migrate in response to climate change.
Habitat fragmentation can hinder the ability of tree species to migrate to more suitable habitat on the landscape, especially if the surrounding area is nonforested. Modeling results indicate that mean centers of suitable habitat for tree species will migrate between 60 and 350 miles by the year 2100 under a high emissions scenario and between 30 and 250 miles under milder climate change scenarios. Based on data gathered for seedling distributions, it has been estimated that many northern tree species could possibly migrate northward at a rate of 60 miles per century. Fragmentation makes this disparity even more challenging, because the landscape is essentially less permeable to migration.

L. Iverson, M. Schwartz, and others. 2004. How fast and far might tree species migrate in the eastern United States due to climate change?. Global Ecology and Biogeography.

C. Woodall, C. Oswalt, and others. 2009. An indicator of tree migration in forests of the eastern United States. Forest Ecology and Management.

Systems that are limited to particular environments will have less opportunity to migrate in response to climate change.
Some species and forest types are confined to particular habitats on the landscape, whether through requirements for hydrologic regimes, soil types, or other reasons. Similar to species occurring in fragmented landscapes, isolated species and systems face additional barriers to migration. Widespread species may also have particular habitat requirements. For example, sugar maple is often limited to soils that are rich in nutrients like calcium, so this species may actually have less available suitable habitat than might be projected solely from temperature and precipitation patterns. Riparian forests are not expected to be able to migrate to upland areas because many species depend on seasonal flood dynamics for regeneration and a competitive advantage. Similarly, lowland conifer swamps contain a unique mix of species that are adapted to low pH values, peat soils, and particular water table regimes. These species face additional challenges in migration compared to more-widespread species with broad ecological tolerances.

A. Jump and J. Peñuelas. 2005. Running to stand still: adaptation and the response of plants to rapid climate change. Ecology Letters.

The urban heat island effect can exacerbate the effects of increasing temperatures.
Urban areas with one million or more people can be 2 to 13° F warmer than their surrounding rural areas due to the "urban heat island effect" from heat-absorbing infrastructure such as pavement and buildings as well as waste heat generated from manufacturing and automobiles. The urban heat island is often more pronounced in historically redlined areas with lower tree cover.

The Effects of Historical Housing Policies on Resident Exposure to Intra-Urban Heat: A Study of 108 US Urban Areas

Impervious cover can exacerbate the effects of increased heavy precipitation events in urban areas.
Increases in impervious cover can dramatically increase the size and frequency of localized flooding. Typically, urban floods are short-lived, but extended flooding can stress trees, leading to leaf yellowing, defoliation, and crown dieback. If damage is severe, mortality can occur. In addition, flooding can lead to secondary attacks by insect pests and diseases. Some species are more tolerant of flooding than others. Flood-intolerant species include upland species such as bitternut and shagbark hickory, Kentucky coffeetree, and white oak. Species that are generally tolerant of flooding include species that are generally native to wetlands and riparian areas such as baldcypress, sycamore, and red maple. Trees in coastal areas may also be vulnerable to saltwater intrusion during flood events.

FAYETTEVILLE'S CURRENT INVASIVE PLANT SPECIES PROGRAM

Overview

An invasive plant is a plant species found outside its native range that threatens the survival or reproduction of native plants and animals, reducing biological diversity and causing significant damage to ecosystems, communities, habitats, and native species. The parks across the City of Fayetteville contain many invasive plant species, including two that are prolific: Japanese and Bush Honeysuckle (*Lonicera maackii*) and Chinese Privet (*Ligustrum sinense*).

The City of Fayetteville's Parks Maintenance Division in the Public Works Department is responsible for the invasive plant species removal and habitat restoration programs on public lands. Parks Maintenance also conducts and collaborates with organizations to host work days to remove targeted areas and rely heavily on volunteers for this work, which ranges from removal of plants with loppers and shovels, to replanting once invasives are gone. Volunteers that participate in these events are trained to take the skills learned back home so that they may remove these plants from their own back yards.

The City has an events calendar and page for interested community members to sign up for text or email notifications about upcoming stewardship volunteer opportunities. In addition to events and trainings, the City has information about the Invasive Plants Ordinance and a list of invasive plants and native alternatives on its website.

Figure 1. Example of the community event for invasive plant species management (Source: City of Fayetteville, AR Facebook)

Figure 2. Example public messaging for the management of invasive plant species (Source: City of Fayetteville, AR Facebook)

The Fayetteville City Council adopted Ordinance #5820 on November 3, 2015 (see Attachment A); this ordinance established a list of eighteen invasive plants to be restricted from being installed in new developments that require a Landscape Plan Review by the Urban Forester. The list of invasive plants was determined through an open participation process which involved a team of thirteen stakeholders. Stakeholders included nursery owners/managers, landscape architects, academic experts, landscape installers, hobby gardeners, botanists, naturalists, conservationists, City Park Managers and local citizens. The team met to evaluate the economic and environmental harm caused by invasive plants. After recognizing the need for an invasive plant policy, the stakeholder group reviewed other communities' invasive plant species policies and made recommendations to City staff.

The Ordinance was established in response to Fayetteville's Comprehensive Plan's guiding policies for Natural Areas which calls to, "preserve native vegetation and meet the habitat needs of multiple species." To support the awareness and compliance of the Ordinance, the "Invasive Plant Species in Fayetteville, Arkansas" resource was created by the City which consists of the eighteen invasive plants and recommends appropriate plant species for trees, shrubs or ground cover. The City of Fayetteville encourages all property owners to identify, remove and replace invasive plants from the landscapes around their homes and businesses.

Figure 3. The City of Fayetteville, AR's educational packet for invasive plant species management (Source: City of Fayetteville, AR)

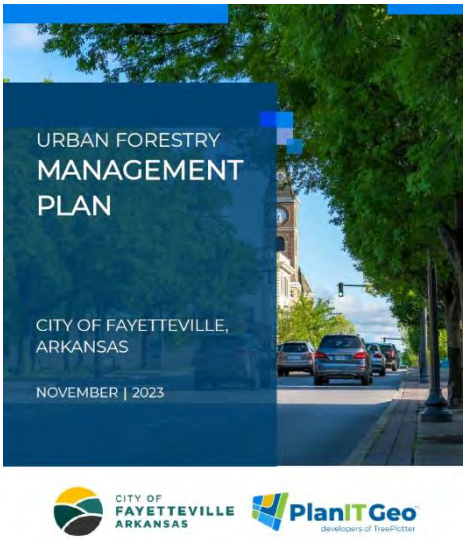

Figure 4. City of Fayetteville, AR's 2023 Urban Forestry Management Plan

This report was provided to the City of Fayetteville in support of the 2023 Urban Forestry Management Plan ("Plan") and was created to examine the existing program for managing invasive plant species in the City. Within the Plan, invasive plant species were recognized as an external challenge facing the City's urban forest now and in the future with changing climates. To address these challenges, Goal B1 in the Plan calls for the City to "prioritize public tree maintenance and tree risk management" and has a supporting action to "continue to manage invasive plant species on public properties and within public rights-of-way. Support controlled burns to manage invasives and wildlife on public properties."

The following provides a summary of the program review and recommendations based on industry standards and best practices and local research pertaining to the management of invasive plant species.

Current Management of Invasive Plant Species

For the City's consideration, the following table summarizes the plant species that are invasive according to Fayetteville's Invasive Plant Species educational packet compared to the University of Arkansas' Cooperative Extension Service (U of A Cooperative Extension) Invasive Plants in Arkansas list:

Plant Species	Listed in Fayetteville's Invasive Plant Species Educational Packet?	Listed in the University of Arkansas Division of Agriculture Cooperative Extension Service's Invasive Plants in Arkansas List?*
Asian Wisteria	Yes	Yes
Bamboo	Yes	Yes
Bigleaf Periwinkle	Yes	Yes
Callery/Bradford Pear	Yes	Yes
Burning Bush	Yes	No
Bush Honeysuckle	Yes	No
Chinese Privet	Yes	Yes
Creeping Euonymus	Yes	No
English Ivy	Yes	Yes
Heavenly Bamboo	Yes	No
Japanese Honeysuckle	Yes	Yes
Kudzu	Yes	No
Littleleaf Periwinkle	Yes	No
Mimosa, Silktree	Yes	Yes
Multiflora Rose	Yes	No
Sericea Lespedeza	Yes	Yes
Shrubby Lespedeza	Yes	Yes
Tree-of-Heaven	Yes	No
Running Monkey Grass	No	Yes
Tall Fescue	No	Yes
Chinese Tallow Tree	No	Yes
Cogongrass	No	Yes

*City of Fayetteville, AR's webpage for Invasive Plants and Native Alternatives (www.fayetteville-ar.gov/3028/Invasive-Plants-and-Native-Alternatives)

**University of Arkansas Division of Agriculture Cooperative Extension Service's Invasive Plants in Arkansas List (www.uaex.uada.edu/environment-nature/ar-invasives/invasive-plants)

Figure 5. Identifying callery pear (Pyrus calleryana) an invasive tree species (Source: Watershed Conservation Resource Center's "Invasive Plants of Northwest Arkansas, A Field Management Guide)

Evaluating and Updating the City's Invasive Species Management Program

The City may consider updating the invasive plant species listed in the Invasive Plant Species educational packet and the City Ordinance #5820 to align with recommendations provided by the University of Arkansas' Cooperative Extension Service, the Arkansas Native Plants Society, the Watershed Conservation Resource Center's "Invasive Plants of Northwest Arkansas, A Field Management Guide", the Northwest Arkansas Land Trust, and/or other reputable sources.

According to the Cooperative Extension Service at the University of Arkansas, the following plant species have been invasive in some landscape situations and should be monitored by the City of Fayetteville to determine the level of invasiveness and the need for prohibiting planting:

- Garlic Chives
- Devil's Walking Stick
- Artemesia
- Trumpet Creeper
- Obedient Plant
- Sweet Autumn Clematis
- Mexican Hydrangea
- Queen Ann's Lace
- Wintercreeper Euonymus
- Chameleon Plant
- Cypress Vine

Planning a Management Strategy

For the consideration of Fayetteville, the following management strategies are recommended for invasive plant species management on public lands and for educating the public to manage invasives on private land (recreated from the Watershed Conservation Resource Center's "Invasive Plants of Northwest Arkansas, A Field Management Guide."):

Prevent Invasive Plants From Establishing

- Don't introduce invasive plants; consider native alternatives
- Younger invasive plants are easier to remove than well-established plants

Identify Plant Species & Area To Be Managed

- Take an inventory of your area and properly identify invasive and native plants
- Use caution on streamside areas or heavily sloped areas
- Seek assistance and consultation in sensitive areas
- Determine where and how removed brush will be handled. If composting, heat must be maintained above 145° F to denature seeds

Practice Safety

- Dress appropriately
    - Long sleeves, pants, gloves, sturdy shoes or boots
    - Safety glasses, sunscreen, and/or insect repellant may be appropriate
- If Using Chemical Herbicide Treatment, Personal Protective Equipment (PPE) Is Needed
    - Safety glasses
    - Latex or nitrile gloves
    - Prevent spills and use extreme caution near water sources
    - Read herbicide labels and Safety Data Sheets (SDS) for additional PPE measures and application guidelines
    - The herbicide label is the law
- Use Extreme Caution With Sharp or Heavy Tools
    - Acquire safety training for chainsaw use
- Be Aware of Surroundings

    - Swinging tools or falling limbs could injure you or others nearby
- Contact Arkansas One-Call at 811
    - Call 811 to locate underground utility lines prior to disturbing a substantial area and/or using heavy equipment.
- Use Caution When Working Around Overhead Utility Lines
- Work Areas May Not Be Easily Accessible
    - Be aware of steep slopes, banks, and slippery areas
- Be Aware of Wildlife
    - Work areas may harbor animals, snakes, or insects
    - Use caution with plants such as Poison Ivy, Poison Hemlock, or thorns (Greenbrier and Multiflora Rose)
- Rest Often
- Stay Hydrated

Divide Area

- Work in phases
- Large acreage may require focusing on one species at a time or dividing into smaller manageable areas
- Plant densities can be overwhelming; distribute workload

Seek Assistance From Local Professionals

- Tree professionals may be required. Use a certified arborist
- Consult your local extension office for herbicide recommendations

Revegetate/Encourage Native Plants

- Minimize damage to native vegetation during removal
- Consult native plant resources and research
- Choose correct native plant for growing conditions, ecoregion, and space
- Currently, Fayetteville recommends the "Wildscaping with Ozark Native Plants - Native Wildflowers and Grasses" resource for revegetating with native plants and the "Ozark-Friendly Landscape – Native Trees and Shrubs" resource for native trees

Do Maintenance Seasonally

- Many plants sprout or sucker from cut points; revisit managed areas
- Opening canopy may activate invasive seed bank and viney plants

Figure 6. City of Fayetteville's public education for invasive plant species removal (Source: KHBS News)

Invasive Plant Species Control and Removal Methods

Several methods are used to control or remove invasive plants each with varying degrees of effectiveness, advantages, and disadvantages. Listing here is not an endorsement for any one method. The area of infestation often dictates removal techniques, such as sensitive riparian areas along waterways, wetlands, or sloped areas. Use of herbicide trade names does not indicate endorsement of any one product.

Mechanical

- Hand Pulling
- Cutting (chainsaw, hand saw, pruners)
- Stump pulling (weed wrench, shrub pullers, chains, mattock, shovel, large machinery)
- Machinery (mowing, brush hog)

"Hand removal" is very effective but does require manual labor and may not be practical across large areas. Cutting alone is rarely effective, unless used in conjunction with cut-stump treatments. The most effective way to kill invasive plants is by removing the entire plant including root systems. Stump pulling is useful for small to medium shrubs and trees and is easier in moist soil.

Cultural Practices

Prescribed fire has been used throughout history to control vegetation, but burning is often unavailable in urban settings. Fire can control the spread of some invasive plants, but must often be used in tandem with mechanical and/or chemical measures. It can risk harming native vegetation, activate invasive seed banks, or even stimulate some undesirable plants. Refer to local laws and ordinances to ensure compliance. Applying mulch helps to control invasive populations by preventing sprouting. It also holds moisture for native plants and covers bare soil to help prevent erosion.

Chemical (Herbicide)

- Foliar spray
- Cut-stump treatments
- Basal bark treatment
- Frill (hack-and-squirt)

Always read and follow herbicide label instructions and precautions. Great care should be taken when conducting chemical treatment and it is important to consult your local cooperative extension office for herbicides effective for weed and brush control. A brief description of herbicide treatments follows:

Foliar sprays are not always a viable option in the urban landscape or public setting. This technique can be used to target young plants, but it tends to be ineffective on many resilient, mature, invasive plants in Northwest Arkansas. Foliar spray can damage or kill non-target native plants from drift and contaminate water resources.

Cut-stump treatments minimize chemical use and contamination of native vegetation and water resources. Most effective in the fall, stumps are cut 3 to 4 inches from the ground and are treated with an herbicide-marking mixture within a few minutes using a squirt bottle or sponge applicator. The marking dye helps land managers or volunteers to see where the chemical has been applied. Stump treatments also help to prevent suckering or secondary growth. Resilient stumps may need cutting and chemical application again the following season.

Basal bark herbicide treatment is effective on most invasive woody plants including vines. An oil soluble herbicide is mixed with an oil carrier. For woody plants with a 6-inch diameter or less, spray the bark of the plant from ground level to 15 inches. Plants should not be cut for 6 months. This method can be used anytime of the year except early spring.

Frill or hack and squirt is used to target invasive trees and introduces the herbicide into the stem using spaced cuts below the last live branch and around the trunk. A hatchet is used to make downward angled incisions through the bark (2 inches long) evenly spaced (one inch) around the tree. Each cut is carefully filled (do not allow spillage) with herbicide-marking mixture using a spray bottle or gunjet.

Re-establishing Native Vegetation

Once invasive vegetation is removed from a property, it is important to establish a healthy stand of plants native to the local ecoregions of Northwest Arkansas. Native vegetation provides shelter and food for wildlife, and it contributes to the reproduction and survival of insects, birds, fish, reptiles, and mammals. Native vegetation also supports migrating species, such as monarch butterflies and wood thrushes. Having adapted to the Ozark Mountain region, native species of plants generally are easy to establish and are drought resistant. Many are beautiful with showy flowers, berries, and leaves, and they can easily be incorporated into a landscaped setting. The previous tables of plants native to both the Boston Mountains and Ozark Highlands Ecoregion should be considered for replanting. These lists can be used as a guide for the revegetation of an area of interest where invasive plants have been removed. Just because a shrub is removed doesn't mean it needs replaced with another shrub. As an example, there may be a preference to establish native grasses and woodland wildflowers in a forested area where bush honey suckle has been removed. As part of the invasive removal process, a plan for native plant establishment should be created.

Figure 7. Revegetating with a native Ozark chinquapin tree (Source: Only in Arkansas)

Native plants can be established by dispersing seed or by planting potted plants or bare roots. Native seed can be collected locally or purchased and is generally used for large areas where grasses and wildflowers are desired. If native seed is purchased, a local source or at a minimum, a source that was cultivated in or near the Ozark Mountain region should be considered. When dispersing native seed on bare soils, mix a nursery crop of winter wheat or oats with a variety of native grass and wildflower species. Following the application of the seed mix, cover with straw. Trees and shrubs are generally established by planting potted plants or bare roots. Again, if possible, find a local source for these plants.

Once the treated area is replaced with native plants, it is important to inspect for and remove new invasive plants that will try to reestablish on the property. Once a healthy stand of native vegetation is established, less invasive vegetation will arise.

Figure 8. Before and after of volunteers removing invasive plants along a trail near Scull Creek in Fayetteville, AR (Source: North American Invasive Species Management Association, NAISMA)

Invasive Plant Species Program Review Checklist

The following checklist is provided by the urban forestry consultants at PlanIT Geo for the City of Fayetteville to examine and update its current Invasive Plant Species Management Program. By updating the program and aligning it with industry standards and best practices, the City will be better equipped to implement the 2023 Urban Forestry Management Plan and achieve the vision of a sustainable urban forest in Fayetteville.

Program Review Checklist for Fayetteville, Arkansas' Invasive Plant Species Management Program

Table 1. Checklist for the City of Fayetteville to evaluate and update its invasive plant species management program (Source: PlanIT Geo, Inc.)

A) PROGRAM OVERVIEW		
A1) Mission and Goals		
Question	***Answer***	***Status***
A1a) Are the program's mission and goals clearly defined and measurable?		
A1b) Do the goals align with the City's overall priorities and environmental goals?		
A2) Program Scope		
Question	***Answer***	***Status***
A2a) What types of invasive plants does the program target?		
A2b) What geographic areas does the program cover?		
A2c) What types of interventions are used (e.g., education, removal, restoration)?		
A3) Program Budget		
Question	***Answer***	***Status***
A3a) Is the program adequately funded to achieve its goals?		
A3b) How are resources allocated across different program components?		
A3c) Are there opportunities for additional funding or cost savings?		

B) PROGRAM IMPLEMENTATION		
B1) Planning and Prioritization		
Question	***Answer***	***Status***
B1a) Does the program have a strategic plan for managing invasive species?		
B1b) Are priorities set based on the ecological impact of different species and the feasibility of control?		
B1c) Is there a mechanism for regularly updating the plan and incorporating new information?		
B2) Outreach and Education		
Question	***Answer***	***Status***
B2a) Does the program have a comprehensive outreach and education plan to engage the public and stakeholders?		
B2b) Are educational materials clear, accurate, and accessible to different audiences?		
B2c) Are there opportunities to partner with other organizations for outreach efforts?		

B3) Invasive Species Removal		
Question	***Answer***	***Status***
B3a) Are control methods effective and based on best practices?		
B3b) Are appropriate disposal methods used for removed plants?		
B3c) Are there monitoring protocols in place to assess the success of control efforts?		
B4) Restoration and Re-vegetation		
Question	***Answer***	***Status***
B4a) Does the program include efforts to restore native plant communities after invasive species removal?		
B4b) Are native species selection and planting methods appropriate for the site and ecological goals?		
B4c) Are there monitoring protocols in place to assess the success of restoration efforts?		

C) PROGRAM EVALUATION		
C1) Data Collection and Analysis		
Question	***Answer***	***Status***
C1a) Does the program collect data on the distribution and abundance of invasive species?		
C1b) Are data collection methods reliable and standardized?		
C1c) Is data analyzed regularly to inform program decision-making?		
C2) Monitoring and Reporting		
Question	***Answer***	***Status***
C2a) Does the program monitor the effectiveness of its interventions?		
C2b) Are results reported to stakeholders and the public?		
C2c) Are there opportunities to improve monitoring and reporting procedures?		
C3) Adaptive Management		
Question	***Answer***	***Status***
C3a) Does the program use an adaptive management approach to adjust interventions based on monitoring results?		
C3b) Are lessons learned from past efforts incorporated into future planning?		
C3c) Are there opportunities to share information and best practices with other programs?		

D) PARTNERSHIPS AND COLLABORATION		
D1) Stakeholder Engagement		
Question	***Answer***	***Status***
D1a) Does the program actively engage with stakeholders such as residents, landowners, and businesses?		
D1b) Are there opportunities for stakeholders to participate in program planning and implementation?		
D2) Interagency Collaboration		
Question	***Answer***	***Status***
D2a) Does the program collaborate with other agencies and organizations involved in invasive species management?		
D2b) Are there opportunities to share resources and expertise?		
D3) Volunteer Engagement		
Question	***Answer***	***Status***
D3a) Does the program utilize volunteers for invasive species removal and restoration efforts?		
D3b) Are volunteer opportunities well-organized and effective?		

E) RECOMMENDATIONS FOR IMPROVEMENT		
Question	***Answer***	***Status***
E1) Based on the review findings, what are the key recommendations for improving the program's effectiveness?		
E2) What are the estimated costs and resources needed to implement the recommendations?		
E3) What are the potential benefits of implementing the recommendations?		

F) CONCLUSION		
Question	***Answer***	***Status***
F1) Overall, is the Fayetteville invasive plant species management program meeting its goals and objectives?		
F2) What are the program's strengths and weaknesses?		
F3) What are the key opportunities for improvement?		

ADDITIONAL NOTES
This checklist is a starting point and may need to be adapted to the specific context of the program.
The review process should involve stakeholders from diverse backgrounds and perspectives.
The results of the review should be used to inform program improvement efforts.

SUMMARY

Fayetteville's urban forest consists of all trees throughout the City on both public and private property. The trees and the overall urban forest are vital resources that provide numerous ecological, economic, and social benefits. However, invasive plant species pose a significant threat to the health and sustainability of this valuable asset. To ensure the long-term health of the urban forest, it is critical for Fayetteville to regularly review and update its programs for managing invasive plant species. By conducting the program review and applying the recommendations provided in this Report the City of Fayetteville will be position to:

Address evolving threats: Invasive species are constantly adapting and evolving, requiring frequent reassessment of management strategies. New invasive species may emerge, and existing species may develop resistance to current control methods. Updating the program allows for incorporating new knowledge and implementing more effective approaches.

Adapt to changing environmental conditions: Climate change and other environmental factors can significantly impact the distribution and abundance of invasive species. By reviewing and updating the program, Fayetteville can ensure it is adaptable and capable of responding to these changing conditions.

Optimize resource allocation: Limited resources must be used efficiently and effectively. A review process can identify areas for improvement in resource allocation and ensure that program efforts are focused on achieving the most significant impact.

Improve program effectiveness: Regular evaluation and feedback are crucial for identifying program weaknesses and areas for improvement. This information can be used to refine existing strategies, develop new interventions, and ultimately enhance the program's overall effectiveness.

Maintain public support: An effective invasive species management program relies on public awareness and support. By demonstrating commitment to continuous improvement and transparency, the program can build trust and encourage broader community engagement.

Ensure a sustainable future: Invasive plant species can have devastating consequences for the health and diversity of the urban forest. By proactively managing these threats, Fayetteville can ensure the long-term sustainability of this valuable ecosystem and safeguard its ecological, economic, and social benefits for future generations.

Regularly reviewing and updating Fayetteville's invasive plant management program is crucial for maintaining a healthy and resilient urban forest. This proactive approach will require ongoing commitment and collaboration, but it will ultimately contribute to a more sustainable and vibrant City for all residents.

113 West Mountain Street
Fayetteville, AR 72701
(479) 575-8323

Ordinance: 5820

File Number: 2015-0496

AMEND CHAPTER 177 LANDSCAPE REGULATONS:

AN ORDINANCE TO AMEND CHAPTER 177 LANDSCAPE REGULATIONS OF THE UNIFIED DEVELOPMENT CODE TO ADOPT REGULATIONS PROHIBITING THE INSTALLATION OF CERTAIN INVASIVE PLANT SPECIES IN NEW DEVELOPMENTS THAT REQUIRE A LANDSCAPE PLAN REVIEW AND APPROVAL BY THE URBAN FORESTRY DIVISION, AND TO MAKE CERTAIN TECHNICAL REVISIONS

WHEREAS, on May 5, 2015, the City Council passed Resolution 101-15 requesting that City staff examine the need and propriety of submitting a proposed ordinance that would regulate or prohibit the sale or use of certain invasive plant species in Fayetteville; and

WHEREAS, City staff assembled a team of thirteen diverse stakeholders who identified eighteen invasive plant species that warrant restrictions based on the economic and environmental harm that they cause.

NOW THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby amends § 177.01 Purpose by adding a new subsection (B)(12) as follows: "Discouraging the new installation of identified invasive plant species and encouraging the removal of existing invasive plant species."

Section 2: That the City Council of the City of Fayetteville, Arkansas hereby amends § 177.01 Purpose by adding a new subsection (C)(8) as follows: "Plants identified as invasive in Section 177.09: Invasive Plant Species are prohibited from being installed in all development projects that require a landscape plan review."

Section 3: That the City Council of the City of Fayetteville, Arkansas hereby amends § 177.02(B) by replacing "Tree and Landscape Advisory Committee" with "Urban Forestry Advisory Board."

Section 4: That the City Council of the City of Fayetteville, Arkansas hereby amends § 177.03 **Landscape Plan Requirements** by adding the words "Combined Plan" to the beginning subsection (C)(5) and by adding a new subsection (C)(7)(h) as follows: "Plants listed in Section 177.09: **Invasive Plant Species** shall not be installed in developments requiring a landscape plan review."

Section 5: That the City Council of the City of Fayetteville, Arkansas hereby adds a new Section 177.09 Invasive Plant Species as set forth in Exhibit "A" attached hereto and made a part hereof.

PASSED and APPROVED on 11/3/2015

Approved:

_____
Lioneld Jordan, Mayor

Attest:

_____
Sondra E. Smith, City Clerk Treasurer

Exhibit A

177.09 Invasive Plant Species

The following plants shall not be installed in development projects that require a landscape plan review.

Asian Wisteria
Wisteria sinensis, Wisteria floribunda

Bamboo
Pyllostachys Spp.

Bigleaf Periwinkle
Vinca major

Callary/Bradford Pear
Pyrus calleryana

Burning Bush
Euonymus alatus

Bush Honeysuckle
Lonicera maackii, Lonicera fragrantissima

Chinese Privet
Ligustrum sinense

Creeping Euonymus
Euonymus fortunei

English Ivy
*Hedera helix*Heavenly Bamboo
*Nandina domestica**

Japanese Honeysuckle
Lonicera japonica

Kudzu
Pueraria montana

Littleleaf Periwinkle
Vinca minor

Mimosa, Silktree
Albizia julibrissin

Multiflora Rose
Rosa multiflora

Sericea Lespedeza
Lespedeza cuneata

Shrubby Lespedeza
Lespedeza bicolor

Tree-of-Heaven
Ailanthus altissima

*Cultivars that do not produce flowers or fruit are not considered invasive.

FAYETTEVILLE, ARKANSAS
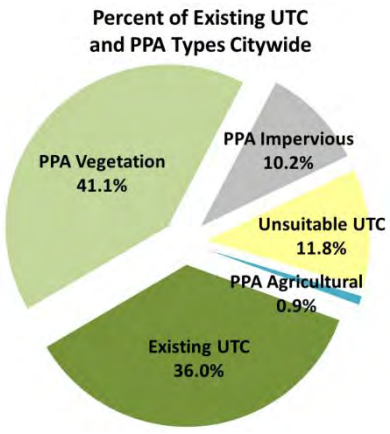
URBAN TREE CANOPY ASSESSMENT 2012

EXECUTIVE SUMMARY

This Urban Tree Canopy (UTC) assessment provides a benchmark of Fayetteville's current tree cover. The study delivers essential data layers, maps and tools to enhance urban forest management, policy and decision-making, and planning. Additionally, by calculating some of the services and benefits the tree canopy provides, City staff and elected officials have information that places a value on trees and forests in their community in order to promote sound environmental and land use plans and policies.



Geographic information systems (GIS), Land Use / Land Cover data, and high-resolution summer imagery provide the basis for this assessment. The data and technologies were used to assess Existing UTC and Possible Planting Areas (PPA) for assessment boundaries with different planning scales and intents. These included Fayetteville's city boundary, 6 land use types at the parcel-level, 2010 census blocks, riparian corridors by watershed boundary, and street rights-of-way.

This report presents results for current land cover and UTC distribution, compares canopy cover to 2002 conditions, estimates tree canopy benefits through multiple scenarios, and offers an evaluation, custom maps and tools, and recommendations for setting and achieving UTC goals.

URBAN TREE CANOPY IN FAYETTEVILLE

This study encompasses 55.4 square miles (35,437 acres) defined by the city limits of the City of Fayetteville, in Washington County, Arkansas. Based on a land area (after excluding water) of 34,586 acres, the City of Fayetteville has 12,441 acres (36%) of existing tree canopy, 17,757 acres (51%) of possible planting area, and 4,388 acres (13%) that is likely unsuitable for tree planting.

Riparian buffer analysis reveals there is 60% tree cover along Fayetteville's streams and rivers. Canopy cover within land use categories ranged from 18% (Commercial) to 45% (Agriculture) while the street rights-of-way average 13% cover. Residential properties average 41% UTC with 6 available planting sites per acre.

ECOSYSTEM SERVICES

Trees and forests in communities provide many "ecosystem services", or direct and indirect economic and environmental benefits such as removing air pollutants, storing and sequestering carbon, mitigating stormwater runoff, conserving energy through shade and wind block, improving public health, and providing wildlife habitat. Fayetteville's tree canopy currently provides an estimated $3.5M in air quality services each year and $64M in total stormwater management. Additionally, 50,000 planting sites were mapped near residential buildings where energy conservation

and associated carbon emissions reductions could be maximized. The impact on ecosystem services from increasing and decreasing canopy cover is presented in this report.

URBAN FOREST MANAGEMENT SCENARIOS

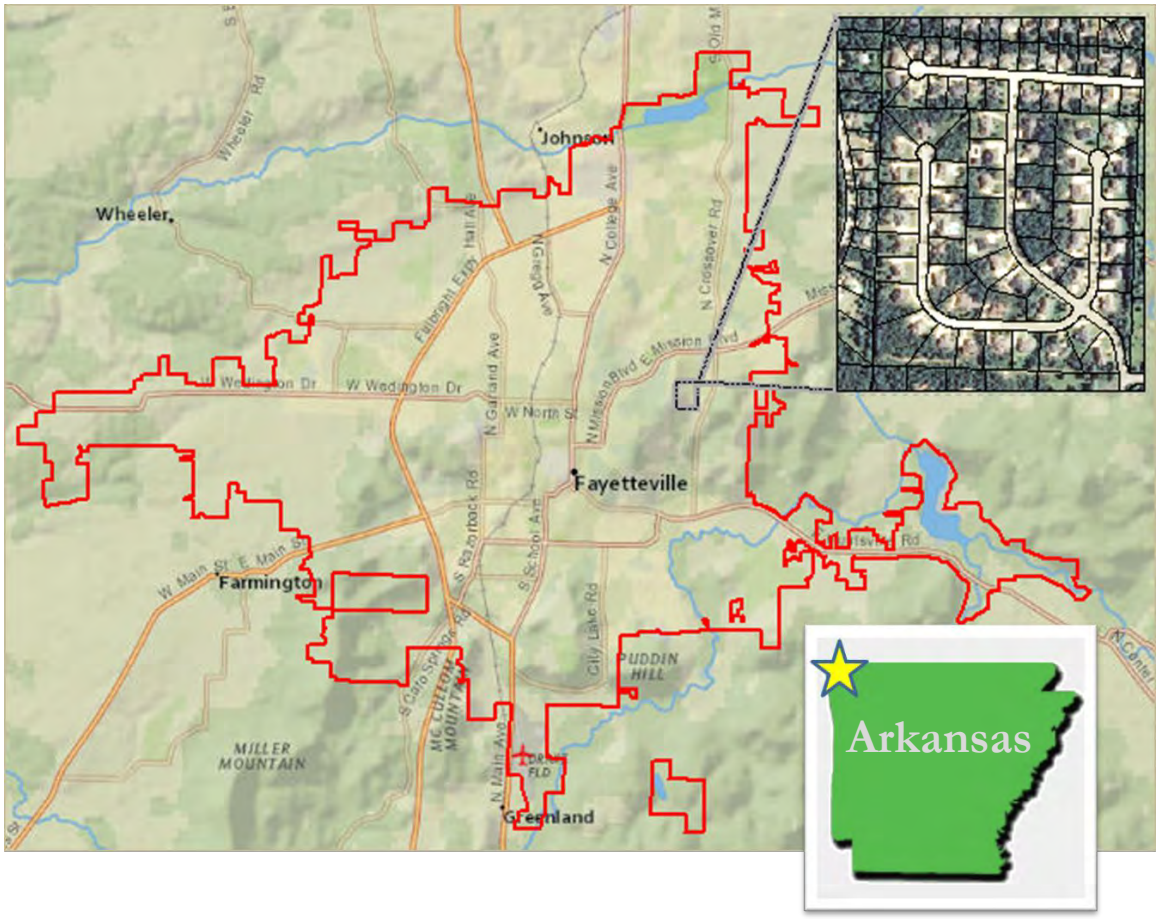
Management scenarios are presented and discussed involving further mapping, analysis and evaluation of Fayetteville's urban forest.

- **Comparison of canopy cover and benefits (2002 – 2012)** – urban forests are dynamic and constantly changing. Three (3) methods were used to assess gains and losses in tree canopy.
- **Target areas to plant trees** – an analysis of potential tree planting sites focused on (1) *areas most vulnerable to urban heat island effects*, (2) *wildlife habitat and linking of corridors*, and (3) *current land use types*. Other attributes were added to this GIS layer for additional prioritization.
- **Evaluating Fayetteville's canopy cover and tree preservation ordinance** – at 36% UTC, Fayetteville is 4% (~1,400 ac) below the national recommendation of 40%. Scenarios to reach 40% and an evaluation on the City's tree preservation ordinance are presented.
- **Management of the urban forest on city owned properties** – gains and losses in tree canopy on city properties is evaluated for future management purposes.

RECOMMENDATIONS AND SUMMARY

Understanding how and where trees are concentrated and distributed across Fayetteville is essential for maintaining a healthy and sustainable urban forest. This study provides the most up-to-date analysis to foster this overarching goal.

Fayetteville currently has 36% tree cover with 52% of the City classified as possible planting space. A comparison and trends assessment indicates canopy cover has decreased from around 37% to 36% (approximately 750-acre net loss) from 2002 to present. Forest regeneration and new tree planting are helping to offset only some of the losses from new development. Broad recommendations offer suggestions on using the results of this assessment as well as ways to create, expand, or strengthen urban forestry practices in the City.



As development and economic progress continue, communities and public officials place a value on their tree cover when drafting and revising policies that affect trees. Fayetteville's leaders, business community, and citizens shape their urban forest in tree planting and protection ordinances, and should use the results from this study to reevaluate whether changes in the City's landscape the past 10 years is acceptable for their health, the environment, and the local economy and community.

Tree canopy cools impervious surfaces on hot sunny days therefore reducing the effects of radiant heat escaping back into the atmosphere (Downing, 2011).

INTRODUCTION

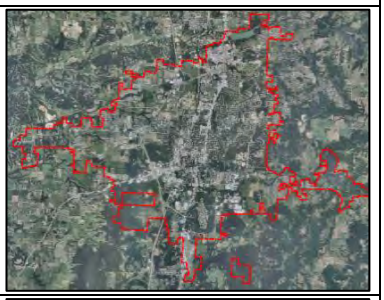
Trees provide many economic, social, and environmental benefits that form the basis of livability in urban municipalities. Therefore, it is important for urban development to work closely with urban forest health protection and management goals in order to maintain community livability. Geographic distribution of land use plays a critical role in maintaining a uniform urban forest. Each category of land use has unique management objectives and regulatory constraints.

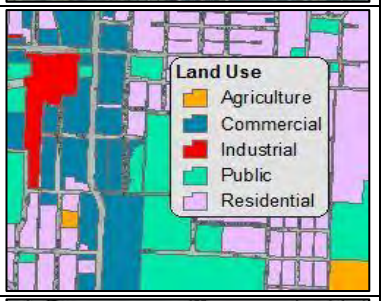
This Urban Tree Canopy Assessment (UTC) in Fayetteville represents an opportunity to better understand baseline conditions of tree canopy, the distribution of existing canopy vs. potential tree canopy, and development of tools to incorporate urban forest benefits during policy and planning processes. It involves the use of high-resolution multispectral imagery, GIS, and remote sensing technologies, training and development of custom tools, ecosystem benefits modeling, and reporting to characterize existing and potential UTC. The products and outcomes of this study will support developing and monitoring of UTC goals, provide detailed data for management plans and ordinances, and foster greater understanding of UTC benefits.

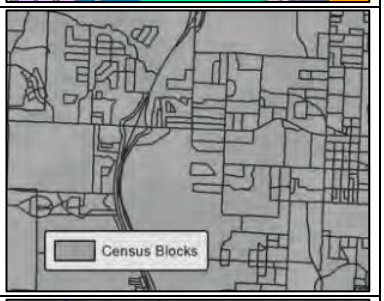
This analysis of urban tree canopy aims to reveal and provide a better understanding of the benefits of the City of Fayetteville's green infrastructure, expanding upon previous studies by the Fayetteville Natural Heritage Association (FNHA). This study looks at the urban forest's relation to air quality, stormwater control, and carbon sequestration and storage. With funding in part provided by the USDA Forest Service (USDA FS), the Arkansas Forestry Commission Urban & Community Forestry (AFC) program contracted with Plan-It Geo, LLC to map Fayetteville's urban tree canopy

(UTC). This assessment examines the area and percent cover for existing tree canopy, possible planting area (in vegetated grass areas and paved impervious areas), and areas unsuitable for planting (buildings, roads, water, agricultural fields, etc.). These metrics were calculated for six (6) assessment boundaries: (1) Fayetteville City boundary, (2) land use, (3) census blocks, (4) riparian corridors, (5) street rights-of-way, and (6) parcels (see Table 1 on the following page).

The assessment was accomplished by using newly generated land cover data and assessment boundaries provided by City GIS. The land cover classification includes the following eight (8) classes for the City: (1) tree canopy, (2) other low-lying vegetation, (3) bare soil/dry vegetation, (4) water, (5) buildings, (6) roads, (7) agriculture, and (8) other impervious surfaces (parking lots, driveways, etc.). See Figure 1.







Specific objectives of this assessment were to:

- Map and assess eight (8) land cover classes across Fayetteville.
- Map and quantify existing urban tree canopy and possible planting areas for the City and five other finer scale assessment boundaries.
- Estimate Urban Forest Ecosystem Services, including air pollution removal capacity, carbon storage and sequestration, and stormwater management, broken out by the City, residential land uses, and watersheds.
- Create a series of Urban Forest Management Scenarios describing how UTC has changed over time and what current vs. future projected tree benefits and tree canopy could look like. This involved developing a GIS layer for prioritized potential planting locations, a plug 'n play Canopy Calculator tool, and an evaluation of the City's tree preservation ordinance.
- Provide training to City staff, volunteer organizations, state agency officials, and others in a workshop demonstrating how to use the data and tools and conduct ecosystem services analysis. In addition, presenting the results to the Fayetteville City Council.

The Fayetteville Urban Tree Canopy assessment provides data and tools to develop local and regional urban forestry goals, policies, outreach, and management plans to sustain and enhance the existing urban forest. In addition to this report, Plan-It Geo, LLC has also provided GIS data layers and Excel spreadsheets to accompany reported results. Only a fraction of the information available from this assessment is provided in the report. Fayetteville and other partners are encouraged to conduct additional analyses to answer specific questions related to local planning policies and concerns.

Table 1. List and description of UTC assessment boundaries for this study.

Assessment Boundary	# of Types or Features	Description	Map
City Boundary	1	City of Fayetteville	
Land Use	6	Land Use Categories Used: Agriculture Commercial Industrial Public Land Residential Public Right-of-Way	
Census Blocks	1,894	2010 U.S. Census data provides demographic data at the tract, block group, and block level. The most detailed 'block' level was used for this project.	
Riparian Corridors	69	Buffered streams and rivers, segmented by watershed boundary into finer-scale reaches to provide a better planning scale for this assessment.	
Street Rights-of-Way	903	The public rights-of-way (ROW) along streets.	
Parcels	28,768	Tax lots from the county assessors property database.	

MAJOR FINDINGS

Based on Fayetteville's analysis of aerial imagery, Land Use / Land Cover, ecosystem services, and potential tree planting sites, the following represents the major findings from this study.

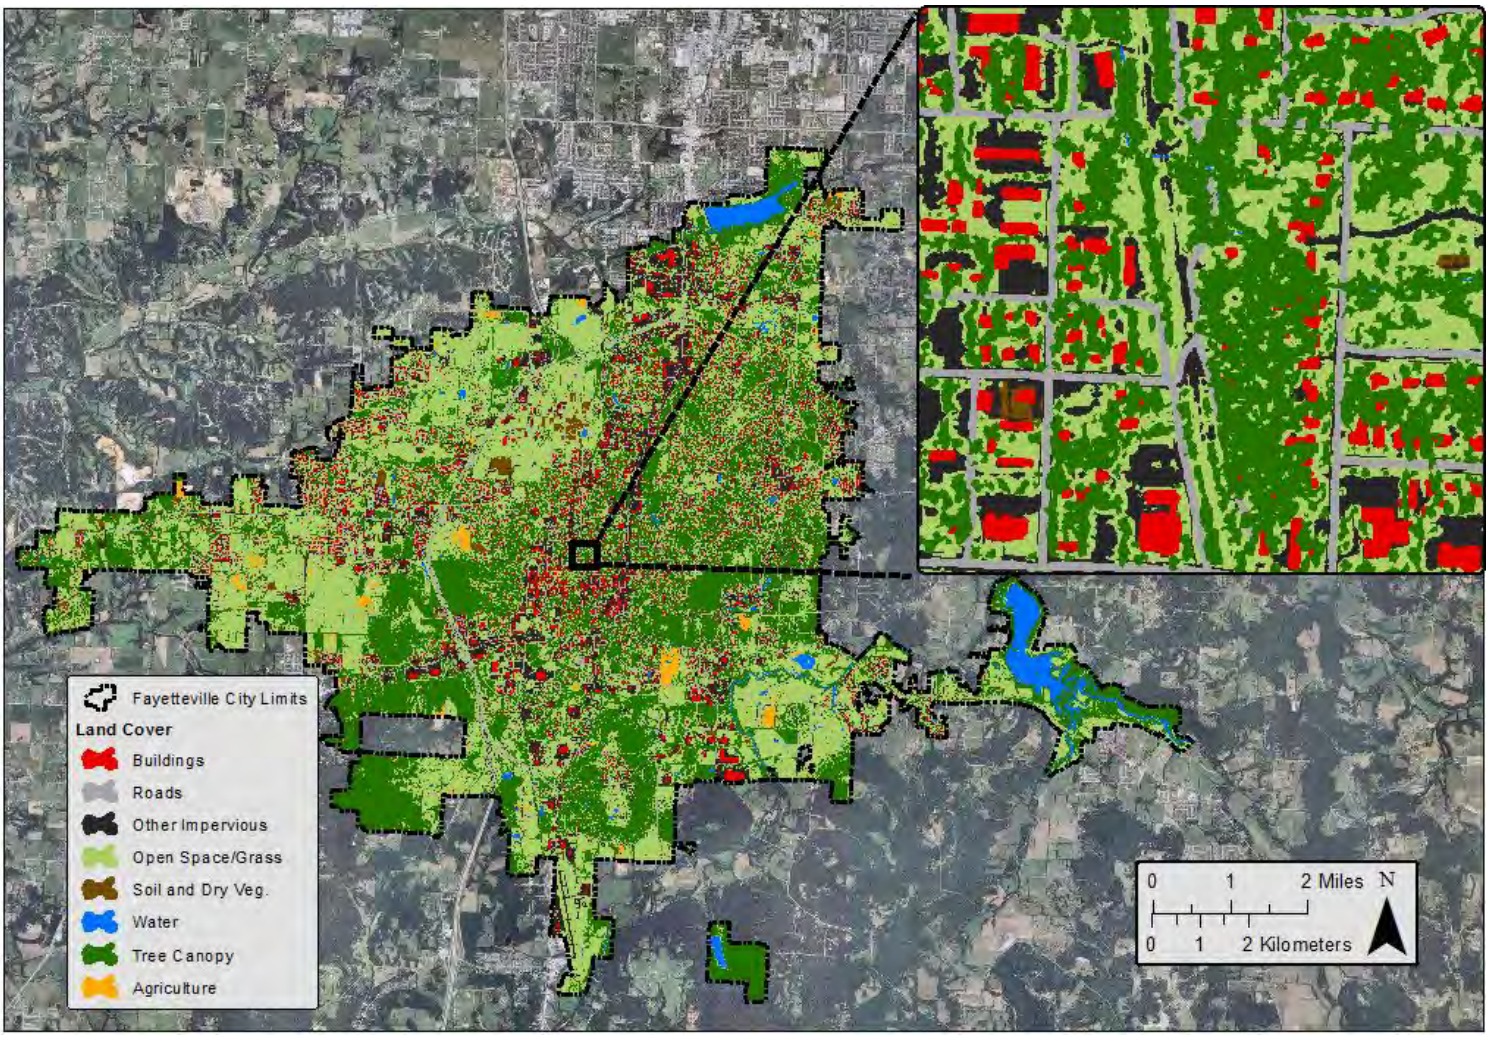
- ***Fayetteville has 36% urban tree canopy cover based on 2010 imagery.***
- ***Canopy trends indicate a loss of possibly 1.5% UTC since 2002.***
- ***Residential lots cover 31% of Fayetteville with an average tree cover of 41% citywide. This represents 1/3 of the City's total tree canopy.***
- ***19% of the City's tree canopy is on publically owned properties.***
- ***The current urban forest removes nearly 1.3M pounds of air pollutants from the air annually, valued at $3.5M per year.***
- ***This equates to 1.1 billion pounds of stored carbon with an annual carbon sequestration rate of 8.4M pounds of CO2 taken up by the tree canopy.***
- ***Stormwater Savings***
    - ***At 36% UTC, Fayetteville's tree canopy is valued at an estimated $64 million based on avoided stormwater facility construction costs.***
    - ***If canopy declines, at 30.0% canopy cover, it is valued at $44M.***
    - ***At 40% UTC with 4% of new canopy growth from regeneration (natural forested areas), it is valued at $65M***
    - ***At 45% UTC with the new canopy growing over streets and parking lots, the tree canopy would be valued at $85M.***
- ***Natural forest regeneration plays a large role in UTC gains in Fayetteville. Examples are provided in the Canopy Change section of this report.***
- ***There are 50,000 potential tree planting locations near residential buildings. If trees are planted to maximize cooling in summer, energy conservation as trees reach maturity would be significant.***

METHODOLOGY

The following section describes the data and methods used for land cover classification and the terminology for defining and assessing the urban tree canopy (UTC) and potential planting areas (PPA). Brief methods for the comparison of tree canopy cover from 2002 to 2010 are included in the Results section further below.

DATA INPUTS, IMAGERY AND LAND COVER CLASSIFICATION

Numerous GIS data layers from the City and County were used in the process of mapping land cover classes and in the UTC assessment process. Examples include streets, buildings, water bodies, streams, parcels, land use, publicly owned properties, watersheds, and GIS layers from Fayetteville Natural Heritage Association's Green Infrastructure Plan. One-meter resolution imagery from summer 2010 (National Agricultural Imagery Program – NAIP) was used as the basis for this UTC Assessment. The final land cover classification data includes eight (8) classes: (1) **tree canopy**, (2) **grass / open space**, (3) **bare soil/dry vegetation**, (4) **water**, (5) **buildings**, (6) **roads**, (7) **agriculture**, and (8) **other paved surfaces** (parking lots, driveways) shown in Figure 1 below.



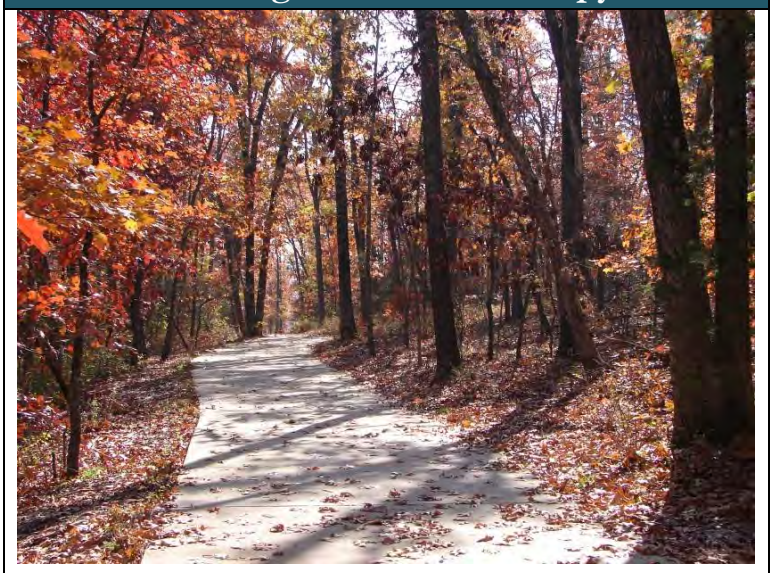


Figure 1. Land cover with 8 classifications as an overview and an inset map.

TERMINOLOGY

The UTC types assessed in this study are defined and described below. The area and percent of each was reported for six assessment boundaries. More details are provided throughout the report.

- ***Existing forest canopy*** is comprised of all forests and individual trees mapped from the 2010 summer NAIP imagery. For the purposes of this study, water was excluded from the total study area when calculating percent UTC. Excluding water from the study area (35,437 acres) creates total land area (34,586 acres) which was used to create all UTC metrics.
- ***Possible planting area (PPA)*** is defined as the total land area where no tree canopy cover currently exists and it is biophysically possible to plant trees. In this analysis, mainly grass and open space constitute "PPA – Vegetation" while impervious surfaces such as parking lots makeup "PPA – Impervious". These are combined to report Total PPA. This does not equal to potential canopy but rather the space on-the-ground that is available for tree planting opportunities.
- ***Unsuitable UTC***, for this study, was the combination of bare soil, dry vegetation, roads, buildings, agricultural land use, and water. Soil and dry vegetation are considered unsuitable given they comprise baseball infields, industrial lots, and vegetation that is lacking completely or unmaintained. Some areas mapped as Unsuitable UTC could become PPA through natural and human processes over time. Agricultural lands from the county land use data were sub-categorized as a PPA type but are generally considered as Unsuitable UTC.

Existing Urban Tree Canopy

Possible Planting Areas – Streets & Yards

Possible Planting Areas – Impervious

RESULTS

Detailed land cover and UTC assessment results are presented below. Land cover results are presented first, followed by results for each assessment boundary with specific tables, maps and graphics for Existing UTC, Possible Planting Areas, and Unsuitable UTC.

LAND COVER IN FAYETTEVILLE

This study encompasses 55.4 square miles (35,437.4 acres) defined by the city limits of Fayetteville. The two predominate land cover types for the study area are green vegetation (grass and open space) at 41% (14,518 acres) and secondly tree canopy at 12,441 acres as shown in Figure 2. "Other impervious", consisting of parking lots, driveways, patios, and other paved surfaces, is third comprising of 10% of Fayetteville or 3,539 acres. The next four land cover classes including roads, buildings, water, soil and dry vegetation each individually fall under 10% for land cover and as a whole comprise of 14% of Fayetteville's land cover.

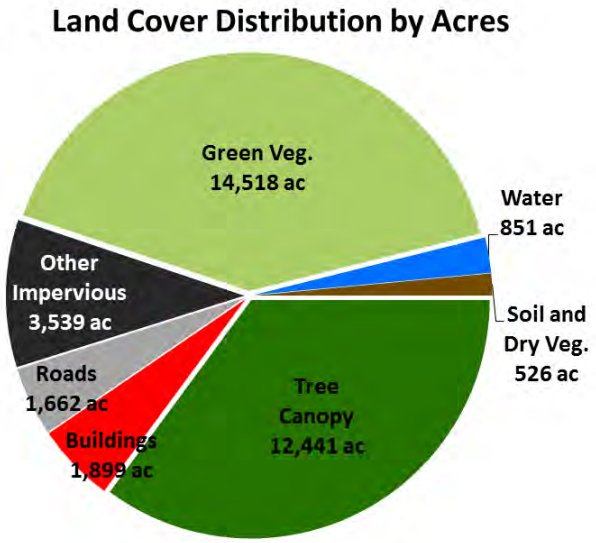

Figure 2. Distribution of land cover in Fayetteville.

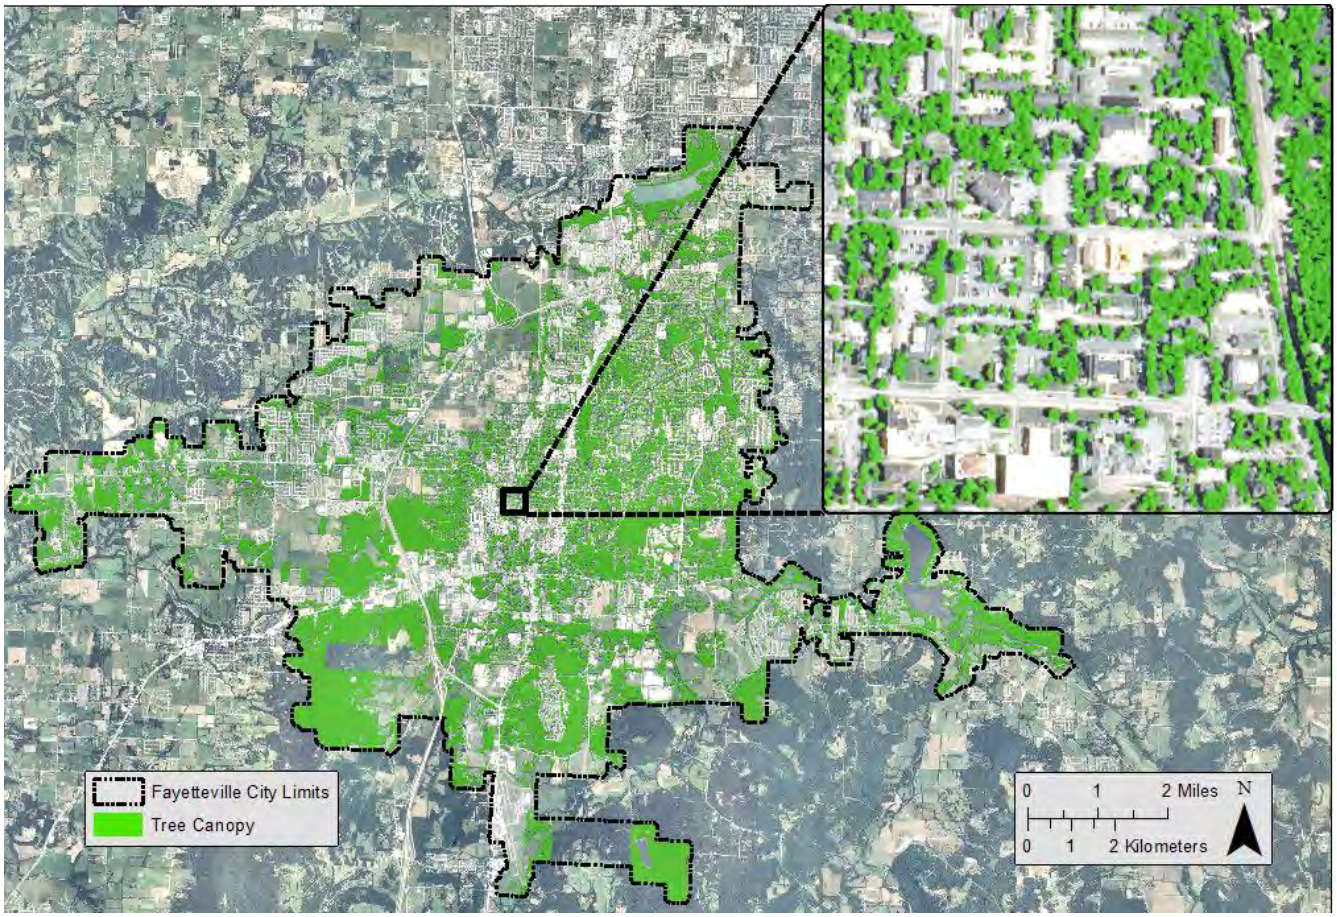

Figure 3. Tree canopy classification overview and inset map.

TREE CANOPY IN FAYETTEVILLE

As seen in Table 2 and Figure 4, Fayetteville's current UTC covers 12,441 acres or 36% of the total land area. In addition to tree canopy, total possible planting area (PPA) in Fayetteville is equivalent to 18,057 acres or 52% of the total land area. The remaining 4,088 acres (11.8%) of land area is considered unsuitable for planting additional trees.

Table 2. Metrics for Fayetteville showing UTC and PPA in acres and percent.

	Total Acres	Land Area (acres)	2010 UTC (acres)	2010 UTC %
City of Fayetteville	35,437	34,586	12,441	36.0%

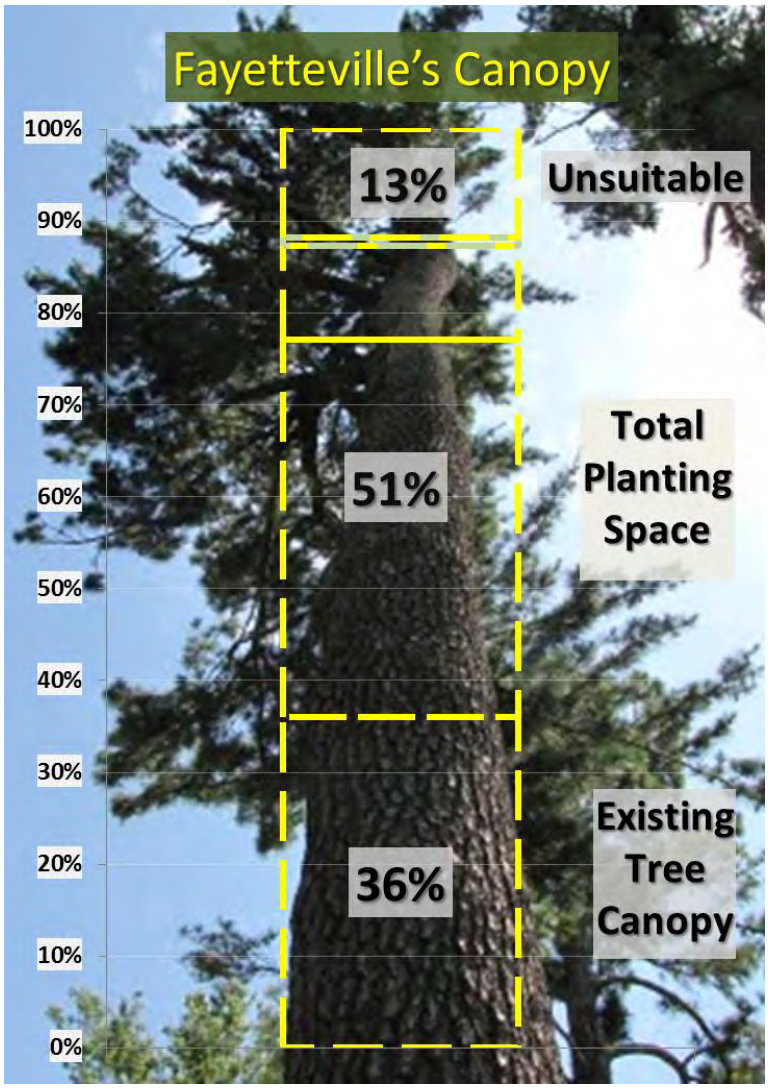

Figure 4. Percent distribution of UTC and PPA for the City of Fayetteville.

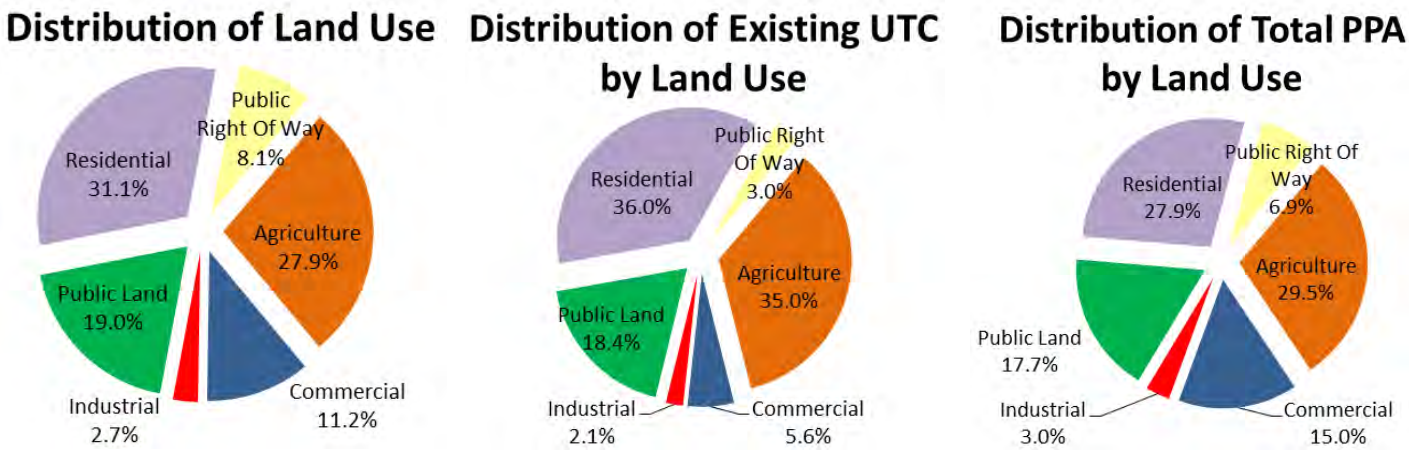
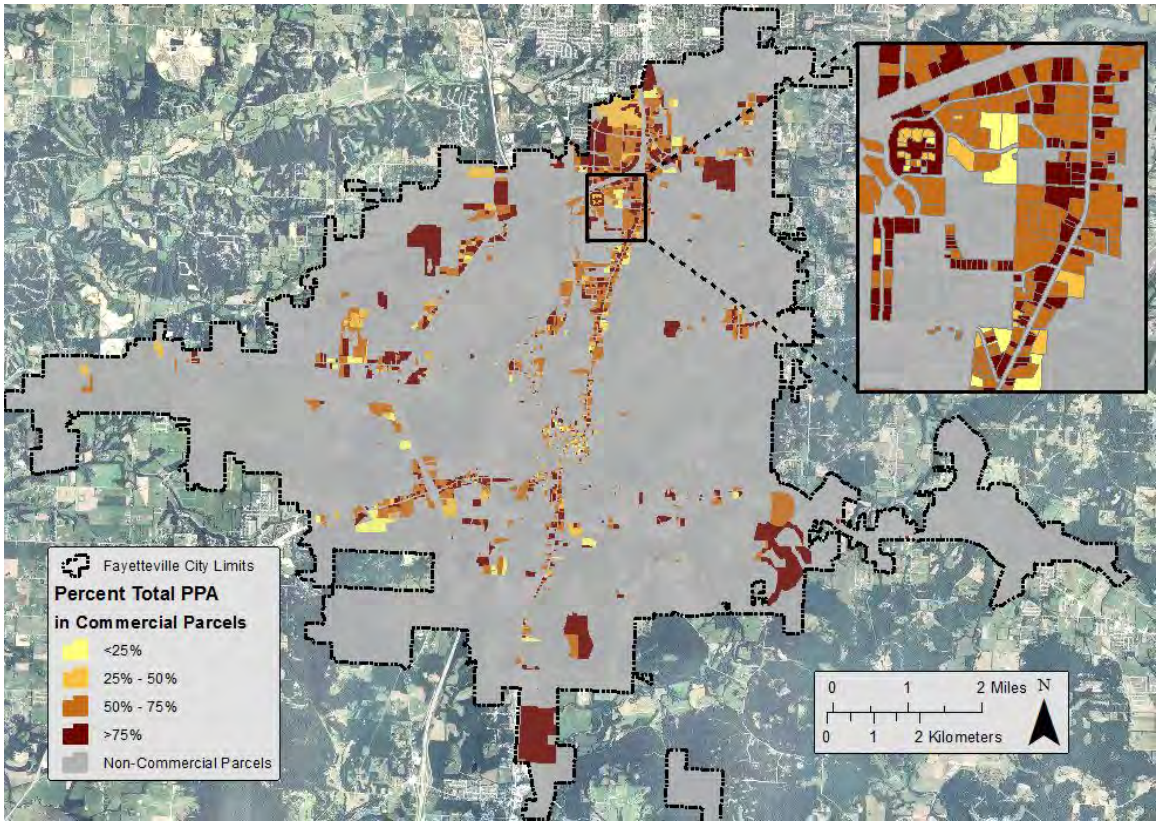


TREE CANOPY BY LAND USE AND PARCELS

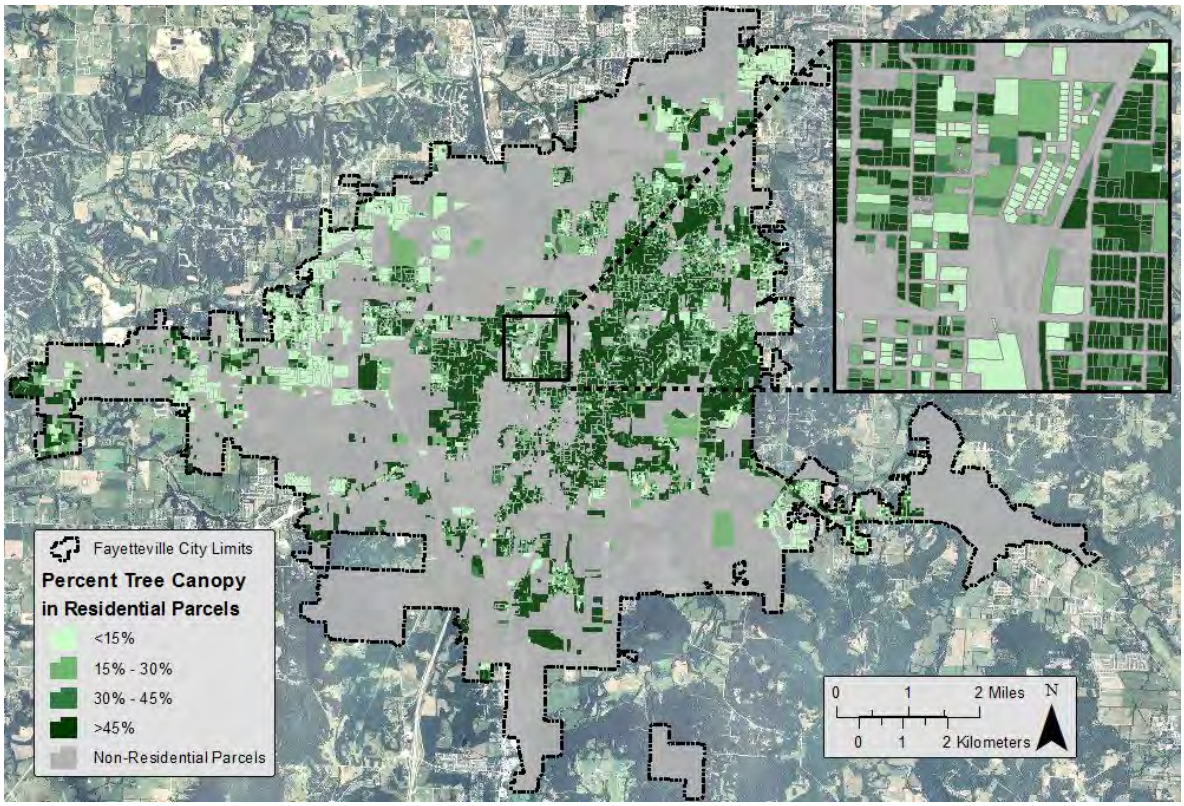
Various policies, regulations, ordinances, and city codes influence tree canopy in Fayetteville. To provide data that advances urban forest management, six (6) broad land use categories were assessed for tree canopy and possible planting areas. Parcels from the county tax assessor's database were provided which included broad land use categories. Public lands were derived from parcels with 'exempt' status and the Public Rights-of-Way occur outside of all parcel boundaries. This was the finest scale assessment boundary and included 28,768 records. Results can be queried and symbolized using GIS to drill down and identify specific planting opportunities in subdivisions, land use types, or neighborhoods. Table 3 provides complete results for UTC and PPA land use metrics.

Table 3. UTC and PPA Results for 6 Broad Land Use Categories.

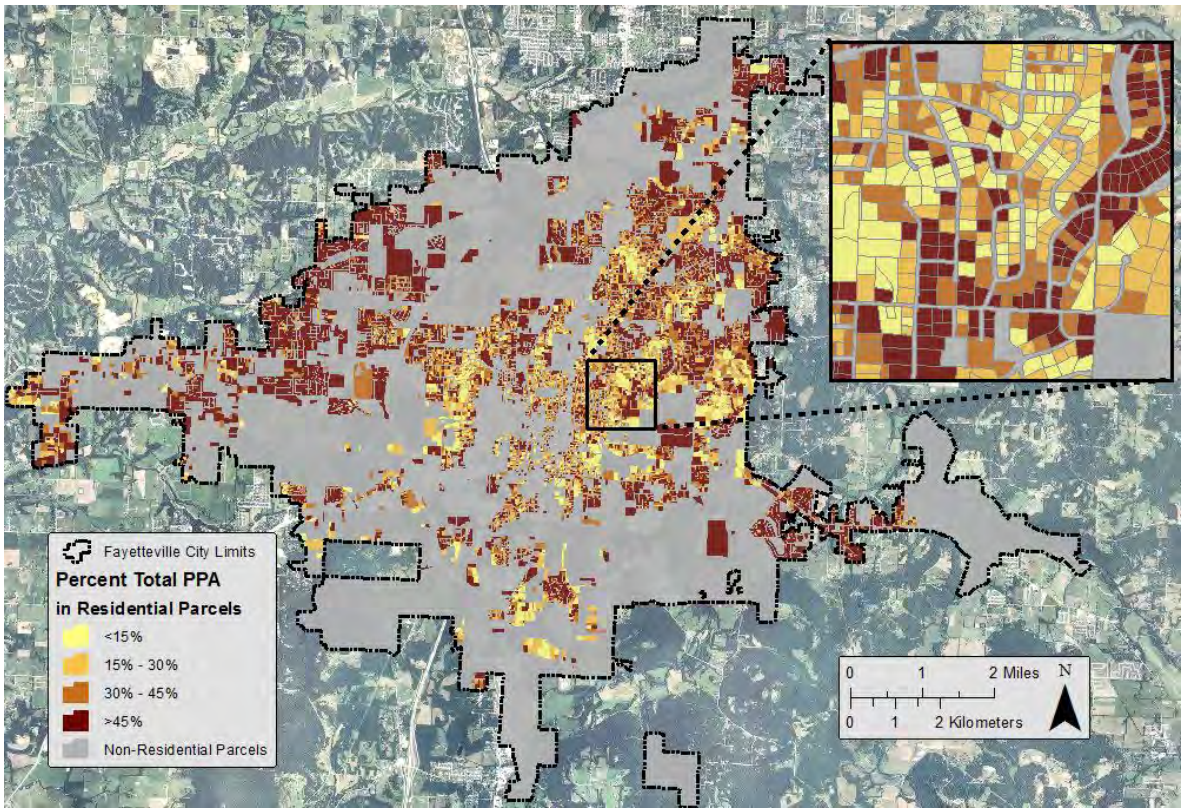
	Land Use Category	Total Acres	Land Area (acres)	% of Total City Area	UTC (acres)	Existing UTC %	Distribution of UTC by Land Use	Total Possible Planting (acres)	Total Possible Planting %	Distribution of Total PPA by Land Use
City of Fayetteville	Agriculture	9,880	9,757	27.9%	4,353	44.6%	35.0%	5,329	54.6%	29.5%
	Commercial	3,985	3,943	11.2%	702	17.8%	5.6%	2,705	68.6%	15.0%
	Industrial	957	949	2.7%	258	27.2%	2.1%	549	57.9%	3.0%
	Public Land	6,731	6,106	19.0%	2,285	37.4%	18.4%	3,190	52.2%	17.7%
	Residential	11,017	10,968	31.1%	4,475	40.8%	36.0%	5,038	45.9%	27.9%
	Public Right Of Way	2,867	2,863	8.1%	368	12.9%	3.0%	1,247	43.6%	6.9%
	TOTALS	**35,437**	**34,586**	**100.0%**	**12,441**	**36.0%**	**100.0%**	**18,058**	**52.2%**	**100.0%**



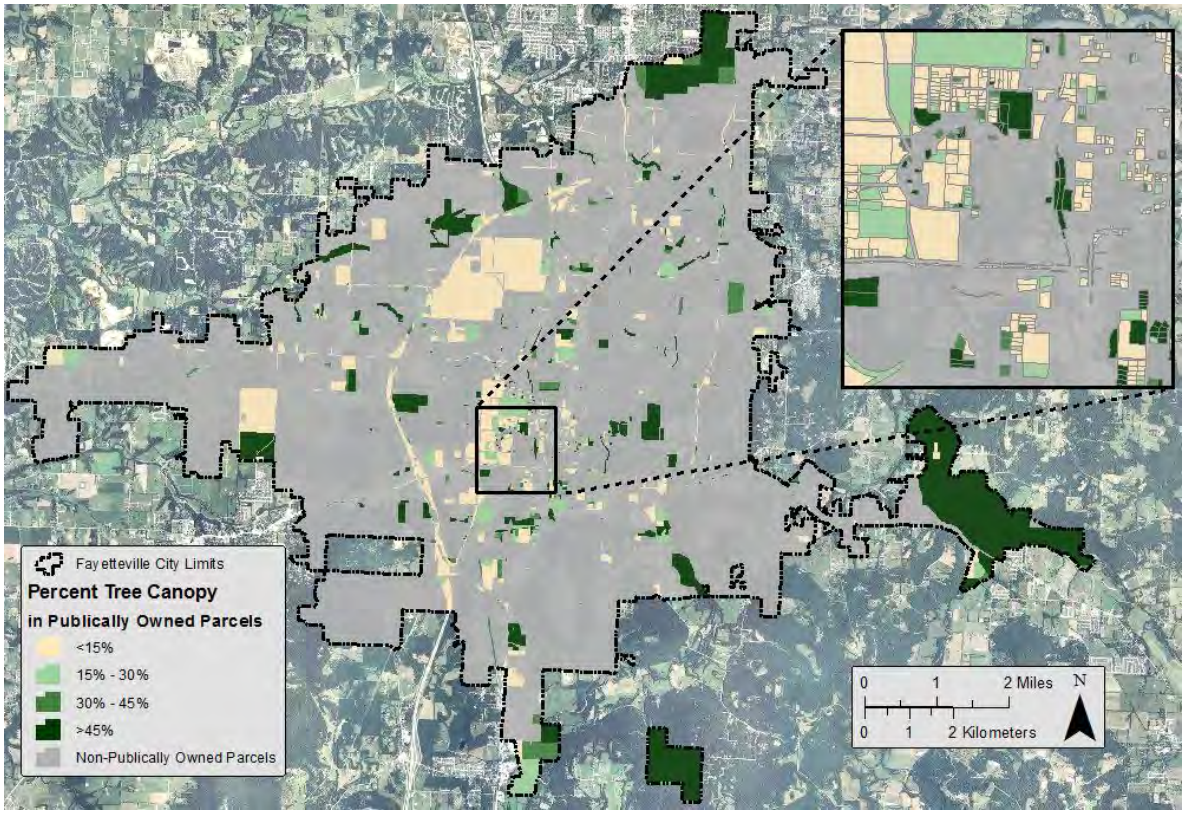
As an example, Commercial properties makeup 11% of the City, have 18% average tree canopy cover which represents almost 6% of UTC citywide, have 69% possible planting area largely from turf grass areas and parking lots, which constitutes 15% of all the PPA citywide.

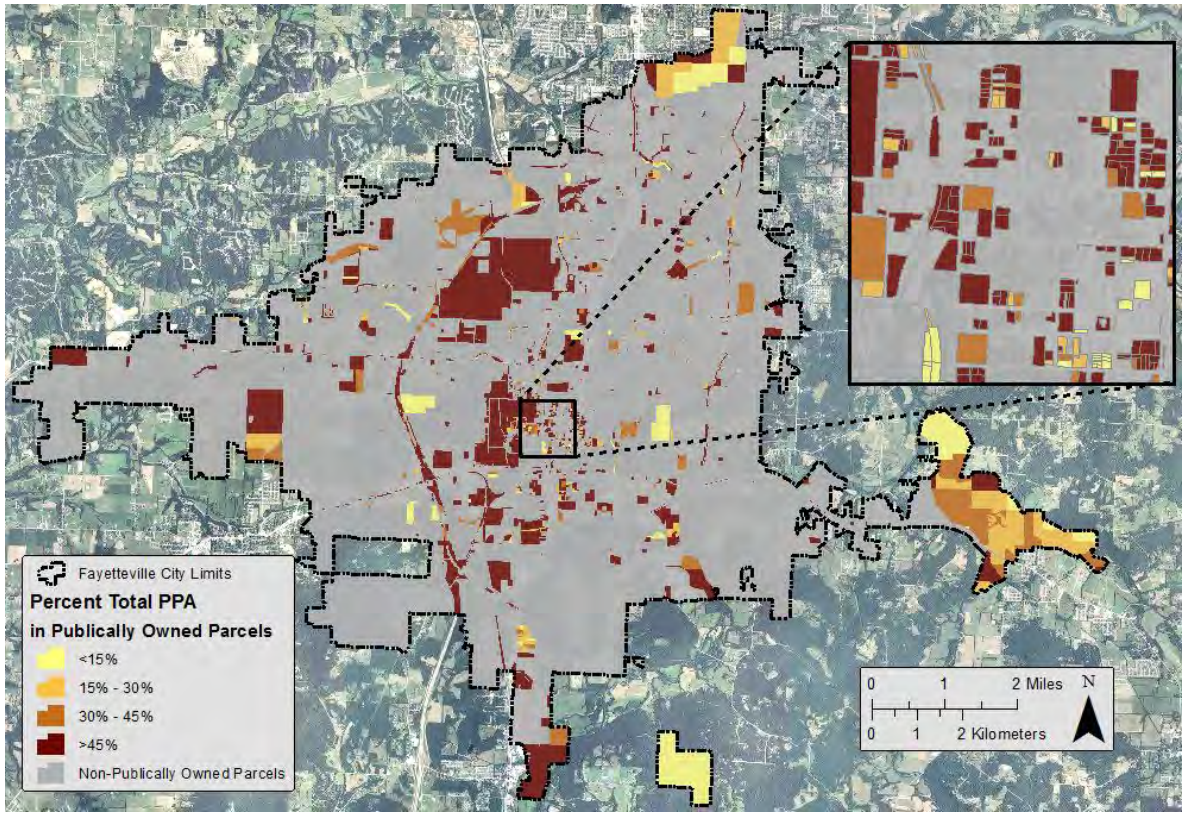


Figures 5-7. The Distribution of Land Use, UTC by Land Use, and PPA by Land Use.



Maps in Figures 8-13 on the following pages illustrate how the land use and parcels data can be used together with UTC and PPA metrics to target specific properties for tree planting as well as monitoring the effectiveness of ordinances. Maps are shown for commercial, residential, and public properties by the percent of Existing UTC and Total Possible Planting Areas.



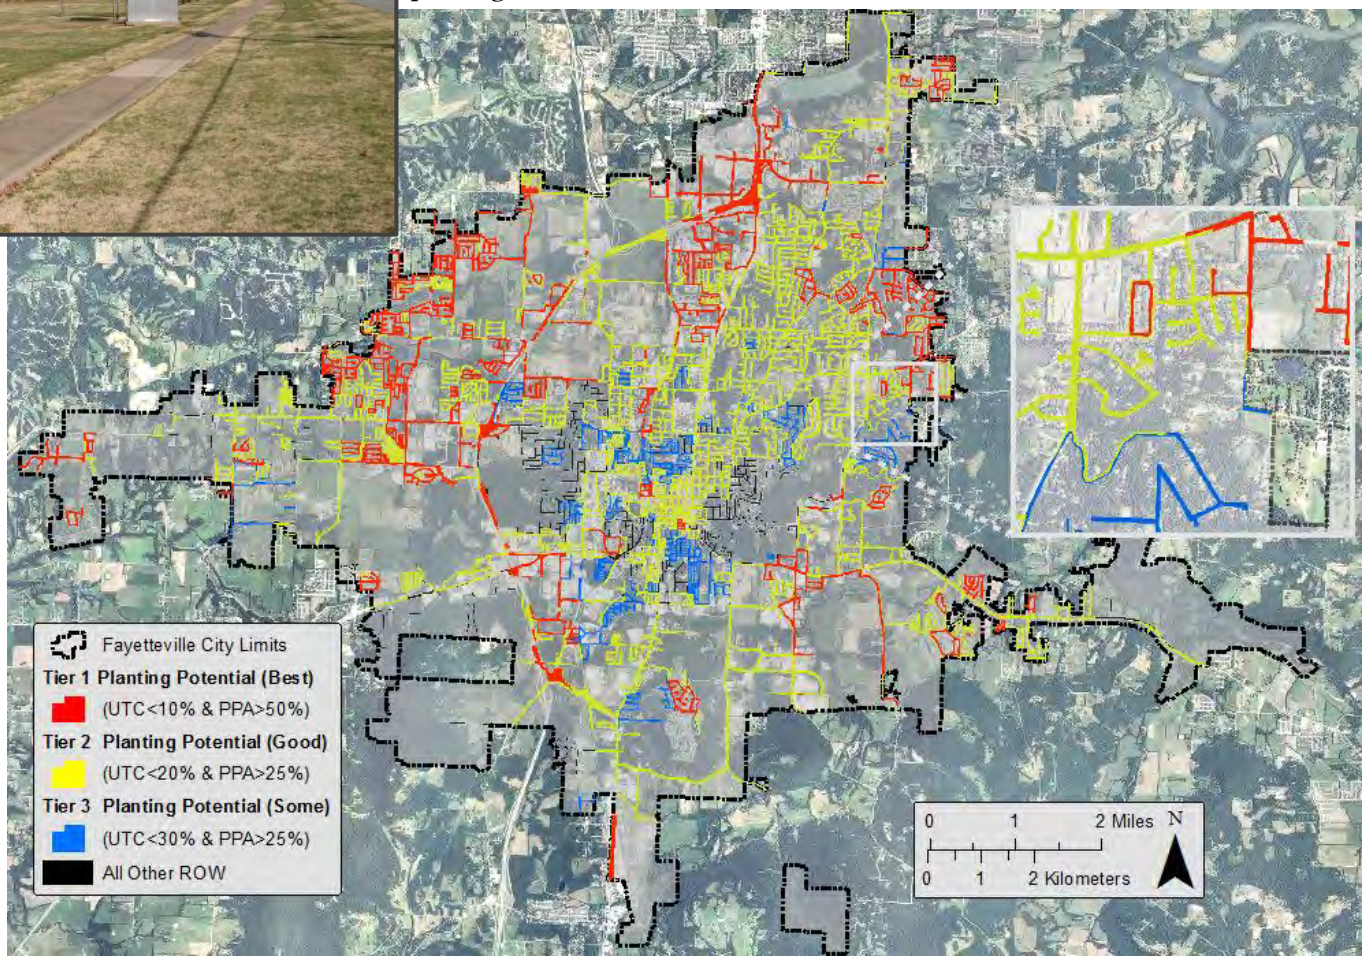


Figures 8-9. Existing UTC and Total PPA Percentages for Commercial Properties.

Figures 10-11. Residential parcels color-coded by Percent Existing UTC and Total PPA.

Figures 12-13. Publicly owned parcels color-coded by Percent Existing UTC and Total PPA.

TREE CANOPY IN THE STREET RIGHTS-OF-WAY



The City of Fayetteville's urban forestry program plants, manages, and maintains trees in the street rights-of-way (ROW). This is where the City has the most direct influence on tree canopy aside from tree preservation or other private property ordinances. Key findings in Fayetteville's ROW are:

- ROW total land area is equal to 2,863 acres, or 8% of the total city land area.
- Existing UTC in the ROW is 368 acres or 13% average cover. This represents 3% of all UTC citywide.
- PPA – Vegetation totals 611 acres or 21% of the ROW and PPA – Impervious totals 636 acres or 22% of the ROW.
- There are an estimated 15,000 potential planting sites in the ROW, or 5 per acre. If 25% of these sites were planted, grew to 30' tree crown spreads, this would generate 61 acres of new tree canopy. 61 acres is 4% of the acreage required to reach 40% citywide UTC.

Other UTC and PPA results for the ROW can be seen in Table 3 and Figures 5-7 in the Tree Canopy by Land Use section.

Figure 14. Potential planting area in the Street ROW. The GIS queries in the map legend show 3 colors based on ranges of Existing UTC and Total PPA. As an example, streets colored red have less than 10% UTC and greater than 50% total planting area.

TREE CANOPY BY CENSUS BLOCKS

The 2010 U.S. Census data provides social and demographic information at a variety of scales, specifically in GIS format from large to small as census tracts, block groups, and individual blocks. In Fayetteville, 1,894 census blocks were assessed for UTC and planting areas.

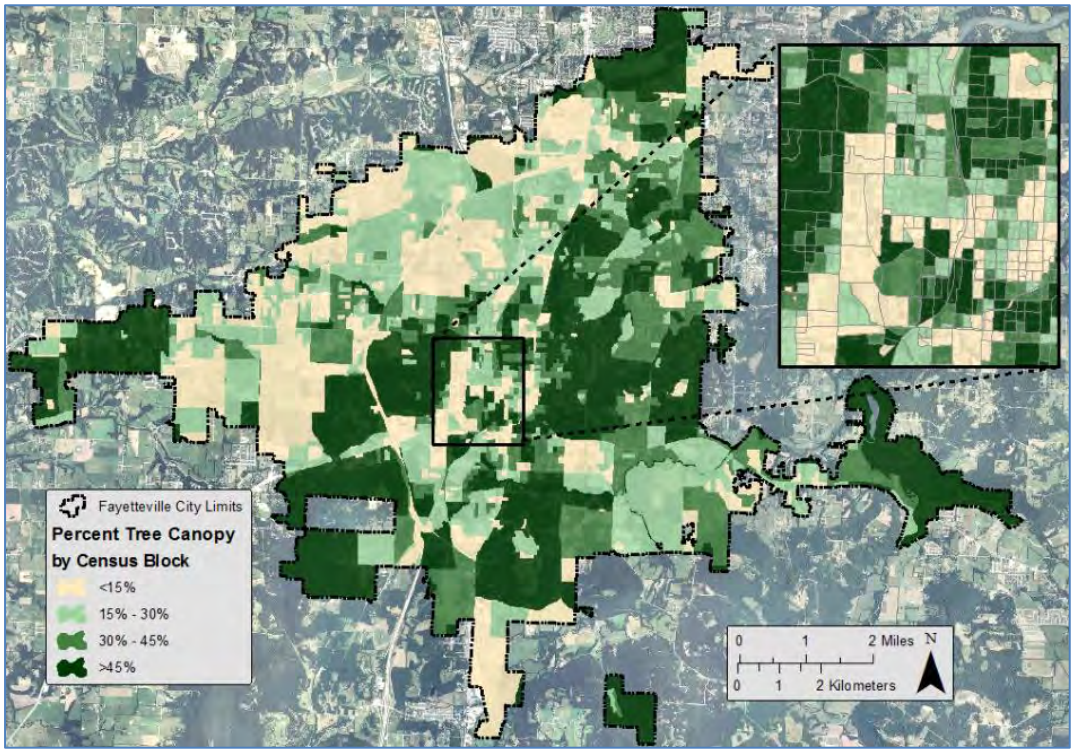


Figure 15.

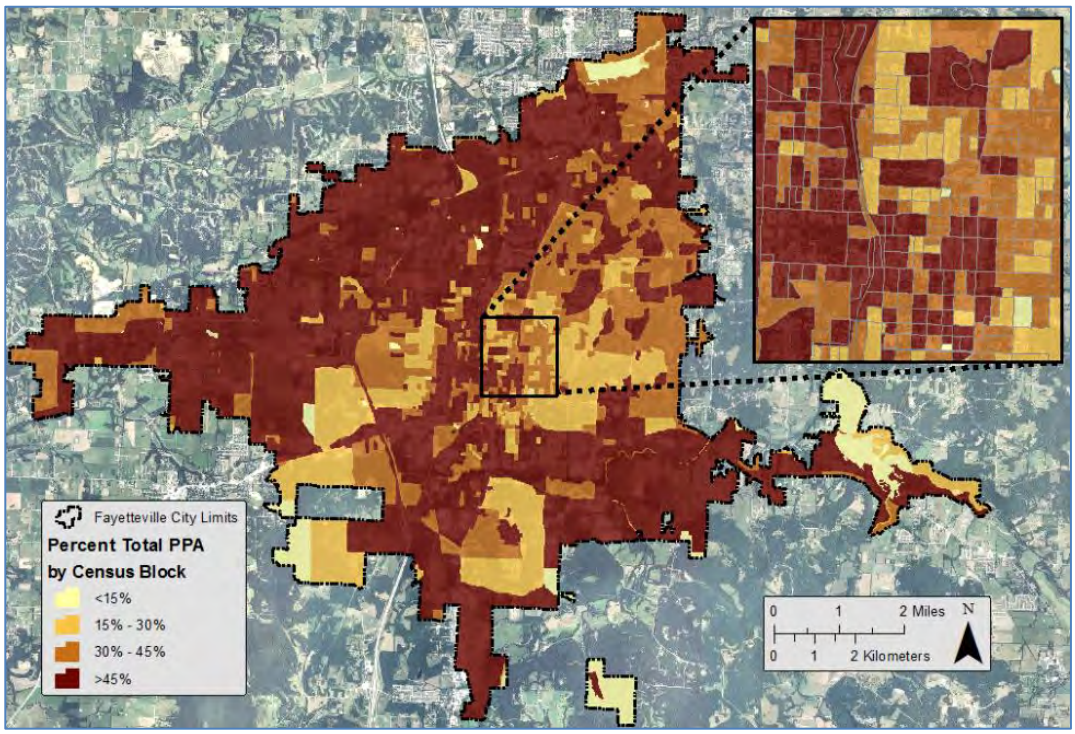
Census blocks (socio-demographic units) color-coded by Percent UTC. Darker areas have more tree cover than lighter colored areas.



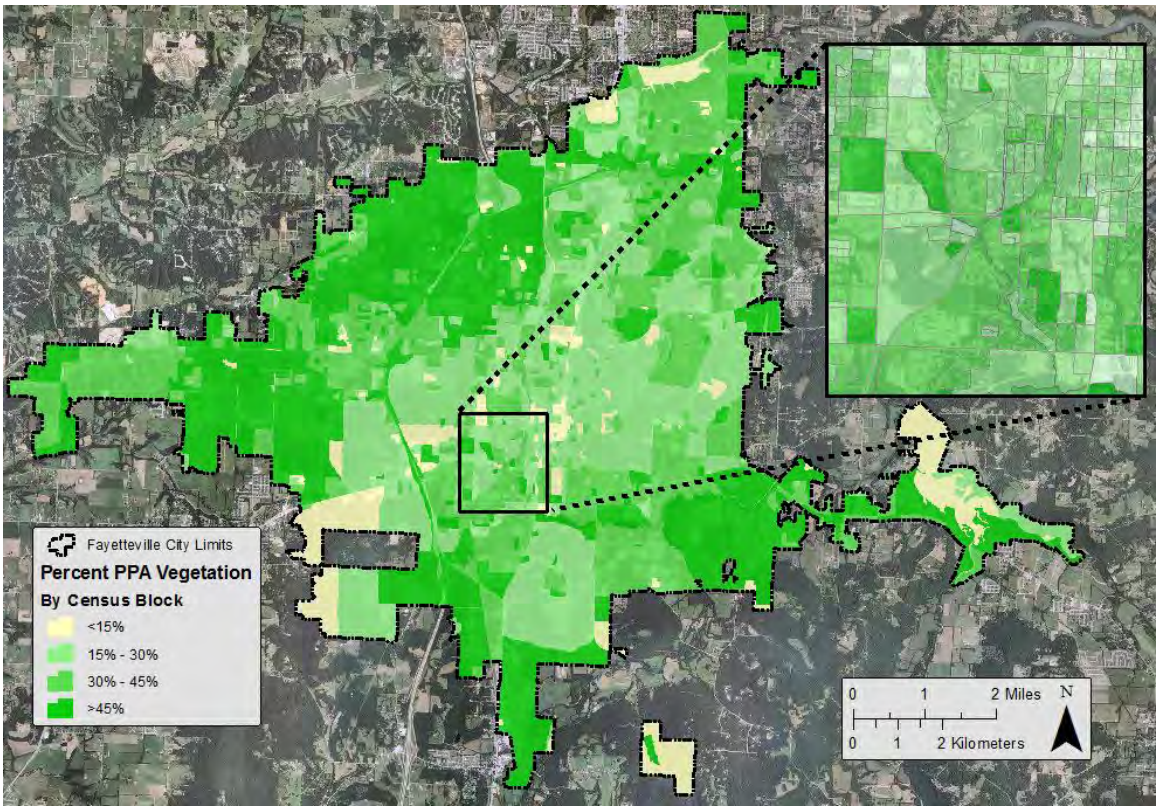


Figure 16.

Census blocks (socio-demographic units) color-coded by Percent of Total PPA. Darker areas have more planting potential from grass and open space as well as suitable paved (impervious) areas.

Figure 17.

Census blocks (socio-demographic units) color-coded by Percent of Total PPA. Darker areas have more planting potential from grass and open space. Agricultural land use areas were excluded from percentages.

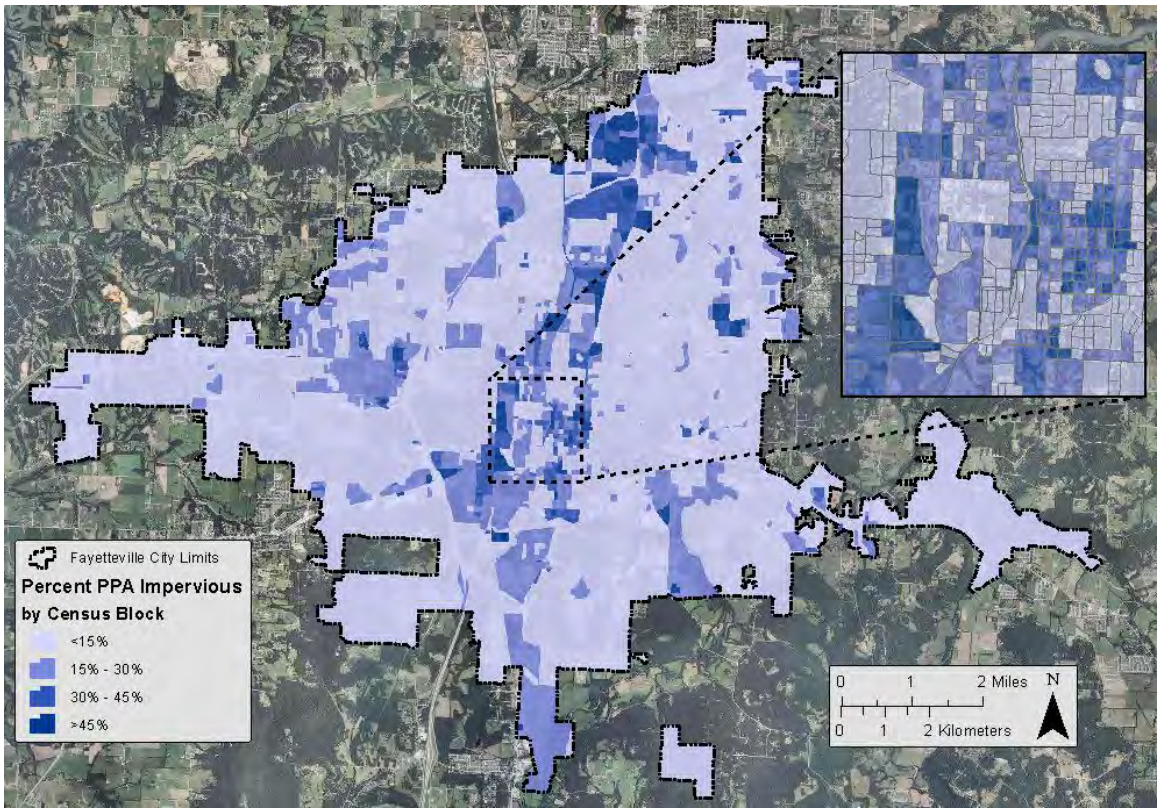

Figure 18.

Census blocks (socio-demographic units) color-coded by Percent of Total PPA. Darker areas have more planting potential from suitable paved (impervious) areas such as parking lots, driveways, etc.

TREE CANOPY BY RIPARIAN CORRIDORS

Fayetteville's streams and rivers, or riparian corridors, provide many ecosystem services such as erosion and sediment control, stream temperature regulation, and wildlife habitat. Conservation buffers along riparian areas are a best management practice where development is often restricted and natural vegetation is encouraged to maintain natural processes. In this study, to provide assessment results at a useful scale, Fayetteville's riparian areas were split along watershed boundaries and then segmented manually into smaller stream reaches. This resulted in 69 riparian corridor "segments" which were buffered by 100 feet and analyzed for UTC and PPA. Key findings included:

- 49 (of 69) riparian corridors segments have greater than 50% existing canopy cover.
- 14 have greater than 50% potential planting area (grass and open space).
- Three watersheds with the largest amount of riparian area for tree planting are:
    - Hamestring Creek (78 acres of PPA; 1,559 potential planting sites)
    - Mud Creek-Clear Creek (92 acres of PPA; 3,037 potential planting sites)
    - Town Branch-West Fork White River (122 acres of PPA; 3,729 planting sites)

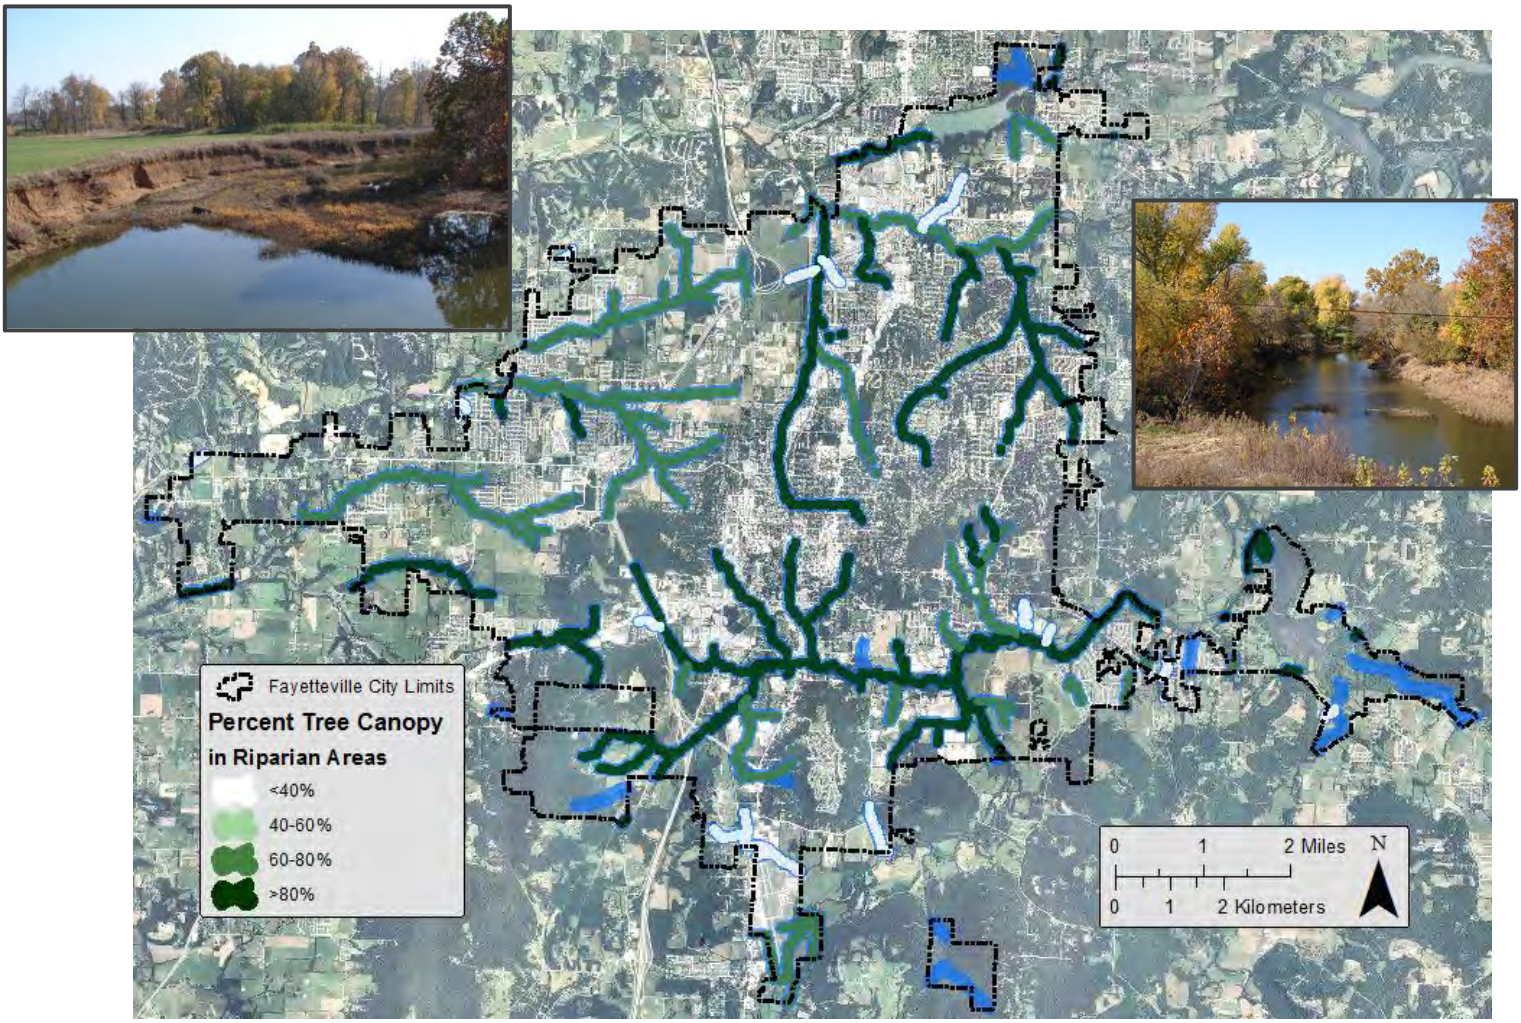

Figure 19. Riparian buffer segments color-coded by percent Existing UTC.

ECOSYSTEM SERVICES

Forest benefits are referred to as "ecosystem services", and describe ways in which urban forests contribute to improving quality of life. We tend to take for granted the direct and indirect benefits trees provide because they are not assigned a dollar value.

Examples include:

- Providing habitat and protecting biodiversity
- Decreasing stormwater utility costs, erosion, and flooding
- Reducing urban heat island effect and cooling costs
- Improving property values, tax revenues, recreation opportunities, and public health and well being
- Absorbing carbon dioxide annually through carbon sequestration and through carbon storage
- Improving air quality, water quality and groundwater recharge

CITYgreen software was used to estimate the benefits of Fayetteville's existing urban tree canopy and scenarios with decreased and increased canopy cover. CITYgreen, a GIS software developed by American Forests using research from the U.S. Forest Service and Natural Resources Conservation Service (NRCS), was used to calculate current and potential benefits related to carbon storage (cumulative amount of carbon stored in trees over time), carbon sequestration (the rate that carbon is captured), air pollution removal by trees annually, stormwater benefit of urban forests.

CITYgreen Parameters Used:

1.) Reference City for Air Quality: Tulsa was chosen as the closest, most representative city for the U.S. Forest Service reference city for air pollutant removal capacity of the urban forest.

2.) Soils: from the choices of Hydrologic Soil Group (HSG) A, B, C or D, soil type "C" was chosen as most representative. C type soils allow for less infiltration (clay) and are more restrictive soil type than B (loam).

3.) Construction cost per cubic foot (cu. ft.): $3/cu. ft. was used as a conservative average for stormwater facility construction cost.

4.) Replacement Land Cover Type: when tree canopy is "replaced" in the CITYgreen model, the replacement land cover chosen was Open Space - Grass/Scattered Trees: Grass cover 50% - 75%. This is more conservative than replacing the tree canopy with commercial or residential development which has a much higher curve number (CN).

Table 4. Summary of Benefits from Current and Future Projected Scenarios of UTC in Fayetteville.

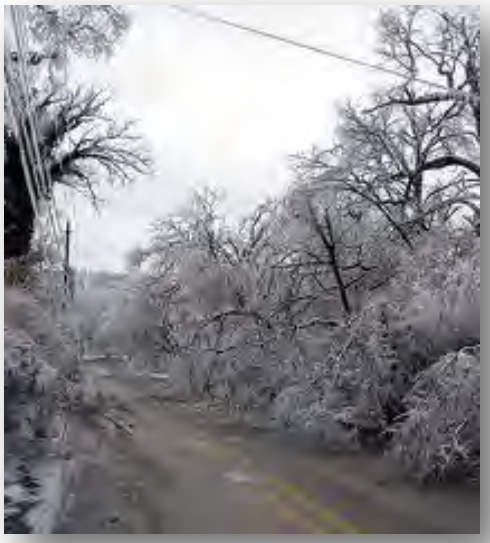
City of Fayetteville "Tree Canopy & Environmental Benefit Scenarios"

Benefit Type			SCENARIOS				
	UTC-%	Citywide 36%	Decline to 30%	Increase #1 to 40%	Increase #2a to 45%	Increase #2b to 45%	Residential 41%
Air Quality	*Annual $ Benefit*	$3.5 million	$3.0 million	$4.0 million	$4.5 million	$5.0 million	$1.3 million
	Lbs. Removed/Year	1.3 million	1.1 million	1.4 million	1.6 million	1.8 million	461,000
Carbon Storage & Sequestration	*Total CO2 stored*	1.1 billion	915 million	1.2 billion	1.4 billion	1.5 billion	391 million
	Annual Rate Stored	8.4 million	7.1 million	9.5 million	10.7 million	11.9 million	3.0 million
Stormwater Savings	*Total $ Benefit*	$64.1 million	$43.9 million	$65.5 million *	$67.1 million *	$84.9 million **	$22.2 million
	Total Gallons Benefit . . .	21.4 million	14.6 million	21.9 million	22.4 million	28.3 million	7.4 million

* For Scenarios "Increase #1 and #2a", new projected tree canopy was assumed to be forests (natural regeneration), not individual yard trees.
** For the Scenario "Increase #2b", new projected tree canopy was assumed to overhang impervious surfaces, resulting in a larger $ value.

Plan-It Geo then used i-Tree Design, a free web-based tool developed by the U.S. Forest Service, to estimate benefits such as energy conservation from a common tree. A red oak tree was modeled at 8" diameter at breast height (dbh) and then projected 25 years out (20" dbh). See Figure 20.

Figure 20. Output from i-Tree Design software showing that a young red oak tree (8" dbh) provides $18 in annual energy savings if planted on the west side of a residential home. If the tree grows for 25 years, it would be expected to reach 20" dbh and provide nearly $48 in annual energy savings. With 50,000 potential planting locations near residential homes in Fayetteville, planting one-quarter (1/4) of these could provide roughly $600,000 in energy savings annually when those trees reach maturity.



URBAN FOREST MANAGEMENT SCENARIOS

Using the land cover data and UTC assessment results, further analysis provides a presentation of different management scenarios introduced below. GIS data models and interpretation were utilized to produce these scenarios. Sample maps or tables are presented for each scenario and provided as additional data along with this report.

- **Comparison of canopy cover and benefits (2002 – 2012)** – multiple data layers and methods were used to assess gains or losses in tree canopy over the roughly ten-year time period. Table 4 in the Ecosystem Services section illustrates scenarios that quantify decreases and increases in benefits as canopy cover changes.
- **Target areas to plant trees** – potential tree planting sites were modeled citywide using the land cover data and GIS analysis. Attributes were created focusing on (1) *areas most vulnerable to urban heat island effects*, (2) *wildlife habitat and linking of corridors*, and (3) *current land use types*. Multiple other attributes were added to the GIS planting points for prioritization.
- **Evaluating Fayetteville's canopy cover and tree preservation ordinance** – this entails an analysis of Fayetteville's current canopy coverage in comparison to the national recommendation of 40% and recommendations on the effectiveness of the tree preservation ordinance.
- **Management of the urban forest on city owned properties** – tree canopy is evaluated for gains or losses for future management purposes.

2002 – 2012 COMPARISON

Fayetteville's urban forests are constantly changing over time resulting from natural and man-made processes, including tree growth and planting, and mortality and development. Monitoring forest change provides important information about the effectiveness of forest policy, community action, and natural processes impacting the urban forest. Today, urban forest managers have access to a variety of tools designed to evaluate forest cover at different spatial scales. This assessment uses three different approaches to evaluate forest change that has occurred since 2002. While no single available approach provides precise quantitative measurements of forest change, the combined methods elucidate several important trends.

Agents of change: heavy winds, flooding, and ice storms such as the 2009 storm illustrated on the right can cause heavy damage and natural loss to forest canopy.

Canopy Comparison Methods

Canopy cover between the two time periods was compared using three methods presented here.

1. i-Tree Canopy Method:
    - A point-based statistical analysis was conducted using the *i-Tree Canopy* tool to compare canopy cover across Fayetteville based on current and 2002 high resolution Google Maps imagery. This method has been used to evaluate canopy cover in 20 cities across the country (Nowak and Greenfield, 2012).

- Tree canopy was assessed for each time period at 770 randomly distributed points.
- Results: 37% (13,147 acres) and 35.3% (12,509 acres) of the City was forest cover in 2002 and 2010 respectively (based on total area), for a net loss of 1.7% (640 acres).

2. GIS Land Cover Comparison Method:

   - Two previous land cover assessments mapped canopy cover in Fayetteville in 2001 and 2002 from satellite imagery. Although the assessments provided the best available data at the time, the overall accuracy of the final land cover products were below standards required for direct comparison with this assessment. Therefore, a manual GIS-based review and editing approach was conducted to provide an initial level of quality control in a comparison between the 2002 canopy data at 39% and the 2010 UTC results at 36%.
   - Forests greater than one-quarter acre from each time period was overlaid to identify significant areas of change. Areas were validated in this GIS-based approach by visually comparing with imagery from each time period and correcting obvious errors.
   - Results illustrate total forest canopy gains of 502 acres and losses of 1,249 acres, for a net loss of 747 acres (2%). See Figure 21.

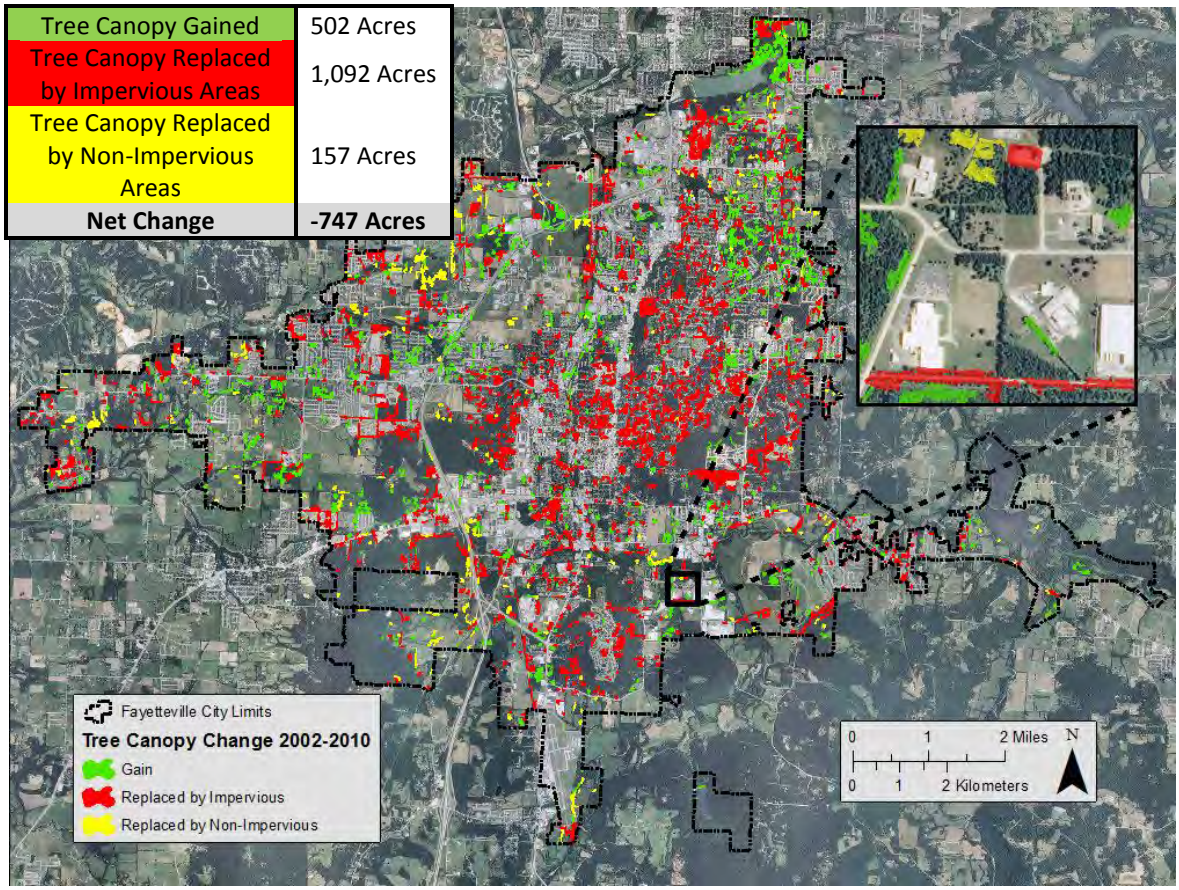


Figure 21. Comparing forests using GIS analysis to show significant gain and loss areas.

3. Growth of Trees from New Residential Development

- Canopy growth from newly planted trees was estimated by digitizing individual tree crowns from current imagery and comparing canopy area to the expected canopy size at the time of planting (2002).
- COF identified 22 new developments where tree plantings were known to occur around 2002. Within the new developments canopies from 250 randomly selected trees were digitized to measure current canopy areas in square feet. The estimated starting point of 40 square feet was subtracted from current canopy to estimate growth since planting.

Figure 22. Individual tree crowns added about 23 acres per 1,000 newly planted trees between since 2002.

- Results for 250 sampled trees on residential properties:
    - Total canopy area in 2011: 66,801 sq.ft. (estimated at 10,000 sq.ft. in 2002 as the starting point)
    - Total canopy growth = 56,081 sq.ft. (1.29 acres)
    - Average annual tree growth = 224 sq.ft. per tree
- Residential canopy cover averages 41% citywide while it averages around 6 or 7% in the 22 subdivisions assessed in this task, implying newly planted trees are not yet compensating for the loss of trees removed during development.

When extrapolated out forty (40) years, the sampled 250 trees are expected to comprise about 5.7 acres of canopy, or 0.02% of Fayetteville's total area. Using this assumption, planting 1,000 trees each year for 40 years would yield about 23 acres of forest canopy annually. With an expected survival to maturity rate of about 70%, accumulated over 40 years a total of 13,000 acres of new tree canopy would be added.

We estimate that around 60 medium sized mature trees are equivalent to one acre of forest canopy. Given mortality rates in the region, the City and residents should expect to plant around 80 trees to produce one acre of mature tree canopy in the future.

Canopy Change and Interpretation

Assessing urban tree canopy change presents many technical challenges given differences in image quality, availability, classification methods, and level of QA/QC. Data and computing capabilities are constantly making higher levels of accuracy and precision in land cover mapping possible. Comparisons with Fayetteville's 2001 and 2002 classifications were challenged given the satellite imagery used as the input image for the 2001 assessment was unavailable and noticeable errors of under- and overestimation were visible. The fact that two independent methods (i-Tree and land cover data) used to assess canopy change yielded similar values provides confidence in both the stated canopy percent values for each time period and the methods used to present a trend in cover.

Table 5. Canopy comparison analysis results from three (3) methods.

Analysis Method	Canopy Change Percent	Change Description
i-Tree Canopy	1.7% Loss Citywide	City-wide statistical estimate comparing 2002 and 2011 tree canopy.
GIS Overlay	2% Loss Citywide	GIS analysis of gains and losses since 2002 in forest areas greater than ¼-acre.
Tree Growth in Developments	0.1% Growth per 1,000 trees planted	Canopy growth over 8 years reflects the challenge of reforestation compared with losses to development.
Overall Trend	1.5% Loss	Overall, canopy cover is in decline.

Recommendations for Comparing Canopy Change Over Time

Based on the comparisons done within the scope of this project, the following recommendations are offered for conducting reliable UTC comparisons over time:

- Use the same city boundary given they change over time due to annexations
- Because UTC percent is calculated based on land area which excludes water, ensure that the area of water is the same and/or accurate in both time periods.
- Use similar image resolution and quality and LiDAR (Light Detection & Ranging) when possible.
- Conduct time-intensive Quality Assurance / Quality Control (QA/QC) for quality comparisons.
    - Accuracy of each time period should be 95% or greater to ensure losses are demonstrating actual canopy change.
    - Early forest regeneration is difficult to map with remote sensing and can be subjective with manual processing. Canopy mapping with sufficient detail to map individual trees will aid in mapping early canopy growth over time.
- Canopy Change analysis within i-Tree Canopy version-5.0 can be effective, but is still subjective to the analyst's preference. Use multiple interpretations to arrive at confident values.
- A process known as "object fate analysis" can be conducted to assess change in land cover across time periods, though initial research shows this is a time-intensive and expense method.

Figure 23. Examples of tree canopy increases from natural regeneration and street/yard planting.

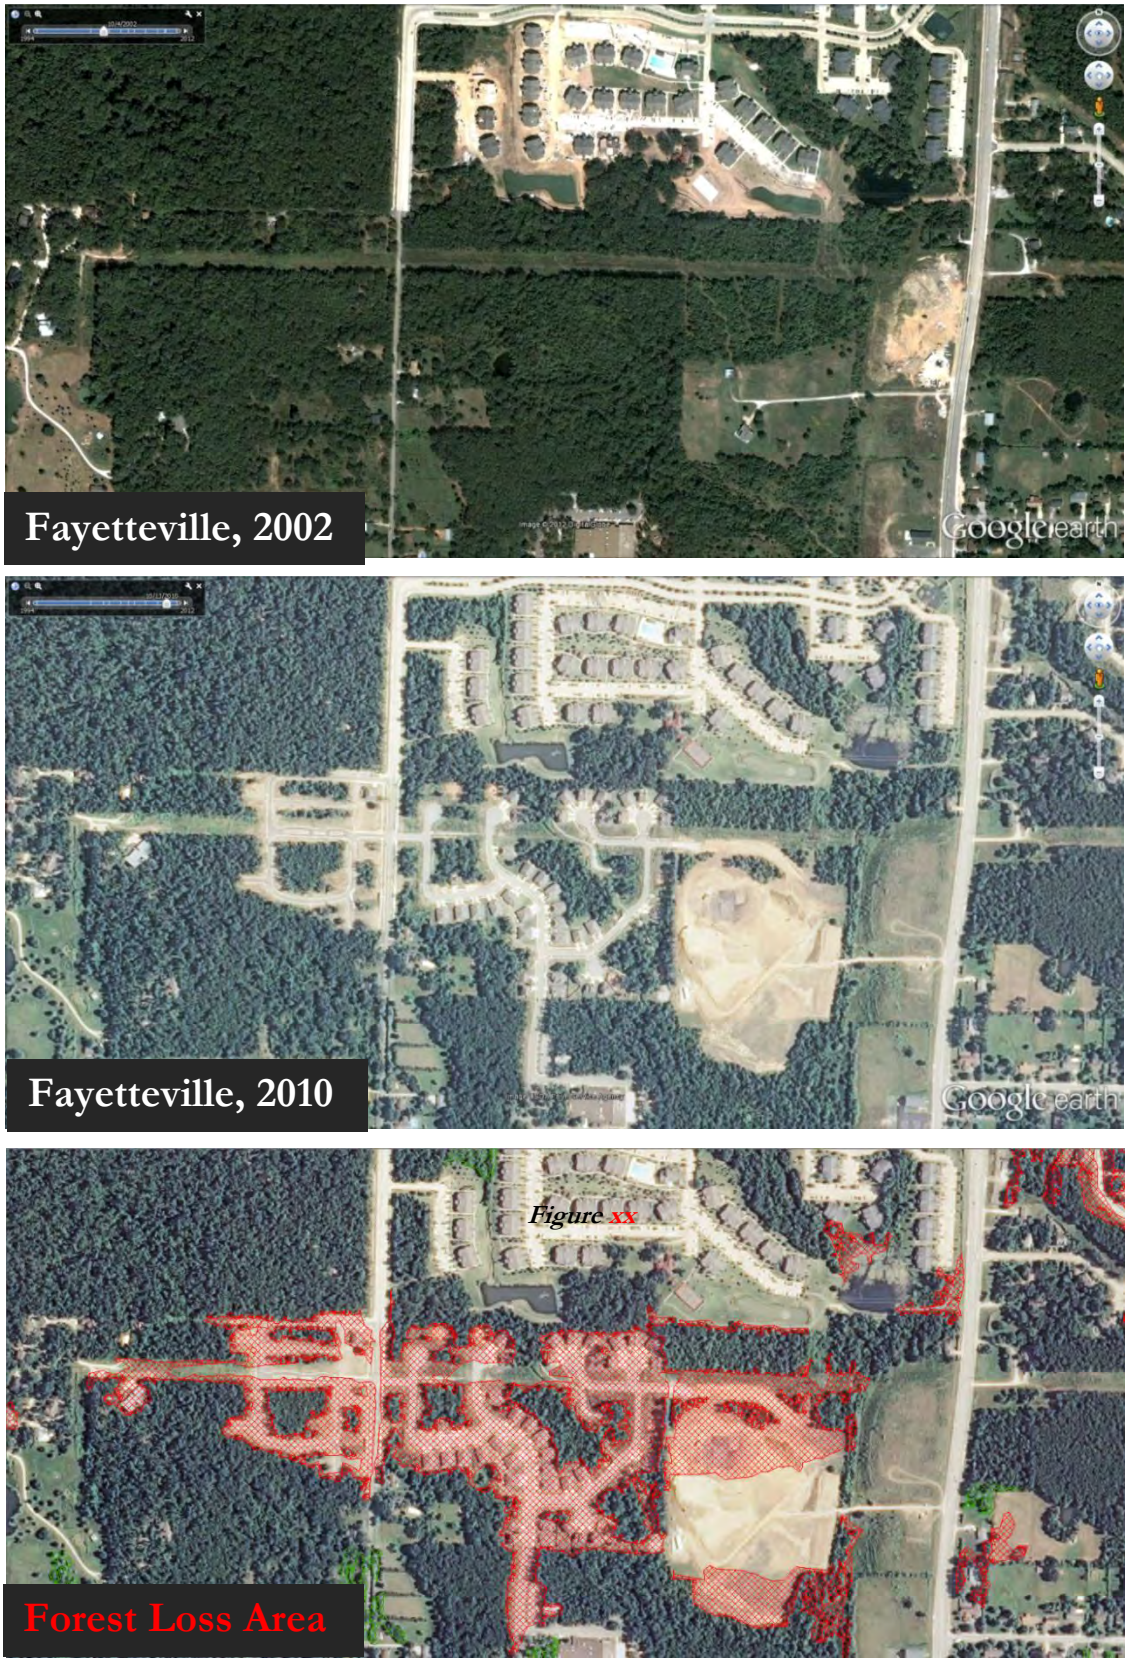

Figure 24. Examples of tree cover loss during development (mapping result shown at bottom).

TARGETING AREAS TO PLANT TREES

The land cover, land use, UTC, and other data were inputs to a sophisticated GIS model to automate the mapping of potential tree planting sites. The resulting GIS points will assist the City in targeting areas to plant trees, evaluating the effectiveness of tree preservation ordinances, and goal setting.

Available planting sites exist where there is a lack of trees and adequate planting area exists in grass and herbaceous cover. To get a more realistic estimate of where trees could be practically planted, exclusions and constraints were applied in the model (see Table 6). After removing these areas from grass and open space in the land cover data, the remaining spaces were converted into potential planting site points.

Table 6. List and description of the main rules used to map potential tree planting locations.

GIS Layer(s)	Rule Applied	Reason
Tree Canopy	Buffered by 10 feet	To allow for spacing and growth of existing trees
Buildings	Buffered by 5 feet	To avoid tree and building conflicts
Agricultural Land Use	Buffered by 15 feet	To allow for farming and related uses

The City should ground-truth (field-verify) the points over time to exclude points that are invalid due to conflicts such as safety, utilities/power lines, and small trees not seen in the 2010 canopy mapping.

The model resulted in roughly 190,000 sites, so prioritizing them is crucial. To prioritize sites, new attributes were added to the GIS planting sites layer. For example, land use types from parcels were spatially joined (overlaid) to each site. For proximity to urban heat islands and wildlife habitat corridors (as well as other high value areas), similar overlays and distances assumptions were used. Sites that meet each criterion can now be queried, symbolized, and counted. The list in Table 7 below shows the types, their count, the criteria used, and then calculates the impact on citywide UTC if 25% or 50% were planted. Maps on the following pages and Appendix offer many examples.

Table 7. List of attributes added to each potential planting site (GIS point database) for prioritization and possible impact on UTC goals.

Planting Site Attribute	Total # of Planting Sites	General Criteria Used	Additional UTC Acres from Planting:		% of Additional UTC Acres Needed to Reach 40% UTC Goal:	
			25% of Planting Sites	50% of Planting Sites	25% of Planting Sites	50% of Planting Sites
City Owned	6,447	On City Owned Property	26	52	2%	4%
School	1,100	On School Parcel	4	9	0%	1%
Wildlife Habitat	47,181	Within 50 ft of Large Forests	191	383	14%	27%
Along Riparian Corridor	18,360	Within 100 ft of Riparian Corridor	74	149	5%	11%
Energy Conservation	69,153	Within 50 ft of Building	281	561	20%	40%
Park	7,898	On Park Parcel	32	64	2%	5%
Urban Heat Island	37,131	Within 50 ft of Large Impervious Area	151	301	11%	22%
Trail	29,033	Within 100 ft of Trail	118	236	8%	17%
Near Park	20,065	Within 1/8 mi of Park	81	163	6%	12%
Front Yard	45,461	Within 25 ft of Rights of Way	184	369	13%	26%
Near School	1,557	Within 1/8 mi of School	6	13	0%	1%
Air Quality	5,691	Within 50 ft of Highways/Arterials	23	46	2%	3%

* Numbers reflect planting sites in "Developed" areas with the exception of Riparian sites which include all
* Projections based on trees with an average 30' crown spread (15' radius)

Urban Heat Island Effect – *refers to developed areas that are hotter than surrounding rural areas due to the abundance of man-made materials there which absorb the sun's energy much more than trees or other plants, and in turn warm the air around them* (Center for Environmental Studies, Brown University, "Trees and the Urban Heat Island Effect", 2010). Tree shade lowers ambient air temperatures which limits the formation of ozone and smog. Trees also absorb ozone which reduces air pollutant concentrations.

The EPA reports that tree shading can reduce surface temperatures 20–45ºF in the summer.

Only 4% of Fayetteville's urban tree canopy overhangs impervious surfaces.

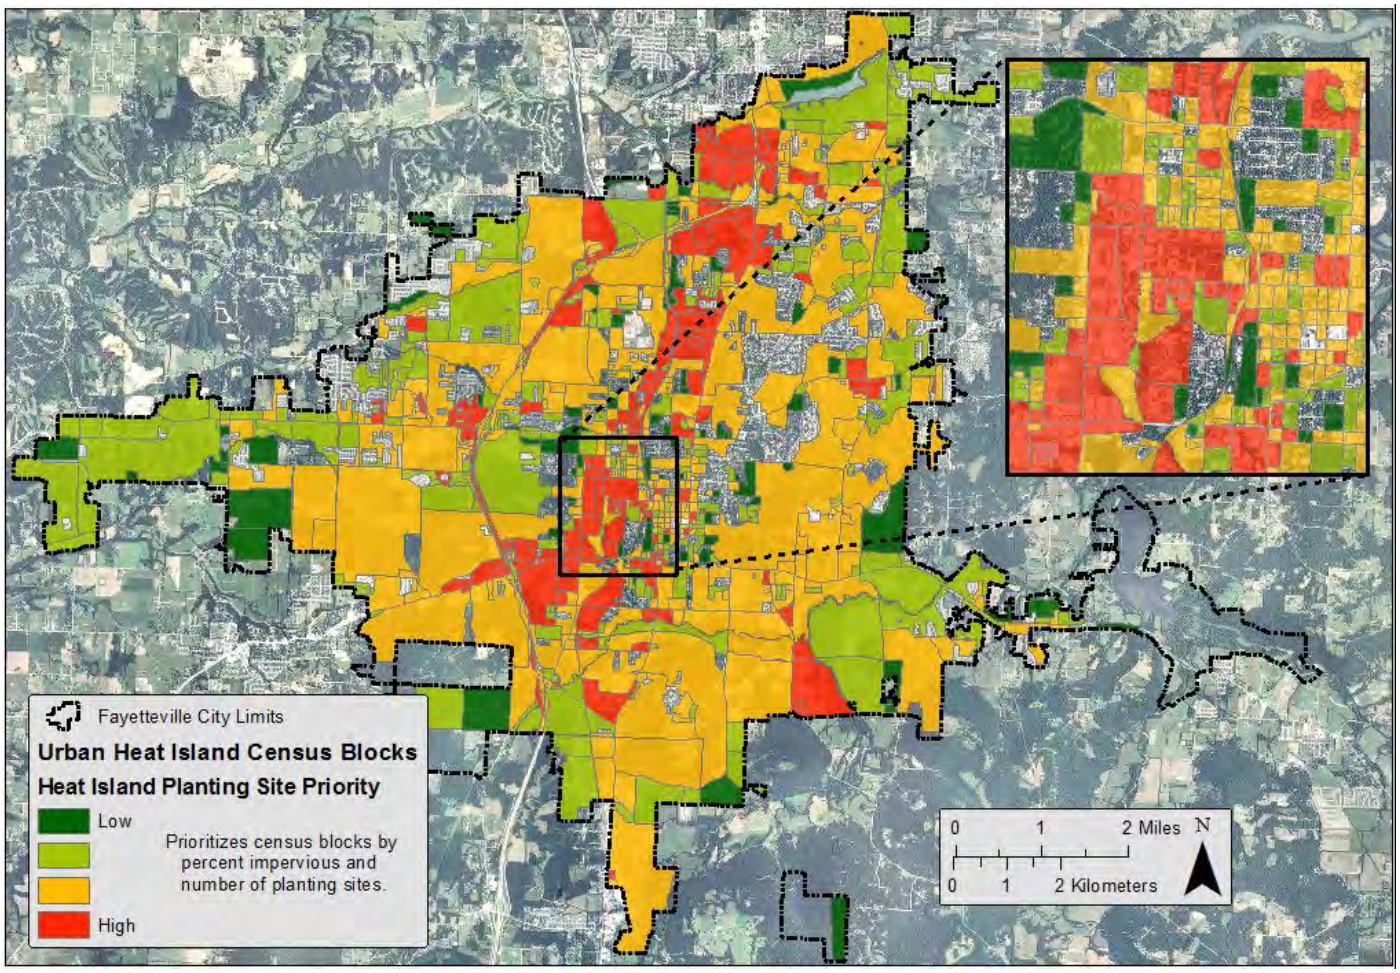

Figure 25. Census blocks with the largest contiguous impervious surface area and highest number of potential planting sites.

Wildlife Habitat – urban forests provide essential habitat for wildlife and provide opportunities for the community to experience nature in the city. The GIS planting site points were modeled with ecological and corridor data from the Fayetteville Natural Heritage Association (FNHA), land use, and large contiguous forested areas. Figures 26-29 illustrates querying planting locations near habitat.

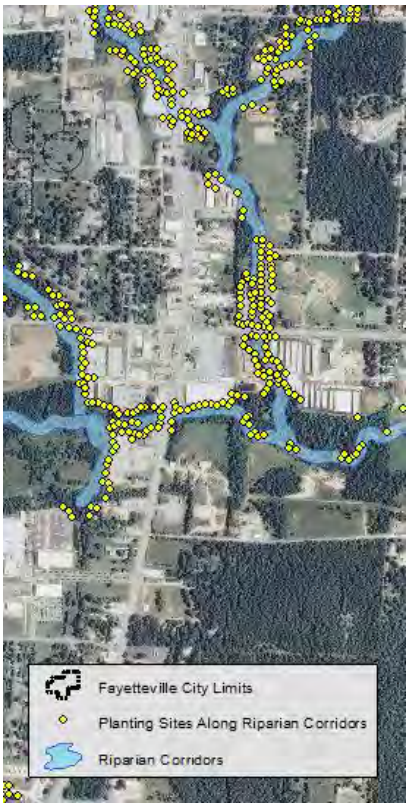

Figure 26. Potential tree planting sites along riparian corridors for improving water quality and decreasing storm water runoff.

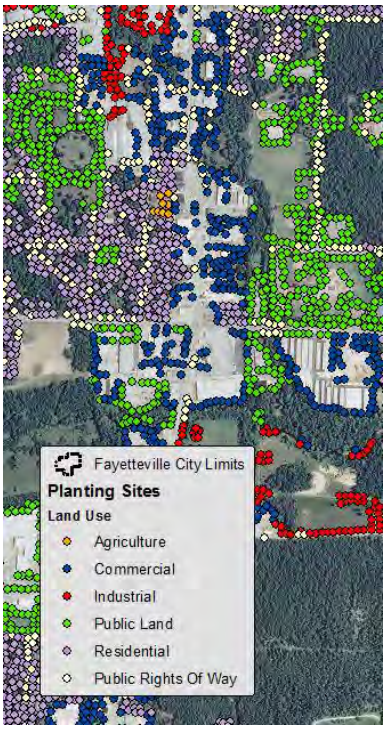

Figure 27. Potential Planting Areas by Land Use.

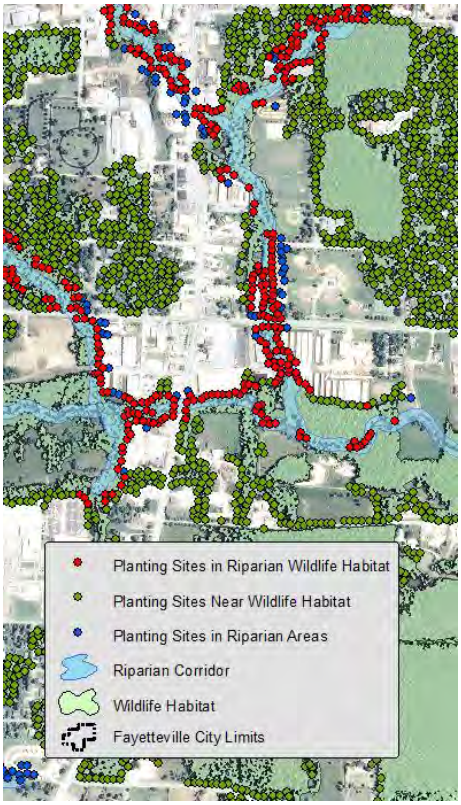

Figure 28. Potential tree planting sites in Fayetteville Natural Heritage Association (FNHA) core areas provide another potential for increased wildlife habitat.

Figure 29. Potential tree planting sites along riparian corridors and near forested lands provide a higher quality wildlife habitat and often provide important wildlife corridors.

TREE CANOPY COVER GOALS AND POLICY

One objectives of this study is to compare canopy coverage to the national recommendation of 40%. At 36% UTC, bridging the 4% gap (1,383 acres) can be accomplished in a number of ways. Here are 2 very different scenarios showing what it might take:

- Using Plan-It Geo's Canopy Calculator tool (Figure 30 below), 40% UTC can be achieved by increasing Commercial properties from 18% to 20% and Residential lots from 41% to 50%.
- Natural forest regeneration is a driver of canopy gains based on results from this study and a cost-effective path. With an estimated 500 acres of forest gain in 10 years (not considering losses), a similar trend could in theory help the City reach 40% UTC in 30 years, but would require a cessation of forest loss during development.

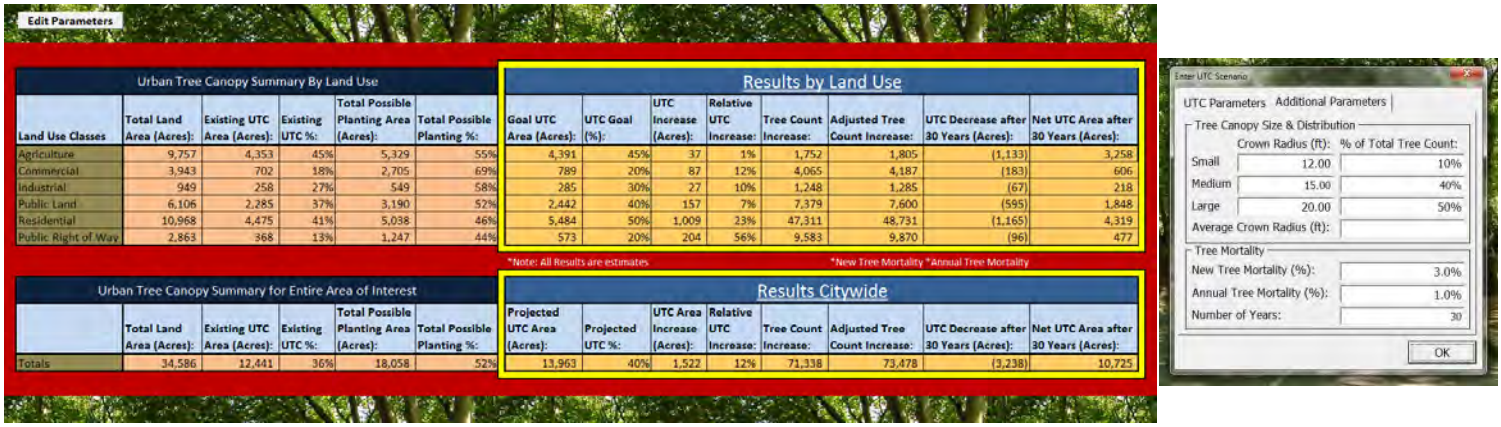

Figure 30. Plan-It Geo's Urban Tree Canopy Calculator tool used to set future goals in Fayetteville.

Another objective is to provide an evaluation of the effectiveness of Fayetteville's tree preservation ordinance followed by recommendations if the ordinance is not working.

The Tree Preservation and Protection Chapter under Fayetteville's Unified Development Code provides a framework for maintaining urban forest quality while the City grows and develops. As the Chapter objectives state, trees provide a variety of benefits that contribute Fayetteville's natural beauty and livability for its residents, including temperature and climate regulation, air and noise pollution reduction, storm water, flood, and erosion mitigation, provision of wildlife habitat, energy conservation, and property value enhancement. The Chapter aims to promote these benefits through the preservation of on-site trees during development, using on-site mitigation strategies when preservation in not possible, off-site preservation, off-site forestation projects, or financial contributions to a tree escrow account.

How can UTC assessment be used to measure successes resulting from the ordinance?

Measuring the incremental success of tree preservation and protection is important for meeting stated goals into the future. Of the many tools available to urban forest managers, this UTC assessment provides a snapshot of city-wide forest canopy extent as seen from above, and its requisition meets the goal of conducting an assessment by end of 2012. The following results can be used to evaluate the relative success of the Tree Preservation and Protection Chapter:

- **Overall forest canopy percent change** across Fayetteville: 37% in 2002 to 36% in 2010.
- **Riparian areas canopy cover** averages 61%, well above the citywide forest cover of 36%.

- **Urban Heat Islands: Canopy percent** averages 22% among census blocks with large impervious areas, and just 9% in high priority areas mapped in this study.
- **Rights of Way: Canopy percent** averages 13% with only 4% of the total tree canopy overhanging impervious surfaces across the City.

Additional Tasks to Measure Preservation and Protection Success

Additional analysis steps can be conducted to measure Preservation and Protection success that were outside the scope of this analysis but could be implemented internally by COF staff:

- **Using this Assessment Data.** Use the new data to evaluate whether recent developments have met preservation requirements (e.g. Minimum Canopy Requirements).
- **Conduct Periodic UTC Assessments.** As the Chapter recommends, periodic assessments can evaluate ordinance progress. Consider using NAIP or i-Tree Canopy (Google Maps and Google Earth) during intermediate years to track development-specific progress.
- **Assess Hillside / Hillslope Overlay Districts** for canopy change over time.
- **Hedonic Pricing models** can be used to assess canopy's contribution to property values.
- **Track Registry Tree growth** of individual registry trees to ensure longevity and protection.

Other forestry tools for measuring preservation success

Today's urban forest managers have access to host of tools which can enhance the effectiveness of management strategies. Many tools are inexpensive or free and can be used to target specific goals and locations.

- **Tree Inventories** provide the greatest level of detail regarding individual tree conditions. Requiring developers to conduct a post-development tree inventory could be a cost-effective way to initiate Fayetteville's citywide inventory.
- **i-Tree Eco** provides the best available science to value benefits received from urban trees.
- **Localized Ecological Studies** can be used to assess impacts from specific development and mitigation strategies by directly measuring impacts before and after implementation.
- **Developer Workshops** hosted by Fayetteville's urban forestry staff to promote best management practices (BMPs) and specific development strategies (such as ordinance requirements or recommendations like cluster development).

MANAGEMENT

The City currently owns and maintains 543 properties that include civic buildings, parks & open space, trails, and more. UTC and PPA metrics were calculated for each property and joined to the land use data layer at the parcel-level. This way queries and custom maps of these properties can be created along with other information. Results were summarized for all city owned properties and the results can be seen in Table 7.

Table 7. Tree canopy and planting potential metrics summarized for all City Owned Properties.

	Total Acres	Land Area (acres)	% of Total City Area	UTC (acres)	UTC %	Distribution of % Total UTC	PPA Vegetation (acres)	PPA Vegetation %	PPA Impervious (acres)	PPA Impervious %	Total # of Planting Sites	Planting Sites per Acre
City Owned Properties	4,763	4,136	11.7%	2,355	56.9%	18.9%	1,491	36.0%	195	4.7%	6,447	1.56

Using the results from the analysis steps described above, gains and losses of tree canopy was estimated for city owned properties (see Figure 31 below). This resulted in a loss of tree canopy for 54 acres or 1.3% of City Owned Properties. This information should be used as a general trend and not an exact measure of UTC change.

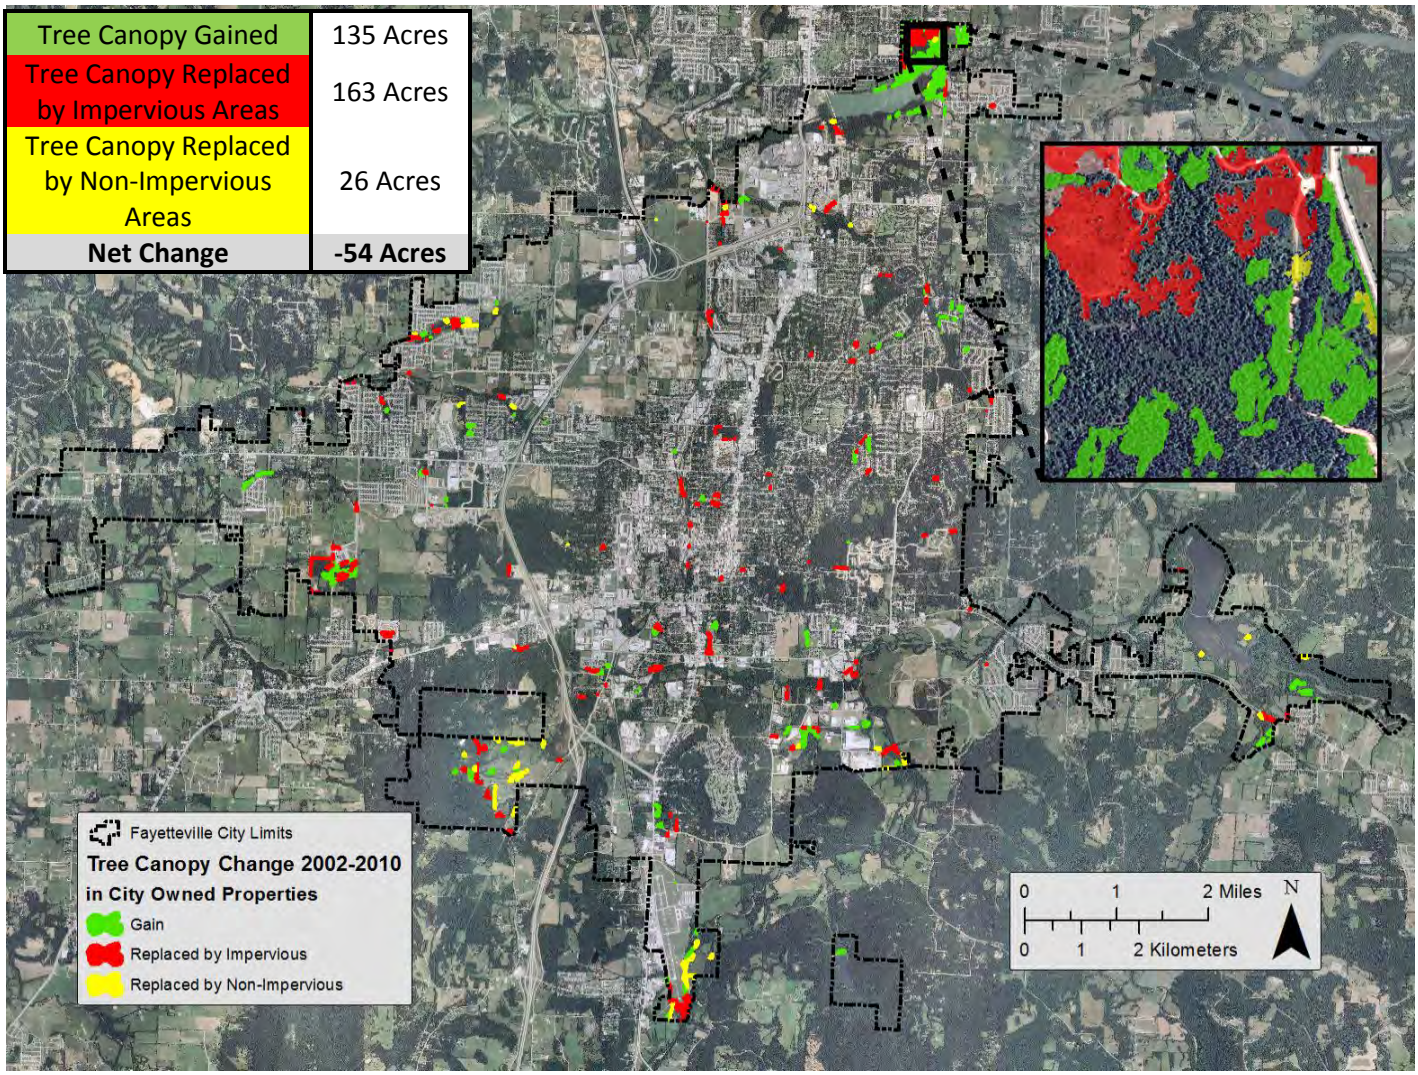

Figure 31. Canopy change for City Owned Properties from 2002-2010.

RECOMMENDATIONS

Based on this assessment, the following general recommendations are offered for using the data and for managing, maintaining, and monitoring a healthy, sustainable, robust working urban forest.

1. **Share this report to promote cohesion among the City, AFC, FNHA, and other partners and community stakeholders:**
   - People are part of the urban forest. Use this report as a catalyst among urban forest managers and community stakeholders to meet Fayetteville's natural resource goals.
   - Solicit feedback from community partners for the refinement of tree preservation ordinances, tree planting initiatives, and steps to encourage survivability and forest health.
   - Develop best management practices (BMPs) such as maintaining higher canopy cover in ecologically sensitive areas (wetlands), parking lots, schools, and commercial properties.
2. **Monitor, adapt, and enforce existing tree Preservation and Protection ordinances**.
   - Streamline tree-related policies and identify if codes are working against local goals.
   - Enforce requirements in the Tree Preservation plan, especially the 90% survival rate for forested areas and tree plantings.
   - Collaborative planning can reduce costs and provide consistency for public works officials, planners, developers, and stormwater and resource managers.
3. **Develop a regional urban tree canopy assessment report in Arkansas.** Utilize the information gained from this assessment and others in the state to compile and compare results. Involve interdisciplinary partners in the process and draft an appropriate call to action.
4. **Assess tree canopy every 8-10 years** to monitor trends and assess the effectiveness of public education & outreach campaigns and the tree preservation ordinance. Tools such as i-Tree Canopy can be used in between comprehensive GIS-based assessments.
5. **Disseminate the land cover and UTC assessment data from this project broadly**. While it is current, encourage its use for applications such as water supply planning, stormwater modeling, land use planning, green infrastructure, and Low Impact Development (LID) design.
6. **Foster academic partnerships.** Recommend that the University of Arkansas become a Tree Campus USA and work with local schools to educate and plant/care for trees.
7. **Explore all potential partnerships to achieve urban forest goals**: public/private including corporate and academic sponsors, council representatives, environmental quality and stormwater associations, volunteers, non-profit organizations, and neighborhood associations.
8. **Promote hardy, climate-adapted, and long-lived tree species** that are appropriate for Fayetteville's environment to insure investments in trees achieve maximum benefits.
9. **Target areas for tree planting using the assessment data.**
   - Use results to justify targeted public tree plantings in the public rights-of-way and greater private planting in commercial landscaping.
   - Ground-truth possible planting areas and planting site locations. Make these data sets available on a GIS webmap as social assessment tools available to residents and businesses.

10. **Create a central repository for monitoring tree planting and tree removals** on public and private property, possibly using a web-based application that is open to the public.
11. **Ensure consistency in future UTC assessments** by using comparable image resolution, classification techniques, and QA/QC procedures. LiDAR and 1.5-2.0' multispectral satellite imagery acquired at similar times would provide an ideal data set.
12. **Create or update an existing targeted education and outreach campaign using the ecosystem benefits values.** Use the data, maps, tools, and tree benefits to help non-profits, residents, and businesses visualize their role in reaching, maintaining and expanding Fayetteville's urban forest for social, environmental, and economic benefits that are relevant to them.
13. **Work urban forestry goals and design specifications into other environmental planning initiatives** such as wetland restoration projects, open space conservation easements, green infrastructure & low impact development (LID) plans, and energy efficiency programs.
14. **Assess forest stands at risk from development** by overlaying zoning or future land use data and developable slope %. Quantify and locate areas at risk that if developed would impact overall citywide canopy cover goals as the economy improves and development follows.
15. **Promote cost-effective professional development in urban forestry.** eLearn Urban Forestry is a state-of-the-art online, distance-learning program geared specifically toward beginning urban foresters and those allied professionals working in and around urban and urbanizing landscapes, including service foresters, natural resource planners, landscape architects, city officials and public works employees. eLearn Urban Forestry provides free access to learning modules, with a link to the Continuing Forestry Education (CFE) group, where for a small maintenance fee you can get ISA or SAF credit. Visit elearn.sref.info/ for more details.
16. **Provide an environment for natural forest regeneration.** This study shows that grass, herbaceous, and shrub/briar land cover types are naturally regenerating into forests, contributing to the City's overall tree canopy and ecosystem services.

SUMMARY

Urban forests are dynamic resources that are constantly changing through natural and human processes. Managing urban forests effectively requires an understanding of where trees are presently, where they can be planted equitably to maximize benefits, and where physical restrictions may prevent their growth.

This assessment provides COF will their first high-resolution UTC data set and citywide estimate of 36% tree cover. While agriculture and residential land uses have similar average tree cover (45% and 41% respectively) and they makeup similar proportions of the total tree canopy (35% and 36% respectively), residential areas provide 28% of the total possible planting area citywide and are most realistic for canopy gains that benefit the community most. These results indicate that one of the most cost-effective means to advancing urban forestry in the city may be education and outreach on the benefits of urban tree canopy.

Based on assessing land cover across several broad land use types, tree planting that focuses on vegetation land cover, such as grassy areas, and impervious land cover, such as parking lots, which are concentrated on public lands and residential land use types will have the greatest impact for increasing Fayetteville's urban tree canopy. As population density and impervious cover increases, the necessity of planting trees will also increase.

Regeneration, be it natural or by strategically planting seedlings and saplings, is important to the success and future of Fayetteville's urban tree canopy. This study shows that natural regeneration is occurring and adding to canopy cover, but invasive species control and forest management is needed.

It is import to sustain the health, environmental, and social benefits received from urban forests by consideration of tree maintenance and forest preservation during development through utilizing a specific urban forest management plan and furthermore the setting of goals. These plans should be dynamic in order to adjust with continuous forest change.

On future periodic assessments, techniques for monitoring gains and losses need to be consistent and include strict quality control / quality assurance methods to reliably track change over time. Additional technology tools are becoming available such as open source wiki-style mobile and web-mapping applications to engage the public in tracking and caring for trees.

Balancing new development with the protection and conservation of environmental values related to forest cover such as wetland habitat, air quality, and climate adaptation related to carbon storage and energy conservation will be an ongoing work item. The economic benefits of urban tree canopy alone are incentives to continue in this direction.

APPENDIX

Additional details on Fayetteville's 2012 urban tree canopy assessment are provided including supporting information on urban tree benefits, land cover classification methodology and accuracy, addition tree planting site maps, and literature citations.

URBAN TREE BENEFITS

The benefits of urban trees include environmental, economic, and social values. These "ecosystem services" are direct or indirect benefits provided by urban forests and individual trees that are often dismissed or underrepresented when valuing infrastructure because they don't readily have an associated dollar value. Types of tree benefits are listed and briefly described below. While none alone are a "silver bullet", when combined, trees and the urban forest are an impressive part of the solution for sustainability during urban planning and community development.

Environmental "Services" of Urban Trees:

- Air Quality – trees absorb, trap, offset and hold air pollutants such as particulate matter, ozone, sulfur dioxide, carbon monoxide, and CO^2.
- Greenhouse Gases (GHGs) and Carbon – trees store and sequester carbon through photosynthesis as well as offset carbon emissions at the plant due to energy conservation.
- Water Quality and Stormwater Runoff Mitigation – trees infiltrate, evapotranspire, and intercept stormwater while also increasing soil permeability and ground water recharge.
- Erosion control – tree roots hold soil together along stream banks and steep slopes, stabilizing soils and reducing sedimentation issues in water bodies.
- Urban heat island effect – trees cool the air directly through shade and indirectly through transpiration, reducing day and nighttime temperatures in cities.
- Increased wildlife habitat – Trees create local ecosystems that provide habitat and food for birds and animals, increasing biodiversity in urban areas.

Economic "Services" of Urban Trees:

- Property value – numerous studies across the country show that residential homes with healthy trees add property value (up to 15%).
- Energy conservation – trees lower energy demand through summer shade and winter wind block, additionally offsetting carbon emissions at the power plant.
- Economic Development – trees attract businesses, tourists, and increase shopping.
- Stormwater facilities – trees and forests reduce the need for or size of costly gray infrastructure.
- Pavement – tree shade increases pavement life through temperature regulation (40-60% in some studies).

Social "Services" of Urban Trees:

- Public health – trees help reduce asthma rates and other respiratory illnesses.
- Safe walking environments – trees reduce traffic speeds and soften harsh urban landscapes.
- Crime and domestic violence – urban forests help build stronger communities. Nature and trees provide settings in which relationships grow stronger and violence is reduced.
- Connection to nature – trees increase our connection to nature.
- Noise pollution – Trees reduce noise pollution by acting as a buffer and absorbing up to 50% of urban noise (U.S. Department of Energy study).

LAND COVER CLASSIFICATION METHODS & ACCURACY

Introduction to Image Classification and Accuracy

The goal of image classification for the City of Fayetteville (COF) was to convert a landscape comprised of complex uses and cover types into target categories that are meaningful for the management of the City's urban forests. The object-based classification approach used in this analysis provides the ability to segment landscape features at a fine scale with a high level of precision, based on the 1 meter horizontal resolution of the input imagery. Classification accuracy assessment describes how well the classification is able to translate the complex landscape into target land cover classes.

Five target land cover classes (1. Tree Canopy, 2. Impervious Surface, 3. Green Vegetation and Agriculture, 4. Soil and Dry Vegetation, or 5. Water) were and three impervious sub-classes were initially mapped (for a total of eight classes) for the COF using four-band National Agricultural Inventory Program (NAIP) aerial photography from 2010. A single color infra-red image was mosaicked from multiple Geotiff image tiles purchased from USDA NAIP headquarters in Utah. Feature Analyst software (FA) was used to segment the COF mosaic into desired land cover classes. Additional vector layer inputs were used to further segment classification categories.

Target land cover classes were selected because they segment the landscape into categories that are useful for urban forest management. Tree canopy describes the current forest cover as seen from above, but is only part of Urban Tree Canopy (UTC) assessment. Subcategories of impervious surfaces segment areas where it may be impossible to plant trees (such as roads and buildings) and areas where trees offset many of the negative impacts of impervious materials (such as parking lots and sidewalks). Areas comprised of green vegetation are important for UTC assessment since they represent the easiest transition to additional forest cover through tree planting. In this assessment, all agricultural areas were classified in the vegetation category and later differentiated from other green vegetation using the agricultural land use data provided by the COF. Soil and dry vegetation is excluded from possible planting areas since these areas represent either current development, or areas where live vegetation is not supported. For this classification, water was directly digitized in combination with input data provided by the COF.

Accuracy Assessment

Accuracy assessments serve two main purposes; Accuracy assessments provide information to map producers about what methods are working and where improvements need to be made for creating the best possible product from available resources. Accuracy assessments also provide information to map users who need to understand how closely the intended classification categories represent the true classes observed on the ground.

Procedure

More than 100 sample points were randomly distributed across the study area and assigned a random numeric value. Sorting from lowest random value to highest, at each sample point, a 3x3 pixel (9 m2) reference sample unit was digitized onto the NAIP imagery and assigned one of the five target land cover classes. The procedure was repeated until an at least 100 pixels were sampled from the three dominant land cover classes (Tree Canopy, Impervious Surfaces, and Green Vegetation). Sample units were then intersected with the classified map to compare with the reference samples, as presented in the sample error matrix below.

Interpretation

Statistical relationships between the reference pixels (representing the true conditions on the ground) and the intersecting classified pixels are used to understand how closely the entire classified map represents the COF landscape. The sample error matrix represents the intersection of reference pixels manually identified by a human observer (columns) and classification category of pixels in the classified image (rows). The white boxes along the diagonals of the matrix represent agreement between the two pixel maps. Off-diagonal values represent the number pixels manually referenced to the column class that were classified as another category in the classification image. Overall accuracy is computed by dividing the total number of correct pixels by the total number of pixels reported in the matrix (238+165+220+72+66 = 761 / 819 = 93%), and the matrix can be used to calculate per class accuracy percentages. For example, 260 pixels were manually digitized in the reference map as Tree Canopy, but only 238 of those pixels were classified as Tree Canopy in the classification map, with 22 pixels misclassified as Green Vegetation. This relationship is called the "Producer's Accuracy" and is calculated by dividing the agreement pixel total (diagonal) by the reference pixel total (column total). Therefore, the Producer's Accuracy for Tree Canopy is calculated as: (238 / 260 = 0.92), meaning that we can expect that 92% of all tree canopy in the COF were classified as Tree Canopy in the classification map. Conversely, the "User's Accuracy" is calculated by dividing the number agreement pixel total by the total number of classified pixels in the row category. For example, 241 classification pixels intersecting reference pixels were classified as Tree Canopy, but three pixels were identified as Green Vegetation in the reference map. Therefore, the User's Accuracy for Tree Canopy is calculated as: (238 /241 = 0.99), meaning that pixels classified as Tree Canopy the classification were actual tree canopy in the COF.

It is important to recognize the Producer's and User's accuracy percent values are based on a sample of the true ground cover, represented by the reference pixels. As with any statistical relationship we can compute the level of confidence with which the classified map values represent the reference map of the COF. Confidence intervals are used to report the lower limit and upper limit of the expected percent values of each classification category. In the matrix above, the 95% confidence interval describes the range of values we would expect to observe 95 out of 100 times given a randomly distributed selection of reference pixels. For example, if the accuracy assessment was repeated 100 times, we expect that tree canopy accuracy would fall between 88% and 95% for Producer's and 97% and 100% for User's accuracy for at least 95 of the 100 samples.

Relating Accuracy to the Classification Map

Accuracy assessments provide important information regarding how well the landscape was classified into target land cover classes, but what do Producer's and User's accuracies mean for interpreting land cover results? It should be noted that for both the classification map and the error matrix, land cover classes are interrelated, meaning that if a pixel is incorrectly omitted from one category, it is also incorrectly committed to another category. For example, 22 pixels in the sample error matrix were erroneously omitted from the Tree Canopy class and erroneously committed to the Green Vegetation class. The classification map reports 36.5% of the COF is covered with Tree Canopy. The Producer's accuracy of 92% can be interpreted as up to 8% of the overall landscape may be tree cover but was classified as another land cover category. Conversely, the User's accuracy of 99% indicates that if a pixel is classified in the classification map as Tree Canopy, we are 99% confident that the pixel is tree canopy in the reference map. When combined, these two figures indicate that 36.5% probably underestimates the true canopy percent (and that the Green Vegetation category probably contains some actual tree canopy). Figure 32 below uses work by Pontius and Millones

(2011) to illustrate the total map area of each classification category where there is agreement between the reference and classification map (blue), where classification categories contained committed (pink) and omitted (green) pixels. The figure below uses concepts defined as Quantity and Allocation disagreement to estimate true land cover percent values based on statistical results.

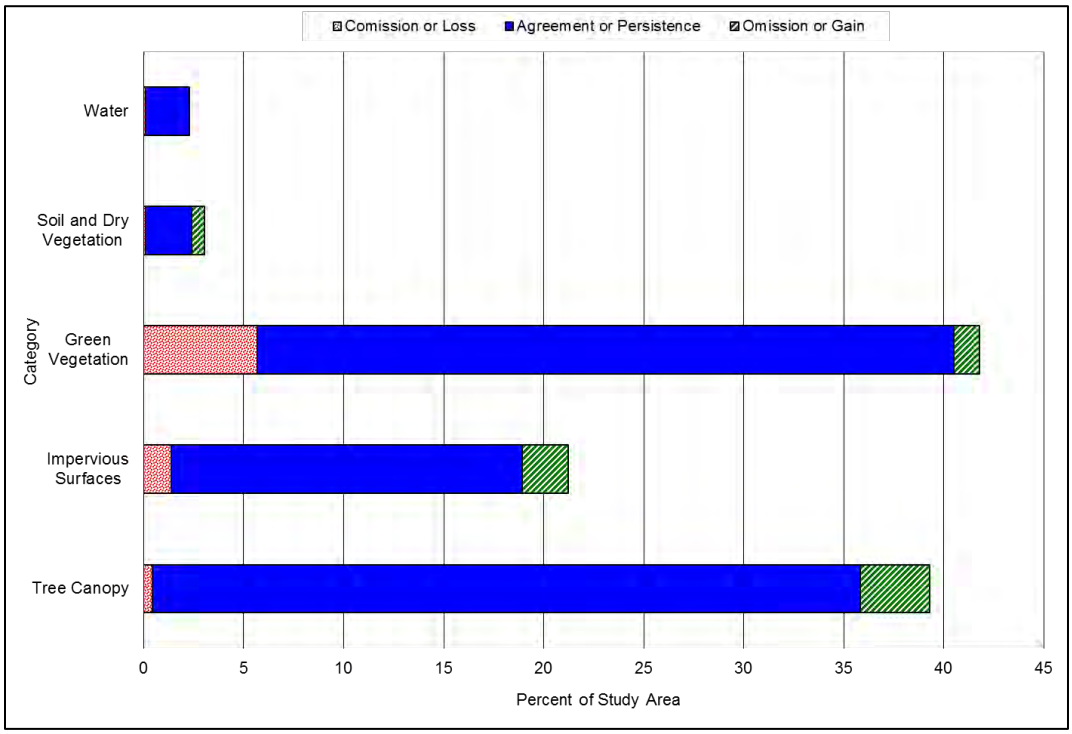

Figure 32. Land Cover Accuracy Assessment per land cover class

Land Cover Classes

A total of eight land cover classes were mapped for Fayetteville including four impervious sub-classes classified using some of the City's GIS resources.

CITY OF
FAYETTEVILLE
ARKANSAS

LETTER FROM THE CITY OF FAYETTEVILLE

In Fayetteville, trees are a source of pride and hold a special place in our City's identity. Our urban tree canopy is part of what makes Fayetteville unique and attractive to residents and visitors. The City of Fayetteville's Urban Forestry Management Plan will serve as a blueprint to guide Fayetteville during rapid growth, helping to make sure our growing community remains healthy, vibrant and green. A coalition of residents, staff, stakeholders, consultants, and board members created this plan for Fayetteville by reviewing our past and current conditions and considering what the future holds for Fayetteville.

I want to express gratitude to all contributors to the Urban Forestry Management Plan. The direction outlined in this plan will help us maintain and grow our urban forests, which continue to provide direct benefits to our community.

MAYOR LIONELD JORDAN

A LETTER FROM FAYETTEVILLE'S URBAN FORESTERS

Trees and forests are the silent workhorses in our City that provide us with many benefits. Trees give us one of the most basic elements of life: oxygen. Trees shelter us from the sun during the blazing summer months. Trees filter pollutants from the air and give us cleaner air to breathe. Trees absorb rainwater and help with stormwater control when located correctly. Trees help make our lives livable.

Scientists are making discoveries about trees every year. Within the last ten years, we have learned that trees communicate with each other. We are learning about the complex web of relationships trees have with each other and other organisms. In the past thirty years, we have learned that trees produce chemicals we absorb in our skin that naturally lower our blood pressure and reduce our anxiety levels. We are just scratching the surface of what we know about trees.

The City of Fayetteville has a strong relationship with trees and tree preservation. The collaboration with our community shows how important trees are to our residents. Trees and our urban forests continue to be a high priority for our residents as illustrated in the survey results from this Plan, the Park and Recreation System Master Plan, Energy Action Plan, and City Plan 2040. We are thrilled to have a plan that embraces our residents' priorities and will help guide us through future growth.

Our City is changing quickly, and these changes impact trees. This plan is a guide to help us continue to grow and change while remembering the importance of trees. Over the past ten years, Urban Forestry staff has strengthened our tree preservation and landscape codes, added flexible elements for development in code, and clarified our Unified Development Code. The Urban Forestry Management Plan has a vision to continue strengthening, clarifying, and adding flexibility to our Tree Preservation and Landscape codes.

The Urban Forestry Management Plan will also help focus our efforts to maintain, grow, and enhance our urban forest programs for the next ten years. Fayetteville's award-winning Urban Forestry programs lead the state in innovation, public outreach, technology, and progress. This plan will help continue this progress, strengthen those attributes, and guide us on what we can do for our urban forests. We are excited to continue to serve Fayetteville with award-winning programs by implementing the recommendations of this plan.

DEFINITIONS AND ABBREVIATIONS

CARBON SEQUESTRATION - The action of capturing carbon from the atmosphere and storing it in another form that canot be immediately released.

CARBON STORAGE - The total amount of carbon in a forest or tree.

DBH - Diameter at Breast Height, which is a industry standard of tree size. This is measure of diameter of the tree, 4.5 feet above the ground.

NET TREE - Refers the number of trees that reach a level maturity that is past their most vulnerable stages of growth.

NO NET LOSS - For the purpose of the Urban Forestry Master Plan, no net loss is defined as balancing canopy loss, regardless of cause, with canopy growth through private and public tree plantings and natural regeneration across the city.

PRIVATE TREES - Trees on private property and not maintained by the City.

PUBLIC TREES - Trees along streets, in medians, parks, and in high use areas on City owned lands.

UDC - Urban Development Code, this is the document that contains the City's ordinances.

UFMP - Urban Forestry Management Plan

Section 1: Executive Summary

EXECUTIVE SUMMARY

INTRODUCTION

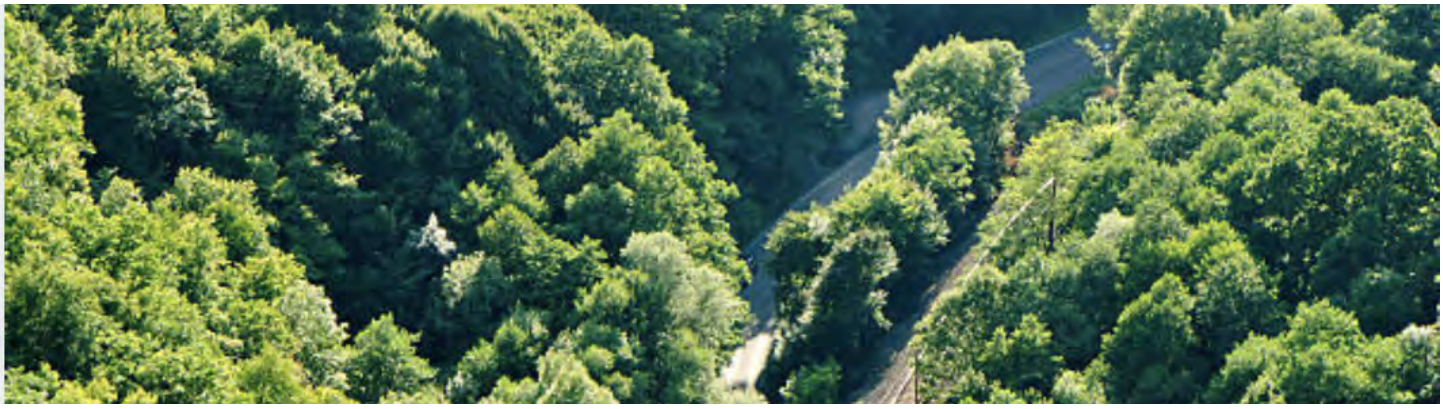
The quality of life for Fayetteville's community members is strongly improved by its trees (collectively known as the urban forest), as trees make a vital and affordable contribution to the sense of community, enhance and create pedestrian-friendly neighborhoods, provide energy savings, reduce stormwater runoff, and improve air quality. Future climate predictions indicate that heat waves will become more frequent, and the average yearly temperatures are expected to continue to rise. In addition, it is anticipated that the region will experience more frequent extreme weather events and temperature changes, prolonged periods of drought, and shortened or disrupted natural seasons. Protecting, maintaining, and expanding Fayetteville's urban forest is essential to preserving and improving quality of life for all residents.

PURPOSE

The City's Urban Forestry Management Plan ("Plan") aims to provides goals and a roadmap for the City to preserve and expand tree canopy cover and maximize the benefits of Fayetteville's urban forest.

THE PLANNING PROCESS

The development of the Fayetteville Urban Forestry Management Plan was based on answering four key questions:



WHAT DO WE HAVE?

WHAT DO WE WANT?

HOW DO WE GET THERE?

HOW ARE WE DOING?

URBAN FOREST KEY FINDINGS

1. 39.4% of the City was shaded by urban tree canopy cover in 2019.
2. Fayetteville's Tree Equity Score is 87 out of 100. The regional average is 77 and the national average is 85 (see page 36 in the Current Conditions section for more details).
3. The citywide urban forest provides an annual estimated benefit of $55 million by improving air quality, health savings, energy savings, and reducing stormwater volume. (Endreny, 2018)
4. An estimated 74% of public trees (Trees comprised of trees along streets, in medians, alleys, parks, and trees in high use areas on City owned lands) are 12 inches in diameter or less, 75% of trees are in good condition, and the most common maintenance need for public trees is clearance pruning (8%), removals (6%), and watering for tree establishment.
5. Fayetteville's Urban Forest Audit Score (page 65) based on U.S. Forest Service criteria is 73% (completed in 2023). The Audit evaluates and scores 11 categories of sustainable urban forest management categories according to industry standards and best practices.
6. A sample inventory of 2,712 public trees and 848 private trees was completed in 2022. The trees are diverse- the top ten species only comprise 44% of all trees.
7. Fayetteville has an estimated 25,000 public trees in maintained areas.
8. The 25,000 publicly-maintained trees provide an estimated $2.5 million over their life in ecosystem benefits.

MANAGEMENT KEY FINDINGS

The City's public trees are managed by three different City departments— Parks, Natural Resources and Cultural Affairs; Public Works; and Development Services.

1. 1.00 full-time equivalent (FTE) staff in Parks, Natural Resources and Cultural Affairs (Park Planning & Urban Forestry Division) and oversees tree plantings, Arbor Day Celebration, the Tree City USA program, specifies new tree plantings in public spaces, is the Staff Leader for the City's Urban Forestry Advisory Board (UFAB), works on Code changes, outreach, budgets, and advises maintenance best management practices.
2. 6.00 FTEs in Public Works perform public tree maintenance.
3. 1.00 FTE in Development Services manages trees as part of private development in accordance with Chapter 167 "Tree Preservation and Protection" within Fayetteville's Unified Development Code and Chapter 177 "Landscape Requirements Code."
4. City staff and commission members face several shared challenges and priorities, including staffing issues, ordinance standards, and infrastructure conflicts. Over 50% of participating staff have identified these as key concerns.

ALIGNING CITY AND COMMUNITY PRIORITIES

The Urban Forestry Management Plan complements existing city and regional planning efforts such as the City Plan 2040 comprehensive plan for Fayetteville, the Park and Recreation System Master Plan, Energy Action Plan, and the Climate Action Plan (in development as of 2024). Involvement from stakeholders and residents has been key to development of the Urban Forestry Management Plan and establishing the Plan's priorities. A diverse group of city staff, residents, and community stakeholders provided perspectives on the most important issues faced by the urban forest. Collectively, this group prioritized preserving existing trees and incorporating healthy, climate-tolerant or native trees into the City's built environment, particularly in underserved areas. The Plan's goals reflect these values and priorities.

URBAN FORESTRY MANAGEMENT PLAN VISION AND GUIDING PRINCIPLES

URBAN FOREST VISION	GUIDING PRINCIPLES
Healthy Trees, Healthy City: The vision for Fayetteville's urban forest is to cultivate a thriving, diverse, and well-maintained tree canopy that enhances the livability, health, and sustainability of our community for current and future generations.	**Equitable and Resilient Canopy Cover:** We value and appreciate the benefits and services provided by the trees in our community. These benefits and services should be maximized and equitably distributed across the City by growing an urban forest that is sustainable and resilient to current and future challenges. **Maintenance and Management:** We care for our trees and the citywide urban forest to ensure the benefits are available for current and future generations. Our operations and investments prioritize sustainability, fiscal responsibility, and equity. **Tree Preservation and Protection:** Our existing tree canopy cover and the investments made in planting and caring for the urban forest are preserved through sound but fair policies and regulations that align with shared priorities in the City and best practices. **Funding and Levels of Service:** The programs and staffing involved with the trees in our community have the resources necessary to meet current and future demands and challenges. **Community Education, Engagement, and Stewardship:** A sustainable urban forest requires a shared commitment from the City and the community. We will foster tree stewardship in our community through equitable and impactful community education and engagement.

Table 1. Summary of the vision and guiding principles for Fayetteville's Urban Forestry Management Plan.

Fayetteville's Urban Forestry Management Plan aims to achieve 44.4% canopy coverage across the City over a 30-year planning period with a 1.2% increase in the first 10 years. The Plan recommends planting an average of 1,850 net trees per year, with a focus on 60% being large-canopy trees at maturity. The City's priority is to maximize the number of trees planted while ensuring they can be maintained to maturity. The City, developers, and private landowners will collectively contribute to reaching the canopy cover goal (*For information on goals see page 66-67*).

Tree canopy analysis is conducted every 10 years to track progress towards our goals and determine what needs to be modified to achieve the canopy goals, as required by City Code section 167.03.C.

Section 2: Introduction

In 2022, the City of Fayetteville committed to developing the City's Urban Forestry Management Plan ("Plan") and conducting a sample inventory of public trees to support the Plan. The Plan was developed with a shared commitment from the City, its partners, and the community to manage and grow a sustainable and equitable urban forest.

ABOUT FAYETTEVILLE

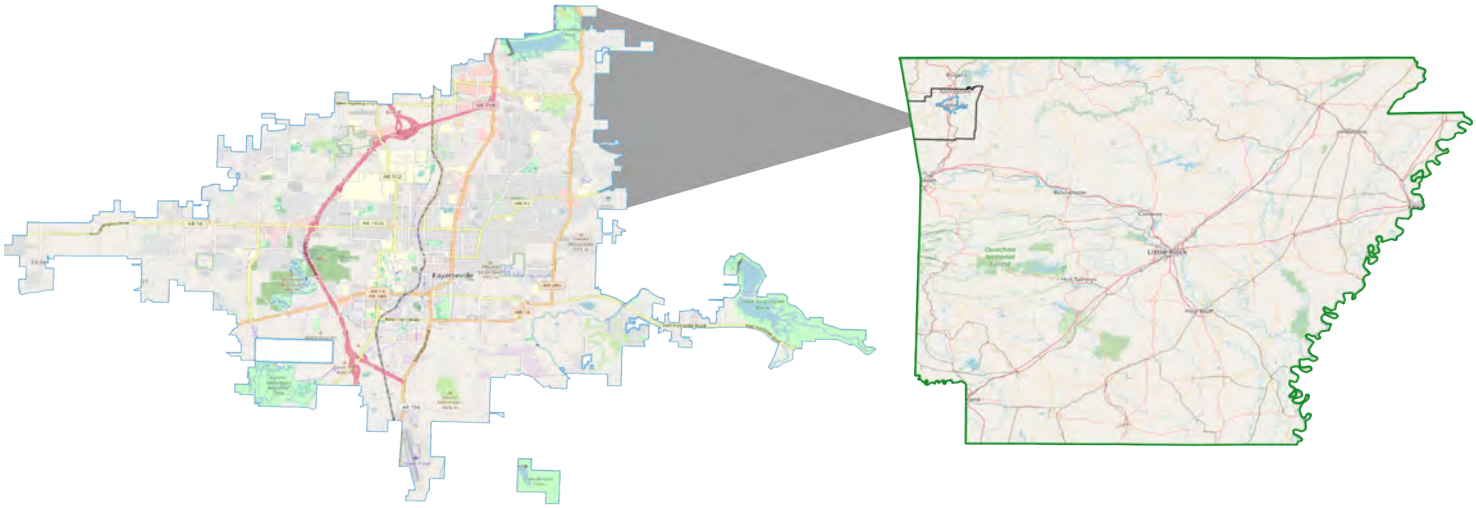


Figure 1. Maps displaying the location of Fayetteville, Arkansas within Washington County.

Nestled within the picturesque Ozark Mountains in the northwestern part of the state, Fayetteville, Arkansas, is a vibrant and growing community that harmoniously blends urban development with natural beauty. As the heart of Washington County and home to the University of Arkansas, Fayetteville exudes a unique character that attracts residents, students, and visitors alike.

Fayetteville is the second most populous city in Arkansas with 93,949 people as of the 2020 U.S. Census. Fayetteville's location between the Springfield Plateau and the Boston Mountains within the Ozarks gives rise to a wide variety of land forms and environmental features including native prairie wetlands, steeply sloped and forested uplands, and a variety of streams and water bodies. Fayetteville's urban forest plays a crucial role in enhancing social interactions, well-being, human health, and community engagement, making Fayetteville a more livable and enjoyable city.

Photo showing circa 1890 Fayetteville, looking northwest from Mount Sequoyah; fayettevillehistory.org

BACKGROUND AND HISTORY

Before the arrival of European settlers, the Ozark Mountains were home to a unique and diverse ecosystem. Understanding the pre-settlement forest conditions, as documented by early explorers, is crucial in appreciating the ecological history of the region. These descriptions reveal a landscape dominated by oak and hickory woodlands, with widely spaced trees creating an open canopy. The forest was punctuated by open glades and patches of prairie grass, adding to its distinctiveness. Shortleaf pine forest ecosystems thrived on the drier, south and west-facing slopes, further enhancing the area's ecological diversity (National Forest Foundation , 2014).

Fayetteville's evolution into the modern city has integrated the surrounding forests into its urban landscape, supporting a network of verdant public spaces and parks. Heavily wooded areas still thrive within the city limits, contributing to Fayetteville's reputation as a green, forested city.

The earliest settlers in the area were Native American tribes who lived off the land and hunted and gathered food from the natural environment. Later, with the arrival of European settlers in the early 19th century, the landscape began to change. The first settlers cleared large areas of land for farming, which led to deforestation and loss of habitat for many species of plants and animals.

In the late 19th and early 20th centuries, industrialization began in Fayetteville. Sawmills and other factories sprang up, leading to further deforestation and pollution of the local waterways. The construction of railroads and highways also had a significant impact on the natural environment as large areas of land were cleared to make way for these transportation routes.

As Fayetteville continued to grow and develop, urbanization became a significant factor in altering the natural environment. The population increased, and more land was needed for housing, development, and infrastructure. This led to further deforestation and loss of habitat, as well as increased pollution and degradation of waterways.

Despite these significant changes, Fayetteville has also taken steps to preserve and protect its natural environment. A pivotal moment in Fayetteville's Urban Forestry history came in 2000 when Mary Lightheart protested the removal of trees at a proposed development and climbed into a massive oak tree, living there for three weeks. She and 50 other activists were protesting a new shopping center that would cause the removal of a large stand of mature oak trees.

Activists helped bring light to tree preservation and the importance of trees. The following year, a stronger tree preservation ordinance was enacted. This action has led to the City of Fayetteville leading the state in progressive urban forestry programs. The residents of Fayetteville made it clear that trees are vital to this City.

This commitment to the natural environment is carried on by Fayetteville's Urban Forestry Management Plan and the City's programs for trees that are detailed in the Current Conditions section.

TREES AS A PUBLIC GOOD

A diverse and healthy urban forest works to the benefit of the community, the environment, and the economy. Trees make cities more livable by decreasing summer temperatures and improving well-being. Greater contact with natural environments correlates with lower levels of stress, improved performance, and fewer sick days. Residents in areas with more greenery are three times more likely to be physically active and less likely to be overweight than residents living in areas with little greenery.

Cooler Pavement Diminishes Urban Heat Islands

Tree canopy lowers temperatures by shading buildings, asphalt, and concrete. Trees deflect radiation from the sun and release moisture into the air, reducing surface temperatures by as much as 36 degrees. Lower temperatures diminish fumes from heated asphalt and mitigate the urban heat island effect.

Improve Air Quality

Trees produce oxygen and clean the air by removing pollutants that would otherwise contribute to human health problems such as asthma and other respiratory diseases.

Protect Wildlife and Ecosystems

Preserving and planting trees provides valuable habitat for wildlife, supports pollinator species, and provides favorable conditions for beneficial soil microorganisms.

Save Energy and Lower Energy Costs for Buildings

As natural screens, trees insulate homes and businesses from extreme weather, keeping buildings cooler and reducing air conditioning bills. Shade trees planted on a sunny exposure can provide savings of up to 50% in the summer. In winter, evergreen trees provide a barrier to cold winter winds.

Conserve Water and Soil

A tree's root system draws water into the soil and their canopy slows rainfall, reducing runoff and erosion while removing contaminants. In contrast, impervious surfaces like roads and parking lots allow water to run off unfiltered and at high volumes, increasing the likelihood of flooding and impaired water quality.

Other benefits include increased property values, reduced pavement wear, aesthetics, health, traffic calming, public safety, among others. View a compilation of research on urban forest benefits and services prepared by the Alliance for Community Trees (www.actrees.org). Tree benefits are quantified in the following section.

"In light of the ongoing effects of climate change, trees and their associated canopy have innumerable benefits and an urban forest plays a role in carbon sequestration, mitigating stormwater issues, filtering pollutants, increasing property values, improving public health, and reducing the heat island impacts associated with urban areas."

FAYETTEVILLE CITY PLAN, 2040

A CLOSER LOOK

Trees come in various forms: shade trees, flowering trees, edible fruit and nuts trees, and trees with vibrant fall colors. All types contribute benefits and services to the urban ecosystem. The environmental benefits of trees in urban areas are identifiable and measurable, while other benefits are tangential and experiential, such as the feeling of walking a quiet tree-covered trail.

Park and street trees create a sense of community, offering opportunities for people to come together and engage in various activities. These shared spaces foster a sense of belonging and connection among residents. Additionally, Fayetteville's urban forest provides a respite from the hustle and bustle of city life, offering peaceful retreats where individuals can relax, unwind, and enjoy nature.

Research summarized in the following paragraphs shows the presence of trees and greenery in urban areas reduces stress, improves mental well-being, and encourages physical activity, all of which contribute to healthier and happier communities. Moreover, Fayetteville's urban forest creates opportunities for environmental education and volunteering, inspiring residents to learn about nature, participate in tree planting initiatives, and engage in environmental stewardship.

Figure 2. Human health and social benefits of trees.

Studies have found that the amount of trees and vegetation in common spaces such as parks are related to a sense of neighborhood safety and more social activity. In turn, greenery in cities enhances the strength of social ties among neighbors (Kim, et al., 2020).

Encounters with nature in cities also lead to enhanced positive attitudes, decreased stress levels, improved attention spans, and better performance on cognitive memory assessments (Wolf, et al., 2020).

Tree canopy cover and greenspaces in cities motivate and provide opportunities for people to be physically active. The percentage of greenspace within a two mile radius of a person's home has been associated with the percentage of residents reporting good health, particularly among the elderly and those with lower socioeconomic status groups that are typically less likely to get sufficient physical activity. Research shows that community residents are three times as likely to be physically active when living in areas with more greenspace (Ulmer, et al., 2016).

Opportunities to experience urban nature—whether it's a view of a street tree out a window or actually being outside in nature— are key to the mental well-being of city residents. People are happier, experience a greater sense of well-being, and have reduced stress levels when they live in areas with more greenspace nearby or on a tree canopied neighborhood street (White, et al., 2013).

Tree cover near schools has a positive effect on student performance. Children with challenges concentrating are more focused following a 20-minute walk in an urban park or tree canopy covered sidewalk than they do after walks in other urban settings without trees and greenery (Taylor, et al., 2009). Trees in neighborhoods and parks connect children to nature.

The link between time spent in natural settings and health outcomes has been the center of focus for healthcare and insurance industries in recent years. Trees and greenspaces have shown to increase longevity, reduce the risk of cancer and heart disease, reduce anxiety and depression, improve immune function, and reduce stress hormones. A study in 2016 of 108,000 people found a 12% lower rate of non-accidental mortality among those with the most greenery in a 820-foot (250 meters) radius around their homes (James, et al., 2016). In addition, hospital patients placed in rooms with views of nature experienced shorter stays in the hospital compared to patients in rooms that faced other buildings (Mihandoust, et al., 2021).

ENVIRONMENTAL BENEFITS OF TREES

Research over the past several decades provides valuable quantified data on environmental benefits for urban forest researchers, managers, and practitioners. This data can be used to communicate tree benefits to residents and stakeholders and to incorporate trees into infrastructure design such as stormwater management. It can also be used to develop strategies that reduce inequities.

A tree canopy assessment conducted by the City in 2020 (with 2019 imagery) determined that 39.4% of the City (14,000 acres) was shaded by tree canopy. In 2022, a sample inventory of 2,712 public trees and 848 private trees was conducted to estimate the composition and structure of public and private tree populations. These datasets were used to calculate the following benefits of the citywide urban forest and public tree population.

Citywide Tree Canopy

The citywide tree canopy across public and private land provides an annual estimated benefit of $55 million by improving air quality and reducing stormwater volumes (Endreny, 2018).

Public Trees

Public trees are comprised of trees along streetscapes, in medians, alleys, parks, trees in high use areas on City-owned land. The 2022 sample inventory of public trees determined there are 42,000 trees in public spaces, and 25,000 are maintained.

The 25,000 publicly maintained trees were used to calculate the benefits and services below. Using i-tree tools, it is estimated that the 25,000 trees provide $71,615 in ecosystem benefits annually.

It is also estimated that they sequester (capture) 1.4 million pounds of carbon dioxide annually, worth $33,613. The air quality benefits equate to $23,949 annually in services. $14,053 of stormwater benefits are diverted from the 25,000 trees. Using these three benefits, the 25,000 public trees provide a yearly total estimated $71,615 in ecosystem benefits (Tree Inventory Summary).

Photo of Eastern towhee habitats are supported by healthy urban forests. Source: Audubon Arkansas

CARBON BENEFITS	**$33,613**
AIR QUALITY BENEFITS	**$23,949**
STORMWATER BENEFITS	**$14,053**
TOTAL BENEFITS	**$71,615**

Assuming an average tree lifetime of 37.5 years based on the i-Tree model, the 25,000 maintained public trees are estimated to generate $7.5 million in ecosystem benefits over their lifetime. Similarly, the 42,000 trees in public spaces are projected to provide over $4.2 million in ecosystem services under the same lifespan assumption. *(For more informaation see Supplement 3, Tree Inventory Supplement page 10)*

ECOSYSTEM BENEFITS	AMOUNT FOR 2712 TREES	AVERAGE PER TREE	TOTAL FOR 25,000 PUBLIC TREES
Overall Monetary Benefit ($)	$7,767	$2.86	$71,599.65
Air Quality Monetary Benefit ($)	$2,598	$0.96	$23,949.30
CO (Carbon Monoxide) Pollution Removed (lbs)	12	0.004480	112.00
CO Removed Monetary Benefit ($)	$8	$0.003	$71.72
NO2 (Nitrogen Dioxide)Pollution Removed (lbs)	55	0.02	505.90
NO2 Removed Monetary Benefit ($)	$11.1	$0.004	$102.69
O3(Ozone) Pollution Removed (lbs)	1,046	$0.39	$9,643.25
O3 Removed Monetary Benefit ($)	$1,233	$0.45	$11,366.70
PM2.5 (Particulate Matter 2.5 microns) Pollution Removed (lbs)	28	0.01	257.65
PM2.5 Removed Monetary Benefit ($)	$1,339	$0.49	$12,343.93
SO2 (Sulfur dioxide) Pollution Removed (lbs)	21	0.01	189.07
SO2 Removed Monetary Benefit ($)	$0.01	$0.000004	$0.09
Pollutants Removed (lbs)	1,169	0.43	10776.27
Carbon Sequestrated Monetary Benefit ($)	$3,646	$1.34	$33,613.57
Carbon Sequestered (lbs) Annually	156,765	57.8	1445102.2
Stormwater Monetary Benefit ($)	$1,524.53	$0.56	$14,053.56
Evaporation (ft^3)	289,960	106.9	2672938.6
Interception (ft^3)	290,397	107.1	2676967.0
Transpiration (ft^3)	613,646	226.3	5656762.4
Potential Evaporation (ft^3)	2,500,561	922.0	23050897.7
Evapotranspiration (ft^3)	1,892,393	697.8	17444623.9
Runoff Avoided (ft^3)	22,804	8.4	210213.8
CO2 Storage (lbs)	5,348,466	1972.1	49303704.8
CO2 Storage Monetary Benefit ($)	$124,391	$45.87	$1,146,668.05
Carbon Dry Weight (lbs)	2,917,345	1075.72	26892933.08
Carbon Storage (lbs)	1,458,672	537.86	13446459.26

"lbs" = pounds; "gal" = gallons; "ft3"= cubic feet

Table 2. Estimated annual benefits of Fayetteville's public trees Source: USDA Forest Service i-Tree research

To understand the annual ecosystem benefits above, it important to understand the difference between carbon sequestration, and carbon storage. Carbon sequestration is the action of capturing carbon from the atmosphere and storing it in another form that cannot be immediately released, and carbon storage, which is the total amount of carbon in a forest or tree.

BUILDING ON PROGRESS

A review of the 2012 Urban Tree Canopy Assessment (Supplement 9, Urban Tree Canopy Assessment Project 2012) was completed to track progress and build upon successes. A summary of the 2012 recommendations with progress information follows.

1. Share this report to promote cohesion among the City, AFC, FNHA, and other partners and community stakeholders:

- People are part of the urban forest. This report can be used as a catalyst among urban forest managers and community stakeholders to meet Fayetteville's natural resource goals.
- Solicit feedback from community partners to refine tree preservation ordinances, tree planting initiatives, and steps to encourage survivability and forest health.
- Develop best management practices (BMPs), such as maintaining higher canopy cover in ecologically sensitive areas (wetlands), parking lots, schools, and commercial properties.

2024 Update. On Going and Complete. *The old and new Urban Forestry Plan will be available on line.*

Staff regularly meets with the Urban Forestry Advisory Board to discuss ordinance changes and tree-planting initiatives and stress the importance of planting the right tree in the right place for longevity. The Urban Forestry Advisory Board advises staff on ordinance changes and tree-planting initiatives. The board is made up of a diverse group of community stakeholders.

Staff has developed a Best Management Practices to ensure we care for new yearly plantings. We set our planting goals based on what we can maintain and grow to maturity.

2. Monitor, adapt, and enforce existing Tree Preservation and Protection ordinances.

- Streamline tree-related policies and identify if codes are working against local goals.
- Enforce requirements in the Tree Preservation plan, especially the 90% survival rate for forested areas and tree plantings.
- Collaborative planning can reduce costs and provide consistency for public works officials, planners, developers, stormwater, and resource managers.

2024 Update. Integrated and Complete. *Urban forestry staff continually review policies and codes and regularly adjust to necessary changes. We inspect all projects for a 90% survival rate. We collaborate with planning, sustainability, park maintenance, stormwater engineers, and others throughout the city for many projects.*

3. Develop a regional urban tree canopy assessment report in Arkansas.

Utilize the information gained from this assessment and others in the state to compile and compare results. Involve interdisciplinary partners in the process and draft an appropriate call to action.

2024 Update. Incomplete. *Fayetteville is one of the few cities in the state that conducts regular tree canopy assessments, completing a study every ten years. Only a handful of other cities in the state have followed suit. Bentonville, for example, completed tree canopy studies in 2013 and 2019. Moving forward, it would be beneficial to advocate for a more regional approach, with additional cities undertaking similar assessments. Urban Forestry staff would enthusiastically participate in a coordinated, regional canopy assessment led by the NWA Regional Planning Commission, which could provide a more comprehensive picture across Northwest Arkansas.*

4. Assess tree canopy every 8-10 years to monitor trends and assess the effectiveness of public education & outreach campaigns and the tree preservation ordinance. Tools such as the I-Tree Canopy can be used between comprehensive GIS-based assessments.

2024 Update. Integrated and Ongoing. *Urban Forestry Staff has worked with the GIS department and receives NAIP imagery as it is released; we can get regular canopy updates every two years. GIS has used the standards to give us tree canopy assessments every other year. We received one in 2015, 2017, and 2019 and are getting canopy assessments for 2021 and 2023.*

The City's urban foresters frequently participate in public education and outreach campaigns. Since 2012, the City has expanded its educational efforts and launched several new programs:

- *A ban on invasive plants was implemented, accompanied by an informational packet and a public outreach campaign to raise awareness.*
- *An "Invasive Plant Bounty" program was created, which has since been emulated nationwide.*
- *The "Amazing Trees of Fayetteville" initiative highlights significant or unique tree species within the City.*
- *"Tree Price Tags" were hung in high-traffic areas, showcasing the ecosystem benefits of the City's trees.*
- *The City now participates annually in school events like Symbols Day and Forest Awareness Day, reaching hundreds of elementary students.*

These new programs have steadily increased public participation and engagement each year

Since 2012, the City Council has amended the Tree Preservation ordinance seven times, strengthening the code, closing loopholes that enabled clear-cutting, adding Low-Impact Development mitigation options, and clarifying key aspects of the regulations.

5. Disseminate this project's land cover and UTC assessment data broadly.
While it is current, encourage its use for applications such as water supply planning, stormwater modeling, land use planning, green infrastructure, and Low Impact Development (LID) design.

2024 Update. Integrated and Complete. *The Urban Forestry staff has several tools to help with the above, and we use GIS and the multitude of layers to plan green infrastructure. The staff has included LID features in many of the City's details, and engineering has included LID in the stormwater management of new developments in our city. Our maps are available to everyone.*

6. Foster academic partnerships. Recommend that the University of Arkansas become a Tree Campus USA and work with local schools to educate and plant/care for trees.

2024 Update. Ongoing. *We have been in touch with several groups at the University of Arkansas to encourage them to become a Tree Campus USA, but we have not been successful. We maintain regular contact with the University's Landscape Architecture department and have also reached out to the Sustainability Department at the University of Arkansas.*

Our staff regularly collaborates with public and private schools in Fayetteville. We have organized tree planting projects with students at Butterfield Elementary, Haas Hall Academy, The New School, and Washington Elementary. Additionally, we have been involved with the Fayetteville High School Advanced Placement science program, which oversees the monitoring and removal of invasive plants at McNair Middle School. Furthermore, we have taken part in numerous regional activities aimed at educating children about the importance of trees.

7. Explore all potential partnerships to achieve urban forest goals: public/private including corporate and academic sponsors, council representatives, environmental quality, and stormwater associations, volunteers, non-profit organizations, and neighborhood associations.

2024 Update. Ongoing. *Fayetteville's Urban Forestry has partnered with Compassion Fayetteville, Beaver Watershed Alliance, Illinois River Watershed Partnership, the NWA Land Trust, Arkansas Urban Forestry Council, and other groups. In 2022, we started partnerships with several Property Owners Associations.*

8. Promote hardy, climate-adapted, and long-lived tree species that are appropriate for Fayetteville's environment to ensure investments in trees achieve maximum benefits.

2024 Update. Active, Integrated and Complete. *In 2023 the City of Fayetteville codified the use of native Ozark trees as the recommended tree species. We have stressed the right tree for the right place. We actively promote using only Ozark native trees and shrubs in development. We updated the recommended tree species list and are working on a new one.*

9. Target areas for tree planting using the assessment data.

- Use results to justify targeted public tree plantings in the public right-of-way and greater private planting in commercial landscaping.
- Ground-truth possible planting areas and planting site locations. Make these data sets available on a GIS web map as social assessment tools for residents and businesses.

2024 Update. Integrated and On Going. *Over the last five years, we have used Tree Equity Score to locate new planting locations. We also use heat maps and other tools to help us plant trees in the most needed locations. Before that, we have always used income, access to trees, heat islands, and other factors to locate new tree plantings.*

10. Create a central repository for monitoring tree planting and tree removals on public and private property, possibly using a web-based application open to the public.

2024 Update. Integrated and On Going. *The Urban Forester in the Parks, Natural Resources, and Cultural Affairs department receives all city planting plans and tracks the annual removal and planting of trees. The staff has also created a spreadsheet to monitor tree removals during the development review process. However, the current workload in the Development department has made it challenging for the staff to keep up with this data, and they hope to receive additional staffing soon. The Urban Forester has prioritized collecting this data in 2025.*

11. Ensure consistency in future UTC assessments using comparable image resolution, classification techniques, and QA/QC procedures. LiDAR and 1.5-2.0' multispectral satellite imagery acquired at similar times would provide an ideal data set.

2024 Update. Integrated and On Going. *With NAIP imagery, we can bring regular reports closer together; however, rapid technological advances may not always make this possible. We will continue to try to do this. This field has made many advances over the past ten years, and aerial imagery allows us to compare information. However, the imagery gets more accurate and improves each year. The latest data will be the most accurate.*

12. Create or update an existing targeted education and outreach campaign using the ecosystem benefits values. Use the data, maps, tools, and tree benefits to help non-profits, residents, and businesses visualize their role in reaching, maintaining, and expanding Fayetteville's urban forest for social, environmental, and economic benefits that are relevant to them.

2024 Update. Integrated and On Going. *We use trees' benefits and values daily with developers and internal customers. This topic is talked about frequently. We won an award for placing price tags on trees that showed the benefits of each tree.*

13. Work on urban forestry goals and design specifications for other environmental planning initiatives such as wetland restoration projects, open space conservation easements, green infrastructure & low impact development (LID) plans, and energy efficiency programs.

2024 Update. Integrated and On Going*. Goals are something we continue to assess and focus on for tree preservation. We will have new goals when we complete this document.*

Forestry is starting to move towards other natural resource management. The foresters worked with the engineering department on specifications for BMPs for stormwater; this included tree preservation, usually near a stream. Staff created mitigation options and codified the options for green roofs, green facades, and other LID features.

14. Assess forest stands at risk from development by overlaying zoning or future land use data and developed slope percent. Quantify and locate areas at risk that, if developed, would impact overall citywide canopy cover goals as the economy improves and development follows.

2024 Update. Modified and Integrated. *The staff has not assessed at-risk forests in the city using zoning codes and future zoning. However, staff uses multiple maps when reviewing development projects such as the enduring green network, heat island map, flood plan, Hill Side Hilltop Overlay District, Nature Based Climate Resilience Score, and other available mapping tools. We use these tools to recommend conservation in the form of tree preservation easements and tree preservation on each project. We identify high-priority areas during our reviews of each project.*

15. Promote cost-effective professional development in urban forestry. eLearn Urban Forestry is a state-of-the-art on line, distance-learning program geared toward beginning urban foresters and those allied professionals working in and around urban and urbanizing landscapes, including service foresters, natural resource planners, landscape architects, City officials and public works employees. eLearn Urban Forestry provides free access to learning modules with a link to the Continuing Forestry Education (CFE) group, where you can get ISA or SAF credit for a small maintenance fee. Visit elearn.sref.info/ for more details.

2024 Update. Integrated and On Going. *Urban Forestry staff codified ISA and other entities as a requirement for internal and external foresters. The city supports employees who want to become certified arborists and allows travel for continuing education. Staff continue to meet continuing education requirements to maintain credentials.*

16. Provide an environment for natural forest regeneration. This study shows that grass, herbaceous, and shrub/briar land cover types naturally regenerate into forests, contributing to the City's overall tree canopy and ecosystem services.

2024 Update. Integrated and On Going. *Last year, Urban Forestry undertook two major forest regeneration initiatives. The department has been systematically converting City-owned hay fields into native forests and savannas. For instance, a hay field at Bayyari Park was planted with 75 large Ozark native trees, while Rodney Ryan Park gained 56 Ozark native trees to restore the original savanna landscape. Additionally, Harmony Pointe Park is slated for an upcoming reforestation project.*

THE TIME IS NOW

It is critical for Fayetteville's environment, economy, and community well-being that the City act now to sustainably manage the urban forest. The City has a Comprehensive Plan for how Fayetteville will grow and change with development. Among other plans in place or in development is the City's Climate Action Plan. Fayetteville's Urban Forestry Management Plan supports and builds on the goals and policies of these plans and supplements those with vital analyses, studies, metrics, and strategies relating to the City's natural environment and specifically, the urban forest.

Undeveloped areas contain native trees and vegetation, fertile soils, vital water resources, natural prairie, and wetlands. Protection and conservation of these critical areas is up to the citizens and the choices made by the City.

Fayetteville's Urban Forestry Management Plan provides the roadmap with goals and supporting recommendations to manage, grow, preserve, and strengthen the urban forest through invigorated partnerships that align with city and community priorities.

PLAN PURPOSE AND VISION

The Urban Forestry Management Plan serves as a guide to proactively manage, care for, protect, and expand the City's tree canopy while navigating these competing pressures. The Plan provides a strategic and systematic framework for the sustainable stewardship, enhancement, and utilization of trees within Fayetteville. This Plan serves as a roadmap to guide decision-making and actions related to the urban forest.

Caring for and prioritizing the urban forest is an important part of maintaining a sustainable and vibrant city. However, urban forest management must also support the City's goals including economic development, transportation, urban design, and the goals of property owners. In recognition of this, Fayetteville's Code of Ordinances requires 'a tree canopy analysis and an Urban Forestry Effects Model study' or their current equivalent studies within the current geographical boundaries of the city every ten (10) years (UDC 167.03).

SUSTAINABILITY AND ENVIRONMENTAL HEALTH:

The Plan ensures that the ecological benefits of trees are maintained and enhanced, contributing to the overall environmental health and resilience of the City.

QUALITY OF LIFE AND COMMUNITY WELL-BEING:

The Plan provides strategies to create and maintain accessible and inviting greenspaces that enhance the quality of life and foster community pride.

CLIMATE CHANGE MITIGATION AND ADAPTATION:

The Plan's overarching goal to increase canopy enables the City to maximize the urban forest's contribution to climate change mitigation and adaptation efforts.

PUBLIC SAFETY AND INFRASTRUCTURE:

The Plan provides recommendations for public tree maintenance and risk management.

EDUCATION AND OUTREACH:

The Plan includes recommendations for community engagement, outreach, and education to raise awareness about the value of trees, promote responsible stewardship, and support the community in tree planting and maintenance activities.

LONG-TERM VISION:

A vision for the urban forest ensures decisions made today have a positive impact on future generations. It provides a framework for adaptive management, allowing for adjustments based on changing conditions and priorities.

An Urban Forestry Management Plan is....

A planning tool that sets values and goals for the current and future urban forest.

A planning tool that identifies Public interest, broad planting and maintenance goals, service gaps, canopy trends and identifies opportunities for improvement.

A planning tool that outlines strategies for achieving urban forestry goals.

An Urban Forestry Management plan is <u>not...</u>

A plan focused on individual sites.

An operations model or financial budget.

A detailed planting plan for trees.

A detailed rewrite of Urban Development Codes pertaining to trees.

Section 3: Current Conditions

CURRENT CONDITIONS

The urban forest includes streetscapes, parks and open space, trail and waterway corridors, commercial and residential properties, among others. While the Plan primarily addresses public trees, all trees across ownership types and the care of these trees contribute to the health, sustainability, and associated benefits of the urban forest.

The current conditions of Fayetteville's urban forest and tree populations are characterized by the type of setting (public or private) and the party responsible for maintenance (the city, property owners, or others).

Public trees are comprised of trees along streetscapes, in medians, parks, and trees in high use areas on City-owned land. View the illustration below for a summary of the tree types in Fayetteville.

Figure 3. Illustration of the types of trees in Fayetteville.

TREE INVENTORY

In October 2022, a sample inventory of public and private trees in Fayetteville was conducted by a contracted Certified Arborist accredited by the International Society of Arboriculture (ISA).

The tree inventory was intended to gather data that informs the current extent, structure, characteristics, and maintenance needs of the urban forest that can be addressed in the Plan. The University of Arkansas property was not included in this plan's public or private tree inventory.

Note, the sample public and private tree inventory analysis was conducted in October 2022. Due to ongoing tree maintenance and the dynamic characteristics of trees, changes such as condition, tree size, and maintenance needs may have changed since the analysis. Additional summaries and analyses of the sample public and private tree inventories from 2022 are provided in the Tree Inventory Supplement.

CHALLENGES FACING FAYETTEVILLE'S URBAN FOREST

EXTERNAL CHALLENGES

Urban forests across the country face common stressors including urban heat, poor air quality, weather extremes, pressure from development, and invasive plants, pests, and diseases. These challenges are often intensified by conflicting priorities and a shortage of resources.

COMMUNITY GROWTH

Fayetteville's urban forest has been growing and changing as development and redevelopment occurs in the City. In many ways Fayetteville and the northwest region of the state are fortunate to be such a highly desirable place to live, work, recreate, and study. Rapid growth in northwest Arkansas is predicted and the effects are already being felt. From 2010 to 2020, Washington County's population rose by 21.1% and almost half of that growth was in Fayetteville alone. Specifically, Fayetteville is experiencing a 28% growth rate and is now the second largest city in the state, replacing Fort Smith (NWARPC). According to Woods & Poole Economics, Inc., the Fayetteville-Springdale- Rogers metropolitan area has a 76% population growth projected from 2022 to 2060.

EQUITY

Like many cities, the tree canopy cover in Fayetteville is not equitably distributed across the City. As a result, some neighborhoods experience higher surface and ambient temperatures, poorer air quality, and more frequent flooding than neighborhoods with greater canopy cover. Additionally, the lack of access to trees and greenspace impacts residents' physical and mental health, sense of community, and overall well-being.

CLIMATE CHANGE

Climate change is an overarching challenge that is compounding the issues facing Fayetteville's trees. In addition to the known pests, diseases, and weather that the native trees have evolved to withstand, the new changes in temperature and weather extremes bring a new onslaught of pests, diseases, and wet/dry cycles.

Healthy trees can play a significant role in making Fayetteville more resilient to weather and climate extremes by sustaining the natural ecosystem health, yet the ability of urban forests to achieve their full potential is often significantly limited due to poor tree health stemming from reactive fixes instead of holistic solutions, limited training of tree care professionals, and insufficient municipal budgets.

INTERNAL CHALLENGES

Proper and timely management of the trees in accordance with current best management practices.

The need for updated tree-related regulations that preserve, protect, and grow the urban forest aligned with best practices and City priorities.

Limited financial and operational resources to address the gradual and immediate impacts of climate change.

Concerns regarding the organizational structure and communications with having three Urban Forestry groups working in three different departments.

Preparing for emerald ash borer and other emerging tree pests and diseases.

Strategic tree planting programs and initiatives needed to sustain and expand tree canopy and the associated benefits.

Educating and revitalizing community tree stewardship.

2022 PUBLIC TREE SAMPLE INVENTORY

Fayetteville's urban forest is a diverse ecosystem consisting of young and mature trees of varying species, function, and associated benefits. A sample inventory was conducted including public trees and private trees (utilizing public rights-of-way for visual assessments). The University of Arkansas property was not included in this plan's public or private tree inventory. A total of 2,712 public trees were inventoried and used to estimate the total public maintained tree population at 25,000 trees. For more detailed information, refer to the Supplement 3, Tree Inventory Summary.

Based on the sample and assumptions, it is estimated that Fayetteville has 25,000 public trees, which are trees along streets, in medians, parks, and high-use areas. The map below shows the locations of the trees surveyed to collect the data used to create this plan.

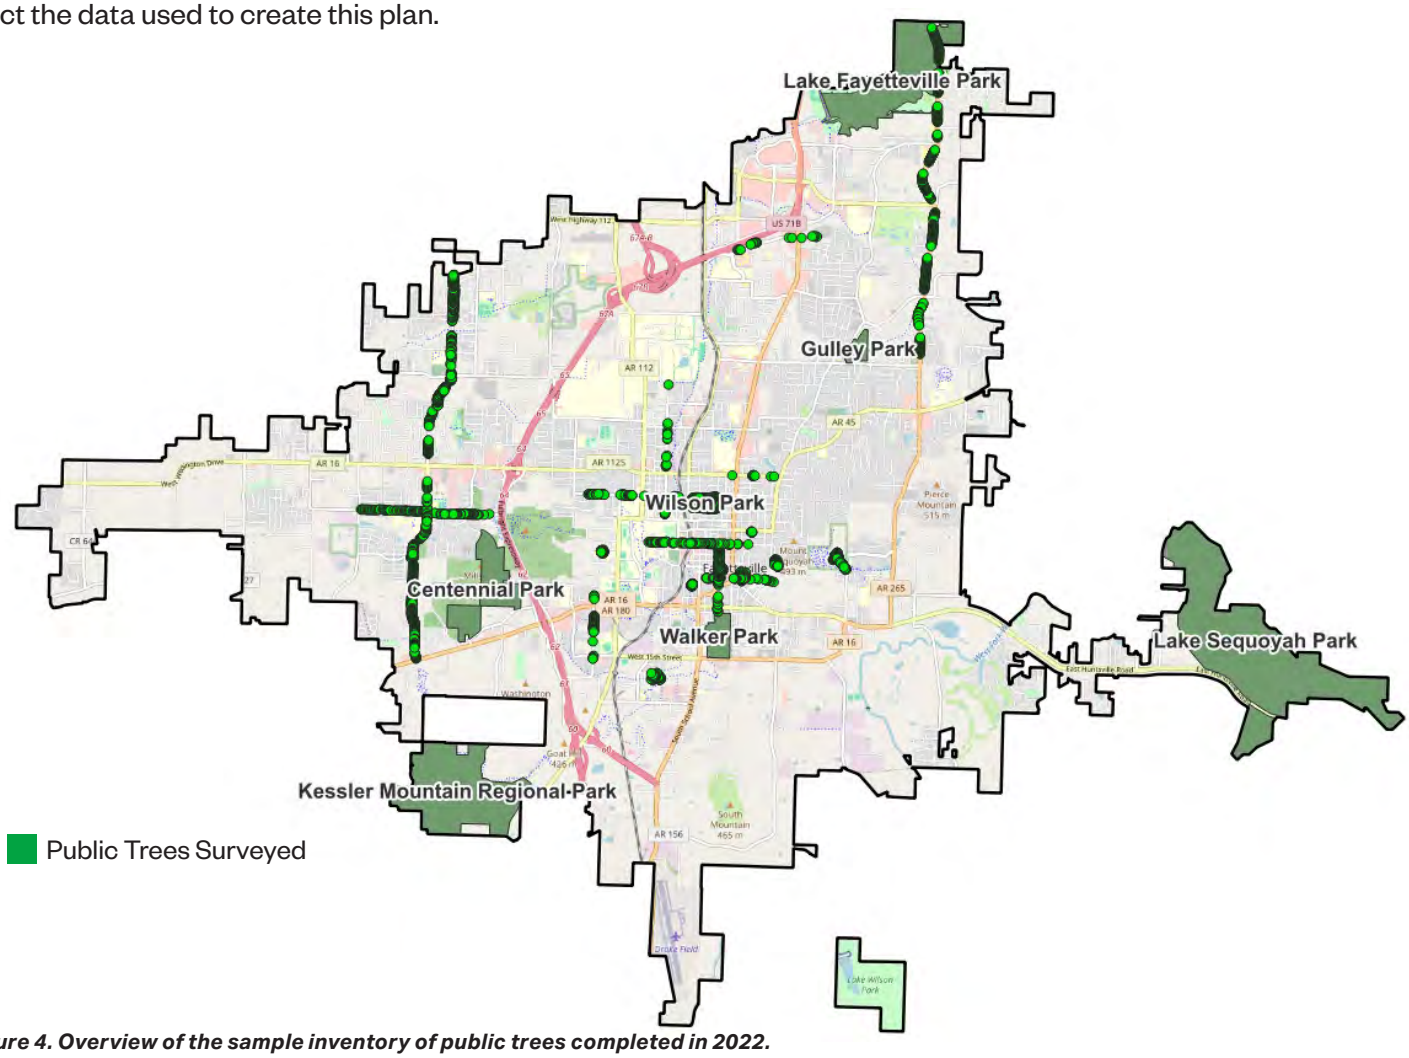

Figure 4. Overview of the sample inventory of public trees completed in 2022.

To grow a healthy and diverse urban forest, the public tree population must be well understood and managed. The data from the 2022 sample tree inventory were examined and assessed to determine the species, size, health, structural integrity, quality of the growing space, and maintenance needs, among other key characteristics for management that is representative of the citywide public tree population. For more detailed information, refer to the Tree Inventory Summary Supplement.

SPECIES DIVERSITY

Species composition data are essential since the types of trees present throughout the City dictate the amount and type of benefits produced, tree maintenance activities required, budget considerations, and influences species selection for future plantings.

It is estimated the current public tree population consists of 111 different species and 54 unique tree genera, which is relatively average in terms of species diversity in the region based on benchmarking research. Princeton elms comprise the highest percentage of trees with 7% of the total tree population, followed by post oaks at 6% and willow oaks with 6%. The top ten most common species make up 44% of the total public tree population— slightly lower than average compared to benchmarking research— which is a potential indicator of a healthy level of tree species diversity. If the most common tree species comprise less than half of the population, it may be a sign that the tree population is relatively diverse due to the number of unique tree species and their frequency of occurrence. The remaining 56% of public trees are made up of other species that are primarily pin oaks, blackgums, red maple, northern red oak, bald cypress, and hackberry. Refer to Supplement 3, The Tree Inventory Summary, for more details.

111 unique public tree species

75% of public trees in good condition

55% of public trees are 0 to 6 inches in diameter

SPECIES (TOP 10)

Princeton Elm
Post oak
Willow oak
Pin oak
Blackgum
New Harmony Elm
Red maple
Northern red oak
Bald cypress
Hackberry

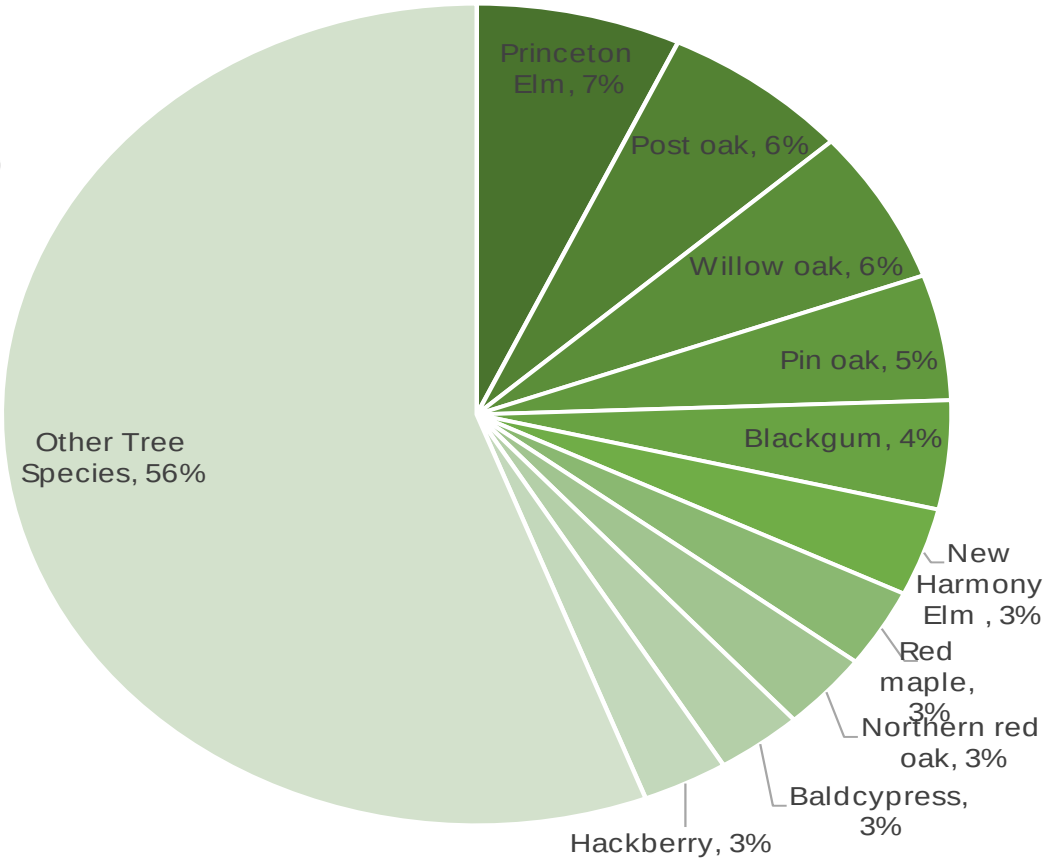

Figure 5. Overview of the species results of the 2022 sample inventory of public trees.

SIZE AND RELATIVE AGE DISTRIBUTION

The distribution of public tree ages and size classes influences the structure of the citywide urban forest and impacts present and future management costs. An unevenly aged urban forest offers continued flow of ecological benefits and a more uniform workflow allowing managers to more accurately allocate annual maintenance schedules and budgets.

To optimize the value and benefits of Fayetteville's trees, the public tree population should have a high percentage of large canopy trees which provide greater ecosystem benefits. There must also be a suitable number of younger, smaller trees in the urban forest to replace large and mature trees in decline. Having a healthy percentage of young trees in the urban forest will ensure a sustainable tree population.

To compare Fayetteville's urban forest structure to industry-recommended standards, the 'ideal distribution' is used (Richards, 1983 and 1993). The diameter at breast height ("DBH" measured at 4.5-feet above grade) is used to measure relative age.

Based on the sample inventory and estimated public tree population, the size distribution of Fayetteville's public tree population is similar to the ideal age distribution. Generally, an ideal distribution has a larger proportion of small diameter trees compared to larger diameter trees. Below is an chart that shows the ideal distribution and Fayetteville's distribution.

Tree Size	Ideal Distribution	Fayetteville's Distribution
Tree in the 0-6 in class/ Young trees	40%	55%
Trees that are 6-12 class	25%	19%
Trees that are 12-18 class	15%	14%
Trees that are 18-24 class	10%	6%
Trees that are 24-30 class	6%	4%
Trees that are over 30" DBH	4%	2%

Table 2. Comparing public tree size classes

It is estimated that 55% of Fayetteville's public trees are in the 0-6 inch class compared to the recommended 40%. In contrast, the City also has less 6-12-inch trees (19%) compared to the ideal distribution of 25%.

The size and relative age distribution of Fayetteville's public trees indicates the population is relatively young given the City has more small-diameter trees and fewer trees than the ideal percentage for each of the larger size classes. This distribution may be an indication of an increase recently in planting efforts. The City should expect a growing demand for maintenance as the large number of young / small trees mature.

CONDITION

Understanding current and changing conditions plays an important role in planning, budgeting, and resource allocation. An analysis of the condition can provide an indicator of how well the trees are managed and how they are performing given site-specific conditions. Tree maintenance needs are assigned for public safety reasons and by tracking these needs, managers are able to better plan and manage Fayetteville's public trees and the citywide urban forest.

Findings from the sample inventory of public trees were used to identify potential trends in tree condition and make the management recommendations to improve condition or minimize the deterioration of trees. Tree health was evaluated by a contracted ISA Certified Arborist based on the condition of the wood, foliage, and structure.

Based on the analysis, it is estimated that three out of four public trees (75%) are in good condition and 15% are in fair condition with only 5% of trees in poor or dead condition. The dead trees or trees noted for removal should be addressed and planned for immediately. Trees classified as "Fair" or "Poor" should be examined to determine the necessary mitigation or plant health care, if any, to improve their condition.

OBSERVATIONS AND DEFECTS

Tree defects were recorded during the 2022 sample inventory to describe further a tree's health, structure, or location. Using a system of 20 observation categories, the arborist found the public trees exhibited 11 of the 20 categories. For more detailed information, refer to page 7 of supplement 3, the Tree Inventory Summary.

A total of 1,283 observations were recorded during the tree inventory. Crown dieback was the most frequent observation recorded. It is estimated that 30% of the citywide public tree population has some level of crown dieback and 6% have cavity decay present. Mechanical damage due to lawnmowers, weed trimmers, construction, or other may comprise 5% of the public tree population followed by poor structure with 4%.

The data reveals several key insights about tree management. Of the recorded observations, 17% of the defects or concerns identified were potentially preventable and fixable. This indicates that many issues are primarily human-caused, highlighting the crucial role of proper tree care practices.

For example, poor tree structure can be prevented through timely and appropriate young tree pruning. Implementing industry best practices and standards would reduce the number of improperly pruned trees. Additionally, selecting quality nursery stock, proper planting techniques, and soil amendments can prevent poor root systems. Trees with suboptimal locations or hardscape damage could have been avoided by selecting species suited to the site and ensuring adequate root space.

Furthermore, the data shows the impacts of deferred maintenance, with about 35% of the recorded observations potentially addressable through proactive pruning and plant health care. Lastly, simple measures like adequate mulch rings, growing space, tree grates, and general awareness could have prevented many instances of mechanical damage. Addressing these areas can enhance the long-term viability and benefits provided by the urban tree canopy.

MAINTENANCE NEEDS

The City's current practices of proactive, routine pruning of public trees have resulted in a low overall maintenance need. Only 8% of the public tree population requires clearance pruning, 6% need removal, 3% require pruning around utilities, and 1% need routine pruning or crown cleaning. While newly planted trees should be structurally pruned (training pruned) within five years, this was not an observable need in the sample inventory.

INTERPRETATION OF PRIVATE TREE ANALYSES AND ESTIMATES

Though less data was collected for private trees during the 2022 sample inventory, this data is valuable in providing information about the citywide urban forest. A total of 850 private trees were inventoried from the public rights-of-way. Based on industry research and benchmarking of comparable cities, it is estimated that there are 80,000 trees in maintained areas on private property.

The sample inventory analysis estimates that oaks (Quercus) comprise 19% of the tree population, maples (Acer) 12%, and pines (Pinus) 9%. The top ten most common tree genera account for 78% of the private tree population, while the top ten most common tree species make up 57%. The most prevalent tree species are pin oak (9%), loblolly pine (8%), red maple (8%), arborvitae, London planetree, hackberry, eastern redbud, eastern red cedar, Princeton elm, and black cherry. Most private trees fall into the 0-6-inch (39%), 6-12-inch (20%), and 12-18-inch (23%) size classes. Only 2% of private trees exceed 30 inches in diameter.

Similar to public trees, it is estimated the private tree population is primarily in good condition (70%) with only 4% in poor condition and 2% consist of dead trees. Based on the contracted ISA Certified Arborists observations of private trees from the public rights-of-way, it appears that the most common maintenance needs are pruning for clearance (9%), removing hardware from trees (6%), and utility pruning (2%).

SUMMARY OF TREE INVENTORY ANALYSIS

Understanding the extent, structure, condition, characteristics, and maintenance needs of public trees enables Fayetteville's Urban Forestry Program and Transportation Department's right-of-way crews to effectively budget, plan, and address maintenance and planting needs in a sustainable, safe, and equitable manner.

For private trees, understanding the extent, health, composition, and other factors provides the Urban Forestry Program with a better picture of the entire urban forest. Challenges such as pests and diseases, invasive plant species, climate resiliency, among other threats to the urban forest can be addressed for private trees by providing resources, education, training, and other support to property owners to support growing a sustainable and resilient urban forest.

Additional summaries and analyses of the sample public and private tree inventories from 2022 are provided in Tree Inventory Summary supplement.

URBAN TREE CANOPY ASSESSMENT- A SNAPSHOT

Urban Tree Canopy Assessments (UTC) provide the comprehensive data and information needed to develop goals and strategies relating to tree planting, preservation, tree equity, risk management, and the data to support community outreach and education. This information can be utilized with other city planning efforts for sustainability, equity, human health, climate resiliency, stormwater management, water quality, wildlife preservation and enhancement, air quality improvements, and development guidelines, among many others. UTCs provide a baseline understanding of existing canopy cover across the entire city. In addition, these assessments can provide an analysis of possible planting areas citywide and by various planning boundaries. This baseline assessment should be utilized to measure the progress resulting from implementing this plan.

2019 UTC Findings – Citywide The City of Fayetteville is 35,712 acres in size. Tree canopy covers 14,081 acres of this area (39.4%) according the analysis of 2019 imagery.

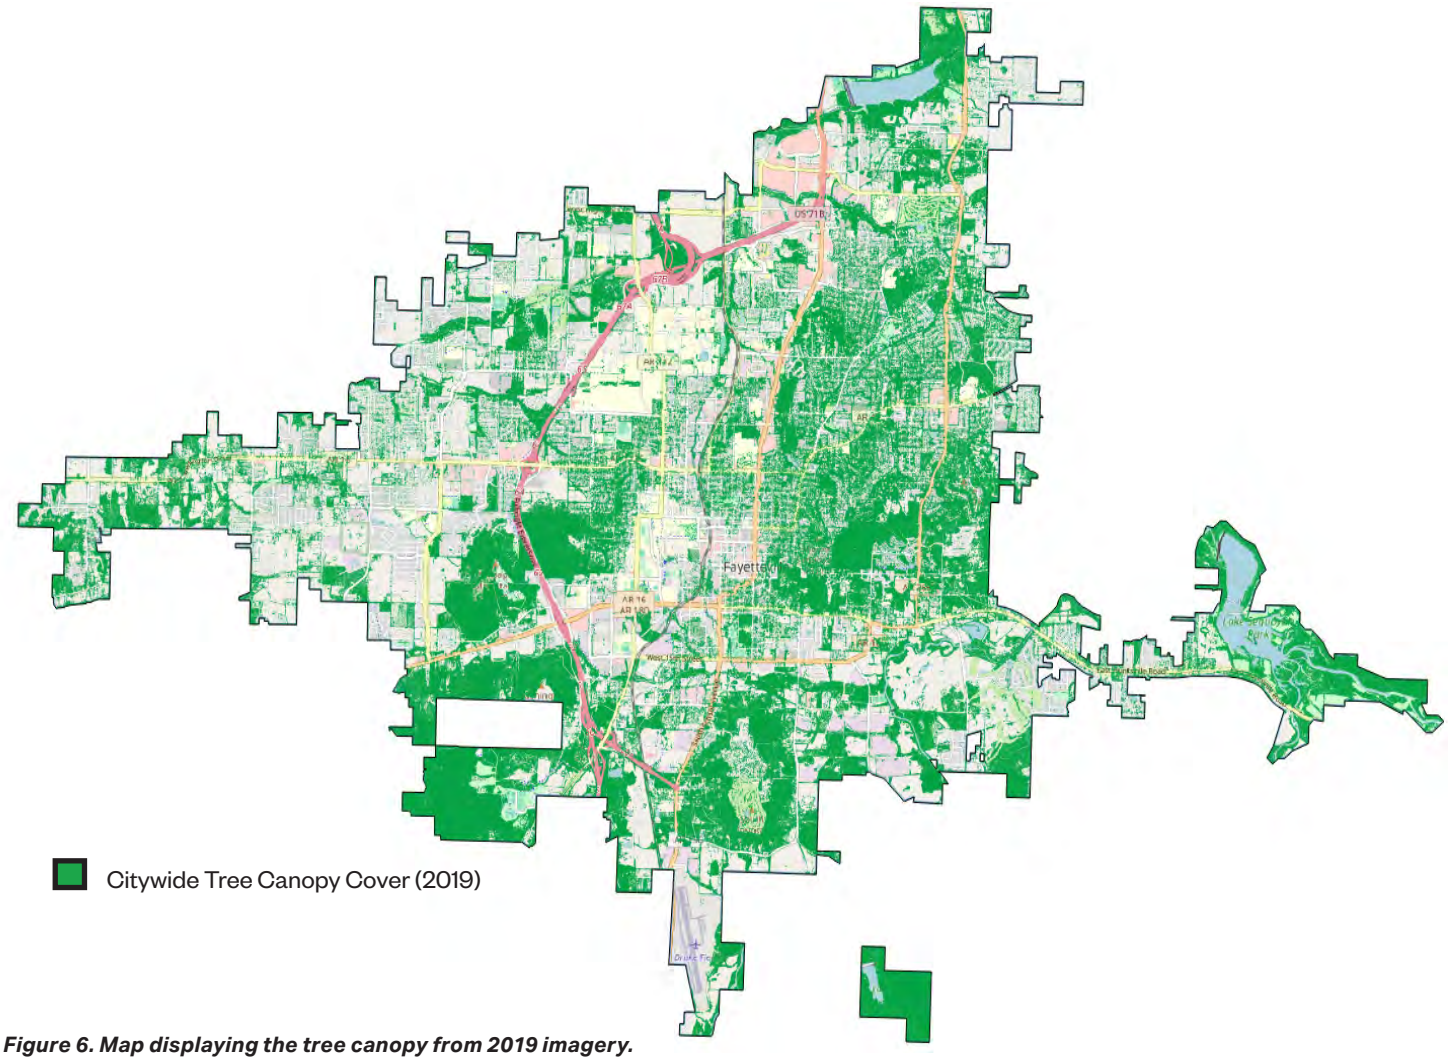

Figure 6. Map displaying the tree canopy from 2019 imagery.

URBAN TREE CANOPY (UTC) FINDINGS - OVERVIEW

A consultant provided an analysis and a report with recommendations on Fayetteville's tree canopy cover change from 2002 to 2010, and in 2020, the City's Geographic Information System (GIS) Department assessed the existing tree canopy and possible planting areas citywide using imagery from 2013, 2015, 2017, and 2019. The historical imagery and related assessments provide information on the canopy change over time though this section focuses on the most current assessment from 2019. The summaries below provide an overview of the baseline conditions relating to urban tree canopy cover and possible planting area in the City. For more information on GIS methodology, see GIS Study.

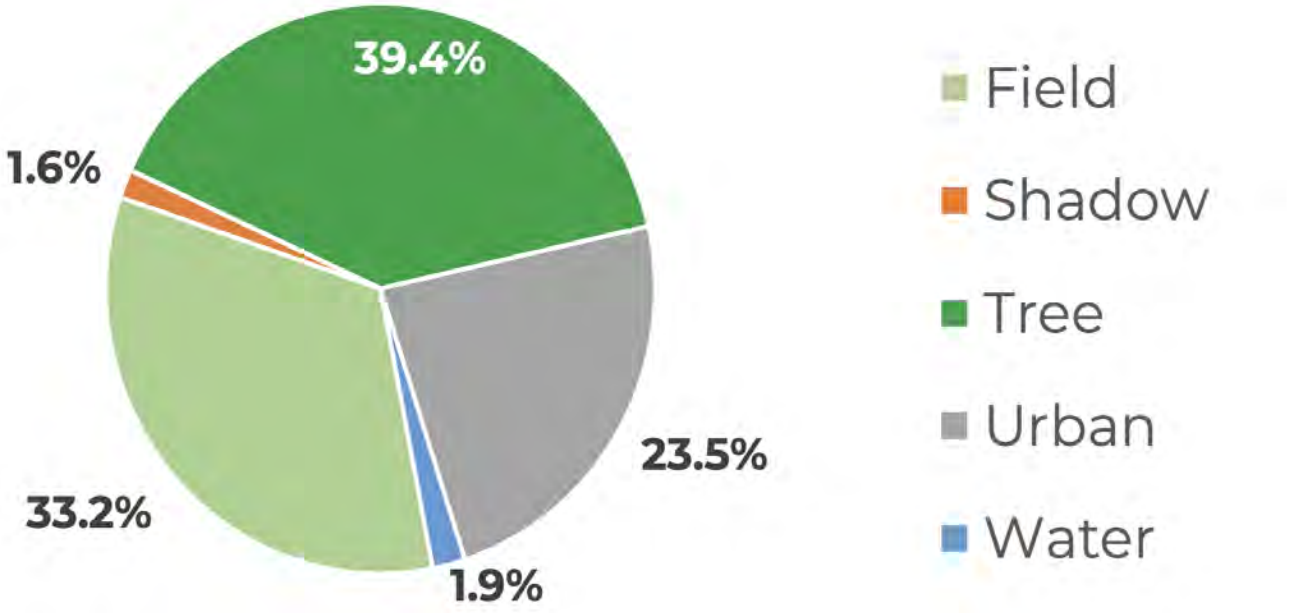

Figure 7. Citywide tree canopy results (2019). Source: City of Fayetteville

Figure 8. Examples of the land cover classes.

UTC COMPARISON

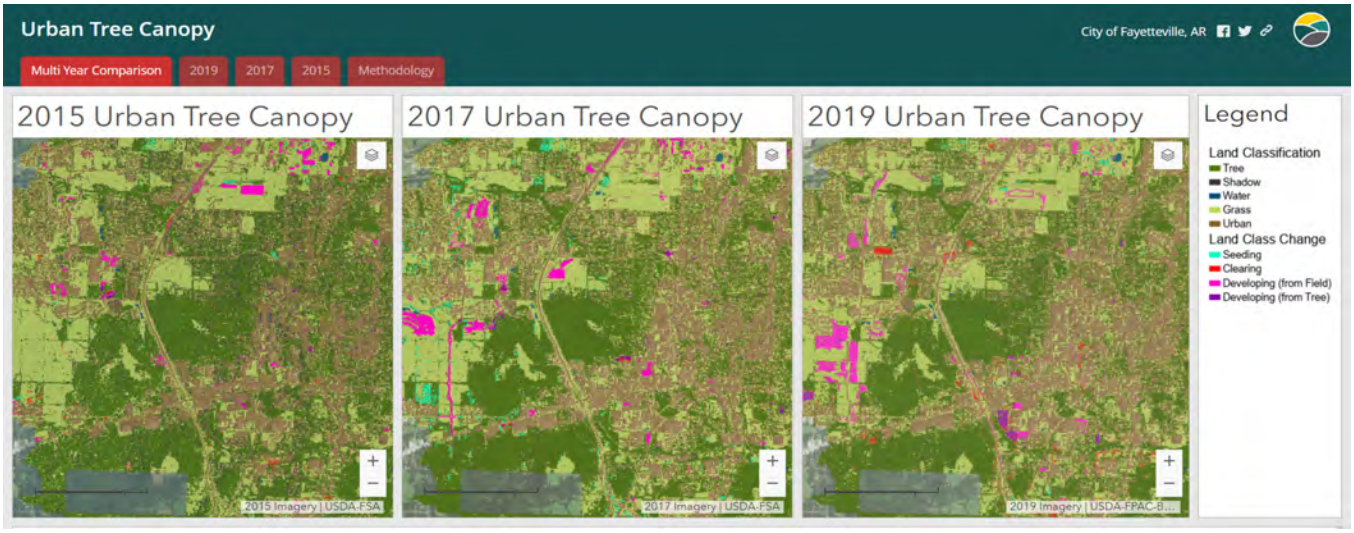

Figure 9. Comparison of canopy in 2015, 2017 and 2019

High-resolution GIS assessments of land cover were completed to identify the extent and opportunities for urban tree canopy cover. The City conducted these assessments based on 2013, 2015, 2017, and 2019 imagery to analyze canopy cover change. A consultant provided an analysis and report on the City's tree canopy cover change from 2002 to 2010 (in 2012), and in 2020, the City's GIS Department completed the Tree Canopy Cover and Environmental Equity study, report, and supporting web map for the 2013, 2015, 2017, and 2019 time periods to examine the correlations between canopy cover and socioeconomic data. (Equity Tree Study).

The difference in reported tree canopy from 2002, 2010 to 2013 and the following years may be due to several factors beyond actual changes in tree canopy:

- Variation in imagery used for the different years of the study.
- Different methods in computing canopy.
- Improvements in the technology and methods used to assess and map the tree canopy.

National Agriculture Imagery Program (NAIP) aerial imagery, captured during the peak growing season, provides optimal data for tree canopy analysis. For this and future reports, the city will use the 2015 city boundary, encompassing 35,457 acres. As the city grows, it can provide data for the new boundaries alongside information based solely on the 2015 city limits. This 2015 boundary will be used to evaluate the success of the ten-year canopy coverage goal (40.6%) outlined in the plan.

Utilizing GIS and NAIP imagery to measure canopy coverage represents a valuable, innovative technology that increases the accuracy of these assessments.

	ACTUAL CITY BOUNDARY			STUDY WITH 2015 BOUNDARY	
Year	City Boundary (Acres)	Tree Canopy (Acres)	Canopy Percent	Study Boundary (2015)	Study Canopy Percent
2013	35,456	14,518	40.95%	35,457	40.95%
2015	35,457	14,217	40.10%	35,457	40.10%
2017	35,457	13,934	39.30%	35,457	39.30%
2019	35,712	14,081	39.43%	35,457	39.71%

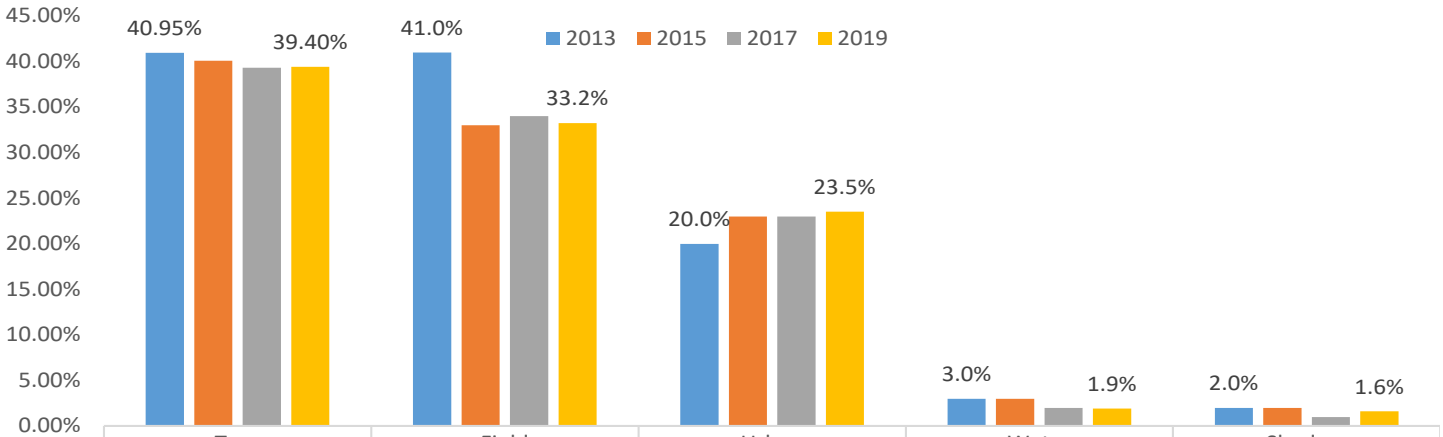

Table 3. Comparison of boundary used for GIS data.

As shown in the previous figure, Fayetteville has demonstrated a proactive commitment to urban forest management by assessing tree canopy cover over several time periods and implementing the recommendations as resources allow. By monitoring the state of tree canopy cover, the City can better understand the urban ecosystem's health and make informed decisions.

Fayetteville's urban forestry efforts have made commendable progress, and the 2024 Urban Forestry Management Plan builds on the progress and guides the City toward a long-term vision. The City must continue its commitment to reassessing canopy cover over time. By measuring changes in tree canopy cover, city planners, urban forest managers, and policymakers can understand how changes and regulations are affecting the health and vitality of the City, as well as the quality of life of residents. Urban forests are dynamic systems that are impacted by a variety of factors, including urbanization, climate change, and invasive species.

LAND COVER CHANGE OVER TIME

From 2013 to 2019, the canopy cover decreased from 43.0% to 39.4% and the land cover classified as field decreased from 41.0% to 33.2%. Urban land cover increased by 3.5% going from 20.0% to 23.5%. This is an increase of 1,400 acres or 2.2 square miles of urban land since 2013. The data is representative of the changes occurring in the City over time as development increases.

	Tree	Field	Urban	Water	Shadow
2013	40.95%	41.0%	20.0%	3.0%	2.0%
2015	40.10%	33.0%	23.0%	3.0%	2.0%
2017	39.30%	34.0%	23.0%	2.0%	1.0%
2019	39.40%	33.2%	23.5%	1.9%	1.6%

Figure 10. Examples of the land cover classes analyzed as part of the tree canopy study.

In Fayetteville, the urban forester within Development Services actively monitors and tracks tree canopy cover change through development regulations and is supported by the urban forester in Parks, Natural Resources, and Cultural Affairs. Comprehensive worksheets and data, along with GIS data, are utilized to track on a monthly and yearly basis. This tracking includes forecasting future canopy growth and loss, and providing staff with clear and reliable guidance on a wealth of information and specifically the following:

- Areas impacted the most by the removed canopy
- Areas to add canopy
- The time it will take to replace the canopy (This can even be tracked on a parcel level or development project level)

Change in tree canopy cover can be used to inform future policy and decision-making. For example, by tracking changes in tree canopy cover over time, city planners can identify areas where new trees may need to be planted to maintain or increase overall canopy cover. The information can also be used to inform land-use planning and development decisions, such as determining where to locate new parks or green spaces.

TREE ORDINANCES IN FAYETTEVILLE

Chapter 167 in the Fayetteville Urban Development Code (UDC) is the Tree Preservation and Protection ordinance. This preservation ordinance preserves and protects trees and natural areas in the City based on the type of project and its location. The regulations require a tree preservation plan and canopy cover retention or the planting of trees to meet minimum canopy cover requirements by zoning designation for proposed development projects.

The table below summarizes the tree minimum canopy cover requirements by zoning designation that are factored into the canopy goals recommended in the Urban Forestry Management Plan. Note, the zoning designations in the table below are consolidated into generalized categories. Specific zoning designations and details for each are available in the UDC, Table 1 of Chapter 167.04.C.

MINIMUM TREE PRESERVATION REQUIREMENTS

ZONING DESIGNATION (CONSOLIDATED)	Percent Minimum Canopy
Residential	15-25%
(single-family, residential office, residential intermediate, multi-family)	*(depending on designation)*
Neighborhood Services	20%
(includes limited and general)	*(for both sub-categories)*
Neighborhood Commercial	20%
Community Services	20%
Thoroughfare	15%
(includes commercial and urban thoroughfare)	*(for both categories)*
Central Business Commercial	15%
Downtown Core	10%
Main Street Center	10%
Downtown General	10%
Neighborhood Conservation	20%
Heavy Commercial & Light Industrial	15%
General Industrial	15%
Institutional	25%
Planned Zoning District*	25%

Table 4. Minimum canopy requirements by zoning designation according to The Tree Preservation and Protection Ordinance.

All residential zoning districts and C-1 districts within the Hillside/Hilltop Overlay District shall have their percent minimum canopy requirements increased by 5% to a total requirement of either 30% or 25%.

Chapter 177, Landscape Regulations, is the ordinance aimed to meet the following goals: a greener, more attractive city with reduced heat, noise and air pollution; and increased property values. The City of Fayetteville requires developers to include landscaping in their building plans to beautify property, provide shade, and screen the perimeters of parking lots, utilities, incompatible uses, and vehicular use areas. Those requirements are found in this chapter of the UDC.

The Tree Preservation and Landscape Manual, created in 1999, updated in 2006, and condensed in 2016, aligns perfectly with the City of Fayetteville Unified Development Code Chapter 167: Tree Preservation and Protection and Chapter 177: Landscape Regulations. This alignment ensures that the manual is a reliable and comprehensive tool for developers and others involved in the development process.

A cursory review of existing tree-related ordinances in Fayetteville was conducted based on industry tools and resources, comparisons of findings from benchmarking research, input gathered from internal stakeholders, and a cross-examination of regulations compared to industry standards and best practices. Appendix C provides a summary of the evaluation of Fayetteville's tree-related ordinances. This integrated approach aims to balance goals for tree canopy cover, development, and other priorities in the future.

SUMMARY OF FAYETTEVILLE'S KEY URBAN FORESTRY PROGRAMS AND RESOURCES

The Urban Forestry team in Public Works performs tree maintenance on street trees not adjacent to private property. They also maintain trees in parks and along the trails.

Tree preservation and protection for new development is performed by the Urban Forester in Development Services. Residential reviews are performed by the Urban Forester in Parks, Natural Resources and Cultural Affairs.

Development Services administers Chapter 167 of the Unified Development Code to ensure Fayetteville maintains, enhances, and preserves trees and the City's natural beauty.

The City's Urban Forestry Advisory Board advises the City Council and the Mayor on urban forestry issues.

Fayetteville Code of Ordinances Chapter 167 Tree Preservation and Protection to preserve and expand the City's urban forest. Chapter 177 regulates landscape for developments.
Volunteer opportunities for tree stewardship and education.

Tree City USA accreditation and Arbor Day celebrations.

Amazing Trees of Fayetteville program and on line inventory.

Celebration of Trees Event and other events celebrating and educating attendees about Fayetteville's urban forest.

The City has an invasive plant ordinance, encourages Ozark native trees, and discourages trees found to have issues.

TREE CANOPY EQUITY

Tree canopy is often not distributed equitably across city landscapes and ownership types. The American Forests organization created the Tree Equity Score (TES, www.treeequityscore.org) tool to measure tree equity across 150,000 U.S. neighborhoods and 486 municipalities in urban areas. Each community's TES indicates whether there are enough trees for everyone to experience the health, economic, and climate benefits that trees provide. The scores are based on how much tree canopy and surface temperature align with income, employment, race, age, and health factors. A 0- to-100-point system makes it easy to understand how a community is doing.

The TES can be used by Fayetteville's community leaders, tree advocates, and residents to address, and evaluate the urban forests through the lens of social equity, guide technical decisions and implementation of the 2024 Urban Forestry Management Plan.

A score of 100 represents tree equity. Based on a 2022 analysis, Fayetteville's overall tree equity score is 87 out of 100. Based on the nationwide dataset for 197,505 U.S. Census-defined urban areas, the average score is 85 (as of 2023).

EQUITY IN TREE CANOPY COVER (TREE EQUITY SCORE TOOL)

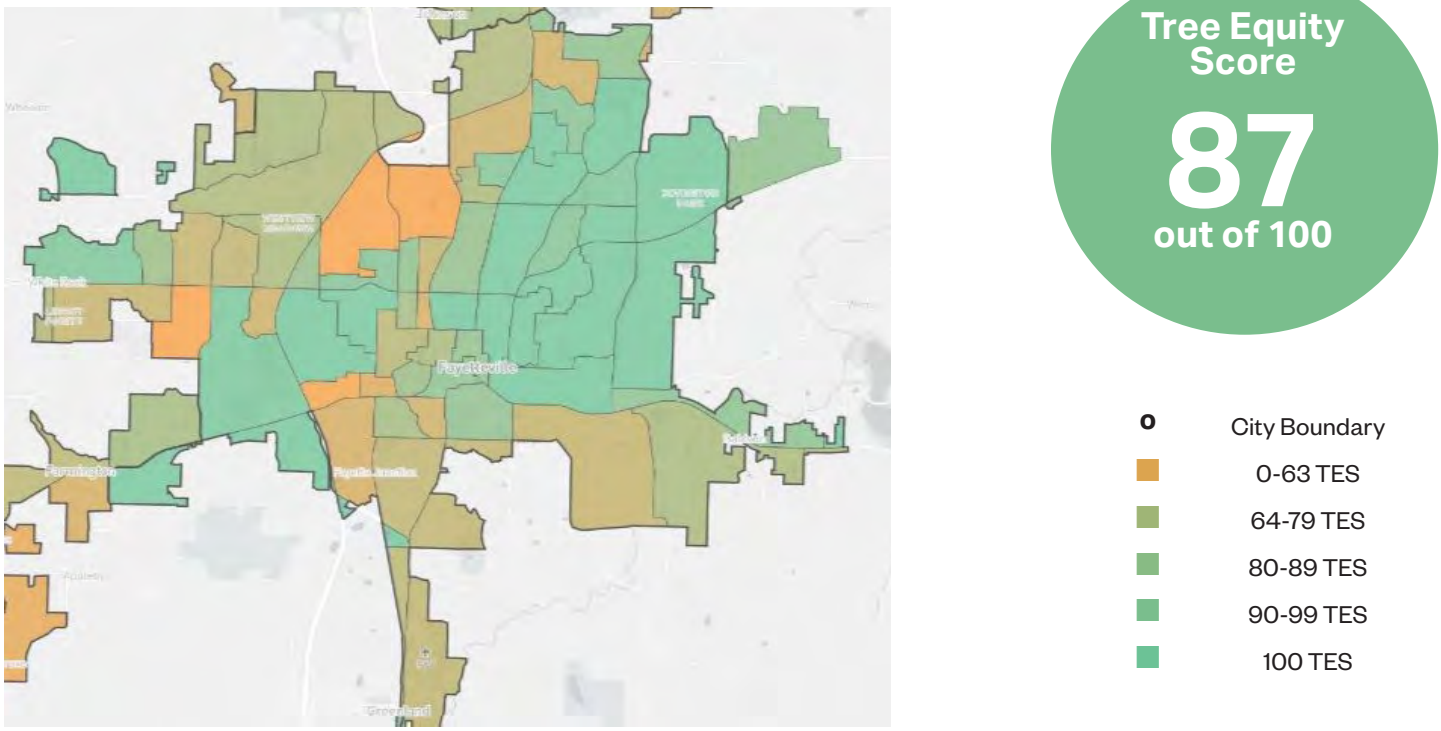

Figure 11. Map showing the Tree Equity Scores for Census Block Groups in Fayetteville. Source: American Forests' Tree Equity Score Tool

Compared to other cities in the state, Fayetteville's Tree Equity Score of 87 is the second highest score out of 10 cities in the study (see figure on the next page) and has the fourth highest score out of eight U.S. Cities commonly used in comparing Fayetteville (see figure on the following page). Fayetteville's score is based on a combination of metrics listed in the figure 12.

Tree equity is being increasingly acknowledged as a priority, and confronting the past practices, to ensure that communities, landscapes, and policies are more intentional about enhancing historically disinvested areas. Fayetteville's Urban Forestry Management Plan seeks to increase canopy in the greatest need areas. Urban Forestry staff has been actively using and will continue to use equity as a criteria for tree planting projects

TREE EQUITY SCORE INPUTS

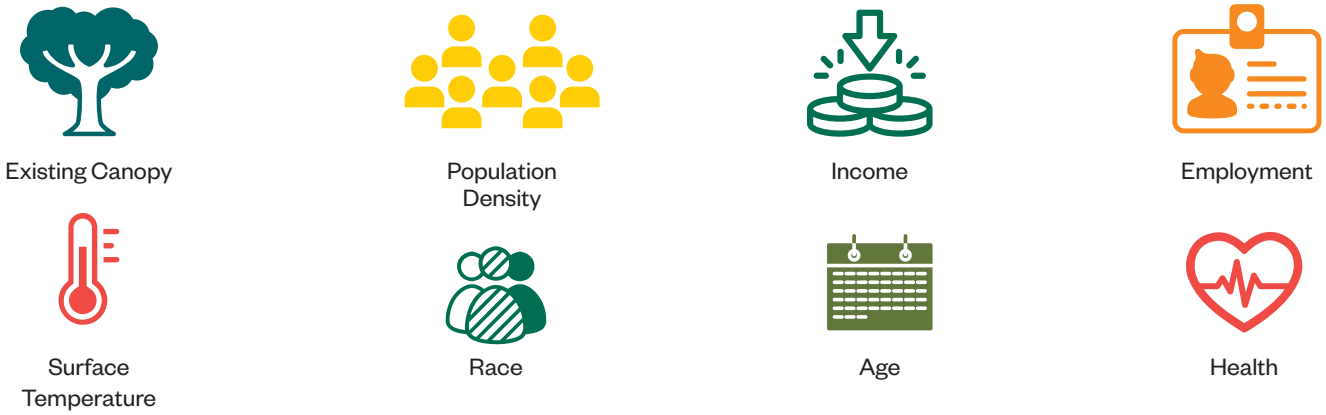

Figure 12. Tree equity data matrix.

COMPARISON OF TREE EQUITY SCORES IN ARKANSAS, AVERAGE: 77

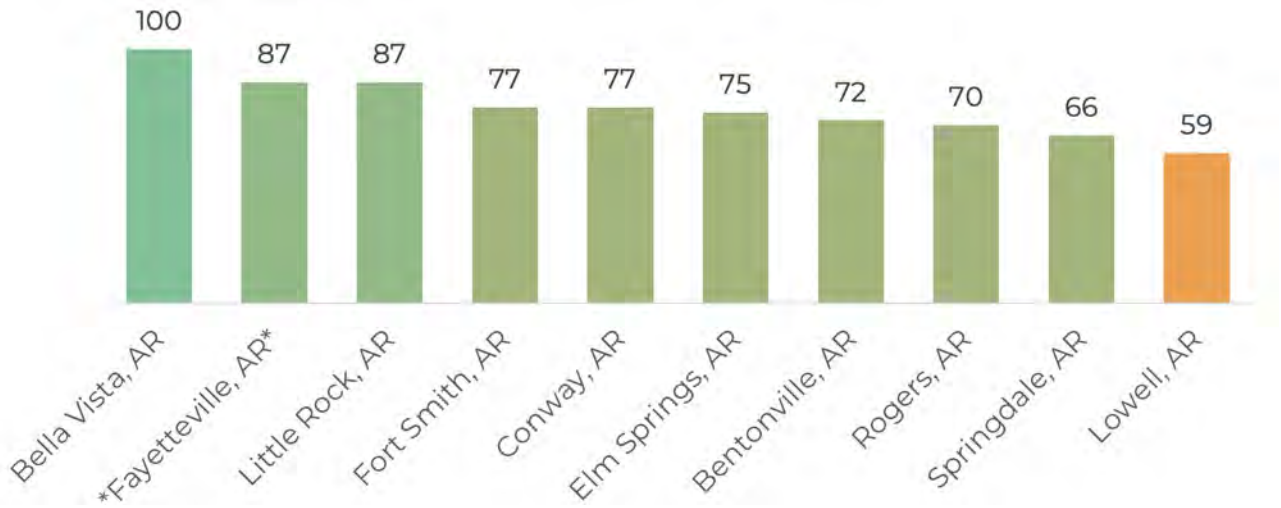

Figure 13. Tree equity score inputs and Comparison of Tree Equity Scores for select Arkansas cities based on a 2023 study. Source: American Forests' Tree Equity Score Tool.

COMPARISON OF TREE EQUITY SCORES IN SELECT U.S. CITIES, AVERAGE: 87

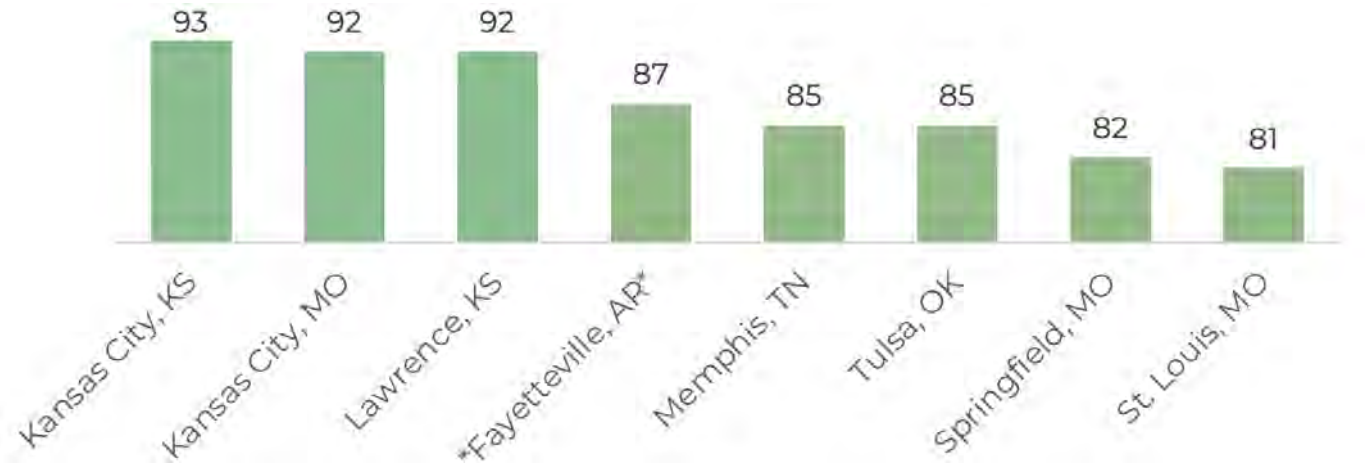

Figure 14. Tree equity score comparison for select U.S. Cities. Source: American Forests' Tree Equity Score Tool.

*Note, the Tree Equity Score tool utilized data from EarthDefine and found the canopy cover percentage to be 35.6%, the UFMP utilizes the 39.4% determined by the City. The numbers by EarthDefine are only used for this comparison. For more information about the data sets and input refer to https://www.treeequityscore.org.

NATIVE PRAIRIE

Photo of Wilson Springs Preserve, a 121-acre preserve with the largest wetland remnant in Fayetteville and one of the last tall grass prairies in the region. Source: City of Fayetteville

In considering a plan for Fayetteville's urban forest and goals to increase tree canopy cover, it is important to evaluate areas of the City where it may not be preferable or permitted to plant trees. While some native prairie lands have been lost to development and other areas are being restored, it's important to consider the native habitats and ecosystems and whether they support growing trees that survive and thrive. Historically, areas of the City were covered in tallgrass prairie, which supported a variety of grasses, wildflowers, and other plants, as well as large grazing mammals like bison and elk. Fayetteville's native prairie land is a rare and valuable ecosystem that is home to a diverse array of plant and animal species.

As mentioned in the background, much of Fayetteville's native prairie land has been converted to other land uses, such as agriculture, urban development, and transportation infrastructure. However, there are still some remnant prairie areas in and around the City that provide important habitat for native plant and animal species. One example of a native prairie area in Fayetteville is the Wilson Springs Preserve, a 121-acre site that is the largest wetland remnant in Fayetteville and one of the last tall grass prairies in the region (Northwest Arkansas Land Trust).

Based on GIS maps provided by the Northwest Arkansas Land Trust (NWALT) and the City of Fayetteville, there are areas of the City that may lend themselves to prairie restoration. The following map provided by Northwest Arkansas Land Trust (NWALT) illustrates an overview of native prairie lands that may lend themselves to future prairie restoration.

CANOPY COVER IN HISTORIC NATIVE PRAIRIE LAND

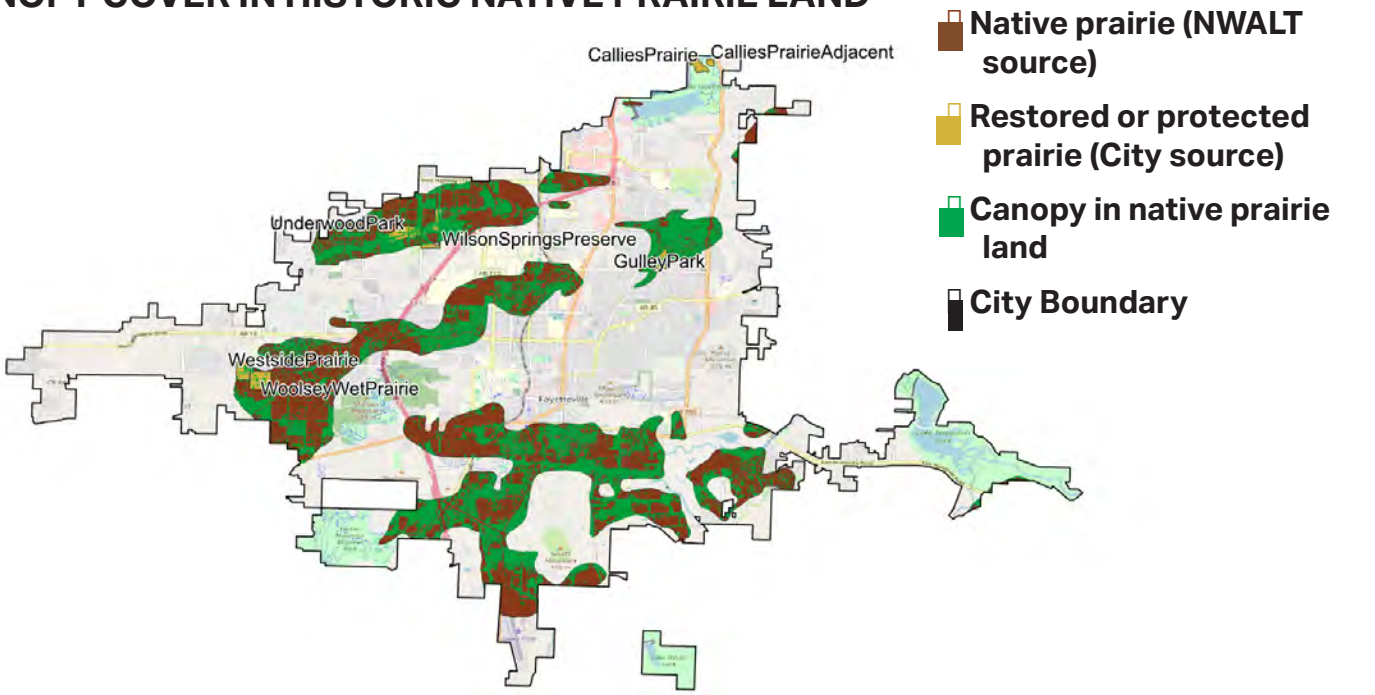

Figure 15. Map of the canopy within native and restored prairie land.

Total Prairie Acres	Total Canopy in Prairies	% of Canopy within Prairies
9,769 total native prairie land acres	1,957 total canopy acres in native prairie land	20% canopy in native prairie land

Figure 16.Acres of native and restored prairie land.

Protected Prairie-related Areas	Acres*
Woolsey Farmstead and Wet Prairie Sanctuary	50
Westside Prairie	40
Wilson Springs Preserve	121
Underwood Park	5 (estimated)
Callies Prairie	33
Gulley	3
TOTAL	**252 acres**

Figure 17. Native and restored prairie land.

As shown in the map and tables above, the City has nearly 10,000 acres of land that was native prairie land. 20% of the native prairie land contains tree canopy which amounts to 1,957 acres of canopy. Over time, the City and organizations have actively restored and protected or preserved portions of this native prairie land as shown in the previous table.

Based on the figures provided by the City, 252 acres of prairie have been restored and/or protected while other native prairie land has been reshaped by development or is vulnerable. In Appendix A explores priority planting areas with a consideration to preserve or restore native prairie land by not introducing trees into the landscape.

THE UNIVERSITY OF ARKANSAS

Aerial photo view of the University of Arkansas campus. Source: University of Arkansas

The University of Arkansas located in Fayetteville owns and manages the urban forest within its campus. The Universities goals for their urban forests may differ from those of the City. While the urban forest within the University contributes benefits to all City residents, the environment, and local economies, the City does not have authority to determine how canopy is preserved, expanded, or reduced. Therefore, an analysis was conducted to look at the amount of canopy on University grounds and the section of this Plan that discusses priority planting areas considers excluding these areas within the University.

The University property was not included in this plan's public or private tree inventory. The University of Arkansas properties were not included in goals or future visions. However, its property and trees were included in the GIS canopy cover measurements. The University, as an independent entity, owns and manages its property, and is not bound by the landscape requirements, tree maintenance practices, or any other landscape regulations enforced by the City of Fayetteville. In the context of this plan, the University operates with a degree of autonomy within the City.

TREE CANOPY COVER WITHIN THE CAMPUS OF THE U OF A

University Acres	Canopy Area (Ac)	Canopy %
377 campus acres	22 acres of canopy on campus	6% canopy on campus

Citywide Acres	35,712
Citywide Canopy Acres	14,081
Citywide Canopy %	39.43%
Citywide Canopy Acres Excluding University	14,059

Table 5. Canopy within University of Arkansas property

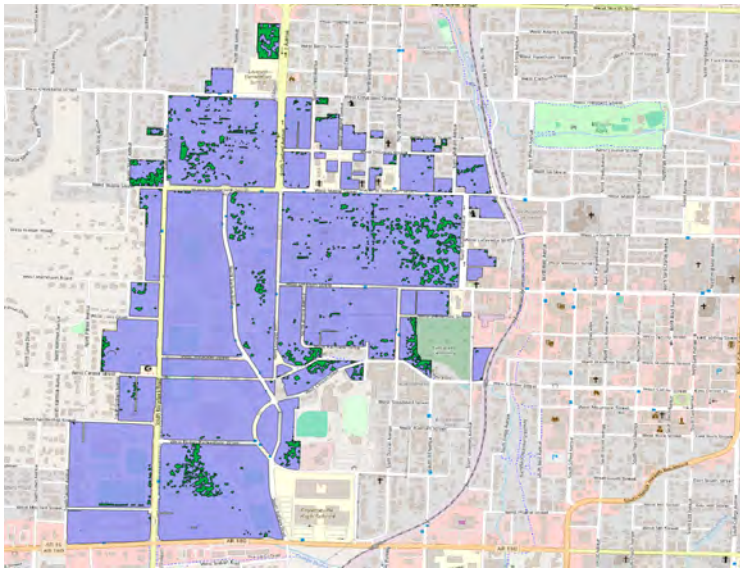

Figure 18. Map displaying tree canopy on University of Arkansas property within the urban core.

University of Arkansas property in urban core

Canopy within University of Arkansas property

As shown in the map and table above, an analysis of tree canopy cover within the University of Arkansas (UA) property in the urban core (excludes the UA Department of Food Science properties to the north) was completed as part of the study. A total of 377 acres of University property were mapped and it was found that within those areas, there are a total of 22 acres of canopy resulting in a 6% canopy for the University of Arkansas.

Although the main U of A campus covers a relatively small area compared to the entire city, the benefits of its tree canopy for students, visitors, and residents warrant ongoing coordination and communication with community institutions and stakeholders. While the University, as state property, is exempt from city development regulations like tree preservation, it is still important to maintain positive relationships with University stakeholders.

TREE MANAGEMENT TEAM

The City's urban forest is governed by a variety of policies, regulations, programs and departments; each bringing important expertise, perspective and resources. Combined, the financial support is estimated at nearly $700,000.

Due to this shared management, Fayetteville is a leading city in urban forestry, having been recognized as a Tree City USA for 28 years, the fifth longest running designation in Arkansas. Fayetteville has also received more Growth Awards than any other city in the state, with 10 awards as of 2023.

Department	Division	Count of FTEs*	Title	Certifications
Development Services	Development Review	1.00	Urban Forester	ISA** Certified Arborist
Parks, Natural Resources and Cultural Affairs	Parks Planning & Urban Forestry	1.00	Urban Forester	ISA Certified Arborist, ISA Municipal Specialist, ISA TRAQ***
Public Works	Park Maintenance	6.00	Urban Foresters	3 ISA Certified Arborists

Table 6. Summary of the departments and staff involved in urban forest management in Fayetteville.

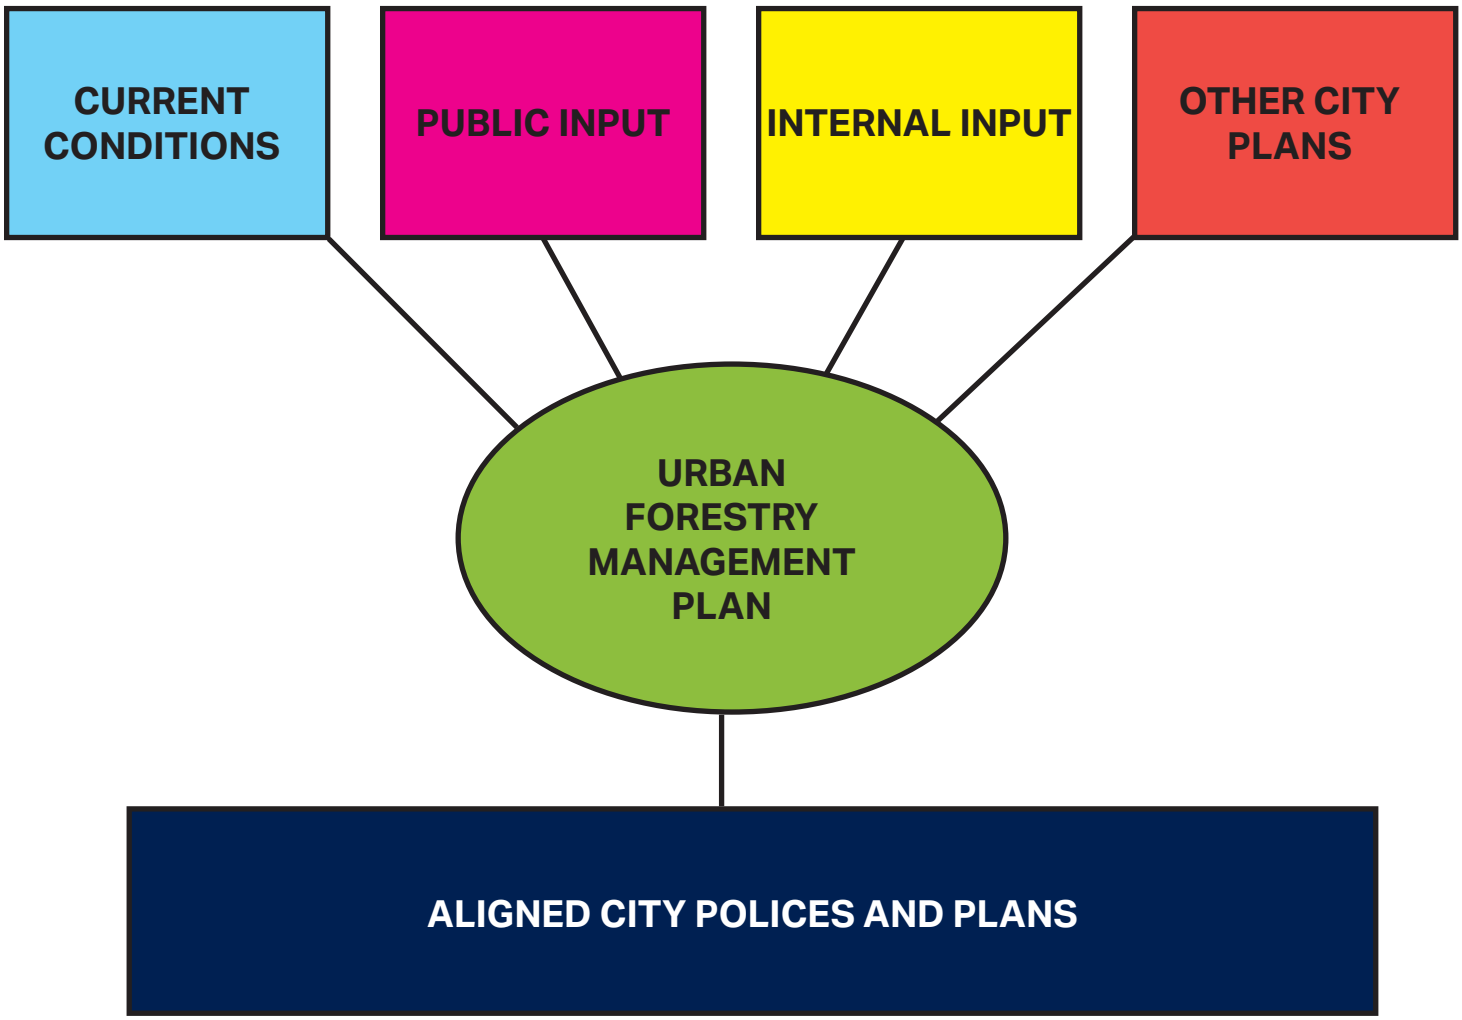
* Full-time employee or full-time equivalent, ** International Society of Arboriculture, *** Tree Risk Assessment Qualification

DEPARTMENT RESPONSIBILITIES

The management of the city's urban forest is divided across three municipal departments. The Parks, Natural Resources and Cultural Affairs Department oversees the City's Urban Forestry Program, which is led by one of the Urban Foresters and supports public street tree maintenance crews. In addition to these responsibilities, the Urban Forester also creates and manages tree planting initiatives, public outreach programs, provides guidance on hazardous trees, and serves as the staff liaison to the City's Urban Forestry Advisory Board.

Development Services' Urban Forester provides services related to development plan reviews and other supporting services. Specifically, the Urban Forester administers, reviews, and monitors regulations within Chapter 167 of Fayetteville's Unified Development Code titled, "Tree Preservation and Protection" and Chapter 177 "Landscape Requirements Code."

Public Works has six Urban Foresters in Public Works Park Maintenance for public street tree and park tree management. The Parks Maintenance Division was integrated into Public Works in 2021 and continues to support Parks, Natural Resources and Cultural Affairs in operations, facility improvements, and tree activities.



Sharing public tree maintenance and management responsibilities across departments can yield many benefits, such as utilizing limited resources efficiently. It is critical that workflows are clear and understood. Fayetteville's urban forest continues to grow and change, public awareness of the City's urban forest and its programs is increasing, and the beneficial impacts of trees to mitigate climate change are understood better than ever. In turn, it is anticipated the service demands will continue to rise, especially as the City implements the Plan's strategies to increase tree canopy cover. As service demand continues to increase so does the need to find methods to increase capacity and efficiency under strained fiscal support.

Section 4: Planning Process

PLANNING PROCESS

Evaluating the alignment of existing policies and plans in Fayetteville with urban forest management elements ensures a strong connection among the programs that manage the urban forest and the projects and initiatives that support them. Proper alignment of urban forestry program recommendations reduces the risk of wasting resources and enables success of key projects that support urban forestry goals. Plans cannot live in isolation, therefore, cross-examining various plans and documents brings to light any projects or initiatives that are a misplacement of resources and time. Tree regulations in the City provide the foundation from which tree canopy cover can be preserved, protected, and expanded while aligning with industry standards and best practices. Regulations for trees on private property are the primary tools for urban foresters to guide private landowners and developers in sustainable practices.

Several documents and resources were reviewed and indexed during the development of the Urban Forestry Management Plan. These documents included:

City Plan 2040 (2020 update): The City of Fayetteville adopted its first comprehensive plan in 1970. The plan, and all of its subsequent updates and revisions, seek to establish a framework of goals, policies, and guidelines to direct future physical, economic, and social development.

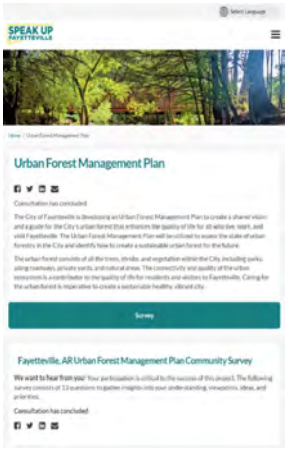
Energy Action Plan (2018): This plan is structured around one overarching goal: reducing greenhouse gas emissions (GHG) for activities occurring in Fayetteville. While GHG reduction is the guiding goal, a host of co-benefits accompany these actions. The plan outlines ways that the City can increase energy efficiency, transition to cleaner fuel sources, improve public health outcomes, build more resilient local businesses, among other core principles.

Active Transportation Plan (updated February 2023): The plan serves as a guiding document for Fayetteville infrastructure and program development related to active transportation. It outlines a network of sidewalks, trails, and bicycle facilities to provide walkers, cyclists, and other users with clear pathways and connections to important city destinations.

Park and Recreation System Master Plan (2023): This plan was in development during the planning stage of the Urban Forestry Management Plan. In February 2023, the Park and Recreation System Master Plan was completed. It exemplifies the City's values in providing a thriving park system for all ages, abilities, and activities. The strategic plan will guide the future of Parks and Recreation for the next decade. It evaluated the existing conditions of the park network and identified areas for growth, improvement, and preservation.

Climate Action Plan: The goal of the Climate Action Plan will inform future policies, programs and actions undertaken by the City and to assist the City in its efforts to remain resilient to the anticipated changes in the climate to preserve the quality of life for those who live, work and play in Fayetteville. Carbon sequestration helps to mitigate carbon dioxide levels. Our urban forests help sequester and store carbon.

The relevant plans and studies are summarized above to demonstrate the parallels among urban forest and other planning efforts in the City. The Urban Forestry Management Plan's long-term framework aims to complement goals and policies within these City plans and studies that pertain to trees in Fayetteville. This evaluation of existing resources serves to reduce conflicting priorities in the City. For more information and cross plan goals see Appendix E: Existing Plan Cross Referencing.



PUBLIC ENGAGEMENT

Engaging internal and external stakeholders is critical to the success of an urban forestry management plan. By involving Fayetteville's staff, residents, businesses, and other stakeholders, the urban forestry team gained a better understanding of the community's needs and concerns. This engagement was woven throughout the development of Fayetteville's Urban Forestry Management Plan, shaping a final plan that reflects the diverse needs of all stakeholders.

To raise awareness and encourage participation, the project team utilized the City's "Speak Up Fayetteville" website (speakup.fayetteville-ar.gov). The website provided background information, project timelines, draft outcomes, and a platform to launch the public survey, allowing the community to stay informed and provide feedback.

From December 2022 through mid-January 2023, a 14-question on line survey was launched on the City's Speak Up Fayetteville website to learn how trees impact the lives of Fayetteville's community members, to gather feedback on canopy goals and priority planting areas, to identify where the City should prioritize resources and investments, and to recognize the benefits and services provided by trees that the community values most.

A total of 169 responses were received. The following provides an overview of the engagement garnered from the effort followed by a summary info-graphic. The majority of respondents own a home in Fayetteville (61%) and are between 25 and 35 years old (28%).

Respondents are engaged with their urban forest in that they understand and appreciate trees providing shade and reducing surface temperatures (62%) and would like to see trees planted where there is historically less canopy coverage (50%). The trees planted should be resilient to pests and diseases, changing climates, limited space, and storm events (40%). To improve public tree health, respondents support setting and achieving canopy goals that are based on reducing heat, improving ecosystems, expanding canopy cover in under served communities, and increasing the benefits trees provide (74%). They would also like to see more trees and preservation incorporated into development projects (66%) and planting trees that can coexist with sidewalks and underground utilities (41%). Future resources and investments that result from the Plan should be focused on strengthening ordinances for private development (70%), purchasing land for conservation (54%), planting trees on public property (51%), and partnering with private property owners to plant trees on private property (41%). To achieve canopy goals, respondents would like to see parks and greenways prioritized (69%), followed by planting trees along streets (68%), on commercial and industrial property (60%), and on school and campus grounds (40%). The kinds of trees respondents would like to see planted include trees and priority areas that are climate-based (56%) and location-based using the right tree right place principle and replanting trees that were removed (25%). Most respondents support watering the street trees adjacent to their property during periods of drought (73%).

The success of this engagement effort is largely attributed to the City's commitment to share the survey and conduct outreach. The survey was announced on the City's website, the Speak Up Fayetteville project web page, social media posts, press releases, news media, and shared throughout relevant partner networks.

The public comment period for the UFMP was open from September 27 to October 11, 2024, allowing time for review and comments. The plan has been presented to the Environmental Action Committee, Parks, Natural Resources, and Cultural Affairs Advisory Board, Planning Commission, and Urban Forestry Advisory Board.

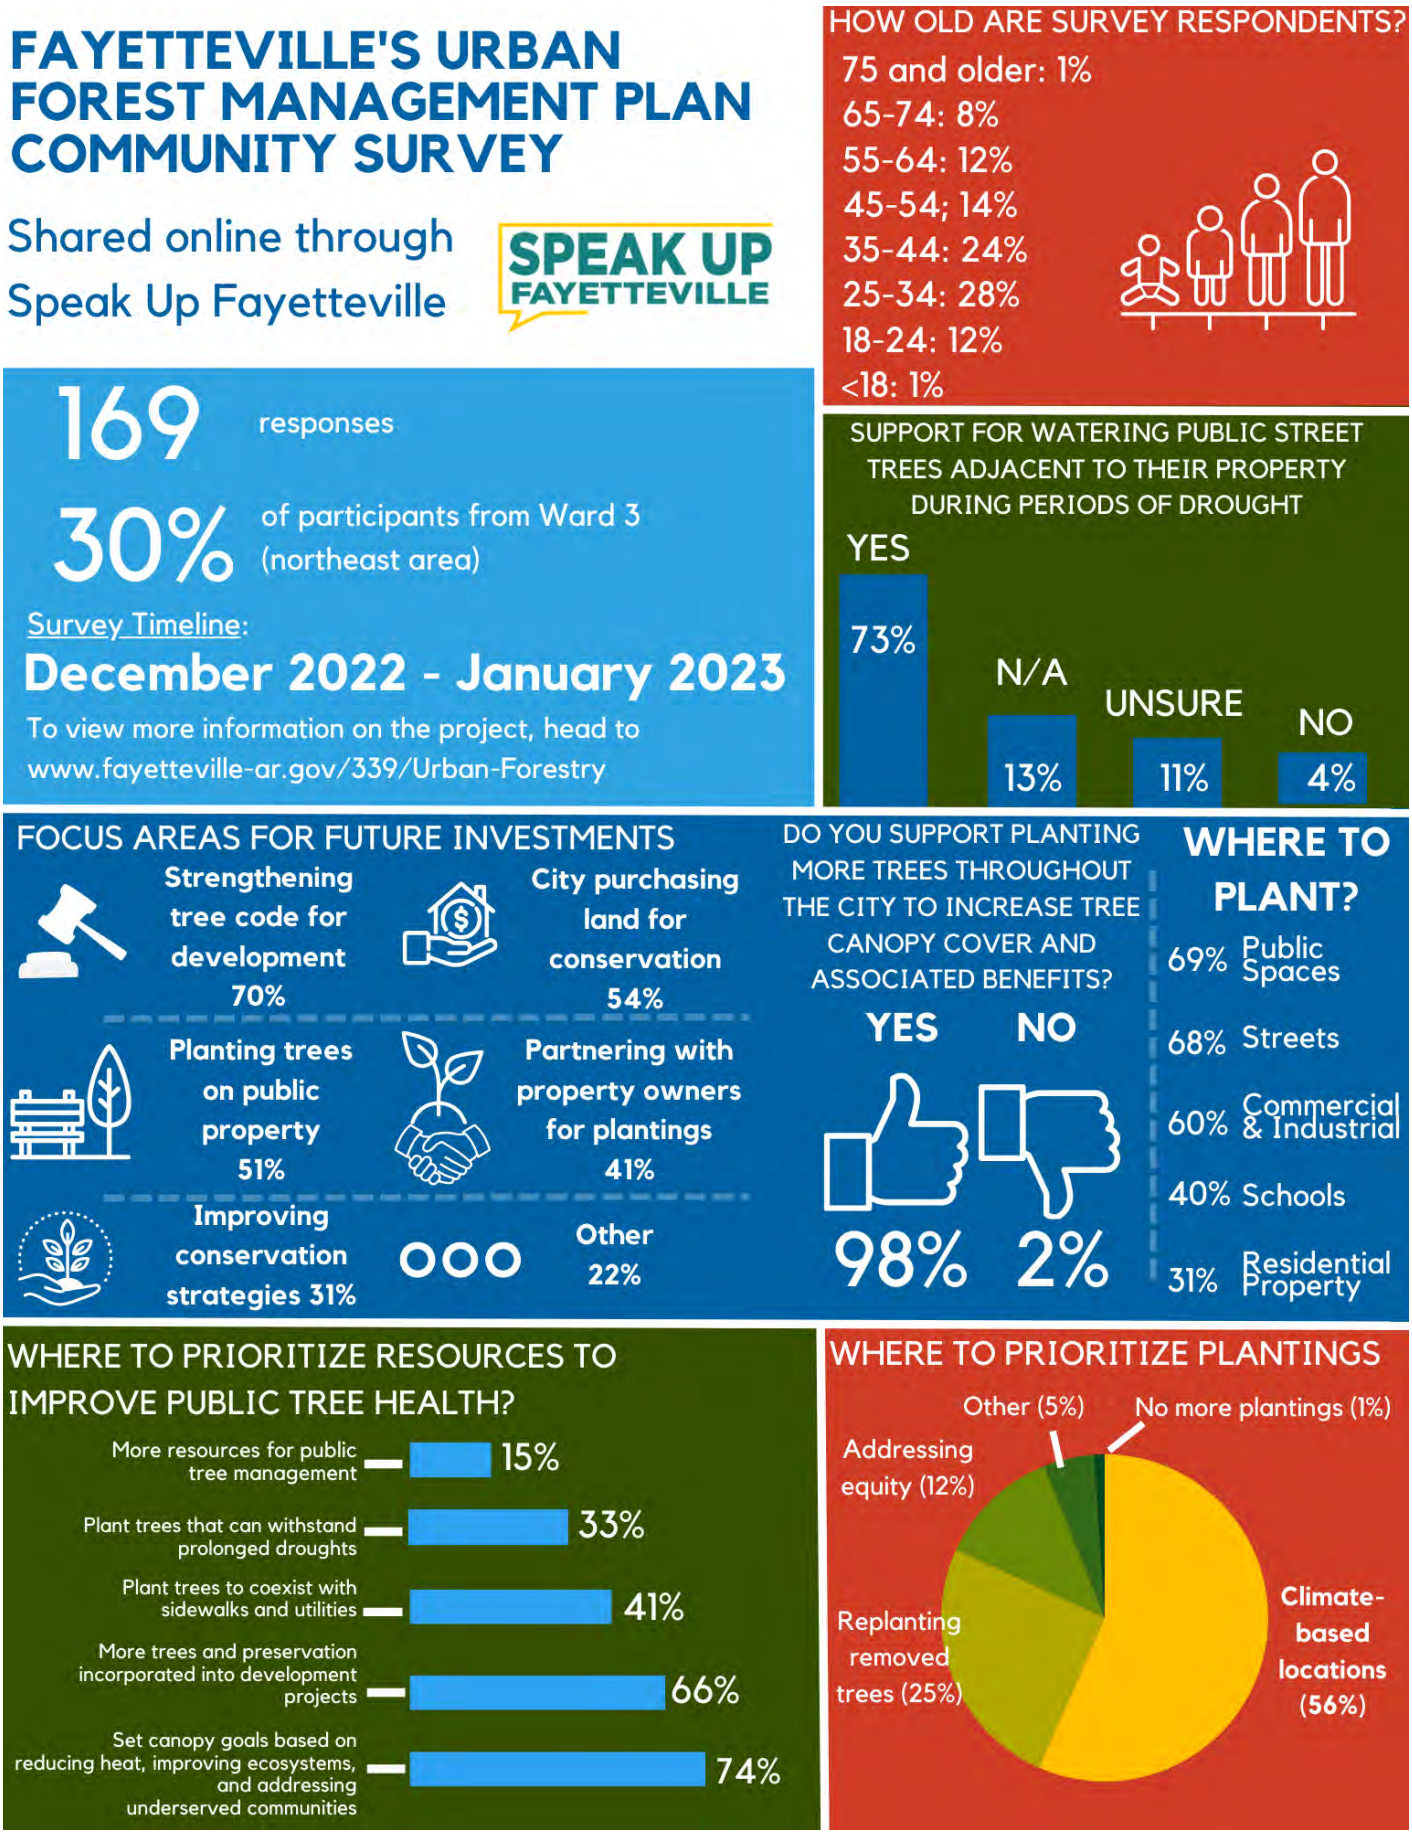


Figure 19. Info-graphic summary of the public's priorities and viewpoints regarding the urban forest.

INTERNAL ENGAGEMENT

In August and September 2022, engagement with City staff in various departments to develop the Urban Forestry Management Plan began with an on line survey to identify workflows, measures of success, concerns, priorities, and shared goals and outcomes as it relates to trees in the City. A total of 28 of the 59 (47%) invited staff and board /commission members participated in the survey and follow-up interviews as desired.

Staff participants represented the departments of Parks, Natural Resources and Cultural Affairs; Public Works; Environmental; and Development Services. In addition, members from the Urban Forestry Advisory Board, Parks, Natural Resources and Cultural Affairs Advisory Board, Environmental Action Committee, Planning Commission, and Keep Fayetteville Beautiful participated.

The figure on the following page provides a graphic summary of responses. Most respondents serve as advocates for public trees and park improvements, over 60% support community recreation and engagement, and half are involved with City planning. Over half of the respondents noted the staffing levels as a challenge, along with needed improvements as they relate to ordinances and infrastructure conflicts (50% each). 46% feel there is more to be done in terms of preparedness planning as well as 46% concerned with the sustainability of ecosystems.

The respondents noted their top priorities to address in the Plan as procuring funding for the City to purchase land for tree preservation and canopy expansion, supporting local businesses and others in the community to cooperatively grow and maintain the urban forest, and increase funding to purchase trees to be planted to support canopy goals.

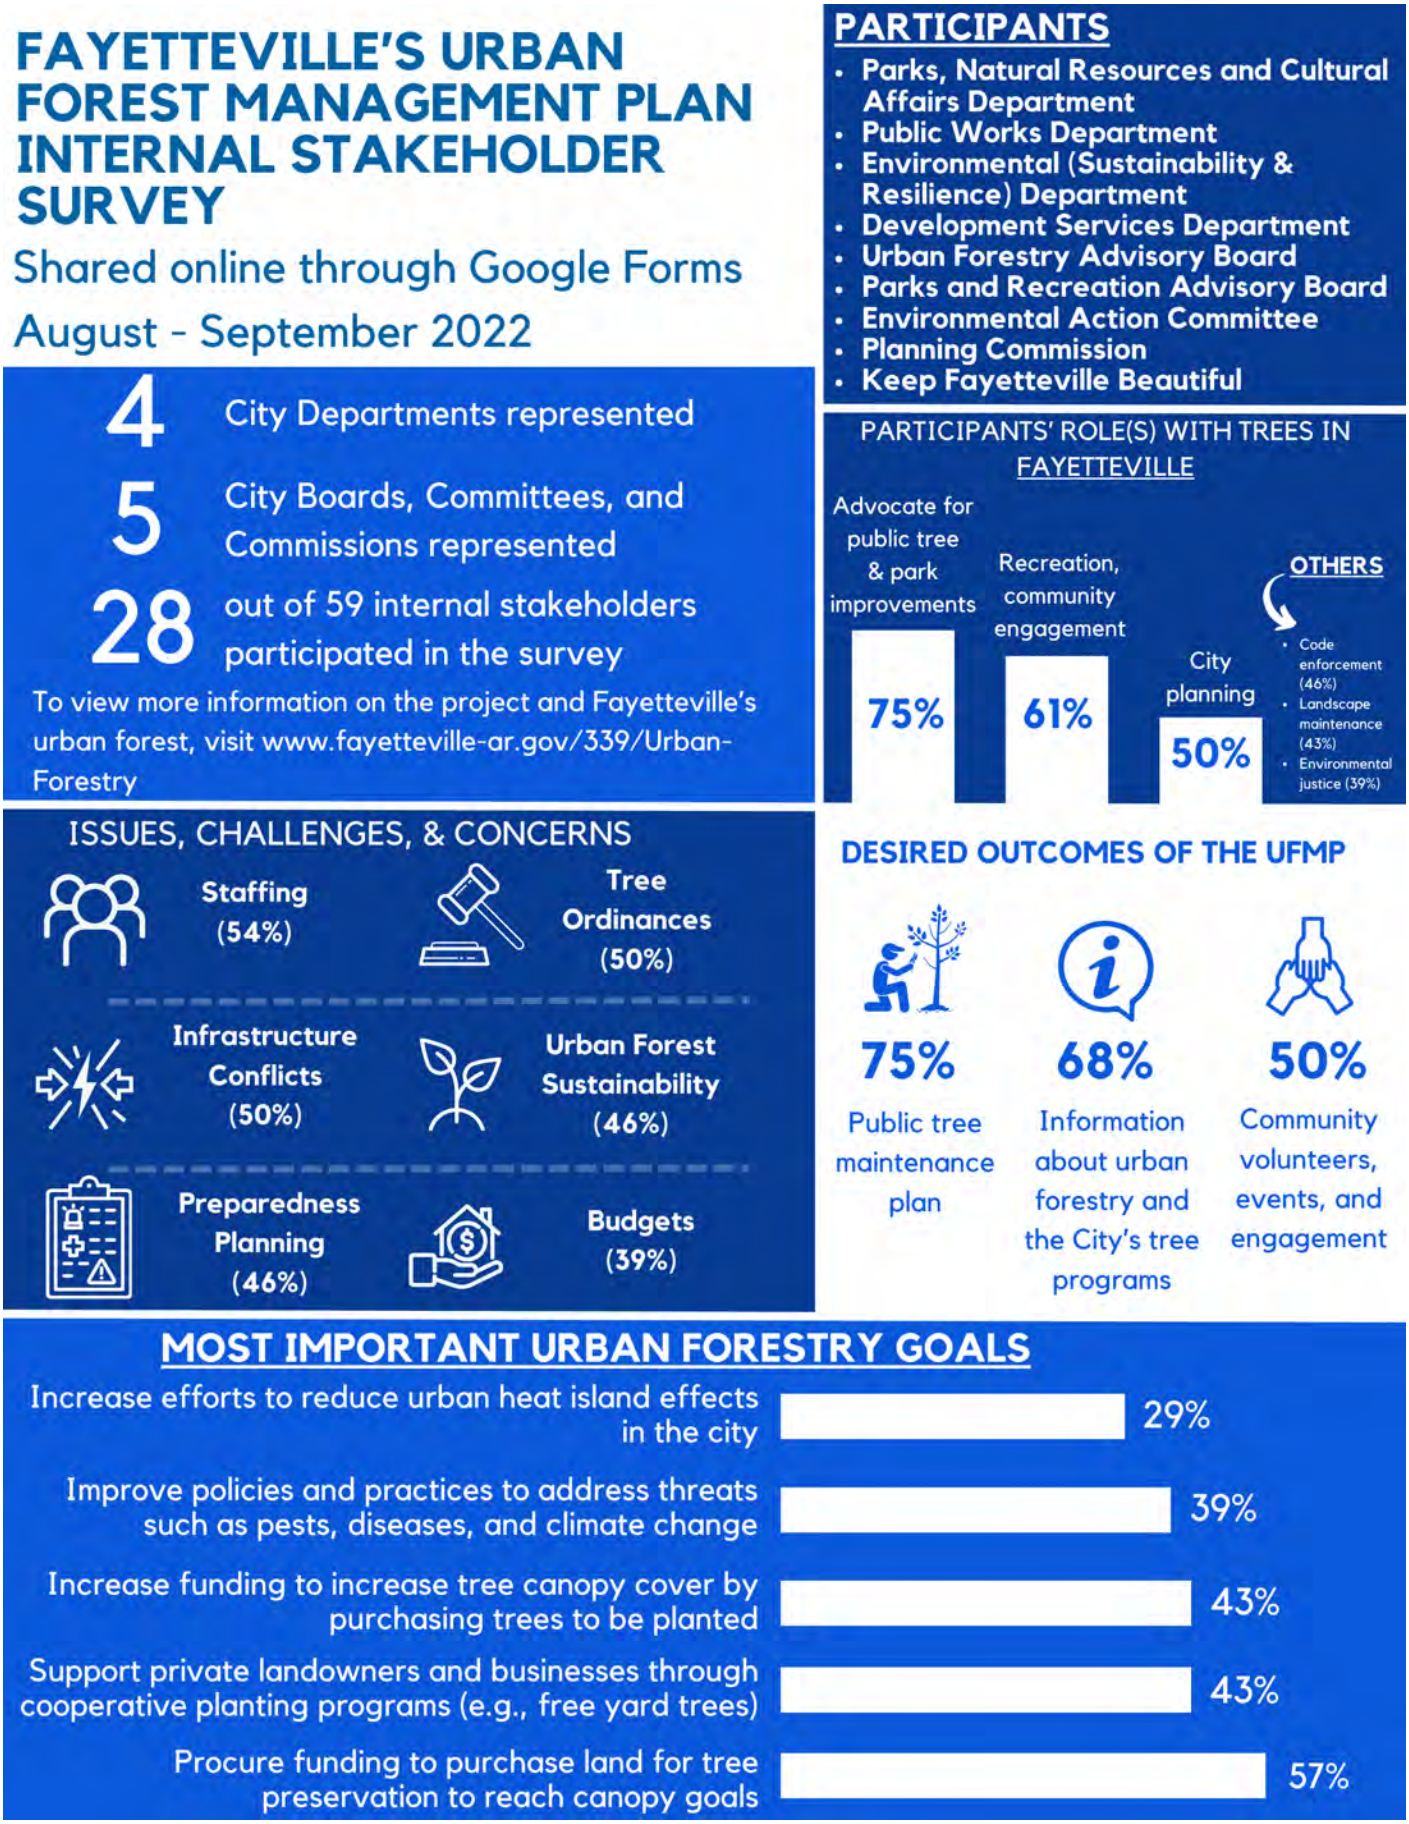

Figure 20. Summary of the feedback received from internal stakeholders.

Section 5: Vulnerabilities

DEVELOPMENT AND LAND USE CHANGE

The Northwest Arkansas Regional Planning Commission (NWARPC) estimates that Fayetteville will grow to a population of 142,496 by the year 2040. This will be an increase of an additional 48,547 people added to the most recent U.S. Census Bureau estimated population of 93,949 in 2020. Planning and anticipating the location, form, and function of land use and growth patterns enables the City and the existing residents to guide where and in what pattern this growth will occur. Relative to neighboring cities, Fayetteville has a large percentage of undeveloped land including swaths of canopy cover and native prairie land. However, according to the City's Urban Forestry Program, Fayetteville lost 35 acres of tree canopy cover in 2022 due to development. While the City's tree ordinances do require tree preservation, protection, and planting to mitigate canopy loss, it is projected that there will be a net loss of 20 acres of canopy solely for those development projects reported in 2022. Additionally, existing urban areas rezoned for more dense development reduce available space for trees and greenspace.

Fragmentation

Development often results in fragmentation of tree canopy, creating isolated populations that are less likely to cross-pollinate. This can reduce biological and genetic diversity of the ecosystem and change the species composition (Fahrig, 2003). It may also result in the loss of buffering potential, such as vegetative stabilization of stream banks. As sites become fragmented and the amount of ecosystem space is reduced, many plants and animals that rely on connected habitats may disappear from the region (Saunders, et al., 1991).

Altered Soils

Urban trees must often survive in compacted soils that have been altered for the built environment. A good growing medium for trees contains approximately 50% pore space (which allows the root system access to the air and water it needs to survive) and a layer of organic matter. In contrast, construction soils typically have less than 25% pore space and organic matter combined.

Competition for Space

Conflicts with hardscapes and utilities often occur when trees are not provided adequate space for root and canopy growth. In rights-of-way, trees may compete for space with signs and streetlights, underground utilities, and overhead electric and telephone lines. As trees outgrow available space, their roots can raise sidewalks as they search for water, air, and growing space. The resulting sidewalk repairs may require removal of the tree or application of alternative sidewalk solutions. The City has regulations and best management practices (BMPs) for addressing these situations.

To prevent and address negative impacts from development, the City of Fayetteville coordinates efforts to ensure projects adhere to City requirements such as tree canopy cover, stormwater management, public safety, and accessibility.

The prevention of future conflicts requires streetscape design that considers the mature size of trees being planted as well as available technologies that allow trees to thrive in this environment. Examples of these unique designs are provided in the graphic below:

EASEMENTS

ROOT BARRIERS

SUSPENDED PAVEMENT

STRUCTURAL SOILS

Figure 21. Streetscape design solutions for preventing or mitigating tree and infrastructure conflicts.

EASEMENTS AND CANOPY VULNERABILITY

Easements grant legal rights to a city, utility, or other municipality to use specific areas of private property for public purposes, such as installing utilities or constructing public infrastructure like sidewalks and roads. However, trees located within these easements can be vulnerable if not properly managed or if regulations fail to adequately preserve and protect the existing tree canopy.

The construction of public infrastructure like sidewalks or roads can lead to the removal of trees due to conflicts with the design and function. Easements may also restrict the planting of trees or other vegetation that could interfere with the installed infrastructure or utilities. This restriction limits the potential for future tree canopy cover in those areas. Additionally, the installation of underground utilities in City easements can damage tree roots, potentially causing tree decline or death. Maintenance activities such as pruning or tree removal may also be necessary in easements to ensure proper functioning of public infrastructure. However, if not done properly, these activities can result in the loss of valuable tree canopy cover.

An analysis of tree canopy within Fayetteville's easements was conducted in 2023 utilizing the City's 2019 tree canopy data, to determine the impact of potential canopy loss. The City contains a number of different types of easements ranging from access, aviation, conservation, drainage, utilities (e.g., gas, sewer, and water), grading, landscape, private, sidewalk, telephone, trail, and tree preservation. The potential for tree canopy gains and losses largely depends on the intended use of the easement, responsible parties, and the regulations.

CITY EASEMENT TYPES

- Conservation
- Tree Preservation
- Drainage
- Utilities

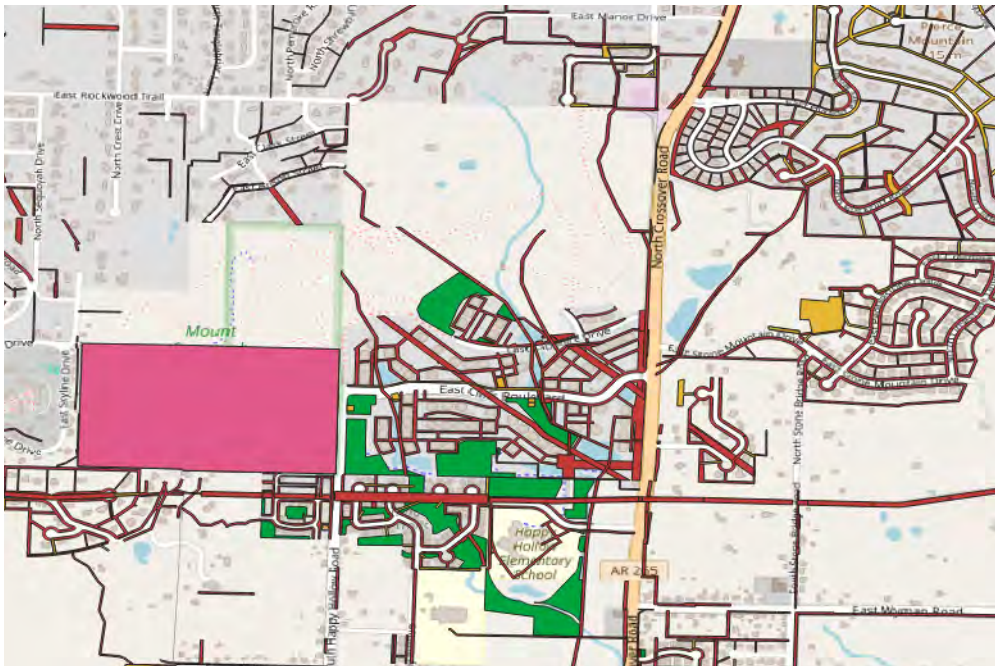

Figure 22. Examples of the types of easements found in the City of Fayetteville.

The table and map below describe the easement types vulnerable to canopy loss

Canopy Likely Preserved	Canopy At Risk ("Vulnerable Easements")	Areas to Proactively Preserve Canopy
Conservation, Tree Preservation	Access, Null, Aviation, Drainage, Utilities, Grading, Landscape, Private, Sidewalk, Telephone, Trail,	Access, Landscape, Sidewalk, Trail,

Table 7. Potential vulnerability to canopy loss by easement type.

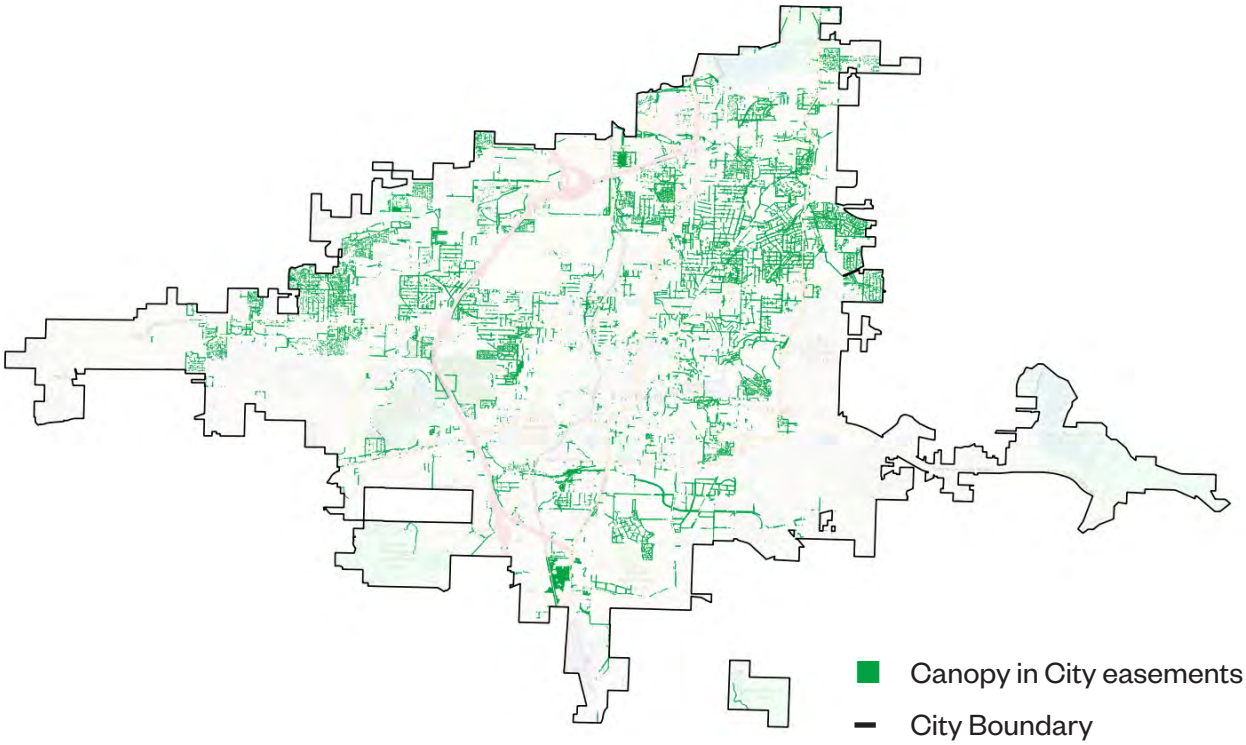

Figure 23. Canopy cover within vulnerable easements.

Acres of Vulnerable Easements	Acres of Canopy in Vulnerable Easements	% Canopy of Vulnerable Easements	Impact on Citywide Canopy Cover
3,981 total acres of vulnerable easements	1,015 acres of canopy in vulnerable easements	25% canopy within vulnerable easements	2.6% potential loss (39.4% reduced to 36.8%)

Table 8. Summary of vulnerable canopy in City easements.

Based on these categories, the vulnerable easements amount to a total of 3,981 acres and within that area, there are a total of 1,015 acres of canopy or 25%. The 1,015 acres of canopy represents 7.2% of the total citywide canopy cover (14,081 acres). This means that if the trees in these easements are not protected and canopy is removed, the City's canopy cover of 39.4% would be reduced to 36.8%.

CLIMATE CHANGE IMPACTS

As the effects of climate change take hold, already stressed trees will decline more rapidly, and healthy trees will have to endure multiple stressors to survive and thrive. The extreme heat and drought will reduce water availability, the plant hardiness zone will shift and introduce invasive plant species, stronger storms will occur resulting in more downed trees and limbs due to the canopy declining, and existing and introduced tree pests and diseases will flourish as trees continue to weaken.

If the City does not commit to a long-term proactive approach and disciplined investment to improve the health and reliability of the public trees, Fayetteville will fight a costly, reactive and escalating battle against failing trees, which will have a detrimental impact to public safety, budgets, tree crews, road closures, and utility reliability. The negative environmental, public well-being and scenic impacts will also be significant. With a quarter of Fayetteville's public street trees in fair or worse condition, and with climate change altering the types of species that thrive, the City's tree canopy is at considerable risk.

URBAN HEAT

Like many urban areas, Fayetteville is experiencing the detrimental effects of excessive summer heat. Urban heat island is a phenomenon that describes the higher air and surface temperatures in urban areas compared to surrounding rural areas. The temperature difference is largely due to the prevalence of buildings, roads, and other elements of the built environment that absorb and retain heat. Increased emissions of greenhouse gases and reduced tree canopy serve to magnify these impacts. Without strategic intervention, urban heat threatens the well-being and health of the community, particularly vulnerable populations lacking the cooling shade of trees.

With urban heat rising, the concern of tree decline is at the forefront of planning in urban areas. To understand Fayetteville's urban forest vulnerability to urban heat, analyses were conducted to measure and project potential impacts on its trees. These impacts include:
Increased stress on trees: Urban heat adds to stress trees are already facing from factors such as air pollution, drought, and pests, making it more difficult for trees to survive and thrive.

- **Reduced tree growth:** Urban heat can slow down tree growth, which can lead to a decline in the overall health of the urban forest.
- **Increased tree mortality:** Urban heat increases the risk of tree loss, which can lead to gaps in the urban forest.
- **Reduced air quality**: Urban heat tends to hold pollutants in the atmosphere, worsening air quality. This places an additional burden on trees' air purifying capabilities while also having a negative impact on human health and the environment.
- **Changes in plant communities**: Urban heat can lead to changes in the composition of plant communities as some species are more tolerant of heat than others. This can lead to a loss of biodiversity in the urban forest.

Figure 24. Illustration of the temperature difference in urban areas due to the urban heat island effect.

Changes in Plant Communities

Climate change will have a dramatic impact on the tree species that can survive and thrive in Fayetteville. To inform the Plan's recommendations, the USDA (United States Department of Agriculture) Forest Service Climate Change Tree Atlas was utilized to model habitat changes for tree species growing in the southeast region of the United States, which includes Arkansas. However, some native species are not currently modeled in the Tree Atlas and no cultivars or exotics are included (Iverson, et al., 2019).

The tables below list tree species that may be found growing in Fayetteville and their predicted vulnerability to habitat loss due to changing conditions. It also includes the proportion of those tree species that are currently in Fayetteville's public tree population based on the 2022 sample inventory.

Predicted Habitat Change	Tree Species Common Name	Percent of Fayetteville's Public Trees
SPECIES HABITAT PREDICTED TO INCREASE **Note: this list is not all inclusive or a recommendation, it is an ever-evolving list. The City will decide on the types of species to be approved.**	Princeton Elm	7%
	Post oak	6%
	Willow oak	6%
	Blackgum	4%
	New Harmony Elm	3%
	Red maple	3%
	American elm	3%
	Eastern redbud	3%
	~~Green ash~~ (Emerald Ash Borer)	2%
	Eastern red cedar	1%
	Winged elm	1%
	Water oak	1%
	Eastern hop hornbeam	1%
	Honeylocust	1%
	Flowering dogwood	1%
	Tulip tree	1%
	Osage orange	1%
	Shortleaf pine	1%

Total		**16%**

Table 11. USDA Forest Service Climate Change Atlas for tree species habitat in Arkansas predicted to decrease (low emission scenario).

Figure 25. Climate change vulnerability of Fayetteville's public street trees. Source: USDA Climate Change Atlas

Important Note: The USDA Forest Service Tree Atlas models predict habitat change for 134 native tree species in the eastern United States. The research is then modeled for tree species in the southeast U.S. including Arkansas. Some native species are not currently modeled in the Tree Atlas and no cultivars or exotics are included. With limited data currently available on the resilience and vulnerability of native Arkansas tree species, this table provides a glimpse of how the species composition of Fayetteville's urban forest may change.
Web source: www.fs.usda.gov/nrs/atlas/tree/

According to the Climate Change Atlas and based on the 2022 sample inventory of Fayetteville's public street trees, 51% or an estimated 12,703 trees are expected to have their growing conditions and habitat improve and increase due to climate change. 12% or 2,913 public trees in Fayetteville are predicted to not be impacted by changing climates and 16% or 3,899 trees are predicted to be negatively impacted by climate change and experience habitat loss.

URBAN TREE PESTS AND DISEASES

Pests and diseases add to the existing stresses faced by trees in an urban environment. Stressed trees are more vulnerable to insects and diseases, although some pests and diseases pose an equal threat to healthy trees. Climate change can create conditions that are favorable for the spread of pests and diseases. Also, prolonged drought stresses trees causing them to be more susceptible to pests and diseases.

Though emerald ash borer (EAB) was found in Arkansas in 2002, it is still a concern for the ash (Fraxinus) trees across the City. From the sample inventory of public trees in 2022, it is estimated that 2% (600 trees) are ash trees. Currently, the City does not treat any ash trees on public land, but ash trees are no longer planted or recommended.

The insect attacks and kills healthy as well as stressed trees, causing catastrophic loss to all ash species. Its impact on the structural integrity of host trees can cause these trees to become safety hazards.

Figure 26. Emerald ash borer (EAB) insect (top), dieback (left), larvae (bottom left), borer holes (right), and larvae galleries (bottom right). Source: AR Department of Agriculture

Sudden oak death (SOD) is caused by Phytophthora ramorum, a fungus-like microorganism. At least 90 species of trees and woody ornamentals are hosts for SOD. Changing climates may cause SOD to become more widespread and harder to control. The disease produces rapid decline in oaks and other tree species; death may occur within months to years later. Symptoms include bleeding cankers on the lower trunk, and leaf spots. Control of SOD is focused on early detection and eradication of infected plants.

Figure 27. Sudden oak death (SOD) wood and bark discoloration.The lesions and discoloration of leaves of one of the 90 different tree species SOD impacts. Source: AR Department of Agriculture

Dutch elm disease (DED) is caused by a fungus (Ophiostoma ulmi) that infects the vascular system of elm (Ulmus) trees. The disease propagates on a number of different elm species but the majority of cases in Arkansas have been found on American elm (Ulmus americana).

Figure 28. American elm identifying features (left), leaf flagging symptom of Dutch elm disease (middle), and gallery of bark beetles that are the vector for the Ophiostoma ulmi fungus. Source: University of Arkansas Cooperative Extension Service

Bacterial leaf scorch (BLS) is a systemic disease caused by the bacterium Xylella fastidiosa that disrupts the transportation of water through the tree. It is commonly transmitted by insects with piercing mouth parts, impacting sycamore, sweetgum, American elm, and various maple, oak, and other tree species. With higher temperatures and drought predicted, the impact of BLS on Fayetteville's trees is likely to increase.

A B C D

Figure 29. Bacterial leaf scorch observed on oak (A), redbud(B), elm (C), and maple (D) leaves. Source: University of Arkansas Cooperative Extension Service

There are other pests and diseases to monitor such as the jumping oak gall disease affecting white oak trees, tent caterpillars with a wide range of hosts, oak wilt, red oak borer insect, thousand cankers disease, laurel wilt disease, and the threat of Asian long-horned beetle that prefers maples but also has a wide range of preferred host tree species. Additional information regarding tree pests and diseases can be found at the University of Arkansas Cooperative Extension Service.

Section 6: Vision, Recommendations, and Implementation

INTRODUCTION

This section provides guidance and recommendations for the City of Fayetteville to continue to provide high levels of service now and into the future over the next 10 years. The Urban Forestry Management Plan's recommendations include those that may only take a few months and others that will require a coordinated effort that may need to continue on beyond the 10-year time frame.

PLAN VISION STATEMENT

"Healthy Trees, Healthy City: To cultivate a thriving, diverse, and well-maintained tree canopy that enhances the livability, health, and sustainability of our community for current and future generations."

VISION

What does the urban forest and its programs look like ten years from now?

The vision guides direction on where Fayetteville is headed and helps guide recommendations for the future.

GUIDING PRINCIPLES

What are we aspiring to achieve?

These are the aspirations for the City over the next 10-years. They are key themes for organizing the plan and include a citywide canopy cover goal.

GOALS

How do we achieve our principles and vision?

The goals are specific opportunities for the City to move toward the 10-year vision.

STRATEGIES

What is the approach to take?

Strategies provide the general direction or method to take to achieve the goals.

Priority Actions

What is the next Step?

This is the prioritized list of steps to take.

GUIDING PRINCIPLES, GOALS, STRATEGIES, AND ACTIONS

Fayetteville's Urban Forestry Management Plan aims to guide the City in managing, protecting, and growing its urban forest. The goals, strategies, and priority actions are developed based on research and analysis of available data, extensive internal and external engagement, and an evaluation of urban forest sustainability criteria. The resulting goals and recommendations address the current conditions, existing and potential challenges, and shared priorities.

To achieve the vision for the urban forest, a citywide canopy cover goal 44.4 % over 30 years was established as the cornerstone metric for tracking progress in implementing the Urban Forestry Management Plan. This metric can be used by the City to track and monitor the urban forest, it resonates with residents, creating a tangible and shared vision of a lush and vibrant urban environment. Moreover, the canopy cover goal aligns with other goals and priorities in the City such as environmental stewardship, climate change resilience, public health, air quality enhancement, and temperature moderation. By using canopy cover as an overarching measure, Fayetteville ensures a comprehensive approach that not only improves the urban ecosystem but also fosters a sense of pride, unity, and responsibility among its residents.

Fayetteville's Tree Canopy Cover Goal

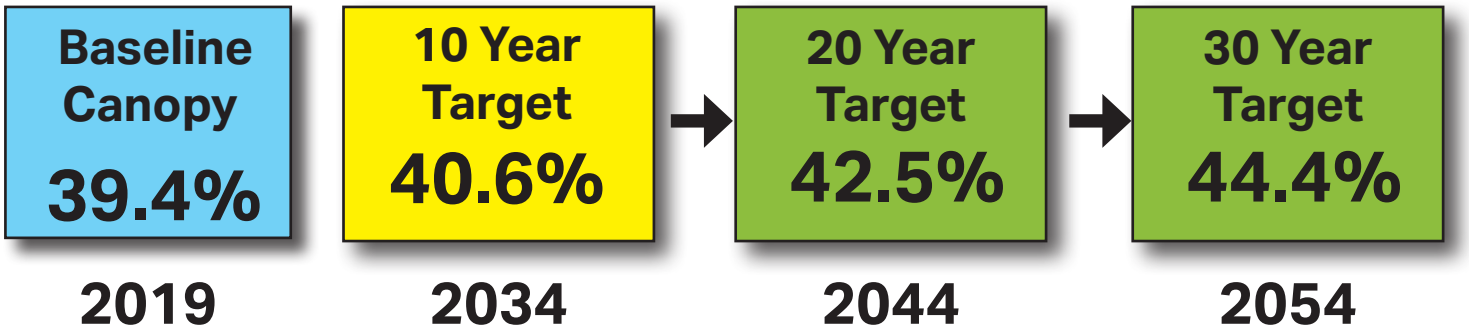

Table 11. Fayetteville's canopy goal milestones and targets.

The overall 30-year goal is to increase canopy from 39.4% to 44.4%. The first step in achieving the 30-year goal is to focus on the actions necessary for the next ten years. The ten-year goal is to increase canopy by 1.2% to 40.6%.

The city's goal of adding 1,850 net trees (trees that reach a level of maturity past their most vulnerable stage of growth) is flexible, with the trees coming from three sources: city plantings, tree giveaways, and citizen plantings. This innovative approach prioritizes maintaining trees to maturity over simply planting a large number. The plan starts by determining how many trees the Public Works Urban Foresters can realistically maintain over the next three years. The direct citizen tree planting program is the second component for reaching the 1,850 net tree goal. Finally, the number of trees given away will be adjusted as needed to ensure the overall target is met. By using realistic mortality rates, the city can better understand and achieve its tree-planting objectives. The example below illustrates how this flexible approach can be implemented.

Planting Sources	**Annual Planting**	**Survival Rate**	**Net Trees**
City Planting	450	90%	405
Citizen Planting	100	90%	90
Subtotal			**495**
Tree Give Aways	2085	65%	1355
Total Net Trees			**1850**

This example shows that even though we need to adjust for fluctuation in maintenance capacity and participation in neighborhood plantings, we can still achieve our 1850 net tree goal. Using this integrated approach, along with preservation and mitigating the loss of canopy, the City of Fayetteville can be confident that this ambitious goal is achievable.

City Plantings

Public Works Urban Forestry staff has maintained information that lets us know how many trees our maintenance staff can care for each year. Newly planted trees require regular watering, structural pruning, mulching, and monitoring for pests and diseases. After 3-5 years, the regular maintenance is lower and requires pruning every few years as needed. We use a 90% survival rate for our newly planted trees. Communication from Public Works Urban Forestry is key to knowing what our annual tree planting will be for the following year. The number of trees planted by the City will fluctuate based on the maintenance capacity of our Public Works Urban Forestry staff.

Citizen Plantings

Urban Forestry Staff has created a pilot program that works directly with property owners and homeowners' associations to add trees on streets, in lots, or around detention areas. These programs are currently adding

approximately 100 trees annually to the canopy. The survival rate for these trees is estimated at 90% since the homeowners will be planting them directly and maintaining trees on their property. The annual number of these types of plantings is targeted to grow.

Tree Give Aways

The city currently hosts two annual tree giveaway events - the Celebration of Trees and the Invasive Plant Bounty - which provide 1,250 free trees to residents. To further expand these efforts, the city could create additional tree distribution programs around Earth Day, Arkansas Arbor Day, and National Arbor Day. Given the strong community interest and attendance at these existing initiatives, expanding the opportunities for residents to receive free trees would be a valuable program addition.

Urban Tree Mortality

Trees do have a lifespan that is typically much longer than humans. However, we must account for natural tree mortality, as 1.1% of the tree stock is estimated to be lost annually (Nowak & Greenfield, 2012).

Our city has a diverse tree population, including forests, public, and private trees. The natural mortality in city forests is offset by replacement and natural regeneration, so the overall forest canopy remains stable.

In contrast, the City actively replaces dead and dying trees on streets, parks, and other municipal properties. Private property owners are also accounted for in the biannual NAIP canopy assessment, and tree replacement programs like Celebration of Trees and partnerships with POAs/HOAs help replant dead trees and add new trees to barren yards.

By addressing tree natural mortality while actively replenishing the urban canopy through public and private efforts, the city is able to maintain a healthy, sustainable tree population. This helps us focus on adding to our overall tree canopy.

Development

It is estimated from available data that approximately 3,728 trees are planted annually due to development activities. The tree planting numbers presented in this plan are based on a no net canopy loss, meaning a balance of canopy loss, regardless of cause, with canopy growth through private and public tree plantings and natural regeneration across the city. Development activities that remove the canopy must be mitigated to reach the canopy goals, which is part of the standards and purpose in 177.01 B1: “Promoting reasonable conservation and replenishment of valued tree canopy and vegetation.” Urban Forestry staff suspects this is insufficient to replace the lost canopy from development.

The primary goal of the Urban Forestry Management plan is to increase the city’s overall tree canopy from 39.4% to 40.6% over the next 10 years. While development has the largest impact on the city’s tree canopy, with some projects resulting in tree loss, particularly in wooded areas, other projects in less treed areas like agricultural fields are expected to gain canopy. To minimize canopy loss, the city’s development code requires a minimum tree cover that must be met for each parcel, with tree mitigation required if a parcel cannot fully meet these requirements. Extensive tree planting efforts from both public and private sources will be required to achieve the targeted 1.2% canopy increase.

Studying and tracking development impacts to the tree canopy is crucial for the Urban Forestery program to respond to evovling conditions.

PRIORITY PLANTING AREAS

Maintaining and selecting locations for trees to reach maturity requires careful planning and consideration of the location. The following maps are recommended to be used when selecting tree planting areas, these areas are high priority and can have the biggest impact. Social, economic, and environmental considerations go into locating areas for tree planting projects.

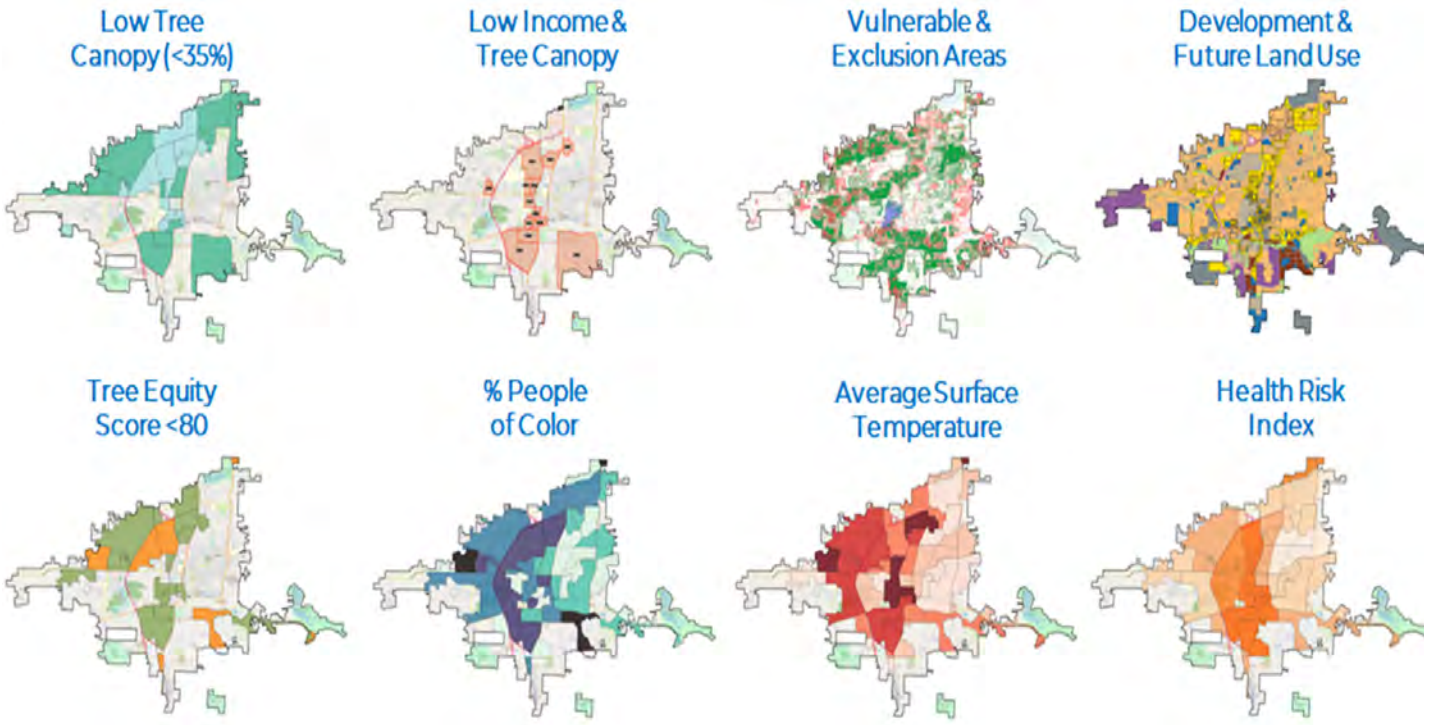

Figure 30. Scenarios for priority planting areas to achieve canopy goals and the Plan's outcomes. Larger Maps can be found on pages 108-111

By identifying priority planting areas to achieve the canopy goal, tree planting and maintenance can be strategically targeted where trees will have the most beneficial impact. The figure above provides an illustration of the priority areas for consideration and Appendix A provides the criteria going into the priorities along with larger maps.

STAKEHOLDER- DRIVEN GUIDING PRINCIPLES AND GOALS

During the data analysis, information collection, and internal and external stakeholder input gathered, a series of overarching guiding principles emerged. These principles were shaped by the feedback received from the surveys. The community's role in this process is crucial, and these priorities, along with the Urban Forest Audit and the Indicators of Sustainable Urban Forestry (detailed in Section 2) established the foundation of the Plan.

	Guiding Principles	Goals
A 	**Equitable and Resilient Canopy Cover** We value and appreciate the benefits and services provided by the trees in our community. These benefits and services should be maximized and equitably distributed across the City by growing an urban forest that is sustainable and resilient to current and future challenges.	**Equitable and Resilient Canopy Cover Goals** **Goal A1:** Increase tree canopy cover citywide beginning in priority areas and purchased land. **Goal A2:** Implement a cooperative tree planting program with businesses, institutions, organizations, neighborhoods, and property owners. **Goal A3:** Plant trees that are resilient to current and future challenges such as climate change and tree pests.
B 	**Maintenance and Management** We care for our trees and the citywide urban forest to ensure the benefits are available for current and future generations. Our operations and investments prioritize sustainability, fiscal responsibility, and equity.	**Maintenance and Management Goals** **Goal B1:** Prioritize public tree maintenance and tree risk management. **Goal B2:** Reduce conflicts between trees and other infrastructure such as sidewalks and utilities. **Goal B3:** Manage harmful tree pests and diseases that are present or expected to impact the urban forest. **Goal B4:** Conduct ongoing industry and professional training for City staff interacting with trees in Fayetteville.
C 	**Tree Preservation and Protection** Our existing tree canopy cover and the investments made in planting and caring for the urban forest are preserved through sound but fair policies and regulations that align with shared priorities in the city and best practices.	**Tree Preservation and Protection Goals** **Goal C1:** Establish or update policies and practices to reduce the urban forest's vulnerability to tree pests, diseases, and climate change impacts. **Goal C2:** Update or amend tree-related ordinances to support the citywide canopy cover goal and other goals in the Plan. **Goal C3:** Monitor and enforce tree-related ordinances.
D 	**Funding and Levels of Service** The programs and staffing involved with the trees in our community have the resources necessary to meet current and future demands and challenges.	**Funding and Levels of Service Goals** **Goal D1:** Procure funding for the City to purchase land for tree preservation and planting and to achieve other City goals. **Goal D2:** Increase funding to purchase trees to be planted and supporting infrastructure in support of the canopy cover goal. **Goal D3:** Evaluate the staffing levels, structure, and resources for tree-related programs and adjust as needed to meet the goals of the Plan and growing demands of the urban forest.
E 	**Community Education, Engagement, and Stewardship** A sustainable urban forest requires a shared commitment from the City and the community. We will foster tree stewardship in our community through equitable and impactful community education and engagement.	**Community Education and Engagement Goals** **Goal E1:** Continue to achieve Tree City USA status and other industry recognitions. **Goal E2:** Create and implement an engagement strategy for all demographics and stakeholders in the community. **Goal E3:** Provide inclusive program offerings such as events, education, and training to meet the needs of all.

Figure 31. Guiding principals and goals.

A) EQUITABLE AND RESILIENT CANOPY COVER

We value and appreciate the benefits and services provided by the trees in our community. These benefits and services should be maximized and equitably distributed across the City by growing an urban forest that is sustainable and resilient to current and future challenges.

STAKEHOLDER INPUT AND SUPPORT

Experts and stakeholders stressed the importance of setting and achieving local and citywide canopy goals to support the long-term health and sustainability of the urban forest. For example, planted trees must be resilient to drought and extreme weather events while supporting biodiversity in the urban ecosystem. A diverse mix of tree species is necessary to ensure the ability of the urban forest to survive pest and disease outbreaks. Success is predicated on planting trees matched to the site in terms of soils, water availability, space, and desired function. Post-planting care is required for trees to become established and thrive in the urban environment.

GOAL A1: INCREASE TREE CANOPY COVER CITYWIDE BEGINNING IN PRIORITY AREAS AND PURCHASED LAND.

Goal A1 Strategies
a) Procure funding to purchase land for the City to preserve and plant trees.
b) Review and refine the priority planting areas provided by the Plan.
c) Continue to offer free trees to citizens.
d) Plant 1,850 net trees per year for 10 years and reassess citywide canopy cover.
e) Coordinate with other City plans and programs.
Goal A1 Priority Actions
Review, refine, and finalize the canopy cover goals and planting priorities.
Develop a neighborhood-level and citywide planting plan to achieve the canopy goals. Align efforts with the Climate Action Plan, Energy Action Plan, the 2023 Park and Recreation System Master Plan, and other initiatives.
Fully integrate tree plantings into City projects. Use the recommendation to inform the annual tree planting plan for parks as recommended in Goal E3 of the 2023 Park and Recreation System Master Plan.
Continue to offer tree care information especially in the priority neighborhoods.
Monitor progress toward achieving the canopy goals and planting targets. Use high-resolution imagery to assess and monitor canopy cover every two years. At minimum, reassess canopy cover citywide and by planning boundaries by 2029 for a 10-year canopy change assessment.

GOAL A2: IMPLEMENT A COOPERATIVE TREE PLANTING PROGRAM WITH BUSINESSES, INSTITUTIONS, ORGANIZATIONS, NEIGHBORHOODS, AND PROPERTY OWNERS.

Goal A2 Strategies
a) Identify existing and potential stakeholders.
b) Collaborate and share resources to identify program funding opportunities.
c) Track progress and recognize successes.
d) Conduct pilot programs to determine efficient ways to assist private land owners with tree plantings.
Goal A2 Priority Actions
Draft a list of existing and potential stakeholders with input from multiple departments.
Organize workshops or seminars that focus on the importance of the program.
Create a task force or utilize the Urban Forestry Advisory Board to collaborate on program design, priority planting locations, funding, tree selection, and ongoing maintenance.
Utilize data management software to track the plantings and recognize partnerships and program success possibly during Arbor Day celebrations.

GOAL A3: PLANT TREES THAT ARE RESILIENT TO CURRENT AND FUTURE CHALLENGES SUCH AS CLIMATE CHANGE AND TREE PESTS.

Goal A3 Strategies
a) Use data and research to make decisions on approved tree species for planting.
b) Select the right tree for the right site.
c) Provide ongoing tree care and monitor the condition of tree plantings.
Goal A3 Priority Actions
Utilize the Climate Tree Atlas study in the Plan to adjust approve tree species lists.
Evaluate the composition of the urban forest to inform changes to tree species selection for planting to maintain diversity.
Provide watering and irrigation for public tree plantings.
Evaluate measures to improve the enforcement of regulations for post-planting maintenance within Chapters 167 and 177 of Fayetteville's Code of Ordinances.

B) MAINTENANCE AND MANAGEMENT

We care for our trees and the citywide urban forest to ensure the benefits are available for current and future generations. Our operations and investments prioritize sustainability, fiscal responsibility, and equity.

STAKEHOLDER INPUT AND SUPPORT

The community would like to see more shade trees along streets and sidewalks, recognizing that this will require additional resources. Participants in the engagement to develop the Plan stated that they would like the City to maintain street trees in a routine, proactive manner. City staff are in support of cooperative planting programs with businesses, institutions, organizations, and individuals where trees can be planted in yards to shade sidewalks. The staff engaged in the planning effort also support improving policies and practices for better public tree maintenance addressing concerns such as tree pests, diseases, and climate change impacts.

GOAL B1: PRIORITIZE PUBLIC TREE MAINTENANCE AND TREE RISK MANAGEMENT.

Goal B1 Strategies
a) Assess the public tree population for maintenance needs and potential risks.
b) Develop a public tree maintenance plan.
c) Develop a plan for maintaining trees that are planted toward the canopy goal.
d) Stay current with industry research, tools, technology, standards, and best practices.
e) Focus on planting strategies and designs that produce long-lived trees.
Goal B1 Priority Actions
Periodically conduct sample inventories or windshield surveys of public trees to identify changes to maintenance and risk management priorities.
Create annual work plans and seek funds to implement those plans using the actions within Goal D3.
Track maintenance records for public trees. Continue to add assets and management data to databases that track total asset management for more efficient maintenance planning.
Acquire and maintain industry certifications and trainings for Urban Foresters.
Continue to manage invasive plant species on public properties and within public rights-of-way. Support controlled burns to manage invasive and wildlife on public properties.
Strengthen or establish public tree risk assessment and mitigation protocols.
Develop a framework and approach to utilize more biomass resulting from public tree maintenance, removals, and post-storm cleanup. Expand efforts beyond mulching by including logs for wood products for local craftsmen.

GOAL B2: REDUCE CONFLICTS BETWEEN TREES AND OTHER INFRASTRUCTURE SUCH AS SIDEWALKS AND UTILITIES.

Goal B2 Strategies
a) Assess public trees for current and potential infrastructure conflicts.
b) Identify existing and potential alternative solutions to infrastructure conflicts.
c) Coordinate with internal and external stakeholders.
d) Ensure trees are planted with the proper soil volume.
Goal B2 Priority Actions
Establish or improve protocols and checklists for evaluating current and potential infrastructure conflicts which includes potential alternative solutions to the conflict.
Establish regular meetings and protocols with internal and external stakeholders for improved coordination during infrastructure and utility planning, design, construction, and maintenance phases.

GOAL B3: MANAGE HARMFUL TREE PESTS AND DISEASES THAT ARE PRESENT OR EXPECTED TO IMPACT THE URBAN FORESTS.

Goal B3 Strategies
a) Identify the primary tree pests and diseases of concern.
b) Provide information for identifying tree pests and diseases.
c) Monitor public trees and the urban forest for tree pests and diseases of concern.
d) Create a preliminary emerald ash borer (EAB) plan.
Goal B3 Priority Actions
Develop and implement an integrated pest management or plant health care plan for public trees.
Integrate tree pest and disease education into the community education strategy (Goal E1 – E3).
Focus on education and technical assistance with large private landowners.

GOAL B4: CONDUCT ONGOING INDUSTRY AND PROFESSIONAL TRAINING FOR CITY STAFF INTERACTING WITH TREES IN FAYETTEVILLE.

Goal B4 Strategies
a) Identify the staff and training needs and secure the annual budget required.
b) Conduct internal cross-training and document training materials and protocols.
c) Consider offering or supporting training of volunteers and tree care professionals.
Goal B4 Priority Actions
Utilize free and available on line trainings and materials where appropriate.
Support the Urban Forestry Advisory Board in attending the free on line Tree Board University program developed by the U.S. Forest Service.
Expand the trainings to include considerations for youth and workforce development.

C) TREE PRESERVATION AND PROTECTION

Our existing tree canopy cover and the investments made in planting and caring for the urban forest are preserved through sound but fair policies and regulations that align with shared priorities in the City and best practices.

STAKEHOLDER INPUT AND SUPPORT

Preservation and protection of existing trees was identified as a high priority. Existing mature trees have an out sized impact on sustainability, environmental justice, wildlife and ecosystems, and human health. Exploring changes to the tree ordinances was raised in most engagement activities and sessions. Preservation and planting requirements should be robust but not unduly burdensome to developers. They should also be tailored to the biome, e.g., different standards for natural prairies compared to forested areas. Trees planted or protected should survive post-development and be replaced if they die. City staff are in support of procuring funding to purchase land for tree preservation in order to maintain and increase tree canopy cover.

GOAL C1: ESTABLISH OR UPDATE POLICIES AND PRACTICES TO REDUCE THE URBAN FOREST'S VULNERABILITY TO TREE PESTS, DISEASES, AND CLIMATE CHANGE IMPACTS.

Goal C1 Strategies
a) Quantify the urban forest's role in climate change mitigation.
b) Maintain tree regulations to minimize urban forest vulnerabilities.
Goal C1 Priority Actions
Calculate the carbon sequestration, storage, and avoided carbon generated from the citywide urban tree canopy cover and the public tree population using industry tools such as i-Tree. Utilize the data to build support and inform climate-related plans.
Update the Tree Preservation and Landscape Manual with any changes to tree-related ordinances.
As needed, update tree lists that prioritize native and climate-resilient tree species. Consider updates based on the diversity of the urban forest and existing / potential pests and diseases. At minimum, maintain a list of prohibited tree species reflective of the latest research and concerns.

GOAL C2: UPDATE OR AMEND TREE-RELATED ORDINANCES TO SUPPORT THE CITYWIDE CANOPY COVER GOAL AND OTHER GOALS IN THE PLAN.

Goal C2 Strategies
a) Monitor and track tree plantings and removals.
b) Adopt a no-net-loss policy for public trees.
c) Review and implement recommended changes to tree ordinances.
Goal C2 Priority Actions
Identify the departments, roles, and workflows (i.e., City Engineering and Transportation) and track public tree removals and plantings in a data management program.
Analyze the potential causes for canopy cover gains and losses as identified in the canopy assessments of four time periods.
Strengthen the mechanisms for tracking tree preservation, removals, plantings, mitigation, and canopy percentages for development projects. Use the tracking to inform potential changes to minimum canopy requirements for zoning designations as needed to support the canopy goal.
Review and refine the tree ordinance evaluation worksheet completed as part of the Plan (see Appendix C). Gather feedback from internal and external stakeholders before significant changes to ordinances are made. For example, develop incentives to preserve existing canopy instead of opting for mitigation and consider updating the penalties for illegal removal of protected trees.
Conserve open space and protect areas of significant riparian benefit, tree canopy, prairie, and other environmental resource through cluster development provisions, density controls, protective easements, and/or other development tools.
Update design standards to be more accommodating to trees and the necessary soil volume while balancing the needs for development.
Establish a policy for reassessing the citywide tree canopy cover at regular intervals to monitor the canopy goal.

GOAL C3: MONITOR AND ENFORCE TREE-RELATED ORDINANCES.

Goal C3 Strategies
a) Distribute information and resources regarding changes to tree regulations.
b) Establish a formal protocol.
c) Recognize exemplary tree preservation practices and projects.
Goal C3 Priority Actions
Update information on the City's website and in materials as tree regulations change.
Consider developing a protocol for scheduled inspections, random spot checks, record keeping, an on-site education.
Develop a program that recognizes exemplary and innovative development projects that preserve and expand tree canopy cover.

D) FUNDING AND LEVELS OF SERVICE

The programs and staffing involved with the trees in our community have the resources necessary to meet current and future demands and challenges.

STAKEHOLDER INPUT AND SUPPORT

During engagement exercises, concerns were raised regarding limited resources, staffing, funding, and time to address the current climate challenges. Additional resources in Development Resources, where code compliance officers are located, are needed to inspect, monitor, and enforce tree regulations. Proactive maintenance in Public Works is needed to water, plant new trees, and monitor new trees that will mitigate the impact of climate change. Stakeholders largely supported allocating additional resources to ensure the availability of urban forest resources now and in the future. City staff support increasing funding to purchase trees to plant towards a citywide canopy cover goal.

GOAL D1: PROCURE FUNDING FOR THE CITY TO PURCHASE LAND FOR THE TREE PRESERVATION AND PLANTING NEW TREES.

Goal D1 Strategies
a) Identify potential areas for land acquisition.
b) Coordinate with partners for land acquisition and management.
c) Lead by example and distribute information about the program.
Goal D1 Priority Actions
Review the priority areas for tree planting and preservation to identify opportunities for land acquisition. Consider vacant land as an initial step and utilize the City Plan 2040's Enduring Green Network map and data.
Develop a multi-year program and allocate funding for land acquisition. Build support from land trusts and other organizations.
Implement best management practices and share information for private landowners to learn about the opportunities for urban forest stewardship on their own property(s).
Develop management plans for the properties purchased.
In the long-term, consider utilizing land acquired for pilot projects such as testing new tree species for the region and in-house tree production (i.e., tree nursery).

GOAL D2: INCREASE FUNDING TO PURCHASE TREES TO BE PLANTED AND SUPPORTING INFRASTRUCTURE IN SUPPORT OF THE CANOPY GOAL.

Goal D2 Strategies
a) Identify the funding gap and funding source(s).
b) Communicate the benefits of a robust planting effort.
c) Develop and implement a tree planting program aligned with the canopy goal.
Goal D2 Priority Actions
Quantify the benefits and services provided by the 1,850 trees planted per year to communicate the future value added to Fayetteville's ecosystem, community, and economy.
Secure the necessary funding to meet the annual tree planting targets.
Provide annual reports on canopy goal progress to justify continued funding for tree plantings.
Coordinate with tree nurseries the tree species for planting to reduce costs and address tree species diversity goals.

GOAL D3: EVALUATE THE STAFFING LEVELS, STRUCTURE, AND RESOURCES FOR THE TREE-RELATED PROGRAMS AND ADJUST AS NEEDED.

Goal D3 Strategies
a) Track and report program activities and Plan implementation progress.
b) Analyze the organization of departments involved with trees in Fayetteville.
c) Conduct cost-benefit analyses and evaluate growing service demands.
Goal D3 Priority Actions
Develop a mission and vision statement for urban forest management in the City that align with the goals in this Plan.
Share with City departments and stakeholders the progress made in implementing the Plan by using the Monitoring section's guidelines. Successes and shortcomings build awareness and supporting for changes to staffing and program structure(s).
Evaluate staffing and contractor resources required to effectively plant trees aligned with canopy goals and to provide post-planting care.
Determine the need for consolidating tree programs into one department, section, or division to improve efficiencies and levels of service.
Consider the need and framework for establishing a City section specific to managing natural areas and open space (e.g., wetlands, bottomlands, prairies).
Secure funding to implement a tree watering program for newly planted public trees. Continuously explore avenues to ensure diverse funding sources and advocate for increased operations and capital funding to address priority tree maintenance and care needs.

E) COMMUNITY EDUCATION, ENGAGEMENT, AND STEWARDSHIP

A sustainable urban forest requires a shared commitment from the City and the community. We will foster tree stewardship in our community through equitable and impactful community education and engagement.

STAKEHOLDER INPUT AND SUPPORT

Participants reported a perception of conflicting policies and priorities regarding the City's trees. City departments, partners, developers, and the community must have a common understanding of the challenges and opportunities surrounding the urban forest to develop a shared vision for addressing them. A public communications plan stemming from a citywide coordinated effort was seen as a necessary step in bringing clarity to the roles of City departments involved with the urban forest and tree care. Half of the internal stakeholders engaged support bolstering community engagement and volunteer efforts.

GOAL E1: CONTINUE TO ACHIEVE TREE CITY USA STATUS AND OTHER INDUSTRY RECOGNITIONS.

Goal E1 Strategies
a) Continue to track program activities and budgets.
b) Explore the opportunities and requirements for other recognition programs.
Goal E1 Priority Actions
Continue to track and annually report urban forestry activities of all partners and continue to maintain Arbor Day Tree City USA designation. Strive to continue to achieve Arbor Day Foundation Growth Awards and Sterling Tree City status.
Achieve an award from the American Public Works Association's Awards Program for innovative programs and outcomes resulting from this Plan.
Conduct a follow-up benchmarking exercise toward year 10 of this Plan to compare program budgets and activities to other Tree City USA communities in the region.

GOAL E2: CREATE AND IMPLEMENT AN ENGAGEMENT STRATEGY FOR ALL DEMOGRAPHIC AND STAKEHOLDERS IN THE COMMUNITY.

Goal E2 Strategies
a) Identify and collaborate with stakeholders to draft the strategy.
b) Implement the strategy as a coordinated effort.
c) Review and adapt the strategy as changes occur.
Goal E2 Priority Actions
Finalize a robust community outreach strategy and a communications plan to garner support, spur behavior change, and increase participation from the community. Use the data and recommendations from this Plan.
Increase outreach and marketing for improving and expanding tree canopy for the public good.
Implement the outreach strategy as a coordinated citywide effort by convening with other City departments and stakeholders. Gather input and feedback from the Urban Forestry Advisory Board.
As outlined in the community outreach strategy, gather input and feedback from the public regarding implementation of this Plan and changes to urban forestry programs.
Identify existing and potential partners and organizations to support the implementation of the community outreach strategy and support engagement that is inclusive and equitable.

GOAL E3: PROVIDE INCLUSIVE PROGRAM OFFERINGS SUCH AS EVENTS, EDUCATION, AND TRAINING TO MEET THE NEEDS OF ALL.

Goal E3 Strategies
a) Implement programs and services through the lens of environmental equity.
b) Coordinate with new and existing community and regional partners.
c) Develop strategies to remove barriers to participation.
Goal E3 Priority Actions
Use the outreach strategy from Goal E2 to identify community groups that represent all neighborhoods.
Identify low tree canopy neighborhoods for targeted engagement.
Coordinate with partners and secure funding for regular public events, training, and educational materials as outline in the outreach strategy.
Make the data and information from this Plan accessible to the public online.
Gather feedback for continual improvements to events, education, and trainings.

STAFFING LEVELS FOR URBAN FOREST MANAGEMENT

Many cities struggle to maintain adequate staffing and resource allocation. Available resources may cover short-term needs while neglecting important initiatives necessary to sustain long-term urban forest management. Determining and maintaining optimal staffing levels is critical to a program's efficiency. Optimal staffing depends on several factors including the number of public trees, how authority and responsibility is defined in the municipal code, internal and external expectations, customer service (i.e., the public), operations, and existing programs.

The City of Fayetteville's commitments to public health and safety, combating climate change, and addressing inequities translates into a growing demand for both long-term initiatives, and the staff to operate them. The growing urban forest will require increased staffing levels to achieve and maintain urban forest goals. Public Works and Development Services need to add full time employees to maintain the current level of services. As the City grows these positions will need to grow.

Some capacity and efficiencies for existing workloads can be improved through clarifications of roles, responsibilities, and workflows among City departments and divisions. Periodically examining program structures, staffing needs, and levels of service may identify ways to improve efficiencies, communications, and workflows within and among departments. Cities often consider consolidating their tree programs into one division or section to achieve these outcomes. Establishing a strong organizational structure with clear operating procedures is foundational in reducing future costs and addressing increased service demands.

IMPLEMENTATION

The framework of the goals and actions in the Urban Forestry Management Plan provides the City of Fayetteville with the means to measure progress and adapt to an ever-changing environment and availability of resources. As actions are implemented, the City may conduct new iterations of the Urban Forest Audit to gauge success, evaluate progress, and adjust accordingly.

Based on the assessment of Fayetteville's urban forest resource, the programs that manage it, and the community that shapes and benefits from it, the following implementation summary is recommended. Implementing the Plan in this manner will effectively and efficiently address the City's shared challenges and priorities using available resources. As the Plan progresses, more resources will be neccessary to implement the longer-term actions.

MONITORING PLAN

This Urban Forestry Management Plan will be updated every ten years as outlined in the code. Revisions can be made in five years, and canopy data will be collected from GIS every two years and revised periodically. Better data will help reflect changes in the urban forest and incorporate changes in industry standards. Also, community response and industry recommendations should be considered to reach the established goals. This process should be supported by an urban forestry working group consisting of community members with various skill sets and backgrounds. Examples include the City's Urban Forestry Program, Urban Forestry Advisory Board members, other City staff, and stakeholders. The monitoring of the plan should follow the evaluation, monitoring, reporting, and revising methodology. Knowing how the City and its partners are doing will require a continual evaluation process. This section presents examples of how to monitor, analyze, and revise the Plan, which will keep stakeholders informed of the status of the Urban Forestry Program. To monitor progress toward implementing the Plan recommendations, an evaluation similar to the U.S. Forest Service's Urban Forest Audit (details below in the Evaluate section) conducted to develop the initial Plan should be completed. This evaluation will identify progress and shortfalls compared to the baseline audit.

In addition, a report card could be created based on the audit's outcomes and distributed to the public periodically. This will measure progress toward implementing the Plan's actions. The Report section provides a suggested structure for measuring and reporting success toward accomplishing each goal. Other indicators to measure progress may need to be developed to ensure a thorough and accurate evaluation.

EVALUATE

The U.S. Forest Service's Urban Forest Audit System provides a framework for routine evaluations of the urban forest, the programs that manage it, and the community that shapes and benefits from it. The deliverables to this Urban Forestry Management Plan project include guidance for completing an update to the audit completed in 2023 to develop the Plan. This audit system consists of 11 categories of urban forest management, sustainability, and community. Within the 11 categories are approximately 130 subcategories or elements. Each element was ranked or scored based on the consultants' evaluations in 2023 for the Urban Forestry Management Plan. It is recommended the City's urban forestry working group (or similar) complete a bi-annual audit to inform any alterations to actions and strategies.

About the Urban Forest Audit

The primary objectives of the audit are defined by the Urban Forest Audit System authors and adapted by the City's urban forestry consulting team to engage the full spectrum of the organizations' management team, provide program direction that increases the level of professionalism in management, conduct a gap analysis of management practices and the health of urban forests, provide strategic direction to improve the health of the urban forest, and optimize management for environmental justice and equitable distribution of resources.

1) Management Policy and Ordinances
2) Professional Capacity and Training
3) Funding and Accounting
4) Decision and Management Authority
5) Tree-related Inventories
6) Tree-related Plans
7) Risk Management
8) Disaster Planning
9) Standards and Best Practices
10) Community
11) Green Asset Management

Table 13. Categories for evaluation using the U.S. Forest Service's Urban Forest Audit System.

Urban Forest Audit Process

The process of analyzing the urban forest involved extensive information and document gathering and research to identify policies, practices, programs, and standards pertaining to categories of urban forest sustainability and management as defined by Clark et al. (1997), Kenney et al. (2011), and the Forest Service. The categories are listed in Table 13.

Each category has a series of subcategories pertaining to the specific category. As an example, the subcategories listed in Table 14 are in the Management Policy and Ordinances category:

1.01) Climate Change (Sustainability)
1.02) No Net Loss
1.03) Risk Management
1.04) Tree Canopy Goals
1.05) Tree Protection
1.06) Utility
1.07) Human Health
1.08) Wildlife Diversity/Habitat/Protection
1.09) Performance Monitoring
1.10) Private Tree Ordinances
1.11) Public Tree Ordinances
1.12) Development Standards
1.13) High-Conservation Value Forests
1.14) Urban Interface (WUI)

Table 14. List of subcategories within the Management Policy and Ordinances category of the audit

EVALUATE

Measuring accomplishment of the actions will require ongoing analysis. The outcomes of the Urban Forest Audit System in the Evaluate section can be used to monitor change over time. These benchmark values should be tracked, and a state of the urban forest report should be prepared and distributed to the public every 2 to 5 years. Analysis may include an updated public tree inventory, i-Tree benefits analyses, or urban tree canopy assessments. The state of the urban forest report should include the benchmark values as reported in the Plan and the Urban Forest Audit System as of 2023, so that the City can measure and compare changes to the urban forest. The report should reflect changes to the audit system that are measured.

Primary Urban Forest Benchmark Values to Measure Plan Progress

2019 Urban Tree Canopy (UTC) Cover (Assessed in 2022)	
Tree Equity Score (2022)	87 out of 100
Urban Tree Canopy	39.4%
Short-term Canopy Goals	39.9% by 2029 (1,850 trees/year) 40.6% by 2034 (1,850 trees/year)
Long-term Canopy Goals	44.4% by 2054 (3,000 trees/year)
Total Trees to Reach 10-year Goal	18,500 trees by 2034 (1,850 trees/year)
Total Trees to Reach 30-year Goal	91,000 trees by 2054 (3,000 per year avg.)
Public Tree Counts (2022 estimates)	
Total Public Trees (alive or dead)	42,000 (estimated)
Total Public Street Trees	25,000
Total Public Street Planting Sites	TBD
Total Public Open Space Trees	Unknown
Tree Benefits (2022 estimates)	
Citywide (UTC Assessment)	2019: $76.5 million (total)
Ecosystem Benefits of Public Trees	2022: $4.2 million (annual estimate)
Tree and Budget Distribution (2021)	
Public Trees (street and park) per Capita	0.44
Budget per Capita	$6.66
Urban Foresters (3 departments)	8.00 (2023)
Total Public Trees per Staff	5,000 trees for every 1.0 FTE
Management Activities (2023)	
Public Trees Pruned	To be recorded at the end of the year
Public Trees Removed	To be recorded at the end of the year
Public Trees Planted	To be recorded at the end of the year
Number of Volunteers and/or Hours	To be recorded at the end of the year
Urban Forest Audit System (Total Score of 2023): 73%	
Management Policy and Ordinances	71%
Professional Capacity and Training	89%
Funding and Accounting	67%
Decision and Management Authority	63%
Tree-related Inventories	65%
Tree-related Plans	54%
Risk Management	78%
Disaster Planning	64%
Standards and Best Management Practices	73%
Community	89%
Green Asset Management	80%
Public Perception (2022)	
Tree-related priorities	62% want trees for shade
Preference for improving public tree health	74% for setting canopy goals, 66% for more trees and preservation in development
Where to prioritize future investments	70% for improved tree code for development

Table 15. Fayetteville's primary urban forest benchmark values to measure Plan progress.

REPORT AND REVISE

To assess the progress of the Plan's implementation, the City's urban forestry department (or similar) should track, record, and report on the success metrics identified in the Urban Forest Audit that was used to develop the Plan's goals. Based on the findings from these reports, the City should revise its policies, procedures, goals, codes, and other relevant areas as needed.

POLICY AND ORDINANCES

Urban forest policies are the foundation for preserving the environmental benefits, resiliency, and the character of Fayetteville's urban forest.

- List all City-led planning efforts.
- Describe related City-led tree planting efforts.
- Communicate citywide canopy goals.
- List recommended changes to City Code, policies, and manuals.
- Distribute any recommended tree list to city staff, partners, and residents.

CAPACITY, TRAINING, AND AUTHORITY

Fayetteville has the capacity and expertise to provide optimal levels of service for sound urban forest management.

- List the existing staff and supporting departments and partners.
- Summarize roles and responsibilities of the Urban Forestry Advisory Board.
- Describe existing and needed certifications, qualifications, and training.
- Report the number of volunteers and volunteer hours.

BUDGET AND FUNDING

Funding and resources enable comprehensive and sustainable urban forest management for the preservation and enhancement of tree benefits.

- Report the proportion of public trees to the City population.
- Report the number of volunteers and volunteer hours.
- List the unfunded urban forestry needs.
- Report the budget, and donations.

ASSESSMENTS AND PLANNING

A thorough understanding of the urban forest ensures data-driven decisions, sustainable and comprehensive planning, and amplified tree benefits.

- Report the number of public trees planted, pruned, and removed.
- Report the number of trees assessed for risk.
- Provide a summary of existing tree canopy cover citywide every two years.

COMMUNITY ENGAGEMENT

Sustainable urban forest management and equity is achieved through a partnership with the City and its residents resulting in improved well-being, human health, and local economies.

- List existing and potential partners.
- Report the number of planting events and trees planted.
- Report the history/count of Tree City USA and supporting awards.
- Report the number of volunteers, events, and volunteer hours.
- Report the results of public surveys.
- Report on the activities of the Urban Forestry Advisory Board.

GREEN ASSET MANAGEMENT

Fayetteville proactively manages the public trees, continues to grow and expand a healthy canopy, effectively mitigates climate change impact. List the existing and potential outreach platforms and initiatives.

- Report the number of public trees pruned, removed, and planted.
- Report the number of mitigation plantings and stormwater plantings.
- Report progress towards canopy goals and tree planting targets.
- Provide a map of planting areas for upcoming year.
- Report on Urban Forestry Audit score every 5 years.

Figure 32. Evaluation, monitoring, and reporting techniques to achieve the urban forestry goals.

REVISE

Completion of this Plan is a critical step towards meeting the vision for Fayetteville's urban forest. Continual monitoring, analysis, and reporting will help to keep urban forest partners involved and focused on accomplishing the actions. Plans are typically revised every 10 to 15 years; hence, the Plan will need formal revision to respond and adapt to changes as they develop. Formal revision of the Plan should coincide with the update of the City's Comprehensive Plan, Park and Recreation System Master Plan, Energy Action Plan, Tree Preservation and Landscape Manual, climate/sustainability and stormwater plans, and other relevant planning efforts. Recommendations and goals of each should be compared. Revisions to the Plan may occur with major events, such as newly discovered pests or diseases, changes in program budget and resources, or significant changes to industry standards or legal codes.

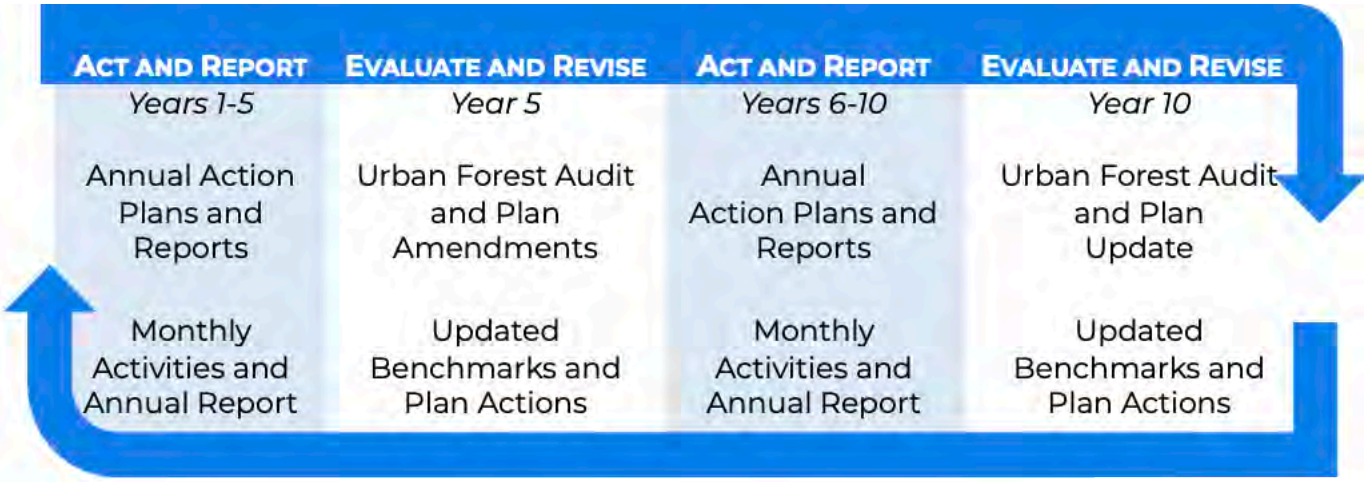

Figure 33. Example of the plan implementation, evaluation, and revision process.

Applying the Urban Forest Audit to Revise the Plan

The Urban Forest Audit can serve as the tool for the City to effectively Evaluate, Monitor, Report, and Revise the Plan as part of the implementation and monitoring protocols. As found in the 2023 Urban Forest Audit completed to develop the Plan, there are areas of urban forest management where the City is performing at a high level and other areas where improvements are needed. The goals and actions in the Plan address both these strengths and challenges.

Ranking	Count	%	% of Total
1) In Development	63	25%	49%
2) Adopted Common Practice	62	48%	48%
0) Not Practiced	4	0%	3%
Category Total	**129**	**73%**	**100%**

Table 16. Summary count of the evaluations completed in the 2023 Urban Forest Audit.

Out of the nearly 130 elements (or subcategories) within the Audit, the majority (63 elements or 49%) ranked "1) In Development" followed by 62 (48%) elements ranked as "2) Adopted Common Practice". Most of the elements given the "In Development" ranking was a result of the outcomes from the Urban Forestry Management Plan or the strategic actions within the Plan to be implemented. As the Plan is being implemented, the status or score of the categories within the audit should change.

Section 7: Conclusion

CONCLUSION

Trees are an integral part of the community and the ecological systems in which they exist. They provide significant economic, social, and ecological benefits, such as carbon sequestration, reduction of urban heat islands, energy savings, reduction of stormwater runoff, improvement of water quality, enhancement of human health and wellness, and increase the value of properties. Planting and maintaining trees helps Fayetteville become more sustainable and reduces the negative impacts on the ecosystem from urban development. Trees are as necessary as water, infrastructure, and energy to sustain healthy communities. The health of the urban forest is directly linked to the health of the region.

The Urban Forestry Management Plan is a roadmap for a strategic approach to manage Fayetteville's urban forest. The Plan contains goals and supporting actions that are critical to the long-term vitality of the forest. However, in order for the Plan to actually have an impact on the forest resource, it requires stewardship and financial resources to begin implementation. Further, it needs to be institutionalized as a document requiring implementation with a sense of urgency to get things started. Completion of the Urban Forestry Management Plan clearly demonstrates that City leadership understands that a healthy urban forest is critical to guaranteeing the long-term health and vitality of the community.

In order to accomplish the goals, the City should consider the following commitments:

- **Recognize that the trees of the urban forest are more than aesthetic enhancements.**
- **Recognize trees as the backbone of the urban ecosystem and an essential part of the community's green infrastructure.**
- **Promote the health and growth of the urban forest by following scientifically established best management practices for tree selection, planting, watering, and pruning.**
- **Promote a robust urban forest through policies and practices that reduce its vulnerability to known diseases or pest infestations, and future threats, including the anticipated effects of climate change.**
- **Engage in a continuous process of long-range planning for the growth and maintenance of the urban forest.**
- **Promote public appreciation of the urban forest through educational outreach programs.**
- **Support local businesses, institutions, organizations, and individuals in their efforts to grow and maintain the urban forest through community education.**
- **Proceed in a manner that is inclusive and transparent.**

Successful implementation of actions in this Plan will bring Fayetteville to a higher level of service that is more equitably distributed across the City resulting in a sustainable and thriving urban forest that benefits all residents and future generations— ultimately achieving the Plan vision: Healthy Trees, Healthy City: Fayetteville's urban forest is to cultivate a thriving, diverse, and well-maintained tree canopy that enhances the livability, health, and sustainability of our community for current and future generations.

Supplement 9- Urban Tree Canopy Assessment Project 2012

APPENDIX A. CANOPY GOALS

Canopy Goal Assumptions: Data from Fayetteville's tree canopy cover assessments (2019) and the American Forests Tree Equity Score (TES) tool were analyzed to identify a feasible canopy goal and to develop strategies to achieve it. The draft canopy goal was refined by examining the available land area, resources, other ongoing city priorities, future land use, land ownership types, opportunities to mitigate urban heat, and preservation of native prairie land. Other considerations were our climate, elevations, historic canopy coverage for the regions, topography, survey results, climate change atlas, invasive species, and development patterns. The goals were set to be achievable and flexible so that staff could take different strategic approaches to planting trees.

Using this integrated approach, the City of Fayetteville's ambitious and achievable goal is 44.4% tree canopy in 30 years— up from 39.4% based on 2019 imagery. To achieve this, the City and partners must preserve the existing canopy to the greatest possible extent, mitigate the lost canopy, and increase canopy coverage by planting trees.

- Existing tree canopy cover is based on imagery from 2019.
- Promote growing trees to maturity rather than focusing on a number.
- A no-net-loss strategy is sought, balancing tree loss with tree gains through out the city.
- Development projects must continue to mitigate tree removal, dedicate tree preservation easements, and add street trees.
- Most new large neighborhoods are in previous pasture land.
- Supporting citizens and growing trees in existing neighborhoods with POA/HOA support.
- Trees that grow into large canopy trees are planted wherever feasible.
- The City will need to plant public street planting sites and consider converting impervious surfaces to planting sites and planting in parks and natural areas.
- Assumes a potential for young tree mortality post-planting is 10% with POA/HOA projects and City projects (the standard for Fayetteville is 10%).
- Assume a potential for trees given away with a survival rate of 65% (10% is our mortality rate, and studies show around 75% make it into the ground from tree giveaways combined. The survival rate is an optimistic 65%).
- $408 per tree is the average cost for contracted tree planting.
- Emphasis should be placed on planting native and highly adaptable trees that support strategies for climate resiliency and tree species diversity.

APPENDIX B: URBAN FORESTRY AUDIT

US FOREST SERVICE URBAN FOREST SUSTAINABILITY AND MANAGEMENT AUDIT

To assess the current state of Fayetteville's urban forest, the programs that manage it, and the community that shapes and benefits from it, a comprehensive evaluation was conducted using the framework of the U.S. Forest Service's Urban Forest Sustainability and Management Audit (Abbot, et al., 2015).

The framework was adapted from the Model of Urban Forest Sustainability (Clark, et al., 1997) and subsequent iterations. The primary objectives of the evaluation of Fayetteville's urban forest are defined by the authors and adapted by the Fayetteville Urban Forestry Management Plan consulting team:

- Engage the full spectrum of the organizations' management team
- Provide program direction for ongoing professional training
- Conduct a gap analysis of management practices and the health of urban forests
- Provide strategic direction to improve the health of the urban forest
- Optimize management for environmental equity

A sustainable system can be defined as one that survives or persists. In the context of urban forests, the objective can be stated as attempting to achieve the maximum long-term benefits over the greatest amount of time. Clark's framework provides specific criteria to evaluate sustainability along with measurable indicators. Social and economic factors as well as natural science are considered, as sustainability is often viewed as the "overlap between what is ecologically possible and what is societally desired by the current generation". Recognizing that both conditions will change over time, sustainability is addressed as a process rather than a goal (Clark, et al., 1997).

Clark's framework categorizes urban forest sustainability indicators in terms of the trees (or resource), the management, and the people who benefit from the urban forest. Within each category, a series of urban forestry industry standards and best management practices were used to evaluate Fayetteville's current performance level. Indicators were rated as low, medium, or high based on available data and information provided by stakeholders. Assessment results were used to identify areas where Fayetteville's urban forest can be improved and to develop recommendations.

RESULT

Based on the analysis of findings from the needs assessment, Fayetteville scored a 73% in terms of urban forest sustainability and management as defined by the U.S. Forest Service, partners, and planning consultants. Based on 16 similar audits completed by the urban forestry consultants, the average score is 64%. The City of Fayetteville scored relatively high when compared to other urban forestry audits completed by the consultants for other communities of similar size. Overall, the City scored highest in Professional Capacity and Training, Community, Green Asset Management, and Risk Management— all of which are at or above 75%. The Urban Forestry Management Plan provides guidance to maintain these strengths and to address shortcomings as opportunities.

Figure 33. Summary of the 2023 Urban Forest Audit completed for Fayetteville's Plan.

The main purpose of the urban forest audit is to apply the research and findings gathered throughout the planning effort to inform the plan's goals, strategies, and priority actions. This audit or "gap analysis" enables the City's Urban Forestry Program to control different aspects of its program with data. This gap analysis identified the shortcomings that the program should overcome and by quantifying them, the program can make improvements. It also enables effective monitoring of Plan goals in that the audit categories and elements can be revisited at key intervals in the implementation process to measure progress and adapt strategies accordingly. For the comprehensive evaluation of all subcategories within the Urban Forest Audit, see Appendix B.

All available documents and plans were reviewed and tallied in the audit worksheet as part of the information discovery phase. Based on the evaluation of the documents and outcomes of all planning processes (i.e., research, City staff interviews, urban forest benchmarks, data analyses, and community engagement) each subcategory within the 11 categories was "ranked" using the following system:

0) Not Practiced - Component doesn't exist or is not practiced; 0 points
1) In Development - Component is in development as part of or aside from this Plan; 1 point
2) Adopted Practice - Component is routinely practiced; 2 points
3) Exceeds Adopted Practice - The component is exceeded; 3 points

The points were then totaled for an overall rating to provide a summary of the City's level of achieving each category of urban forest management and sustainability.

Urban Forest Audit Results for Fayetteville

#	Category	SOC* (% Achieved)	Base** (% Achieved)	Overall Rating	Overall (% Achieved)
1	Management Policy, Ordinances	50%	67%	20	71%
2	Professional Capacity and Training	100%	NA	16	89%
3	Funding and Accounting	75%	NA	8	67%
4	Decision, Management Authority	50%	100%	5	63%
5	Tree-related Inventories	NA	56%	17	65%
6	Tree-related Plans	NA	50%	13	54%
7	Risk Management	83%	50%	14	78%
8	Disaster Planning	NA	67%	9	64%
9	Standards and BMPs***	75%	69%	44	73%
10	Community	100%	NA	25	89%
11	Green Asset Management	NA	NA	16	80%
TOTAL		**76%**	**65%**	**187**	**73%**

*Standard of Care (SOC) elements represent the minimum group of urban forestry management "best practices" that a municipality should consider for implementation. SOC refers to the degree of prudence and caution required of an individual who is under a duty of care (i.e., legal obligation of the controlling authority, owner, or manager) to minimize risk. Neither state, regional, nor national minimum management components have been established for SOC but these are interim recommendations for consideration. (NA = not applicable)

**Base Practices (BP) elements represent additional urban forest management activities or components that may effectively expand a program beyond the SOC group (see footnote above). These elements are typically precursors to other "non-core" elements in the category. (NA = not applicable)

***Best Management Practices (BMPs)

Table 18. Outcomes of the urban forest audit completed in 2023 for Fayetteville's Plan.

Category	Findings
Management Policy and Ordinances Rating of 71%	The City scored relatively average in this category due to the existing tree ordinances, development standards, and the Tree Preservation and Landscape Manual. The Tree-related Plans and Regulations section of this Plan summarizes existing tree ordinances and Appendix C provides a summary of an evaluation of these ordinances based on industry standards and best practices. The City's Comprehensive Plan includes urban forestry and tree canopy as a vital component in addressing climate change. As part of the Plan, a canopy analysis was completed, and canopy goals were drafted to support a "no net loss" approach with canopy expansion.
Professional Capacity and Training Rating of 89%	Staff have industry certifications, qualifications, and training. The Urban Forestry Program has staff for park and trail tree maintenance and to administer tree preservation and protection for new development. In addition, the program works with other departments, partners, and contractors to plant trees. In recent years, staffing levels increased but capacity should be evaluated periodically to ensure it aligns with the goals of this Plan and the service demands.
Funding and Accounting Rating of 67%	The City's adopted budgets have specific line items for the Urban Forestry Program and staff. The City's Tree Escrow account is one funding source for tree planting activities. The figures reported for Arbor Day Foundation Tree City USA accreditation incorporate budgets from other departments but do not include the urban forestry budgets for Public Works' programs responsible for planting trees. Until very recently tree escrow was the primary funding source, now, there is a designated budget for tree planting. The score will improve with the next audit score.
Decision and Management Authority Rating of 63%	An Urban Forestry Advisory Board exists to advise on urban forestry matters. Currently, urban forest management is distributed across three groups in three different departments. The delineation of responsibilities at times is unclear and there is no single department or staff person designated as a point of contact for urban forestry. It is likely that communications and workflows could be improved with an adjusted program structure. Unique to other cities, Fayetteville's Urban Forester in Development Services has direct authority and oversight on tree preservation and protection for new development.
Tree-related Inventories Rating of 65%	Fayetteville completed a sample inventory of public trees and planting spaces along with a private tree sample inventory. In addition, the City conducted GIS analyses of urban tree canopy cover over four time periods and examined the correlation of tree canopy to sociodemographic data. Also, the Urban Forester actively tracks canopy gains and losses occurring on development projects— one of the most robust tracking systems the urban forestry consultants have seen. Within the City, the University of Arkansas has an inventory of its trees through its Arboretum Mapping Project.

Tree-related Plans Rating of 54%	Tracking and reporting of urban forest management activities, this Plan, and urban forestry referenced in the Comprehensive Plan and canopy goals in the Energy Action Plan resulted in higher than average scores for certain elements within this category. The City completed a Tree Canopy Cover and Environmental Equity Story Map and supporting reports.
Risk Management Rating of 78%	The Urban Forester in Parks, Natural Resources and Cultural Affairs is trained in tree risk assessments and the City has an adopted standard of care. The City completed a sample public tree inventory in 2022 to inform management strategies. The City also has an Emergency Operations Plan, actively manages invasive plant species and pests and diseases, and has lists and resources for recommended and prohibited trees.
Disaster Planning Rating of 64%	The City's maintenance staff and contractors address downed trees and limbs and collaborate when extensive response is needed.
Standards, and Best Practices Rating of 73%	Fayetteville has an average rating for this category though its strengths include tree ordinances, the Tree Preservation and Landscape Manual, Comprehensive Plan, Standard Details such as the Tree Preservation detail, clear guidance on the City's website relating to regulations and best practices, tree species lists, and tree protection requirements for construction and development.
Community Rating of 89%	Fayetteville has been a Tree City USA city consecutively since 1995, demonstrating the value placed on urban forests. This Plan included a public survey and has engaged and informed the public through an interactive project website— Speak Up Fayetteville. The City conducts Arbor Day events, has an Urban Forestry Advisory Board, engages the public through social media, website, and other platforms, addresses service requests, conducts the annual Celebration of Trees event, has an on line resource for Amazing Trees in Fayetteville, provides education resources and trainings, and works closely with other community partners.
Green Asset Management Rating of 80%	The sample public tree inventory determined there are 54 unique tree genera and 111 unique tree species resulting in no tree species exceeding the recommended diversity thresholds. The size classes of public trees are in line with an ideal distribution and the majority (75%) of public trees are in good condition. Also, only 6% of trees are recommended for removal and the primary maintenance need is clearance pruning (8%). Most importantly, the City's Park Maintenance's right-of-way crews proactively prune approximately 4,000 public trees per year resulting in an estimated 5.7-year rotation and the Urban Forestry Program conducts public park and trail tree maintenance.

The information provided in the table above describes the current conditions of Fayetteville's urban forest, the programs that manage it, and the community framework. As recommended in the Plan's monitoring methods, the City should use this framework to evaluate implementation progress, report successes, and inform changes to Plan actions. Many of the urban forest audit elements were given a rating of "In Development" as they previously did not exist but are addressed in this Urban Forestry Management Plan. This means that the City is already well underway in advancing its program and its Urban Forest Audit score.

APPENDIX B. 2023 URBAN FOREST AUDIT RESULTS

Urban Forest Audit Scoring Key

Not Practiced (0)	In Development (1)	Adopted Practice (2)

Management Policy

Category	Component Evaluated	Description or Criteria for Evaluation
1.00	Approved Policy Statements	Written policy statements approved by a governing body.
1.01	Climate Change (Sustainability)	Also referred to as Sustainability. With reference to urban trees. Addresses the long-term health and productivity of the natural resource.
1.02	No Net Loss	No net loss is mitigating the lost canopy within 20 years.
1.03	Risk Management	Should reference: ANSI A300 Part 9, ISA BMP, and prioritization funding mechanisms.
1.04	Tree Canopy Goals	Overall community/campus goal, or by designated "zone".
1.05	Tree Protection	Construction and/or landscape maintenance.
1.06	Utility	Utility pruning, planting, and installation policy (e.g. boring vs. trenching).
1.07	Human Health – Physical & Psychological	Recognizes and addresses the human health benefits of the natural resource (e.g., exercise, air quality, stress management, shade). Could also include Urban Heat Island (UHI) policies.
1.08	Wildlife Diversity/Habitat/Protection	Mammals, birds, or reptiles.
1.09	Performance Monitoring	Recognizes the annual or biennial calculation of metrics (e.g. some component of ecosystem services) for the purpose of tracking management performance.
1.10	Ordinance (Private)	Tree protection and management for trees on private property.
1.11	Ordinance (Public)	Tree protection and management for public trees.
1.12	Development Standards	US Green Building Council's LEED® rating systems (or similar internationally) LEED v4 BD+C (Sustainable Sites) LEED 4 ND (Neighborhood Pattern & Design, Green Infrastructure) ASLA's SITES® Rating System
1.13	High-Conservation Value Forests	Programs or policies for identification, acquisition, and/or protection of groups of trees or forests that provide unique public benefits.
1.14	Urban Interface (WUI)	Programs or policies that improve management of the urban interface for fire and/or invasive species.

Capacity and Training

Category	Component Evaluated	Description or Criteria for Evaluation
2.00	Professional Management	Provision for professional consultation.
2.01	Certified Arborist - Staff	International Society of Arboriculture
2.02	Certified Arborist - Contracted	International Society of Arboriculture
2.03	Certified Arborist - Other Resource	International Society of Arboriculture
2.04	Other Professional - Advising/directing UF management	This could be a professional in an allied field like Landscape Architecture.
2.05	Municipal Forestry Institute	Graduate of Society of Municipal Arborist's MFI program or similar
2.06	USFS Urban Forestry Institute or similar	Attendance at USFS UFI or similar
2.07	Campus/city arborist – ISA CA instructor for CEUs	Arborist routinely provides ISA CEU presentations/workshops.
2.08	Tree Board University or similar	On-line training modules from Oregon U&CF for Tree Board/Advisory Council or similar
2.09	Organizational Communications	Process, procedures, and protocol for cross-professional communications within the organization (all departments "touching" trees).

Funding and Accounting

Category	Component Evaluated	Description or Criteria for Evaluation
3.00	Urban Forestry Budget	
3.01	Budgeted Annually	Budget authorized/required for tree board, tree maintenance, and/or tree planting.
3.02	Contingency Budget Process	A protocol is in place to prioritize urban forestry management activities during budget shortfalls; e.g. during times of limited funding for: [1)] risk management, [2)] young tree care, [3)] mulching.
3.03	Funding Calculated from Community Attribute	Budget in terms of per capita, per tree, or for performance (e.g. per tree weighted by size class or age.
3.04	Funding Based on Performance Monitoring	Budget connected with/based on ecosystem service (ES) monitoring and performance.
3.05	Urban Forestry Line Item	Is the budget specific to urban forest management?
3.06	Green Asset Accounting	Maintain green infrastructure data in the "unaudited supplementary disclosure of an entity's comprehensive annual financial report (CAFR)". GASB 34 implementation for municipalities.

Authority

Category	Component Evaluated	Description or Criteria for Evaluation
4.00	Authority	
4.01	Urban Forest Manager	Professional urban forest manager with authority over the program and day-to-day activity. Including designated budget line item.
4.02	Staff Authority	Designated staff with authority over the program and day-to-day activity. Including designated line item.
4.03	Communication Protocol	Established protocol and mechanism(s) for communication among all members of the urban forest management "community" in your municipality or organization (e.g. manager, department under control, advisory board, finance, field operations, public, NGOs, business community, developers).
4.04	Tree Board, Commission, or Advisory Council	Establishes a board for public participation (advisory or with authority).

Tree-related Inventories

Category	Component Evaluated	Description or Criteria for Evaluation
5.00	Inventories and Assessments	
5.01	Canopy Inventory (UTC)	Periodic (≤5 year) canopy inventory and assessment. Public & private.
5.02	Ecosystem Services	Recent (≤5 year) ecosystem services (ES) inventory & assessment? Public: 100% or street trees; Public & Private: Sample; or Campus. Or, are ES calculated annually or biennially based on partial re-inventory and projected growth as a monitoring tool.
5.03	Public Trees 🡻	🡻 Evaluate below 🡻
5.04	Street Trees	Encompassed with the current inventory.
5.05	Parks/Riparian Areas	Encompassed with the current inventory.
5.06	Other Public Trees	Public facility landscaped areas, Industrial parks, green space.
5.07	Continuous inventory on a cycle (≤5 years; i.e. panel)	Partial re-inventory to support continuous forest inventory, growth projections, and the calculation of ecosystem services for the purpose of long-term monitoring of urban forest management performance (e.g. carbon or leaf surface).
5.08	Private Trees 🡻	🡻 Evaluate below 🡻
5.09	Campus (Educational)	Not applicable.
5.10	Corporate	Not applicable.
5.11	Other Private Property	Not applicable.
5.12	Continuous inventory on a cycle (≤5 years; i.e. panel), inventory software	Partial re-inventory to support continuous forest inventory, growth projections, and the calculation of ecosystem services for the purpose of long-term monitoring of urban forest management performance (e.g. carbon or leaf surface).
5.13	Green Stormwater Infrastructure (GSI)	BMP stormwater mitigation practices and locations (e.g. Washington DC)
5.14	Spatial	Inventory data includes Lat/Long (i.e. GIS). Should address the spatial relationship between the natural resource and people (i.e. residents, visitors, activities) that would help manage the resource for benefits associated with proximity (air quality, recreation, stress mitigation, improved educational opportunity).
5.15	Maintenance and Planting Records Maintained	Planting details (nursery, species, size, cost, contractor, etc.) maintained with inventory or as separate database or recordkeeping system. Also pruning and removal histories.

Tree-related Plans

Category	Component Evaluated	Description or Criteria for Evaluation
6.00	Management Planning Activities	
6.01	Annual Maintenance Calendar	An annual calendar that defines typical activity by season. To support scheduling.
6.02	Public Trees ↓	↓ Evaluate below ↓
6.03	Street Tree Management	Public works Urban Forestry manages street trees.
6.04	Parks/Riparian Area Management	Several restoration projects are underway.
6.05	Other Public Trees	Public facility landscaped areas, Industrial parks, green space.
6.06	Private Trees ↓	↓ Evaluate below ↓
6.07	Campus (Educational)	Not applicable.
6.08	Corporate	Not applicable.
6.09	Other Private Property	Not applicable.
6.10	Green Infrastructure	There is a plan for green infrastructure. Large-scale projects.
6.11	Other Written Plans	Not applicable
6.12	Tree Planting	Plans are done yearly.
6.13	UF as Part of a Comprehensive Plan	Is any UF management plan referenced in the comprehensive plan (i.e. county or municipality) or master plan (i.e. Campus)?
6.14	Urban Forest Planning and Management Criteria and Performance Indicators	Criteria and indicators based on *A Model of Urban Forest Sustainability* (Clark, J.R., Matheny, N.P., Cross, G., and Wake, V. 1997 Journal of Arboriculture.) or on work of W.A. Kenney, P.J.E. van Wassenaer, and A.L. Satel in *Criteria and indicators for strategic urban forest planning and management*. (2011)

Risk Management

Category	Component Evaluated	Description or Criteria for Evaluation
7.00	Risk Management Activities	
7.01	TRAQ Attained	At least one staff or consultant is TRAQ.
7.02	Annual Level 1 (ANSI A300 Part 9 & ISA BMP)	All trees in high occupancy areas visited annually.
7.03	Mitigation Prioritization	A protocol for prioritizing mitigation following Level 1 and Level 2 assessments. Reflects the controlling agency's threshold for risk.
7.04	Occupancy Areas Mapped	Has TRAQ staff/consultant discussed/mapped occupancy levels with controlling authority?
7.05	Recordkeeping, Reporting, and Communications	A process has been put in place to maintain records on requests, inspections, evaluations, and mitigation of risk; and on the communications among the managers related to those risk assessments.
7.06	Standard of Care Adopted	Controlling authority has adopted a Standard of Care (SOC) or risk management policy.
7.07	Tree Risk Specification	Is there a written specification that meets requirements of ANSI A300 (Part 9)? And, has it been discussed with the controlling authority with relevance to the controlling authority's threshold for acceptable risk?
7.08	Urban Tree Risk Management	The community has prepared and follows a comprehensive program for urban tree risk management.
7.09	Invasive Management	Plan to address and manage invasive: plants, insects, and disease.

Disaster Planning

Category	Component Evaluated	Description or Criteria for Evaluation
8.00	Disaster Planning Activities	
8.01	Response/Recovery Mechanism	Staff knowledge of the municipality's protocol for requesting disaster resources through the county or state with access to mutual aid and EMAC.
8.02	Urban Forestry as part of the County Disaster Plan	The UF plan (8.3) is incorporated into the county/municipal disaster plan; specifically in reference to debris management and risk mitigation.
8.03	Urban Forestry Disaster Plan	A separate/specific plan within the urban forestry management program (i.e. who to call, priorities).
8.04	Pre-disaster Contracts	Contracts are in place for critical needs.
8.05	Mitigation Plan	A mitigation plan has been developed for pre-disaster, recovery, and post-disaster.
8.06	EMAC Mission Ready Packages (MRP)	Municipality has published disaster resources with state EM and participates in inter-state Mutual Aid to support Urban Forest Strike Teams (UFST).
8.07	Urban Forest Strike Team	Participation in the UFST project.

Standards and Best Management Practices

Category	Component Evaluated	Description or Criteria for Evaluation
9.00	ANSI Standard & BMP Activities	
9.01	ANSI Standards	Reference and adherence to ANSI Standards for arboricultural practices (A300), safety (Z133), or Nursery Stock (ANSI Z60.1) (any or all).
9.02	Ages/Diameter Distribution	Specific management for the development of an age-diverse tree population
9.03	Arborist Standards	Standards of practice for arborists (i.e. Certification).
9.04	Best Management Practices (BMPs)	Establishes or references tree maintenance BMPs (i.e. written comprehensive standards & standards).
9.05	Fertilization and Mulching	Fertilization or mulching standards required for conserved & planted trees.
9.06	Lightning Protection Systems	BMP written to the ANSI A300 Standard.
9.07	Planting	Planting and transplanting standards required/specified.
9.08	Pruning	Pruning standards required for conserved & planted trees.
9.09	Removal	Infrastructure damage, stump grinding, etc.
9.10	Support Systems (Guying and Bracing)	BMP written to the ANSI A300 Standard.
9.11	Tree Risk	Tree risk assessment procedures; ISA BMP or equivalent.
9.12	Construction Management Standards	Written standards for: tree protection, trenching/boring in CRZs, pre-construction mulching, root or limb pruning, watering (any or all).
9.13	Design Standards	Standards for design that specifically require trees; standards for tree placement (i.e. location), soil treatment, and/or drainage.
9.14	Genus/Species Diversity	Suggests or requires diversity of plant material.
9.15	Green Stormwater Infrastructure (GSI)	BMPs for site level GI practices like rain gardens and swales. Small-scale projects.
9.16	Inventory Data Collection	Community has adopted or developed applicable standards for local urban tree inventory data collection to support QA/QC.
9.17	Minimum Planting Volume	Minimum required root zone volume.

Standards and Best Management Practices (continued)

Category	Component Evaluated	Description or Criteria for Evaluation
9.00	ANSI Standard & BMP Activities	
9.18	Minimum Tree Size	Minimum caliper for tree replacements, and/or minimum size of existing trees to receive tree density or canopy credit.
9.19	Root Protection Zone (CRZ)	Defines adequate root protection zone; Critical Root Zone (CRZ).
9.20	Safety	Safety logs, trainings, reference to ANSI Z133 Safety Standard
9.21	Topping	Prohibits topping or other internodal cuts (public & private).
9.22	Tree Species List	Identifies and publishes a list of the most desirable, recommended, and/or preferred species (may include native and non-native species); alternatively, a list of species prohibited.
9.23	Tree Quality Standards	Written standards for tree selection at nursery in addition to Z60.1.
9.24	Utility Right-of-Way (ROW) Management	Requirements for planting, pruning, and/or removal of trees within a utility ROW.
9.25	Urban Agriculture	Enabled urban food forestry practices.
9.26	Wood Utilization	Larger diameter material is processed for wood products.
9.27	Third-party forest products certification compliance	Examples: American Tree Farm System (ATFS), Forest Stewardship Council™ (FSC®).
9.28	Energy generation	Local or regional use of chips or other woody debris for co-generation facilities (an efficient process that uses one fuel to generate two types of energy— electrical and thermal).
9.29	Composting of Leaf and/or Other Woody Debris	Leaves and small woody debris are captured and used on-site or processed by someone by composting for reuse.
9.30	Watering Standards	

Community

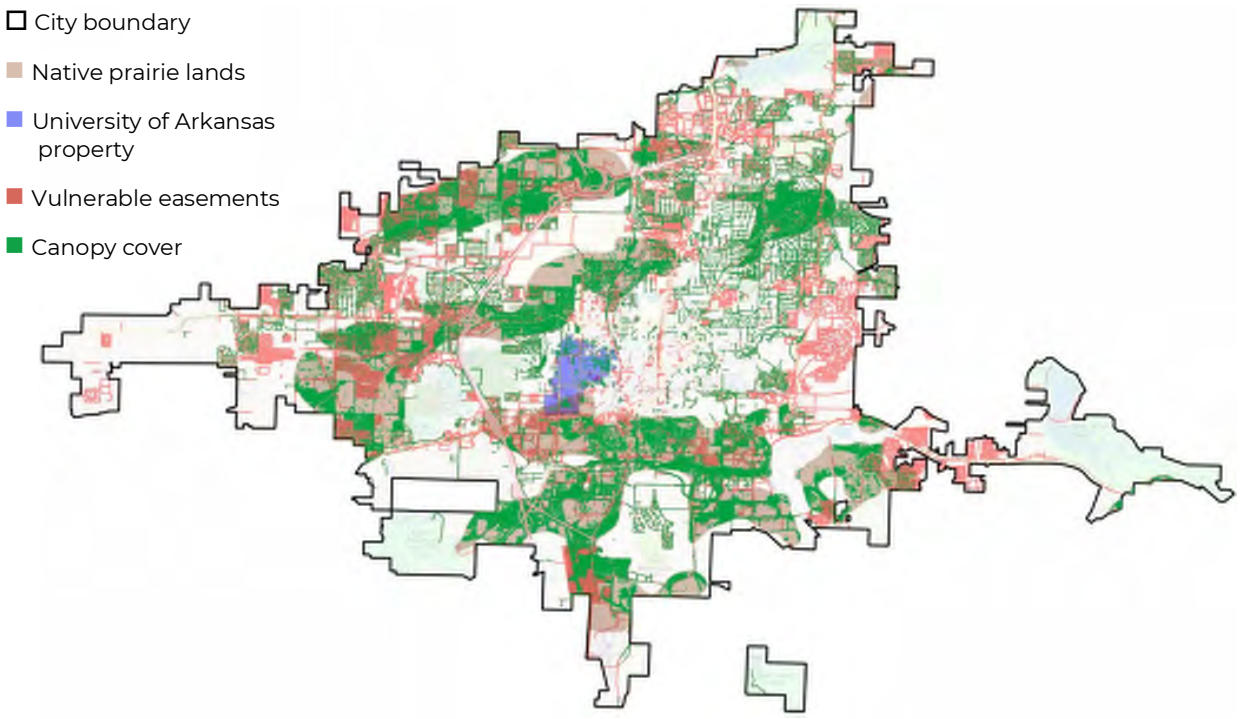
Category	Component Evaluated	Description or Criteria for Evaluation
10.00	Activities that Build Community	
10.01	Social Media Website or Similar	Does your community/campus use social media platforms or similar to document and publicize your urban forestry program, activity, or events?
10.02	Education	The urban forest is used as an educational laboratory for class activity; Kids in the Woods, PLT, high school, or college level.
10.03	Private Property Tree Program	Does your community sponsor this program locally?
10.04	Public-facing Tree Inventory and Management Software	Public access to the community tree resource via an on-line mapping program (i.e. any Web Map Service; WMS).
10.05	Public Perception	Is public management consistent with private property requirements for tree protections and care? Does the Campus/public tree management reflect neighborhood norms?
10.06	Recognition Programs	Programs that raise awareness of trees or that use trees to connect the community to significant events or activities.
10.07	Arbor Day Celebration	Whether or not associated with Tree City USA.
10.08	Arboretum designation	Internal or third party arboretum designation.
10.09	Significant trees	For example: size, history.
10.10	Memorial/Honorarium	Tree planting or tree care programs than honor/memorialize individuals, organizations, or events.
10.11	Social Media	Does your community/campus make use of Twitter, Facebook, Blogs for internal or external outreach?
10.12	Active Communications	Press releases, regular news articles (print), “State of the Urban Forest” reports, periodic analysis of threats and opportunities.
10.13	Tree Care	Are volunteers trained and used for basic tree care (e.g. mulching, pruning, planting).
10.14	Tree Campus USA®, Tree City USA®, Tree Line USA®	Community/campus meets current qualifications for any of these programs.
10.15	Volunteer Opportunities	Ad hoc or scheduled. Any/all age groups. Tree Campus USA student activities.

Green Asset Management

Category	Component Evaluated	Description or Criteria for Evaluation
11.00	Observed Outcomes (Activity, Health)	
11.01	Deadwood	Look for evidence of periodic or ad-hoc deadwood removal (i.e. lack of dead limbs ≥ 2" in the trees or on the ground).
11.02	Genus Diversity	No genera exceed 20% of population; make specific observations for *Acer*, *Quercus*, *Fraxinus, Ulmus* and other local species of concern.
11.03	Mature Tree Care	Mature trees are retained in the landscape, and are of acceptable risk; i.e. veteran tree management.
11.04	Mulching	Evidence of adequate (i.e. spatial extent, depth, and material) roots zone mulching for all age classes.
11.05	Planting Site Volume Optimization	Are species & sites matched for optimization of above ground canopy; right tree in the right spot concept.
11.06	Rooting Volume Optimization	Are species & sites matched for optimization for below ground rooting volume; right tree in the right spot concept.
11.07	Species Diversity	No species/cultivars exceed 10% of population; make specific observations for *Acer*, *Quercus*, *Fraxinus, Ulmus* and other local genera of concern. Also evaluate the role of regionally local native species.
11.08	Soil Compaction	Observe evidence of soil compaction by users or staff during maintenance. Include "desire" lines and construction activity at time of evaluation.
11.09	Tree Health	Rate the overall tree health in all size (age) classes; look for crown dieback, decay, foliage density & color.
11.10	Young Tree Pruning	Look for evidence of periodic (e.g. every 3 years to year 9) structural pruning (e.g. subordination cuts, dominant central leader, co-dominant stems lower that 20').

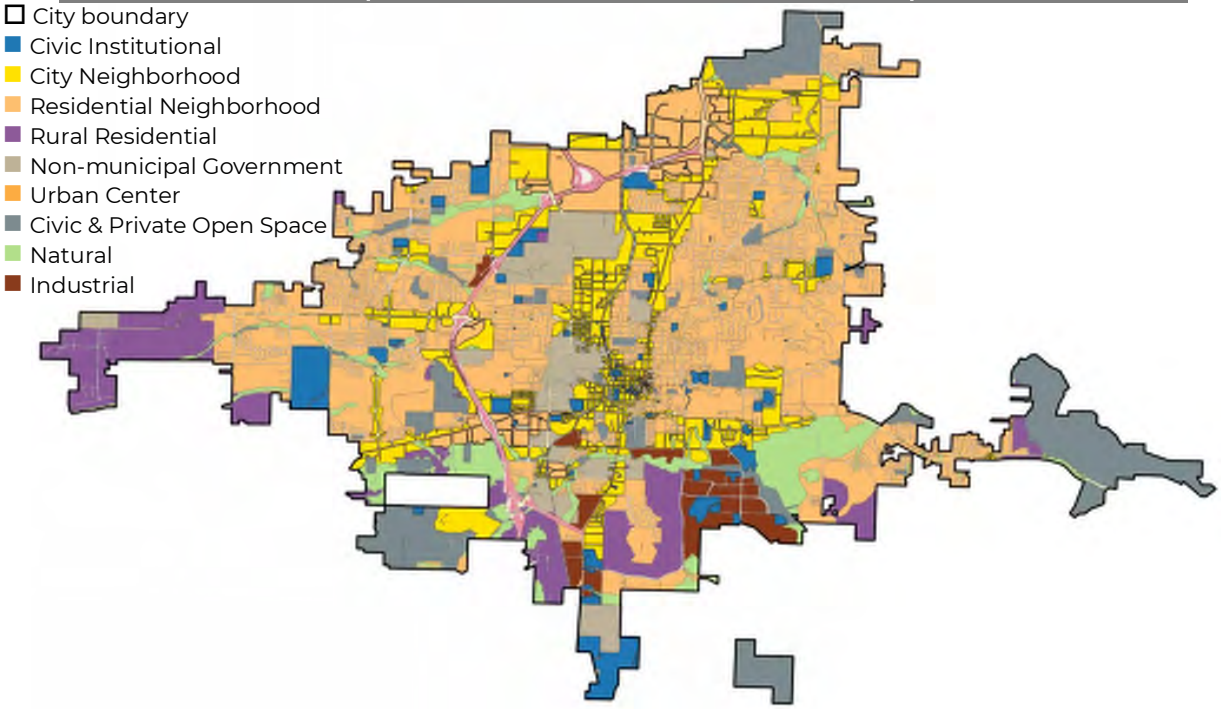
APPENDIX C: TREE PLANTING AREAS AND CRITERIA

Priority Planting Areas to Achieve Canopy Goals and Tree Equity



Once the City finalizes local and citywide tree canopy goals, it is recommended to establish priority areas based on a variety of themes and community needs. Themes may include ownership type (public and private), areas of low existing tree canopy, Tree Equity Scores (TreeEquityScore.org), and greatest amount of available planting space while other themes may address air quality, stormwater reduction, water quality, and preserving native land cover (e.g., native prairie land). Others may evaluate opportunities to address disadvantaged areas, densely populated regions, loss due to development, and human health factors such as asthma cases, median age, and mental health. In any planting prioritization scenario, the scale may include U.S. Census Bureau Census Block Groups, Future Land Use Classes, neighborhoods, ownership (public, private, campus and institutional), and citywide.

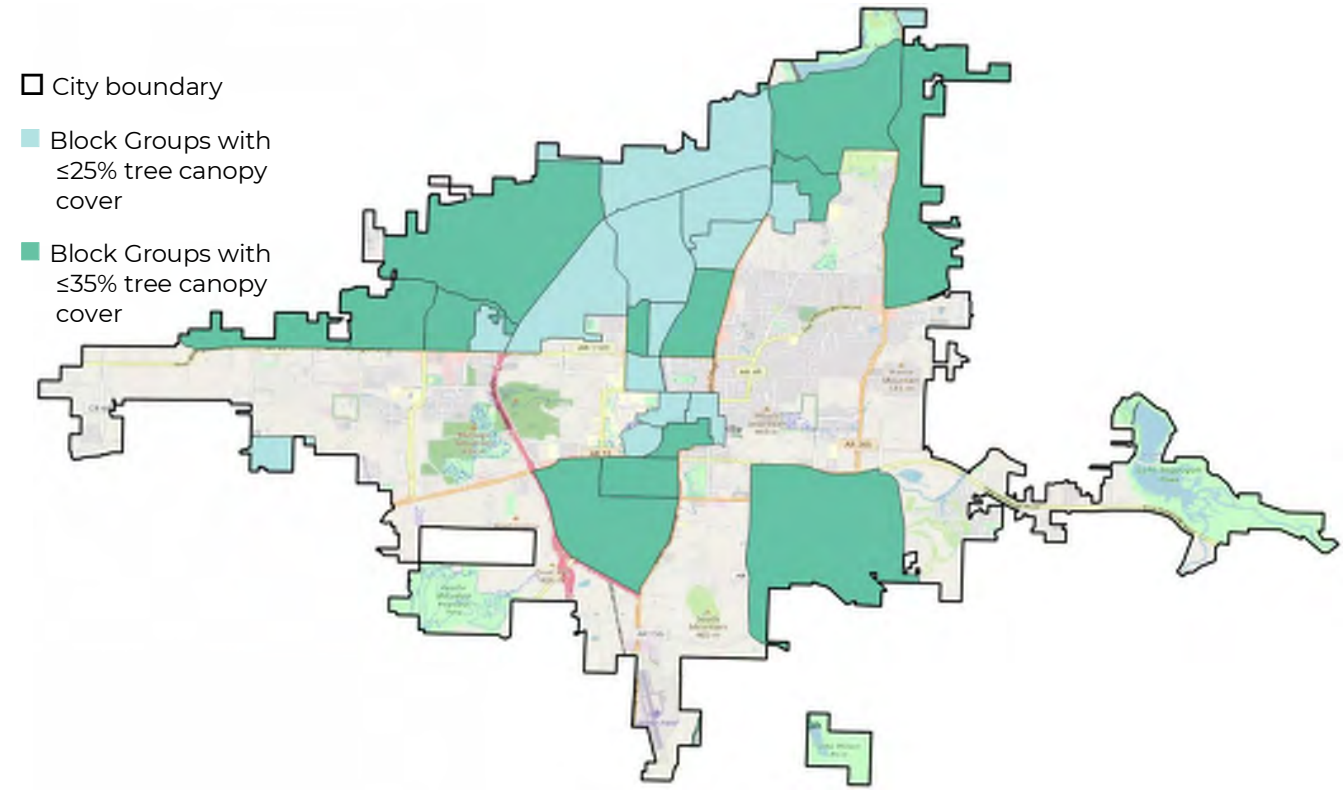
Using the results from the 2019 Urban Tree Canopy Assessment and an analysis of canopy change over four time periods and analyses in a Geographic Information System (GIS), a series of recommended prioritization techniques is provided. The description of the prioritization techniques and scenarios is provided below followed by a series of corresponding priority maps.



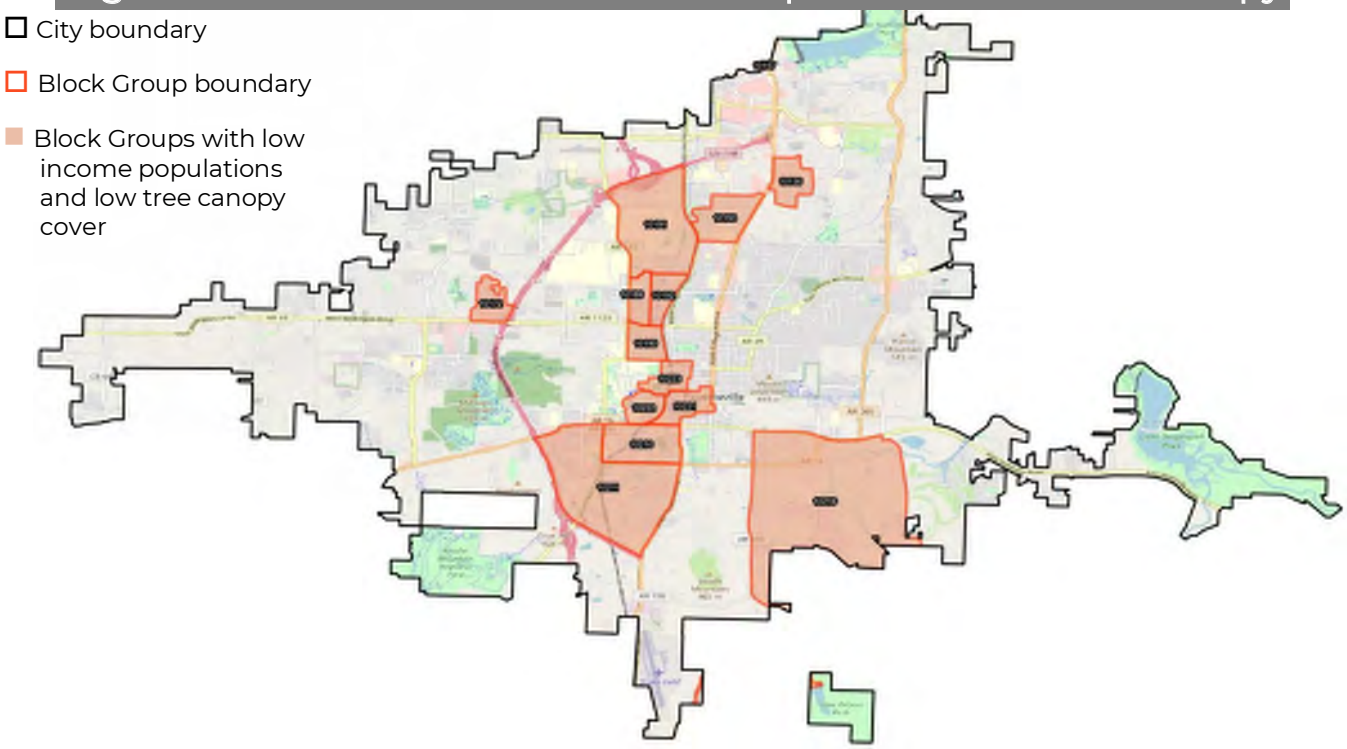
- **Low Tree Canopy:** It is important to understand the existing distribution of existing tree canopy across the City. This scenario shows Census Block Groups (CBGs) that are low in canopy cover (less than 35% canopy cover).
- **Low Income and Tree Canopy:** This scenario shows the CBGs with a high proportion of low-income populations and low amounts of tree canopy cover (less than 35%).
- **Vulnerable and Exclusion Areas:** Certain areas of the City may not be preferable to plant trees such as in native prairie land. Other areas are outside of the City's jurisdiction such as the University of Arkansas. And other areas such as easements have tree canopy that is vulnerable to change such as the removal of trees for a utility easement.
- **Development and Future Land Use:** With robust tree regulations in place, tree plantings in future land use areas can be considered to support a citywide canopy goal.
- **Tree Equity:** The American Forests' Tree Equity Score tool evaluates the correlation between tree canopy cover, surface temperatures, and socioeconomic data. Priority areas may include CBGs that have less than the citywide score of 87 out of 100.
- **Percent People of Color:** Redressing tree canopy cover inequities requires multiple facets of urban forest management though identifying canopy cover and the proportion of people of color within CBGs can assist in determining priority areas for plantings.
- **Average Surface Temperature:** Trees and green spaces have been proven to lower surface temperatures and mitigate urban heat island effects. Data from USGS Landsat 8 imagery, thermal bands.
- **Health Risk Index:** Research shows trees can improve human health through air quality improvements and encouraging physical activity. Priority areas are based on self-reported poor mental health, poor physical health, asthma, and coronary heart disease from the Centers for Disease Control.

View the maps on the following pages for examples of the listed planting priority techniques.

Vulnerable and Exclusion Areas

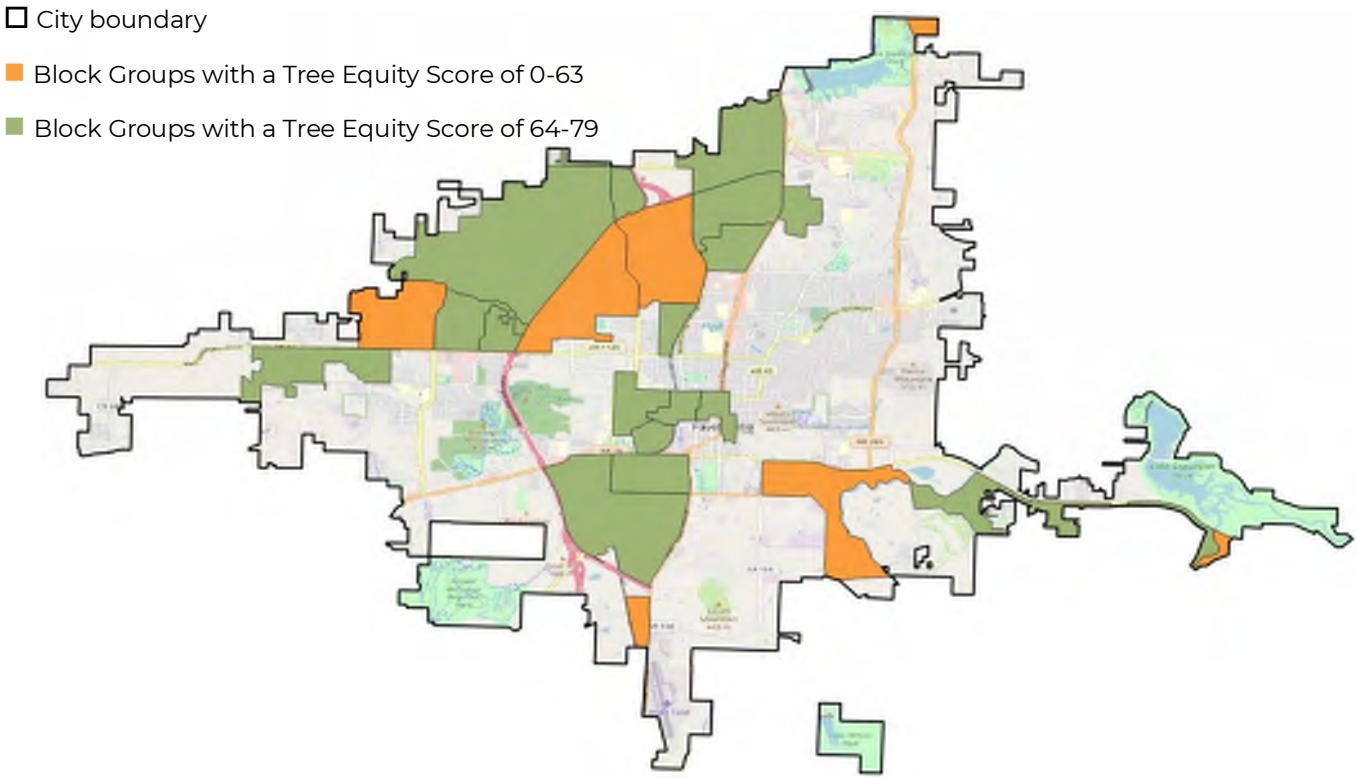


Development and Future Land Use Impacts

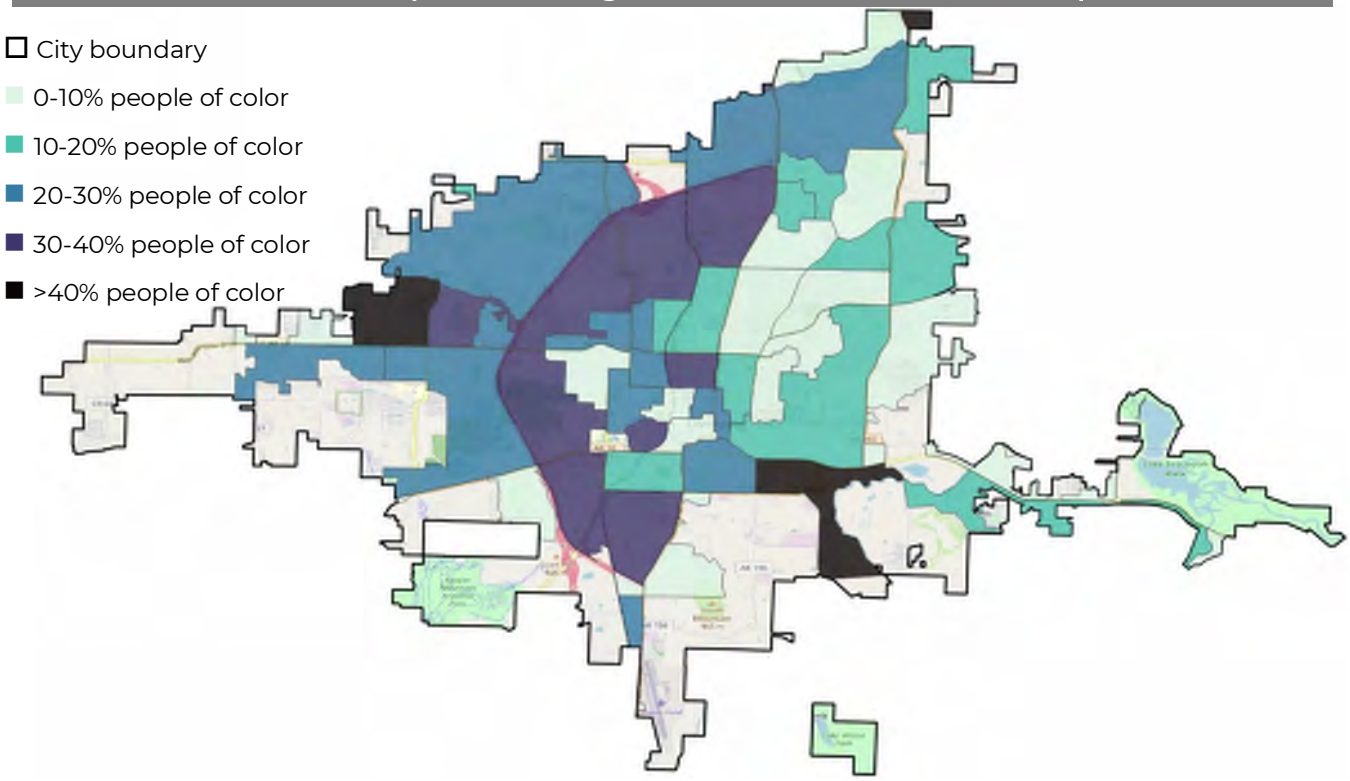


Priority Planting Maps by Theme

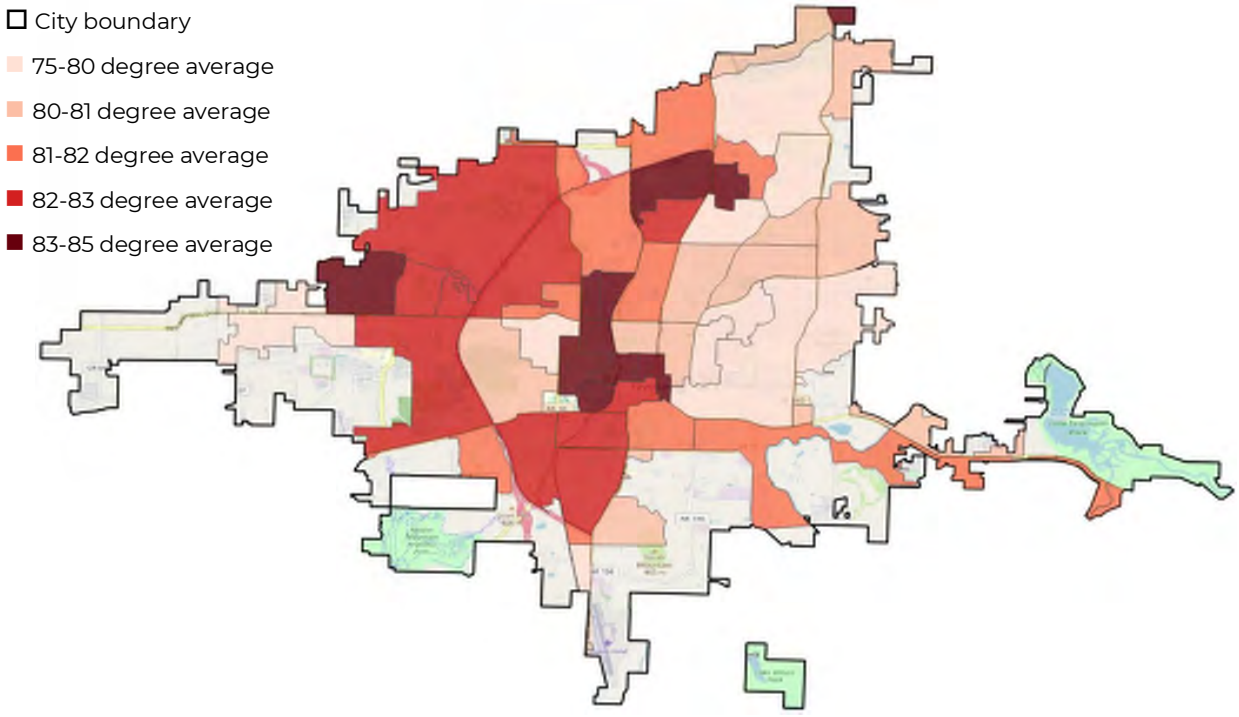
Figure 50. Priority planting maps by planting theme.



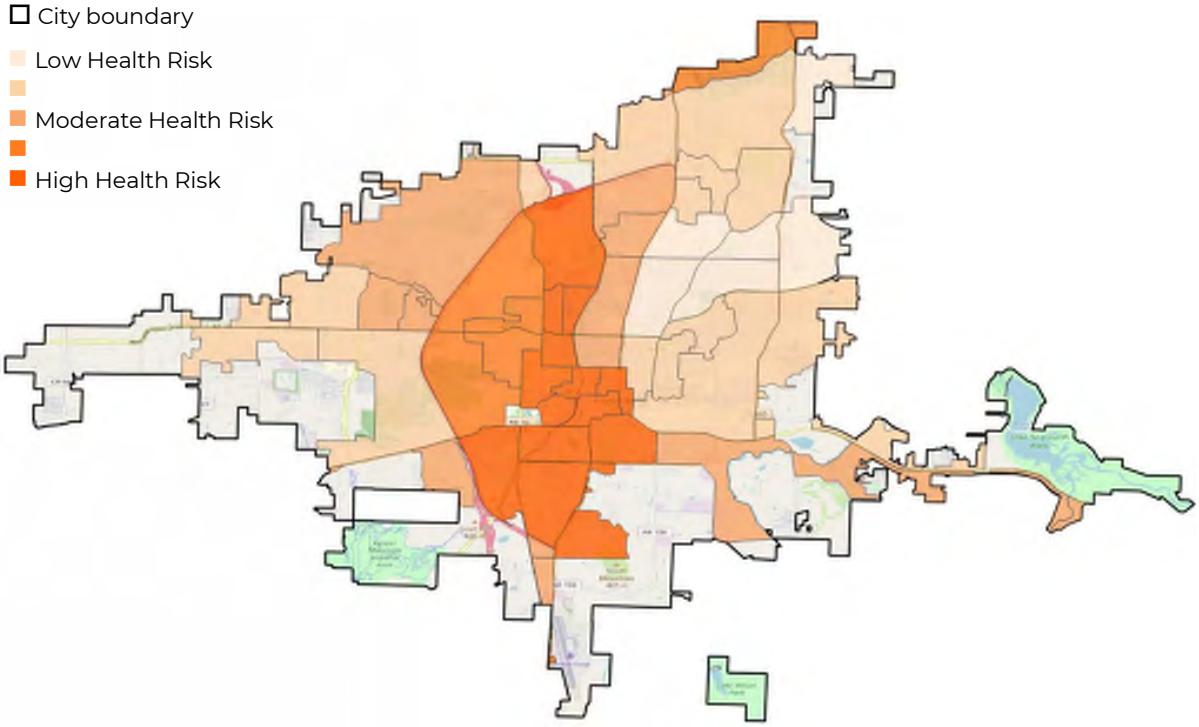
Areas with Low Tree Canopy Cover (<35%)



High Concentration of Low-Income Populations and Low Canopy



Areas with Tree Equity Scores Less Than 80 out of 100



Census Block Groups with High Concentrations of People of Color

Areas with Higher than Average Surface Temperature

Health Risk Index Based on the Centers for Disease Control

APPENDIX D: ORDINANCE EVALUATION

The following considerations are provided for Chapter 167 Tree Preservation and Protection and Chapter 177 Landscape Regulations of Fayetteville's Code of Ordinances. The evaluation is based on a checklist shown in the table on the following page. Considerations for changes may also pertain to City design standards, protocols, and manuals such as the Fayetteville Tree Preservation and Landscape Manual (referred to as the Tree Manual in this section). Based on this approach, the following summary provides the City with considerations for tree regulation changes in the future.

- Prior to any significant change(s) to tree ordinances, it is recommended that the City engage with internal and external stakeholders and the general public to gather input and feedback.
- Include references to the Urban Tree Canopy (UTC) assessments and the amount of tree canopy cover (39.4% based on 2019 imagery) and associated ecosystem benefits. Begin by updating section 167.01 Purpose and section 177.01 Purpose with these references and expand on the purpose to include the benefits of trees in mitigating climate change and other benefits and services not currently listed such as the human health and social benefits.
- Consider creating a section within Chapter 167 ("Definitions") that specifically defines and clarifies urban forestry-related terms. An example of a clarification could include descriptions and criteria for "significant trees", "priority trees" (listed in section 167.04.E.3), and trees within the "Tree Registry". As an alternative, the definitions could be listed in the Tree Manual and referenced in Chapter 167.
- Identify changes to resources needed to provide adequate staffing for administration, monitoring, and enforcement of tree-related ordinances. Update Code language accordingly.
- Consider a more nuanced approach to tree mitigation requirements for private development. For example, large mature and/or specimen trees that are approved for removal should have a greater requirement in terms of mitigation, replacement plantings, and/or fees. Explore mitigation and penalties for the unauthorized removal of private protected trees Chapter 167) and public trees (Chapter 177). Periodically review and update canopy goal requirements as needed.
- Gather feedback to determine if any changes are necessary for public and private tree variances to the regulations. Develop incentives and regulations for projects to meet the canopy cover requirements (%'s) rather than defaulting to mitigation.
- During the periodic update to the Tree Manual, review the recommended tree species for planting and revise as needed based on the latest research and goals for tree species diversity. Periodically revisit the invasive plant species list in section 177.09 of Fayetteville's Code of Ordinances and update as needed based on the latest research, presence of species of concern, and the emergence of favorable habitats for new invasives to the region due to changing climates.
- Clarify roles and responsibilities for public street trees planted as part of private development projects (Chapter 177). Consider updating regulations for public street trees that are not planted as part of private development projects.
- Clarify regulations for trees in proximity or in conflict with overhead utilities.
- Review the evaluation table on the following page to finalize a scope of potential changes to tree-related ordinances.

Table 22. Tree ordinance evaluation checklist. Source: PlanIT Geo

Priority Level Key: 1 = High Priority, 3 = Low Priority " –" = adequate regulations in place

Topic	Addressed (X)	Chapter & Section	Comments	Priority Level
Credentials				
Requires certified arborist for paid private tree work	X	167.07		-
Requires certified arborist for public tree work	X	167.07		-
Requires licensing of private tree care firms	X	167.07		-
Defines official authority for public tree management	X	Throughout Ch. 177		-
Public Tree Management and Protection				
Establishes/authorizes Urban Forester to regulate public trees	X	Throughout Ch. 177		-
Establishes/Authorizes City position (e.g., Mayor, City Administrator, DPW Director) to regulate public trees	X	177.02.B	Defines the authority and role of the Urban Forestry Advisory Board	-
Requires annual public tree work plans				2
Identifies formula for determining monetary tree value				1
Establishes responsibility for public tree maintenance (e.g., City, adjacent property owner)	X (Limited)	177.05 177.10	Chapter 177 does not define responsibility beyond those street trees planted as part of private development	1
Requires regular public tree maintenance	X (Limited)	177.10	Provided only for street trees planted as part of private development (3 years)	1
Requires particular types of maintenance (e.g., pruning)	X	167.06.A		-
Requires adherence to ANSI A300 standards and best management practices	X	167.06.A		-
Establishes permit system for work on public trees				3
Establishes provisions for penalties for non-compliance				2

Topic	Addressed (X)	Chapter & Section	Comments	Priority Level
Public Tree Management and Protection (continued)				
Restricts public tree removal	X	167.06.C		-
Permit or approval required for tree removal, pruning or excavating near public trees				1
Prohibits damage to public trees (e.g., attaching ropes, signs, wires, chemicals, storing materials, excavation etc.)	X	177.01 167.06.D	"Damage" should be defined and prohibited rather than "remove and replace damaged landscape"	-
Restricts burning of solid wood waste				3
Establishes a wood utilization program				2
Establishes an insect/disease control strategy			Address pests/diseases of concern. Consider ability to remove diseased trees on private property if a hazard	1
Defines tree maintenance requirements on public property	X (Limited)	177.10	Only applies to street trees as part of private development	1
Prohibits tree topping	X	167.06.E		-
Regulates abatement of hazardous or public nuisance trees	X	167.08		-
Regulates removal of dead or diseased trees	X	167.08		-
Tree Fund	X (Limited)	177.10.A.5.b	Only applies to street trees as part of private development. Consider adjusting $250 fee-in-lieu and $425 3-year maintenance fees to align with industry and comparable cities' rates	1
Public Tree Planting				
Regulates tree species which may or may not be planted on **private** property (approved tree list)	X	167.04.I.6	Update periodically based on research and trends	-
Requires replacement of removed publicly owned trees	X (Limited)	177.01	Only applies to private development street trees	2
Regulates tree species which may or may not be planted on **public** property (approved tree list)	X	177.09 167.06	Revisit species list periodically and update as needed	-

Topic	Addressed (X)	Chapter & Section	Comments	Priority Level
Private Tree Protection and Preservation				
Requires tree planting around reconstructed parking lots	X	177, 167.04 Ch. 167 Table 1		-
Requires tree plantings around new parking lots	X	167.04 Ch. 167 Table 1	Required for lots with 5 or more spaces	-
Requires tree plantings around new developments	X	167.04.I.4 Ch. 167 Table 1	Plantings are regulated in terms of canopy retention and high or low priority canopy	-
Restricts tree removal on private property	X (Limited)	167.04.L.3	Consider fees / fines for violation(s). Only restricted in tree preservation easements	-
Permit or approval required for tree removal on private property	X (Limited)	167.04	Only restricted in tree preservation easements	-
Requires preservation of trees during development on private property	X	167.04	Mitigation is an option and should be a last resort to preservation	-
Prohibits damage to preserved/protected trees	X	167.05		-
Prohibits damage or removal of trees on another person's property	X (Limited)	167.05	Mitigation is the only penalty though. Consider changes	3
Inventory of trees on site required	X	167.04	Requires a preservation plan	-
Identification of forests/woodlands required	X	167.04		-
Specific species and/or size of trees regulated (e.g., heritage/significant trees)	X (Limited)	167.04.E	Revisit periodically to determine if sizes reflect species significance and value. Needs more protection in Code	2
Location of Critical Root Zone/Dripline required	X	167.05	Specification provided in Tree Preservation and Landscape Manual	-
Minimum canopy coverage requirement set	X	167.04.C	Table 1 Consider updating canopy requirements using the canopy assessment data and canopy goals as needed	-

Topic	Addressed (X)	Chapter & Section	Comments	Priority Level
Private Tree Protection and Preservation (continued)				
Identification of riparian buffers, natural areas, preservation zones	X	167.04.E.2		-
Tree protection/preservation plan required	X	167.04		-
Identification of prohibited activities in dripline/critical root zone	X	167.05	Also in Tree Preservation and Landscape Manual	-
Tree protection fencing required	X	167.04.H.2 167.04.H.3 167.05.B	Chain link or orange fence required	-
Location/type of other tree protection measures (e.g., root pruning, aeration, vertical mulching, trunk/soil protection, irrigation,) on development plans (e.g., site plans, construction plans, etc.)	X	167.04.H.2 167.04.H.3 167.05.B		-
Provide incentives for tree preservation	X (Limited)	167.04.I 167.04.J	On- and off-site mitigation offered, fee-in-lieu toward Escrow account. Reevaluate for additional incentives to preserve canopy rather than mitigate. No credits considered	1
Landscape plan with proposed landscaping and mitigation trees to be planted	X	167.04		-
Requires Grading plan to include protected/preserved trees	X	167.04.A.10		-
Utility plan with trees to include protected/preserved trees	X (Limited)	167.06.J	Consider referencing industry standards for utility pruning and to consult with Urban Forester for pruning or removing trees encroaching utilities (above and below ground, including proposed lights)	1

Topic	Addressed (X)	Chapter & Section	Comments	Priority Level
Private Tree Protection and Preservation (continued)				
Tree planting requirements for removal of regulated trees	X	167.04.C	Consider a 2:1 replacement ratio for significant, specimen, special / priority trees or mitigation that is based on the diameter inches of tree(s) removed	-
Fee in Lieu of planting mitigation trees	X	167.04.J.4	Determine if Escrow Account fee per tree required and 3-year maintenance fee is adequate	-
Tree mitigation survival requirements	X	167.10	Binding 3-year maintenance and monitoring plan	-
New tree planting survival requirements	X	167.10	Binding 3-year maintenance and monitoring plan	-
Fine for removal of regulated trees			No penalties, fees, or fines listed. Only tree mitigation (planting) currently	1
Penalties established for damage and removal of preserved/saved trees			No penalties, fees, or fines listed	1
Bonding utilized to discourage tree removals			A tree bond requires a land developer to deposit a certain amount of money with the local authority during development. If the identified tree or trees are not present and healthy after the development, the funds are forfeited.	1
Tree Fund	X	167.04.J.4	City's Tree Escrow	-

APPENDIX E: EXISTING CITY PLANS CROSS REFERENCING

The Urban Forest has been valued for decades and accounted for in many planning efforts across city departments. References to the urban forest in other plans have been extracted and are summarized below.

PLAN NAME & DATE	EXCERPTS PERTAINING TO URBAN FOREST
THE CITY PLAN 2040 VISION, 2020 UPDATE 	**City Plan 2040 Goals** **Goal 1 - We will make appropriate infill and revitalization our highest priority. P. 22.** **3.1.5 Reinvest in parks, street, and civic buildings within the heart of the City.** The tree-lined streets, parks, and historic civic buildings found in Fayetteville's older neighborhoods greatly contribute to the unique community character and high quality of life that residents treasure. Preservation of our tree-lined streets and parks and adaptive reuse of our historic civic buildings will maintain the community cultural identity. The City should continue to utilize the Enduring Green Network map to identify and preserve high-value open spaces that help to create an interconnected green network throughout the community. P. 24 **Goal 5 - We will assemble and enduring green network. P. 40** 3.5.1 Vigilantly nurture a continuum of greenspace. 3.5.2 Strategically plan for and acquire land that can be incorporated into the Enduring Green Network. 3.5.3 Promote conservation easements and alternative development patterns that encourage efficient use of land.
ENERGY ACTION PLAN, 2018 UPDATE 	**Cross Sector Building** **Strategy 3. Make existing institutional, commercial, and industrial buildings more efficient. P. 37** Encourage heat island mitigation features to help lower utility costs for residents and businesses. Encourage tree planting, green roofs, and other energy-saving techniques across the City through education, outreach, and tree give-aways. **Strategy 4: Conduct a community-wide tree canopy assessment and set a tree canopy coverage percentage goal. P. 39** Target areas in need of additional tree canopy by creating a tree canopy map layer.

PLAN NAME & DATE	EXCERPTS PERTAINING TO URBAN FOREST
ENERGY ACTION PLAN, 2018 UPDATE 	**CROSS SECTOR- BUILDINGS** **Strategy 4: Conduct a community-wide tree canopy assessment and set a tree canopy coverage percentage goal. P. 39** Explore a strategy and funding mechanism to increase the permanent preservation of lands identified as the "Enduring Green Network" in the City's Future Land Use Plan and Map. These lands may be City-owned or preserved through land trusts, tree preservation easements, or other mechanisms. Increase awareness of utility-focused "Right Tree, Right Place" program through joint outreach campaigns. Explore options to develop a tree planting program partnering with residents, business owners, and institutions for the planting of trees in right-of-way, on easements, or on private properties. Evaluate the feasibility of modifying existing tree preservation minimums and mitigation rates in the City's Tree Preservation Code to improve the long-term ecological outcomes of urban development. Conduct a community-wide tree canopy assessment every five years. **City Government Strategies** **Strategy 2: Make all new and existing city-owned facilities and assets more energy efficient. P. 58** **Action Items:** Explore a strategy and funding mechanism to increase the permanent preservation of lands identified as the "Enduring Green Network" in the City's Future Land Use Plan and Map. These lands may be City-owned or preserved through land trusts, tree preservation easements or other legal mechanisms. Install native landscaping to provide relief from the urban heat island effect and reduce cooling costs in summer months. Continue to prioritize tree planting at existing and new facilities to provide shade, infiltrate stormwater, improve air quality, and generally enhance our urban ecosystem functions.

PLAN NAME & DATE	EXCERPTS PERTAINING TO URBAN FOREST
CLIMATE ACTION PLAN, 2024 UPDATE 	**6.0 Nature Based Solutions Ecosystem Services** **Goal 3: Preserve land within the City's planning area that provide high ecosystem services for resilience to extreme weather events. P 38.** Action: Explore bond potential for land acquisition and conservation. P. 40 **Goal 4: Restore and improve ecosystem services provided by existing preserved natural areas. Existing preserved lands identified as having high ecosystem services value for adaptation to extreme weather events should be prioritized for conservation and restoration efforts. P. 41** Action: Secure the necessary funding to meet the annual tree planting targets and implement a tree establishment program **Goal 5: Reduce climate change threats to public infrastructure and private property. P. 42** Actions: Implement strategies and actions identified in the 2023 Urban Tree Plan and Assessment. Plant species that provide optimal ecological benefit in City owned parks, trails, and rights-of-way. Update tree lists that prioritize native and climate-resilient tree species. Identify opportunities to "rewild" parks that contribute to ecosystem resilience **Ecosystem Resilience** **Goal 1: Identify lands with high levels of biodiversity and ecosystem resilience. P. 43** Actions: Create a city-wide tool to track environmental assets and ecosystem services. Identify opportunities to "rewild" parks that contribute to ecosystem resilience. **Goal 2: Preserve lands with high levels of biodiversity and ecosystem resilience. P. 43** Actions: Acquire at least 100 acres of land with very high value for climate resilience by 2040.

PLAN NAME & DATE	EXCERPTS PERTAINING TO URBAN FOREST
CLIMATE ACTION PLAN, 2024 UPDATE 	**Goal 3: Restore and enhance City-owned or managed lands with high levels of biodiversity and ecosystem resilience. P. 45** Actions: Plant species that provide optimal ecological benefit in City owned parks, trails, and rights-of-way. Identify opportunities to "rewild" parks that contribute to ecosystem resilience. Plant species that provide optimal ecological benefit in City owned parks, trails, and rights-of-way. Provide native plant species that offer optimal ecological benefit for the annual tree and plant giveaway events hosted by the Urban Forestry Division. Update tree lists that prioritize native and climate-resilient tree species. **Goal 4: Support on-going ecological education and outreach efforts by local expert organizations. P. 46** Actions:Plant species that provide optimal ecological benefit in City owned parks, trails, and rights-of-way. Provide native plant species that offer optimal ecological benefit for the annual tree and plant giveaway events hosted by the Urban Forestry Division. **Carbon Sequestration** **Goal 1: Measure and track carbon sequestration in the City's tree canopy and natural environment. P. 47** Actions: Calculate the carbon sequestration, storage, and avoided carbon generated from the citywide urban tree canopy cover. **Goal 2: Increase carbon sequestration into the City's soils, plants, and tree's biomass. P. 47** Actions: Implement strategies and actions identified in the 2023 Urban Tree Plan and Assessment. Plant native tree and plant species that provide optimal carbon sequestration benefit in City owned parks, trails, and rights-of-way. Distribute native tree and plant species that provide optimal carbon sequestration benefit for the annual tree and plant giveaway events hosted by the Urban Forestry Division.

PLAN NAME & DATE	EXCERPTS PERTAINING TO URBAN FOREST
CLIMATE ACTION PLAN, 2024 UPDATE 	**Goal 3: Preserve and enhance existing carbon sinks such as wetlands, prairies, and forests. P. 48** Actions: Implement strategies and actions identified in the 2023 Urban Tree Plan and Assessment. Plant native tree and plant species that provide optimal carbon sequestration benefit in City owned parks, trails, and rights-of-way. Distribute native tree and plant species that provide optimal carbon sequestration benefit for the annual tree and plant giveaway events hosted by the Urban Forestry Division. Acquire lands with high carbon sequestration value.

PLAN NAME & DATE	EXCERPTS PERTAINING TO URBAN FOREST
Active Transportation Plan (2023) 	**Pedestrian Recommendations – Planning P. 36** Include greenspace separation and/or street trees for all city and privately developed sidewalk projects.

PLAN NAME & DATE	EXCERPTS PERTAINING TO URBAN FOREST
PARK AND RECREATION SYSTEM MASTER PLAN (FEBRUARY 2023) 	**Guiding Principle 1: Nature Connection** **Goal A2: Raise awareness about parks, recreation offerings, environmental education, and trails. P. 57** **Strategy g) Provide environmental education through signage, program partnerships, outdoor classrooms and stewardship and volunteerism.** **Goal A3: Increase nature interaction opportunities in parks, focusing on more urbanized areas of Fayetteville. P. 58** Restore flood plains and wetland areas, adding bird viewing screens and other amenities to promote nature based activities in locations and with methods that do not negatively impact wildlife or sensitive ecologies. **Guiding Principle 5: Resilient Natural Systems P. 80** **Goal E1. Conserve land and strategically direct acquisitions for conservation to meet environmental and community objectives.** a) Develop a Conservation Plan to advance the "Enduring Green Network" and other natural resource goals. Include a natural lands and open space acquisitions action plan with consideration to linked growth concepts. b) Re-purpose city properties and acquire properties in the city center that will provide access to nature contact and deliver environmental services. c) Partner with Northwest Arkansas Land Trust, Watershed Alliances, Corp of Engineers, Department of the Interior and others to conserve land.

PLAN NAME & DATE	EXCERPTS PERTAINING TO URBAN FOREST
PARK AND RECREATION SYSTEM MASTER PLAN (FEBRUARY 2023) 	**Goal E2. Promote green infrastructure and regional systems in support of environmental conservation and preservation. P. 81** **Strategies:** a) Seek opportunities for stormwater properties to serve multiple purposes such as urban forest or recreation purposes. b) Implement best management practices to reduce flooding and erosion and preserve the quality of streams. **Goal E3. Enhance the ecological performance of existing parks and natural land properties. P.82** a) Improve management of natural resources within city properties and make improvements that enhance performance for ecological/climate action purposes. b) Create a dedicated natural resources team within parks maintenance to focus on natural areas. c) Coordinate with the Urban Forestry Plan to increase/improve tree canopy throughout the parks system where appropriate. d) Integrate volunteers and environmental educators (such as the Watershed Conservation Resource Center) into restoration and environmental enhancement projects. e) Educate about the value of unconventional management practices such as prescribed burns, livestock grazing, weed management and use of native grasses.

BACKGROUND AND OVERVIEW

Background

The purpose of Urban Forest Benchmarking is to understand the level of effort and capacity necessary to satisfy the City's adopted goals, to identify industry trends and best practices, and to ensure urban forest sustainability. Benchmarks help to gauge the City's investment in its urban forest compared to other communities facing similar issues in urban forest management. The results of the benchmarking exercise enable the urban forestry planning consultants to develop realistic strategies and achievable targets that align with comparable communities and industry standards. It will also serve as one platform and tool for monitoring implementation of Fayetteville, AR's Urban Forest Management Plan (in development as of January 2023).

BENCHMARKING DATA SOURCES

Several data sources were reviewed and compiled to evaluate how Fayetteville's urban forest and associated programs compare to industry standards and communities of a similar size or geographic location and how its own operations have changed over time.

Phase I of the benchmarking process uses the Arbor Day Foundation's Tree City USA 2021 dataset and compares statistics provided by the City of Fayetteville and as reported to Arbor Day for Tree City USA accreditation. The dataset includes program metrics for over 3,700 communities and the data is used to identify cities of similar size, location, and program structure that also participate in the Tree City USA program. Using this dataset helps better understand how Fayetteville's urban forestry budget and activities compare to relevant cities. Relevant cities are determined by 1) proximity (within 50 and 100 miles of city center), 2) population size (percent difference and cities with more than 90,000 but less than 200,000 people), and cities outside of these parameters but are areas of interest. The Tree City USA dataset is largely focused on urban forestry budgets, per capita funding information, and volunteer hours. The number of trees planted, removed, and pruned are also summarized. The budget from Tree City USA application includes all departments, equipment, vehicles, and volunteer hours. It does not represent the budgeted amount for Urban Forestry Tree plantings.

Phase II of benchmarking involves comparing Fayetteville's urban forestry operations to findings from an in-depth study conducted by researchers Richard Hauer and Ward Peterson (2014). In this study, researchers interviewed urban forestry programs in various regions across the U.S. and among varying population classes. A total of 670 communities participated in the census. Specific study focus areas include community and staff profiles, funding, tree management policy and planning, volunteers and partnerships, contracting tree care activities, community tree populations, tree operations and management, and assistance programs. Data from this study was compared to data obtained from the City of Fayetteville for the purposes of determining program health as compared to accurate data across a range of scales and locations.

Phase III of benchmarking is comprised of presenting the findings to the City and allowing time for any further data collection or clarifications in order to ensure the highest quality analysis. This phase also includes internal quality controls to ensure data comparisons are as accurate as possible. Information gathered during this process will inform the development of realistic and attainable goals and strategies in the City's Urban Forest Management Plan.

PHASE I BENCHMARKING RESEARCH

Summary of Communities for Benchmarking Research

Understanding the urban forest policies, management approaches, budgets, and programs of comparable communities and nationwide averages provides comparative data to benchmark the City's performance, present and future. While existing tree data describes the current conditions, benchmarks offer guidance to bring Fayetteville's urban forestry policies and practices into alignment with similar-sized cities in Arkansas and nationwide, enhancing urban forest management. A summary of the cities used for benchmarking Fayetteville can be found in (Table 1) below.

COMPARISON CITIES & COMPARISON GROUPS

Table 1. Communities benchmarked for the Fayetteville, AR Urban Forest Management Plan

Comparison Criteria	Community	County	Pop.*	Difference	Distance**
STUDY AREA	**Fayetteville**	**Washington**	**93,580**	**0**	**0.0**
AR Cities >25k Pop	Springdale, AR	Washington/Benton	87,609	-5,971	8.9
AR Cities >25k Pop	Rogers, AR	Benton	71,112	-22,468	22.7
AR Cities >25k Pop	Bentonville, AR	Benton	56,734	-36,846	27.0
AR Cities >25k Pop	Bella Vista, AR	Benton	30,808	-62,772	34.8

Reading, PA	$258,054	$2.71
Fishers, IN	$366,906	$3.70

Table 3. Summary of urban forestry budgets compared to city populations (per capita) in 2021

PHASE II BENCHMARKING RESEARCH

Note: The following comparisons use Fayetteville's 2021 metrics whereas the metrics for the comparison populations are based on 2014 data. The urban forestry planning consultants will need 2014 metrics from the City or data from the US Forest Service for 2021 in order to finalize the Phase II benchmarking. The following study is a preliminary exercise intended for internal use and for initial comparisons from which strategies may be developed.

URBAN FORESTRY BUDGETS

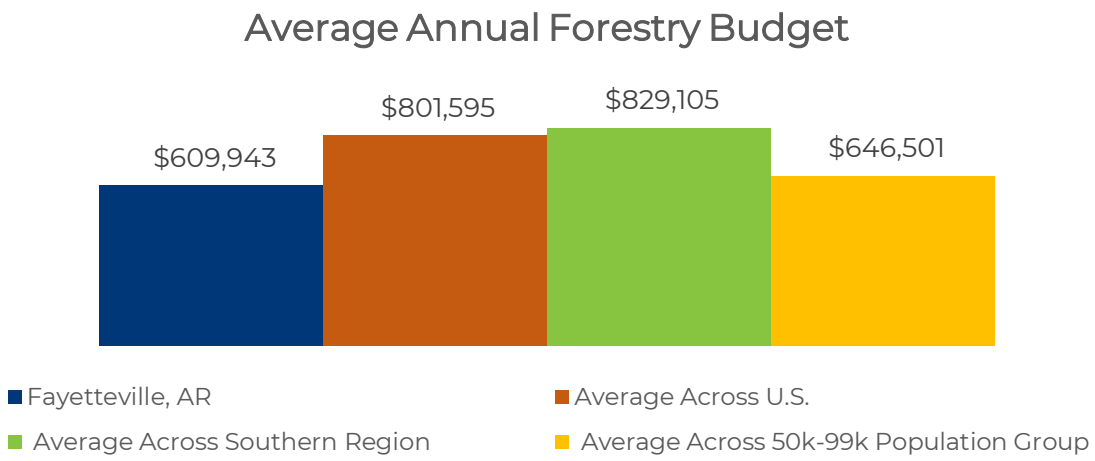

Figure 13. Comparison of urban forestry budgets (Hauer, 2014)

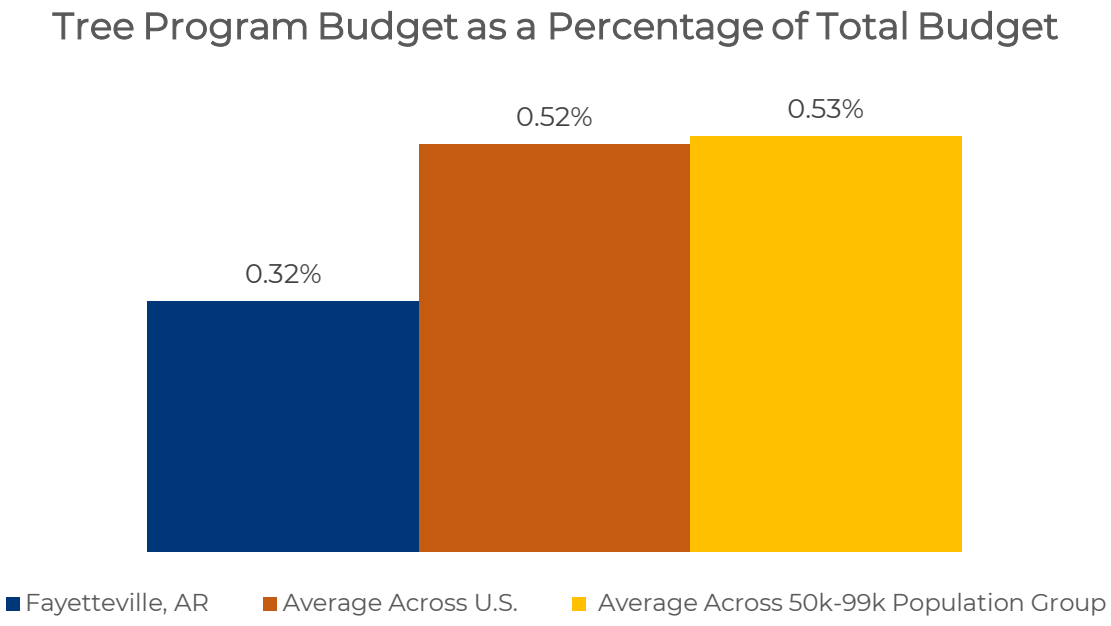

Figure 14. Urban forestry budget compared to the total municipal budget (Hauer, 2014)

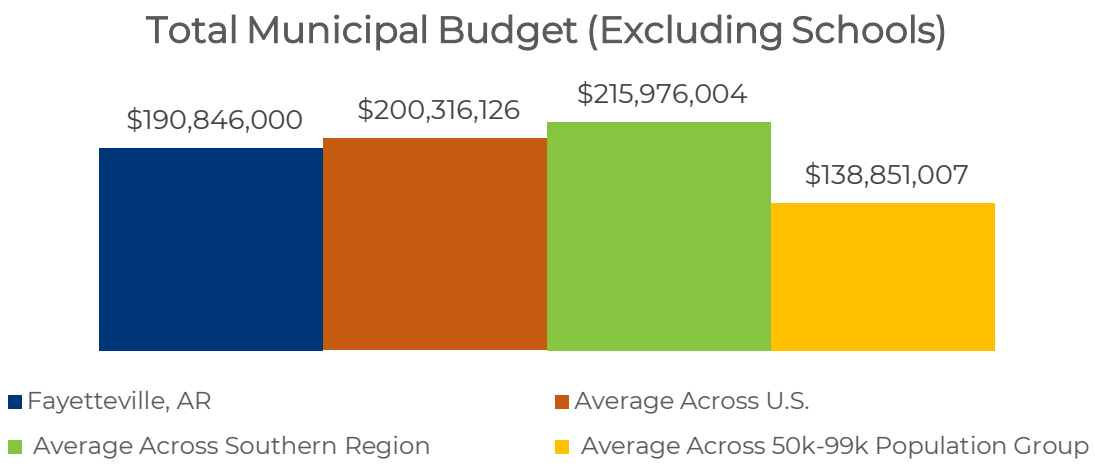

Figure 15. Total municipal budgets (Hauer, 2014)

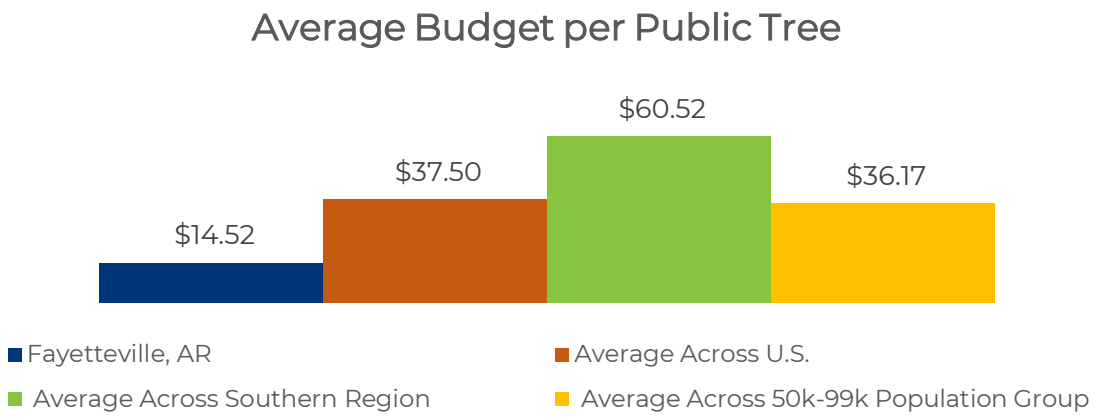

Figure 16. Average budget per public tree (Hauer, 2014)

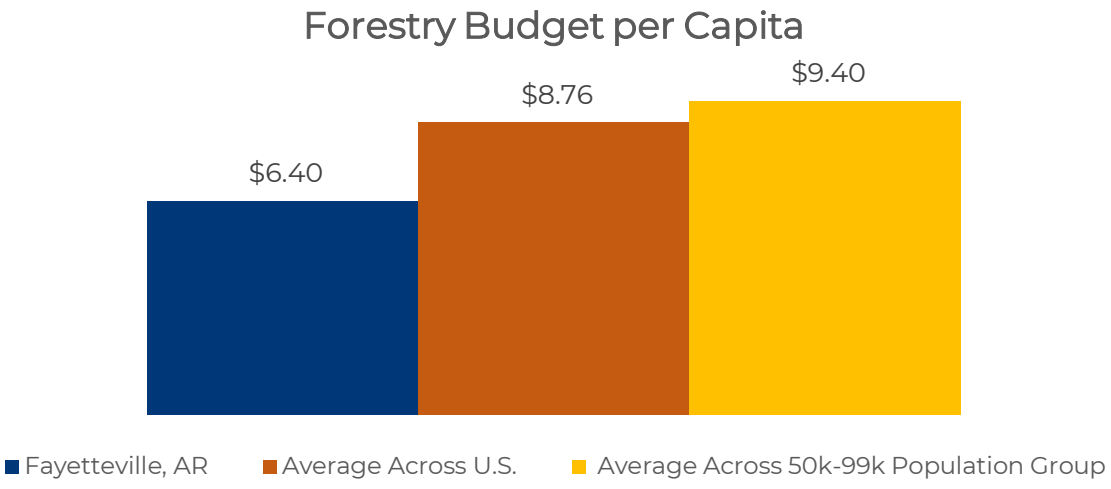

Figure 17. Comparison of urban forestry budget per capita (Hauer, 2014)

COMPARISON OF PUBLIC TREE COUNTS, DISTRIBUTION, AND VALUE

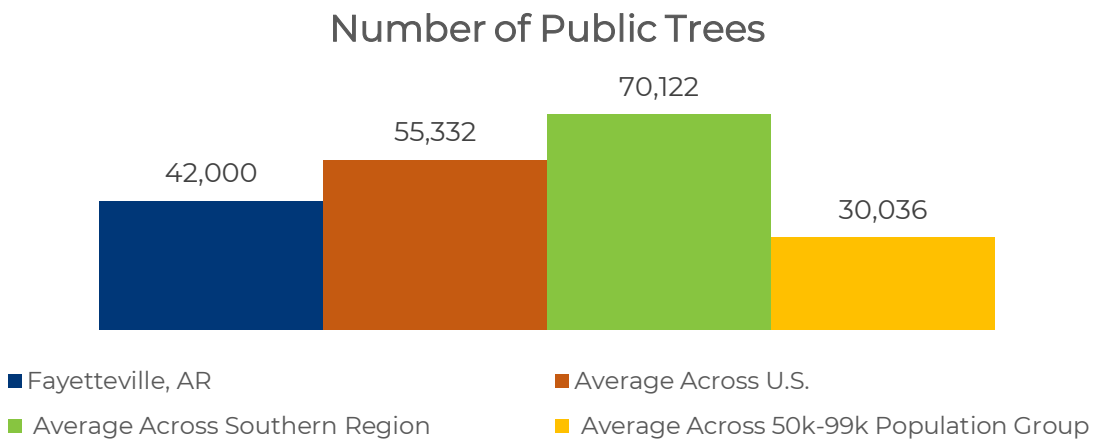

Figure 18. Comparison of the number of public trees (Hauer, 2014)

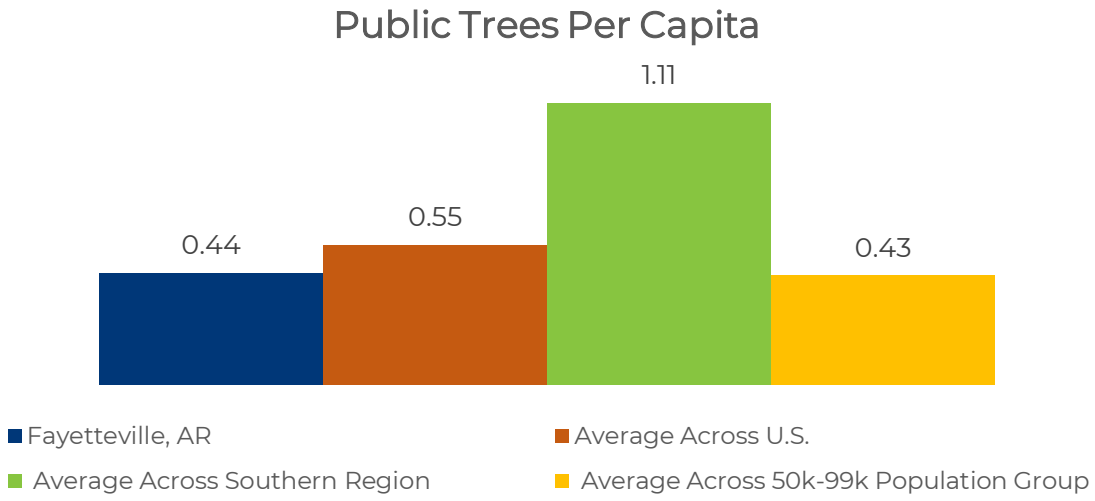

Figure 19. Comparison of public trees per capita (Hauer, 2014)

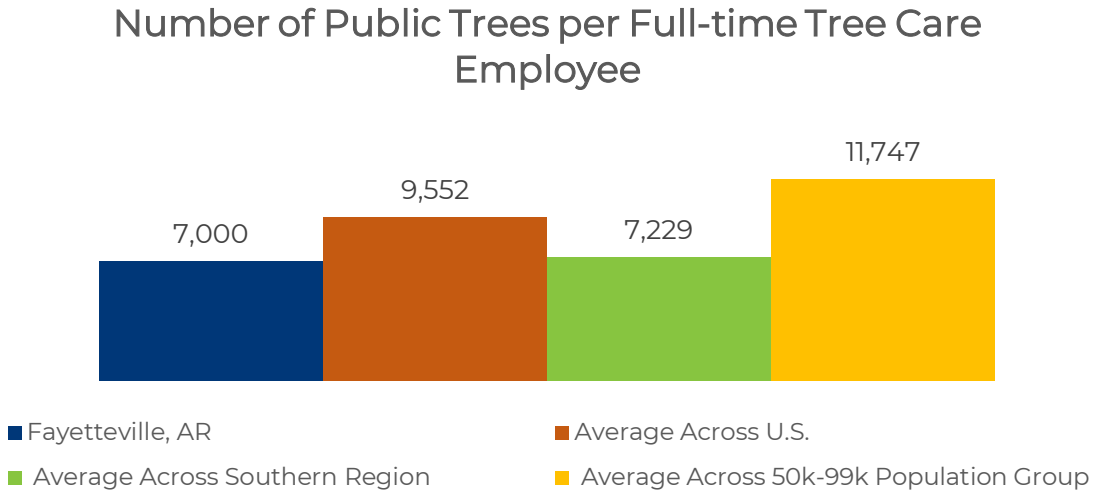

Figure 20. Comparison of the number of public trees per full-time tree care employee (Hauer, 2014)

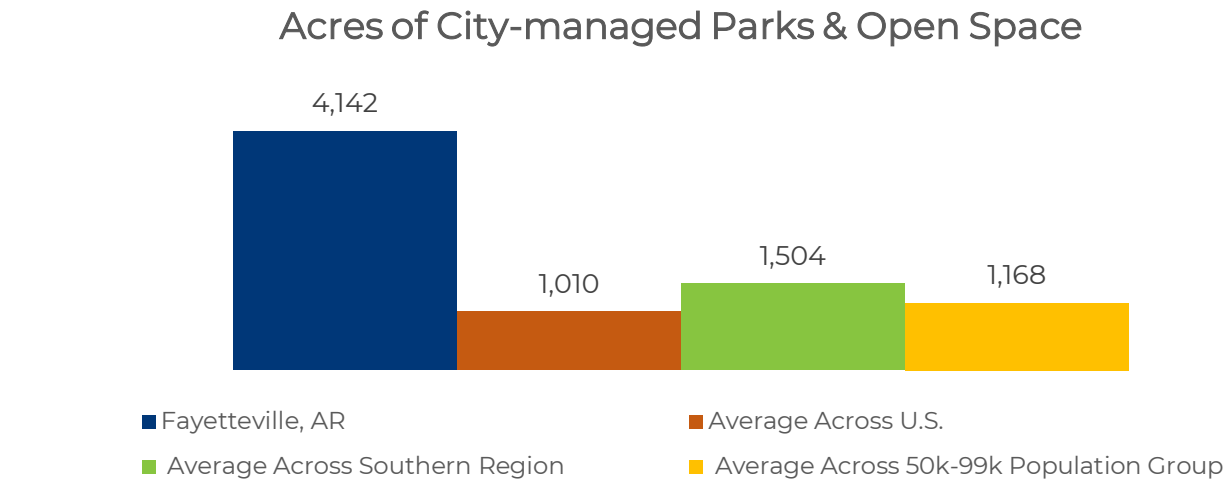

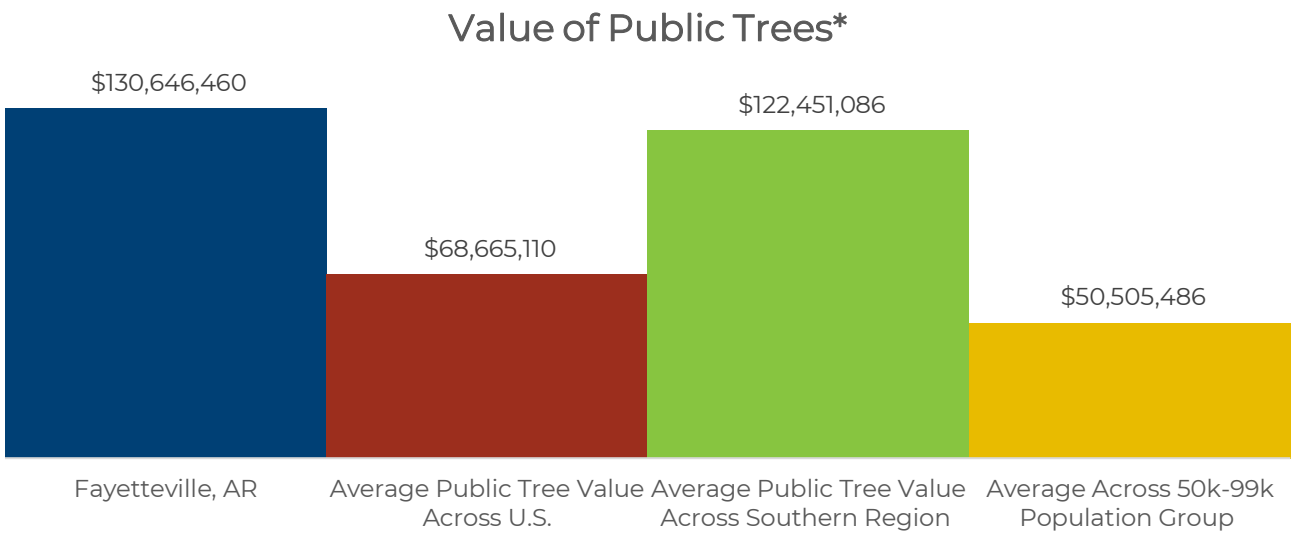

Figure 21. Comparison of the acres of public parks and open space (Hauer, 2014)

** Value of Fayetteville's public trees is based on the $1.3 million in ecosystem benefits and services ($110.63 per tree on average) plus the structural value of public trees estimated at $3,000 per tree on average based on regional research.*

Figure 22. Comparison of the value of public trees (Hauer, 2014)

Fayetteville, AR

URBAN FORESTRY MANAGEMENT PLAN

Canopy Goal Setting & Priority Areas

August 2023

Canopy Goals for Consideration

Milestones	Year Range	City Acres	Starting Canopy Ac	Total New Canopy Ac	Starting Canopy %	New Canopy %	Total Trees Added	Total Added Benefits	Total Carbon Seq. (lbs)
Year 1	2023	35,712	14,081	14,105	39.4%	39.5%	1,000	$18,559	149,592
Years 2-5	2024-2027	35,712	14,105	14,244	39.5%	40%	6,000	$111,354	897,552
Years 6-8	2028-2030	35,712	14,244	14,396	40%	40%	6,500	$120,634	972,348
Years 9-10	**2031-2032**	**35,712**	**14,396**	**14,512**	**40%**	**40.6%**	**5,000**	**$92,795**	**747,960**
Years 11-15	2033-2037	35,712	14,512	14,815	41%	41%	13,000	$241,267	1,944,696
Years 16-18	2038-2040	35,712	14,815	15,025	41%	42%	9,000	$167,031	1,346,328
Years 19-20	2041-2042	35,712	15,025	15,165	42%	42.5%	6,000	$111,354	897,552
Years 21-25	2043-2047	35,712	15,165	15,619	42%	44%	19,500	$361,901	2,917,044
Years 26-28	2048-2050	35,712	15,619	15,969	44%	45%	15,000	$278,385	2,243,880
Years 29-30	2051-2052	35,712	15,969	16,202	45%	45%	10,000	$185,590	1,495,920
TOTAL	30 Years			2,120	45.4%	5.9%	91,000	$1,688,869	13,612,872

Minus 10% cumulative canopy loss = 44.4% in 30 years (2023 – 2052). Considers 10% will be small canopy trees, 30% medium canopy, and 60% large canopy trees.

A 10-year goal requires a total of 18,500 trees with an average of 1,850 trees per year

If pursuing a 30-year goal, 91,000 total trees needed with an average of 3,000 trees per year needed.

Scenario B) Detailed Planting Targets to Establish a 10-year Canopy Goal

Milestone	Year	Total City Acres	Canopy Ac (2019)	Canopy % (2019)	Planting Scenarios (# of Trees)	New Canopy Acres Added	Total Canopy Acres	New % Canopy	Total Added Ecosystem Benefits	All Plantings: Future Carbon Sequestered by Large Trees (249.32 lbs/tree)	All Plantings: Total Future Carbon Sequestered
Year 1	**2023**	**35,712**	**14,081**	**39.4%**	**1,000**	**23.3**	**14,105**	**39.5%**	**$18,559**	**149,592**	**149,592**

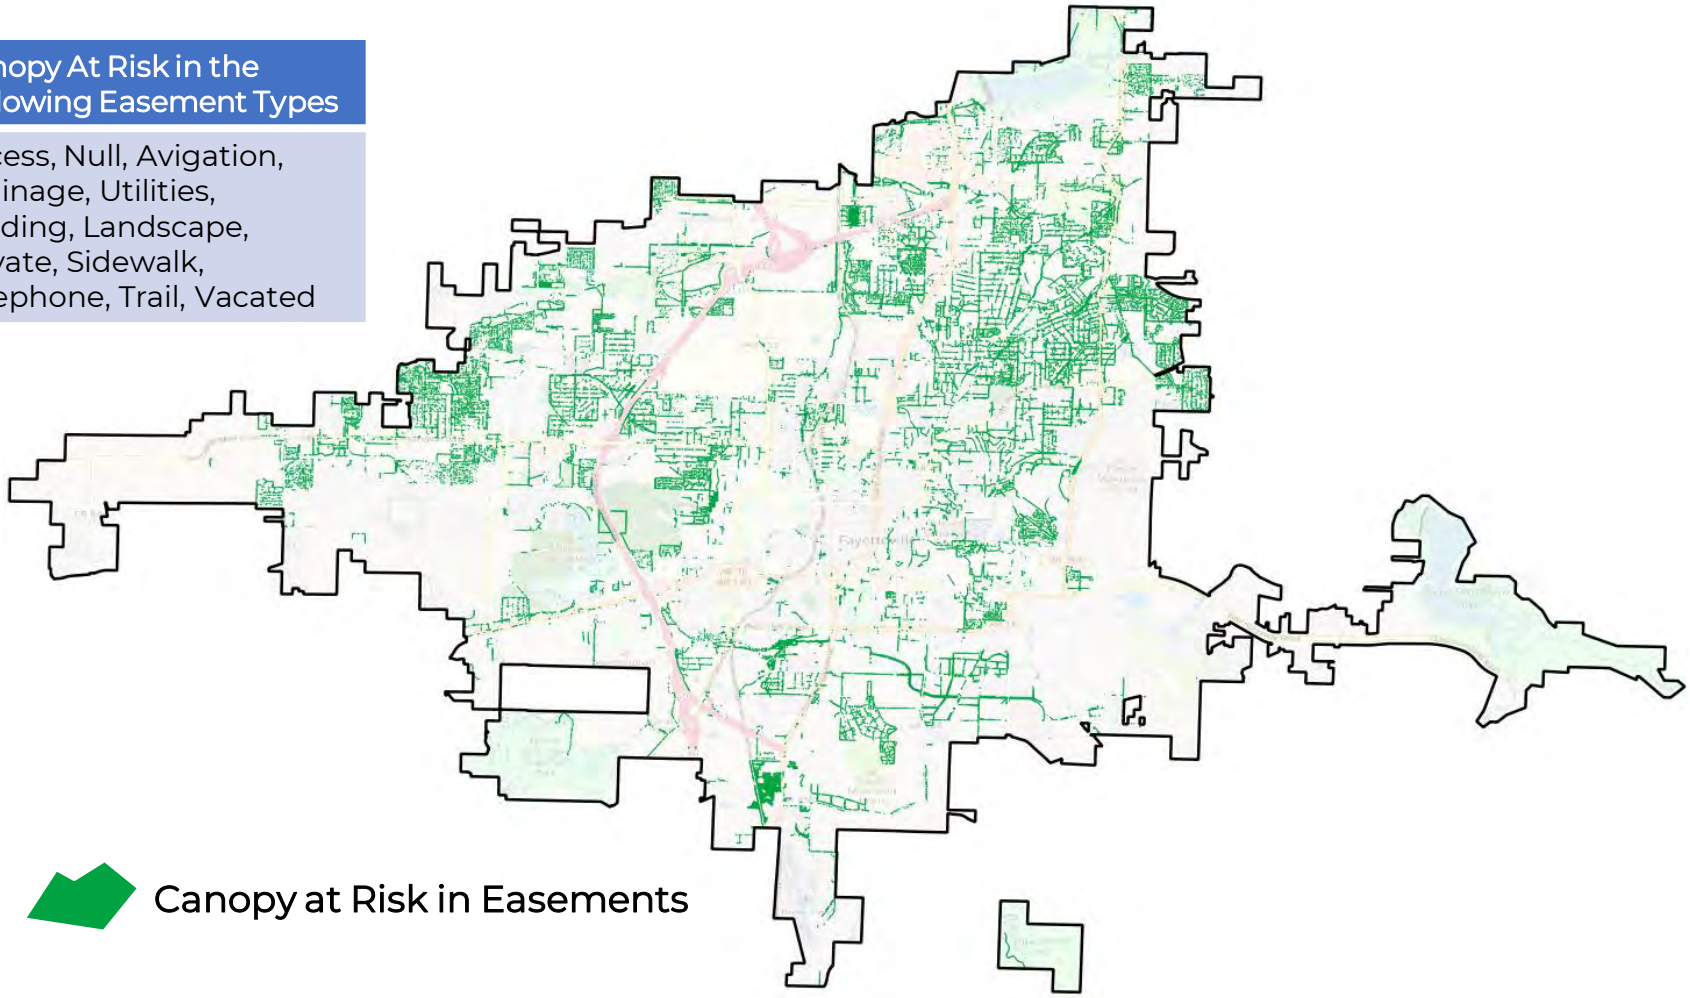
Easements Example



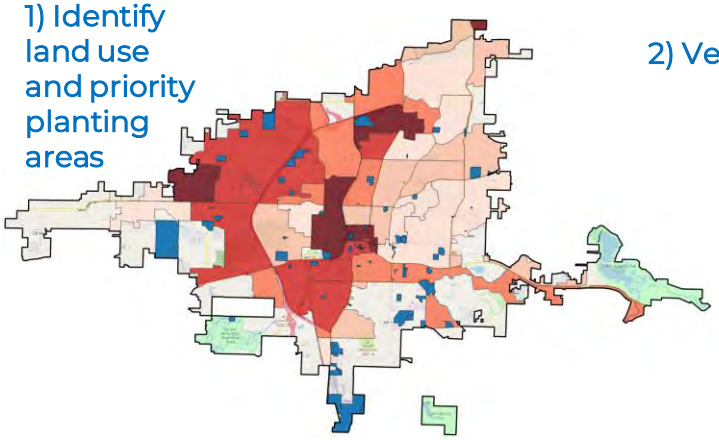
Canopy Likely Preserved	Canopy At Risk ("Vulnerable Easements"	Areas to Proactively Preserve
Conservation(?), Tree Preservation	Access, Null(?), Avigation, Drainage, Utilities, Grading, Landscape, Private, Sidewalk, Telephone, Trail, Vacated	Access, Landscape, Sidewalk, Trail, Vacated

Canopy in At Risk Easements

Acres of Vulnerable Easements	Canopy Acres of Vulnerable Easements	% Canopy of Vulnerable Easements
3,980.6	1,015.0	25%

Canopy At Risk in the Following Easement Types

Access, Null, Avigation, Drainage, Utilities, Grading, Landscape, Private, Sidewalk, Telephone, Trail, Vacated

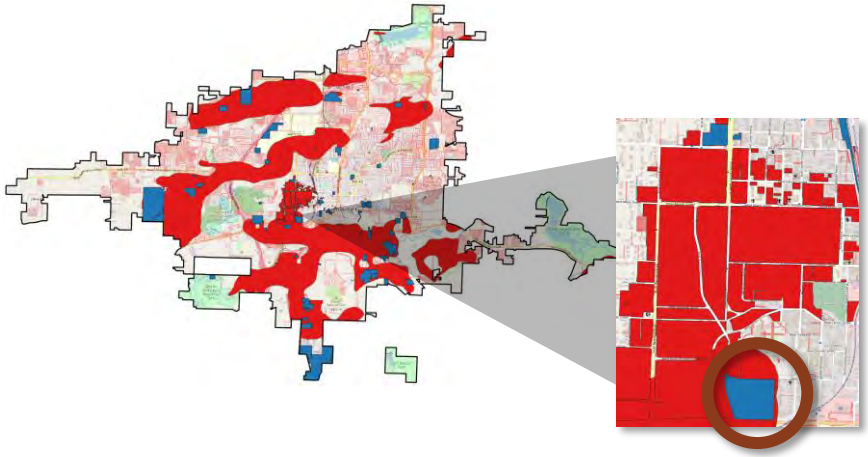


Canopy at Risk in Easements

Applying Canopy Goals & Priority Planting Areas with Consideration of Exclusion Areas

Priority Planting in Civic Institutional Land Use Areas to Achieve Canopy Goals

1) Identify land use and priority planting areas



Average Surface Temperature

- City Boundary
- Civic Institutional Land Use
- 75 – 80
- 80 – 81
- 81 – 82
- 82 – 83
- 83 - 85

2) Verify and confirm the canopy goal and number of trees to plant for the land use

Future Land Use	Current Canopy %	Modeled Canopy %	Timeframe (years)	# of Trees per Year
Urban Center	16%	16%	30	1
City Neighborhood	30%	31%	30	106
Residential Neighborhood	41%	46%	30	1,050
Rural Residential	48%	53%	30	1,032
Non-Muni Government	17%	19%	30	55
Civic Institutional	30%	32%	30	74
Civic & Private Open Space	62%	65%	30	202
Natural	62%	65%	30	480
Industrial	30%	30%	30	3
Citywide	39%	44.7%	30 Years	3,003

3) Identify and remove non-plantable areas (university, easements, prairie)

Legend

- City Boundary
- Civic Institutional Land Use
- University grounds, vulnerable easements, and prairie
- Not plantable

4) Identify Possible Planting Area in priority area for the land use and determine planting locations

5) Continue to identify possible planting areas in priority areas for the land use to strategize how and where to plant 74 trees per year for 30 years to reach the 32% canopy goal for the Civic Institutional land use as shown in the table above in step #2

TREE INVENTORY OVERVIEW

About

In October 2022, a sample inventory of public and private trees in Fayetteville, Arkansas was conducted by PlanIT Geo's Certified Arborists accredited by the International Society of Arboriculture. The scope of the public and private tree sample inventory was prepared as part of the City's Urban Forest Management Plan ("UFMP" or "Plan") project that is currently underway as of November 2022. The tree inventory is intended to gather data that informs the current extent, structure, characteristics, and maintenance needs of the urban forest that can be addressed in the UFMP.

Due to limited funding, a comprehensive inventory was not conducted though sampling methods were used in order to extrapolate the data to represent the total public and private tree populations, respectively. To do this, a sample inventory of public trees along approximately 5 percent of linear road miles (25 miles) was conducted. For public trees in parks, approximately 10 percent of City park acres were inventoried. The locations for the public tree inventory were determined by the City's Urban Forester and PlanIT Geo's Field Services team. For the private tree sample, an inventory of trees on private property was conducted when adjacent to public trees being inventoried. Data collection for private trees was not conducted on or within private property— the inventory was conducted within public rights-of-way (i.e., sidewalks) to provide a snapshot of the extent, structure, and characteristics of private trees. In addition to trees, possible available public planting sites were also inventoried based on criteria provided by the City's Urban Forester.

In November 2022, the Consulting Team developing the UFMP reviewed and analyzed the tree inventory datasets and provided summary worksheets and this draft summary report. The following details the draft outcomes of the analysis. Additional analyses such as ecosystem benefits and extrapolating the data to represent the Citywide urban forest remains to be done as part of the UFMP project.

Note, the public and private tree sample inventory analysis was conducted in the months of November and December 2022. Due to ongoing tree maintenance and the dynamic characteristics of trees, changes such as condition, tree size, and maintenance needs may have changes since the analysis.

Table 8. Summary of possible public planting sites inventoried in 2022

ESTIMATED CHARACTERISTICS OF ALL PUBLIC TREES

Methodology

Based on a total of 470 (500) linear road miles in the City and the inventory of public trees along 5% of roadways, the urban forestry consultants utilized research data from the 2014 Urban & Community Forestry Census of Tree Activities (Hauer, et al.) to estimate the total public tree population. For communities of similar size, population, population density, and linear road miles, the average public tree population is 25,000 trees. Based on these estimates, the sample public tree data (2,712 alive or dead trees) was extrapolated to represent 25,000 public trees. The following summaries provide estimates of public tree extent, growing space, structure, characteristics, and maintenance needs:

Public Tree Status

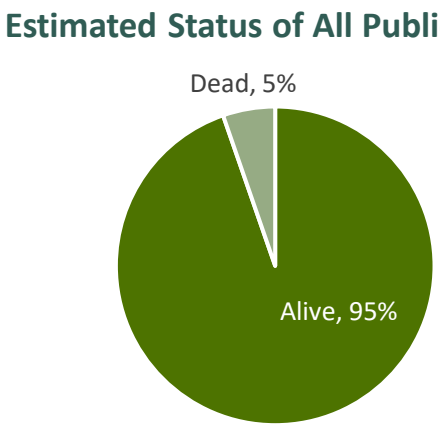

Figure 23. Estimated status of all public trees

Public Tree Location and Growing Space (Estimated for All Public Trees)

"lbs" = pounds; "gal" = gallons; "ft^3" = cubic feet

ESTIMATED CHARACTERISTICS OF ALL PRIVATE TREES

Methodology

A total of 850 private trees were inventoried as a sample. These trees were located in private parcels adjacent to public streets that were visited during the public tree inventory. According to Fayetteville's Mobility Plan, there are a total of 470 linear road miles and the inventory crews inventoried along a total of 25 linear road miles or approximately 5% of roadways. The private parcels included in the sample inventory had a total acreage of 342 acres. Using the City's Zoning classifications and GIS data, a total of 32,150 acres exist across the City. Therefore, the inventory crews visited 1% of all private parcels. Based on these figures, it is estimated that there are a total of 79,884 private trees, or approximately 80,000 private trees in maintained areas of properties. The following summaries provide estimates of private tree extent, growing space, structure, characteristics, and maintenance needs:

Private Tree Status

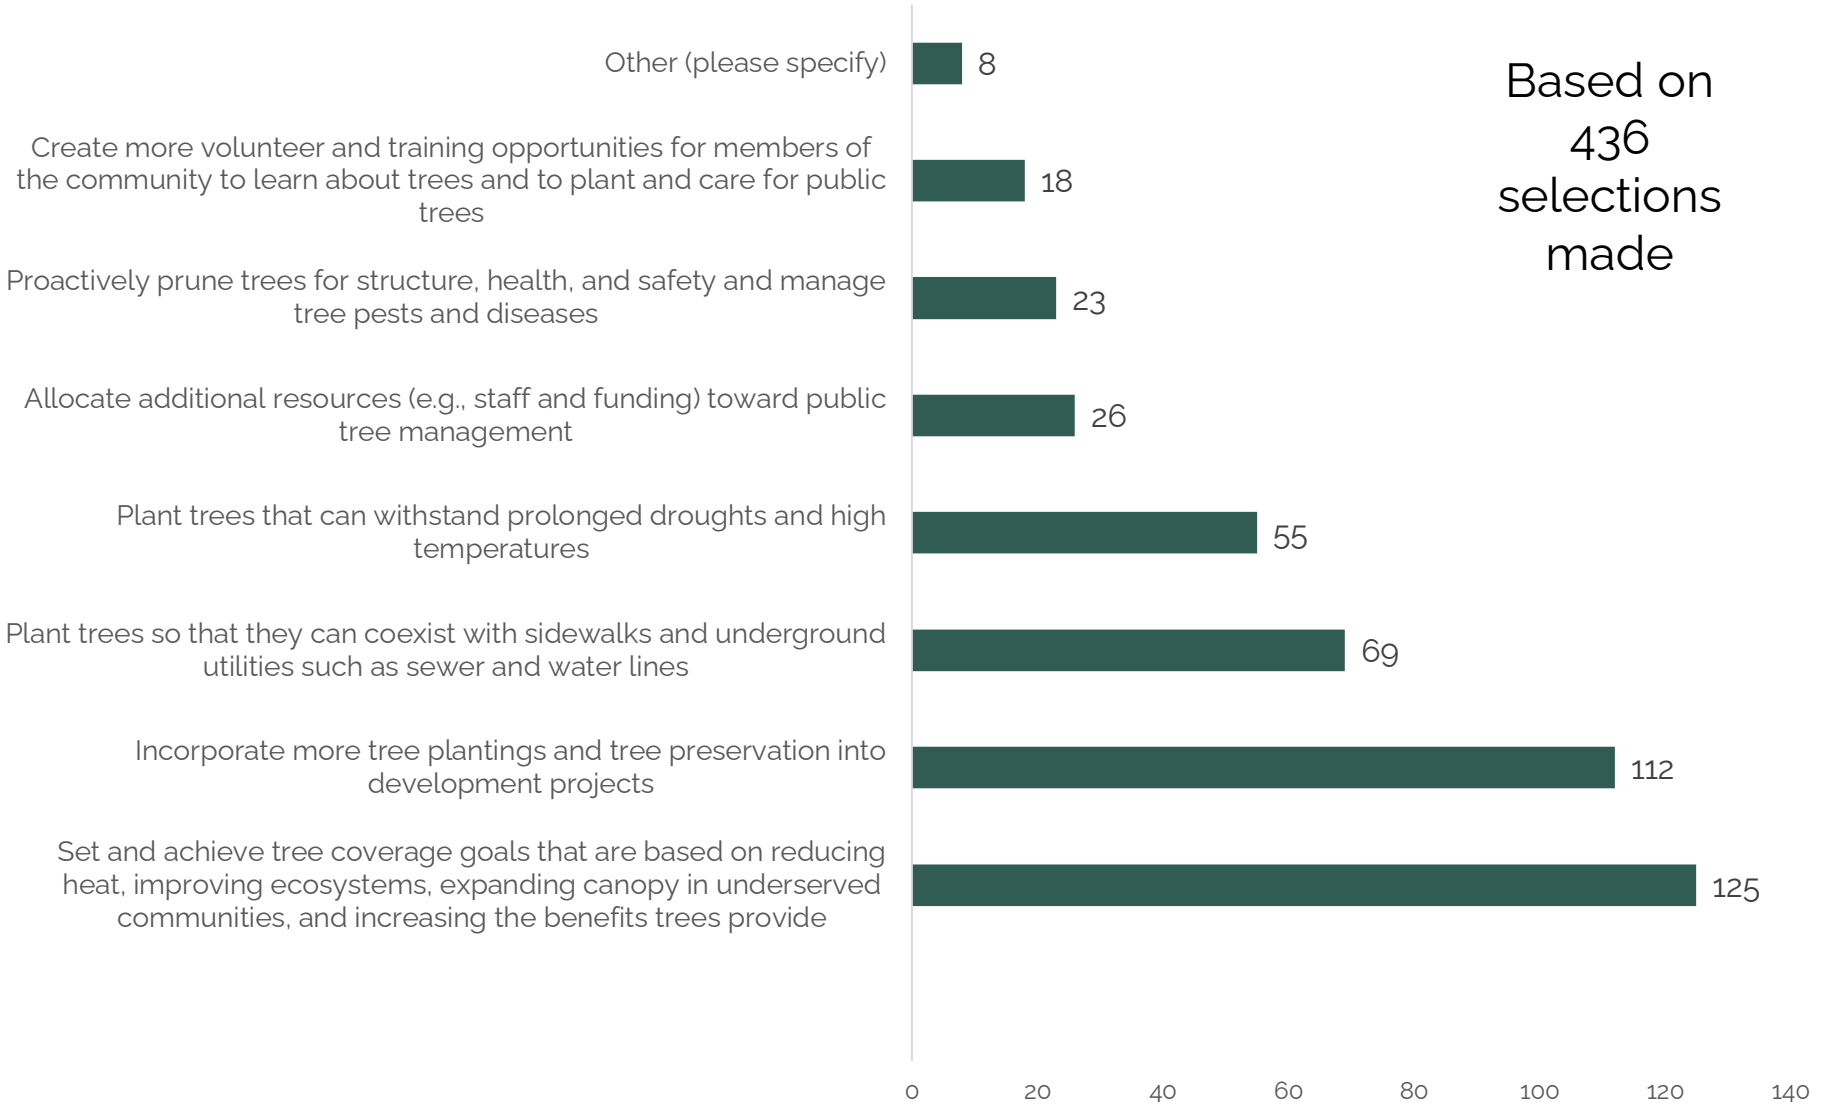
QUESTION #1



Q1: What do you consider most important for the trees in Fayetteville? (Select your top two options)?
I envision something different than what is listed above (please describe):
11
More volunteer and training opportunities to plant and care for trees in my neighborhood
13
A city program that proactively maintains our public trees for safety and to maximize the benefits they provide
38
Healthy trees that are resilient to pests, diseases, prolonged drought, urban heat and changing climates, limited space, and storm events
67
Increased number of trees where there is historically minimal tree coverage
84
Trees providing shade and reducing surface temperatures where I park, walk, and play

QUESTION #2

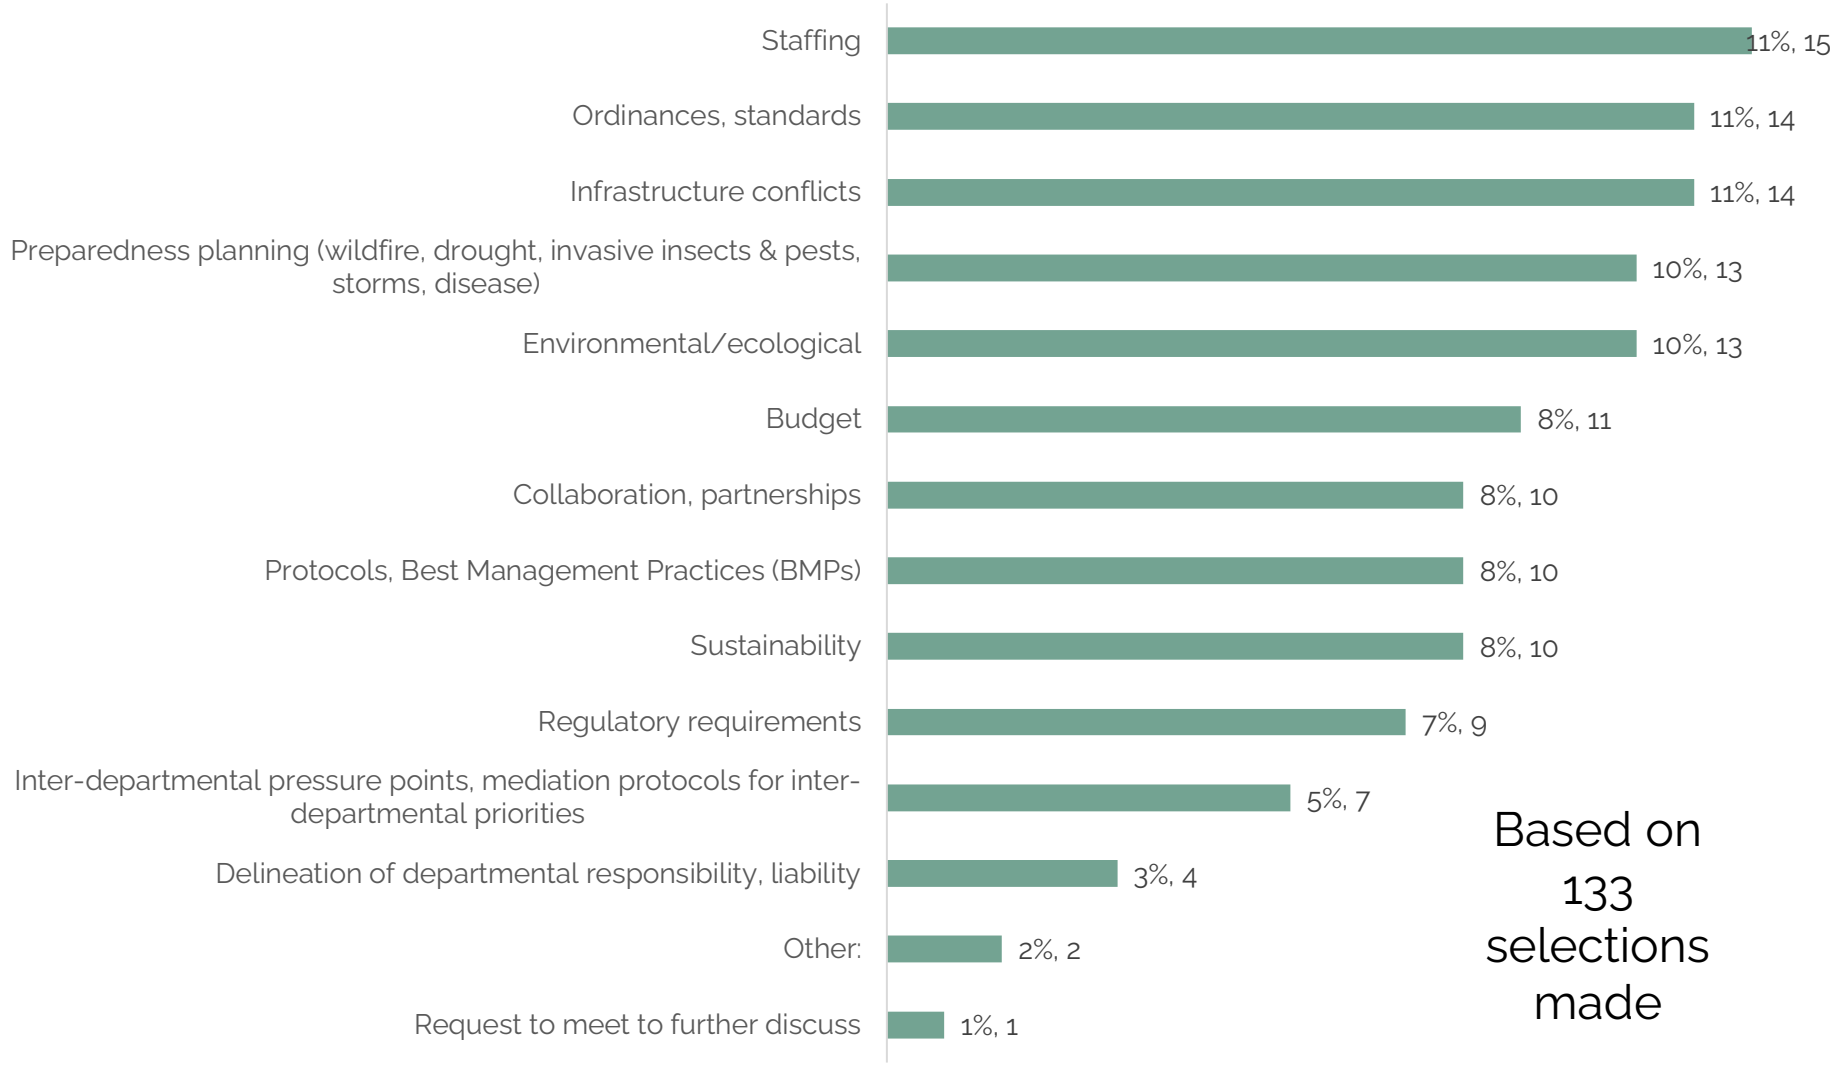
2. How does your work or role impact or influence the urban forest, individual trees, natural areas, and/or the landscape in Fayetteville?

Based on 137 selections made

QUESTION #2

2. How does your work or role impact or influence the urban forest, individual trees, natural areas, and/or the landscape in Fayetteville?

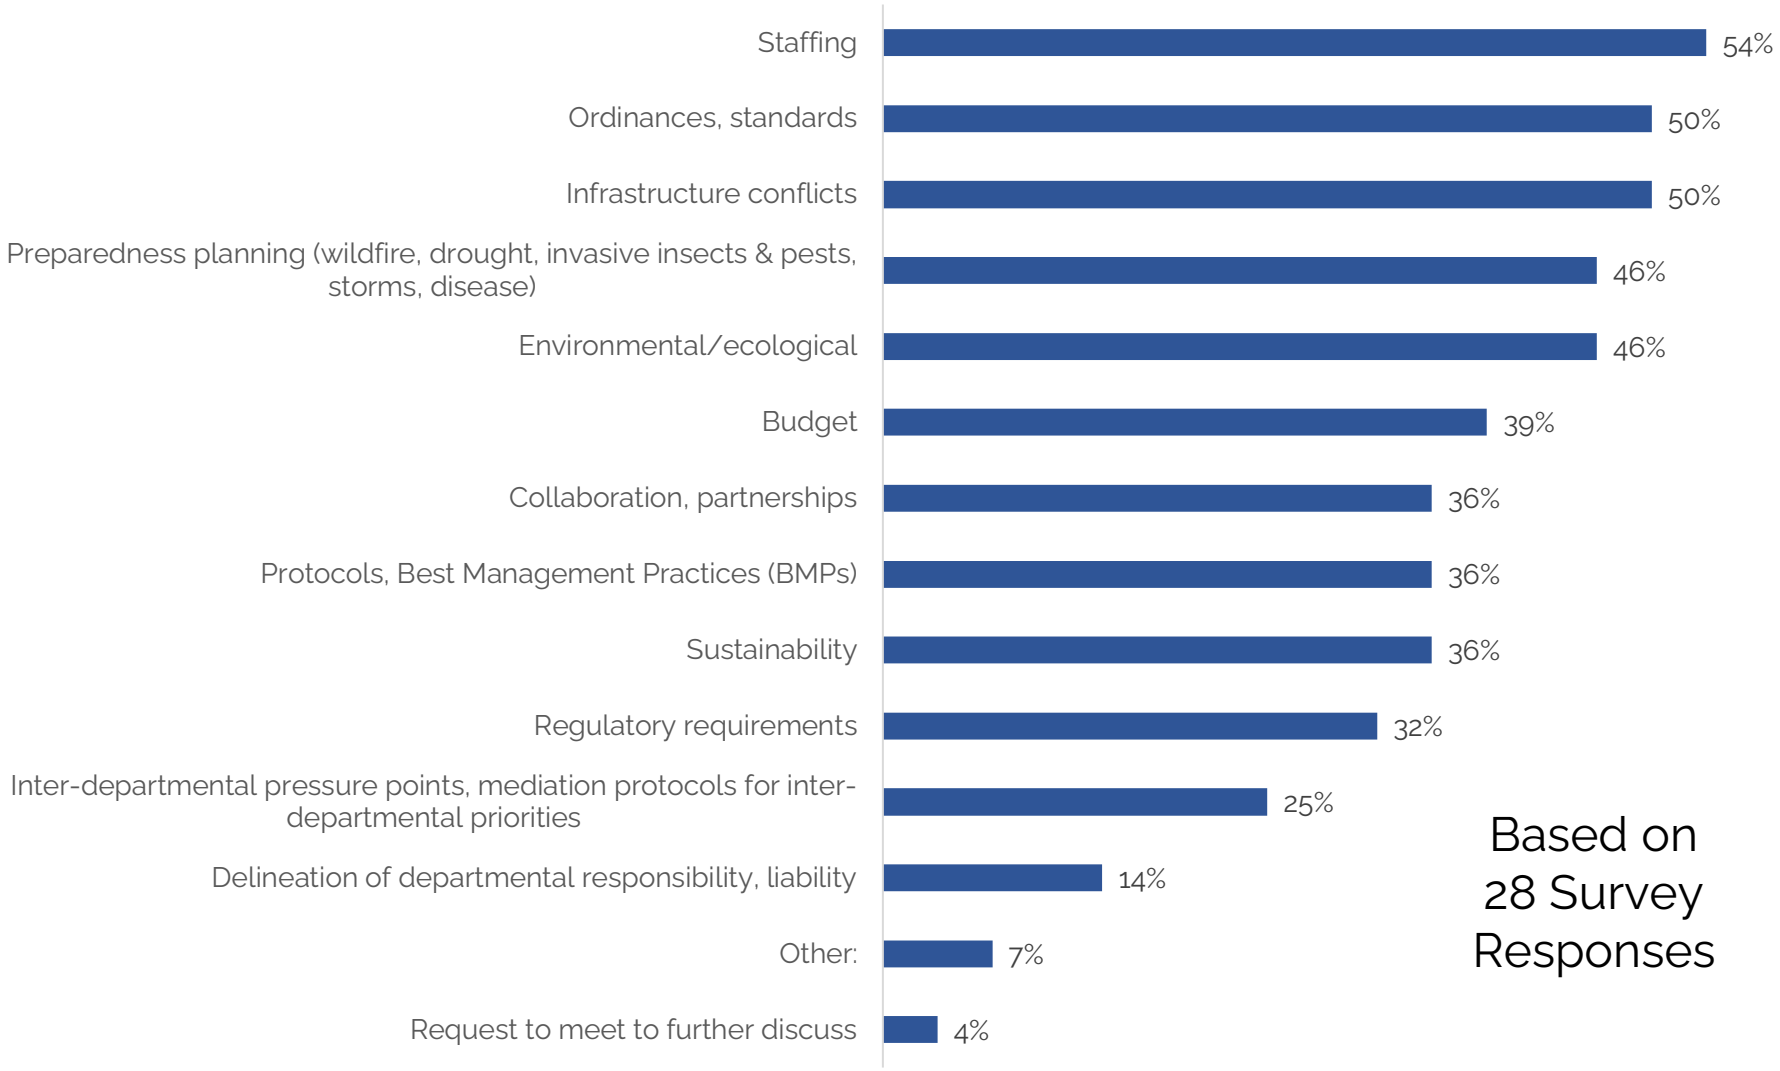


Based on 28 Survey Responses

Question #2 Comments

Name	Comment(s)
	Member of PRAB
	Citizen at large on EAC committee
	use the platform of an outdoor retailer to advocate for public lands and environmental stewardship
	EAC has advisory role to City Council
	Voice for urban forestry goals and missed opportunities in city planning decisions.

QUESTION #3



3. What are the current issues, concerns, challenges, information/resource gaps, or inefficiencies experienced or seen, if any, as it relates to your work/role described in #2?

Based on 133 selections made

QUESTION #3

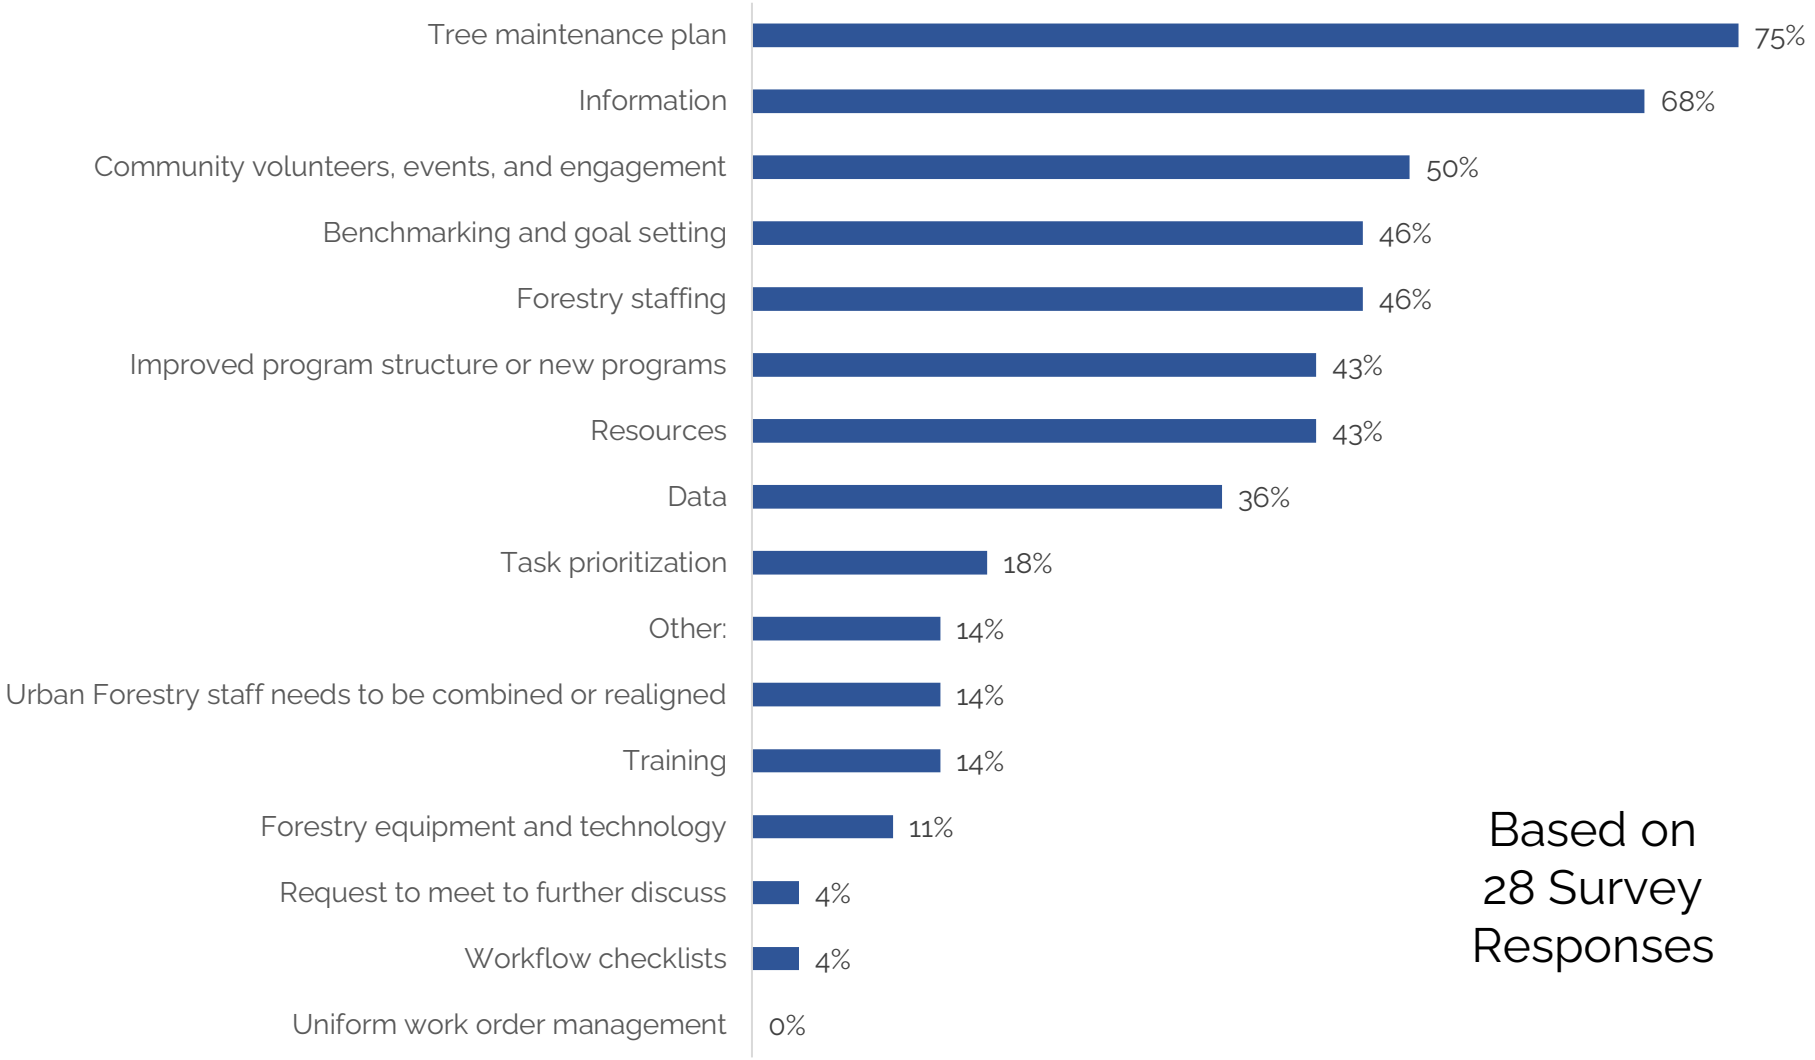
3. What are the current issues, concerns, challenges, information/resource gaps, or inefficiencies experienced or seen, if any, as it relates to your work/role described in #2?

Based on 28 Survey Responses

Question #3 Comments

Name	Comment(s)
	Poor inventory management
	Replacement of street trees in existing neighborhoods

QUESTION #4

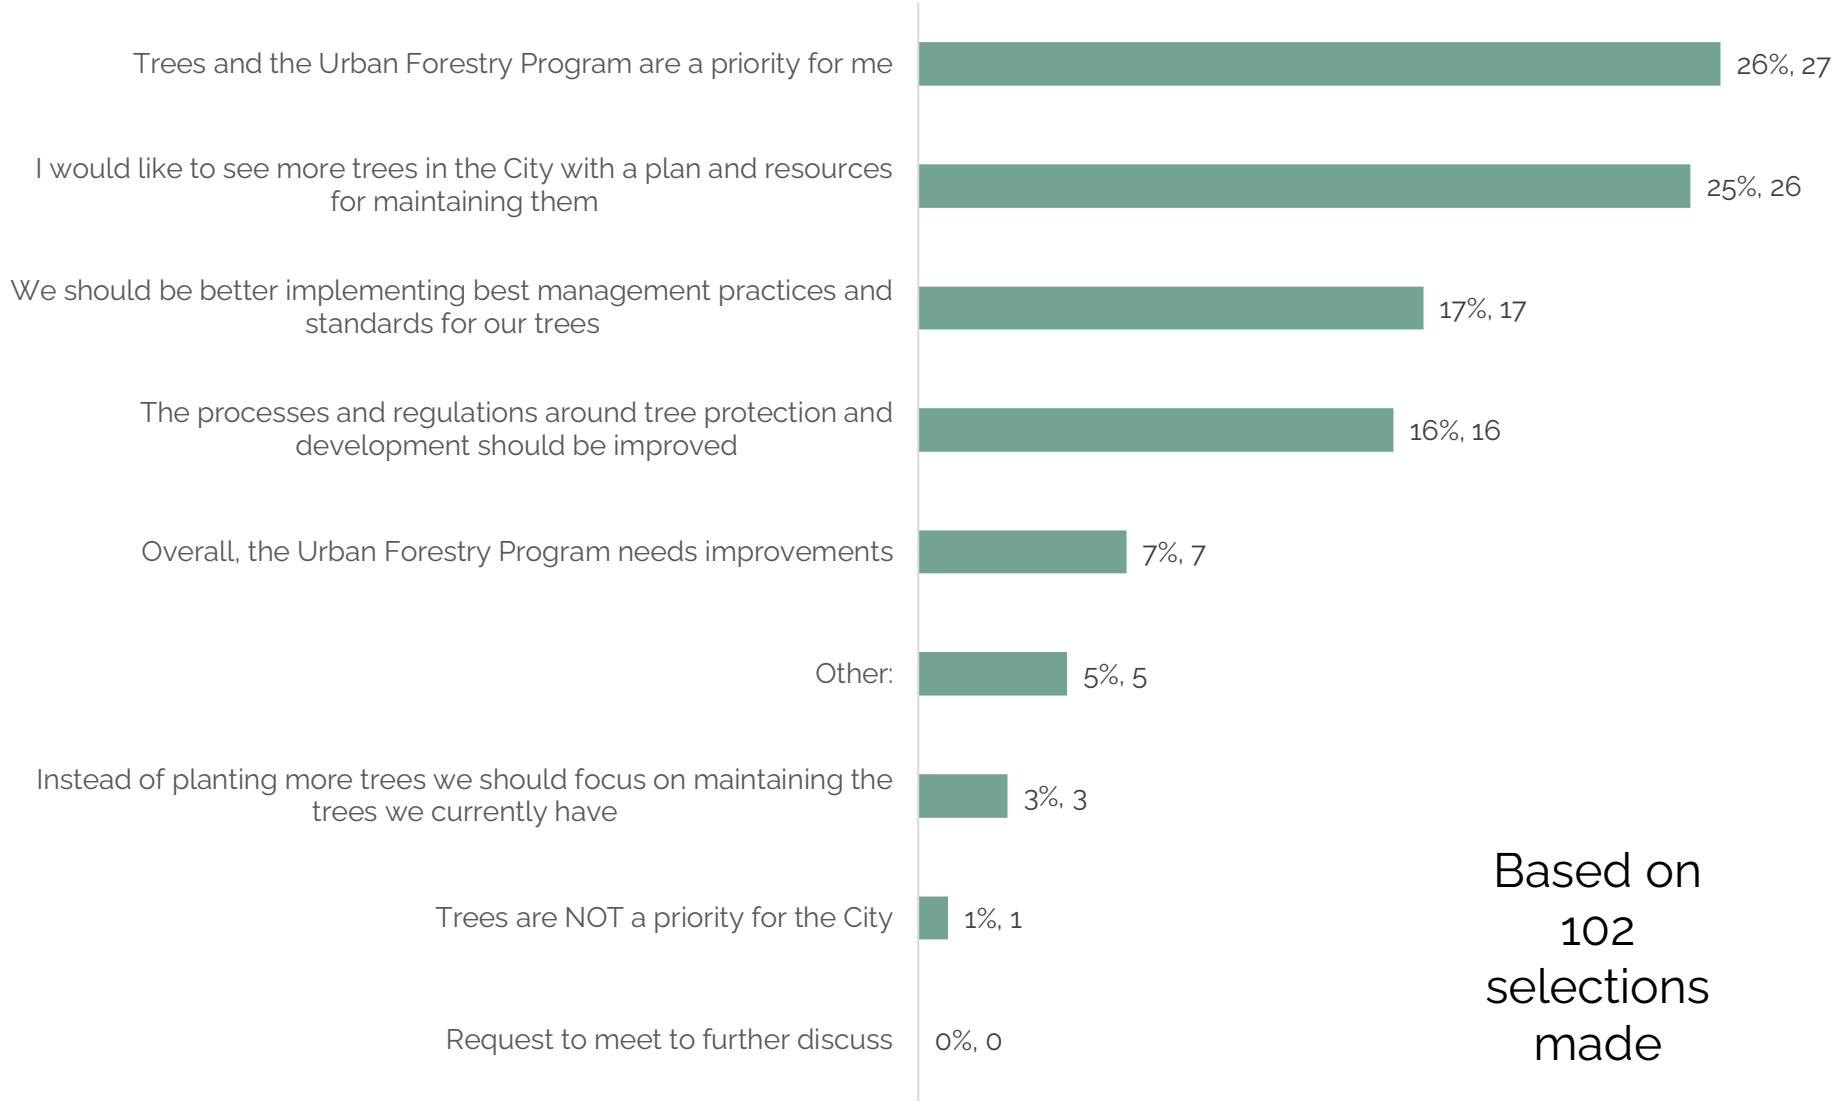


4. What results and outcomes of the UFMP would you like to see to assist and support your work or role as it relates to the trees and related services in Fayetteville?

Based on 136 selections made

QUESTION #4

4. What results and outcomes of the UFMP would you like to see to assist and support your work or role as it relates to the trees and related services in Fayetteville?

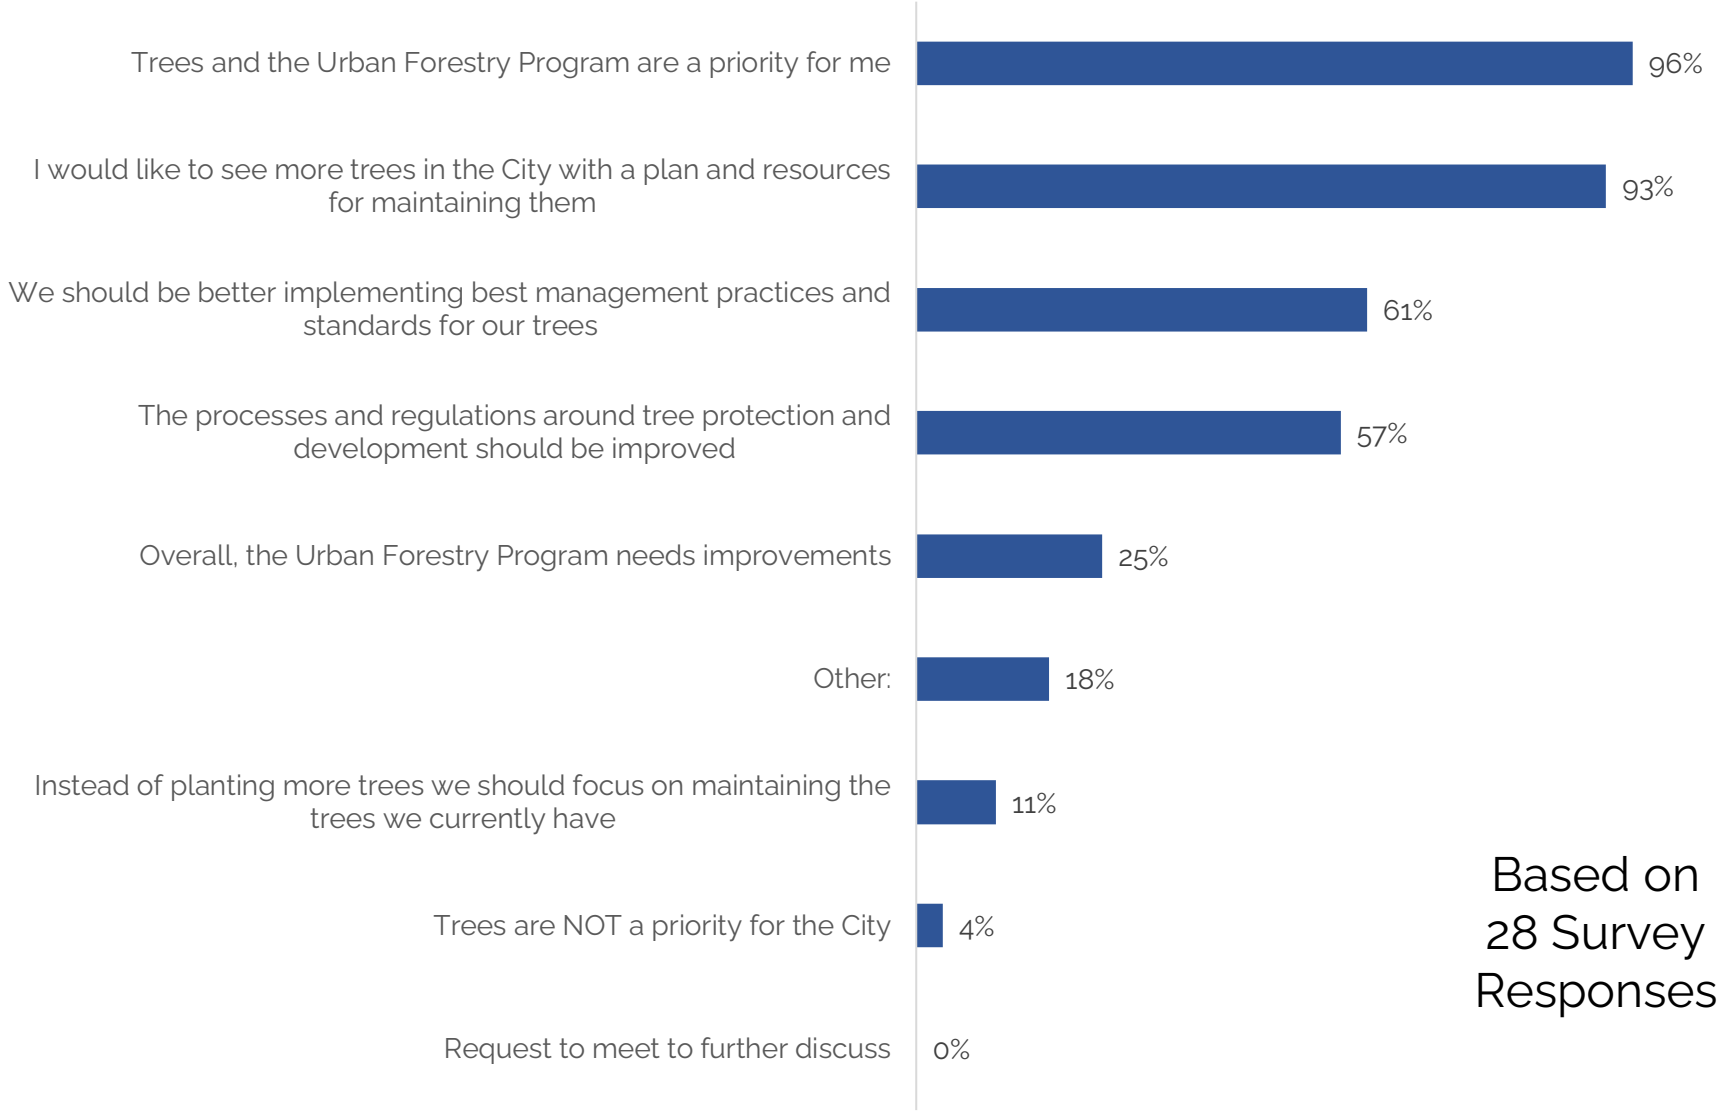


Based on 28 Survey Responses

Question #4 Comments

Name	Comment(s)
	Expand to be "urban ecology"
	Supporting current Forestry activities and preservation/landscaping standards
	Clear understanding of where efforts should be focused and what benefits will be received by increased efforts is warranted.
	Prioritize planting trees that will have the greatest positive impact on other species. For example, prioritize native oaks over Liriodendron (tulip tree)

QUESTION #5

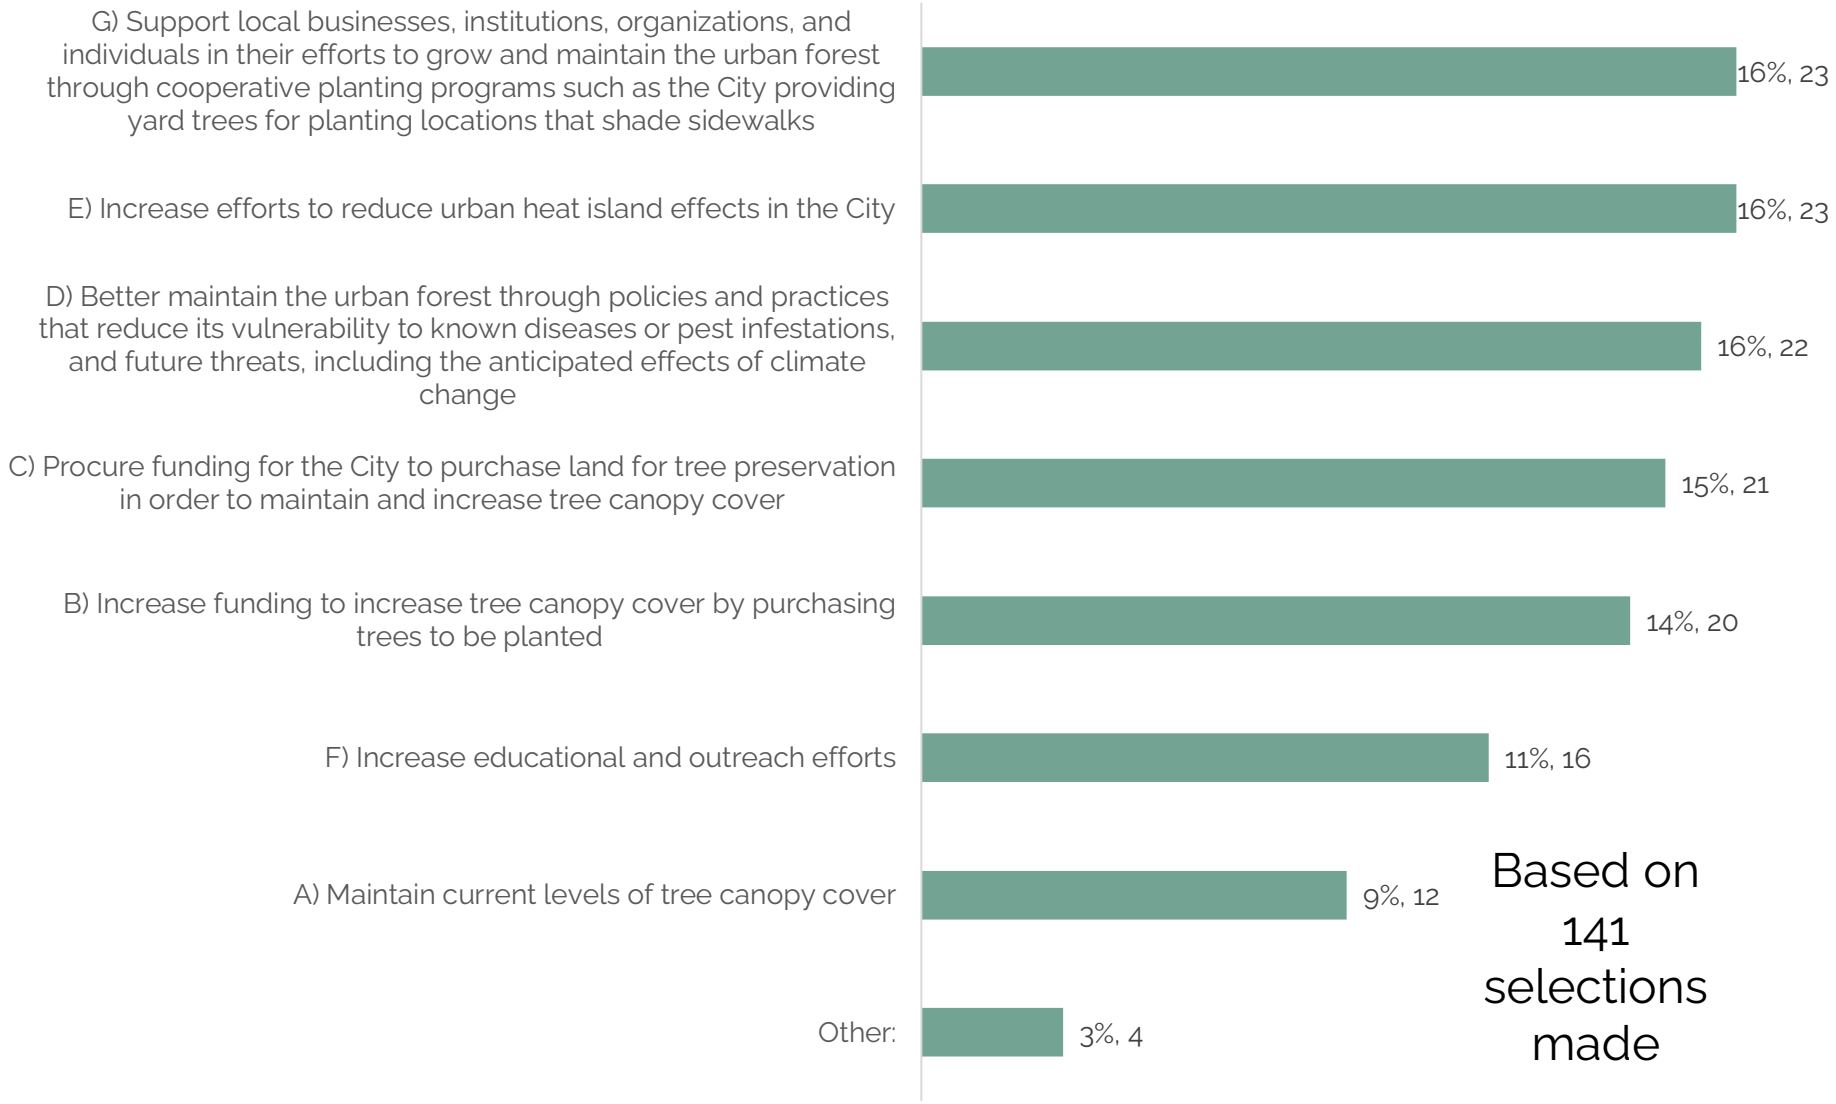


5. Please select from the following to summarize your viewpoints and priorities relating to trees and the urban forest in the City.

Based on 102 selections made

QUESTION #5

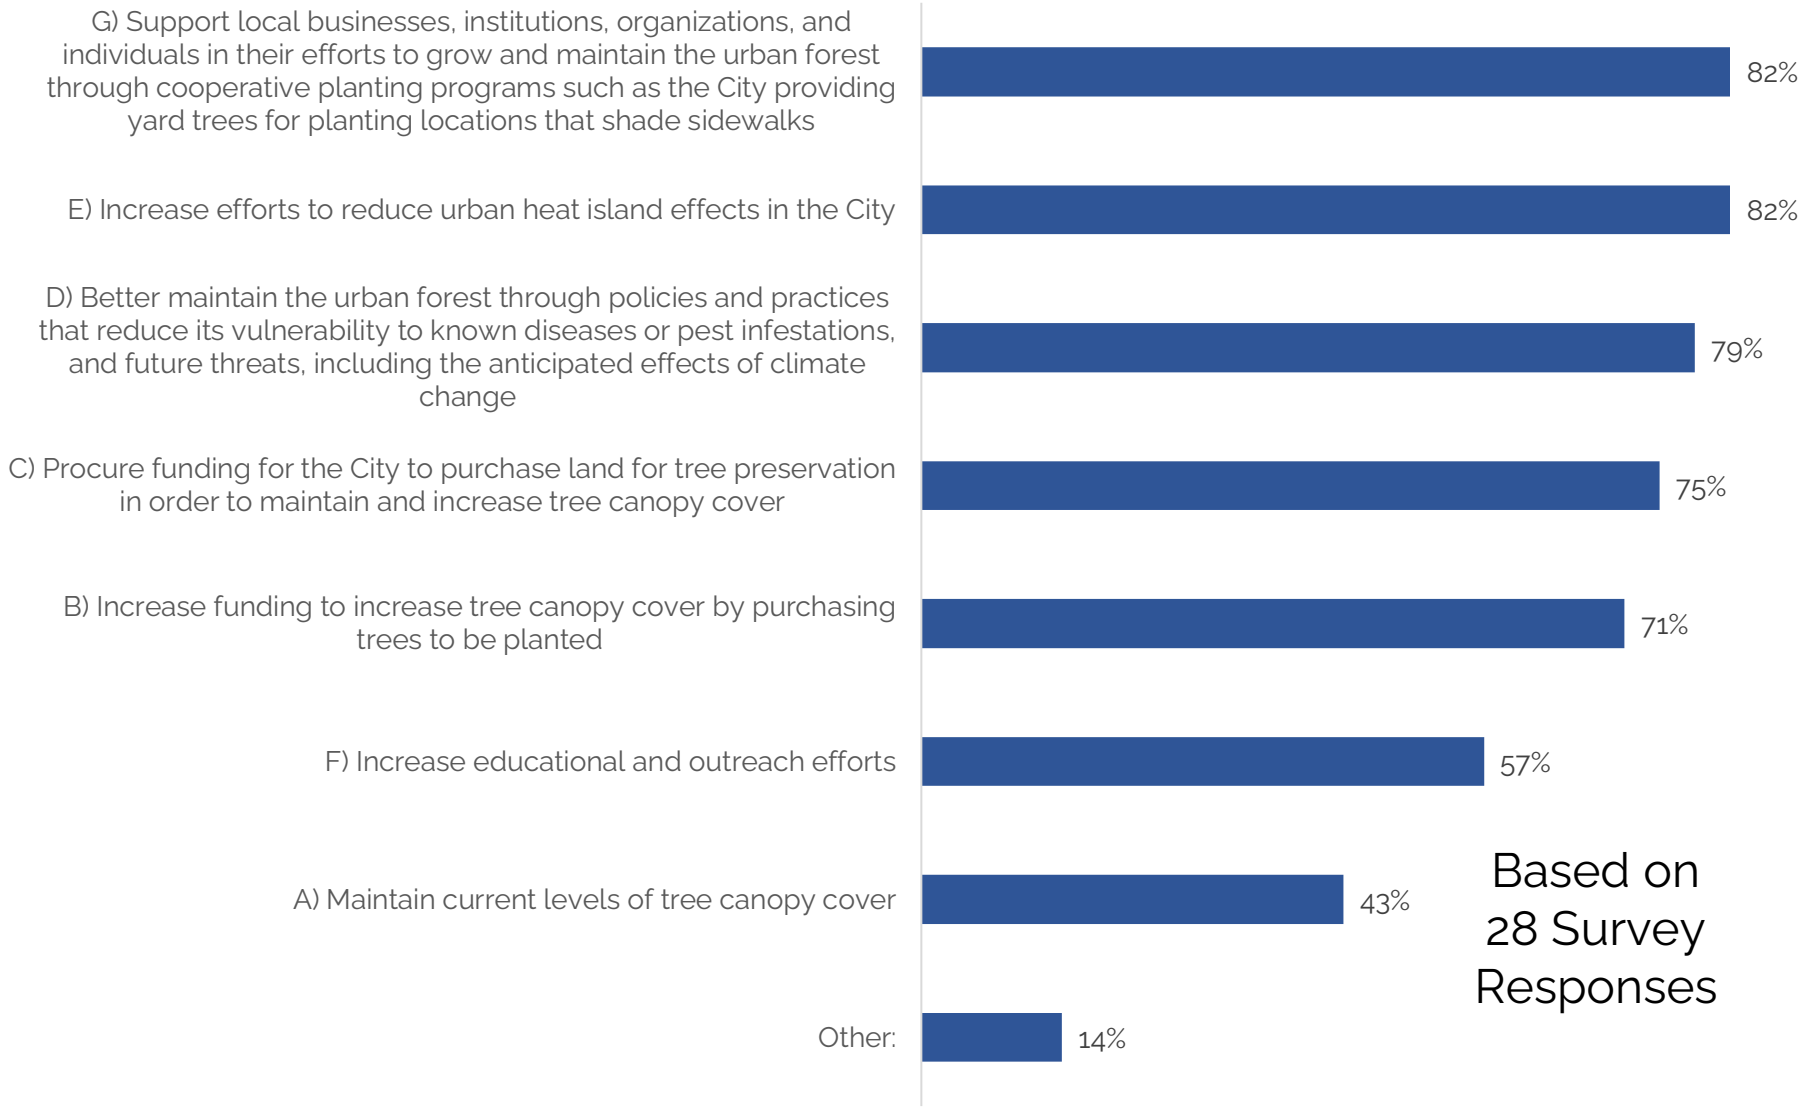
5. Please select from the following to summarize your viewpoints and priorities relating to trees and the urban forest in the City.



Based on 28 Survey Responses

Question #5 Comments

Name	Comment(s)
	I picked 3 and 4 because I like the idea of more trees but we lack a proper maintenance plan
	Expand to include broader ecological issues
	Street sections need to be reviewed. We are placing trees in spaces that are too confined for long term health of tree and infrastructure.
	We should not just be counting trees on properties that are about to be developed. We should identify large trees with significant environmental value.
	Yes, the Urban Forestry program needs improvements - it needs more resources, more vocal recognition of its value, and deeper integration with utilities and infrastructure and management that reflects that value

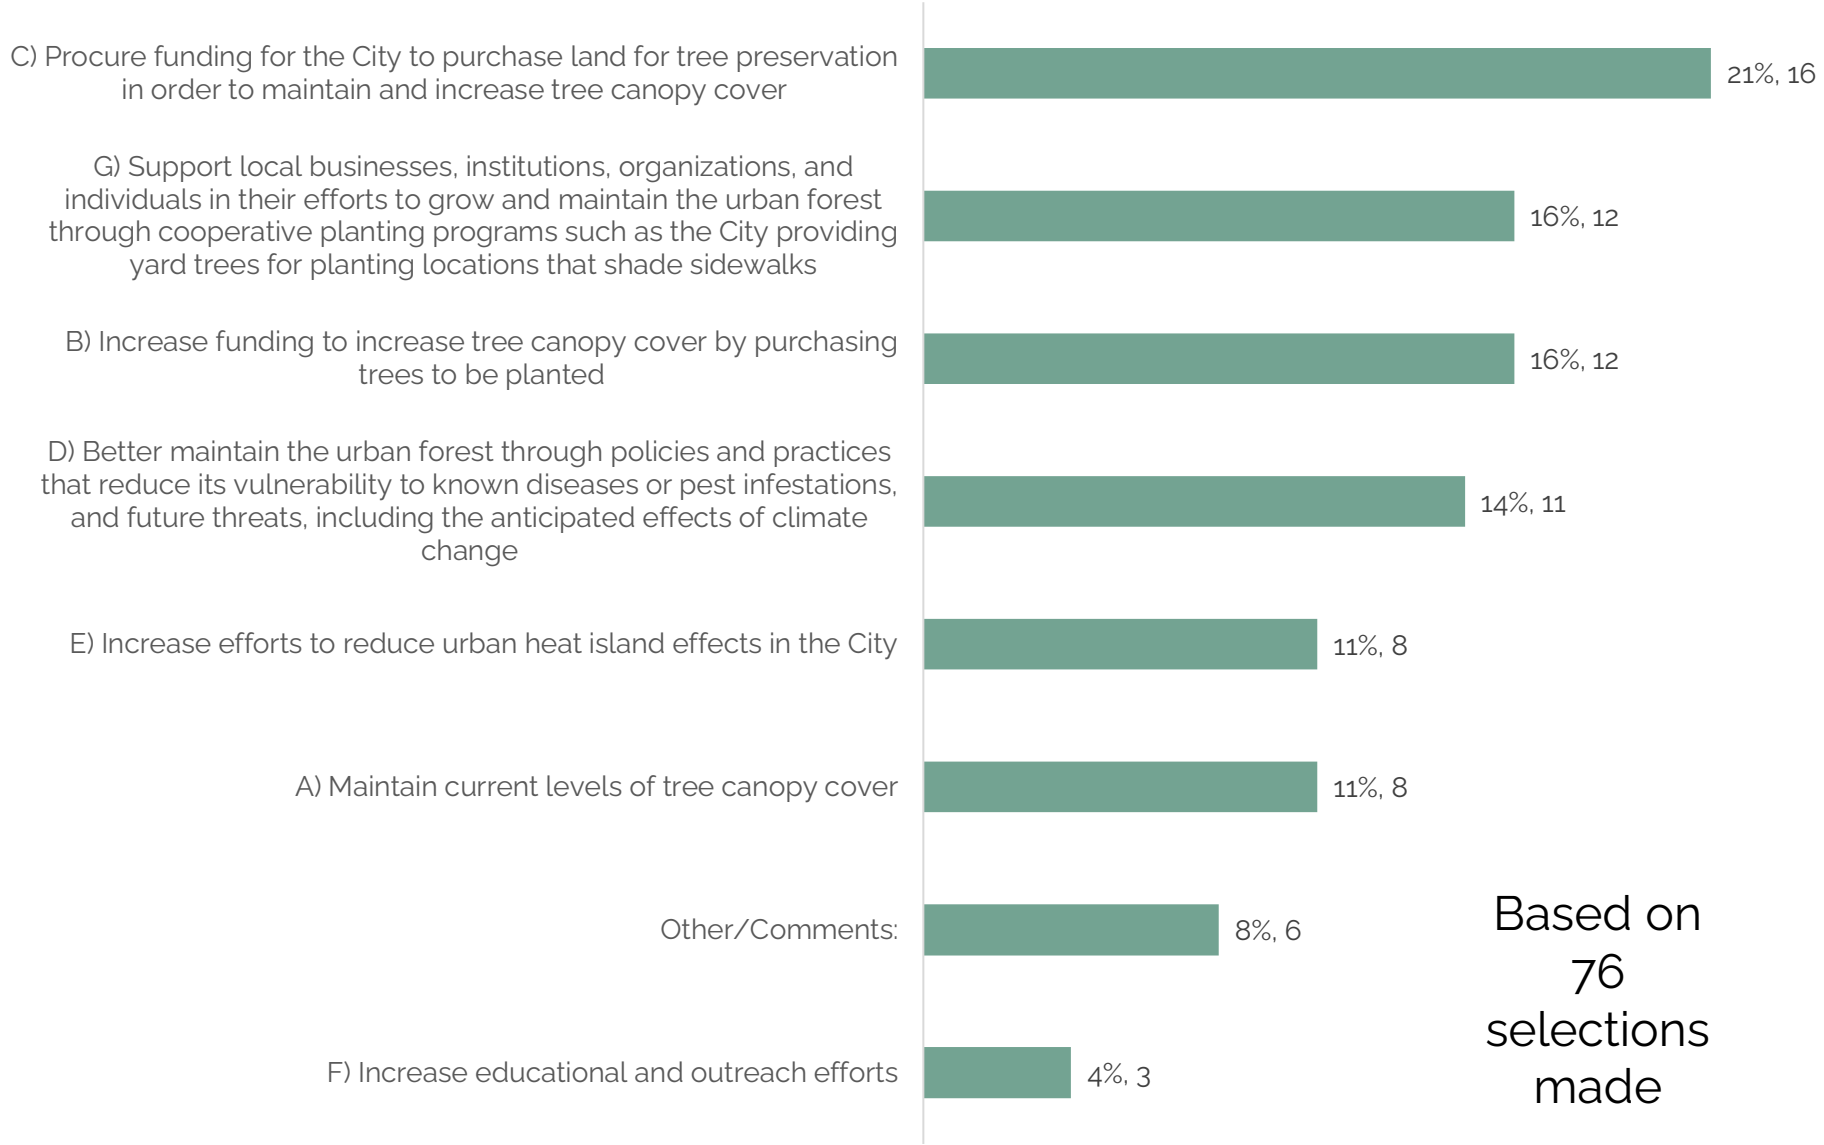


QUESTION #6

6. Overall, what do you feel are the most important goals for the City in regards to urban forestry?

QUESTION #6

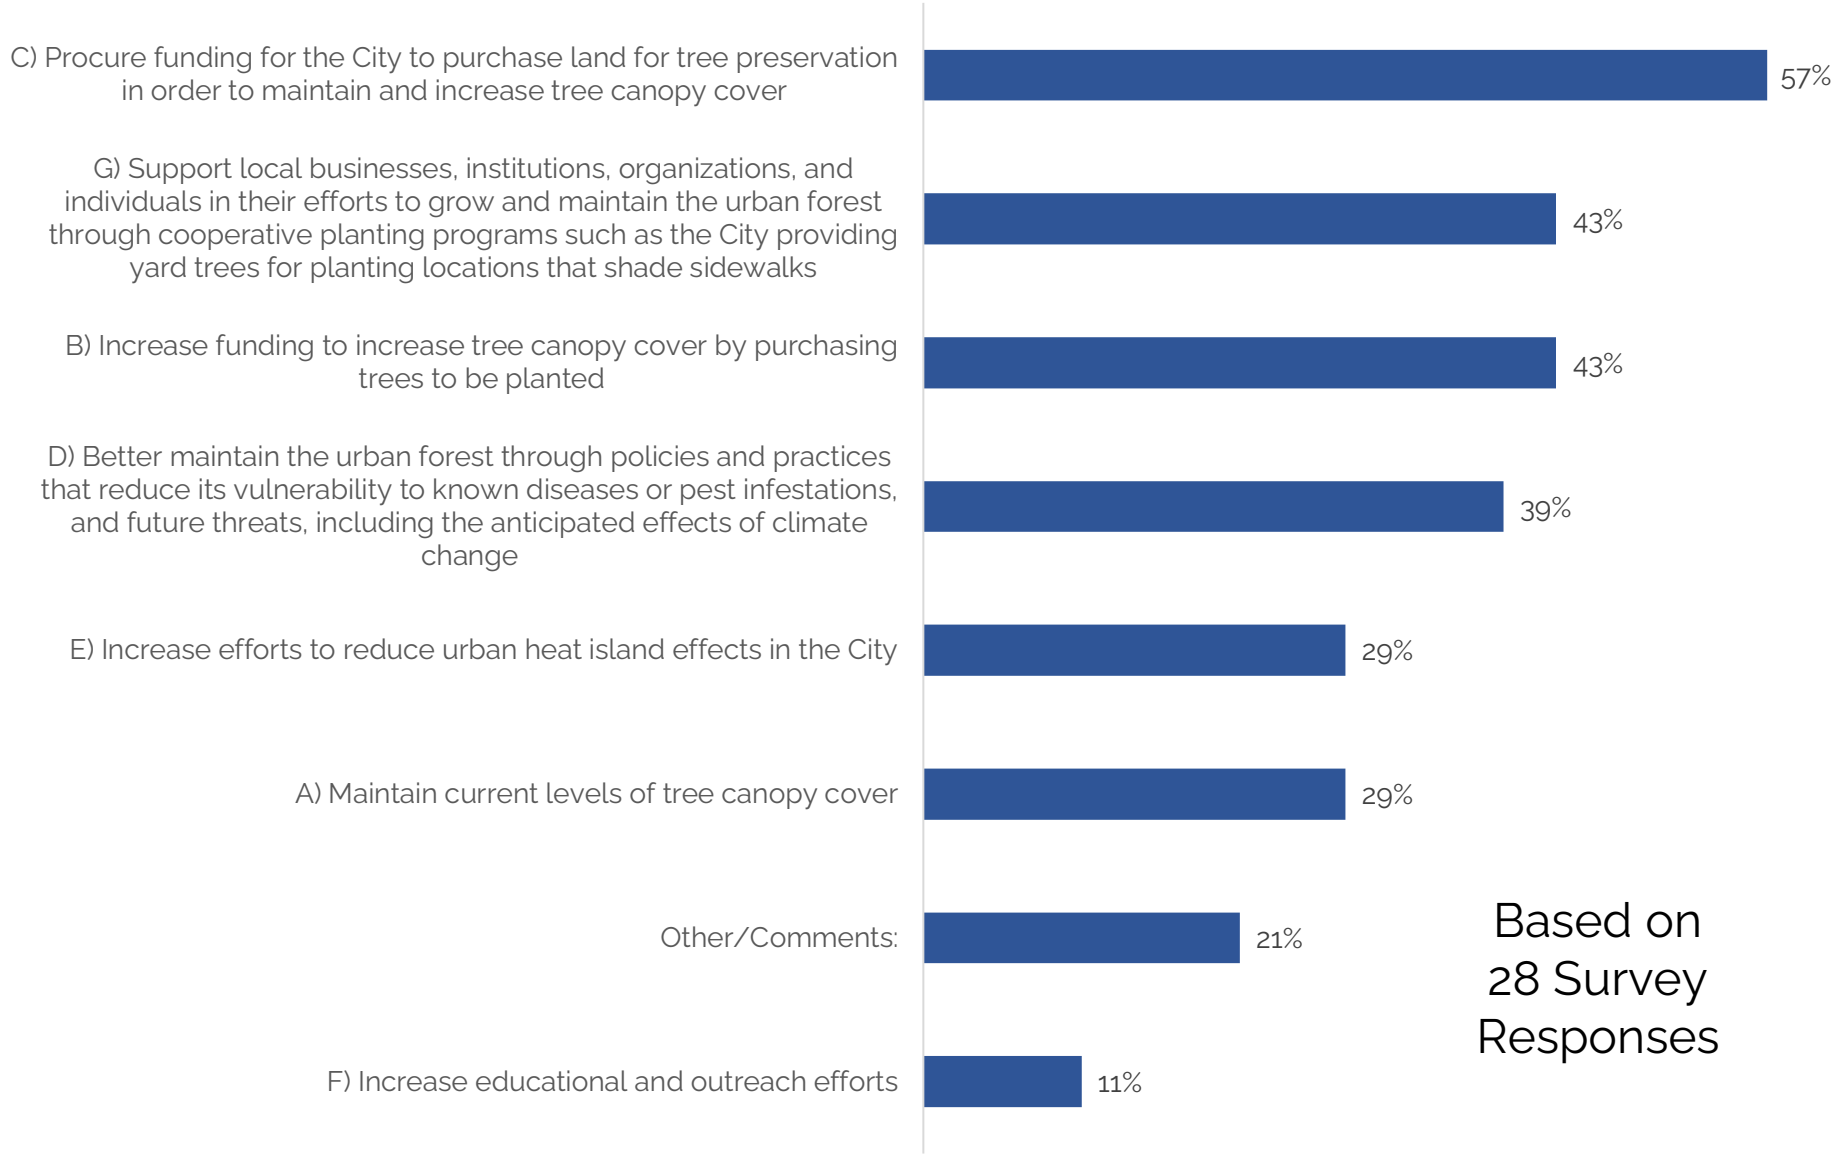
6. Overall, what do you feel are the most important goals for the City in regards to urban forestry?



Question #6 Comments

Name	Comment(s)
	Make sure that underserved areas, and those with few trees receive priority for planting urban forests.
	I agree with A) as a percent of the City under canopy, but not necessarily the existing canopy.
	Determine what is a reasonable canopy goal for the city based on land use, growth, and evnironmental/health benefits.
	Integration of urban ecology, of which forestry is a subset, into the value decisions of the mayor and city council, into budgeting and staffing, and into workflows of utilities and engineering

QUESTION #7



7. From the list above, what are the three (3) most important goals (list letter)?

Based on 76 selections made

QUESTION #7

7. From the list above, what are the three (3) most important goals (list letter)?

Based on 28 Survey Responses

Question #7 Comments

Name	Comment(s)
	Large gap between C (procure funding…) and G (support local businesses…)
	Make sure that underserved areas, and those with few trees receive priority for planting urban forests.
	and B (increase funding…)
	and F (increase educational…)
	I agree with A) (maintain current levels of UTC…) as a percent of the City under canopy, but not necessarily the existing canopy.
	Other: Integration and expansion of Urban Forestry through the city's organization

Documents Evaluated and Recorded in the Index

#	Resource	Information Gathered / Application
1	City Plan 2040 Comprehensive Plan	Public survey conducted, tree canopy section 8.3 (p89), climate change and canopy, urban forest benefits, ordinance, UFAB (formerly Tree and Landscape Advisory Committee est. in 1993)
2	Tree Preservation & Landscape Manual	Contains recommended tree list
3	Code of Ordinances - Chapter 167 Tree Preservation and Protection	
4	Code of Ordinances - Chapter 177 Landscape Regulations	Contains list of invasive plant species
5	Tree Preservation Standard Detail	
6	Tree List from Arkansas Native Plant Society	
7	Significant Trees List & Classifications	
8	Tree Canopy Cover and Environmental Equity	
9	Adopted Annual Budget & Work Program	Contains statement on 40% canopy goal (based on Energy Action Plan), lists trees planted, lists trees mitigated and preservation acres
10	2022 Q1 Executive Management Report	Nothing to report
11	Adopted Five Year Capital Improvements Plan 2021-2025	
12	"Fayetteville First" Strategic Plan	
13	Energy Action Plan	Chapter 1 Greenhouse Gas Reduction & Climate Change; Chapter 3 Buildings, Strategy #5 - UHI mitigation (p40); Chapter 3 Buildings Strategy 2, Make Existing Single-family & Multi-family Dwellings More Efficient; Ch 3 Buildings Strategy 4, Conduct a Community-Wide Tree Canopy Assessment and Set a Tree Canopy Coverage Percentage Goal (p39); Ch 3 Cross-Sector Strategy 1, Integrate Resilience and Adaptation Considerations into Planning and Policy Decisions -- investigate feasibility of a stormwater utility to improve green infrastructure
14	Master Street Plan (excerpt from City Plan 2040)	
15	City Plan 2040 Public Survey	Q11) "please help the City understand which of the following amenities, characteristics, or public improvements should be prioritized in association with infill" -- responses greatly supported making the neighborhood they want to live in, projects are friendly to pedestrians, and public amenities (traffic calming, pathways, open spaces)

Example of the resources reviewed and documented in the Document Index

A total of 66 documents were gathered for the research and information discovery phase of the UFMP project. Based on the research, there were a total of 326 instances where elements in the Audit were referenced in the 66 documents. An example of the document index is provided above. For a complete listing, see the “Fayetteville Urban Forest Audit” spreadsheet.

Urban Forest Audit System: Discovery Matrix

Example of the Documents and References to Audit Elements

Management Policy and Ordinances	
Climate Change (Sustainability)	City Plan 2040 Comprehensive Plan Adopted Annual Budget & Work Program Adopted Five Year Capital Improvements Plan 2021-2025 "Fayetteville First" Strategic Plan Energy Action Plan Active Transportation Plan Mobility Plan Fayetteville Downtown Master Plan Walker Park Neighborhood Master Plan Weddington Corridor Plan Economic and Labor Force Analysis - Appendix B Draft Fayette Junction Master Plan Tomorrow's Corridor - Rethinking 71B University of Arkansas Office for Sustainability - Plants - Current Projects
No Net Loss	Tree Canopy Cover and Environmental Equity
Risk Management	Code of Ordinances - Chapter 167 Tree Preservation and Protection Adopted Annual Budget & Work Program Mobility Plan
Tree Canopy Goals	City Plan 2040 Comprehensive Plan Tree Preservation & Landscape Manual Code of Ordinances - Chapter 167 Tree Preservation and Protection Tree Canopy Cover and Environmental Equity Adopted Annual Budget & Work Program Adopted Five Year Capital Improvements Plan 2021-2025 Energy Action Plan Mobility Plan Fayette Junction Master Plan Tomorrow's Corridor - Rethinking 71B City Website Urban Forestry/Tree Preservation and Landscape Regulations (letter from the Urban Forester) Urban Forestry/Tree Preservation and Landscape Regulations (letter from the Urban Forester)

Discovery Matrix example for Fayetteville documents relating to Management Policy

Once the documents were indexed, each of the 66 resources were reviewed and cross-examined with the Audit's Discovery Matrix categories (11) and elements (130). An example of the process is shown on the left. For the "Management Policy and Ordinances" category, documents are listed in the green cells that mention or relate to the category's elements including "Climate Change", "No Net Loss", "Risk Management", and "Tree Canopy Goals". Any reference to the element within a document was given a "1" to enable a count of the total references to urban forestry per document, per element.

Audit Category	Documents with Reference
Management Policy and Ordinances	104
Professional Capacity and Training	4
Funding and Accounting	10
Decision and Management Authority	40
Inventories	18
Urban Forest Management Plans	7
Risk Management	12
Disaster Planning	2
Standards & Best Management Practices (BMPs)	109
Community	20
Green Asset Evaluation	N/A
TOTAL COUNT	**326**

URBAN FOREST AUDIT SYSTEM: PROCESS

RESEARCH DEEP DIVE: Existing plans, ordinances, practices

CITY CONSULTATIONS: Workflows, operations, services, best practices, standards, challenges, opportunities

EXISTING CONDITIONS: Inventory analysis, ecosystem benefits, trends, maintenance needs, planting, preservation

BENCHMARKING: Establish baseline metrics for comparison and monitoring ($ per tree, staff per tree, etc.)

COMMUNITY ENGAGEMENT: Existing and potential partners, recommendations, public meeting

URBAN FOREST AUDIT: Systematic evaluation from which goals and actions are developed and can be monitored

URBAN FOREST AUDIT SYSTEM: PROCESS

Category: Management Policy & Ordinances			
Element	*Subcategory*	*Description or Criteria for Evaluation*	*Assigned Status**
1.01	Climate Change (Sustainability)	With reference to urban trees, addresses the long-term health and productivity of the natural resource.	Score: 2 "Adopted Common Practice"
1.02	No Net Loss	Can refer to trees, basal area, or canopy.	Score: 2 "Adopted Common Practice"
1.03	Risk Management	Should reference: ANSI A300 Part 9, ISA BMP and prioritization funding mechanisms.	Score: 2 "Adopted Common Practice"
1.04	Tree Canopy Goals	Overall community/campus goal, or by designated "zone".	

EXAMPLE

0) Not Practiced
1) In Development
2) Adopted Common Practice
3) Exceeds Common Practice

*For each subcategory that is evaluated, 0 points are attributed if the component doesn't exist or is not practiced; 1 point is given if the component is in development; 2 points are given if the component is routinely practiced; and 3 points are given if the practice is exceeded. The points can then be totaled for an overall score.

URBAN FOREST AUDIT SYSTEM: OUTCOMES

#	Category	SOC (% Achieved)*	Base (% Achieved)**	Overall Rating	Overall (% Achieved)
1	Management Policy and Ordinances	75%	50%	15	54%
2	Professional Capacity and Training	100%	NA	13	81%
3	Funding and Accounting	100%	NA	6	50%
4	Decision and Management Authority	100%	50%	7	88%
5	Inventories	NA	25%	12	46%
6	Urban Forest Management Plans	NA	50%	11	46%
7	Risk Management	100%	100%	16	89%
8	Disaster Planning	NA	100%	13	93%
9	Standards and BMPs	100%	69%	44	73%
10	Community	100%	NA	24	86%
11	Green Asset Evaluation	NA	NA	17	85%
Total		**96%**	**63%**	**178**	**70%**

EXAMPLE

*Standard of Care (SOC) elements represent the minimum group of urban forestry management "best practices" that a municipality should consider for implementation.

**Base Practices (BP) elements represent additional urban forest management activities or components that may effectively expand a program beyond the SOC group (see footnote above). These elements are typically precursors to other "non-core" elements in the category.

Urban Forest Audit System: Score Key

Color	Rank	Description	Ranking Rationale / Considerations
Blue	Category and element description		
Light Red	0) Not Practiced	No mention of the audit element in any documents, nothing uncovered during staff consultations, not in development as part of the UFMP project.	Describes the considerations that influenced the ranking
Yellow	1) In Development	The audit element is either mentioned in various documents but needs improvements or it is being addressed as part of the UFMP project.	Describes the considerations that influenced the ranking
Green	2) Adopted Common Practice	The audit element is mentioned in various documents, and it aligns with industry standards and best practices.	Describes the considerations that influenced the ranking

URBAN FOREST AUDIT SYSTEM: MANAGEMENT POLICY

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
1.00	**Policy**	**Written policy statements approved by a governing body.**	
1.01	Urban Heat (Sustainability)	Also referred to as Sustainability. With reference to urban trees. Addresses the long-term health and productivity of the natural resource.	Most documents that mention sustainability relate to development not trees though Chapter 167 Tree Preservation & Protection ordinance exists
1.02	No Net Loss	Can refer to trees, basal area, or canopy.	Not specifically mentioned but ordinances have mitigation requirements
1.03	Risk Management	Should reference: ANSI A300 Part 9, ISA BMP, and prioritization funding mechanisms.	No document specifically calls out standards, protocols, or staff trained for tree risk management
1.04	Tree Canopy Goals	Overall community/campus goal, or by designated "zone".	Energy Action Plan has a stated goal of 40%
1.05	Tree Protection	Construction and/or landscape maintenance.	Ordinances, critical root zone mentioned in various permit documents, construction standards
1.06	Utility	Utility pruning, planting, and installation policy (e.g. boring vs. trenching).	No policy in place for utility pruning was found but permits require identifying location of underground utilities
1.07	Human Health – Physical & Psychological	Recognizes and addresses the human health benefits of the natural resource (e.g. exercise, air quality, stress management, shade). Could also include Urban Heat Island (UHI) policies.	Benefits of trees are stated in various documents but less emphasis on heat reduction and human health
1.08	Wildlife Diversity / Habitat / Protection	Mammals, birds, or reptiles.	Comprehensive Plan and other plans have strategies and policies for preserving and conserving natural resources for wildlife
1.09	Performance Monitoring	Recognizes the annual or biennial calculation of metrics (e.g. some component of ecosystem services) for the purpose of tracking management performance.	Performance metrics in budget documents. Specific KPIs to be developed as part of the UFMP
1.10	Ordinance (Private)	Tree protection and management for trees on private property.	Ordinances are in place but will be reviewed with recommendations as part of the UFMP. City has the Tree Preservation & Landscape Manual
1.11	Ordinance (Public)	Tree protection and management for public trees.	Chapter 167 Tree Preservation & Protection is for private development. Similarly for Chapter 177 Landscape Regulations
1.12	Development Standards	US Green Building Council's LEED® rating systems (or similar internationally) LEED v4 BD+C (Sustainable Sites) LEED 4 ND (Neighborhood Pattern & Design, Green Infrastructure) ASLA's SITES® Rating System	Chapter 167 Tree Preservation & Protection is for private development. Similarly for Chapter 177 Landscape Regulations
1.13	High-Conservation Value Forests	Programs or policies for identification, acquisition, and/or protection of groups of trees or forests that provide unique public benefits.	The Comprehensive Plan focuses heavily on conservation and easements
1.14	Urban Interface (WUI)	Programs or policies that improve management of the urban interface for fire and/or invasive species.	Wildfire management is not covered in the documents but invasive species management is

URBAN FOREST AUDIT SYSTEM: CAPACITY & TRAINING

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
2.00	**Professional Management**	**Provision for professional consultation.**	
2.01	Certified Arborist - Staff	International Society of Arboriculture	Urban Foresters in Parks, Public Works, and Development
2.02	Certified Arborist - Contracted	International Society of Arboriculture	Chapter 167 identifies and recognizes ISA Certified Arborists
2.03	Certified Arborist - Other Resource	International Society of Arboriculture	Supporting staff with ISA credentials
2.04	Other Professional - Advising/directing UF management	This could be a professional in an allied field like Landscape Architecture.	City to provide input
2.05	Municipal Forestry Institute	Graduate of Society of Municipal Arborist's MFI program or similar	City to provide input
2.06	USFS Urban Forestry Institute or similar	Attendance at USFS UFI or similar	City to provide input
2.07	Campus/city arborist – ISA CA instructor for CEUs	Arborist routinely provides ISA CEU presentations/workshops.	City to provide input, trainings and resources are available on the website ("Citizen Tree Care Resources")
2.08	Tree Board University or similar	On-line training modules from Oregon U&CF for Tree Board/Advisory Council or similar	Unsure of the training and background of members on the Urban Forestry Advisory Board, Environmental Action Committee, or the Keep Fayetteville Beautiful Committee
2.09	Organizational Communications	Process, procedures, and protocol for cross-professional communications within the organization (all departments "touching" trees).	City to provide input but improvements will be recommended in the UFMP

URBAN FOREST AUDIT SYSTEM: FUNDING & ACCOUNTING

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
3.00	**Urban Forestry Budget**		
3.01	Budgeted Annually	Budget authorized/required for tree board, tree maintenance, and/or tree planting.	Urban Foresters and programs clearly listed in budget line items
3.02	Contingency Budget Process	A protocol is in place to prioritize urban forestry management activities during budget shortfalls; e.g. during times of limited funding for: 1) risk management, 2) young tree care, 3) mulching.	City to provide input
3.03	Funding Calculated from Community Attribute	Budget in terms of per capita, per tree, or for performance (e.g. per tree weighted by size class or age.	City to provide input. The inventory with ecosystem benefit calculations is a starting point
3.04	Funding Based on Performance Monitoring	Budget connected with/based on ecosystem service (ES) monitoring and performance.	City to provide input. The inventory with ecosystem benefit calculations is a starting point
3.05	Urban Forestry Line Item	Is the budget specific to urban forest management?	Line items for the Urban Forestry staff, clear line items for Forestry & Habitat plus events, and Tree City USA reporting documents
3.06	Green Asset Accounting	Maintain green infrastructure data in the "unaudited supplementary disclosure of an entity's comprehensive annual financial report (CAFR)". GASB 34 implementation for municipalities.	City to provide input

Urban Forest Audit System: Authority

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
4.00	**Authority**		
4.01	Urban Forest Manager	Professional urban forest manager with authority over the program and day-to-day activity. Including designated budget line item.	"Urban Forester" mentioned frequently in documents stating authority, role, and communications protocols
4.02	Staff Authority	Designated staff with authority over the program and day-to-day activity. Including designated line item.	Clearly defines the role of the Urban Forester
4.03	Communication Protocol	Established protocol and mechanism(s) for communication among all members of the urban forest management "community" in your municipality or organization (e.g. manager, department under control, advisory board, finance, field operations, public, NGOs, business community, developers).	City to provide input
4.04	Tree Board, Commission, or Advisory Council	Establishes a board for public participation (advisory or with authority).	Urban Forestry Advisory Board

URBAN FOREST AUDIT SYSTEM: INVENTORIES

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
5.00	**Inventories and Assessments**		
5.01	Canopy Inventory (UTC)	Periodic (≤5 year) canopy inventory and assessment. Public & private.	2012, 2013, 2015, 2017, 2019 canopy assessments
5.02	Ecosystem Services	Recent (≤5 year) ecosystem services (ES) inventory & assessment? Public: 100% or street trees; Public & Private: Sample; or Campus. Or, are ES calculated annually or biennially based on partial re-inventory and projected growth as a monitoring tool.	The sample inventory and canopy data were collected / provided to conduct the analysis as part of the UFMP
5.03	Public Trees ↓	↓ Evaluate below ↓	↓
5.04	Street Trees	Is there a recent (5 year) inventory?	Guidance to be provided in the UFMP
5.05	Parks/Riparian Areas	Is there a recent (5 year) inventory?	No inventory located except for the public/private sample inventory in 2022
5.06	Other Public Trees	Public facility landscaped areas, Industrial parks, green space.	No inventory located except for the public/private sample inventory in 2022
5.07	Continuous inventory on a cycle (≤5 years)	Partial re-inventory to support continuous forest inventory, growth projections, and the calculation of ecosystem services.	Guidance to be provided in the UFMP
5.08	Private Trees ↓	↓ Evaluate below ↓	↓
5.09	Campus (Educational)	Is there a recent (5 year) inventory?	University of Arkansas has a tree inventory and online map
5.10	Corporate	Is there a recent (5 year) inventory?	Guidance to be provided in the UFMP
5.11	Other Private Property	Is there a recent (5 year) inventory?	Guidance to be provided in the UFMP
5.12	Continuous inventory on a cycle (≤5 years)	Partial re-inventory to support continuous forest inventory, growth projections, and the calculation of ecosystem services).	Guidance to be provided in the UFMP
5.13	Green Stormwater Infrastructure (GSI)	BMP stormwater mitigation practices and locations (e.g. Washington DC)	Water Master Plan but not specific to green infrastructure or stormwater. Energy Action Plan has a strategy to investigate feasibility of a stormwater utility to improve green infrastructure
5.14	Spatial	Inventory data includes Lat/Long (i.e. GIS). Should address the spatial relationship between the natural resource and people (i.e. residents, visitors, activities) that would help manage the resource for benefits associated with proximity (air quality, recreation, stress mitigation, etc.	Canopy Assessments and tree inventory provide spatial data. Guidance to be provided in the UFMP
5.15	Maintenance and Planting Records Maintained	Planting details (nursery, species, size, cost, contractor, etc.) maintained with inventory or as separate database or recordkeeping system. Also pruning and removal histories.	City to provide input

URBAN FOREST AUDIT SYSTEM: PLANS

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
6.00	**Management Planning**		
6.01	Annual Maintenance Calendar	An annual calendar that defines typical activity by season. To support scheduling.	City to provide input
6.02	Public Trees ↓	↓ Evaluate below ↓	↓
6.03	Street Tree Management	Is there a recent (5 year) plan for street trees?	Guidance to be provided in the UFMP
6.04	Parks/Riparian Area Management	Is there a recent (5 year) plan ?	Parks Master Plan in development as of January 2023
6.05	Other Public Trees	Public facility landscaped areas, Industrial parks, green space.	Guidance to be provided in the UFMP
6.06	Private Trees ↓	↓ Evaluate below ↓	↓
6.07	Campus (Educational)	Is there a recent (5 year) plan for Campus trees?	TBD whether University of Arkansas is a Tree Campus USA campus
6.08	Corporate	Is there a recent (5 year) plan?	Guidance to be provided in the UFMP
6.09	Other Private Property	Is there a recent (5 year) plan?	Guidance to be provided in the UFMP
6.10	Green Infrastructure	Is there a plan for green infrastructure (i.e. nodes & linkages)? Large-scale projects.	Energy Action Plan mentions stormwater utility for green infrastructure
6.11	Other Written Plans	Other natural resource plans (e.g. tree canopy). May be a component of another plan.	Comp Plan, Energy Action Plan, Parks Master Plan (in progress), neighborhood plans
6.12	Tree Planting	Is there a recent (3 year) tree planting plan?). May be a component of another plan.	Guidance to be provided in the UFMP
6.13	UF as Part of a Comprehensive Plan	Is any UF management plan referenced in the comprehensive plan (i.e. county or municipality) or master plan (i.e. Campus)?	Section 8.3 of the Comprehensive Plan is "Tree Canopy" and describes the role urban forests play in climate change, stormwater, etc.
6.14	Urban Forest Planning and Management Criteria and Performance Indicators	Criteria and indicators based on *A Model of Urban Forest Sustainability* (Clark, J.R., Matheny, N.P., Cross, G., and Wake, V. 1997 Journal of Arboriculture.) or on work of W.A. Kenney, P.J.E. van Wassenaer, and A.L. Satel in *Criteria and indicators for strategic urban forest planning and management*. (2011)	Guidance to be provided in the UFMP. Conducting this Audit is one approach to Criteria & Indicators

URBAN FOREST AUDIT SYSTEM: RISK MANAGEMENT

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
7.00	**Risk Management Activities**		
7.01	TRAQ Attained	At least one staff or consultant is TRAQ.	City to provide input
7.02	Annual Level 1 (ANSI A300 Part 9 & ISA BMP)	All trees in high occupancy areas visited annually.	City to provide input
7.03	Mitigation Prioritization	A protocol for prioritizing mitigation following Level 1 and Level 2 assessments. Reflects the controlling agency's threshold for risk.	City to provide input
7.04	Occupancy Areas Mapped	Has TRAQ staff/consultant discussed/mapped occupancy levels with controlling authority?	City to provide input
7.05	Recordkeeping, Reporting, and Communications	A process has been put in place to maintain records on requests, inspections, evaluations, and mitigation of risk; and on the communications among the managers related to those risk assessments.	City to provide input
7.06	Standard of Care Adopted	Controlling authority has adopted a Standard of Care (SOC) or risk management policy.	City to provide input
7.07	Tree Risk Specification	Is there a written specification that meets requirements of ANSI A300 (Part 9)? And, has it been discussed with the controlling authority with relevance to the controlling authority's threshold for acceptable risk?	City to provide input
7.08	Urban Tree Risk Management	The community has prepared and follows a comprehensive program for urban tree risk management.	City to provide input
7.09	Invasive Management	Plan to address and manage invasive: plants, insects, and disease.	10 documents mention invasive management, prohibited trees, recommended trees, Arkansas Native Plant Society tree list, among others

URBAN FOREST AUDIT SYSTEM: DISASTER PLANNING

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
8.00	**Disaster Planning Activities**		
8.01	Response/Recovery Mechanism	Staff knowledge of the municipality's protocol for requesting disaster resources through the county or state with access to mutual aid and EMAC.	City to provide input, Fayetteville Emergency Operations Plan is in place
8.02	Urban Forestry as part of the County Disaster Plan	The UF plan (8.3) is incorporated into the county/municipal disaster plan; specifically in reference to debris management and risk mitigation.	Nothing found at the county level, City to provide input
8.03	Urban Forestry Disaster Plan	A separate/specific plan within the urban forestry management program (i.e. who to call, priorities).	No plan identified, City to provide input
8.04	Pre-disaster Contracts	Contracts are in place for critical needs.	City likely has a structure in place, City to provide input
8.05	Mitigation Plan	A mitigation plan has been developed for pre-disaster, recovery, and post-disaster.	City to provide input
8.06	EMAC Mission Ready Packages (MRP)	Municipality has published disaster resources with state EM and participates in inter-state Mutual Aid to support Urban Forest Strike Teams (UFST).	City to provide input
8.07	Urban Forest Strike Team	Participation in the UFST project.	City to provide input

URBAN FOREST AUDIT SYSTEM: STANDARDS & BMPS

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
9.00	**Standards & BMPs**		
9.01	ANSI Standards	Reference and adherence to ANSI Standards for arboricultural practices (A300), safety (Z133), or Nursery Stock (ANSI Z60.1) (any or all).	Tree ordinances reference standards, website lists standards, Tree Preservation Manual, Tree Preservation Standard Detail
9.02	Ages/Diameter Distribution	Specific management for the development of an age-diverse tree population	No specific mention about age diversity but species diversity is recognized
9.03	Arborist Standards	Standards of practice for arborists (i.e. Certification).	Tree ordinances reference standards, website lists standards, Tree Preservation Manual, Tree Preservation Standard Detail
9.04	Best Management Practices (BMPs)	Establishes or references tree maintenance BMPs (i.e. written comprehensive standards & standards).	Tree ordinances reference best practices, website lists standards, Comprehensive Plan lists BMPs, Tree Preservation Manual, Tree Preservation Standard Detail
9.05	Fertilization and Mulching	Fertilization or mulching standards required for conserved & planted trees.	Ordinances list requirements, City website has resources, Structural Soil Detail includes guidance
9.06	Lightning Protection	BMP written to the ANSI A300 Standard.	Nothing listed, minor recommendation to consider in the UFMP
9.07	Planting	Planting and transplanting standards required/specified.	Listed in ordinances, Tree Preservation Standard Detail, website, Tree Planting on Slope Detail
9.08	Pruning	Pruning standards required for conserved & planted trees.	Listed in ordinances, Tree Preservation Manual, Tree Preservation Standard Detail, City website
9.09	Removal	Infrastructure damage, stump grinding, etc.	Guidance listed in Chapter 167 and City website
9.10	Support Systems (Guying and Bracing)	BMP written to the ANSI A300 Standard.	Nothing listed, minor recommendation to consider in the UFMP
9.11	Tree Risk	Tree risk assessment procedures; ISA BMP or equivalent.	Risk mentioned in Ch. 167 but should be evaluated as part of the UFMP
9.12	Construction Management Standards	Written standards for: tree protection, trenching/boring in CRZs, pre-construction mulching, root or limb pruning, watering (any or all).	Critical root zone, tree protection zones, critical root zone addressed in ordinances, Tree Preservation Manual, City website, and Tree Preservation Standard Detail
9.13	Design Standards	Standards for design that specifically require trees; standards for placement, soil treatment, and/or drainage.	18 documents have standards listed for development that impacts trees and landscaping (Comp Plan, Tree Manual, Ordinances, Active Transportation Plan, neighborhood plans, others)
9.14	Genus/Species Diversity	Suggests or requires diversity of plant material.	City website has a list and references the Arkansas Native Plant Society Tree List

URBAN FOREST AUDIT SYSTEM: STANDARDS & BMPS CONT.

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
9.00	**ANSI Standards & BMPs**	**CONTINUED**	
9.15	Green Stormwater Infrastructure (GSI)	BMPs for site level GI practices like rain gardens and swales. Small-scale projects.	Energy Action Plan recommends stormwater utility for green infrastructure, other plans reference stormwater management and GI
9.16	Inventory Data Collection	Adopted or developed standards for tree inventory data collection	Guidance to be provided in the UFMP
9.17	Minimum Planting Volume	Minimum required root zone volume.	Tree Preservation & Landscape Manual provides standards and BMPs
9.18	Minimum Tree Size	Minimum caliper for tree replacements, and/or minimum size of existing trees to receive tree density or canopy credit.	Tree Preservation & Landscape Manual notes the 2" minimum caliper
9.19	Root Protection Zone (CRZ)	Defines adequate root protection zone; Critical Root Zone (CRZ).	Tree Preservation & Landscape Manual plus 5 other documents note this
9.20	Safety	Safety logs, trainings, reference to ANSI Z133 Safety Standard	No specific standards for safety around trees. Guidance to be provided in the UFMP
9.21	Topping	Prohibits topping or other internodal cuts (public & private).	Chapter 167 restricts topping
9.22	Tree Species List	Identifies and publishes a list of the most desirable, recommended, or preferred species (native and non-native species); alternatively, a list of species prohibited.	Tree Preservation & Landscape Manual, ordinances, significant trees list, City website, and others list the recommended or required trees
9.23	Tree Quality Standards	Written standards for tree selection at nursery in addition to Z60.1.	Tree Preservation & Landscape Manual notes the ANSI standard for nursery stock
9.24	Utility Right-of-Way (ROW) Management	Requirements for planting, pruning, and/or removal of trees within a utility ROW.	Chapter 167 and City website mention utility management but could be expanded as part of the UFMP
9.25	Urban Agriculture	Enabled urban food forestry practices.	Guidance to be considered for the UFMP
9.26	Wood Utilization	Larger diameter material is processed for wood products.	Guidance to be considered for the UFMP
9.27	3rd party forest certification	Examples: American Tree Farm System (ATFS), Forest Stewardship Council™	Guidance to be considered for the UFMP
9.28	Energy generation	Local or regional use of chips or other woody debris for co-generation facilities.	Guidance to be considered for the UFMP
9.29	Composting of Leaf and/or Other Woody Debris	Leaves and small woody debris are captured and used on-site or processed by someone by composting for reuse.	No mention of debris management, guidance to be considered for the UFMP
9.30	Watering Standards		Various documents state the watering requirement post-planting. Additional guidance to be provided in the UFMP

URBAN FOREST AUDIT SYSTEM: COMMUNITY

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
10.00	**Community Building**		
10.01	Social Media Website or Similar	Does your community/campus use social media platforms or similar to document and publicize your urban forestry program, activity, or events?	City website, social media, Speak Up Fayetteville
10.02	Education	The urban forest is used as an educational laboratory for class activity; Kids in the Woods, PLT, high school, or college level.	Resources on City website, Tree Manual
10.03	Private Property Tree Program	Does your community sponsor this program locally?	To be addressed in the UFMP
10.04	Public-facing Inventory Software	Public access to the community tree resource via an on-line mapping program (i.e. any Web Map Service; WMS).	2022 sample tree inventory used a public facing software program but trial subscription ended. City does have online portal of canopy assessment maps
10.05	Public Perception	Is public management consistent with private property requirements for tree protections and care? Does the Campus/public tree management reflect neighborhood norms?	Comprehensive Plan included a survey. Ongoing public feedback recommendations to be provided in the UFMP
10.06	Recognition Programs	Programs that raise awareness of trees or that use trees to connect the community to significant events or activities.	Arbor Day events, spring and fall planting, Celebration of Tres, Amazing Tree
10.07	Arbor Day Celebration	Whether or not associated with Tree City USA.	Arbor Day events, spring and fall planting, Celebration of Tres, Amazing Tree
10.08	Arboretum designation	Internal or third party arboretum designation.	University of Arkansas tree inventory and Arboretum Mapping Project, Botanical Garden of the Ozarks
10.09	Significant trees	For example: size, history.	No Heritage or Significant Tree Ordinance but City has Significant Trees on website
10.10	Memorial/Honorarium	Tree planting or tree care programs than honor/memorialize individuals, organizations, or events.	City to provide input. City has tree giveaways, and tree donations
10.11	Social Media	Does your community/campus make use of Twitter, Facebook, Blogs for internal or external outreach?	Several posts about urban forestry but additional guidance to be provided in UFMP
10.12	Active Communications	Press releases, regular news articles (print), "State of the Urban Forest" reports, periodic analysis of threats and opportunities.	Additional guidance to be provided in the UFMP
10.13	Tree Care	Are volunteers trained and used for basic tree care (e.g. mulching, pruning, planting).	Volunteer program and events, invasive species removal, City website with resources for tree care
10.14	Tree City USA®	Community/campus meets current qualifications for any of these programs.	27 years as TC USA with 9 Growth Awards
10.15	Volunteer Opportunities	Ad hoc or scheduled. Any/all age groups. Tree Campus USA student activities.	Volunteer programs and events

URBAN FOREST AUDIT SYSTEM: GREEN ASSET EVALUATION

#	Component Evaluated	Description or Criteria for Evaluation	Ranking Rationale / Considerations
11.00	**Observed Outcomes**	**Based on an analysis of tree inventories**	
11.01	Deadwood	Look for evidence of periodic or ad-hoc deadwood removal (i.e. lack of dead limbs ≥ 2" in the trees or on the ground).	To be evaluated with the 2022 tree inventory and guidance provided in the UFMP
11.02	Genus Diversity	No genera exceed **20%** of population; make specific observations for *Acer*, *Quercus*, *Fraxinus, Ulmus* and other local species of concern.	Based on the sample inventory in 2022, 31% are oaks, 15% elms, 8% maples. Guidance to be provided in the UFMP
11.03	Mature Tree Care	Mature trees are retained in the landscape, and are of acceptable risk; i.e. veteran tree management.	Based on the sample inventory in 2022, the highest percent of recommended tree work is pruning for clearance (8%). Guidance to be provided in the UFMP
11.04	Mulching	Evidence of adequate (i.e. spatial extent, depth, and material) roots zone mulching for all age classes.	To be evaluated with the 2022 tree inventory and guidance provided in the UFMP
11.05	Planting Site Volume Optimization	Are species & sites matched for optimization of above ground canopy; right tree in the right spot concept.	Only 6% of the trees inventoried in 2022 have a clearance conflict (2% pedestrian, 1% building, 1% light, 1% sign or signal). Guidance to be provided in the UFMP
11.06	Rooting Volume Optimization	Are species & sites matched for optimization for below ground rooting volume; right tree in the right spot concept.	Only 0.3% of trees inventoried in 2022 were noted as causing sidewalk damage. Guidance to be provided in the UFMP
11.07	Species Diversity	No species/cultivars exceed **10%** of population; make specific observations for *Acer*, *Quercus*, *Fraxinus, Ulmus* and other local genera of concern. Also evaluate the role of regionally local native species.	Based on the sample inventory in 2022, no species exceed the 10% threshold. 7% are Princeton elms, 6% post oaks, 6% willow oaks, 5% pin oaks, and 4% blackgums. Guidance to be provided in the UFMP
11.08	Soil Compaction	Observe evidence of soil compaction by users or staff during maintenance. Include "desire" lines and construction activity at time of evaluation.	To be evaluated with the 2022 tree inventory and guidance provided in the UFMP
11.09	Tree Health	Rate the overall tree health in all size (age) classes; look for crown dieback, decay, foliage density & color.	Based on the sample inventory in 2022, 75% of public trees are in good condition, 15% in fair condition, 5% poor, and 5% dead. Guidance to be provided in the UFMP
11.10	Young Tree Pruning	Look for evidence of periodic (e.g. every 3 years to year 9) structural pruning (e.g. subordination cuts, dominant central leader, co-dominant stems lower that 20').	Based on the sample inventory in 2022, only 3 trees (0.1%) require structural pruning at a young age. Guidance to be provided in the UFMP

URBAN FOREST AUDIT SYSTEM: SUMMARY

Final Audit Results

Note, the audit may be kept internal and is only meant to serve as a preliminary evaluation to support the development of the Plan's goals and strategies though it may serve as a UFMP implementation monitoring tool

#	Category	SOC (% Achieved)*	Base (% Achieved)**	Overall Rating	Overall (% Achieved)
1	Management Policy and Ordinances	50%	67%	20	71%
2	Professional Capacity and Training	100%	NA	16	89%
3	Funding and Accounting	75%	NA	8	67%
4	Decision and Management Authority	50%	100%	5	63%
5	Inventories	NA	56%	17	65%
6	Urban Forest Management Plans	NA	50%	13	54%
7	Risk Management	83%	50%	14	78%
8	Disaster Planning	NA	67%	9	64%
9	Standards and BMPs	75%	69%	44	73%
10	Community	100%	NA	25	89%
11	Green Asset Evaluation	NA	NA	16	80%
Total		**76%**	**65%**	**187**	**73%**

*Standard of Care (SOC) elements represent the minimum group of urban forestry management "best practices" that a municipality should consider for implementation.

**Base Practices (BP) elements represent additional urban forest management activities or components that may effectively expand a program beyond the SOC group (see footnote above). These elements are typically precursors to other "non-core" elements in the category.

Urban Forest Audit System: Source

The original audit and supporting spreadsheet were developed by Urban Forestry South (USDA Forest Service, Region 8, SRS-4952, Athens, Georgia). The spreadsheet was based on the current Urban Forest Sustainability and Management Review Checklist developed in cooperation with Agnes Scott College Office of Sustainability and the ASC Arboretum Advisory Council and the City of Austin (TX)

CLIMATE IMPACTS IN FAYETTEVILLE

Urban areas around the world are facing dramatically intensifying extreme weather and climate impacts including drought, long-term water shortages, flooding, extreme weather events, and prolonged heat. Urban trees can play a significant role in making Fayetteville resilient to weather and climate extremes, and in protecting human and ecosystem health and safety. View Appendix A for the Climate Adaptation Report generated for the southeast United States from the Climate Adaptation Workbook.

Increased temperatures and prolonged heat have a dramatic effect on urban trees. Urban trees already face many struggles of the urban environment, including competition for space, elements of an urban environment, vandalism, and harmful pests and diseases. Some of Fayetteville's established trees are unlikely to survive the changes in the climate and weather patterns over the next 50-75 years. Planting the right trees for Fayetteville today and in the future will play a vital role in the resiliency of the City's urban forest as well as overall community sustainability.

In pursuit of a sustainable and resilient urban forest, the City of Fayetteville seeks to apply climate adaptation strategies to urban forest management planning. Building toward this objective, the City maintains a recommended tree list of small, medium, and large trees prepared by the Arkansas Native Plant Society. The following provides an analysis of the changing climate and considerations for new tree species to integrate into Fayetteville's urban forest over time.

FAYETTEVILLE'S CURRENT TREE LIST AND PLANTING PRACTICES

Recreated from the City of Fayetteville's website— www.fayetteville-ar.gov/3979/List-of-Recommended-Native-Trees-and-Shr

Overview

Urban Forestry Staff reviews, recommends and selects trees for a variety of sites and growing environments. Staff evaluates each place for site-specific variables when selecting the most appropriate trees for a site. Not every tree is right for every location, and the Urban Forestry staff uses our extensive tree knowledge, research and site evaluation when selecting trees, mindful of how each tree and each site may change in the short- and long-term future.

This list of trees contains recommendations for trees planted in Fayetteville, including ideal locations and notes on each tree. It highlights how many species of butterflies and moths each of these trees can host. The list does not include all the insects, birds, reptiles and small mammals that a tree can host. The Arkansas Native Plant Society was the catalyst for this updated list, and the Urban Forestry Advisory Board assisted with information.

Urban Forestry Staff is continuously researching and contemplating the use, space, species and varieties of trees, shrubs and plants used throughout the City. We seek expert advice in our community and are lucky to have professional connections with the Horticulture, Landscape Architecture, and Plant Pathology Departments at the University of Arkansas. We also have a healthy relationship with the Arkansas Forestry Commission and the Arkansas Native Plant Society. We utilize the wealth of knowledge surrounding us to benefit the City by helping Staff and residents choose the right tree for the right space.

The Danger of Single Species Planting

Historically, the use of a single species of street trees has had negative consequences. In the early 1900s, the American Chestnut, a popular and heavily planted street tree, was devastated by the chestnut blight. The blight caused large swaths of trees in the American streetscape to perish and left large gaps in the American landscape. A similar incident occurred with the spread of Dutch Elm disease. Due to the monoculture planting of elm trees as street trees, the impact was even more noticeable on streetscapes throughout the country. For these reasons and other global issues with plant disease, pests and pathogens, Fayetteville's Urban Forestry Staff encourages and recommends a diverse planting palette. Using native species trees is vital because it benefits the local ecosystem and saves the City money and time. Native species are well suited for our climate and prosper in Northwest Arkansas's soils because they originated here.

Criteria for Selection for the List

The City Urban Forestry Staff carefully selects species of trees as each location offers unique challenges. The overall criteria include:

- Native or native cultivars first
- Trees tolerant of pollution, drought and harsh conditions (salt/sand from winter and winds)
- Trees that create litter problems or produce large fruit are not used as street trees
- Tree shape – to ensure limbs are not too low and could create a visibility issue
- Small trees under power lines
- Trees with seasonal interest: fall color or blooms
- Amount of sun and shade in the existing conditions
- Speed of traffic
- Pedestrian intensity
- Visibility for traffic
- Maintenance issues
- Pest problems
- Longevity of the tree
- Type of Street Tree location:
    - Urban tree well
    - Large median (over six feet wide)
    - Small median (usually the green space between a curb and sidewalk, less than six feet wide)

Street Tree Planting Scenarios

Urban Tree Well

Trees planted in urban tree wells have the most difficulty surviving and thriving for several reasons: the structured soils do not offer the same nutrients as a forest; space for the root systems is limited; and exposure to pollutants. The tree's shape also has to be considered for pedestrian visibility, automobile visibility, and not interfering with buildings.

Large Medians

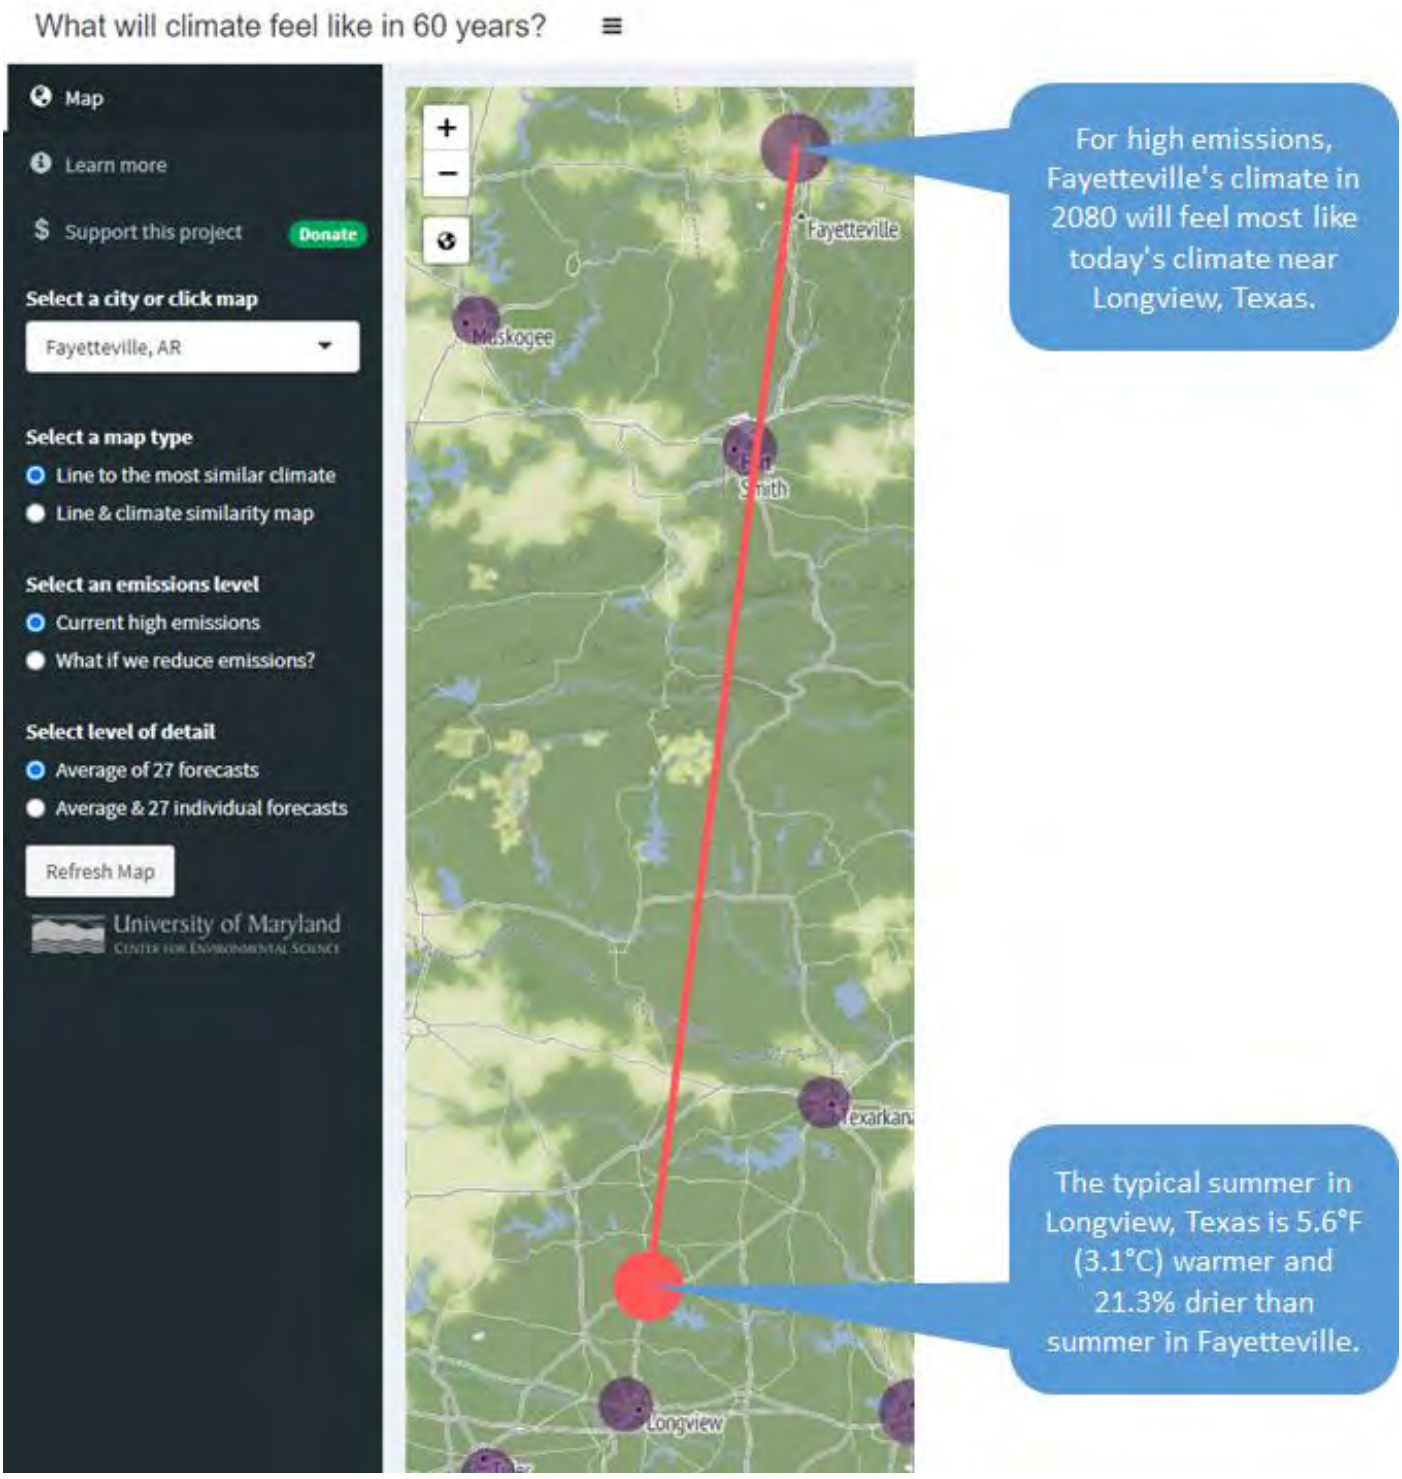
Large median spaces vary in size from six to 10 feet wide. The space is adequate for most trees, and Staff considers maintenance needs when choosing a tree to be planted in the medians. Trees that produce less litter and fruit are ideal for large medians. Finally, visibility is another characteristic when choosing a large median tree. Urban Forestry staff selects trees that allow for visibility under and through the canopy to increase vehicular safety.

Small Medians - Trees between Curb and Sidewalk (Tree Lawn less than Six feet)

Small medians are the green spaces between the curb and the sidewalk, typically less than six feet wide. In these cases, Staff prioritizes maintaining the structural integrity of the sidewalk and curb. Other factors included in choosing the right species for this condition are sightline visibility for vehicles and pedestrians, sun and shade conditions, the appropriate size for location in town (residential, commercial, downtown), watering needs, amount of litter produced, and environmental benefits.

This list does not contain every tree used in Fayetteville. Urban Forestry Staff does consider other trees not listed as viable options and will examine all proposed trees. There are construction techniques that allow larger trees in small locations. Staff will consider these techniques with appropriate construction details.

LARGE SPECIES - Mature ht. 45' or above



Species	Common Name	Street Tree Recommendation Types of Street tree conditions. Tree well, Large median (6' or more) small median (6' or less)	Number of butterfly and moth species tree can host (Does not include other insects, birds, reptiles and small animals that live in trees.)	Ideal Location	Notes
Acer rubrum	Red Maple	None	199	Trunk shaded in morning and afternoon	Grows poorly in compacted soil. Not a good street tree, sun scald is big problem with this as a street tree.
Acer saccharum	Sugar Maple	None	199	Trunk shaded in morning and afternoon	Grows poorly in compacted soil. Not a good street tree, sun scald is big problem with this as a street tree.
Betula nigra	River Birch	None	221		Extended dry soil leads to leaf drop. Avoid high pH. The three trunk species is overused in landscapes.
Carya cordiformis	Bitternut Hickory	None	220	Woods/Property Perimeter	Nuts -plant away from storm drains. Nut trees do not make good street trees due to litter.
Carya illinoinensis	Pecan	None	220	Woods/Property Perimeter	Nuts -plant away from storm drains. Nut trees do not make good street trees due to litter.

Figure 1. Excerpt from the City of Fayetteville's recommended tree list showing the attributes and a sample of large species trees in the list

FAYETTEVILLE'S SISTER CLIMATE CITY

The Future Urban Climates tool, created and maintained by University of Maryland Center for Applied Sciences, is a mapping tool that matches and displays similar climates for cities across the United States. The comparisons are based on minimum and maximum temperatures and seasonal precipitation in each city.

The closest area where current climate data is available is the Springdale, Arkansas area, just 10 miles north of Fayetteville. Results for a high emissions scenario show that the climate in 2080 for the Fayetteville region will feel most like today's climate near Longview, Texas—approximately 130 miles east of Dallas, Texas. The typical winter in Longview, Texas is 10.7°F (5.9°C) warmer and 40.8% wetter than winter in Fayetteville.

Sister Climate City Tree List Comparisons

Based on the climate projections, Longview, Texas (Sister Climate City) currently has a climate that is similar to Fayetteville's projected climate and plant hardiness zone. The Sister Climate City's approved tree planting list was researched and compared with Fayetteville's "2020 Tree List From Arkansas Native Plant Society" list. After online research, no recommended tree list exists or was found for Longview, TX's urban forestry program. Therefore, the City of Dallas, Texas's recommended tree list was utilized given Dallas is only 130 miles west of Longview and the urban forestry consultants conducting this SCCA study have extensive experience in the Dallas-Fort Worth area.

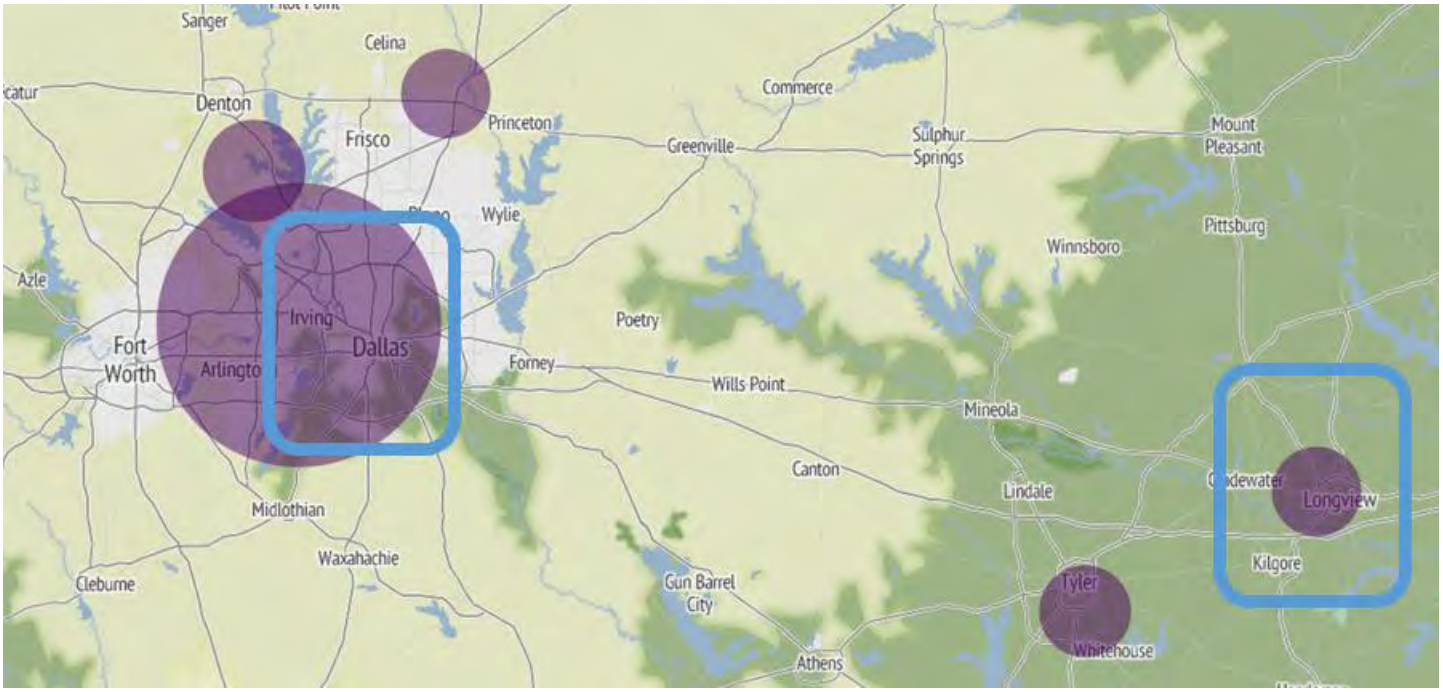


Figure 2. Map displaying the Sister Climate City of Longview, TX and the City of Dallas, TX which was utilized for comparing recommended tree lists

Fayetteville, AR and Dallas, TX Tree List Crosswalk - Results

A total of 38 of 74 (51%) tree species in Fayetteville's tree list are in the "Approved Tree List" for Dallas, TX. The majority (24 tree species) are in the "Large" category, four are in the "Medium" category, and nine are in the "Small" category. The table below details Fayetteville's tree list (shrubs excluded) and an indicator of the species that is also in the Dallas tree list.

Table 1. Summary of tree species in the Fayetteville, AR and Dallas, TX recommended or approved tree lists

COMPARISON OF FAYETTEVILLE TREE LIST TO SISTER CLIMATE CITY TREE LIST		
Fayetteville Tree List (ordered by Scientific Name)	**Common Name**	**Dallas, TX Tree List?**
Acer rubrum	Red Maple	Yes
Acer saccharum	Sugar Maple	
Aesculus glabra	Ohio Buckeye	
Aesculus pavia	Red Buckeye	Yes
Amelanchier arborea	Serviceberry	
Aronia arbutifolia	Red Chokeberry	
Asimina triloba	Pawpaw	
Betula nigra	River Birch	Yes
Carpinus caroliniana	Hornbeam or Musclewood	
Carya cordiformis	Bitternut Hickory	
Carya illinoinensis	Pecan	Yes
Carya ovata	Shagbark Hickory	
Catalpa speciosa	Northern Catalpa	
Celtis laevigata	Sugarberry	Yes
Celtis occidentalis	Hackberry	
Cercis canadensis	Redbud	Yes

SUMMARY

Fayetteville's tree planting recommendations are in line with industry standards and best practices since the City utilizes the Arkansas Native Plant Society list and therefore, generally plants and recommends planting trees native to the region.

The effects of climate change are already taking hold in the City and Fayetteville recognizes the challenges that lie ahead. Some of the experienced and anticipated effects include prolonged periods of high temperatures and drought, extreme weather events, changes in the duration of seasons, favorable conditions for harmful tree pests and diseases, among other impacts. To grow a sustainable and resilient urban forest, the City should continue to examine the performance of trees planted and the species of trees that are recommended for planting.

To develop plans and strategies relating to tree planting for climate change, a Sister Climate City Analysis (SCCA) was conducted. This SCCA examined the predicted climate of Fayetteville 60 years from now and identified a city with a current climate that matches the projected climate of Fayetteville. The City of Longview, Texas was identified but no city-approved or recommended tree list was found. Therefore, a neighboring city, the City of Dallas, Texas was utilized given the location and the urban forestry consultant's experience working with Dallas. From the SCCA, it was found that 51% of Fayetteville's trees on the Arkansas Native Plant Society tree list are also in the City of Dallas's approved tree list. This means that those trees in Fayetteville's list may favor well with changing climate since the Sister Climate City of Dallas currently approves and is planting those tree species.

In addition to the Sister Climate City Analysis, the U.S. Forest Service's Climate Change Atlas was utilized to examine the predicted habitat change due to climate change. From this study, it was found that 44 trees in Fayetteville's list are in the Climate Change Atlas study. Of the 44 trees, there are 28 species where it is predicted that the habitat will increase due to climate change. A total of 8 species have habitats that may decrease and 8 species have habitats that may not change with climate change. A full report is provided in the 2023 Urban Forestry Management Plan.

When combining the SCCA results and the Climate Change Atlas, a total of 24 of the 74 (32%) tree species in Fayetteville's list are on the Dallas, TX approved tree list and are predicted to have habitats either increase or not change.

This analysis shows the City of Fayetteville is on track for planting a resilient urban forest but the City should be mindful of the diversity of species, the associated benefits of the trees planted, the maintenance needs, and other considerations beyond what is covered in this summary report. The results of this analysis are not meant to serve as a definitive guide for tree species selection. Instead, it provides an analysis of what is currently being planted compared to the effects of climate change and offers general guidance on the species of trees that should continue to be planted while considering other goals and standards such as species diversity.

APPENDIX A. CLIMATE ADAPTATION REPORT

Climate Change Impacts for Southeast

Source: Adaptation Workbook, Developed in partnership with the U.S. Department of Agriculture (USDA), the USDA Forest Service, the Northern Institute of Applied Climate Science, and American Forests.

Climate Change Impacts for Southeast research report by: Carter, L., A. Terando, K. Dow, K. Hiers, K.E. Kunkel, A. Lascurain, D. Marcy, M. Osland, and P. Schramm, 2018: Southeast. In Impacts, Risks, and Adaptation in the United States: Fourth National Climate Assessment, Volume II [Reidmiller, D.R., C.W. Avery, D.R. Easterling, K.E. Kunkel, K.L.M. Lewis, T.K. Maycock, and B.C. Stewart (eds.)]. U.S. Global Change Research Program, Washington, DC, USA, pp. 743–808. doi: 10.7930/NCA4.2018.CH19

This region was defined in the National Climate Assessment (2014) and includes the states of Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia.

National Climate Assessment (2018) - Southeast

Temperatures in the Southeast are projected to increase by 4.4 to 7.7 degrees Fahrenheit by late-century (2071-2100).
All climate models agree that temperatures are projected to increase over the 21st century across the Southeast. The spatial variations are projected to be relatively small across the region, with the largest temperature changes occurring in the northwest part of the region (Arkansas, Kentucky, Mississippi, and Tennessee), the smallest variations occurring in southern Florida. Temperature increases will be the greatest in summer. The greatest warming during summer is expected in the northwest portion of the region. Compared to all other seasons, winter temperature increases are projected to be more mild.

R.S. Vose, D.R. Easterling, and others. 2017. Climate Science Special Report: Temperature Changes in the United States. U.S. Global Change Research Program.

The Southeast is expected to experience between 5 and 30 more days per year with a maximum temperature exceeding 95 degrees Fahrenheit by the middle of the century.
The smallest increase of 4 days per year is expected in areas with a currently low number of 95-degree days, including the highest elevation areas along the spine of the Appalachians where historically days above 95-degrees occur fewer than 10 days out of the year. The largest increase in the number of 95-degree days per year (35 days) is expected in south-central Florida, where these kinds of hot days are already common. The western portion of the region is expected to experience the largest number of consecutive 95-degree days, with as many as 16-20 additional days by mid-century.

L. Carter, A. Terando, and others. 2018. Fourth National Climate Assessment: Southeast. U.S. Global Change Research Program.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

The Southeast is expected to experience between 0 and 14 fewer days per year with a minimum temperature below 10 degrees Fahrenheit by the middle of the century.
The largest decreases are expected in Kentucky, Virginia, Tennessee, North Carolina and the northern part of Arkansas. The smallest decreases in cold days are expected along the coastal and southern areas, where these kinds of cold days rarely occur. Similarly, the Southeast region is expected to have more than 20 fewer days with a minimum temperature below 32 degrees by the middle of the century.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

Average annual precipitation is projected to increase slightly in the northeast portion of the Southeast, but may decrease in the southwest half of the region.
There is uncertainty between different climate scenarios for future precipitation projections in the Southeast. Generally, there is a southwest-to-northeast gradient in annual precipitation projections. The greatest increases are projected in North Carolina and Virginia (3-9% increase by the end of the century), and the greatest decreases are projected in Louisiana and Arkansas (3-12% decrease by the end of the century). Overall changes in precipitation for the Southeast are projected to be slight and comparable to current year-to-year variations. Daily precipitation totals in the Southeast have increased substantially in the fall season, and this trend is expected to continue.

D.R. Easterling, K.E. Kunkel, and others. 2017. Climate Science Special Report: Precipitation Change in the United States. U.S. Global Change Research Program.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

The number of days per year with more than 1 inch of precipitation will increase across the Southeast by the middle of the century, and double the number of heavy rainfall events are projected by late century.
Extreme rainfall events have increased in frequency and intensity in the Southeast, and will continue to increase in the future. Most of the region is projected to experience 6% to 25% more days each year with more than an inch of precipitation by the middle of the century. The largest increases (up to 25% increases) in extreme precipitation are expected across the Appalachian Mountains. The smallest increases (less than 10%) are expected across Arkansas, Louisiana and Mississippi. Days with more than 2 inches, 3 inches, and 4 inches of precipitation are also expected to occur more frequently by the middle of the century. Under a high emissions scenario, projections indicate approximately double the number of heavy rainfall events (2-day precipitation events with a 5-year return period) and a 21% increase in the amount of rain falling on the heaviest precipitation days (days with a 20-year return period) by late century. Heavy precipitation associated with hurricanes and tropical storms could result in more flooding and damage to coastal forests, and contribute to an increase in inland flooding as well.

L. Carter, A. Terando, and others. 2018. Fourth National Climate Assessment: Southeast. U.S. Global Change Research Program.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

A majority of climate models suggest that precipitation in the Southeast will increase in the winter, spring, and fall by the end of the century, but summer is generally expected to become drier.
Simulated changes in summer precipitation by the end of the century range from a 0-10% decrease, with the largest decreases occurring in southern Florida and Arkansas and Tennessee. The means of several climate models indicate that winter and spring precipitation may increase around 15% by the end of the century, particularly in the northern part of the region. Daily precipitation totals in the Southeast have increased substantially in the fall season; this trend is expected to continue, with the greatest expected increases along the Gulf Coast. Overall, only minimal change or slight increases in precipitation are projected along much of the Atlantic and Gulf Coasts. These projections are averaged outputs from a climate scenario with higher emissions (A2), and under mild climate scenarios changes are generally expected to be smaller.

L. Carter, A. Terando, and others. 2018. Fourth National Climate Assessment: Southeast. U.S. Global Change Research Program.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

The annual freeze-free season is expected to increase by 20 to 30 days in the Southeast by 2055. The freeze-free season lengthens by more than a month by the late 21st century in climate simulations based on a high emissions scenario.
The freeze-free season is defined as the period of time between the last spring frost (daily minimum temperature below 32 degrees F) and the first fall frost. The length of the annual freeze-free season has been increasing since the 1980s, and all climate models agree that it will continue to increase in the future across the Southeast. The largest increases of 25-30 days are mainly expected in Louisiana, Tennessee, Kentucky, Virginia, and North Carolina. The smallest changes are expected in southern Florida, which is not surprising because freezing events are already rare in this part of the Southeast.

L. Carter, A. Terando, and others. 2018. Fourth National Climate Assessment: Southeast. U.S. Global Change Research Program.

K. Kunkel, L. Stevens, and others. 2013. Regional Climate Trends and Scenarios for the U.S. National Climate Assessment - Southeast. NOAA.

Red spruce, balsam fir, and eastern hemlock are projected to decline substantially across the Southeast by the end of the century, and conditions for pines may also deteriorate.
Red spruce and eastern hemlock are already declining in some areas, and these species are projected to be extirpated from the southeast by 2100 as a result of the combined stresses of warming, air pollution, and insects. If temperature continues to increase and precipitation becomes more variable, conditions for pine growth may begin to deteriorate. Even if regional forest productivity remains high for pine species, the center of forest productivity could shift northward into North Carolina and Virginia, causing significant economic and social impacts.

J. Vose, D. Peterson, and others. 2012. Effects of Climate Variability and Change on Forest Ecosystems: A Comprehensive Science Synthesis for the U.S. Forest Sector.. USDA Forest Service Pacific Northwest Research Station.

Climate change will amplify many existing stressors to forest ecosystems in the Southeast, such as invasive species and insect pests.
Forest ecosystems throughout the Southeast Region are exposed to a range of natural, introduced, and anthropogenic stressors. Stressors such as invasive plants, forest pests, and diseases are expected to become more damaging under climate change, and these factors may interact in unpredictable ways. The southern pine beetle is already the most destructive pest in the region's forests, and longer growing seasons could allow populations of the pest to expand more rapidly. Cogongrass and kudzu are expected to expand into new territory under climate change, and both of these species have cascading effects on disturbance regimes and diversity.

J. Vose, D. Peterson, and others. 2012. Effects of Climate Variability and Change on Forest Ecosystems: A Comprehensive Science Synthesis for the U.S. Forest Sector.. USDA Forest Service Pacific Northwest Research Station.

Wildfire risk is projected to increase across the Southeast by the end of the century.
Rising temperatures and increases in the duration and intensity of drought are expected to increase wildfire occurrence and also reduce the effectiveness of prescribed fire in the Southeast. While this region experiences the highest number of wildfires in the country, prescribed fire is currently more common than wildfire in Southeastern forests. However, as fire seasons lengthen in the future, the window for prescribed burning may decrease because of increased fuel flammability. Decades of wildfire suppression has increased the potential for crown fires, and model projections indicate that wildfires are likely to occur more frequently in the Southeast in the future. Annual fire probability, calculated solely with climate data and physical principles, is projected to increase by 20% to 80% across the Southeast by the end of the century, with the greatest increases in the southern Appalachians. The incidence of atmospheric conditions that contribute to large and erratic fire behavior, measured by the Haines Index, is also projected to occur more 8 to 11% more frequently by the end of the century. The limitation for these sorts of projections is that they do not account for changes in land use, fire suppression rates, or vegetation changes.

R. Guyette, F. Thompson, and others. 2014. Future Fire Probability Modeling with Climate Change Data and Physical Chemistry. Forest Science.

Damage from hurricanes and sea-level rise is expected to increase in the Southeast by the end of the century.
Global sea level rise is projected to rise between 1 and 4 feet by the end of the century. Sea level rise and related increases in storm surges pulsing farther inland will continue to exacerbate ongoing land loss in low-lying coastal areas and may result in excessive saltwater inundation of coastal forests. The number of Category 4 and 5 hurricanes has increased since the 1980s, and this trend can be attributed both to natural variability and climate change. High-intensity hurricanes such as the 2017 Hurricane Irma are expected to become more common in the future. Rapid intensification of storms is also more likely as the climate warms, even though there is also some historical evidence that the same conditions that lead to this intensification also act to weaken hurricane intensity near the U.S. coast, but it is unclear whether this relationship will continue as the climate warms further. Damage from these kinds of storms can be intense and extend for hundreds of miles inland, including windthrow and blowdown, inundation, damage to infrastructure on land, and significant ecological impacts to terrestrial and freshwater ecosystems due to saltwater intrusion and altered hydrology.

L. Carter, A. Terando, and others. 2018. Fourth National Climate Assessment: Southeast. U.S. Global Change Research Program.

L. Carter, J. Jones, and others. 2014. National Climate Assessment – Southeast. U.S. Global Change Research Program.

Low-diversity systems are at greater risk from climate change.
Studies have consistently shown that diverse systems have exhibited greater resilience to extreme environmental conditions and greater potential to recover from disturbance than less diverse communities. This relationship makes less diverse communities inherently more susceptible to future changes and stressors. The diversity of potential responses of a system to environmental change (response diversity), is a critical component of ecosystem resilience. Response diversity is generally reduced in less diverse ecological systems. Genetic diversity within species is also critical for the ability of populations to adapt to climate change, because species with high genetic variation have better odds of producing individuals that can withstand extreme events and adapt to changes over time.

A. Hoffman and C. Sgrò. 2011. Climate change and evolutionary adaptation. Nature.

Systems that are more tolerant of disturbance have less risk of declining on the landscape
Disturbances such as wildfire, flooding, and pest outbreaks are expected to increase in the future. Forests that are adapted to gap-phase disturbances, with stand-replacing events occurring over hundreds or thousands of years, may be less tolerant of more frequent widespread disturbances. Mesic hardwood forests can create conditions that could buffer

against fire and drought to some extent, but these systems are not expected to do well if soil moisture declines significantly. Forest systems that are more tolerant of drought, flooding, or fire are expected to be better able to withstand climate-driven disturbances. This principle holds true only to a given point, because it is also possible for disturbance-adapted systems to experience too much disruption. For example, dry pine forests and woodlands might benefit from drier conditions with more frequent fire, but these systems might also convert to savannas or open grasslands if fire becomes too frequent or drought becomes too severe.

G. Nowacki and M. Abrams. 2008. The Demise of Fire and "Mesophication" of Forests in the Eastern United States. BioScience.

E. Gustafson and B. Sturtevant. 2013. Modeling Forest Mortality Caused by Drought Stress: Implications for Climate Change. Ecosystems.

Species in fragmented landscapes will have less opportunity to migrate in response to climate change.
Habitat fragmentation can hinder the ability of tree species to migrate to more suitable habitat on the landscape, especially if the surrounding area is nonforested. Modeling results indicate that mean centers of suitable habitat for tree species will migrate between 60 and 350 miles by the year 2100 under a high emissions scenario and between 30 and 250 miles under milder climate change scenarios. Based on data gathered for seedling distributions, it has been estimated that many northern tree species could possibly migrate northward at a rate of 60 miles per century. Fragmentation makes this disparity even more challenging, because the landscape is essentially less permeable to migration.

L. Iverson, M. Schwartz, and others. 2004. How fast and far might tree species migrate in the eastern United States due to climate change?. Global Ecology and Biogeography.

C. Woodall, C. Oswalt, and others. 2009. An indicator of tree migration in forests of the eastern United States. Forest Ecology and Management.

Systems that are limited to particular environments will have less opportunity to migrate in response to climate change.
Some species and forest types are confined to particular habitats on the landscape, whether through requirements for hydrologic regimes, soil types, or other reasons. Similar to species occurring in fragmented landscapes, isolated species and systems face additional barriers to migration. Widespread species may also have particular habitat requirements. For example, sugar maple is often limited to soils that are rich in nutrients like calcium, so this species may actually have less available suitable habitat than might be projected solely from temperature and precipitation patterns. Riparian forests are not expected to be able to migrate to upland areas because many species depend on seasonal flood dynamics for regeneration and a competitive advantage. Similarly, lowland conifer swamps contain a unique mix of species that are adapted to low pH values, peat soils, and particular water table regimes. These species face additional challenges in migration compared to more-widespread species with broad ecological tolerances.

A. Jump and J. Peñuelas. 2005. Running to stand still: adaptation and the response of plants to rapid climate change. Ecology Letters.

The urban heat island effect can exacerbate the effects of increasing temperatures.
Urban areas with one million or more people can be 2 to 13° F warmer than their surrounding rural areas due to the "urban heat island effect" from heat-absorbing infrastructure such as pavement and buildings as well as waste heat generated from manufacturing and automobiles. The urban heat island is often more pronounced in historically redlined areas with lower tree cover.

Impervious cover can exacerbate the effects of increased heavy precipitation events in urban areas.
Increases in impervious cover can dramatically increase the size and frequency of localized flooding. Typically, urban floods are short-lived, but extended flooding can stress trees, leading to leaf yellowing, defoliation, and crown dieback. If damage is severe, mortality can occur. In addition, flooding can lead to secondary attacks by insect pests and diseases. Some species are more tolerant of flooding than others. Flood-intolerant species include upland species such as bitternut and shagbark hickory, Kentucky coffeetree, and white oak. Species that are generally tolerant of flooding include species that are generally native to wetlands and riparian areas such as baldcypress, sycamore, and red maple. Trees in coastal areas may also be vulnerable to saltwater intrusion during flood events.

FAYETTEVILLE'S CURRENT INVASIVE PLANT SPECIES PROGRAM

Overview

An invasive plant is a plant species found outside its native range that threatens the survival or reproduction of native plants and animals, reducing biological diversity and causing significant damage to ecosystems, communities, habitats, and native species. The parks across the City of Fayetteville contain many invasive plant species, including two that are prolific: Japanese and Bush Honeysuckle (*Lonicera maackii*) and Chinese Privet (*Ligustrum sinense*).

The City of Fayetteville's Parks Maintenance Division in the Public Works Department is responsible for the invasive plant species removal and habitat restoration programs on public lands. Parks Maintenance also conducts and collaborates with organizations to host work days to remove targeted areas and rely heavily on volunteers for this work, which ranges from removal of plants with loppers and shovels, to replanting once invasives are gone. Volunteers that participate in these events are trained to take the skills learned back home so that they may remove these plants from their own back yards.

The City has an events calendar and page for interested community members to sign up for text or email notifications about upcoming stewardship volunteer opportunities. In addition to events and trainings, the City has information about the Invasive Plants Ordinance and a list of invasive plants and native alternatives on its website.

Figure 1. Example of the community event for invasive plant species management (Source: City of Fayetteville, AR Facebook)

Figure 2. Example public messaging for the management of invasive plant species (Source: City of Fayetteville, AR Facebook)

The Fayetteville City Council adopted Ordinance #5820 on November 3, 2015 (see Attachment A); this ordinance established a list of eighteen invasive plants to be restricted from being installed in new developments that require a Landscape Plan Review by the Urban Forester. The list of invasive plants was determined through an open participation process which involved a team of thirteen stakeholders. Stakeholders included nursery owners/managers, landscape architects, academic experts, landscape installers, hobby gardeners, botanists, naturalists, conservationists, City Park Managers and local citizens. The team met to evaluate the economic and environmental harm caused by invasive plants. After recognizing the need for an invasive plant policy, the stakeholder group reviewed other communities' invasive plant species policies and made recommendations to City staff.

The Ordinance was established in response to Fayetteville's Comprehensive Plan's guiding policies for Natural Areas which calls to, "preserve native vegetation and meet the habitat needs of multiple species." To support the awareness and compliance of the Ordinance, the "Invasive Plant Species in Fayetteville, Arkansas" resource was created by the City which consists of the eighteen invasive plants and recommends appropriate plant species for trees, shrubs or ground cover. The City of Fayetteville encourages all property owners to identify, remove and replace invasive plants from the landscapes around their homes and businesses.

Figure 3. The City of Fayetteville, AR's educational packet for invasive plant species management (Source: City of Fayetteville, AR)

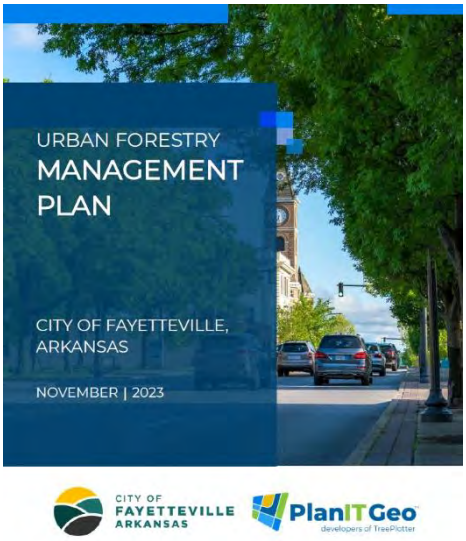

Figure 4. City of Fayetteville, AR's 2023 Urban Forestry Management Plan

This report was provided to the City of Fayetteville in support of the 2023 Urban Forestry Management Plan ("Plan") and was created to examine the existing program for managing invasive plant species in the City. Within the Plan, invasive plant species were recognized as an external challenge facing the City's urban forest now and in the future with changing climates. To address these challenges, Goal B1 in the Plan calls for the City to "prioritize public tree maintenance and tree risk management" and has a supporting action to "continue to manage invasive plant species on public properties and within public rights-of-way. Support controlled burns to manage invasives and wildlife on public properties."

The following provides a summary of the program review and recommendations based on industry standards and best practices and local research pertaining to the management of invasive plant species.

Current Management of Invasive Plant Species

For the City's consideration, the following table summarizes the plant species that are invasive according to Fayetteville's Invasive Plant Species educational packet compared to the University of Arkansas' Cooperative Extension Service (U of A Cooperative Extension) Invasive Plants in Arkansas list:

Plant Species	Listed in Fayetteville's Invasive Plant Species Educational Packet?	Listed in the University of Arkansas Division of Agriculture Cooperative Extension Service's Invasive Plants in Arkansas List?*
Asian Wisteria	Yes	Yes
Bamboo	Yes	Yes
Bigleaf Periwinkle	Yes	Yes
Callery/Bradford Pear	Yes	Yes
Burning Bush	Yes	No
Bush Honeysuckle	Yes	No
Chinese Privet	Yes	Yes
Creeping Euonymus	Yes	No
English Ivy	Yes	Yes
Heavenly Bamboo	Yes	No
Japanese Honeysuckle	Yes	Yes
Kudzu	Yes	No
Littleleaf Periwinkle	Yes	No
Mimosa, Silktree	Yes	Yes
Multiflora Rose	Yes	No
Sericea Lespedeza	Yes	Yes
Shrubby Lespedeza	Yes	Yes
Tree-of-Heaven	Yes	No
Running Monkey Grass	No	Yes
Tall Fescue	No	Yes
Chinese Tallow Tree	No	Yes
Cogongrass	No	Yes

*City of Fayetteville, AR's webpage for Invasive Plants and Native Alternatives (www.fayetteville-ar.gov/3028/Invasive-Plants-and-Native-Alternatives)

**University of Arkansas Division of Agriculture Cooperative Extension Service's Invasive Plants in Arkansas List (www.uaex.uada.edu/environment-nature/ar-invasives/invasive-plants)

Figure 5. Identifying callery pear (Pyrus calleryana) an invasive tree species (Source: Watershed Conservation Resource Center's "Invasive Plants of Northwest Arkansas, A Field Management Guide)

Evaluating and Updating the City's Invasive Species Management Program

The City may consider updating the invasive plant species listed in the Invasive Plant Species educational packet and the City Ordinance #5820 to align with recommendations provided by the University of Arkansas' Cooperative Extension Service, the Arkansas Native Plants Society, the Watershed Conservation Resource Center's "Invasive Plants of Northwest Arkansas, A Field Management Guide", the Northwest Arkansas Land Trust, and/or other reputable sources.

According to the Cooperative Extension Service at the University of Arkansas, the following plant species have been invasive in some landscape situations and should be monitored by the City of Fayetteville to determine the level of invasiveness and the need for prohibiting planting:

- Garlic Chives
- Devil's Walking Stick
- Artemesia
- Trumpet Creeper
- Obedient Plant
- Sweet Autumn Clematis
- Mexican Hydrangea
- Queen Ann's Lace
- Wintercreeper Euonymus
- Chameleon Plant
- Cypress Vine

Planning a Management Strategy

For the consideration of Fayetteville, the following management strategies are recommended for invasive plant species management on public lands and for educating the public to manage invasives on private land (recreated from the Watershed Conservation Resource Center's "Invasive Plants of Northwest Arkansas, A Field Management Guide."):

Prevent Invasive Plants From Establishing

- Don't introduce invasive plants; consider native alternatives
- Younger invasive plants are easier to remove than well-established plants

Identify Plant Species & Area To Be Managed

- Take an inventory of your area and properly identify invasive and native plants
- Use caution on streamside areas or heavily sloped areas
- Seek assistance and consultation in sensitive areas
- Determine where and how removed brush will be handled. If composting, heat must be maintained above 145° F to denature seeds

Practice Safety

- Dress appropriately
    - Long sleeves, pants, gloves, sturdy shoes or boots
    - Safety glasses, sunscreen, and/or insect repellant may be appropriate
- If Using Chemical Herbicide Treatment, Personal Protective Equipment (PPE) Is Needed
    - Safety glasses
    - Latex or nitrile gloves
    - Prevent spills and use extreme caution near water sources
    - Read herbicide labels and Safety Data Sheets (SDS) for additional PPE measures and application guidelines
    - The herbicide label is the law
- Use Extreme Caution With Sharp or Heavy Tools
    - Acquire safety training for chainsaw use
- Be Aware of Surroundings

    - Swinging tools or falling limbs could injure you or others nearby
- Contact Arkansas One-Call at 811
    - Call 811 to locate underground utility lines prior to disturbing a substantial area and/or using heavy equipment.
- Use Caution When Working Around Overhead Utility Lines
- Work Areas May Not Be Easily Accessible
    - Be aware of steep slopes, banks, and slippery areas
- Be Aware of Wildlife
    - Work areas may harbor animals, snakes, or insects
    - Use caution with plants such as Poison Ivy, Poison Hemlock, or thorns (Greenbrier and Multiflora Rose)
- Rest Often
- Stay Hydrated

Divide Area

- Work in phases
- Large acreage may require focusing on one species at a time or dividing into smaller manageable areas
- Plant densities can be overwhelming; distribute workload

Seek Assistance From Local Professionals

- Tree professionals may be required. Use a certified arborist
- Consult your local extension office for herbicide recommendations

Revegetate/Encourage Native Plants

- Minimize damage to native vegetation during removal
- Consult native plant resources and research
- Choose correct native plant for growing conditions, ecoregion, and space
- Currently, Fayetteville recommends the "Wildscaping with Ozark Native Plants - Native Wildflowers and Grasses" resource for revegetating with native plants and the "Ozark-Friendly Landscape – Native Trees and Shrubs" resource for native trees

Do Maintenance Seasonally

- Many plants sprout or sucker from cut points; revisit managed areas
- Opening canopy may activate invasive seed bank and viney plants

Figure 6. City of Fayetteville's public education for invasive plant species removal (Source: KHBS News)

Invasive Plant Species Control and Removal Methods

Several methods are used to control or remove invasive plants each with varying degrees of effectiveness, advantages, and disadvantages. Listing here is not an endorsement for any one method. The area of infestation often dictates removal techniques, such as sensitive riparian areas along waterways, wetlands, or sloped areas. Use of herbicide trade names does not indicate endorsement of any one product.

Mechanical

- Hand Pulling
- Cutting (chainsaw, hand saw, pruners)
- Stump pulling (weed wrench, shrub pullers, chains, mattock, shovel, large machinery)
- Machinery (mowing, brush hog)

"Hand removal" is very effective but does require manual labor and may not be practical across large areas. Cutting alone is rarely effective, unless used in conjunction with cut-stump treatments. The most effective way to kill invasive plants is by removing the entire plant including root systems. Stump pulling is useful for small to medium shrubs and trees and is easier in moist soil.

Cultural Practices

Prescribed fire has been used throughout history to control vegetation, but burning is often unavailable in urban settings. Fire can control the spread of some invasive plants, but must often be used in tandem with mechanical and/or chemical measures. It can risk harming native vegetation, activate invasive seed banks, or even stimulate some undesirable plants. Refer to local laws and ordinances to ensure compliance. Applying mulch helps to control invasive populations by preventing sprouting. It also holds moisture for native plants and covers bare soil to help prevent erosion.

Chemical (Herbicide)

- Foliar spray
- Cut-stump treatments
- Basal bark treatment
- Frill (hack-and-squirt)

Always read and follow herbicide label instructions and precautions. Great care should be taken when conducting chemical treatment and it is important to consult your local cooperative extension office for herbicides effective for weed and brush control. A brief description of herbicide treatments follows:

Foliar sprays are not always a viable option in the urban landscape or public setting. This technique can be used to target young plants, but it tends to be ineffective on many resilient, mature, invasive plants in Northwest Arkansas. Foliar spray can damage or kill non-target native plants from drift and contaminate water resources.

Cut-stump treatments minimize chemical use and contamination of native vegetation and water resources. Most effective in the fall, stumps are cut 3 to 4 inches from the ground and are treated with an herbicide-marking mixture within a few minutes using a squirt bottle or sponge applicator. The marking dye helps land managers or volunteers to see where the chemical has been applied. Stump treatments also help to prevent suckering or secondary growth. Resilient stumps may need cutting and chemical application again the following season.

Basal bark herbicide treatment is effective on most invasive woody plants including vines. An oil soluble herbicide is mixed with an oil carrier. For woody plants with a 6-inch diameter or less, spray the bark of the plant from ground level to 15 inches. Plants should not be cut for 6 months. This method can be used anytime of the year except early spring.

Frill or hack and squirt is used to target invasive trees and introduces the herbicide into the stem using spaced cuts below the last live branch and around the trunk. A hatchet is used to make downward angled incisions through the bark (2 inches long) evenly spaced (one inch) around the tree. Each cut is carefully filled (do not allow spillage) with herbicide-marking mixture using a spray bottle or gunjet.

Re-establishing Native Vegetation

Once invasive vegetation is removed from a property, it is important to establish a healthy stand of plants native to the local ecoregions of Northwest Arkansas. Native vegetation provides shelter and food for wildlife, and it contributes to the reproduction and survival of insects, birds, fish, reptiles, and mammals. Native vegetation also supports migrating species, such as monarch butterflies and wood thrushes. Having adapted to the Ozark Mountain region, native species of plants generally are easy to establish and are drought resistant. Many are beautiful with showy flowers, berries, and leaves, and they can easily be incorporated into a landscaped setting. The previous tables of plants native to both the Boston Mountains and Ozark Highlands Ecoregion should be considered for replanting. These lists can be used as a guide for the revegetation of an area of interest where invasive plants have been removed. Just because a shrub is removed doesn't mean it needs replaced with another shrub. As an example, there may be a preference to establish native grasses and woodland wildflowers in a forested area where bush honey suckle has been removed. As part of the invasive removal process, a plan for native plant establishment should be created.

Figure 7. Revegetating with a native Ozark chinquapin tree (Source: Only in Arkansas)

Native plants can be established by dispersing seed or by planting potted plants or bare roots. Native seed can be collected locally or purchased and is generally used for large areas where grasses and wildflowers are desired. If native seed is purchased, a local source or at a minimum, a source that was cultivated in or near the Ozark Mountain region should be considered. When dispersing native seed on bare soils, mix a nursery crop of winter wheat or oats with a variety of native grass and wildflower species. Following the application of the seed mix, cover with straw. Trees and shrubs are generally established by planting potted plants or bare roots. Again, if possible, find a local source for these plants.

Once the treated area is replaced with native plants, it is important to inspect for and remove new invasive plants that will try to reestablish on the property. Once a healthy stand of native vegetation is established, less invasive vegetation will arise.

Figure 8. Before and after of volunteers removing invasive plants along a trail near Scull Creek in Fayetteville, AR (Source: North American Invasive Species Management Association, NAISMA)

Invasive Plant Species Program Review Checklist

The following checklist is provided by the urban forestry consultants at PlanIT Geo for the City of Fayetteville to examine and update its current Invasive Plant Species Management Program. By updating the program and aligning it with industry standards and best practices, the City will be better equipped to implement the 2023 Urban Forestry Management Plan and achieve the vision of a sustainable urban forest in Fayetteville.

Program Review Checklist for Fayetteville, Arkansas' Invasive Plant Species Management Program

Table 1. Checklist for the City of Fayetteville to evaluate and update its invasive plant species management program (Source: PlanIT Geo, Inc.)

A) PROGRAM OVERVIEW		
A1) Mission and Goals		
Question	***Answer***	***Status***
A1a) Are the program's mission and goals clearly defined and measurable?		
A1b) Do the goals align with the City's overall priorities and environmental goals?		
A2) Program Scope		
Question	***Answer***	***Status***
A2a) What types of invasive plants does the program target?		
A2b) What geographic areas does the program cover?		
A2c) What types of interventions are used (e.g., education, removal, restoration)?		
A3) Program Budget		
Question	***Answer***	***Status***
A3a) Is the program adequately funded to achieve its goals?		
A3b) How are resources allocated across different program components?		
A3c) Are there opportunities for additional funding or cost savings?		

B) PROGRAM IMPLEMENTATION		
B1) Planning and Prioritization		
Question	***Answer***	***Status***
B1a) Does the program have a strategic plan for managing invasive species?		
B1b) Are priorities set based on the ecological impact of different species and the feasibility of control?		
B1c) Is there a mechanism for regularly updating the plan and incorporating new information?		
B2) Outreach and Education		
Question	***Answer***	***Status***
B2a) Does the program have a comprehensive outreach and education plan to engage the public and stakeholders?		
B2b) Are educational materials clear, accurate, and accessible to different audiences?		
B2c) Are there opportunities to partner with other organizations for outreach efforts?		

B3) Invasive Species Removal		
Question	***Answer***	***Status***
B3a) Are control methods effective and based on best practices?		
B3b) Are appropriate disposal methods used for removed plants?		
B3c) Are there monitoring protocols in place to assess the success of control efforts?		
B4) Restoration and Re-vegetation		
Question	***Answer***	***Status***
B4a) Does the program include efforts to restore native plant communities after invasive species removal?		
B4b) Are native species selection and planting methods appropriate for the site and ecological goals?		
B4c) Are there monitoring protocols in place to assess the success of restoration efforts?		

C) PROGRAM EVALUATION		
C1) Data Collection and Analysis		
Question	***Answer***	***Status***
C1a) Does the program collect data on the distribution and abundance of invasive species?		
C1b) Are data collection methods reliable and standardized?		
C1c) Is data analyzed regularly to inform program decision-making?		
C2) Monitoring and Reporting		
Question	***Answer***	***Status***
C2a) Does the program monitor the effectiveness of its interventions?		
C2b) Are results reported to stakeholders and the public?		
C2c) Are there opportunities to improve monitoring and reporting procedures?		
C3) Adaptive Management		
Question	***Answer***	***Status***
C3a) Does the program use an adaptive management approach to adjust interventions based on monitoring results?		
C3b) Are lessons learned from past efforts incorporated into future planning?		
C3c) Are there opportunities to share information and best practices with other programs?		

D) PARTNERSHIPS AND COLLABORATION		
D1) Stakeholder Engagement		
Question	***Answer***	***Status***
D1a) Does the program actively engage with stakeholders such as residents, landowners, and businesses?		
D1b) Are there opportunities for stakeholders to participate in program planning and implementation?		
D2) Interagency Collaboration		
Question	***Answer***	***Status***
D2a) Does the program collaborate with other agencies and organizations involved in invasive species management?		
D2b) Are there opportunities to share resources and expertise?		
D3) Volunteer Engagement		
Question	***Answer***	***Status***
D3a) Does the program utilize volunteers for invasive species removal and restoration efforts?		
D3b) Are volunteer opportunities well-organized and effective?		

E) RECOMMENDATIONS FOR IMPROVEMENT		
Question	***Answer***	***Status***
E1) Based on the review findings, what are the key recommendations for improving the program's effectiveness?		
E2) What are the estimated costs and resources needed to implement the recommendations?		
E3) What are the potential benefits of implementing the recommendations?		

F) CONCLUSION		
Question	***Answer***	***Status***
F1) Overall, is the Fayetteville invasive plant species management program meeting its goals and objectives?		
F2) What are the program's strengths and weaknesses?		
F3) What are the key opportunities for improvement?		

ADDITIONAL NOTES
This checklist is a starting point and may need to be adapted to the specific context of the program.
The review process should involve stakeholders from diverse backgrounds and perspectives.
The results of the review should be used to inform program improvement efforts.

SUMMARY

Fayetteville's urban forest consists of all trees throughout the City on both public and private property. The trees and the overall urban forest are vital resources that provide numerous ecological, economic, and social benefits. However, invasive plant species pose a significant threat to the health and sustainability of this valuable asset. To ensure the long-term health of the urban forest, it is critical for Fayetteville to regularly review and update its programs for managing invasive plant species. By conducting the program review and applying the recommendations provided in this Report the City of Fayetteville will be position to:

Address evolving threats: Invasive species are constantly adapting and evolving, requiring frequent reassessment of management strategies. New invasive species may emerge, and existing species may develop resistance to current control methods. Updating the program allows for incorporating new knowledge and implementing more effective approaches.

Adapt to changing environmental conditions: Climate change and other environmental factors can significantly impact the distribution and abundance of invasive species. By reviewing and updating the program, Fayetteville can ensure it is adaptable and capable of responding to these changing conditions.

Optimize resource allocation: Limited resources must be used efficiently and effectively. A review process can identify areas for improvement in resource allocation and ensure that program efforts are focused on achieving the most significant impact.

Improve program effectiveness: Regular evaluation and feedback are crucial for identifying program weaknesses and areas for improvement. This information can be used to refine existing strategies, develop new interventions, and ultimately enhance the program's overall effectiveness.

Maintain public support: An effective invasive species management program relies on public awareness and support. By demonstrating commitment to continuous improvement and transparency, the program can build trust and encourage broader community engagement.

Ensure a sustainable future: Invasive plant species can have devastating consequences for the health and diversity of the urban forest. By proactively managing these threats, Fayetteville can ensure the long-term sustainability of this valuable ecosystem and safeguard its ecological, economic, and social benefits for future generations.

Regularly reviewing and updating Fayetteville's invasive plant management program is crucial for maintaining a healthy and resilient urban forest. This proactive approach will require ongoing commitment and collaboration, but it will ultimately contribute to a more sustainable and vibrant City for all residents.

113 West Mountain Street
Fayetteville, AR 72701
(479) 575-8323

Ordinance: 5820

File Number: 2015-0496

AMEND CHAPTER 177 LANDSCAPE REGULATONS:

AN ORDINANCE TO AMEND CHAPTER 177 LANDSCAPE REGULATIONS OF THE UNIFIED DEVELOPMENT CODE TO ADOPT REGULATIONS PROHIBITING THE INSTALLATION OF CERTAIN INVASIVE PLANT SPECIES IN NEW DEVELOPMENTS THAT REQUIRE A LANDSCAPE PLAN REVIEW AND APPROVAL BY THE URBAN FORESTRY DIVISION, AND TO MAKE CERTAIN TECHNICAL REVISIONS

WHEREAS, on May 5, 2015, the City Council passed Resolution 101-15 requesting that City staff examine the need and propriety of submitting a proposed ordinance that would regulate or prohibit the sale or use of certain invasive plant species in Fayetteville; and

WHEREAS, City staff assembled a team of thirteen diverse stakeholders who identified eighteen invasive plant species that warrant restrictions based on the economic and environmental harm that they cause.

NOW THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby amends § 177.01 Purpose by adding a new subsection (B)(12) as follows: "Discouraging the new installation of identified invasive plant species and encouraging the removal of existing invasive plant species."

Section 2: That the City Council of the City of Fayetteville, Arkansas hereby amends § 177.01 Purpose by adding a new subsection (C)(8) as follows: "Plants identified as invasive in Section 177.09: Invasive Plant Species are prohibited from being installed in all development projects that require a landscape plan review."

Section 3: That the City Council of the City of Fayetteville, Arkansas hereby amends § 177.02(B) by replacing "Tree and Landscape Advisory Committee" with "Urban Forestry Advisory Board."

Section 4: That the City Council of the City of Fayetteville, Arkansas hereby amends § 177.03 **Landscape Plan Requirements** by adding the words "Combined Plan" to the beginning subsection (C)(5) and by adding a new subsection (C)(7)(h) as follows: "Plants listed in Section 177.09: **Invasive Plant Species** shall not be installed in developments requiring a landscape plan review."

Section 5: That the City Council of the City of Fayetteville, Arkansas hereby adds a new Section 177.09 Invasive Plant Species as set forth in Exhibit "A" attached hereto and made a part hereof.

PASSED and APPROVED on 11/3/2015

Approved:

_____
Lioneld Jordan, Mayor

Attest:

_____
Sondra E. Smith, City Clerk Treasurer

Exhibit A

177.09 Invasive Plant Species

The following plants shall not be installed in development projects that require a landscape plan review.

Asian Wisteria
Wisteria sinensis, Wisteria floribunda

Bamboo
Pyllostachys Spp.

Bigleaf Periwinkle
Vinca major

Callary/Bradford Pear
Pyrus calleryana

Burning Bush
Euonymus alatus

Bush Honeysuckle
Lonicera maackii, Lonicera fragrantissima

Chinese Privet
Ligustrum sinense

Creeping Euonymus
Euonymus fortunei

English Ivy
*Hedera helix*Heavenly Bamboo
*Nandina domestica**

Japanese Honeysuckle
Lonicera japonica

Kudzu
Pueraria montana

Littleleaf Periwinkle
Vinca minor

Mimosa, Silktree
Albizia julibrissin

Multiflora Rose
Rosa multiflora

Sericea Lespedeza
Lespedeza cuneata

Shrubby Lespedeza
Lespedeza bicolor

Tree-of-Heaven
Ailanthus altissima

*Cultivars that do not produce flowers or fruit are not considered invasive.

FAYETTEVILLE, ARKANSAS
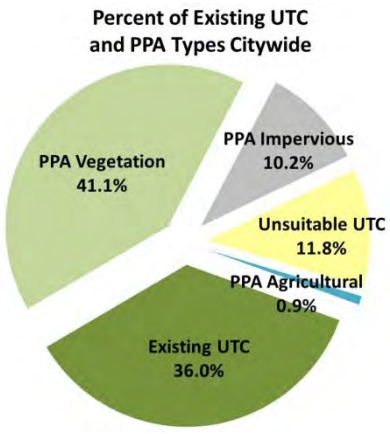
URBAN TREE CANOPY ASSESSMENT 2012

EXECUTIVE SUMMARY

This Urban Tree Canopy (UTC) assessment provides a benchmark of Fayetteville's current tree cover. The study delivers essential data layers, maps and tools to enhance urban forest management, policy and decision-making, and planning. Additionally, by calculating some of the services and benefits the tree canopy provides, City staff and elected officials have information that places a value on trees and forests in their community in order to promote sound environmental and land use plans and policies.



Geographic information systems (GIS), Land Use / Land Cover data, and high-resolution summer imagery provide the basis for this assessment. The data and technologies were used to assess Existing UTC and Possible Planting Areas (PPA) for assessment boundaries with different planning scales and intents. These included Fayetteville's city boundary, 6 land use types at the parcel-level, 2010 census blocks, riparian corridors by watershed boundary, and street rights-of-way.

This report presents results for current land cover and UTC distribution, compares canopy cover to 2002 conditions, estimates tree canopy benefits through multiple scenarios, and offers an evaluation, custom maps and tools, and recommendations for setting and achieving UTC goals.

URBAN TREE CANOPY IN FAYETTEVILLE

This study encompasses 55.4 square miles (35,437 acres) defined by the city limits of the City of Fayetteville, in Washington County, Arkansas. Based on a land area (after excluding water) of 34,586 acres, the City of Fayetteville has 12,441 acres (36%) of existing tree canopy, 17,757 acres (51%) of possible planting area, and 4,388 acres (13%) that is likely unsuitable for tree planting.

Riparian buffer analysis reveals there is 60% tree cover along Fayetteville's streams and rivers. Canopy cover within land use categories ranged from 18% (Commercial) to 45% (Agriculture) while the street rights-of-way average 13% cover. Residential properties average 41% UTC with 6 available planting sites per acre.

ECOSYSTEM SERVICES

Trees and forests in communities provide many "ecosystem services", or direct and indirect economic and environmental benefits such as removing air pollutants, storing and sequestering carbon, mitigating stormwater runoff, conserving energy through shade and wind block, improving public health, and providing wildlife habitat. Fayetteville's tree canopy currently provides an estimated $3.5M in air quality services each year and $64M in total stormwater management. Additionally, 50,000 planting sites were mapped near residential buildings where energy conservation

and associated carbon emissions reductions could be maximized. The impact on ecosystem services from increasing and decreasing canopy cover is presented in this report.

URBAN FOREST MANAGEMENT SCENARIOS

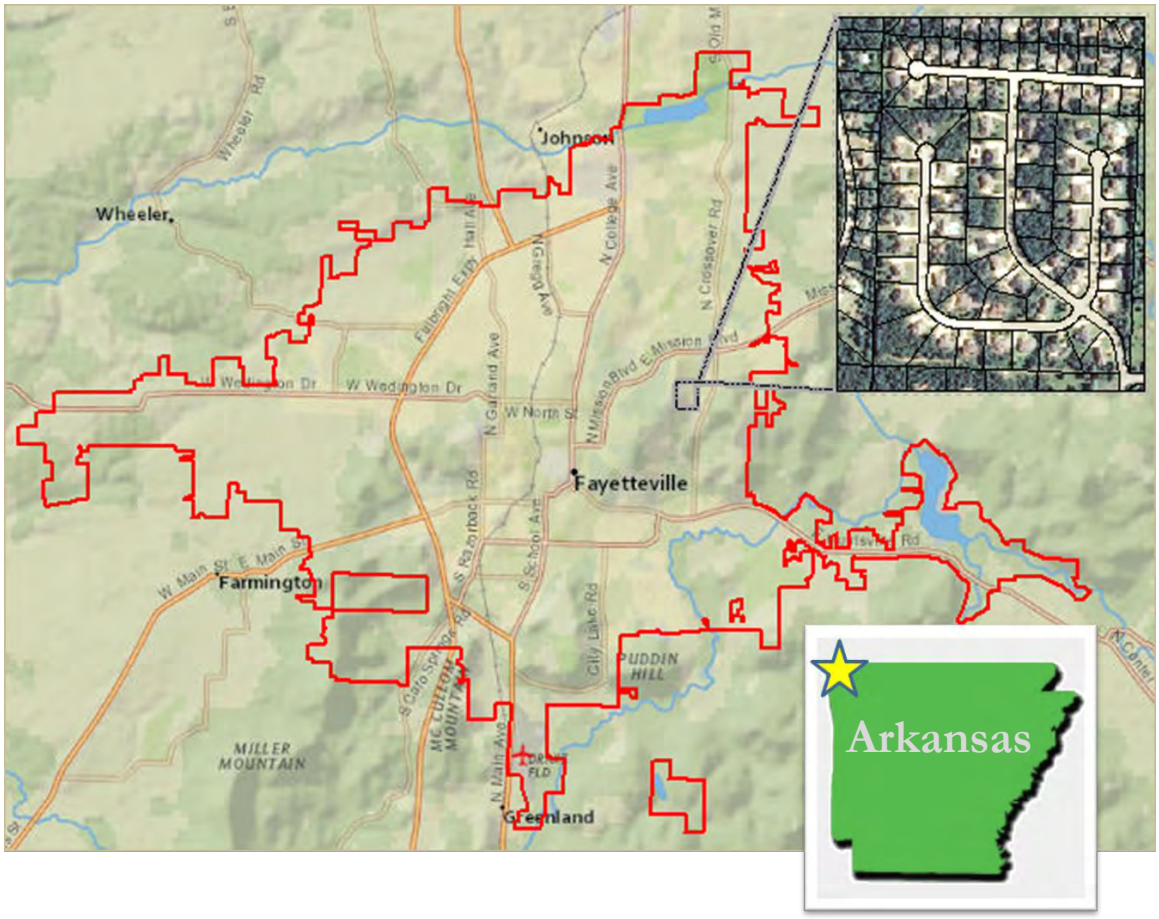
Management scenarios are presented and discussed involving further mapping, analysis and evaluation of Fayetteville's urban forest.

- **Comparison of canopy cover and benefits (2002 – 2012)** – urban forests are dynamic and constantly changing. Three (3) methods were used to assess gains and losses in tree canopy.
- **Target areas to plant trees** – an analysis of potential tree planting sites focused on (1) *areas most vulnerable to urban heat island effects*, (2) *wildlife habitat and linking of corridors*, and (3) *current land use types*. Other attributes were added to this GIS layer for additional prioritization.
- **Evaluating Fayetteville's canopy cover and tree preservation ordinance** – at 36% UTC, Fayetteville is 4% (~1,400 ac) below the national recommendation of 40%. Scenarios to reach 40% and an evaluation on the City's tree preservation ordinance are presented.
- **Management of the urban forest on city owned properties** – gains and losses in tree canopy on city properties is evaluated for future management purposes.

RECOMMENDATIONS AND SUMMARY

Understanding how and where trees are concentrated and distributed across Fayetteville is essential for maintaining a healthy and sustainable urban forest. This study provides the most up-to-date analysis to foster this overarching goal.

Fayetteville currently has 36% tree cover with 52% of the City classified as possible planting space. A comparison and trends assessment indicates canopy cover has decreased from around 37% to 36% (approximately 750-acre net loss) from 2002 to present. Forest regeneration and new tree planting are helping to offset only some of the losses from new development. Broad recommendations offer suggestions on using the results of this assessment as well as ways to create, expand, or strengthen urban forestry practices in the City.



As development and economic progress continue, communities and public officials place a value on their tree cover when drafting and revising policies that affect trees. Fayetteville's leaders, business community, and citizens shape their urban forest in tree planting and protection ordinances, and should use the results from this study to reevaluate whether changes in the City's landscape the past 10 years is acceptable for their health, the environment, and the local economy and community.

Tree canopy cools impervious surfaces on hot sunny days therefore reducing the effects of radiant heat escaping back into the atmosphere (Downing, 2011).

INTRODUCTION

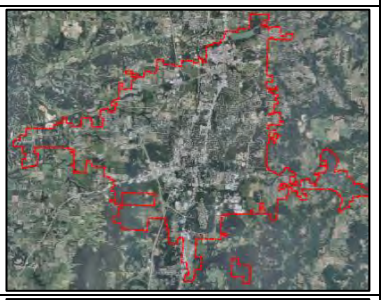
Trees provide many economic, social, and environmental benefits that form the basis of livability in urban municipalities. Therefore, it is important for urban development to work closely with urban forest health protection and management goals in order to maintain community livability. Geographic distribution of land use plays a critical role in maintaining a uniform urban forest. Each category of land use has unique management objectives and regulatory constraints.

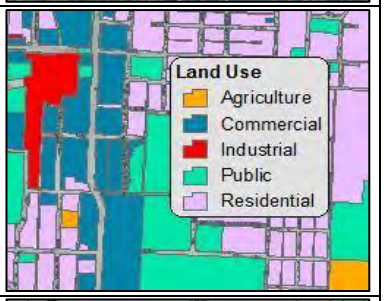
This Urban Tree Canopy Assessment (UTC) in Fayetteville represents an opportunity to better understand baseline conditions of tree canopy, the distribution of existing canopy vs. potential tree canopy, and development of tools to incorporate urban forest benefits during policy and planning processes. It involves the use of high-resolution multispectral imagery, GIS, and remote sensing technologies, training and development of custom tools, ecosystem benefits modeling, and reporting to characterize existing and potential UTC. The products and outcomes of this study will support developing and monitoring of UTC goals, provide detailed data for management plans and ordinances, and foster greater understanding of UTC benefits.

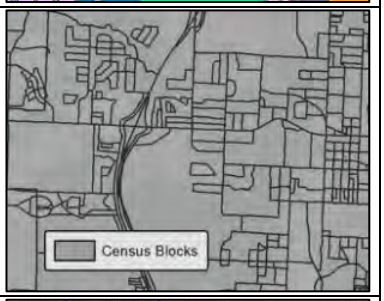
This analysis of urban tree canopy aims to reveal and provide a better understanding of the benefits of the City of Fayetteville's green infrastructure, expanding upon previous studies by the Fayetteville Natural Heritage Association (FNHA). This study looks at the urban forest's relation to air quality, stormwater control, and carbon sequestration and storage. With funding in part provided by the USDA Forest Service (USDA FS), the Arkansas Forestry Commission Urban & Community Forestry (AFC) program contracted with Plan-It Geo, LLC to map Fayetteville's urban tree canopy

(UTC). This assessment examines the area and percent cover for existing tree canopy, possible planting area (in vegetated grass areas and paved impervious areas), and areas unsuitable for planting (buildings, roads, water, agricultural fields, etc.). These metrics were calculated for six (6) assessment boundaries: (1) Fayetteville City boundary, (2) land use, (3) census blocks, (4) riparian corridors, (5) street rights-of-way, and (6) parcels (see Table 1 on the following page).

The assessment was accomplished by using newly generated land cover data and assessment boundaries provided by City GIS. The land cover classification includes the following eight (8) classes for the City: (1) tree canopy, (2) other low-lying vegetation, (3) bare soil/dry vegetation, (4) water, (5) buildings, (6) roads, (7) agriculture, and (8) other impervious surfaces (parking lots, driveways, etc.). See Figure 1.







Specific objectives of this assessment were to:

- Map and assess eight (8) land cover classes across Fayetteville.
- Map and quantify existing urban tree canopy and possible planting areas for the City and five other finer scale assessment boundaries.
- Estimate Urban Forest Ecosystem Services, including air pollution removal capacity, carbon storage and sequestration, and stormwater management, broken out by the City, residential land uses, and watersheds.
- Create a series of Urban Forest Management Scenarios describing how UTC has changed over time and what current vs. future projected tree benefits and tree canopy could look like. This involved developing a GIS layer for prioritized potential planting locations, a plug 'n play Canopy Calculator tool, and an evaluation of the City's tree preservation ordinance.
- Provide training to City staff, volunteer organizations, state agency officials, and others in a workshop demonstrating how to use the data and tools and conduct ecosystem services analysis. In addition, presenting the results to the Fayetteville City Council.

The Fayetteville Urban Tree Canopy assessment provides data and tools to develop local and regional urban forestry goals, policies, outreach, and management plans to sustain and enhance the existing urban forest. In addition to this report, Plan-It Geo, LLC has also provided GIS data layers and Excel spreadsheets to accompany reported results. Only a fraction of the information available from this assessment is provided in the report. Fayetteville and other partners are encouraged to conduct additional analyses to answer specific questions related to local planning policies and concerns.

Table 1. List and description of UTC assessment boundaries for this study.

Assessment Boundary	# of Types or Features	Description	Map
City Boundary	1	City of Fayetteville	
Land Use	6	Land Use Categories Used: Agriculture Commercial Industrial Public Land Residential Public Right-of-Way	
Census Blocks	1,894	2010 U.S. Census data provides demographic data at the tract, block group, and block level. The most detailed 'block' level was used for this project.	
Riparian Corridors	69	Buffered streams and rivers, segmented by watershed boundary into finer-scale reaches to provide a better planning scale for this assessment.	
Street Rights-of-Way	903	The public rights-of-way (ROW) along streets.	
Parcels	28,768	Tax lots from the county assessors property database.	

MAJOR FINDINGS

Based on Fayetteville's analysis of aerial imagery, Land Use / Land Cover, ecosystem services, and potential tree planting sites, the following represents the major findings from this study.

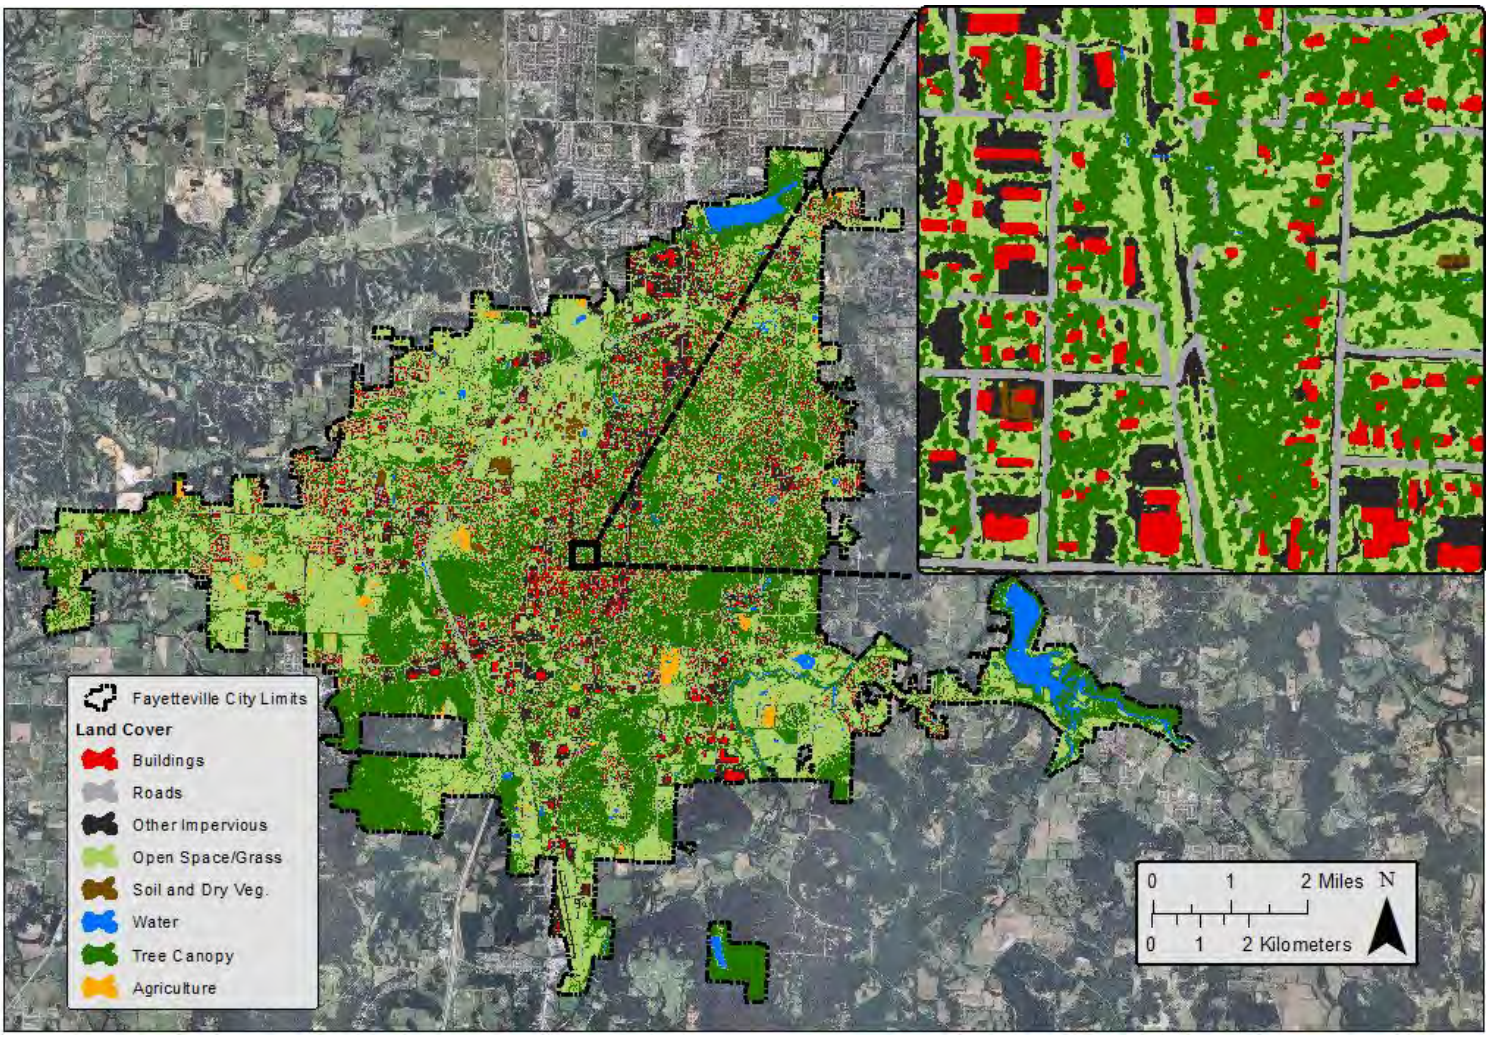
- ***Fayetteville has 36% urban tree canopy cover based on 2010 imagery.***
- ***Canopy trends indicate a loss of possibly 1.5% UTC since 2002.***
- ***Residential lots cover 31% of Fayetteville with an average tree cover of 41% citywide. This represents 1/3 of the City's total tree canopy.***
- ***19% of the City's tree canopy is on publically owned properties.***
- ***The current urban forest removes nearly 1.3M pounds of air pollutants from the air annually, valued at $3.5M per year.***
- ***This equates to 1.1 billion pounds of stored carbon with an annual carbon sequestration rate of 8.4M pounds of CO2 taken up by the tree canopy.***
- ***Stormwater Savings***
    - ***At 36% UTC, Fayetteville's tree canopy is valued at an estimated $64 million based on avoided stormwater facility construction costs.***
    - ***If canopy declines, at 30.0% canopy cover, it is valued at $44M.***
    - ***At 40% UTC with 4% of new canopy growth from regeneration (natural forested areas), it is valued at $65M***
    - ***At 45% UTC with the new canopy growing over streets and parking lots, the tree canopy would be valued at $85M.***
- ***Natural forest regeneration plays a large role in UTC gains in Fayetteville. Examples are provided in the Canopy Change section of this report.***
- ***There are 50,000 potential tree planting locations near residential buildings. If trees are planted to maximize cooling in summer, energy conservation as trees reach maturity would be significant.***

METHODOLOGY

The following section describes the data and methods used for land cover classification and the terminology for defining and assessing the urban tree canopy (UTC) and potential planting areas (PPA). Brief methods for the comparison of tree canopy cover from 2002 to 2010 are included in the Results section further below.

DATA INPUTS, IMAGERY AND LAND COVER CLASSIFICATION

Numerous GIS data layers from the City and County were used in the process of mapping land cover classes and in the UTC assessment process. Examples include streets, buildings, water bodies, streams, parcels, land use, publicly owned properties, watersheds, and GIS layers from Fayetteville Natural Heritage Association's Green Infrastructure Plan. One-meter resolution imagery from summer 2010 (National Agricultural Imagery Program – NAIP) was used as the basis for this UTC Assessment. The final land cover classification data includes eight (8) classes: (1) **tree canopy**, (2) **grass / open space**, (3) **bare soil/dry vegetation**, (4) **water**, (5) **buildings**, (6) **roads**, (7) **agriculture**, and (8) **other paved surfaces** (parking lots, driveways) shown in Figure 1 below.



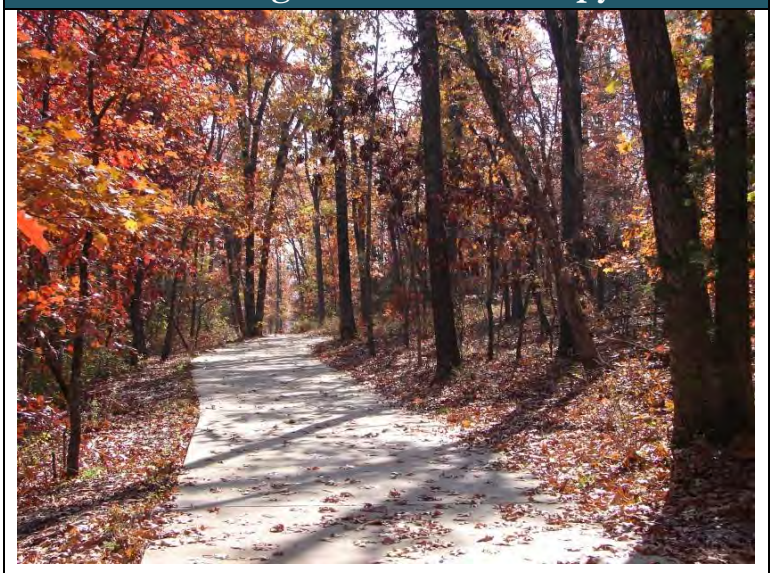


Figure 1. Land cover with 8 classifications as an overview and an inset map.

TERMINOLOGY

The UTC types assessed in this study are defined and described below. The area and percent of each was reported for six assessment boundaries. More details are provided throughout the report.

- ***Existing forest canopy*** is comprised of all forests and individual trees mapped from the 2010 summer NAIP imagery. For the purposes of this study, water was excluded from the total study area when calculating percent UTC. Excluding water from the study area (35,437 acres) creates total land area (34,586 acres) which was used to create all UTC metrics.
- ***Possible planting area (PPA)*** is defined as the total land area where no tree canopy cover currently exists and it is biophysically possible to plant trees. In this analysis, mainly grass and open space constitute "PPA – Vegetation" while impervious surfaces such as parking lots makeup "PPA – Impervious". These are combined to report Total PPA. This does not equal to potential canopy but rather the space on-the-ground that is available for tree planting opportunities.
- ***Unsuitable UTC***, for this study, was the combination of bare soil, dry vegetation, roads, buildings, agricultural land use, and water. Soil and dry vegetation are considered unsuitable given they comprise baseball infields, industrial lots, and vegetation that is lacking completely or unmaintained. Some areas mapped as Unsuitable UTC could become PPA through natural and human processes over time. Agricultural lands from the county land use data were sub-categorized as a PPA type but are generally considered as Unsuitable UTC.

Existing Urban Tree Canopy

Possible Planting Areas – Streets & Yards

Possible Planting Areas – Impervious

RESULTS

Detailed land cover and UTC assessment results are presented below. Land cover results are presented first, followed by results for each assessment boundary with specific tables, maps and graphics for Existing UTC, Possible Planting Areas, and Unsuitable UTC.

LAND COVER IN FAYETTEVILLE

This study encompasses 55.4 square miles (35,437.4 acres) defined by the city limits of Fayetteville. The two predominate land cover types for the study area are green vegetation (grass and open space) at 41% (14,518 acres) and secondly tree canopy at 12,441 acres as shown in Figure 2. "Other impervious", consisting of parking lots, driveways, patios, and other paved surfaces, is third comprising of 10% of Fayetteville or 3,539 acres. The next four land cover classes including roads, buildings, water, soil and dry vegetation each individually fall under 10% for land cover and as a whole comprise of 14% of Fayetteville's land cover.

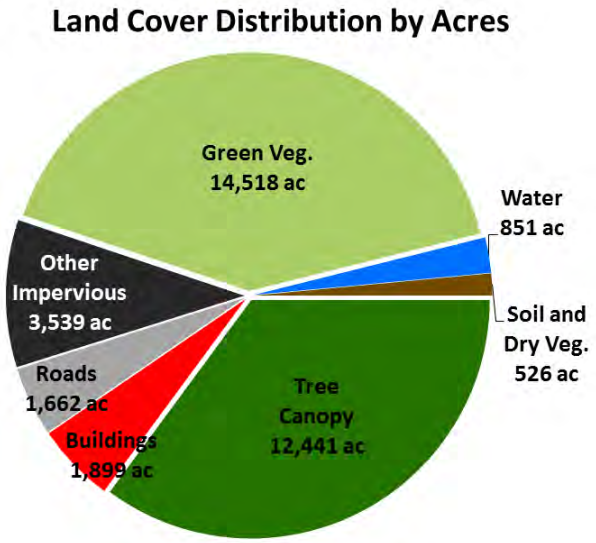

Figure 2. Distribution of land cover in Fayetteville.

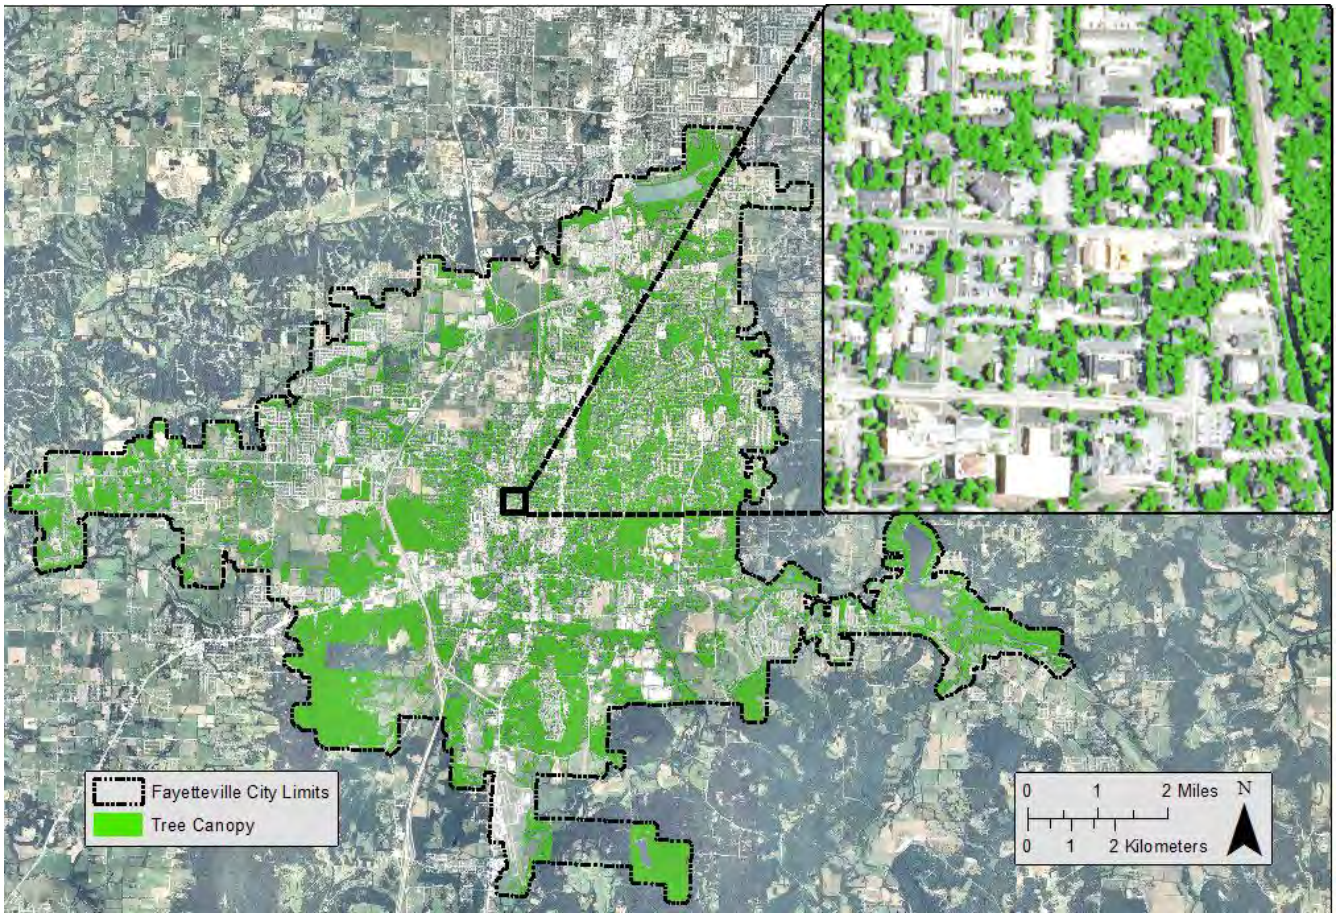

Figure 3. Tree canopy classification overview and inset map.

TREE CANOPY IN FAYETTEVILLE

As seen in Table 2 and Figure 4, Fayetteville's current UTC covers 12,441 acres or 36% of the total land area. In addition to tree canopy, total possible planting area (PPA) in Fayetteville is equivalent to 18,057 acres or 52% of the total land area. The remaining 4,088 acres (11.8%) of land area is considered unsuitable for planting additional trees.

Table 2. Metrics for Fayetteville showing UTC and PPA in acres and percent.

	Total Acres	Land Area (acres)	2010 UTC (acres)	2010 UTC %
City of Fayetteville	35,437	34,586	12,441	36.0%

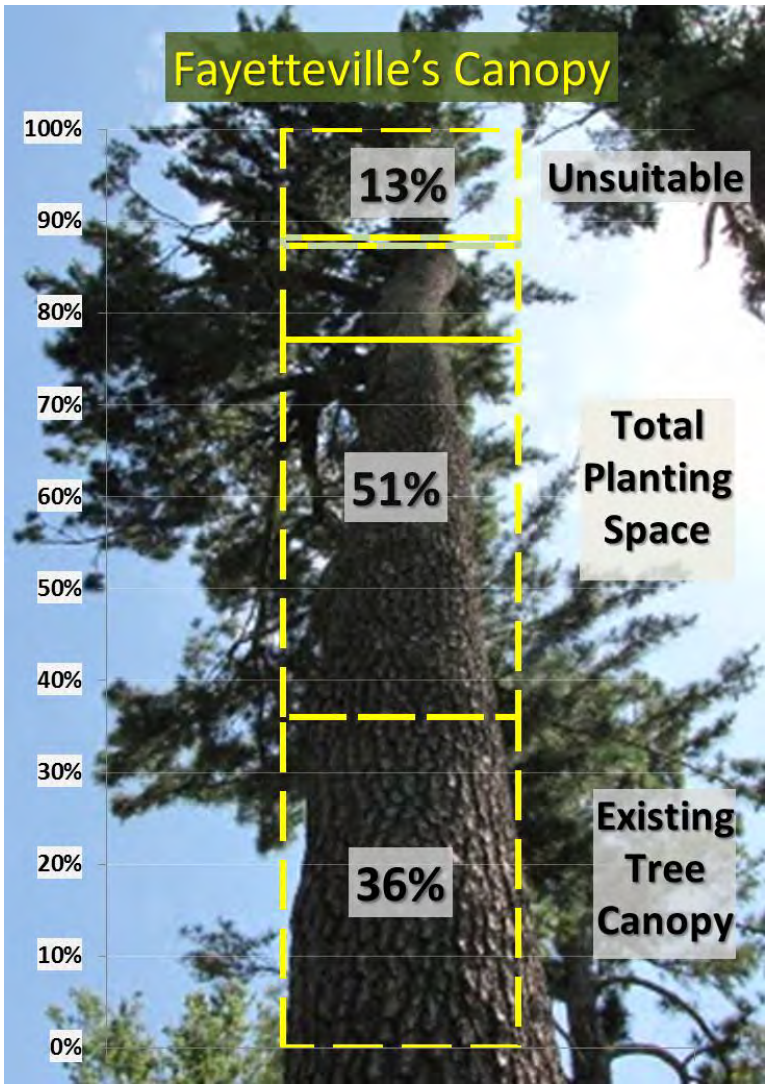

Figure 4. Percent distribution of UTC and PPA for the City of Fayetteville.

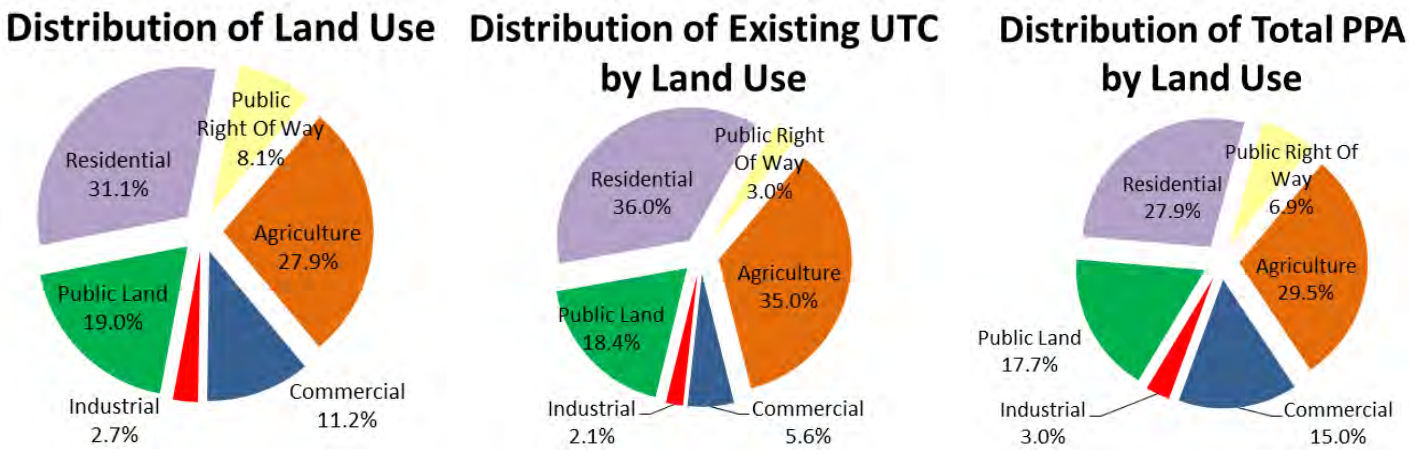
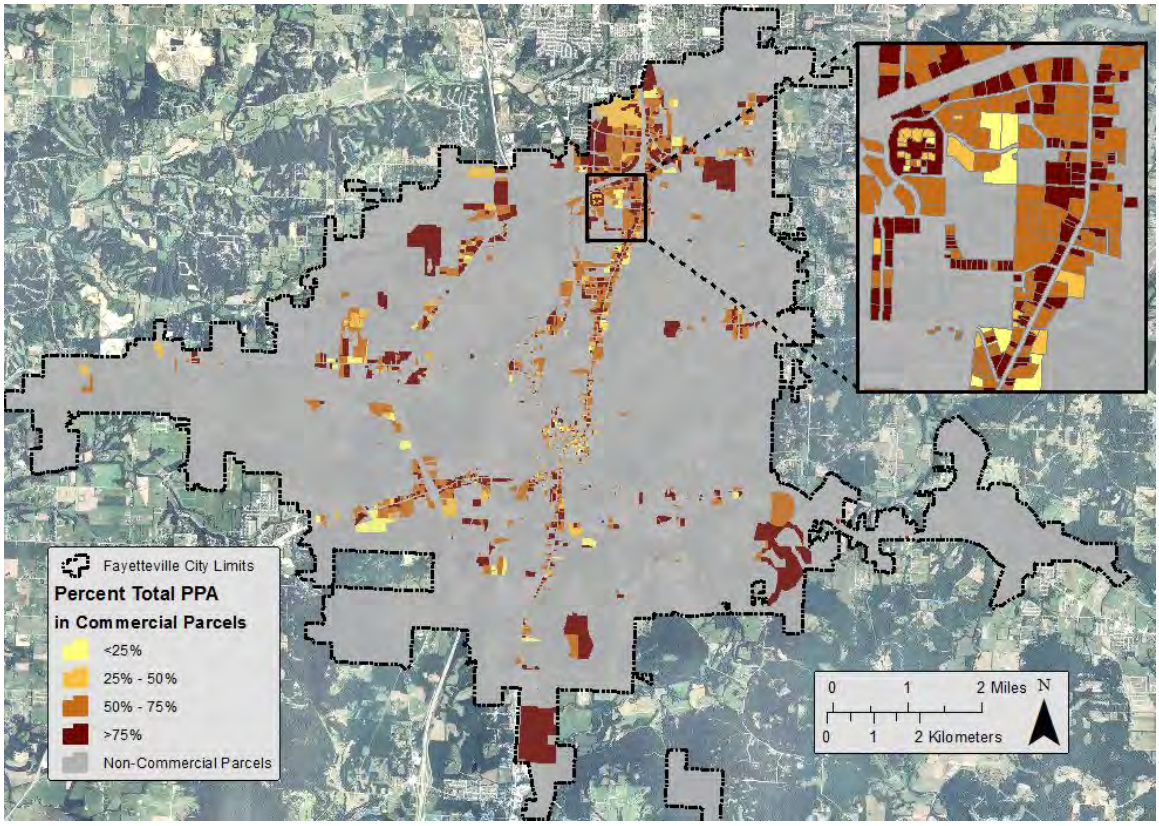


TREE CANOPY BY LAND USE AND PARCELS

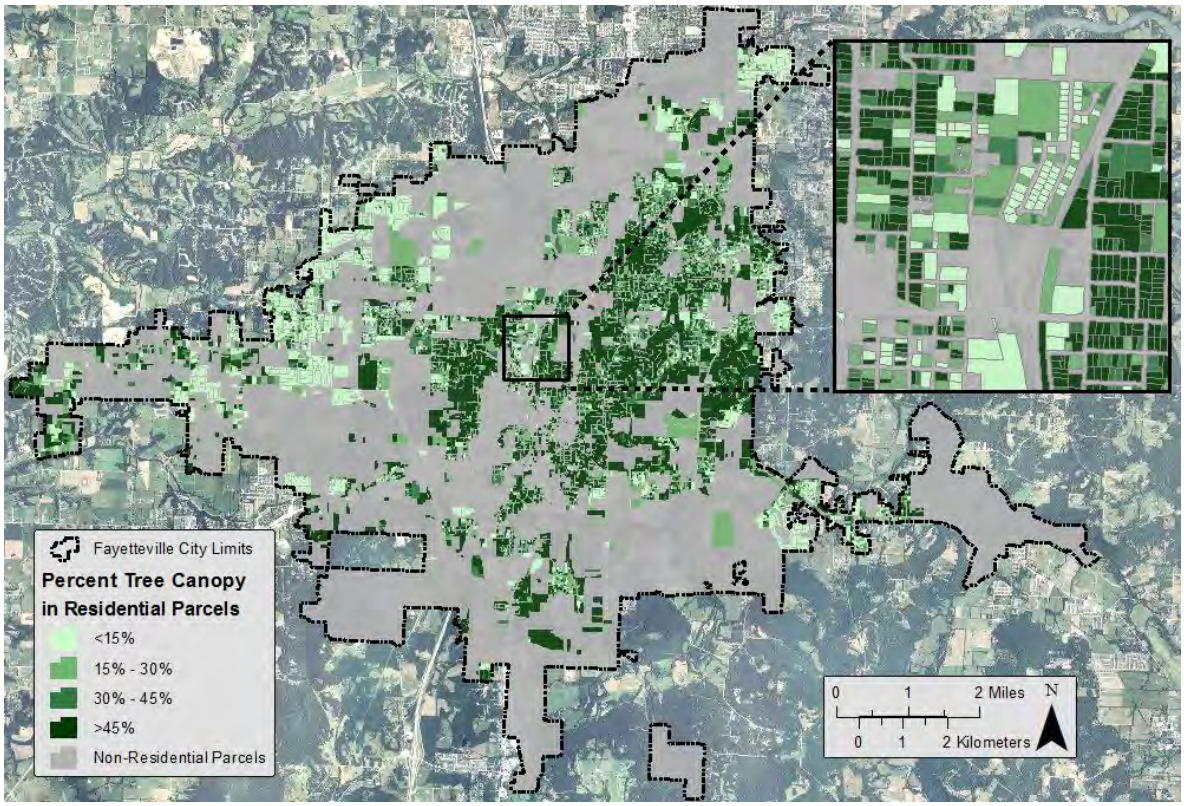
Various policies, regulations, ordinances, and city codes influence tree canopy in Fayetteville. To provide data that advances urban forest management, six (6) broad land use categories were assessed for tree canopy and possible planting areas. Parcels from the county tax assessor's database were provided which included broad land use categories. Public lands were derived from parcels with 'exempt' status and the Public Rights-of-Way occur outside of all parcel boundaries. This was the finest scale assessment boundary and included 28,768 records. Results can be queried and symbolized using GIS to drill down and identify specific planting opportunities in subdivisions, land use types, or neighborhoods. Table 3 provides complete results for UTC and PPA land use metrics.

Table 3. UTC and PPA Results for 6 Broad Land Use Categories.

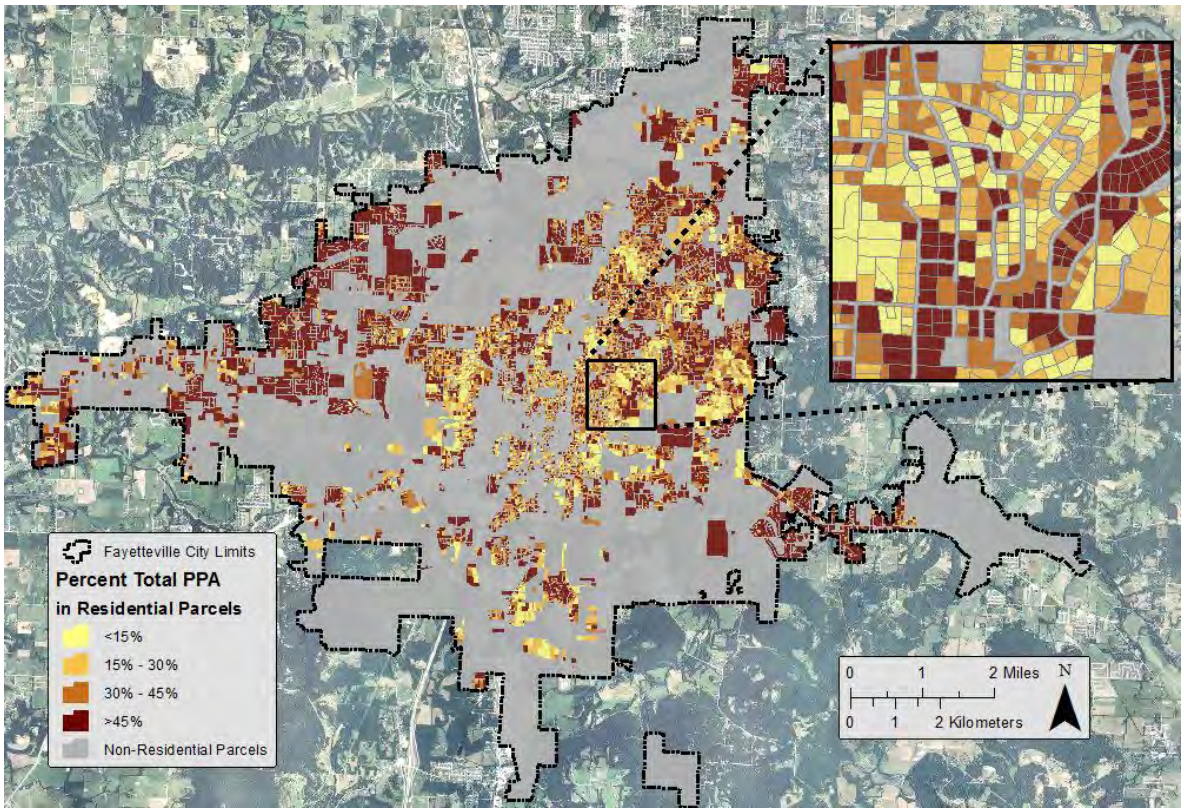
	Land Use Category	Total Acres	Land Area (acres)	% of Total City Area	UTC (acres)	Existing UTC %	Distribution of UTC by Land Use	Total Possible Planting (acres)	Total Possible Planting %	Distribution of Total PPA by Land Use
City of Fayetteville	Agriculture	9,880	9,757	27.9%	4,353	44.6%	35.0%	5,329	54.6%	29.5%
	Commercial	3,985	3,943	11.2%	702	17.8%	5.6%	2,705	68.6%	15.0%
	Industrial	957	949	2.7%	258	27.2%	2.1%	549	57.9%	3.0%
	Public Land	6,731	6,106	19.0%	2,285	37.4%	18.4%	3,190	52.2%	17.7%
	Residential	11,017	10,968	31.1%	4,475	40.8%	36.0%	5,038	45.9%	27.9%
	Public Right Of Way	2,867	2,863	8.1%	368	12.9%	3.0%	1,247	43.6%	6.9%
	TOTALS	**35,437**	**34,586**	**100.0%**	**12,441**	**36.0%**	**100.0%**	**18,058**	**52.2%**	**100.0%**



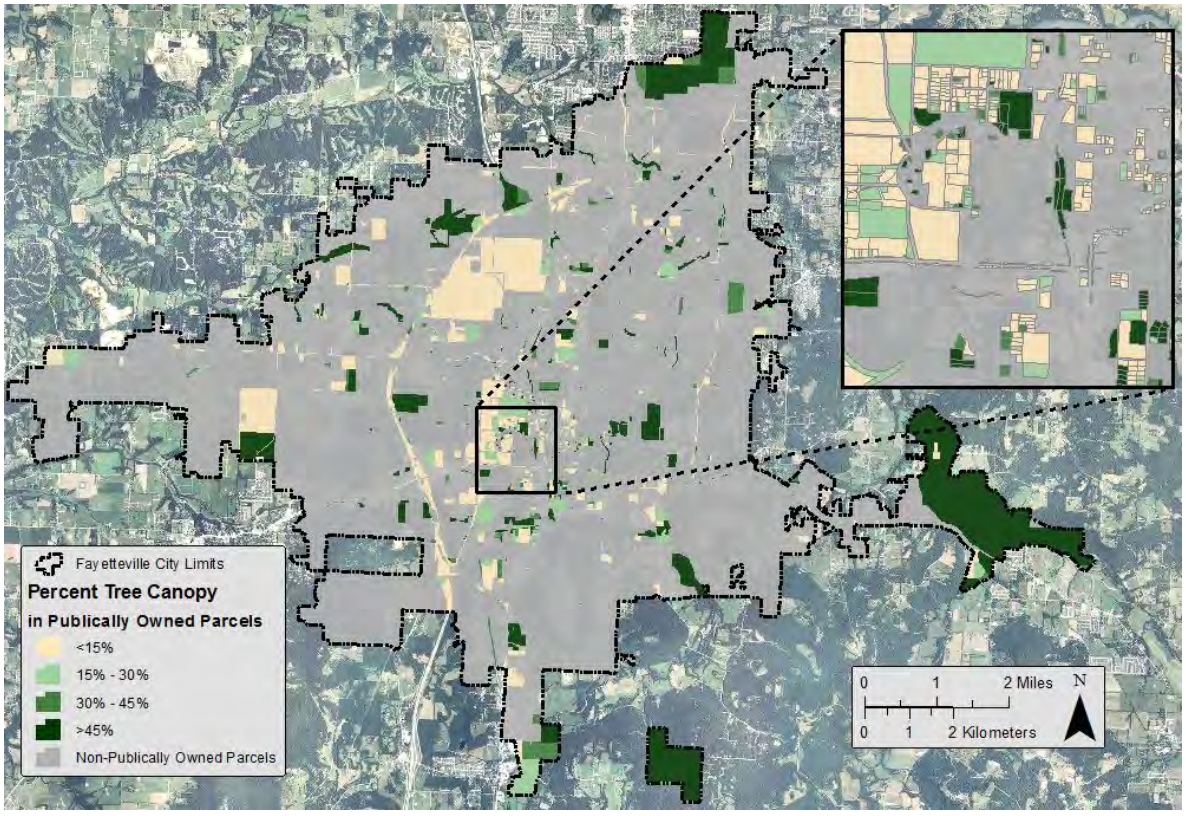
As an example, Commercial properties makeup 11% of the City, have 18% average tree canopy cover which represents almost 6% of UTC citywide, have 69% possible planting area largely from turf grass areas and parking lots, which constitutes 15% of all the PPA citywide.

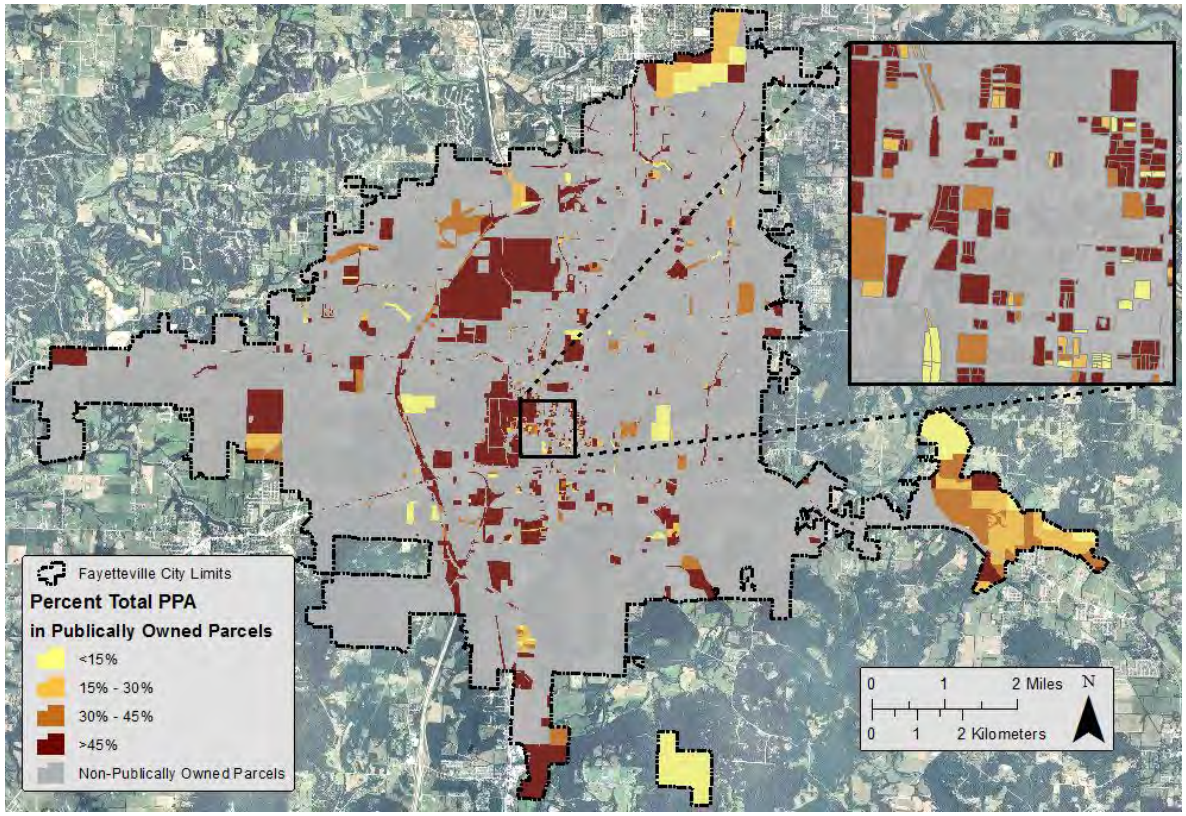


Figures 5-7. The Distribution of Land Use, UTC by Land Use, and PPA by Land Use.



Maps in Figures 8-13 on the following pages illustrate how the land use and parcels data can be used together with UTC and PPA metrics to target specific properties for tree planting as well as monitoring the effectiveness of ordinances. Maps are shown for commercial, residential, and public properties by the percent of Existing UTC and Total Possible Planting Areas.



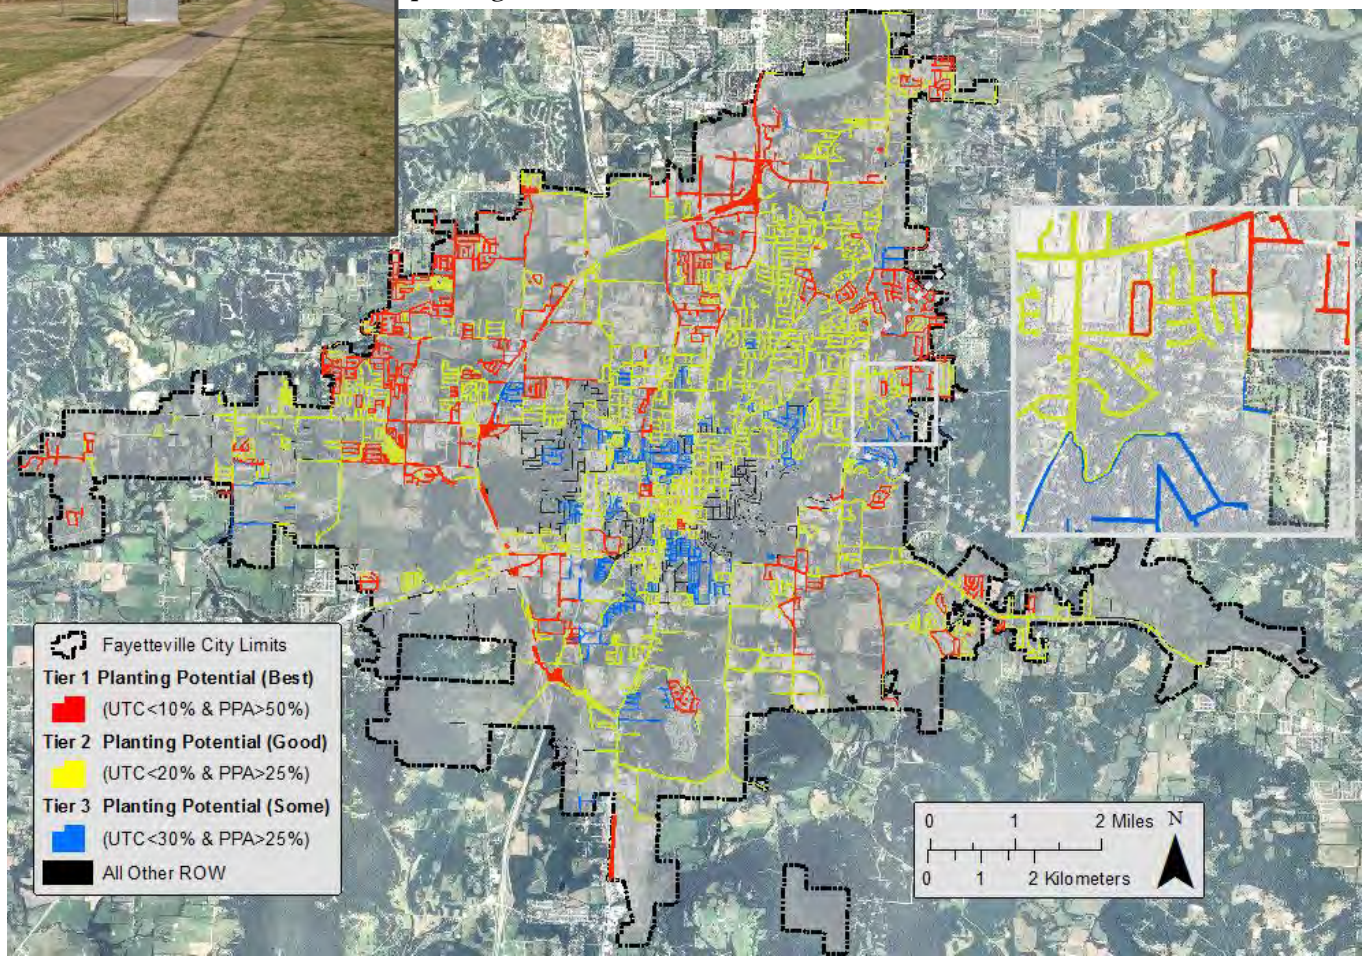


Figures 8-9. Existing UTC and Total PPA Percentages for Commercial Properties.

Figures 10-11. Residential parcels color-coded by Percent Existing UTC and Total PPA.

Figures 12-13. Publicly owned parcels color-coded by Percent Existing UTC and Total PPA.

TREE CANOPY IN THE STREET RIGHTS-OF-WAY



The City of Fayetteville's urban forestry program plants, manages, and maintains trees in the street rights-of-way (ROW). This is where the City has the most direct influence on tree canopy aside from tree preservation or other private property ordinances. Key findings in Fayetteville's ROW are:

- ROW total land area is equal to 2,863 acres, or 8% of the total city land area.
- Existing UTC in the ROW is 368 acres or 13% average cover. This represents 3% of all UTC citywide.
- PPA – Vegetation totals 611 acres or 21% of the ROW and PPA – Impervious totals 636 acres or 22% of the ROW.
- There are an estimated 15,000 potential planting sites in the ROW, or 5 per acre. If 25% of these sites were planted, grew to 30' tree crown spreads, this would generate 61 acres of new tree canopy. 61 acres is 4% of the acreage required to reach 40% citywide UTC.

Other UTC and PPA results for the ROW can be seen in Table 3 and Figures 5-7 in the Tree Canopy by Land Use section.

Figure 14. Potential planting area in the Street ROW. The GIS queries in the map legend show 3 colors based on ranges of Existing UTC and Total PPA. As an example, streets colored red have less than 10% UTC and greater than 50% total planting area.

TREE CANOPY BY CENSUS BLOCKS

The 2010 U.S. Census data provides social and demographic information at a variety of scales, specifically in GIS format from large to small as census tracts, block groups, and individual blocks. In Fayetteville, 1,894 census blocks were assessed for UTC and planting areas.

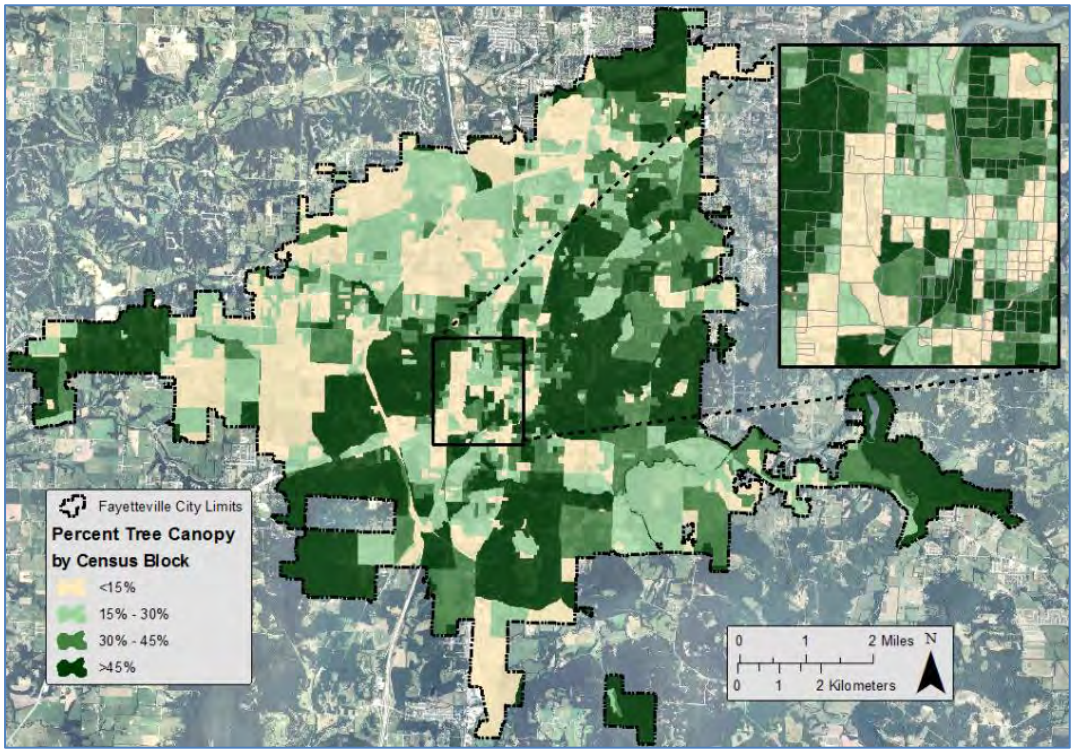


Figure 15.

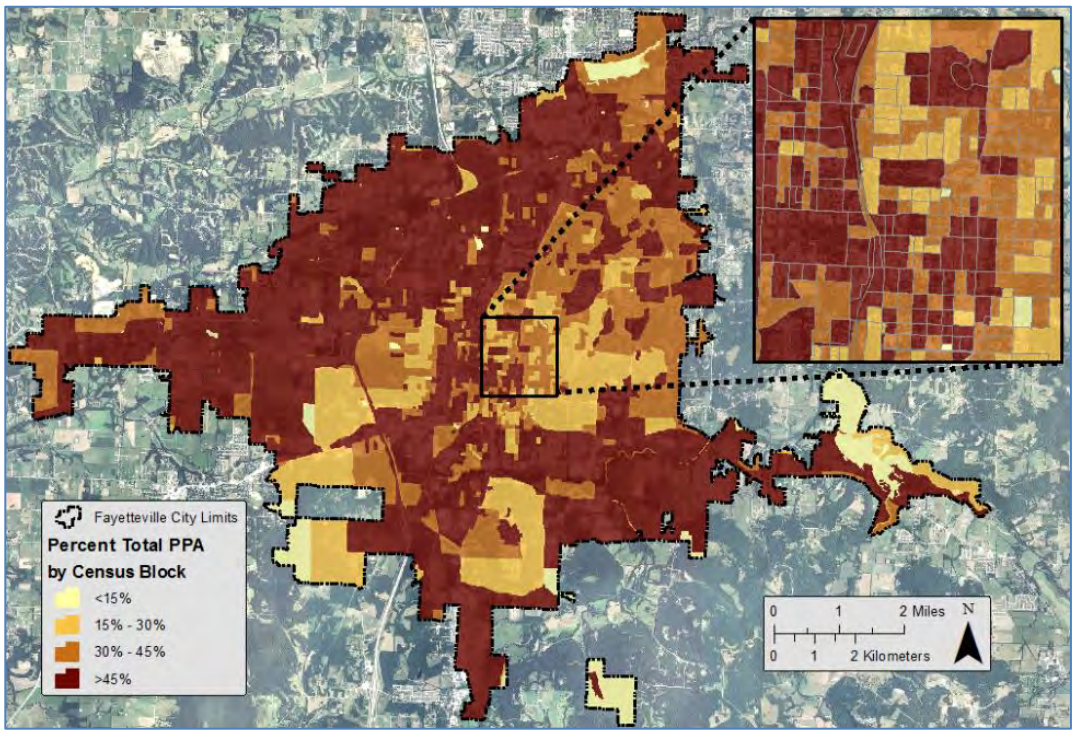
Census blocks (socio-demographic units) color-coded by Percent UTC. Darker areas have more tree cover than lighter colored areas.



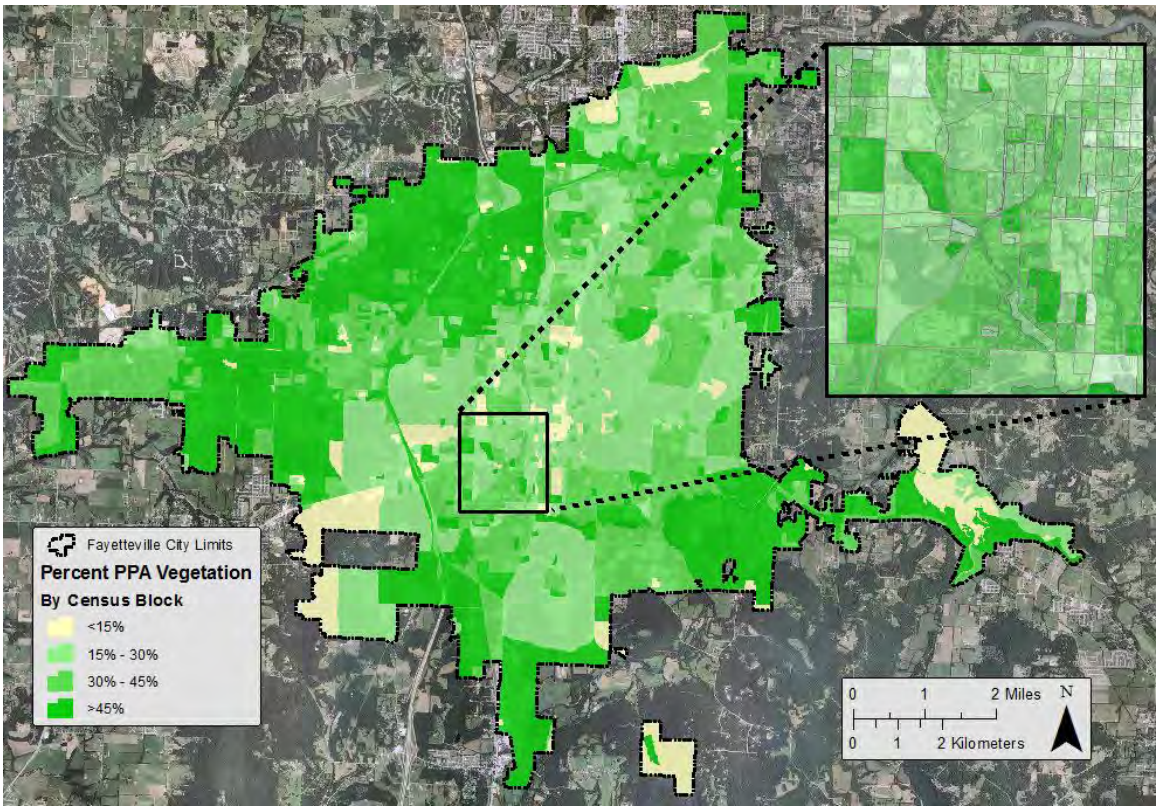


Figure 16.

Census blocks (socio-demographic units) color-coded by Percent of Total PPA. Darker areas have more planting potential from grass and open space as well as suitable paved (impervious) areas.

Figure 17.

Census blocks (socio-demographic units) color-coded by Percent of Total PPA. Darker areas have more planting potential from grass and open space. Agricultural land use areas were excluded from percentages.

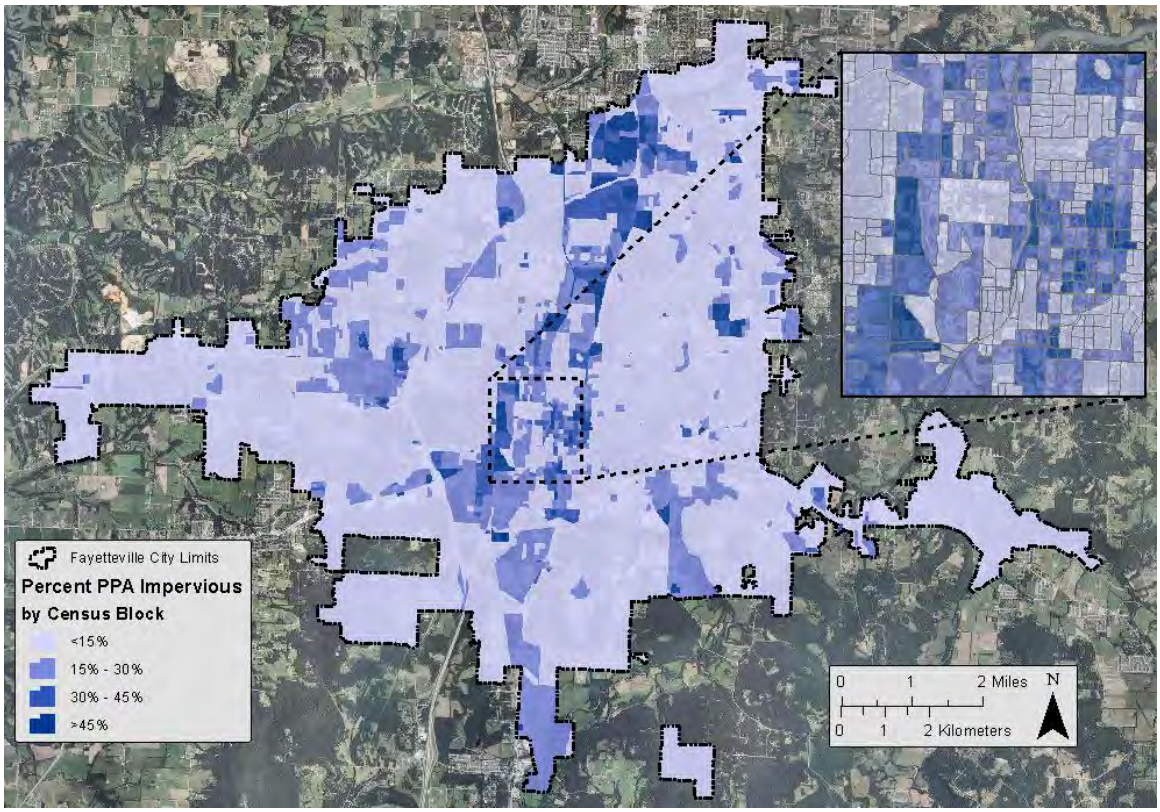

Figure 18.

Census blocks (socio-demographic units) color-coded by Percent of Total PPA. Darker areas have more planting potential from suitable paved (impervious) areas such as parking lots, driveways, etc.

TREE CANOPY BY RIPARIAN CORRIDORS

Fayetteville's streams and rivers, or riparian corridors, provide many ecosystem services such as erosion and sediment control, stream temperature regulation, and wildlife habitat. Conservation buffers along riparian areas are a best management practice where development is often restricted and natural vegetation is encouraged to maintain natural processes. In this study, to provide assessment results at a useful scale, Fayetteville's riparian areas were split along watershed boundaries and then segmented manually into smaller stream reaches. This resulted in 69 riparian corridor "segments" which were buffered by 100 feet and analyzed for UTC and PPA. Key findings included:

- 49 (of 69) riparian corridors segments have greater than 50% existing canopy cover.
- 14 have greater than 50% potential planting area (grass and open space).
- Three watersheds with the largest amount of riparian area for tree planting are:
    - Hamestring Creek (78 acres of PPA; 1,559 potential planting sites)
    - Mud Creek-Clear Creek (92 acres of PPA; 3,037 potential planting sites)
    - Town Branch-West Fork White River (122 acres of PPA; 3,729 planting sites)

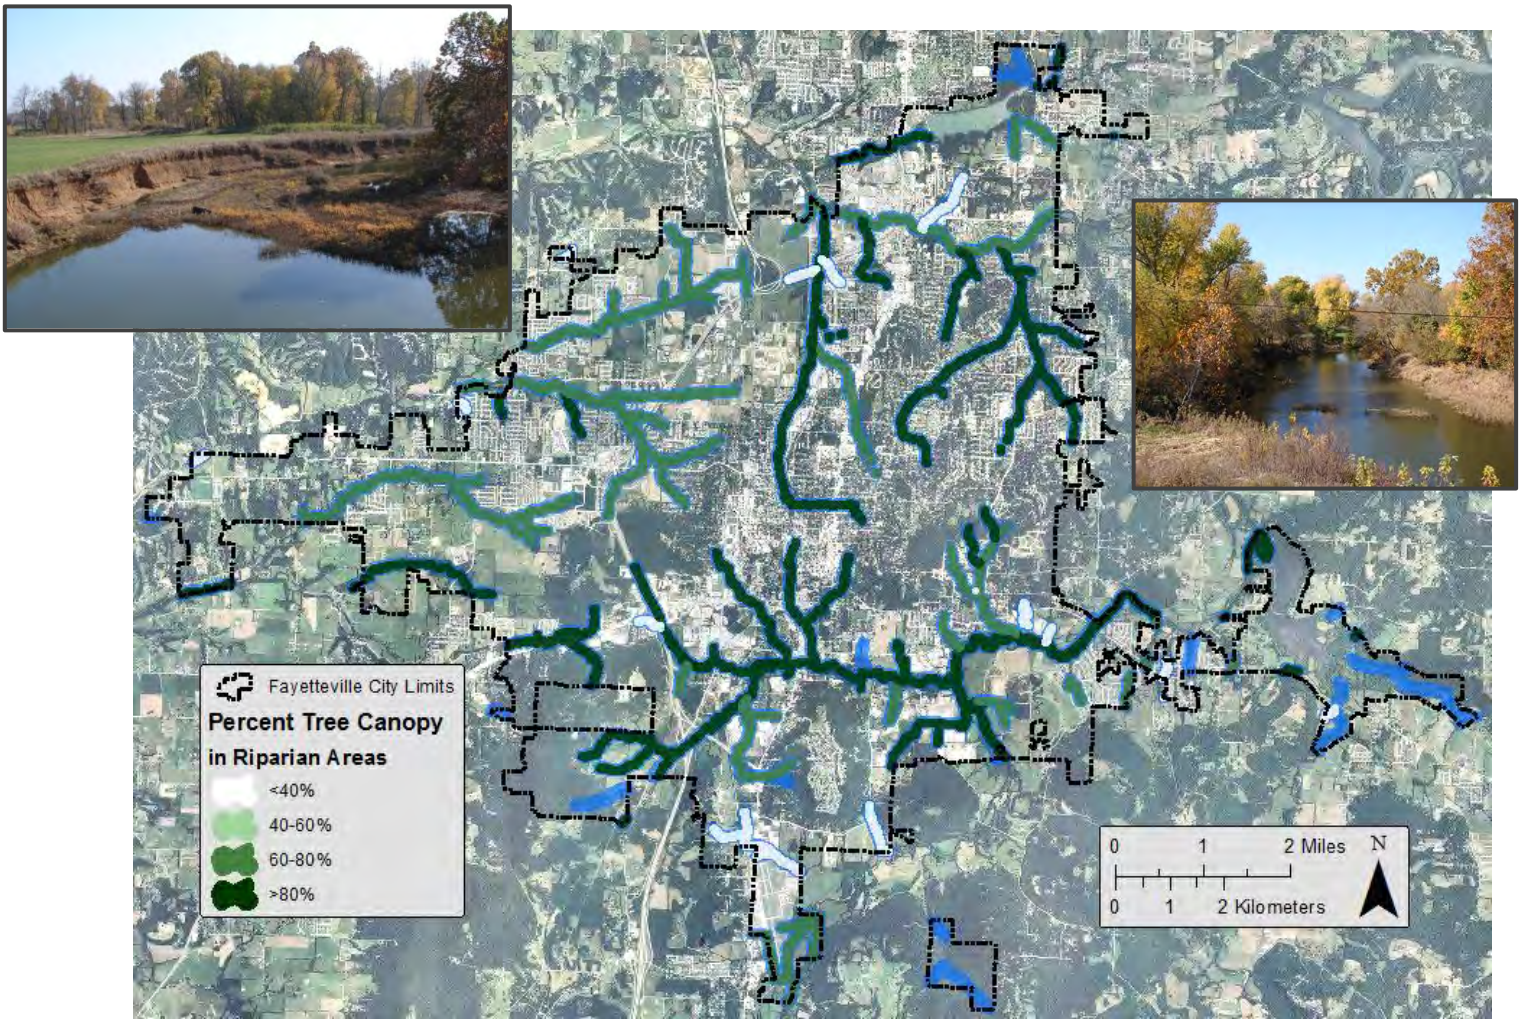

Figure 19. Riparian buffer segments color-coded by percent Existing UTC.

ECOSYSTEM SERVICES

Forest benefits are referred to as "ecosystem services", and describe ways in which urban forests contribute to improving quality of life. We tend to take for granted the direct and indirect benefits trees provide because they are not assigned a dollar value.

Examples include:

- Providing habitat and protecting biodiversity
- Decreasing stormwater utility costs, erosion, and flooding
- Reducing urban heat island effect and cooling costs
- Improving property values, tax revenues, recreation opportunities, and public health and well being
- Absorbing carbon dioxide annually through carbon sequestration and through carbon storage
- Improving air quality, water quality and groundwater recharge

CITYgreen software was used to estimate the benefits of Fayetteville's existing urban tree canopy and scenarios with decreased and increased canopy cover. CITYgreen, a GIS software developed by American Forests using research from the U.S. Forest Service and Natural Resources Conservation Service (NRCS), was used to calculate current and potential benefits related to carbon storage (cumulative amount of carbon stored in trees over time), carbon sequestration (the rate that carbon is captured), air pollution removal by trees annually, stormwater benefit of urban forests.

CITYgreen Parameters Used:

1.) Reference City for Air Quality: Tulsa was chosen as the closest, most representative city for the U.S. Forest Service reference city for air pollutant removal capacity of the urban forest.

2.) Soils: from the choices of Hydrologic Soil Group (HSG) A, B, C or D, soil type "C" was chosen as most representative. C type soils allow for less infiltration (clay) and are more restrictive soil type than B (loam).

3.) Construction cost per cubic foot (cu. ft.): $3/cu. ft. was used as a conservative average for stormwater facility construction cost.

4.) Replacement Land Cover Type: when tree canopy is "replaced" in the CITYgreen model, the replacement land cover chosen was Open Space - Grass/Scattered Trees: Grass cover 50% - 75%. This is more conservative than replacing the tree canopy with commercial or residential development which has a much higher curve number (CN).

Table 4. Summary of Benefits from Current and Future Projected Scenarios of UTC in Fayetteville.

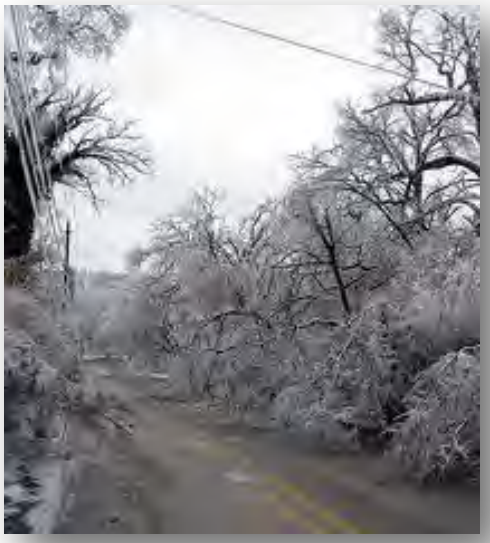
City of Fayetteville "Tree Canopy & Environmental Benefit Scenarios"

Benefit Type			SCENARIOS				
	UTC-%	Citywide 36%	Decline to 30%	Increase #1 to 40%	Increase #2a to 45%	Increase #2b to 45%	Residential 41%
Air Quality	*Annual $ Benefit*	$3.5 million	$3.0 million	$4.0 million	$4.5 million	$5.0 million	$1.3 million
	Lbs. Removed/Year	1.3 million	1.1 million	1.4 million	1.6 million	1.8 million	461,000
Carbon Storage & Sequestration	*Total CO2 stored*	1.1 billion	915 million	1.2 billion	1.4 billion	1.5 billion	391 million
	Annual Rate Stored	8.4 million	7.1 million	9.5 million	10.7 million	11.9 million	3.0 million
Stormwater Savings	*Total $ Benefit*	$64.1 million	$43.9 million	$65.5 million *	$67.1 million *	$84.9 million **	$22.2 million
	Total Gallons Benefit . . .	21.4 million	14.6 million	21.9 million	22.4 million	28.3 million	7.4 million

* For Scenarios "Increase #1 and #2a", new projected tree canopy was assumed to be forests (natural regeneration), not individual yard trees.
** For the Scenario "Increase #2b", new projected tree canopy was assumed to overhang impervious surfaces, resulting in a larger $ value.

Plan-It Geo then used i-Tree Design, a free web-based tool developed by the U.S. Forest Service, to estimate benefits such as energy conservation from a common tree. A red oak tree was modeled at 8" diameter at breast height (dbh) and then projected 25 years out (20" dbh). See Figure 20.

Figure 20. Output from i-Tree Design software showing that a young red oak tree (8" dbh) provides $18 in annual energy savings if planted on the west side of a residential home. If the tree grows for 25 years, it would be expected to reach 20" dbh and provide nearly $48 in annual energy savings. With 50,000 potential planting locations near residential homes in Fayetteville, planting one-quarter (1/4) of these could provide roughly $600,000 in energy savings annually when those trees reach maturity.



URBAN FOREST MANAGEMENT SCENARIOS

Using the land cover data and UTC assessment results, further analysis provides a presentation of different management scenarios introduced below. GIS data models and interpretation were utilized to produce these scenarios. Sample maps or tables are presented for each scenario and provided as additional data along with this report.

- **Comparison of canopy cover and benefits (2002 – 2012)** – multiple data layers and methods were used to assess gains or losses in tree canopy over the roughly ten-year time period. Table 4 in the Ecosystem Services section illustrates scenarios that quantify decreases and increases in benefits as canopy cover changes.
- **Target areas to plant trees** – potential tree planting sites were modeled citywide using the land cover data and GIS analysis. Attributes were created focusing on (1) *areas most vulnerable to urban heat island effects*, (2) *wildlife habitat and linking of corridors*, and (3) *current land use types*. Multiple other attributes were added to the GIS planting points for prioritization.
- **Evaluating Fayetteville's canopy cover and tree preservation ordinance** – this entails an analysis of Fayetteville's current canopy coverage in comparison to the national recommendation of 40% and recommendations on the effectiveness of the tree preservation ordinance.
- **Management of the urban forest on city owned properties** – tree canopy is evaluated for gains or losses for future management purposes.

2002 – 2012 COMPARISON

Fayetteville's urban forests are constantly changing over time resulting from natural and man-made processes, including tree growth and planting, and mortality and development. Monitoring forest change provides important information about the effectiveness of forest policy, community action, and natural processes impacting the urban forest. Today, urban forest managers have access to a variety of tools designed to evaluate forest cover at different spatial scales. This assessment uses three different approaches to evaluate forest change that has occurred since 2002. While no single available approach provides precise quantitative measurements of forest change, the combined methods elucidate several important trends.

Agents of change: heavy winds, flooding, and ice storms such as the 2009 storm illustrated on the right can cause heavy damage and natural loss to forest canopy.

Canopy Comparison Methods

Canopy cover between the two time periods was compared using three methods presented here.

1. i-Tree Canopy Method:
    - A point-based statistical analysis was conducted using the *i-Tree Canopy* tool to compare canopy cover across Fayetteville based on current and 2002 high resolution Google Maps imagery. This method has been used to evaluate canopy cover in 20 cities across the country (Nowak and Greenfield, 2012).

- Tree canopy was assessed for each time period at 770 randomly distributed points.
- Results: 37% (13,147 acres) and 35.3% (12,509 acres) of the City was forest cover in 2002 and 2010 respectively (based on total area), for a net loss of 1.7% (640 acres).

2. GIS Land Cover Comparison Method:

   - Two previous land cover assessments mapped canopy cover in Fayetteville in 2001 and 2002 from satellite imagery. Although the assessments provided the best available data at the time, the overall accuracy of the final land cover products were below standards required for direct comparison with this assessment. Therefore, a manual GIS-based review and editing approach was conducted to provide an initial level of quality control in a comparison between the 2002 canopy data at 39% and the 2010 UTC results at 36%.
   - Forests greater than one-quarter acre from each time period was overlaid to identify significant areas of change. Areas were validated in this GIS-based approach by visually comparing with imagery from each time period and correcting obvious errors.
   - Results illustrate total forest canopy gains of 502 acres and losses of 1,249 acres, for a net loss of 747 acres (2%). See Figure 21.

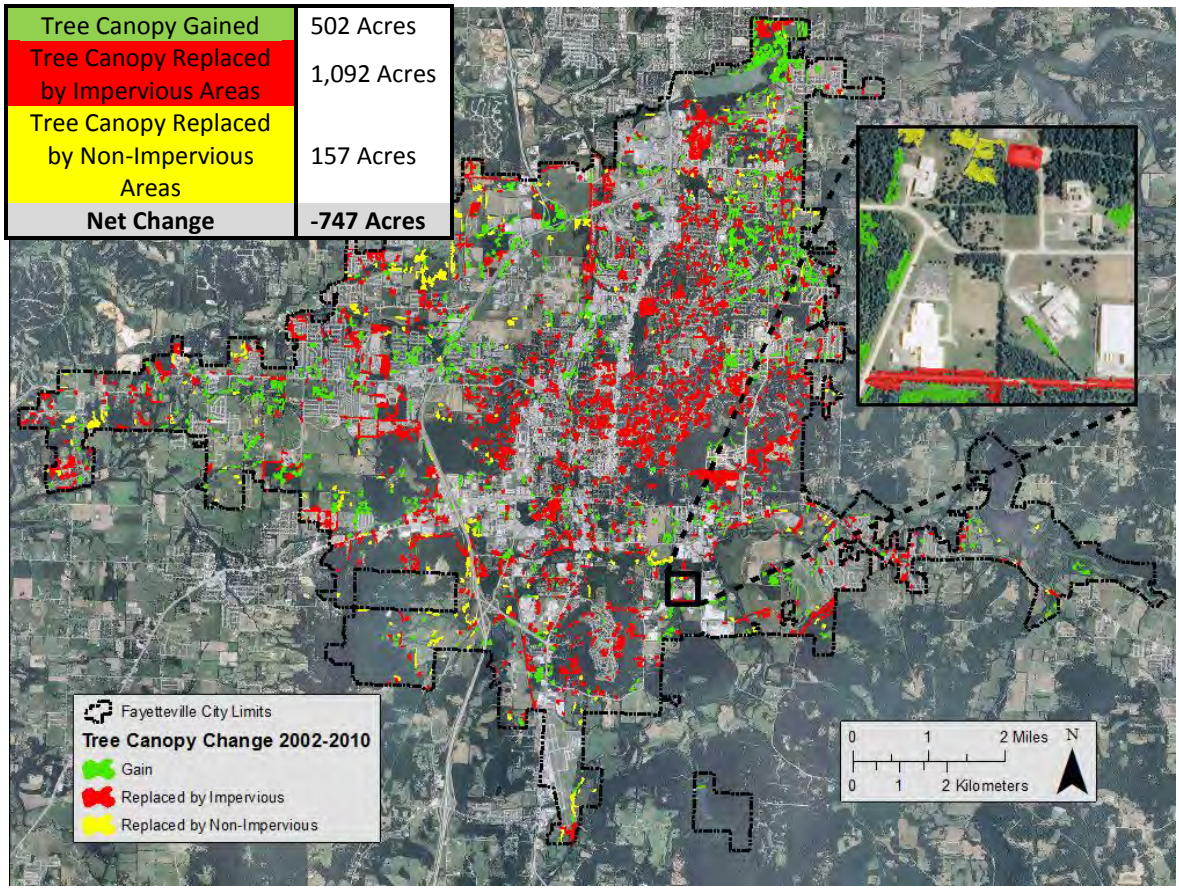


Figure 21. Comparing forests using GIS analysis to show significant gain and loss areas.

3. Growth of Trees from New Residential Development

- Canopy growth from newly planted trees was estimated by digitizing individual tree crowns from current imagery and comparing canopy area to the expected canopy size at the time of planting (2002).
- COF identified 22 new developments where tree plantings were known to occur around 2002. Within the new developments canopies from 250 randomly selected trees were digitized to measure current canopy areas in square feet. The estimated starting point of 40 square feet was subtracted from current canopy to estimate growth since planting.

Figure 22. Individual tree crowns added about 23 acres per 1,000 newly planted trees between since 2002.

- Results for 250 sampled trees on residential properties:
    - Total canopy area in 2011: 66,801 sq.ft. (estimated at 10,000 sq.ft. in 2002 as the starting point)
    - Total canopy growth = 56,081 sq.ft. (1.29 acres)
    - Average annual tree growth = 224 sq.ft. per tree
- Residential canopy cover averages 41% citywide while it averages around 6 or 7% in the 22 subdivisions assessed in this task, implying newly planted trees are not yet compensating for the loss of trees removed during development.

When extrapolated out forty (40) years, the sampled 250 trees are expected to comprise about 5.7 acres of canopy, or 0.02% of Fayetteville's total area. Using this assumption, planting 1,000 trees each year for 40 years would yield about 23 acres of forest canopy annually. With an expected survival to maturity rate of about 70%, accumulated over 40 years a total of 13,000 acres of new tree canopy would be added.

We estimate that around 60 medium sized mature trees are equivalent to one acre of forest canopy. Given mortality rates in the region, the City and residents should expect to plant around 80 trees to produce one acre of mature tree canopy in the future.

Canopy Change and Interpretation

Assessing urban tree canopy change presents many technical challenges given differences in image quality, availability, classification methods, and level of QA/QC. Data and computing capabilities are constantly making higher levels of accuracy and precision in land cover mapping possible. Comparisons with Fayetteville's 2001 and 2002 classifications were challenged given the satellite imagery used as the input image for the 2001 assessment was unavailable and noticeable errors of under- and overestimation were visible. The fact that two independent methods (i-Tree and land cover data) used to assess canopy change yielded similar values provides confidence in both the stated canopy percent values for each time period and the methods used to present a trend in cover.

Table 5. Canopy comparison analysis results from three (3) methods.

Analysis Method	Canopy Change Percent	Change Description
i-Tree Canopy	1.7% Loss Citywide	City-wide statistical estimate comparing 2002 and 2011 tree canopy.
GIS Overlay	2% Loss Citywide	GIS analysis of gains and losses since 2002 in forest areas greater than ¼-acre.
Tree Growth in Developments	0.1% Growth per 1,000 trees planted	Canopy growth over 8 years reflects the challenge of reforestation compared with losses to development.
Overall Trend	1.5% Loss	Overall, canopy cover is in decline.

Recommendations for Comparing Canopy Change Over Time

Based on the comparisons done within the scope of this project, the following recommendations are offered for conducting reliable UTC comparisons over time:

- Use the same city boundary given they change over time due to annexations
- Because UTC percent is calculated based on land area which excludes water, ensure that the area of water is the same and/or accurate in both time periods.
- Use similar image resolution and quality and LiDAR (Light Detection & Ranging) when possible.
- Conduct time-intensive Quality Assurance / Quality Control (QA/QC) for quality comparisons.
    - Accuracy of each time period should be 95% or greater to ensure losses are demonstrating actual canopy change.
    - Early forest regeneration is difficult to map with remote sensing and can be subjective with manual processing. Canopy mapping with sufficient detail to map individual trees will aid in mapping early canopy growth over time.
- Canopy Change analysis within i-Tree Canopy version-5.0 can be effective, but is still subjective to the analyst's preference. Use multiple interpretations to arrive at confident values.
- A process known as "object fate analysis" can be conducted to assess change in land cover across time periods, though initial research shows this is a time-intensive and expense method.

Figure 23. Examples of tree canopy increases from natural regeneration and street/yard planting.

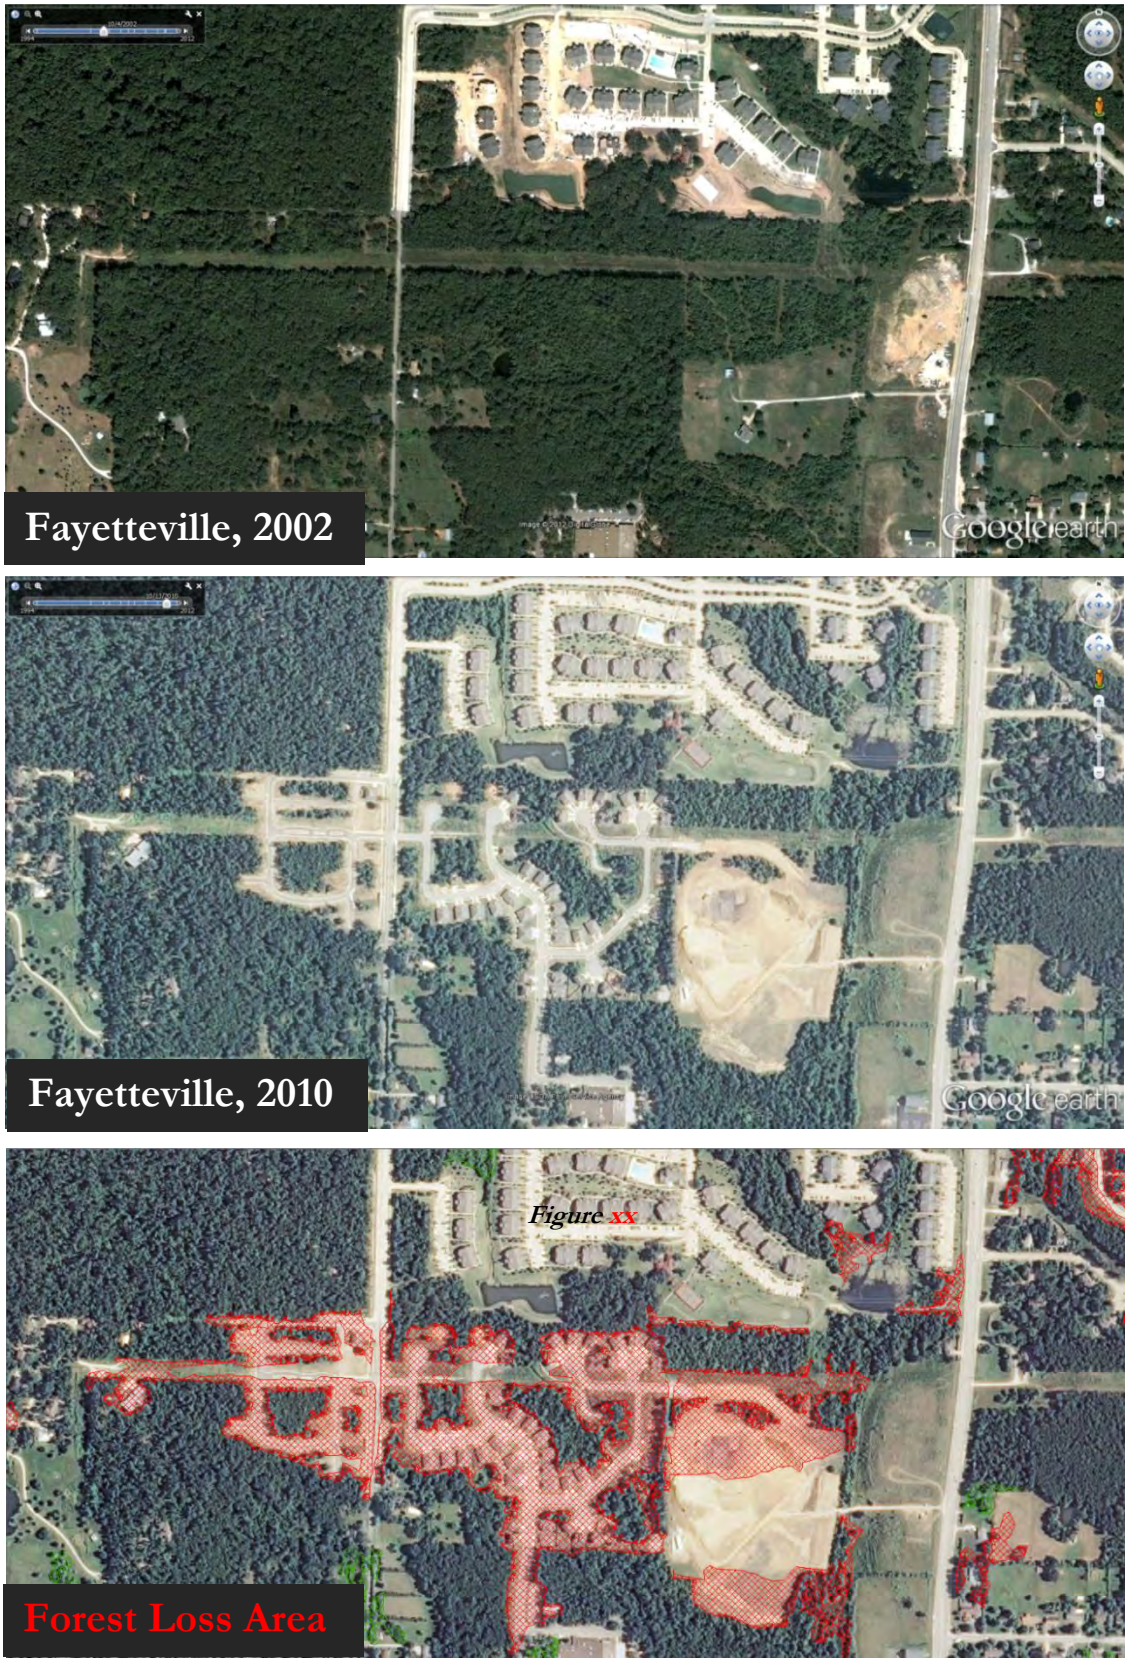

Figure 24. Examples of tree cover loss during development (mapping result shown at bottom).

TARGETING AREAS TO PLANT TREES

The land cover, land use, UTC, and other data were inputs to a sophisticated GIS model to automate the mapping of potential tree planting sites. The resulting GIS points will assist the City in targeting areas to plant trees, evaluating the effectiveness of tree preservation ordinances, and goal setting.

Available planting sites exist where there is a lack of trees and adequate planting area exists in grass and herbaceous cover. To get a more realistic estimate of where trees could be practically planted, exclusions and constraints were applied in the model (see Table 6). After removing these areas from grass and open space in the land cover data, the remaining spaces were converted into potential planting site points.

Table 6. List and description of the main rules used to map potential tree planting locations.

GIS Layer(s)	Rule Applied	Reason
Tree Canopy	Buffered by 10 feet	To allow for spacing and growth of existing trees
Buildings	Buffered by 5 feet	To avoid tree and building conflicts
Agricultural Land Use	Buffered by 15 feet	To allow for farming and related uses

The City should ground-truth (field-verify) the points over time to exclude points that are invalid due to conflicts such as safety, utilities/power lines, and small trees not seen in the 2010 canopy mapping.

The model resulted in roughly 190,000 sites, so prioritizing them is crucial. To prioritize sites, new attributes were added to the GIS planting sites layer. For example, land use types from parcels were spatially joined (overlaid) to each site. For proximity to urban heat islands and wildlife habitat corridors (as well as other high value areas), similar overlays and distances assumptions were used. Sites that meet each criterion can now be queried, symbolized, and counted. The list in Table 7 below shows the types, their count, the criteria used, and then calculates the impact on citywide UTC if 25% or 50% were planted. Maps on the following pages and Appendix offer many examples.

Table 7. List of attributes added to each potential planting site (GIS point database) for prioritization and possible impact on UTC goals.

Planting Site Attribute	Total # of Planting Sites	General Criteria Used	Additional UTC Acres from Planting:		% of Additional UTC Acres Needed to Reach 40% UTC Goal:	
			25% of Planting Sites	50% of Planting Sites	25% of Planting Sites	50% of Planting Sites
City Owned	6,447	On City Owned Property	26	52	2%	4%
School	1,100	On School Parcel	4	9	0%	1%
Wildlife Habitat	47,181	Within 50 ft of Large Forests	191	383	14%	27%
Along Riparian Corridor	18,360	Within 100 ft of Riparian Corridor	74	149	5%	11%
Energy Conservation	69,153	Within 50 ft of Building	281	561	20%	40%
Park	7,898	On Park Parcel	32	64	2%	5%
Urban Heat Island	37,131	Within 50 ft of Large Impervious Area	151	301	11%	22%
Trail	29,033	Within 100 ft of Trail	118	236	8%	17%
Near Park	20,065	Within 1/8 mi of Park	81	163	6%	12%
Front Yard	45,461	Within 25 ft of Rights of Way	184	369	13%	26%
Near School	1,557	Within 1/8 mi of School	6	13	0%	1%
Air Quality	5,691	Within 50 ft of Highways/Arterials	23	46	2%	3%

* Numbers reflect planting sites in "Developed" areas with the exception of Riparian sites which include all
* Projections based on trees with an average 30' crown spread (15' radius)

Urban Heat Island Effect – *refers to developed areas that are hotter than surrounding rural areas due to the abundance of man-made materials there which absorb the sun's energy much more than trees or other plants, and in turn warm the air around them* (Center for Environmental Studies, Brown University, "Trees and the Urban Heat Island Effect", 2010). Tree shade lowers ambient air temperatures which limits the formation of ozone and smog. Trees also absorb ozone which reduces air pollutant concentrations.

The EPA reports that tree shading can reduce surface temperatures 20–45ºF in the summer.

Only 4% of Fayetteville's urban tree canopy overhangs impervious surfaces.

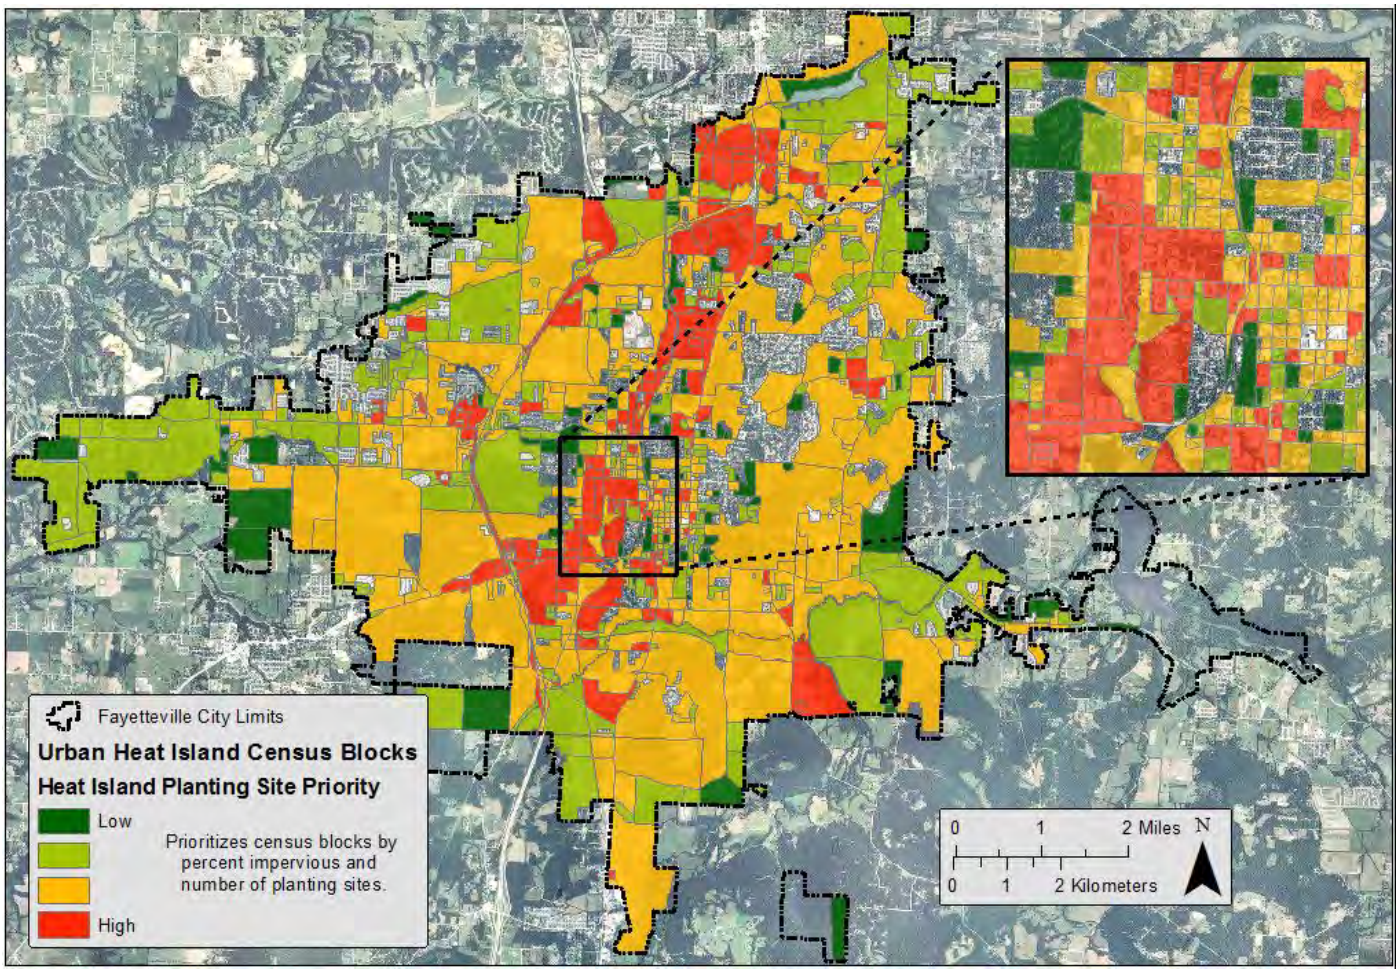

Figure 25. Census blocks with the largest contiguous impervious surface area and highest number of potential planting sites.

Wildlife Habitat – urban forests provide essential habitat for wildlife and provide opportunities for the community to experience nature in the city. The GIS planting site points were modeled with ecological and corridor data from the Fayetteville Natural Heritage Association (FNHA), land use, and large contiguous forested areas. Figures 26-29 illustrates querying planting locations near habitat.

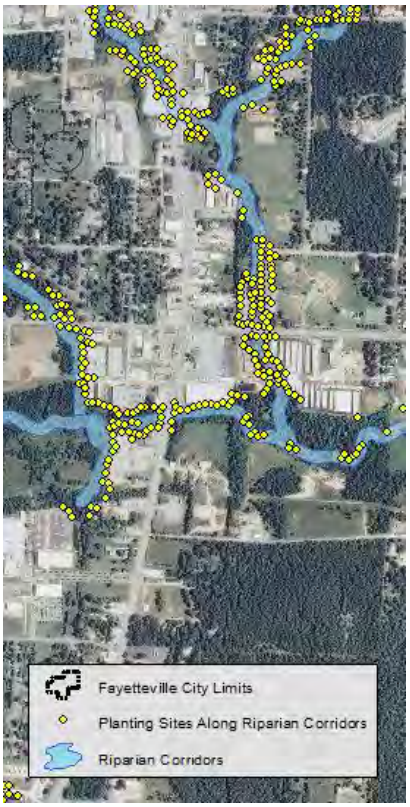

Figure 26. Potential tree planting sites along riparian corridors for improving water quality and decreasing storm water runoff.

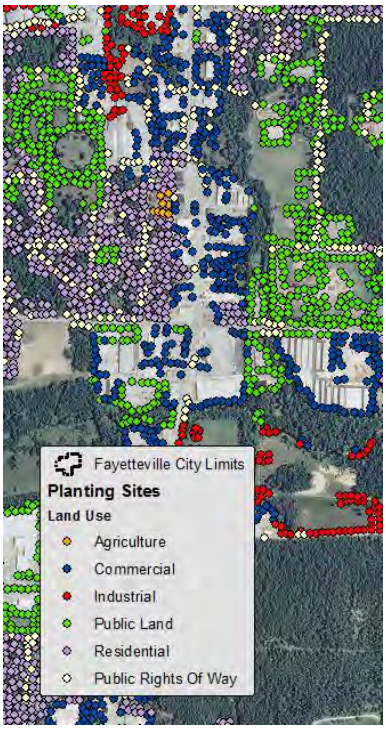

Figure 27. Potential Planting Areas by Land Use.

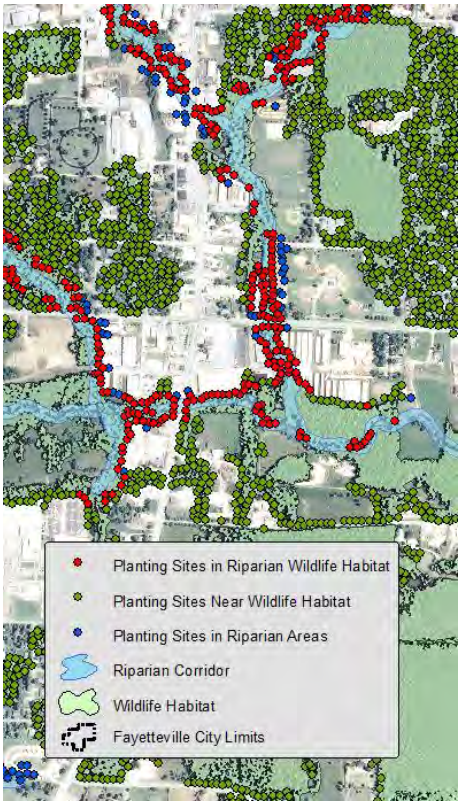

Figure 28. Potential tree planting sites in Fayetteville Natural Heritage Association (FNHA) core areas provide another potential for increased wildlife habitat.

Figure 29. Potential tree planting sites along riparian corridors and near forested lands provide a higher quality wildlife habitat and often provide important wildlife corridors.

TREE CANOPY COVER GOALS AND POLICY

One objectives of this study is to compare canopy coverage to the national recommendation of 40%. At 36% UTC, bridging the 4% gap (1,383 acres) can be accomplished in a number of ways. Here are 2 very different scenarios showing what it might take:

- Using Plan-It Geo's Canopy Calculator tool (Figure 30 below), 40% UTC can be achieved by increasing Commercial properties from 18% to 20% and Residential lots from 41% to 50%.
- Natural forest regeneration is a driver of canopy gains based on results from this study and a cost-effective path. With an estimated 500 acres of forest gain in 10 years (not considering losses), a similar trend could in theory help the City reach 40% UTC in 30 years, but would require a cessation of forest loss during development.

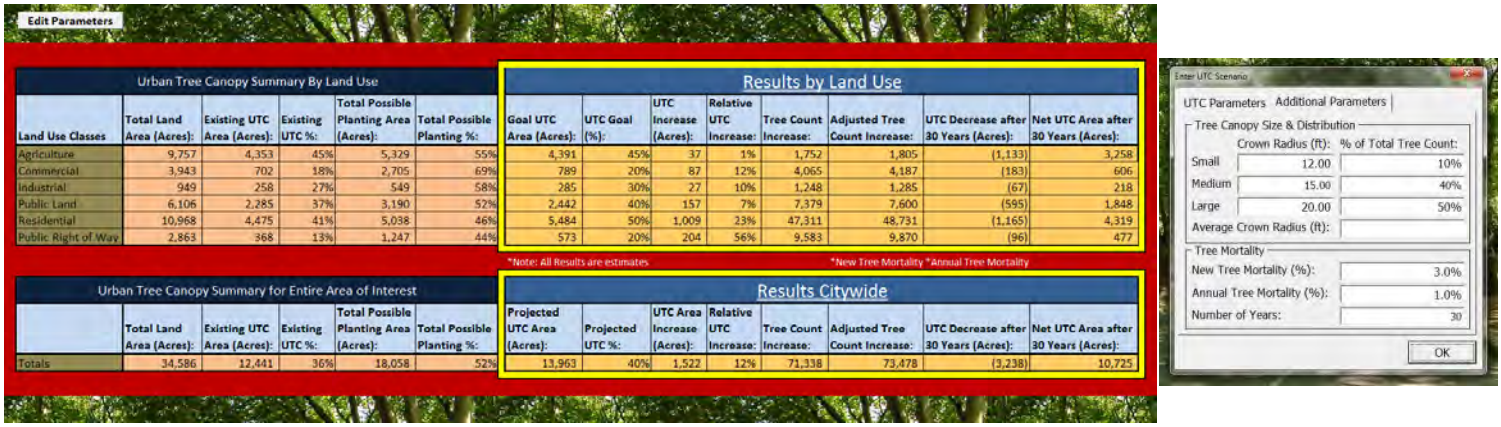

Figure 30. Plan-It Geo's Urban Tree Canopy Calculator tool used to set future goals in Fayetteville.

Another objective is to provide an evaluation of the effectiveness of Fayetteville's tree preservation ordinance followed by recommendations if the ordinance is not working.

The Tree Preservation and Protection Chapter under Fayetteville's Unified Development Code provides a framework for maintaining urban forest quality while the City grows and develops. As the Chapter objectives state, trees provide a variety of benefits that contribute Fayetteville's natural beauty and livability for its residents, including temperature and climate regulation, air and noise pollution reduction, storm water, flood, and erosion mitigation, provision of wildlife habitat, energy conservation, and property value enhancement. The Chapter aims to promote these benefits through the preservation of on-site trees during development, using on-site mitigation strategies when preservation in not possible, off-site preservation, off-site forestation projects, or financial contributions to a tree escrow account.

How can UTC assessment be used to measure successes resulting from the ordinance?

Measuring the incremental success of tree preservation and protection is important for meeting stated goals into the future. Of the many tools available to urban forest managers, this UTC assessment provides a snapshot of city-wide forest canopy extent as seen from above, and its requisition meets the goal of conducting an assessment by end of 2012. The following results can be used to evaluate the relative success of the Tree Preservation and Protection Chapter:

- **Overall forest canopy percent change** across Fayetteville: 37% in 2002 to 36% in 2010.
- **Riparian areas canopy cover** averages 61%, well above the citywide forest cover of 36%.

- **Urban Heat Islands: Canopy percent** averages 22% among census blocks with large impervious areas, and just 9% in high priority areas mapped in this study.
- **Rights of Way: Canopy percent** averages 13% with only 4% of the total tree canopy overhanging impervious surfaces across the City.

Additional Tasks to Measure Preservation and Protection Success

Additional analysis steps can be conducted to measure Preservation and Protection success that were outside the scope of this analysis but could be implemented internally by COF staff:

- **Using this Assessment Data.** Use the new data to evaluate whether recent developments have met preservation requirements (e.g. Minimum Canopy Requirements).
- **Conduct Periodic UTC Assessments.** As the Chapter recommends, periodic assessments can evaluate ordinance progress. Consider using NAIP or i-Tree Canopy (Google Maps and Google Earth) during intermediate years to track development-specific progress.
- **Assess Hillside / Hillslope Overlay Districts** for canopy change over time.
- **Hedonic Pricing models** can be used to assess canopy's contribution to property values.
- **Track Registry Tree growth** of individual registry trees to ensure longevity and protection.

Other forestry tools for measuring preservation success

Today's urban forest managers have access to host of tools which can enhance the effectiveness of management strategies. Many tools are inexpensive or free and can be used to target specific goals and locations.

- **Tree Inventories** provide the greatest level of detail regarding individual tree conditions. Requiring developers to conduct a post-development tree inventory could be a cost-effective way to initiate Fayetteville's citywide inventory.
- **i-Tree Eco** provides the best available science to value benefits received from urban trees.
- **Localized Ecological Studies** can be used to assess impacts from specific development and mitigation strategies by directly measuring impacts before and after implementation.
- **Developer Workshops** hosted by Fayetteville's urban forestry staff to promote best management practices (BMPs) and specific development strategies (such as ordinance requirements or recommendations like cluster development).

MANAGEMENT

The City currently owns and maintains 543 properties that include civic buildings, parks & open space, trails, and more. UTC and PPA metrics were calculated for each property and joined to the land use data layer at the parcel-level. This way queries and custom maps of these properties can be created along with other information. Results were summarized for all city owned properties and the results can be seen in Table 7.

Table 7. Tree canopy and planting potential metrics summarized for all City Owned Properties.

	Total Acres	Land Area (acres)	% of Total City Area	UTC (acres)	UTC %	Distribution of % Total UTC	PPA Vegetation (acres)	PPA Vegetation %	PPA Impervious (acres)	PPA Impervious %	Total # of Planting Sites	Planting Sites per Acre
City Owned Properties	4,763	4,136	11.7%	2,355	56.9%	18.9%	1,491	36.0%	195	4.7%	6,447	1.56

Using the results from the analysis steps described above, gains and losses of tree canopy was estimated for city owned properties (see Figure 31 below). This resulted in a loss of tree canopy for 54 acres or 1.3% of City Owned Properties. This information should be used as a general trend and not an exact measure of UTC change.

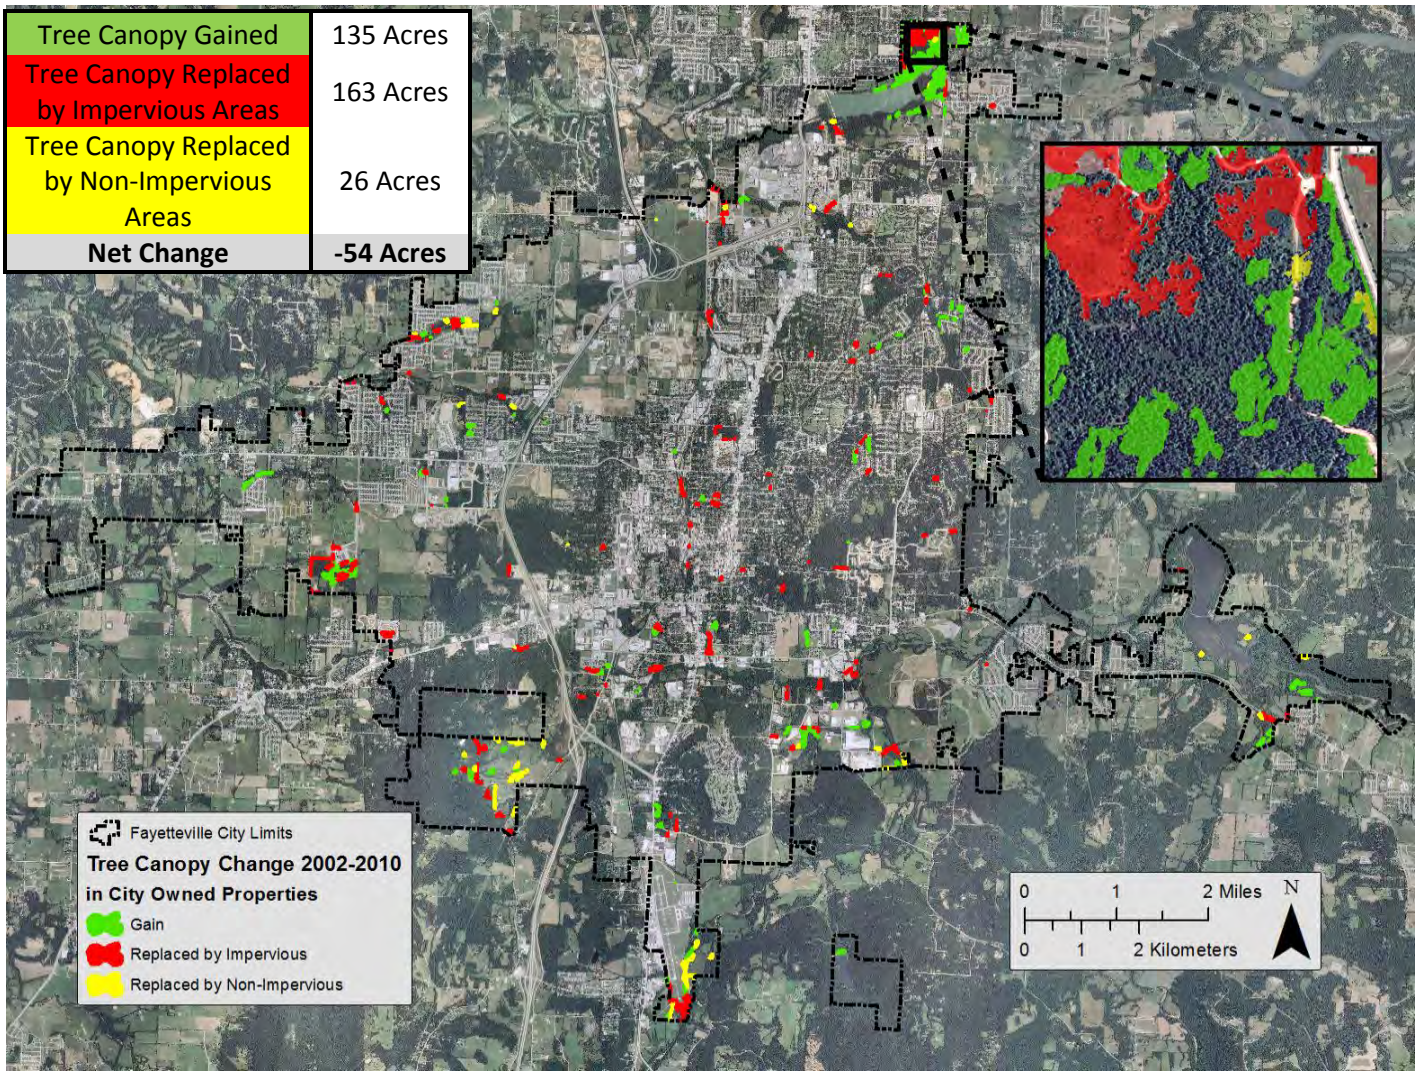

Figure 31. Canopy change for City Owned Properties from 2002-2010.

RECOMMENDATIONS

Based on this assessment, the following general recommendations are offered for using the data and for managing, maintaining, and monitoring a healthy, sustainable, robust working urban forest.

1. **Share this report to promote cohesion among the City, AFC, FNHA, and other partners and community stakeholders:**
   - People are part of the urban forest. Use this report as a catalyst among urban forest managers and community stakeholders to meet Fayetteville's natural resource goals.
   - Solicit feedback from community partners for the refinement of tree preservation ordinances, tree planting initiatives, and steps to encourage survivability and forest health.
   - Develop best management practices (BMPs) such as maintaining higher canopy cover in ecologically sensitive areas (wetlands), parking lots, schools, and commercial properties.
2. **Monitor, adapt, and enforce existing tree Preservation and Protection ordinances**.
   - Streamline tree-related policies and identify if codes are working against local goals.
   - Enforce requirements in the Tree Preservation plan, especially the 90% survival rate for forested areas and tree plantings.
   - Collaborative planning can reduce costs and provide consistency for public works officials, planners, developers, and stormwater and resource managers.
3. **Develop a regional urban tree canopy assessment report in Arkansas.** Utilize the information gained from this assessment and others in the state to compile and compare results. Involve interdisciplinary partners in the process and draft an appropriate call to action.
4. **Assess tree canopy every 8-10 years** to monitor trends and assess the effectiveness of public education & outreach campaigns and the tree preservation ordinance. Tools such as i-Tree Canopy can be used in between comprehensive GIS-based assessments.
5. **Disseminate the land cover and UTC assessment data from this project broadly**. While it is current, encourage its use for applications such as water supply planning, stormwater modeling, land use planning, green infrastructure, and Low Impact Development (LID) design.
6. **Foster academic partnerships.** Recommend that the University of Arkansas become a Tree Campus USA and work with local schools to educate and plant/care for trees.
7. **Explore all potential partnerships to achieve urban forest goals**: public/private including corporate and academic sponsors, council representatives, environmental quality and stormwater associations, volunteers, non-profit organizations, and neighborhood associations.
8. **Promote hardy, climate-adapted, and long-lived tree species** that are appropriate for Fayetteville's environment to insure investments in trees achieve maximum benefits.
9. **Target areas for tree planting using the assessment data.**
   - Use results to justify targeted public tree plantings in the public rights-of-way and greater private planting in commercial landscaping.
   - Ground-truth possible planting areas and planting site locations. Make these data sets available on a GIS webmap as social assessment tools available to residents and businesses.

10. **Create a central repository for monitoring tree planting and tree removals** on public and private property, possibly using a web-based application that is open to the public.
11. **Ensure consistency in future UTC assessments** by using comparable image resolution, classification techniques, and QA/QC procedures. LiDAR and 1.5-2.0' multispectral satellite imagery acquired at similar times would provide an ideal data set.
12. **Create or update an existing targeted education and outreach campaign using the ecosystem benefits values.** Use the data, maps, tools, and tree benefits to help non-profits, residents, and businesses visualize their role in reaching, maintaining and expanding Fayetteville's urban forest for social, environmental, and economic benefits that are relevant to them.
13. **Work urban forestry goals and design specifications into other environmental planning initiatives** such as wetland restoration projects, open space conservation easements, green infrastructure & low impact development (LID) plans, and energy efficiency programs.
14. **Assess forest stands at risk from development** by overlaying zoning or future land use data and developable slope %. Quantify and locate areas at risk that if developed would impact overall citywide canopy cover goals as the economy improves and development follows.
15. **Promote cost-effective professional development in urban forestry.** eLearn Urban Forestry is a state-of-the-art online, distance-learning program geared specifically toward beginning urban foresters and those allied professionals working in and around urban and urbanizing landscapes, including service foresters, natural resource planners, landscape architects, city officials and public works employees. eLearn Urban Forestry provides free access to learning modules, with a link to the Continuing Forestry Education (CFE) group, where for a small maintenance fee you can get ISA or SAF credit. Visit elearn.sref.info/ for more details.
16. **Provide an environment for natural forest regeneration.** This study shows that grass, herbaceous, and shrub/briar land cover types are naturally regenerating into forests, contributing to the City's overall tree canopy and ecosystem services.

SUMMARY

Urban forests are dynamic resources that are constantly changing through natural and human processes. Managing urban forests effectively requires an understanding of where trees are presently, where they can be planted equitably to maximize benefits, and where physical restrictions may prevent their growth.

This assessment provides COF will their first high-resolution UTC data set and citywide estimate of 36% tree cover. While agriculture and residential land uses have similar average tree cover (45% and 41% respectively) and they makeup similar proportions of the total tree canopy (35% and 36% respectively), residential areas provide 28% of the total possible planting area citywide and are most realistic for canopy gains that benefit the community most. These results indicate that one of the most cost-effective means to advancing urban forestry in the city may be education and outreach on the benefits of urban tree canopy.

Based on assessing land cover across several broad land use types, tree planting that focuses on vegetation land cover, such as grassy areas, and impervious land cover, such as parking lots, which are concentrated on public lands and residential land use types will have the greatest impact for increasing Fayetteville's urban tree canopy. As population density and impervious cover increases, the necessity of planting trees will also increase.

Regeneration, be it natural or by strategically planting seedlings and saplings, is important to the success and future of Fayetteville's urban tree canopy. This study shows that natural regeneration is occurring and adding to canopy cover, but invasive species control and forest management is needed.

It is import to sustain the health, environmental, and social benefits received from urban forests by consideration of tree maintenance and forest preservation during development through utilizing a specific urban forest management plan and furthermore the setting of goals. These plans should be dynamic in order to adjust with continuous forest change.

On future periodic assessments, techniques for monitoring gains and losses need to be consistent and include strict quality control / quality assurance methods to reliably track change over time. Additional technology tools are becoming available such as open source wiki-style mobile and web-mapping applications to engage the public in tracking and caring for trees.

Balancing new development with the protection and conservation of environmental values related to forest cover such as wetland habitat, air quality, and climate adaptation related to carbon storage and energy conservation will be an ongoing work item. The economic benefits of urban tree canopy alone are incentives to continue in this direction.

APPENDIX

Additional details on Fayetteville's 2012 urban tree canopy assessment are provided including supporting information on urban tree benefits, land cover classification methodology and accuracy, addition tree planting site maps, and literature citations.

URBAN TREE BENEFITS

The benefits of urban trees include environmental, economic, and social values. These "ecosystem services" are direct or indirect benefits provided by urban forests and individual trees that are often dismissed or underrepresented when valuing infrastructure because they don't readily have an associated dollar value. Types of tree benefits are listed and briefly described below. While none alone are a "silver bullet", when combined, trees and the urban forest are an impressive part of the solution for sustainability during urban planning and community development.

Environmental "Services" of Urban Trees:

- Air Quality – trees absorb, trap, offset and hold air pollutants such as particulate matter, ozone, sulfur dioxide, carbon monoxide, and CO^2.
- Greenhouse Gases (GHGs) and Carbon – trees store and sequester carbon through photosynthesis as well as offset carbon emissions at the plant due to energy conservation.
- Water Quality and Stormwater Runoff Mitigation – trees infiltrate, evapotranspire, and intercept stormwater while also increasing soil permeability and ground water recharge.
- Erosion control – tree roots hold soil together along stream banks and steep slopes, stabilizing soils and reducing sedimentation issues in water bodies.
- Urban heat island effect – trees cool the air directly through shade and indirectly through transpiration, reducing day and nighttime temperatures in cities.
- Increased wildlife habitat – Trees create local ecosystems that provide habitat and food for birds and animals, increasing biodiversity in urban areas.

Economic "Services" of Urban Trees:

- Property value – numerous studies across the country show that residential homes with healthy trees add property value (up to 15%).
- Energy conservation – trees lower energy demand through summer shade and winter wind block, additionally offsetting carbon emissions at the power plant.
- Economic Development – trees attract businesses, tourists, and increase shopping.
- Stormwater facilities – trees and forests reduce the need for or size of costly gray infrastructure.
- Pavement – tree shade increases pavement life through temperature regulation (40-60% in some studies).

Social "Services" of Urban Trees:

- Public health – trees help reduce asthma rates and other respiratory illnesses.
- Safe walking environments – trees reduce traffic speeds and soften harsh urban landscapes.
- Crime and domestic violence – urban forests help build stronger communities. Nature and trees provide settings in which relationships grow stronger and violence is reduced.
- Connection to nature – trees increase our connection to nature.
- Noise pollution – Trees reduce noise pollution by acting as a buffer and absorbing up to 50% of urban noise (U.S. Department of Energy study).

LAND COVER CLASSIFICATION METHODS & ACCURACY

Introduction to Image Classification and Accuracy

The goal of image classification for the City of Fayetteville (COF) was to convert a landscape comprised of complex uses and cover types into target categories that are meaningful for the management of the City's urban forests. The object-based classification approach used in this analysis provides the ability to segment landscape features at a fine scale with a high level of precision, based on the 1 meter horizontal resolution of the input imagery. Classification accuracy assessment describes how well the classification is able to translate the complex landscape into target land cover classes.

Five target land cover classes (1. Tree Canopy, 2. Impervious Surface, 3. Green Vegetation and Agriculture, 4. Soil and Dry Vegetation, or 5. Water) were and three impervious sub-classes were initially mapped (for a total of eight classes) for the COF using four-band National Agricultural Inventory Program (NAIP) aerial photography from 2010. A single color infra-red image was mosaicked from multiple Geotiff image tiles purchased from USDA NAIP headquarters in Utah. Feature Analyst software (FA) was used to segment the COF mosaic into desired land cover classes. Additional vector layer inputs were used to further segment classification categories.

Target land cover classes were selected because they segment the landscape into categories that are useful for urban forest management. Tree canopy describes the current forest cover as seen from above, but is only part of Urban Tree Canopy (UTC) assessment. Subcategories of impervious surfaces segment areas where it may be impossible to plant trees (such as roads and buildings) and areas where trees offset many of the negative impacts of impervious materials (such as parking lots and sidewalks). Areas comprised of green vegetation are important for UTC assessment since they represent the easiest transition to additional forest cover through tree planting. In this assessment, all agricultural areas were classified in the vegetation category and later differentiated from other green vegetation using the agricultural land use data provided by the COF. Soil and dry vegetation is excluded from possible planting areas since these areas represent either current development, or areas where live vegetation is not supported. For this classification, water was directly digitized in combination with input data provided by the COF.

Accuracy Assessment

Accuracy assessments serve two main purposes; Accuracy assessments provide information to map producers about what methods are working and where improvements need to be made for creating the best possible product from available resources. Accuracy assessments also provide information to map users who need to understand how closely the intended classification categories represent the true classes observed on the ground.

Procedure

More than 100 sample points were randomly distributed across the study area and assigned a random numeric value. Sorting from lowest random value to highest, at each sample point, a 3x3 pixel (9 m2) reference sample unit was digitized onto the NAIP imagery and assigned one of the five target land cover classes. The procedure was repeated until an at least 100 pixels were sampled from the three dominant land cover classes (Tree Canopy, Impervious Surfaces, and Green Vegetation). Sample units were then intersected with the classified map to compare with the reference samples, as presented in the sample error matrix below.

Interpretation

Statistical relationships between the reference pixels (representing the true conditions on the ground) and the intersecting classified pixels are used to understand how closely the entire classified map represents the COF landscape. The sample error matrix represents the intersection of reference pixels manually identified by a human observer (columns) and classification category of pixels in the classified image (rows). The white boxes along the diagonals of the matrix represent agreement between the two pixel maps. Off-diagonal values represent the number pixels manually referenced to the column class that were classified as another category in the classification image. Overall accuracy is computed by dividing the total number of correct pixels by the total number of pixels reported in the matrix (238+165+220+72+66 = 761 / 819 = 93%), and the matrix can be used to calculate per class accuracy percentages. For example, 260 pixels were manually digitized in the reference map as Tree Canopy, but only 238 of those pixels were classified as Tree Canopy in the classification map, with 22 pixels misclassified as Green Vegetation. This relationship is called the "Producer's Accuracy" and is calculated by dividing the agreement pixel total (diagonal) by the reference pixel total (column total). Therefore, the Producer's Accuracy for Tree Canopy is calculated as: (238 / 260 = 0.92), meaning that we can expect that 92% of all tree canopy in the COF were classified as Tree Canopy in the classification map. Conversely, the "User's Accuracy" is calculated by dividing the number agreement pixel total by the total number of classified pixels in the row category. For example, 241 classification pixels intersecting reference pixels were classified as Tree Canopy, but three pixels were identified as Green Vegetation in the reference map. Therefore, the User's Accuracy for Tree Canopy is calculated as: (238 /241 = 0.99), meaning that pixels classified as Tree Canopy the classification were actual tree canopy in the COF.

It is important to recognize the Producer's and User's accuracy percent values are based on a sample of the true ground cover, represented by the reference pixels. As with any statistical relationship we can compute the level of confidence with which the classified map values represent the reference map of the COF. Confidence intervals are used to report the lower limit and upper limit of the expected percent values of each classification category. In the matrix above, the 95% confidence interval describes the range of values we would expect to observe 95 out of 100 times given a randomly distributed selection of reference pixels. For example, if the accuracy assessment was repeated 100 times, we expect that tree canopy accuracy would fall between 88% and 95% for Producer's and 97% and 100% for User's accuracy for at least 95 of the 100 samples.

Relating Accuracy to the Classification Map

Accuracy assessments provide important information regarding how well the landscape was classified into target land cover classes, but what do Producer's and User's accuracies mean for interpreting land cover results? It should be noted that for both the classification map and the error matrix, land cover classes are interrelated, meaning that if a pixel is incorrectly omitted from one category, it is also incorrectly committed to another category. For example, 22 pixels in the sample error matrix were erroneously omitted from the Tree Canopy class and erroneously committed to the Green Vegetation class. The classification map reports 36.5% of the COF is covered with Tree Canopy. The Producer's accuracy of 92% can be interpreted as up to 8% of the overall landscape may be tree cover but was classified as another land cover category. Conversely, the User's accuracy of 99% indicates that if a pixel is classified in the classification map as Tree Canopy, we are 99% confident that the pixel is tree canopy in the reference map. When combined, these two figures indicate that 36.5% probably underestimates the true canopy percent (and that the Green Vegetation category probably contains some actual tree canopy). Figure 32 below uses work by Pontius and Millones

(2011) to illustrate the total map area of each classification category where there is agreement between the reference and classification map (blue), where classification categories contained committed (pink) and omitted (green) pixels. The figure below uses concepts defined as Quantity and Allocation disagreement to estimate true land cover percent values based on statistical results.

CITY OF FAYETTEVILLE ARKANSAS

CITY COUNCIL MEMO
2024-616

MEETING OF NOVEMBER 26, 2024

TO: Mayor Jordan and City Council

THRU: Susan Norton, Chief of Staff
Jonathan Curth, Development Services Director

FROM: Donna Wonsower, Planner

SUBJECT: **APPEAL: LSD-2024-0011: Large Scale Development (SOUTHEAST OF S. NELSON HACKETT BLVD & E. SOUTH ST/URBAN LOFTS AT NELSON HACKETT, 523): Submitted by DEVELOPMENT CONSULTANTS INC for property located SOUTHEAST OF S. NELSON HACKETT BLVD in WARD 1. The property is zoned DG, DOWNTOWN GENERAL and contains approximately 1.28 acres. The request is for a 138-unit multi-family residential development and associated parking.**

RECOMMENDATION:
City Staff and Planning Commission recommend approval of the large-scale development request as described and shown in the attached Exhibits 'A' and 'B', and described in the attached Planning Commission staff report.

BACKGROUND:
The subject area contains one 1.28-acre parcel which is bound by W. South St. to the north, S. Nelson Hackett Blvd. to the west, W. 4th St. to the south, and S. Block Ave. to the east. The parcel received its current zoning designation in 2006 with the implementation of the Downtown Master Plan (ORD 4930). The parcel was previously developed with four residential structures, each of which contained four residential dwelling units. These fourplexes were demolished in 2022 and the site is currently undeveloped. The property is within the Downtown Master Plan area and 71B Corridor Plan.

Request: The applicant requests large scale development approval to develop the subject property with two multifamily structures totaling 138 residential units.

Public Comment: Staff has received substantial comments on this proposal, with the majority expressing opposition. Several members of the public have provided both multiple written and verbal comments. Six people spoke at Subdivision Committee and 18 spoke at the August 12 Planning Commission meeting. Including written comments received before and after the August 12 Planning Commission meeting, staff has received 53 written comments from 37 unique individuals. Comments opposed to the development generally cited include increased traffic danger and congestion, insufficient or dangerous parking, conflicts with the existing neighborhood character, a high number of children and walkers, inadequate existing infrastructure, opposition to small "efficiency" units, and incompatible density. Comments in support have cited the need for more affordable housing in the city, previous multifamily use of the property, a thoughtful approach and transition, good design, and high-quality materials.

*Findings: S*taff finds the proposed large-scale development is not likely to adversely affect the public interest.

The proposed multi-family structures are of a type and scale that is compatible with the surrounding neighborhoods, with the larger structure fronting Nelson Hackett Blvd. and transitioning to a smaller building of only two stories adjacent to the surrounding neighborhood. Street improvements, including sidewalk construction and curb widening, are proposed along S. Nelson Hackett Boulevard., W. South Street, S. Block Avenue, and W. 4th Street. On average, each street is shown to be widened by approximately the width of a parallel parking space, meaning that any proposed parallel parking would occur outside of the existing street curb. Memos have been provided from Solid Waste and the Fire Marshall's office indicating no concerns with street access as designed. Further, the police have requested proposed parking on Nelson Hackett be well-lit for public safety but have otherwise indicated that they do not see substantial issues arising from the proposed development. Additionally, a traffic assessment was completed, and Engineering staff have determined that the anticipated impact of the development is not sufficient to warrant a full traffic study.

While there has been substantial public comment regarding the proposed density of the project, staff notes that the underlying DG, Downtown General zoning district does not have a prescribed density limit. The applicant voluntarily reduced their total unit count during the entitlement process; however, staff cannot require reductions of the unit count beyond what is permitted by right or controlled by other development standards. Further, staff analyzed several downtown multifamily developments, and found that the proposal is less intense than many of these when considering density by bedrooms per acre rather than unit count. As parking requirements apply based on bedroom count, staff found this metric provided a more direct comparison since other apartment complexes in the area feature multi-bedroom units. The proposed Urban Lofts project has a bedroom count of 108 bedroom per acre and is parked 99% on site or on the immediately abutting streets, which is permitted with the approval of the Zoning and Development Administrator. In comparison, the Atmosphere Apartments have 188 bedrooms per acre with 85% of these bedrooms parked. The Cardinal Apartments have 174 bedrooms per acre with 88% of units provided parking. Academy at Frisco Apartments and Gather Dickson both park 100% of units when accounting for only their residential component, but also have bedroom densities of more than double the proposed density at Urban Lofts.

Four variances have been requested, with staff finding these to be appropriate and representing relatively minor impacts, including for access management and dumpster location. Given the property's unique condition of four street frontages, these variances would likely be necessary of any development. No variances have been requested for parking counts, as the proposal is within all parking allowances permitted by-right including the ability to utilize substituted bicycle racks and motorcycle spaces within the required parking total. While staff notes that one variance applies to parking located within a build-to-zone, the applicant has not taken their full, potential reduction allowed based on proximity to multiple transit stops. While removing these spaces could eliminate the need for this variance, it could also increase potential overflow off-site. Staff recommends approval of all requested variances.

DISCUSSION:

At the August 12 Planning Commission meeting, the Planning Commission voted to deny the overall project, citing traffic safety concerns. Extensive public comment was also provided, which is summarized in the report. After a request to reconsider by the applicant, the Commission voted to do so on August 26 and tabled the item to the September 23 Planning Commission meeting to provide time for the applicant to re-notify the surrounding properties. In the intervening weeks, updated plans were provided which reduced the total number of units from 163 to 138, removed two variance requests, addressed inconsistencies in tree mitigation calculations, and updated parking calculations. A bike wash and work stand was also added at the northwest pedestrian entry near the proposed bike racks. The request for reconsideration also includes a commitment to reserve 15% of the units for those within a designated AMI and well as multiple steps intended to encourage car-free renters.

At the September 23 Planning Commission meeting, the Planning Commission voted 8-1-0 to approve the

revised plans. Commissioner Werner motioned to approve with a second from Commissioner Castin. Commissioners voting in favor of the development cited steps the developer has taken to address concerns, stringent standards for project denials, proposed safety improvements, the by-right nature of parking allowances, proposal by the applicant to purchase parking permits in the adjacent downtown parking garage for potential overflow, reasonable variance requests, proximity to transit, thoughtful design, high-quality materials, and the need for additional housing options including smaller rental units. Several commissioners mentioned the possibility of a parking district in the surrounding neighborhoods but noted that doing so would be a separate process that would require City Council approval. Commissioner Payne voted against the proposal, citing potential traffic hazards. Twenty-nine individuals spoke at this meeting, with 10 in support and 19 opposed. Comments in support generally cited the need for single-bedroom apartments in Fayetteville, recent street improvements along Nelson Hackett, proximity to downtown, the housing crisis, and city goals for infill and housing along the 71B corridor. Comments opposed generally cited concerns with traffic, parking, pedestrian safety, desire for less housing, and the presence of the depressed courtyards along Nelson Hackett.

A RESOLUTION TO GRANT THE APPEAL OF CITY COUNCIL MEMBER D'ANDRE JONES AND DENY LARGE SCALE DEVELOPMENT APPLICATION LSD-2024-0011

WHEREAS, on September 23, 2024, the Planning Commission voted to approve the large scale development application LSD-2024-0011; and

WHEREAS, City Council Member D'Andre Jones timely appealed this approval by his email to City Clerk Treasurer Kara Paxton on October 1, 2024.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby determines that large scale development application LSD-2024-0011 submitted by Development Consultants Inc. for property located Southeast of South Nelson Hackett Boulevard is denied pursuant to § 166.02(C)(2)(a)(iv) because the proposed development would create or compound a dangerous traffic condition.

Subject: FW: Request to appeal

Kara,
Reading this entire list of emails below, I conclude that Council Member D'Andre Jones has properly appealed the Planning Commission's decision to approve the Large Scale Development on the corner of Nelson Hackett boulevard and South Street on behalf of resident Louise Gamache upon my forwarding of this email to you. Council Member Jones properly referenced the proper code listing approval/rejection criteria for an LSD and his concern about traffic safety.

Teresa,
You may appeal this decision for a resident by emailing your appeal for the resident to the City Clerk's Office. The appeal must be accomplished by next Monday (ten business days from the Planning Commission's decision). You need to reference Section 166.02 (C)(2)(a) and discuss a possible violation of subsection (iv) "The proposed development would create or compound a dangerous traffic condition." I have attached copies of the relevant Code sections for your information. If you have further questions, please call me.

> **Subject: Lot at 4th St and South St, bordering on Nelson Hackett Blvd, plans and approval Sept. 23rd LSD-2024-0011**
>
> Dear Teresa: As a property owner and resident in Ward One on the south side, I am appalled by the approval to build on over 130 unit apartment complex with a parking lot to hold 72 cars on this lot which is just over an acre, on a hill off a busy road as well as building in parallel parking on Nelson Hackett Blvd. The residents and nearby residents spoke eloquently against this and I concur. It is a devastating money grab which will harm the existing neighborhood, pose dangerous traffic issues, congest a fragile historic area and harm the essential nature of this city. I ask that you appeal this decision on LSD-2024-0011 by the City Planning Board to allow the build yo proceed. If I and other concerned citizens of Fayetteville need to do more to stop this build, please let me know. Thank you.

- *In favor of recommended right-of-way dedication,*
- *In favor of recommended street improvements, and*
- *In favor of all other conditions as recommended by staff."*

AUGUST 12, 2024 PLANNING COMMISSION MEETING:
At the August 12 Planning Commission meeting, the Planning Commission voted to deny the overall project, citing traffic safety concerns. Extensive public comment was also provided, which is summarized in the report. After a request to reconsider by the applicant, the Commission voted to reconsider the item on August 26 and tabled the item to the September 23 Planning Commission meeting to provide time for the applicant to renotify the surrounding properties. In the intervening weeks, updated plans were provided which reduced the total number of units from 163 to 138, removed two variance requests, addressed inconsistencies in tree mitigation calculations, and updated parking calculations. A bike wash and work stand was also added at the northwest pedestrian entry near the proposed bike racks. The request for reconsideration also includes a commitment to reserve 15% of the units for those within a designated AMI and well as multiple steps intended to encourage car-free renters.

BACKGROUND:
The subject area contains one 1.28-acre parcel which is bound by W. South St. to the north, S. Nelson Hackett Blvd. to the west, W. 4th St. to the south, and S. Block Ave. to the east. The parcel received its current zoning designation in 2006 with the implementation of the Downtown Master Plan (ORD 4930). The parcel was previously developed with four residential structures, each of

which contained four residential dwelling units. These fourplexes were demolished in 2022 and the site is currently undeveloped. The property is within the Downtown Master Plan area and 71B Corridor Plan. Surrounding land uses and zoning are depicted in *Table 1.*

Table 1:
Surrounding Land Uses and Zoning

Direction	Land Use	Zoning
North	Retail, Mixed-Density Residential	DG, Downtown General
South	Single-Family Residential	DG, Downtown General
East	Single-Family Residential	NC, Neighborhood Conservation RSF-18, Residential Single Family, 18 Units per Acre
West	Single-family Residential	DG, Downtown General

Proposal: The applicant requests large scale development approval to develop the subject property with two multifamily structures totaling 138 residential units. Four variances have been requested with this project.

Variance #1: §166.11(A), Conformance to Plans and Regulations. All projects shall conform to the official plans and regulations that make up the City's Master Street Plan.
S. Nelson Hackett Blvd. is an Urban Center Street, which typically requires two ten-foot drive lanes, two eight-foot parking lanes, two four-foot furniture zones and an eight-foot sidewalk on each side of the street. The applicant has proposed a street section in line with administratively approvable design elements, with the exception of a proposed ten-foot slip lane between the drive lanes and parallel parking.

a. *Staff recommendation: Staff recommends in favor of the variance. The stated intent of the slip lane is to provide additional area for vehicles utilizing on-street parking to safely maneuver while entering or existing the parallel parking spots. Given the curve and slope of S. Nelson Hackett Blvd., staff finds that this slip lane will serve the public benefit by improving safety. Fayetteville Police recommend that the proposed parallel parking along Nelson Hackett shall be well-lit, and staff recommends a modified curb shall be installed between the travel and buffer lanes, and the buffer lane shall be constructed out of stamped colored concrete (similar to roundabout truck aprons) to create a visual and tactile change in material between the travel and parking lanes. The exact stamp pattern and colored concrete may be submitted to Engineering for approval with the grading permit.*
Should the Planning Commission choose to specify an exact stamp pattern and concrete color, staff recommends it match what was installed at the Porter/Deane/Stephen Carr roundabout.

Variance #2 §166.08(F): Access Management. Per ordinance, properties that fronts onto more than one (1) public street shall place a higher priority on accessing the street with the lowest functional classification, e.g., residential and neighborhood links. In a case where the streets have the same classification, access shall be from the lower volume street, or as determined by the City Engineer. The proposal includes one driveway onto S. Block Ave. and one driveway onto W. 4th St. approximately mid-block.

Staff recommendation: Staff recommends in favor of the variance with no added conditions. The ordinance is intended to promote safety by reducing the number of driveways onto higher classification streets. All adjacent streets are designated as Urban Centers with S. Nelson Hackett as the highest traffic street. Per the applicant's letter, two entries are required to meet the fire code and that both entries could not be located on S. Block Ave. while still meeting separation

requirements. Given this, staff finds driveways on two separate streets to be necessary.

Variance #3 §166.21(E)(1): Dumpster Location. Per the Downtown Design Overlay District regulations, dumpsters may only be located within the rear yard of a parcel. The dumpster is currently proposed along the southern property line adjacent to E. 4th St.

Staff recommendation: Staff recommends in favor of the variance. The parcel is bounded on all sides by a public street, meaning that there are effectively no rear yards in which an exterior dumpster could be placed. However, staff finds that the intent of the ordinance is still being met. S. Nelson Hackett Blvd. and W. South St. are functioning as the principal facades, with an additional building located at the corner of E. 4th St. and S. Block Ave. Staff finds that the proposed location is largely screened by adjacent buildings to the east and west and that impact is likely to be minimal. Staff recommends a condition that the dumpster screening enclosure shall be constructed of high-quality materials such as the proposed CMU with a brick façade and with either vegetative screening or public art to minimize visual impact from the south.

Variance #4 §172.04(C)(4): Parking Lot Location Standards. In urban zoning districts, a drive-thru lane, parking lot drive aisle, or parking spaces are not permitted to be located in the front yard directly between a building and the Master Street Plan right-of-way. The proposal includes a parking lot with access from S. Block Ave. and E. 4th St., with portions located between the building and ROW.

Staff recommendation: Staff recommends in favor of the variance. As noted in the applicant's request letter, the parcel has frontage on four sides meaning that there are effectively no rear or side setbacks. The parking is not visible from either E. Nelson Hackett Blvd. or W. South St., the two principal facades. A large portion of the parking lot is also screened from both S. Block Ave. and E. 4th St. by the second residential building. Staff finds that the parking within the build-to-zone is meeting screening requirements of §172.04(C)(1) and that fully locating all parking behind a building façade is not practical given the site's shape and topography changes.

Right-of-Way to be Dedicated: The subject property currently has street frontage along S. Nelson Hackett Blvd., W. South St., S. Block Ave., and W. 4th St., all of which are designated as Urban Center Streets with typical right-of-way dedication of 30.5 feet from centerline. Per a right-of-way determination by the Zoning and Development Administrator, forty-six feet of dedication shall be required for S. Nelson Hackett Blvd. The remaining three streets were each determined to require 26.5 feet of right-of-way from the centerline.

Street Improvements: All adjacent streets are Urban Center. The Zoning and Development Administrator completed a right-of-way determination on July 2, 2024, for several alternative design elements that may be administratively approved. These requirements are described below.

- S. Nelson Hackett Blvd: The applicant proposes for the existing turn lane and ten-foot drive to remain. A portion of the road is proposed to be widened to accommodate a ten-foot slip lane and eight-foot parallel parking lane with 0.5-foot curb. A four-foot furniture zone and eight-foot sidewalk are proposed following the curb. As the ten-foot slip lane is not an administratively approvable item, a variance to §166.11(A), Conformance to Plans and Regulations has been requested with this application.

- W. South St., S. Block Ave., and W. 4th St.: The remaining three streets are proposed to include a 10-foor drive lane, 8-foot parallel parking lane with bump-outs, 0.5-foot curb, and eight-foot sidewalk including three-foot deep urban tree wells. The typical furniture zone requirement was permitted to be administratively removed along these streets.

Access Management/Connectivity: Staff has determined that the proposed development is compliant with the City's access management and connectivity standards with the exception of the above variance request. Memos have been provided from Solid Waste and the Fire Marshall's office indicating no concerns with access as designed. Further, the police have requested proposed parking on Nelson Hackett be well-lit for public safety but have otherwise indicated that they do not see substantial issues arising from the proposed development.

Design Standards: Staff finds the proposed development is substantially in compliance with §166.21 Downtown Design Overlay District, §166.22 Parking Garages, §166.23 Urban Residential Design Standards, and 172.04 Parking Lot Design Standards except where variances are specifically requested above. Final plans will be reviewed with grading and building permits.

Parking Design and Number of Spaces: Reductions in proposed parking counts as described in §172.05(A)(2) are by-right per ordinance and are not subject to discretionary approval. Based on proximity to multiple transit stops, the proposed development is within the area where a 15% reduction of the required number of spaces may be taken, which would reduce the total number of required vehicle spaces from 138 (one per bedroom) to 117. The applicant does not propose to utilize this full reduction. Rather, they propose to shift a total of 9 spaces from full vehicle spaces to motorcycle/ scooter spots, and an additional 12 from vehicle to bicycle racks. Accounting for motorcycle/scooter spaces and bicycle racks required in other sections of the code, a total of 137 total bicycle or vehicle spaces are proposed with the development. This total is only one space fewer than the number of bedrooms proposed

As noted above, the proposal is within allowances permitted by right which are not subject to discretionary approval. However, staff further analyzed similar large multifamily apartments and their density and parking structures in order to provide a comparison given extensive public concern. Based on this analysis, staff finds that the proposal not only meets required parking minimums, but also exceeds the typical parking of other large apartment complexes.

Development	Bedroom Count per Acre	Percent Parked (Vehicle, Motorcycle / Scooter, and Bike Racks)
Urban Lofts at Nelson Hackett	108	99% (86% auto)
Atmosphere Apartments	188	85% (60% auto)
Cardinal Apartments	174	88% (81% auto)
Academy at Frisco Apartments (When Considering Residential Only, Project also includes 8,000 sf of commercial)	227	103% (93% auto)
Gather Dickson	256	103% (59% Auto spaces)

The applicant's request to reconsider the proposal also includes multiple steps the applicant intends to utilize to encourage car-free renting, including providing a discount on rent for those who do not require a parking spot, stating in the leases that tenants are expected to utilize on-site parking rather than the surrounding neighborhoods, and providing a designated drop-off zone on nelson Hackett for rideshare pick-up and drop-off.

Water and Sewer System: The applicant is proposing to install a fire hydrant, fire lines, and water meters to provide domestic service and fire protection to the development, and to install a new sanitary sewer main in E 4th St to provide sanitary sewer service to the development.

Parkland dedication or fee in-lieu: The Parks and Recreation Advisory Board (PRAB) reviewed this proposal at a meeting held on March 7, 2022. The Parks and Recreation Advisory Board recommended fee-in-lieu of parkland dedication. Final park fees shall be determined and paid prior to the issuance of any building permits. Based on current information, fees for 138 new multifamily residential units minus the previous 16 multifamily units previously located on site would result in a fee of $116,144.

Tree Preservation:
Canopy minimum requirement: 10.0%
Existing Canopy: 48.0%
Preserved canopy: 5.0%
Mitigation required: 56 two-inch caliper trees

While a large number of trees are proposed to be removed, staff finds that most of these would be heavily impacted by any street improvements which comply with the master street plan or required construction of any buildings within the build-to-zone. Tree preservation is proposed in the southwest corner of the property that will also serve as a communal outdoor space. 43 on-site mitigation trees and 10 off-site mitigation trees are proposed. Green facades and green roofs are also proposed on the site, which may take the place of an additional 3 mitigation trees.

Public Comment: Staff has received substantial comments on this proposal, with the majority expressing opposition. Several members of the public have provided both multiple written and verbal comments. Six people spoke at Subdivision Committee and 18 spoke at the August 12 Planning Commission meeting. Including written comments received before and after the August 12 Planning Commission meeting, staff has received 53 written comments from 37 unique individuals. Comments opposed to the development generally cited include increased traffic danger and congestion, insufficient or dangerous parking, conflicts with the existing neighborhood character, a high number of children and walkers, inadequate existing infrastructure, opposition to small “efficiency” units, and incompatible density. Comments in support have cited the need for more affordable housing in the city, previous multifamily use of the property, a thoughtful approach and transition, good design, and high-quality materials.

RECOMMENDATION: Staff recommends approval of **LSD-2024-0011** with the following conditions:

Conditions of Approval:

1. **Planning Commission determination of variance to §166.11(A), Conformance to Plans and Regulations.** *Staff recommends approval of the requested variance with the following conditions:*
    a. Proposed parallel parking along Nelson Hackett shall be well-lit.
    b. Modified curb shall be installed between the travel and buffer lanes, and the buffer lane shall be constructed out of stamped colored concrete (similar to roundabout truck aprons) to create a visual and tactile change in material between the travel and parking lanes. The exact stamp pattern and colored concrete may be submitted to Engineering for approval with the grading permit. Should the Planning Commission choose to specify an exact stamp pattern and

concrete color, staff recommends it match what was installed at the Porter/Deane/Stephen Carr roundabout.

Subdivision Committee recommended in favor.

2. **Planning Commission determination of variance to §166.08(F): Access Management.** *Staff recommends approval of the requested variance with no added conditions.*

   Subdivision Committee recommended in favor.

3. **Planning Commission determination of variance §166.21(E)(1): Dumpster Location.** *Staff recommends approval of the requested variance with the following conditions:*
   a. *The dumpster screening enclosure shall be constructed of high-quality materials such as the proposed CMU with a brick façade and with either vegetative screening or public art to minimize visual impact from the south.*

   Subdivision Committee recommended in favor.

4. **Planning Commission determination of variance to §172.04(C)(4): Parking Lot Location Standards.** *Staff recommends approval of the requested variance with no added conditions:*

   Subdivision Committee recommended in favor.

5. **Planning Commission determination of right-of-way dedication.** *Staff recommends right-of-way dedication in the following amounts.:*
   a. Forty-six feet (46') of right-of-way dedication for N. Nelson Hackett Blvd from street centerline.
   b. Twenty-six and a half feet (26.5') of right-of-way dedication for E. South St. from street centerline.
   c. Twenty-six and a half feet (26.5') of right-of-way dedication for S. Block Ave. from street centerline.
   d. Twenty-six and a half feet (26.5') of right-of-way dedication for W. 4th St. from street centerline.

   Subdivision Committee recommended in favor.

6. **Planning Commission determination of street improvements.** *Staff recommends street improvements as described below:*
   a. S. Nelson Hackett Blvd: 5.5-foot left turn lane (half), 10-foot drive lane, 10-foot alternative slip lane, 8-foot parallel parking lane, 0.5-foot curb, 4-foot furniture zone, and 8-foot sidewalk
   b. W. South St., S. Block Ave., and W. 4th St.: 10-foot drive lane, 8-foot parallel parking lane, 0.5-foot curb, 0-foot furniture zone, and 8-foot sidewalk

   Subdivision Committee recommended in favor.

7. Parks fees shall be determined and paid prior to building permit issuance. Based on current information, fees for 138 new multifamily residential units would be required in the amount of $139,944.

8. Remaining comments from Planning shall be addressed, including:
    a. Extend screening wall around parking's east side within 4th St. build-to-zone.

9. Conditions of approval from Engineering, Fire, and Urban Forestry are included in the official conditions of approval, attached hereto;
    a. Address remaining plan comments
    b. Provide domestic flow demands and fire flow calculations to ensure water meters and fire lines are sized appropriately.
    c. Retaining walls over 4 feet in height shall be designed by a professional engineer licensed in Arkansas. Safety railings are required for the retaining wall proposed along S. Nelson Hackett Blvd. Limits of wall construction must be shown on plans. Geogrid cannot be in right-of-way.
    d. Existing curb inlets to be converted to grate inlets must perform how existing curb inlets function- spread, depth, capture, etc. Include calculations in drainage report.

Standard Conditions of Approval:

10. Impact fees for fire, police, water, and sewer shall be paid in accordance with city ordinance;

11. Technical Plat Review and Subdivision Committee comments (to include written staff comments provided to the applicant or their representative, and all comments from utility representatives: Black Hills Energy, AT&T, Ozarks Electric, SWEPCO, and Cox Communications);

12. Staff approval of final detailed plans, specifications and calculations (where applicable) for grading, drainage, water, sewer, fire protection, streets (public and private), sidewalks, and tree preservation. The information submitted for the plat review process was reviewed for general concept only. All public improvements are subject to additional review and approval. All improvements shall comply with the City's current requirements;

13. Large scale development approval shall be valid for one year;

14. Prior to building permit, a cost estimate for all required landscaping is to be submitted to the Landscape Administrator for review. Once approval is gained, a guarantee is to be issued (bond/letter of credit/cash) for 150% of the cost of the materials and installation of the plants. This guarantee will be held until the improvements are installed and inspected, at the time of Certificate of Occupancy; and

15. Prior to the issuance of a building permit, the following is required:
    a. Grading and drainage permits;
    b. Separate easement plat for this project that shall include any tree preservation areas and all utility and access easements;
    c. Exterior lighting package must be provided to the Planning Division;
    d. An on-site inspection by the Landscape Administrator of all tree protection measures prior to any land disturbance;
    e. Project Disk with all final revisions; and
    f. Completion of all required improvements or the placement of a surety with the City (letter of credit, bond, escrow) as required by Section 158.01 "Guarantees in Lieu of Installed Improvements" to guarantee all incomplete improvements. Further, all

improvements necessary to serve the site and protect public safety must be completed, not just guaranteed, prior to the issuance of a Certificate of Occupancy.

PLANNING COMMISSION ACTION: ☒ **Approved** ❒ **Tabled** ❒ **Denied**

Meeting Date: **September 23, 2024**

Motion: WERNER

Second: CASTIN

Vote: 8-1-0 (PAYNE OPPOSED)

"I move to approve LSD-2024-0011, determining"
•In favor of variance to §166.11(A), Conformance to Plans and Regulations;
•In favor of variance to §166.05(F), Access Management;
•In favor of variance to §166.21(E)(1), Dumpster Location;
•In favor of variance to §172.04(C)(4): Parking Lot Location Standards;
•In favor of recommended right-of-way dedication,
•In favor of recommended street improvements, and
•In favor of all other conditions as recommended by staff."

RE: **Approval/Denial of LSDs/PPLs and Variances**

I sent a memo in July (attached) about the approval/denial criteria for large scale developments and preliminary plats. It did not get into how variances might play a role in the consideration of a development so I wanted to provide that context.

Variances must be considered based on the standards set forth in § 156.03, which governs development, parking and loading variances:

> If the provisions of Development, Chapter 166, or Parking and Loading, Chapter 172 are **shown by the developer to cause undue hardship as they apply to this proposed development (including, but not limited to financial, environmental, or regulatory) and that the situation is unique to the subject property**, the City Planning Commission may grant a variance, on a temporary or permanent basis, to the development from such provision, so that substantial justice may be done and the public interest secured; provided that the variation will not have the effect of nullifying the intent and purpose of the development or parking and loading regulations.

At next Monday's meeting you are reconsidering the Urban Lofts at Nelson Hackett project. The applicant now requests four variances instead of six:

1. Variance # 1 – Slip Lane: With this variance, the Planning Commission is not considering the parallel parking proposed for the project. You are considering only the slip lane between the driving lane and the parking spaces. If you do not grant the variance, the project would still be authorized by the UDC to construct parallel parking but it would be immediately adjacent to the driving lane. Whether the slip lane variance

is approved or not, the parking itself should be considered within the standard for approval/denial of a large scale development.

2. Variance #2 – Access Management: With respect to the access management variance, our office has consistently opined that a property owner has a constitutional right to access any street abutting its property. Here the applicant is requesting a second point of access to a public street which should be granted.
3. Variance #3 – Dumpster Location: I think any developer of this property could establish a hardship since there is no "rear yard" in which to place a dumpster; however, the Planning Commission certainly has the authority to approve conditions that ensure the intent of the requirement is met, including placement and screening.
4. Variance #4 – Parking Lot Location Standards: The project proposes to extend the parking lot into the build-to-zone because the applicant wishes to provide more parking for residents. The Planning Commission could potentially consider this a self-imposed hardship; however, if this variance is not granted, I understand the applicant could revise its parking plan by simply removing those spaces from the plan. This would remove the build-to-zone encroachment and nullify the need for a variance but could also lead to more off-site parking.

Just because a project requires variances doesn't mean it should be denied. The UDC provides for variances because it recognizes that certain project sites may present challenges others do not. As stated above, those challenges can include, but are not limited to, financial, environmental, or regulatory hardships. However, even if some variances are denied, it does not mean the entire project can be denied.

Conclusion

If the Planning Commission intends to deny a variance, you should clearly state why it did not meet the standards set forth in Chapter 156.

If the Planning Commission intends to deny a preliminary plat or large scale development, you should clearly state which of the six reasons set forth in § 166.02(C)(2)(a) led to the denial. As stated in the July memo, "if a proposed Large Scale Development or Preliminary Plat meets the minimum standards of the Unified Development Code, it must be approved even if every Commissioner believes it is a terrible development unanimously opposed by the neighbors."

OFFICE OF THE
CITY ATTORNEY

DEPARTMENTAL CORRESPONDENCE

Stacy Barnes
Paralegal

TO: **Planning Commissioners**

FROM: **Blake Pennington**, Senior Assistant City Attorney

DATE: **July 8, 2024**

RE: **Approval/Rejection of Large Scale Developments/Preliminary Plats**

The Planning Commission can be faced with strong neighborhood opposition to a Large Scale Development (LSD) or Preliminary Plat with compelling arguments that the proposal is incompatible with the existing neighborhood, too dense, likely to devalue adjoining homes, etc. These types of arguments may not be considered when determining whether to approve or reject a Preliminary Plat or LSD. **The Planning Commission must follow the dictates of the Unified Development Code (enacted by the City Council).**

The Arkansas Supreme Court has clearly held:

> **"When a subdivision ordinance specifies minimum standards to which a preliminary plat must conform, it is arbitrary as a matter of law to deny approval of a plat that meets those standards."** Richardson v. City of Little Rock Planning Commission, 295 Ark. 189, 747 S.W. 2d 116, 117 (1988).

The City Council has enacted those minimum standards in the Unified Development Code. When it comes to denial of a large scale development or preliminary plat, you may only consider the six factors set forth in § 166.02(C)(2)(a):

> (a) Reasons For Denial. The Subdivision Committee or Planning Commission may refuse to approve a large scale development, preliminary plat or concurrent plat for any of the following reasons:
>
> (i) The plat or development plan is not submitted in accordance with the requirements of this chapter.

(ii) The proposed development would violate a city ordinance, a state statute, or a federal statute.

(iii) The developer refuses to dedicate the street right-of-way, utility easements or drainage easements required by this chapter.

(iv) The proposed development would create or compound a dangerous traffic condition. For the purpose of this section, a dangerous traffic condition shall be construed to mean a traffic condition in which the risk of accidents involving motor vehicles is significant due to factors such as, but not limited to, high traffic volume, topography, or the nature of the traffic pattern.

(v) City water and sewer is not readily available to the property within the large scale development, preliminary plat, or concurrent plat and the developer has made no provision for extending such service to the development.

(vi) The developer refused to comply with ordinance requirements or conditions of approval for on-site and off-site improvements.

Any objection or reason to deny a Large Scale Development or Preliminary Plat must be included within those six stated reasons to be valid. If a proposed Large Scale Development or Preliminary Plat meets the minimum standards of the Unified Development Code, **it must be approved even if every Commissioner believes it is a terrible development unanimously opposed by the neighbors**.

Although the City Council has clear authority to amend the UDC and change the factors that could be considered beyond the six currently enacted by the City Council, until such an amendment occurs you **must** obey the current Code of Ordinances.

"A city simply cannot pass procedural ordinances they expect to be followed by their residents and then conveniently ignore them themselves. **A legislative body must substantially comply with its own procedural policies.**" Potocki v. City of Fort Smith, 279 Ark. 19, 648 S.W. 2d 462, (1983). (emphasis added)

CITY OF FAYETTEVILLE ARKANSAS

STAFF MEMO

TO: Donna Wonsower, Planner

FROM: Melissa Boyd, Staff Engineer

DATE: September 17, 2024

SUBJECT: **Planning Commission Engineering Comments for LSD-2024-0011 Urban Lofts at Nelson Hackett**

Water: The applicant is proposing to install a fire hydrant, fire lines, and water meters to provide domestic service and fire protection to the development.

Sewer: The applicant is proposing to install a new sanitary sewer main in W 4th St to provide sanitary sewer service to the development.

Streets: The applicant is proposing to widen S Nelson Hackett Blvd, W South St, S Block Ave, and W 4th St along the project's frontage to provide on-street parking. The applicant has also requested two City Engineer determinations. The first request is to install a portion of a retaining wall within right-of-way at the south end of the sidewalk improvements along S Nelson Hackett Blvd. The second request is for on-street parking spaces to encroach within sight triangles on W South St, S Block Ave, and W 4th St. Both requests as shown on the exhibits included with the request dated July 3, 2024, have been approved by the City Engineer.

On-street parallel parking along S Nelson Hackett Blvd will include a buffer lane between the travel and parking lanes to allow vehicles to safely exit and re-enter traffic. Staff recommends a condition be added that a modified curb be installed between the travel and buffer lanes, and for the buffer lane to be constructed out of stamped colored concrete, similar to roundabout truck aprons, to create a visual and tactile change in material between the travel and parking lanes. The exact stamp pattern and concrete color may be submitted to Engineering for approval with the grading permit. Should the Planning Commission choose to specify an exact stamp pattern and concrete color, staff recommends it match what was installed at the Porter/Deane/Stephen Carr roundabout.

Drainage: This development is required to meet the 4 Minimum Standards for water quality, channel protection, overbank flood protection, and extreme flood protection of the Drainage Criteria Manual. The drainage report is still being reviewed for compliance with these requirements.

Plan Comments:

1. Provide domestic flow demands and fire flow calculations to ensure water meters and fire lines are sized appropriately.
2. Retaining walls over 4 feet in height shall be designed by a professional engineer licensed in Arkansas. Safety railings are required for the retaining wall proposed along S. Nelson Hackett Blvd. Limits of wall construction must be shown on plans. Geogrid cannot be in right-of-way.

3. Existing curb inlets to be converted to grate inlets must perform how existing curb inlets function- spread, depth, capture, etc. Include calculations in drainage report.
4. Address comments on plans and drainage report.

Standard Comments:

1. All designs are subject to the City's latest design criteria (water, sewer, streets and drainage). Review for plat approval is not approval of public improvements, and all proposed improvements are subject to further review at the time construction plans are submitted.
2. Any damage to the existing public street due to construction shall be repaired/replaced at the owner/developers expense
3. All public sidewalks, curb ramps, curb & gutter, and driveway aprons along this project frontage must meet ADA guidelines and be free of damage. Any existing infrastructure that does not conform to ADA guidelines or is otherwise damaged must be removed and replaced to correct the issue. Coordinate with the engineering department for inspection of existing facilities to determine compliance.
4. Water and sewer impact fees will apply for the additional impact to the system. The fees will be based on the proposed meter size and will be charged at the time of meter set.
5. Note, the following portions of all projects will typically not be reviewed by the Engineering Division until time of construction-level review (unless specifically requested at plat review):
    - Storm Sewer pipe/inlet sizing, gutter spread, profiles, or utility conflicts
    - Sanitary Sewer pipe sizing, profiles, or utility conflicts
    - Waterline fittings, callouts, or utility conflicts
    - Street profiles
    - Fine grading/spot elevations

CITY OF FAYETTEVILLE ARKANSAS

TO: Planning Division

FROM: Zach Foster, Parks Planning

DATE: September 9, 2024

SUBJECT: Parks & Recreation Technical Plat Review Comments

****

PRAB Meeting Date:	March 7, 2022
Project Title:	Urban Lofts at Nelson Hackett
Project Number:	LSD-2024-0011
Project Location:	NW of S Block Ave and W 4th St
Plat Page:	523
Park Quadrant:	SE
Billing Name & Address:	Osment Investments LLC, 204 SE 6th St, STE 102 Bentonville, AR 72712

☐ **Land Dedication** ☒ **Fee-in-Lieu** ☐ **Combination**

FEE-IN-LIEU

Single Family:	____	units	x	$1,089	per unit =	$ 0	
Multi Family:	122	units	x	$952	per unit =	$116,144	

TOTAL Fees
$116,144

SUMMARY:

- Project proposes **0** SF units and **138** MF units.
- The project will be charged for **122** MF units since there were **16** MF units previously on site.
- The final amount of fee-in-lieu and/or land dedication needed to satisfy Parkland Dedication requirements will be determined after Planning Commission's approval of this project.
- Current fee-in-lieu and/or land dedication rates will be applied regardless of when project was approved by PRAB.
- Prior to final receipt by the city, all fees must be paid and any deeds for parkland dedication property must be:
  - Approved by the City's Land Agent in the Engineering Division.
  - Recorded at the Washington County Courthouse.
- Each additional housing unit that is constructed in Fayetteville places an increased demand on the Parks and Recreation system. The money collected as part of this project will be used to fund future park acquisitions and improvements for this park quadrant.

Subject: Re: Planning Commission - Monday, August 12 - Establishing Neighborhood Parking District

Follow Up Flag: Follow up
Flag Status: Flagged

Hi Jessie,

Thanks for passing this along. There's no process per se. City Council approval is required to establish or alter any paid parking boundaries and the area in question would require a new district to be established, the regulations of which would ultimately be determined/approved by City Council.

The only neighborhood district that has been established (Wilson Park area) was a result of a Council Member bringing it forward followed by several months of meetings with neighbors and Council members to fine-tune the details.

There is no turn-key approach. We (or someone) based on input from the neighbors would have to determine:

1. who is eligible to receive parking permits and how many per residence;
2. what is the cost for residential permits;
3. what will the parking rates be for non-permit holders;
4. are residents of the new development eligible for permits, and if not, why not; and
5. what additional staff resources are necessary to administer and enforce the program

If we do go down this road my recommendation would be to make any of the regulated parking "mixed-use" meaning anyone can park there with either a residential permit or by paying a parking rate. Experience has shown that making certain on-street spaces exclusive for residential permit-holders only has resulted in low utilization.

Lastly, is there a tool to require a parking impact study for this type of development? If it is perceived that the development is going to create a parking problem are there other tools or variance denials that can be used to mitigate?

Sorry, I know that's a bit of rambling, but those are my initial thoughts – I'm not sure if any of it's helpful but please let me know what additional info or clarification I can provide.

Thanks,

Justin Clay

Subject: LSD-2024-0011 Solid Waste Access

Good Afternoon,

There was a great deal of concern at the previous Planning Commission meeting regarding LSD-2024-0011 on Nelson Hackett, specifically in regards to potential impacts to fire, police, and solid waste services and whether these services will still be able to access the property and surrounding neighborhood with the proposed on-street parking. I know you have been working with the applicant extensively, and wanted to confirm if Solid Waste has any concerns about getting around this area from the proposal.

Title: Urban Lofts
Project: LSD-2024-0011

Subject: Fire Apparatus Access Roads

Donna,

The Fire Marshal's Office has reviewed the Large-Scale Development (LSD) plans for the Urban Lofts. The site is located at the corner of Nelson Hackett BLVD and West South Street. After our review we have found the project meets and exceeds the minimum requirements for Fire Apparatus Access Roads set forth by the Arkansas Fire Prevention Code (AFPC) 2021 edition.

Regards,

Captain Jason Hood

Subject: RE: LSD-2024-0011 Access Concerns

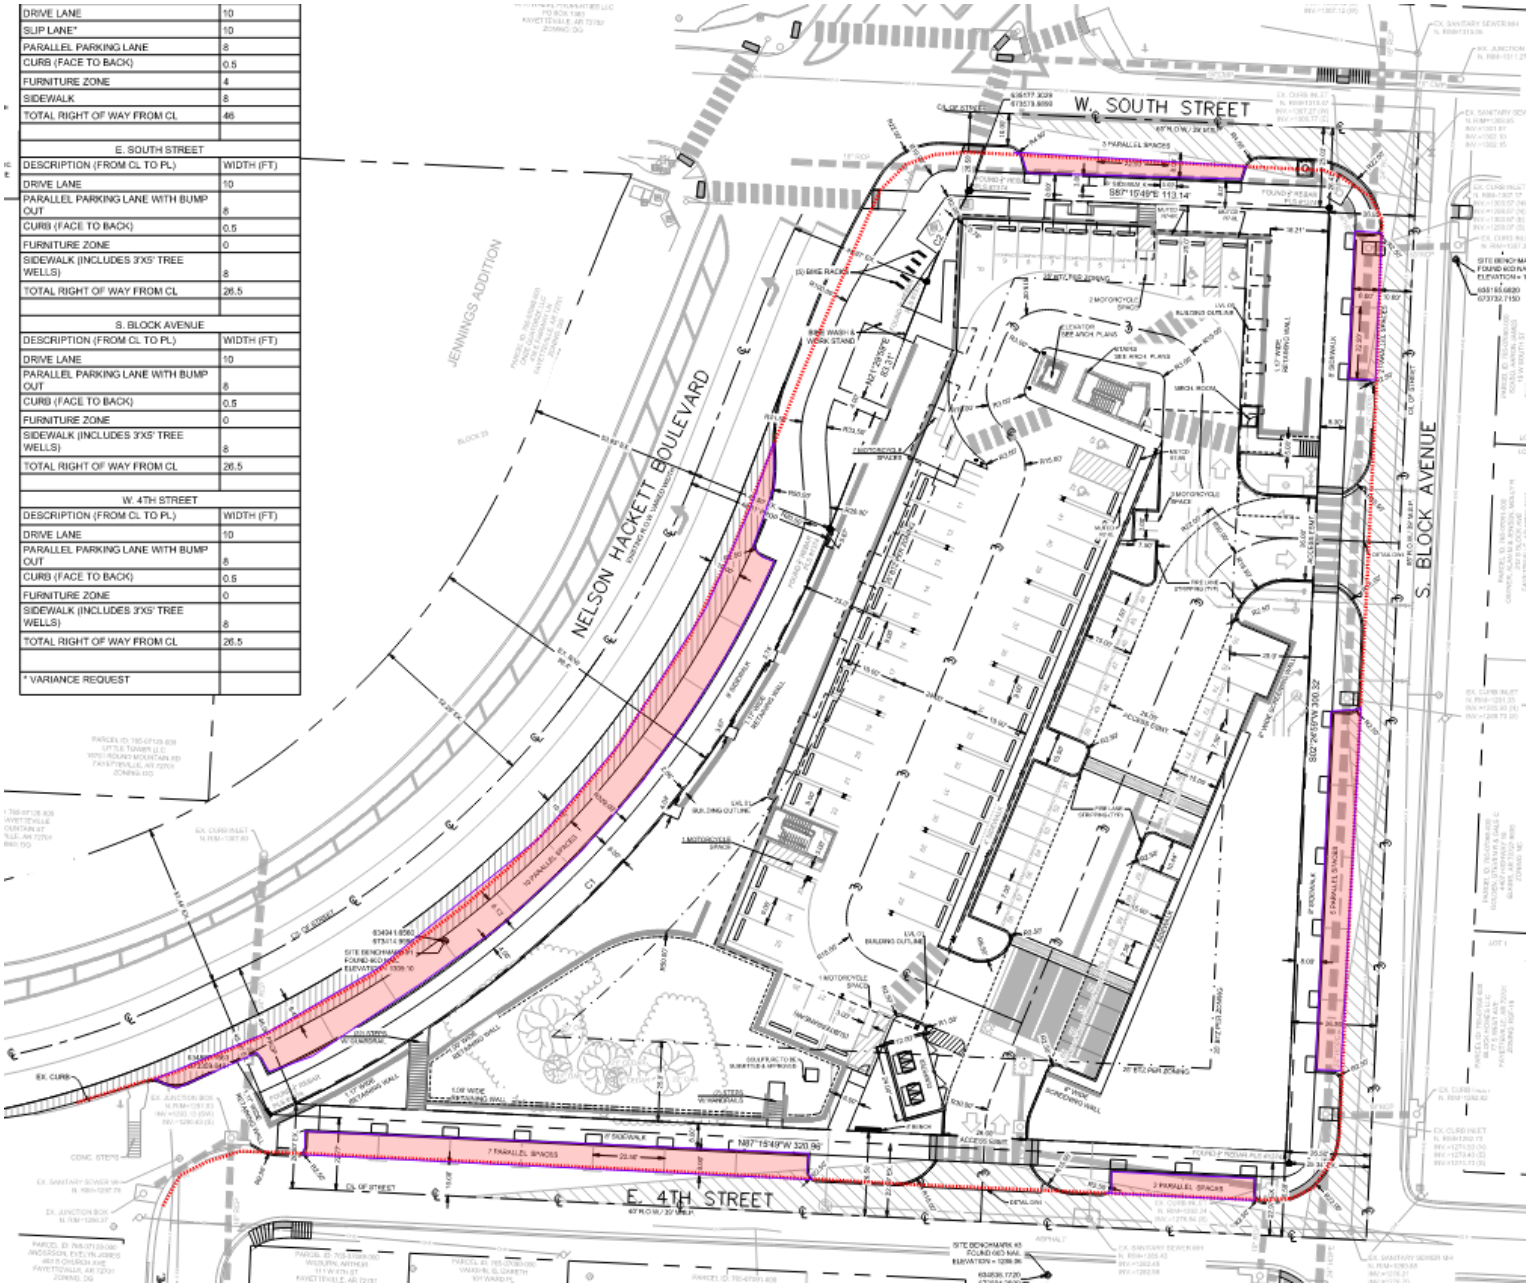
Good Morning,

I am working up the Planning Commission report for this project over the next few days and wanted to confirm that I am representing police comments accurately. Coul you pleas confirm the below:

- No issues with access to the apartments themselves
- Only major concern for the proposed development is the proposed on-street parking along W. Nelson Hackett Blvd., though this concern was lessened after determining that the proposed slip lane is 10 feet in width. Police recommend that this area is well-lit to ensure that anyone utilizing this area is fully visible.



Let me know if I've misstated anything. Thank you!

* VARIANCE REQUEST	

Proposed Widening

URBANLOFT Co.

August 22, 2024

Mr. Chairman,

We respectfully request that the Planning Commission reconsider our application for a Large Scale Development. We listened carefully to comments from commissioners and members of the public at the previous meeting, and are keen to present a few significant changes to the application in light of what we heard:

1. **A unit reduction of** nearly 20%, **from 163 total to 138 total.** It's important to point out that we are proposing more affordable 1-bed units. If we were instead proposing more expensive 2-bed units, the total units would be 69, or if we had chosen to follow the student housing model that is common in Fayetteville with 4-bed units, we would only have 35 units. Not only are our units more affordable, they're also more flexible, being appropriate for a wide variety of renters including young professionals, divorcées, retirees, and seasonal occupants (such as healthcare providers). In fact, we have seen that these customer segments are common in similar developments completed by this team, including in other college towns.
2. **A commitment to reserve up to 15 percent of the units for individuals making no more than a designated amount of AMI.** This commitment, which is unprecedented in terms of market-rate developments in this area as far as we're aware, is possible because providing housing for this segment of the population has been a goal of ours from day one. We feel strongly enough about this to put it in writing and invite you to make it a condition of approval. We are still working through these details and look forward to the opportunity to present these to the commission.
3. **A commitment to fully managed parking that encourages car-free renters**. A careful survey of our existing properties has revealed that on-site parking utilization hovers around 65% in our walkable developments, with many of our renters choosing other modes of transportation. Even though our project fully meets the city's requirements for parking, we will further encourage use of alternative transportation by:
    1. Providing a discount on monthly rent for renters who do not require a parking spot.
    2. Clearly stating in our lease agreements that renters should not plan to use on-street parking in the area as an alternative to our on-site accommodations.
    3. Providing a designated drop-off zone for ride sharing to be located on Nelson Hackett (away from neighborhood streets).

While none of these compromises are required by code, we are eager to offer them as a show of good faith in support of our earnest hope to be good neighbors. We have also made every effort to reduce or

215 Union St, STE 400
Jonesboro, AR 72401

https://www.theurbanloftco.com/

URBANLOFT Co.

eliminate variances from this project; what we are left with is a short list of items where conflicting codes and / or site constraints have created hardships that are unavoidable. We thank City Staff for their favorable recommendations with regard to these variances and the project as a whole. We also did not note any specific objections to these variances from Planning Commissioners.

For years, City leadership has pointed out that creating infill housing in downtown and along 71B is critical to meeting Fayetteville's housing needs now and in the future. Indeed, this property has been zoned for this kind of development for well over a decade. Commission's consideration of this development comes amid a push by the city to rezone much of 71B for similar development patterns – an effort that is supported by a great deal of citizen input. We ask you to please consider re-hearing this project, which we believe will be a catalyst for the revitalization of the 71B corridor and instrumental in bringing more workforce housing units to Fayetteville.

Should the commission agree to re-hear the application, we would like to further request that the item be tabled to the next meeting to allow us sufficient time to notify members of the public.

Sincerely,

Andrew Berner
Managing Partner

16 September 2024

City of Fayetteville
Planning Commission
125 W. Mountain Street
Fayetteville, AR 72701
479.575.8267

LSD Number: 2024-0011
DCI Job Number: 2023-196
Project Name: Urban Lofts at Nelson Hackett
Owner: The Dallas Collection, LLC
215 Union St. STE 400
Jonesboro, AR 72401

Project Narrative:
The Urban Lofts at Nelson Hacket Multi-Family development is located at 309 S Block Ave, Parcel 765-07087-000, and consists of approximately 1.25 acres. This parcel fronts four streets, Nelson Hackett for approximately 376', W. South Street for approximately 113', S Block Ave for approximately 300', and E 4th Street for approximately 321'. The project is a multifamily development consisting of 138 micro-loft units contained in two buildings: a four-story structure with basement level parking and a three-story structure.

Variance Request:
On behalf of the owner, DCI is requesting variances to the following sections of the Unified Development Code.

1. Variance to UDC Section 166.08.F. Code requires properties fronted by more than one public street to place access off the lowest functional classification or volume of traffic. Fire Code requires buildings in excess of 3 stories or 30' to have two separate approved entries. As this site is fronted by streets on all four sides with Downtown General classification, the lowest volume streets were chosen for the fire access. Additionally, the Access Management Standards (UDC 166.08.F) require curb cut separations of 100' for Neighborhood Links (the closest street section to Downtown General) from all intersections and other curb cuts. It is not possible to achieve two curb cuts on S. Block Street that would both be 100' from an intersection and one another as S. Block Street has a total distance of 327 linear feet fronting this property. Similarly, E. 4th Street is only 320 linear feet in frontage, which would not allow for two entries that meet the above criteria. Therefore, the site requires the two fire apparatus entries to be located on separate streets.
2. Variance to UDC Section 166.11, Conformance to Plans and Regulations, for Van Buren Ave. Code requires the development to conform to the official plans and regulations that make up the Comprehensive Land Use Plan including the Master Street Plan. The Master Street Plan requires Nelson Hackett BLVD to provide an 8' parallel parking lane adjacent to the traveled way. DCI is

requesting a variance to the Master Street Plan on the owner's behalf to allow the construction of a slip lane, providing additional room for northbound traffic on Nelson Hackett to decelerate and safely maneuver into the parallel parking spaces. Requiring strict adherence to the Master Street Plan would require users to access their vehicles immediately adjacent to the traveled way of Nelson Hackett, which had an average daily traffic of 1,000 vehicles per day in 2023 (latest data).

3. Variance to UDC Section 166.21.E.1. Code requires trash dumpsters to be in the rear yard of a development that is located within the Downtown Design Overlay District. As this site is fronted by streets on all four sides, no "rear" yard exists. The dumpster location has been placed such that it is on the "rear" side of the primary building, hidden from view of Nelson Hackett and W South Street, which are considered the primary streets for this development.
4. Variance to UDC Section 172.04.C.4. Code requires all parking lots in urban zones to be located behind or on the side of a building. DCI is requesting a variance for portions of the parking lot adjacent to Block Ave. With this property being surrounded by streets and designed to be an intense, dense urban project, all usable space not being utilized for buildings or required green space is being utilized for parking. Portions of the parking lot are located behind the "front" of the building fronting Nelson, but are visible from Block Ave. Requiring all parking to be behind a building would require more building space or the removal of parking below allowable limits.

Thank you for your consideration and we look forward to working with the City moving forward.

Sincerely,

Chase Henrichs, P.E.

MEMORANDUM

August 23, 2024

TO: Development Consultants Inc.

FROM: Nathan Becknell, P.E., PTOE, PTP

SUBJECT: Nelson Hackett Multi-Family
Traffic Impact Review

LOCATION: Nelson Hackett Boulevard - 4th Street to South Street
Fayetteville, Arkansas

STATE OF ARKANSAS
REGISTERED PROFESSIONAL ENGINEER
No. 13621
NATHAN LEE BECKNELL

INTRODUCTION

Traffic Engineering Consultants, Inc. (TEC) was retained by Development Consultants Inc. (DCI) to conduct a traffic impact review on the proposed Nelson Hackett Multi-Family development. The proposed development is located east of Nelson Hackett Boulevard from 4th Street to South Street in Fayetteville, Arkansas as shown in **Figure 1** in the attachments.

The proposed multi-family development would include two mid-rise buildings with 138 dwelling units as shown in **Figure 2** in the attachments. Access to the development is proposed via drives at both 4th Street and Block Avenue. Additional access is proposed via on-street parking on the east curb line of Nelson Hackett Boulevard, the south curb line of South Street, the west curb line of Block Avenue, and the north curb line of 4th Street. Nelson Hackett Boulevard is a three-lane, with side-path, generally north/south "downtown/urban street" with a posted speed limit of 35 mph and has an approximate average daily traffic (ADT) of 19,000 vehicles per day (vpd). 4th Street, South Street, and Block Avenue are two-lane "downtown/urban streets" with an unposted speed limit of 20 mph. Historical ADT data and master street plan section information is included in the attachments.

SITE GENERATED TRAFFIC

To determine the effects a new development will have on an existing street system, the new or additional traffic must be projected. The latest edition of the *Trip Generation Manual*, published by the Institute of Transportation Engineers, was used to determine the amount of traffic the development is expected to generate. The report is a nationally accepted reference which provides trip rates for determining the traffic expected to be generated by different land use types.

Available information was utilized regarding the anticipated land use to determine the site generated traffic. The *Multifamily Housing (Mid-Rise)* with 4-10 floors land use category was selected as the most applicable to determine the trip generation of the proposed development. The resulting traffic volumes projected to be generated by the proposed development once completed are indicated in **Table 1**.

TABLE 1

Projected Site Generated Trips

Building Type (Land Use)	ITE Land Use Code	Approximate Gross Floor Area or Other	Average Weekday Vehicle Trips			Average AM Peak Hour Directional Distribution		Average AM Peak Hour Directional Trips (vph)		Average PM Peak Hour Directional Distribution		Average PM Peak Hour Directional Trips (vph)	
			Per Day	Per Peak Hour of Adjacent Street Traffic: One Hour Between 7am & 9am	Per Peak Hour of Adjacent Street Traffic: One Hour Between 4pm & 6pm								
			(vpd)	(vph)	(vph)	IN	OUT	IN	OUT	IN	OUT	IN	OUT
Trip Rate*		(Dwelling Units)	4.43	0.36	0.39								
Multifamily Housing (Mid-Rise)	221	138	612	49	54	23%	77%	11	38	61%	39%	33	21

* Trip Rates from "TRIP GENERATION MANUAL", 11th Ed., Institute of Transportation Engineers.

The proposed development would be expected to generate 612 vehicle trips per day with 49 trips occurring during the a.m. peak hour and 54 trips occurring during the p.m. peak hour. The City of Fayetteville minimum street standards are silent for study threshold requirements for the downtown/urban street section. Typically, a full traffic impact analysis is recommended for any development along a residential link which generates 100 or more vehicle trips during a peak hour or a regional link which generates 200 or more vehicle trips during a peak hour. It is assumed 4th Street, South Street, and Block Avenue behave similar to residential links and Nelson Hackett Boulevard behaves similar to a regional link for study requirement purposes. The proposed development would be expected to generate less than the minimum recommendation for all neighboring streets, therefore, a full traffic impact analysis was not conducted.

PARKING

The proposed site plan includes a combination of on-site parking and on-street parking to satisfy the minimum vehicle parking demands of the development. The City of Fayetteville master street plan classifies Nelson Hackett Boulevard as a “downtown/urban street,” which is a section allowing for more access and non-vehicular considerations. The roadway has recently transitioned from a more vehicular service section to partially implement the latest city master street plan section. Recent modifications include reallocation of lanes from four primary vehicle lanes to three with the addition of exclusive bicycle facilities. The “downtown/urban street” section desires on-street parking along Nelson Hackett Boulevard that does not currently exist. The following information is a summary of considerations for safety and function with on-street parking at the south/east curb line of Nelson Hackett Boulevard along the site.

Literature Summary

NACTO *Urban Street Design Guide*

Design Controls – Design Speed – "On-street parking narrows the street and slows traffic by creating friction for moving vehicles."

AASHTO *Policy on Geometric Design of Highways and Streets* (*Green Book*)

2.5.1 – "The principal advantages of controlling access are the preservation of improvement of service and the reduction of crash frequency and severity."

2.5.5 and Figures 2-7/2-8 - The inclusion of a two-way left-turn lane compared with an undivided section has a reduced crash rate for all rates of access management.

3.2.1 – "The designer should provide sight distance of sufficient length that drivers can control the operation of their vehicles to avoid striking an unexpected object in the traveled way."

4.20 – "On-street parking generally decreases through-traffic capacity, impedes traffic flow, and increases crash potential… However, within urban areas… located on arterial highway routes, on-street parking should be considered in order to accommodate existing and developing land uses. Often, adequate off-street parking facilities are not available. Therefore, the designer should consider on-street parking so that the proposed street or highway improvements will be compatible with the land use."

4.20 – "When a proposed roadway improvement is to include on-street parking, parallel parking should be considered. Under certain circumstances, (front-in/back-out) angle parking is an allowable form of street parking."

4.20 – "Where diagonal parking exists or is planned, consideration may be given to back-in/head-out diagonal parking because of the improved visibility for the driver to see vehicular and bicycle traffic when existing the parking space. In addition, back-in/head-out diagonal parking is usually a simpler maneuver than parallel parking."

7.3.3.7 – "Where parking is needed to contribute to an urban context or where adequate off-street parking facilities are not available or practical, parallel or angle parking may be considered on lower-speed arterials as long as the capacity provided by the through lanes for motor vehicles and bicycles is considered. However, parking is highly undesirable on higher speed roadways (50 mph and above) and generally not used on facilities in the 40- to 45 mph range."

AASHTO *Highway Safety Manual*

12.7.1/13.11.2.1 – Crash Modification Factor (CMF) for On-Street Parking – CMF for three-lane with turn lane 1.465 for parallel parking and 3.428 for front-in/back-out angle parking. The base condition being an absence of on-street parking. A value over one indicates an anticipated increase in crashes. Note: The CMF clearinghouse provided similar results and did not include CMF data for back-in/head-out diagonal parking.

FHWA *Highway Performance Monitoring System Field Manual*

Signalized Intersection Approach Capacity Adjustment for Parking for one lane in group and 6 parking maneuvers per hour (two-way streets with parking on one side) is 0.87. This value indicates slight reduction in capacity due to parking near a signalized approach.

FHWA *Road Diet Informational Guide*

3.3.5 – "The FHWA advises that roadways with ADT of 20,000 vpd or less may be good candidates for a Road Diet…"

Stopping Sight Distance

To determine stopping sight distance as recommended by the AASHTO *Policy on Geometric Design of Highways and Streets* (*Green Book)*, 24-hour volumes and speeds were collected during a typical mid-week day with mild weather and while school was in session in February 2024 on Nelson Hackett Boulevard between 4th Street and South Street. Based on the traffic data collected, the Nelson Hackett Boulevard ADT is 16,000 vpd (Note: ARDOT 2022 ADT measured at 19,000 vpd) and the 85th percentile speed is 38.1 mph for northbound traffic and 39.0 mph for southbound traffic. Detailed printouts of all the traffic count data are included in the appendix.

For speeds of 38.1 mph and an uphill grade of 5.5% the *Green Book* recommends a stopping sight distance of 262-feet. The proposed parking along the south/east curb of Nelson Hackett Boulevard should be checked for adequate vehicle stopping sight distance to enhance safety.

SUMMARY

The proposed Nelson Hackett Multi-Family development would be expected to generate 54 additional trips during the typical weekday peak hour periods. The traffic generated by the proposed development would have negligible effects on the surrounding intersections and roadways during the weekday peak periods. Based on these factors, no additional traffic related issues are anticipated as a result of the proposed development.

The City of Fayetteville "downtown/urban street" master street plan section desires on-street parking along Nelson Hackett Boulevard that does not currently exist. The existing vehicle speeds and volumes present on the corridor are less than the common thresholds for safety and capacity as found in literature by NACTO, AASHTO, and FHWA. On-street parking would be considered typically compatible with the proposed land use and urban context. Back-in/head-out diagonal parking would be considered an acceptable alternative to parallel parking. A minimum stopping sight distance of 262-feet shall be provided for northbound traffic.

Additionally, for "downtown/urban street" sections surrounding the development that behave similar to residential links, the City of Fayetteville master street plan desires a street section as shown in the proposed site plan and recommended by traffic safety literature. The proposed development does not create or compound a dangerous traffic condition on the existing low-volume streets surrounding the development and is in keeping with the requirements and ideals of the City of Fayetteville master street plan.

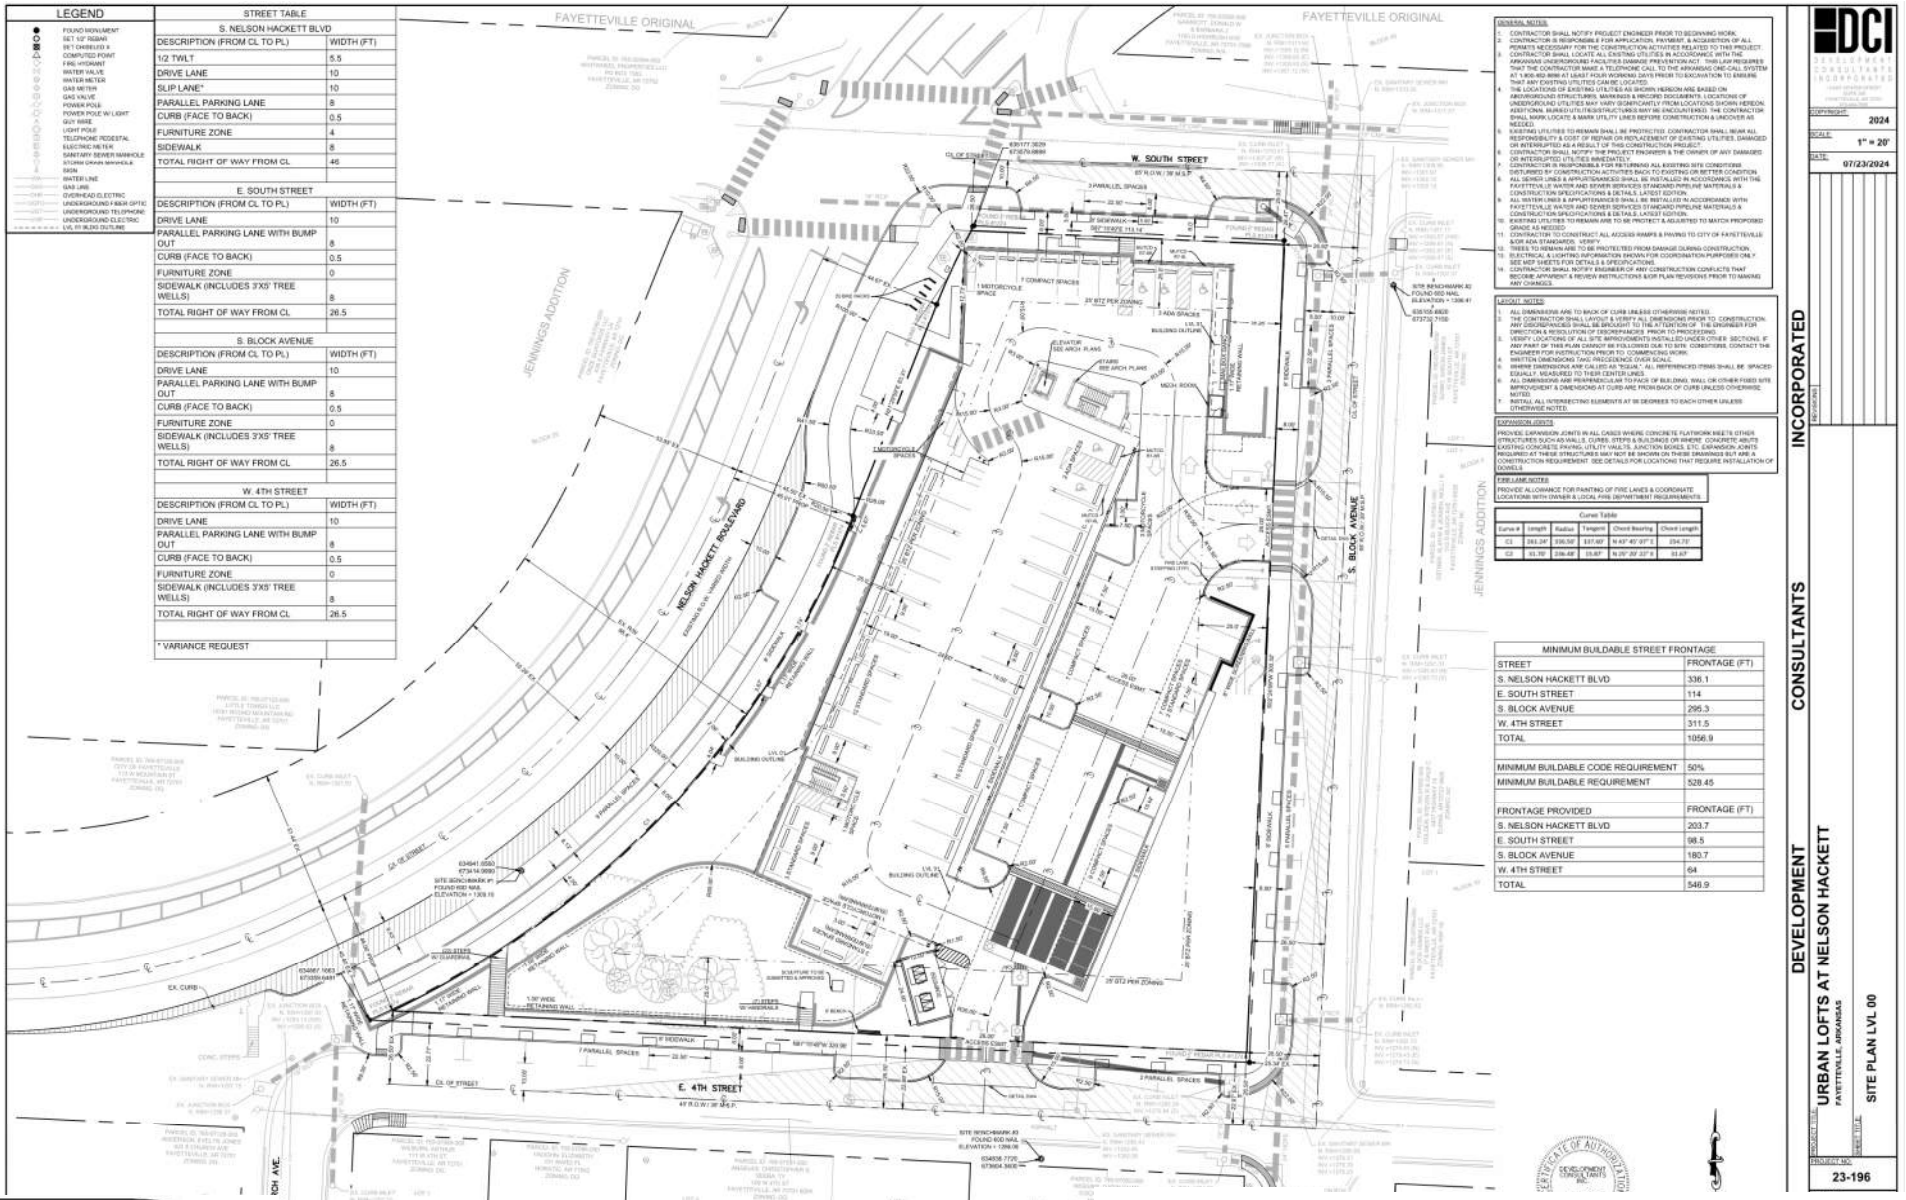
Fayetteville, Arkansas



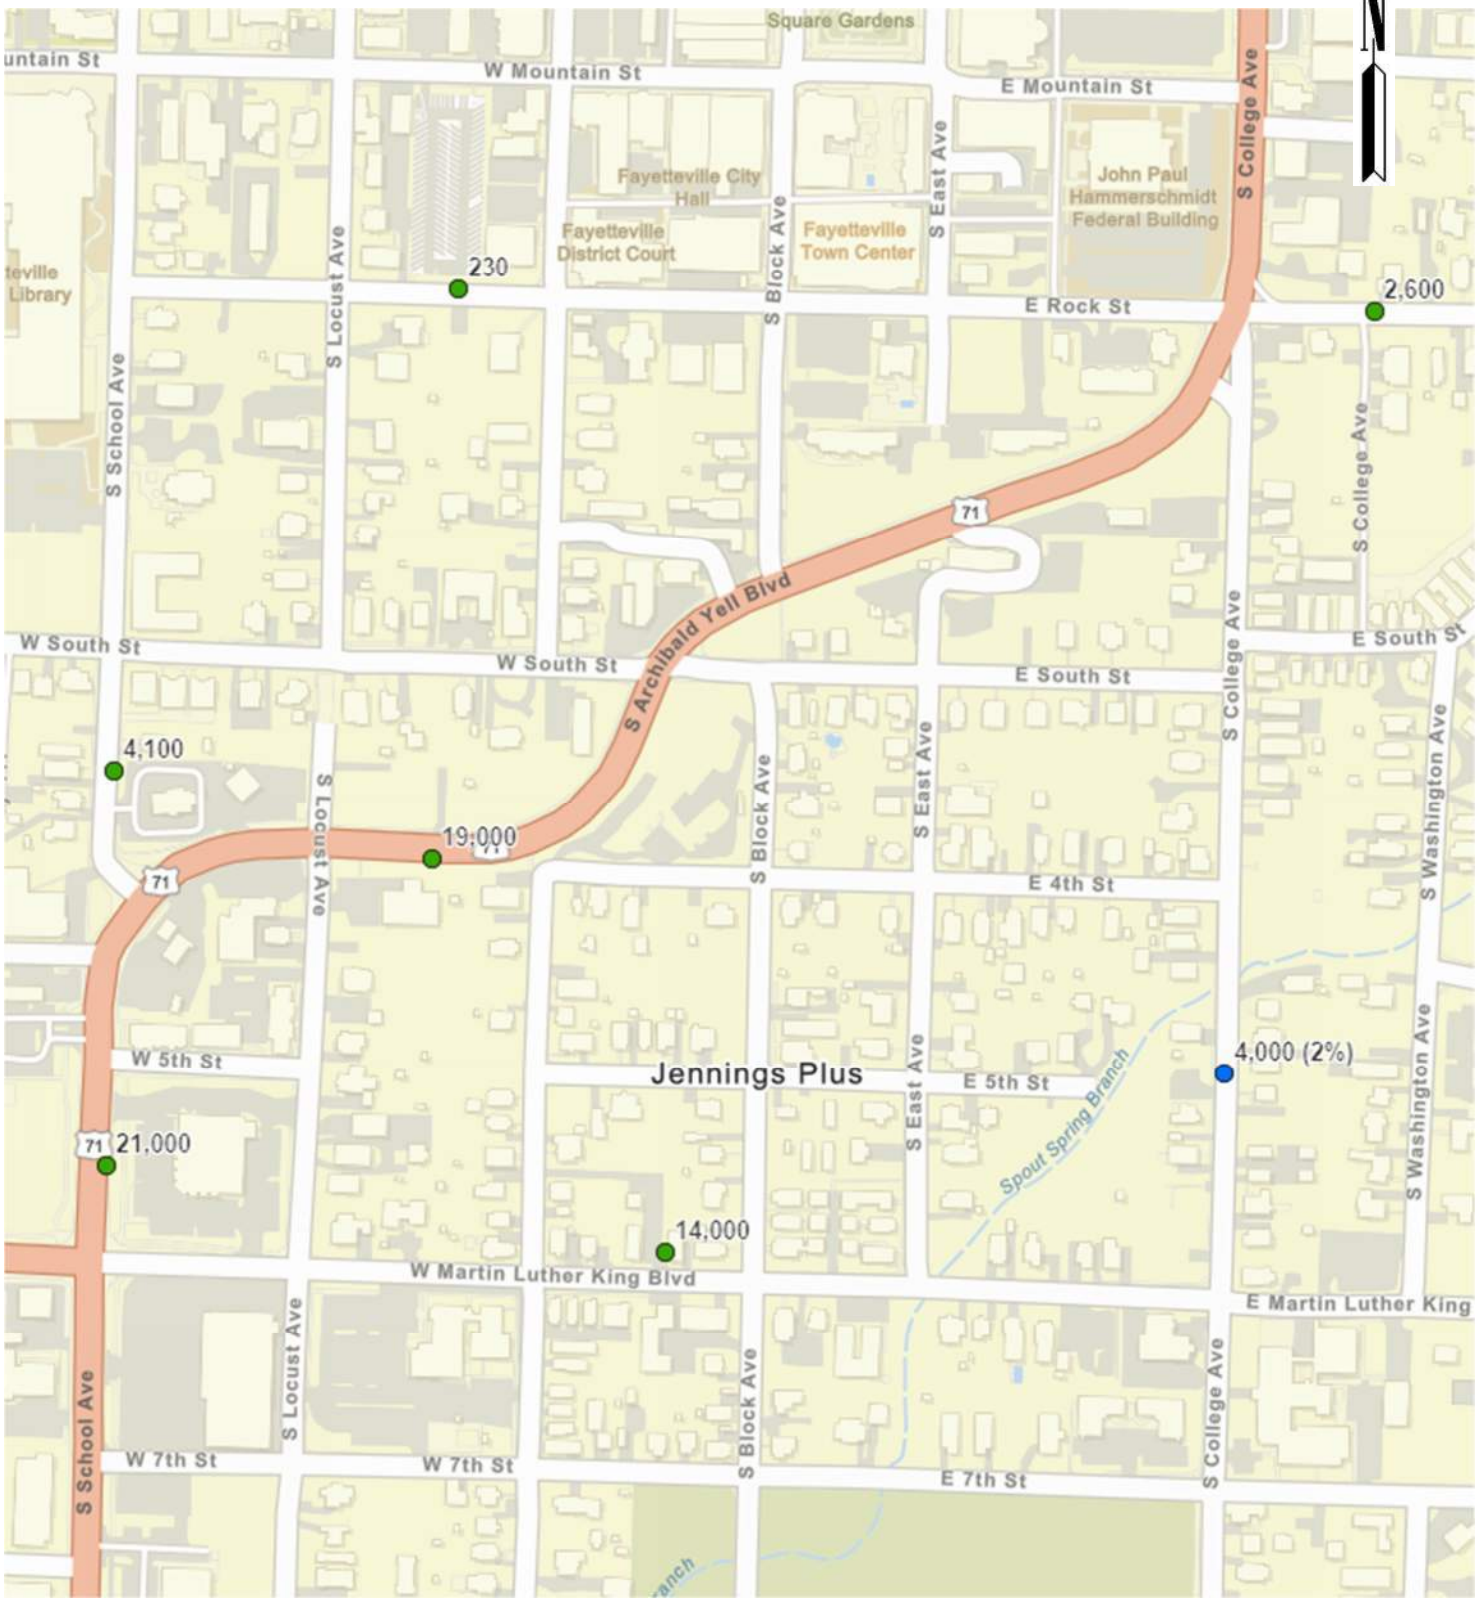


FIGURE 2. Site Plan

Nelson Hackett Multi-Family

2022 ADT—Nelson Hackett Blvd

Fayetteville, Arkansas

Downtown/Urban Street

Design Service Volume: Varies - Desired Operating Speed: 20-25 mph

The downtown (or urban) street section is intended to be used in Fayetteville's downtown core. Wide sidewalks, with separated furnishing/tree zones will be the standard. On-street parking is desirable and low-speed design should be encouraged to allow for maximum pedestrian comfort and utilization. Sight-lines at intersections should be protected from obstructions. Ideally, bicycles should be able to intermix with traffic safely and on-street protected bike facilities considered where traffic volumes or speeds exceed thresholds for all ages and abilities. Storm drainage infrastructure should have adequate depth or be offset to avoid conflicts with street tree plantings. Low-Impact Development (LID) features in green spaces are recommended best practices to incorporate alternative stormwater treatment techniques.

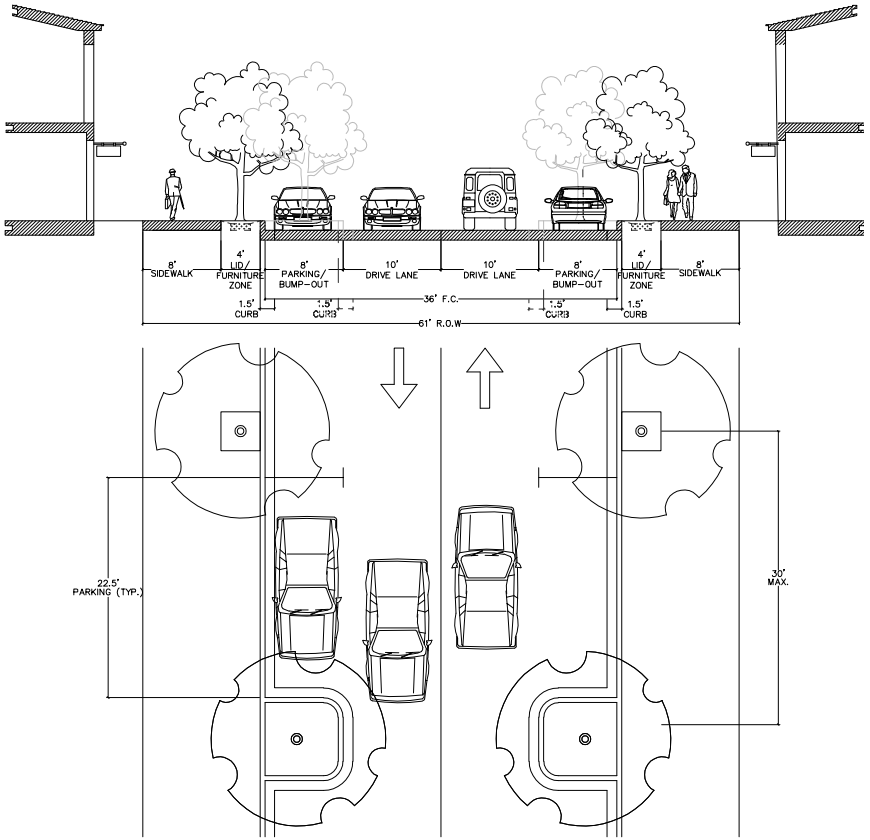

Figure 12.10 - Downtown/Urban Street

As determined by city staff, additional roadway elements may be required and include:

- An additional 2-ft frontage zone where buildings abut right-of-way. This may be accomplished with setbacks or additional right-of-way.
- If known or planned transit route, increase lane widths to 11-ft.

Alternative design elements may be approved administratively and include:

- Removal of the 8-ft parking lane or lanes to reduce the right-of-way by 16-ft will be considered when adequate parking is provided elsewhere.
- Sidewalk widths may be reduced to a minimum of 6-ft.
- Furniture zone may be reduced to 3-ft when determined appropriate by the Zoning and Develoment Administrator.
- Where bump-outs are used, the 4-ft furniture zone may be removed. Street trees may be planted behind sidewalk to meet requirements.
- Angled parking may be used with an additional amount of right-of-way as determined by the Zoning and Development Administrator. (79-ft Right-of-Way)

Example section (left) with parking on both sides.

Minimum Right-of-Way: 39-feet
Maximum Right-of-Way: 63-feet

GENERAL NOTES:

1. CONTRACTOR SHALL NOTIFY PROJECT ENGINEER PRIOR TO BEGINNING WORK.
2. CONTRACTOR IS RESPONSIBLE FOR APPLICATION, PAYMENT, & ACQUISITION OF ALL PERMITS NECESSARY FOR THE CONSTRUCTION ACTIVITIES RELATED TO THIS PROJECT.
3. CONTRACTOR SHALL LOCATE ALL EXISTING UTILITIES IN ACCORDANCE WITH THE ARKANSAS UNDERGROUND FACILITIES DAMAGE PREVENTION ACT. THIS LAW REQUIRES THAT THE CONTRACTOR MAKE A TELEPHONE CALL TO THE ARKANSAS ONE-CALL SYSTEM AT 1-(800)-482-8998 AT LEAST FOUR WORKING DAYS PRIOR TO EXCAVATION TO ENSURE THAT ANY EXISTING UTILITIES CAN BE LOCATED.
4. THE LOCATIONS OF EXISTING UTILITIES AS SHOWN HEREON ARE BASED ON ABOVEGROUND STRUCTURES, MARKINGS & RECORD DOCUMENTS. LOCATIONS OF UNDERGROUND UTILITIES MAY VARY SIGNIFICANTLY FROM LOCATIONS SHOWN HEREON. ADDITIONAL BURIED UTILITIES/STRUCTURES MAY BE ENCOUNTERED. THE CONTRACTOR SHALL MARK LOCATE & MARK UTILITY LINES BEFORE CONSTRUCTION & UNCOVER AS NEEDED.
5. EXISTING UTILITIES TO REMAIN SHALL BE PROTECTED. CONTRACTOR SHALL BEAR ALL RESPONSIBILITY & COST OF REPAIR OR REPLACEMENT OF EXISTING UTILITIES DAMAGED OR INTERRUPTED AS A RESULT OF THIS CONSTRUCTION PROJECT.
6. CONTRACTOR SHALL NOTIFY THE PROJECT ENGINEER & THE OWNER OF ANY DAMAGED OR INTERRUPTED UTILITIES IMMEDIATELY.
7. CONTRACTOR IS RESPONSIBLE FOR RETURNING ALL EXISTING SITE CONDITIONS DISTURBED BY CONSTRUCTION ACTIVITIES BACK TO EXISTING OR BETTER CONDITION.
8. ALL SEWER LINES & APPURTENANCES SHALL BE INSTALLED IN ACCORDANCE WITH THE FAYETTEVILLE WATER AND SEWER SERVICES STANDARD PIPELINE MATERIALS & CONSTRUCTION SPECIFICATIONS & DETAILS, LATEST EDITION.
9. ALL WATER LINES & APPURTENANCES SHALL BE INSTALLED IN ACCORDANCE WITH FAYETTEVILLE WATER AND SEWER SERVICES STANDARD PIPELINE MATERIALS & CONSTRUCTION SPECIFICATIONS & DETAILS, LATEST EDITION.
10. EXISTING UTILITIES TO REMAIN ARE TO BE PROTECT & ADJUSTED TO MATCH PROPOSED GRADE AS NEEDED
11. CONTRACTOR TO CONSTRUCT ALL ACCESS RAMPS & PAVING TO CITY OF FAYETTEVILLE &/OR ADA STANDARDS, VERIFY.
12. TREES TO REMAIN ARE TO BE PROTECTED FROM DAMAGE DURING CONSTRUCTION.
13. ELECTRICAL & LIGHTING INFORMATION SHOWN FOR COORDINATION PURPOSES ONLY. SEE MEP SHEETS FOR DETAILS & SPECIFICATIONS.
14. CONTRACTOR SHALL NOTIFY ENGINEER OF ANY CONSTRUCTION CONFLICTS THAT BECOME APPARENT & REVIEW INSTRUCTIONS &/OR PLAN REVISIONS PRIOR TO MAKING ANY CHANGES.

LAYOUT NOTES:

1. ALL DIMENSIONS ARE TO BACK OF CURB UNLESS OTHERWISE NOTED.
2. THE CONTRACTOR SHALL LAYOUT & VERIFY ALL DIMENSIONS PRIOR TO CONSTRUCTION. ANY DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER FOR DIRECTION & RESOLUTION OF DISCREPANCIES PRIOR TO PROCEEDING.
3. VERIFY LOCATIONS OF ALL SITE IMPROVEMENTS INSTALLED UNDER OTHER SECTIONS, IF ANY PART OF THIS PLAN CANNOT BE FOLLOWED DUE TO SITE CONDITIONS, CONTACT THE ENGINEER FOR INSTRUCTION PRIOR TO COMMENCING WORK.
4. WRITTEN DIMENSIONS TAKE PRECEDENCE OVER SCALE.
5. WHERE DIMENSIONS ARE CALLED AS 'EQUAL' ALL REFERENCED ITEMS SHALL BE SPACED EQUALLY, MEASURED TO THEIR CENTER LINES.
6. ALL DIMENSIONS ARE PERPENDICULAR TO FACE OF BUILDING, WALL OR OTHER FIXED SITE IMPROVEMENT & DIMENSIONS AT CURB ARE FROM BACK OF CURB UNLESS OTHERWISE NOTED.
7. INSTALL ALL INTERSECTING ELEMENTS AT 90 DEGREES TO EACH OTHER UNLESS OTHERWISE NOTED.

EXPANSION JOINTS

PROVIDE EXPANSION JOINTS IN ALL CASES WHERE CONCRETE FLATWORK MEETS OTHER STRUCTURES SUCH AS WALLS, CURBS, STEPS & BUILDINGS OR WHERE CONCRETE ABUTS EXISTING CONCRETE PAVING, UTILITY VAULTS, JUNCTION BOXES, ETC. EXPANSION JOINTS REQUIRED AT THESE STRUCTURES MAY NOT BE SHOWN ON THESE DRAWINGS BUT ARE A CONSTRUCTION REQUIREMENT. SEE DETAILS FOR LOCATIONS THAT REQUIRE INSTALLATION OF DOWELS.

FIRE LANE NOTES

PROVIDE ALLOWANCE FOR PAINTING OF FIRE LANES & COORDINATE LOCATIONS WITH OWNER & LOCAL FIRE DEPARTMENT REQUIREMENTS.

GENERAL DEMOLITION NOTES:

1. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO HAVE THOROUGH KNOWLEDGE OF THE ALL ITEMS SHOWN IN REGULAR PRINT OR LABELED ARE TO BE REMOVED.
2. ALL ITEMS SHOWN IN BOLD PRINT OR LABELED ARE TO REMAIN.
3. DEMOLITION PLAN SHOWS SOME, BUT NOT ALL, OF THE ITEMS TO BE REMOVED. CONTRACTOR SHALL REVIEW ENTIRE SITE AND INCLUDE ALL ITEMS NECESSARY FOR CONSTRUCTION OF THE PROJECT.
4. ITEMS NOT SHOWN TO BE REMOVED OR THEIR PLANT INVEST, THE PRODUCT LIMITS & BY ALL JURISDICTIONAL AUTHORITIES HAVING JURISDICTION.
5. ALL DEMOLITION WORK SHALL BE COORDINATED WITH THE CITY OF FAYETTEVILLE. NOTICE OF INTERRUPTION TO UTILITY SERVICES SHALL BE GIVEN TO THE OWNER(S) AND AREAS OF CONSTRUCTION OF THE PROJECT.
6. ALL DEMOLITION WORK SHALL BE COORDINATED WITH THE CITY OF FAYETTEVILLE. NOTICE OF INTERRUPTION TO UTILITY SERVICES SHALL BE GIVEN TO THE OWNER(S) AND AREAS OF CONSTRUCTION OF THE PROJECT.
7. ALL DEMOLITION WORK SHALL BE COORDINATED WITH THE CITY OF FAYETTEVILLE. NOTICE OF INTERRUPTION TO UTILITY SERVICES SHALL BE GIVEN TO THE OWNER(S) AND AREAS OF CONSTRUCTION OF THE PROJECT.
8. ALL DEMOLITION WORK SHALL BE COORDINATED WITH THE CITY OF FAYETTEVILLE. NOTICE OF INTERRUPTION TO UTILITY SERVICES SHALL BE GIVEN TO THE OWNER(S) AND AREAS OF CONSTRUCTION OF THE PROJECT.
9. ALL DEMOLITION WORK SHALL BE COORDINATED WITH THE CITY OF FAYETTEVILLE. NOTICE OF INTERRUPTION TO UTILITY SERVICES SHALL BE GIVEN TO THE OWNER(S) AND AREAS OF CONSTRUCTION OF THE PROJECT.
10. CONTRACTOR SHALL REVIEW RECORD DRAWINGS FOR EXISTING BUILDING & BUILDINGS BEING SHOWN TO BE REMOVED SHALL BE STORED & REUSED PER THESE PLANS OR AS DIRECTED BY OWNER.

GENERAL NOTES:

1. ALL WORK SHALL COMPLY WITH THE LATEST EDITION OF THE CITY OF FAYETTEVILLE, ARKANSAS CONSTRUCTION STANDARDS AND SPECIFICATIONS.
2. CONTRACTOR IS RESPONSIBLE FOR EXCAVATION, SHORING, & EXCAVATION OF ALL TRENCHES UNDERGROUND UTILITIES SHALL BE LOCATED AND STAKED PRIOR TO THE BEGINNING OF CONSTRUCTION. CONTRACTOR SHALL CONTACT ALL UTILITIES IN ACCORDANCE WITH THE ARKANSAS ONE-CALL SYSTEM AT 1-800-482-8998 AT LEAST FOUR WORKING DAYS PRIOR TO EXCAVATION TO ENSURE THE LOCATIONS OF EXISTING UTILITIES AS SHOWN HEREON ARE SHOWN ON
3. ALL UNDERGROUND UTILITIES MAY VARY. SHORT CUTS FROM LOCATIONS SHOWN HEREON. CONTRACTOR SHALL MARK LOCATE & MARK CITY OF FAYETTEVILLE UTILITIES BEFORE CONSTRUCTION & EXCAVATION AS

Thanks for the review Donna. I'm amazed the giant pit in the ground next to the soon-to-be point of pride for Fayetteville Nelson Hackett meets downtown design standards. Seems like a real design drawback to me, promoting folks to feel uneasy and making pedestrians not want to go near it and all the fire-rated safety stairs they are putting there.

Subject: Vote against Urban Lofts

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hello Fayetteville Planning Commissioners,
I am writing today to request you **vote against the Urban Lofts proposal** LSD 2024-011 as it is currently being presented. There are many traffic dangers to this project as well as a long list of exceptions to Fayetteville's own development codes. It's way too much of a good thing.

1) National Highway data Bureau of Transportation Statistics shows 6 vehicle trips per day is the average for NWA from a residence. Even with the reduced project size to 138, this equals an average of 828 added vehicle trips per day from this project on our historic, narrow streets! Our streets are already crowded, with lots of kids, elderly walking pets, visitors trying to park, cars attempting to not block each other's mailboxes & trash cans on pickup day, etc. Common sense tells us **this is compounding a dangerous traffic situation** and is grounds for voting no.

2) What's with the **pit in the ground along Nelson Hackett** for this project? I'm stunned this pit meets the thorough, careful Downtown Fayetteville Design code. Huge efforts are going into making Nelson Hackett more prominent and safer with the recent Road Diet (reducing from 4 lanes to 3), and the awesome stoplight at South street intersection, and future trees and nice sidewalks planned. Now a pit in the ground along this project frontage? Folks will feel nervous and uncertain walking along there not sure of what's going on down there. Completely opposite of the beautiful streetscape with street-level shops we have all seen drawn up by the city vision over the last 20 years. This pit is a poor addition to the neighborhood and Nelson Hackett Drive. It pulls the neighborhood and the town down instead of bringing us up.

3) The mountain matters. This project is well-suited for a flat site, clearly seen by the pit needed to make the steep lot "flat" for the buildings. This **project does not respond or adapt to the steep site** at all, only creates more problems attempting to fight the mountain they are choosing to develop on. The long list of variances, which do not require approval, are proof that they are attempting to put too much on this site. Many other projects would fit nicely here at a lower 60 units per acre density: condos, townhomes, triplexes. These would still provide the much-needed increase in housing.

4) The **lack of 100 parking spots** for the project will be an enormous problem and traffic danger to this fragile neighborhood. Many of us don't have driveways and park on the street even today! We will be swamped with folks constantly looking for on-street parking. This isn't Boston or NYC. It's truly fantasy-land to think folks will rent the Urban Loft units without having a car.

5) Where is the buffer zoning? The DG zoning for Urban Lofts at 106 units per acre is massive! The established neighborhood is zoned NC at 10 units per acre. Good planning places a buffer between intensive uses and residential uses. Keep the Urban Lofts project to 40-60 units and it will all work safely.

We can all have it both ways, with multi-family and keeping the neighborhood intact. **Since there's no buffer zoning this project needs to be the buffer.** Ask the developer to lower the scale of Urban Lofts to prevent a traffic disaster.

6) This project is **killing the goose that laid the golden egg!** This neighborhood is experiencing a complete revival, thanks in part to the City's vision with the 2008 Walker Plan. That plan gave us the Neighborhood Conservation zoning and was the rocket that got us all headed in the right direction. Many folks are using gentle density, one property at a time, to revive this area. It's working! The Urban Lofts project will run out the folks who have worked hard to make this place special. Vote against this project to keep the success going.

Thanks for your time and efforts on this important city board.

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission:
We have resided in South Fayetteville, one block from LSD-2024-0011, for the last 24 years and have serious concerns regarding the project.

Over the years, we have witnessed bottlenecks created by cars parked on both sides of the streets which, on more than one occasion, have caused great difficulty for residents, garbage- and firetrucks and emergency personnel trying to reach their destinations. We are a neighborhood with active families who have small children who often play on or near these streets. The addition of at least 163 new residents with their vehicles increases the likelihood of cases of traffic endangerment in an area zoned as Neighborhood Conservation.

We are looking to the Planning Commission to support desirable development in our neighborhood and throughout the city, aligned with the values of livability, walkability, and a focus on arts, culture, and entertainment, as the Fayetteville Master Plan outlines. The scale and design of the proposed apartment complex make it unsuitable for this location. And while we understand the need for more housing in our growing city, the safety of Fayetteville's citizens and their right to a high quality of life should not be sacrificed.

Sincerely,
Cindy King and Jared Pebworth

To: <brad.payne@fayetteville-ar.gov>

Dear Sir,
There is a large high density development planned for the corner of 4th and Block streets. The proposal would be for 140-170 units. While there is hope to develop the site, the neighborhood lacks the infrastructure to safely accommodate such a development.
The lack of parking by the proposed development will cause a significant spill over into the surrounding community. Parking which is already stressed by current infill. The community has become a near model for Fayetteville. On my block alone, 2 houses have been razed and 5 houses have been built; proving that the infill policies are working.
However, the addition of 150 units with only 50% parking will radically change that. The current dog, child and person walkable neighborhood will likely be transformed into a commuter zone with a hellscape of parking.

The developer has asked for several variances. Firstly, the parking spot count includes spaces that already exist. The proposed parking on 4th and block are used regularly and would not be "invented" by the proposed development. Second, the proposed development is not within 1/4 mile of any public transportation. Yes if I could fly to the bus stop; it is, but if I could fly why do I need a bus? Thirdly, the suggestion that providing a bike or scooter parking is in any way a substitute for car parking is incorrect. Arkansas motor vehicle registrations per licensed driver is ~1.5
In short, this is the wrong development in the wrong place. I urge you to reject the proposal for safety, community development and civic pride

Donna,

My wife Louise and I live at 11 West South street, about 100 yards from the proposed Urban Lofts project. We have lived in our home for 40 years. We remain very concerned about the size of the project. On the street parking and pedestrian safety remain big concerns for us. There is a lot of pedestrian traffic on our street , bikes, parents walking with young children and people just strolling. Many of the homes in our wonderful little neighborhood have no driveways,(like our home), and on the street parking is our only choice. A development this size will severely tax these older small streets.

I am also concerned about the strain on the old infrastructure in this part of town. The city has repaired leaks in the water/ sewer mains on West South at least 3 times in the past year or so. We are not against development of this property. It's just the size of the proposal. It just doesn't fit. Thank you very much for your time and service to Fayetteville and your consideration of our concerns,

Franklin Evarts and Dr. Louise Rozier

Subject: Large scale apartment project on South Block street. LSD 2024-001.

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

City of Fayetteville Planning Commission,

My name is Franklin Evarts. My wife Louise and I have lived at 11, West South Street for nearly 40 years. In this time we have seen many changes, and quite a bit of new development and growth in our neighborhood, the majority of it being good and well thought out. Twenty years ago there were hardly any children around and a good percentage of the properties were rentals. Now there are many families buying properties because of the unique eclectic, friendly, diverse qualities of our little neighborhood. There are families walking with strollers and many kids playing in the streets. We are firstly concerned about safety, especially for the neighborhood children and then our own personal property. The apartment proposal is much too large as is. South street, which the development will border, was the main thoroughfare from Nelson Hackett and South College while all the traffic calming work was being done and there was so much traffic, and cars constantly were traveling way too fast. That was temporary. Many of the homes on South street have no driveways so street parking is our only choice; this makes the street even more narrow. When there are cars parked across from each other only one car can pass through at a time. I am very concerned about the safety of the pedestrians especially kids that are always on the street. There is a sidewalk on only one side of the street, and we are very concerned about such a large increase in traffic and potential overflow parking. We worry about the infrastructure of the neighborhood. The water main lines and sewage lines are repeatedly being repaired. The streets are too small and narrow to accommodate a large influx of new traffic. We understand that neighborhoods change. The proposed development is much too large and will negatively change our and many of our neighbors lives dramatically. Louise and I want to go on record to say we are not against safe, thought out, practical development.

Please consider these concerns when making your decision.

Thank you very much for your time and work for the city.

Sincerely,
Franklin Evarts and Louise Rozier

CITY OF FAYETTEVILLE ARKANSAS

From: Schuyler Schwarting <schuylerschwarting@gmail.com>
Sent: Wednesday, July 31, 2024 11:08 PM
To: Planning Shared <planning@fayetteville-ar.gov>
Subject: Multi Family Development at 309 S. Block Ave. LSD-2024-011

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission and Subdivision Board Members,

I live 1 block from this proposed project (160' away) and object to the size and density of it. The proposal of this many units, 162, on this small of a lot, 1.24 acres, is crazy for our family oriented neighborhood. With the possibility of 2 tenants to a unit, this development could add an additional 324 cars to our small neighborhood streets because the entrance to these units is through our neighborhood. Also, we do not feel there is enough parking on this small lot to accommodate this many units when adding potential roommates and visiting friends. This will most definitely overflow to the neighboring streets.
Our neighborhood is full of families with small children and very active residents, enjoying strolling and playing in their front yards and street. Adding this many cars would completely disrupt the quality of life and would work against what our neighborhood strives to be.

We do not want campus dorm sized residential apartments in our neighborhood. These units are as small as 318 SF, about the size of a hotel room. To put it into context, the smallest type of apartments according to apartments.com are about 500 - 600 SF. These are about half that size. Studio and efficiency apartments are usually located in very high-density downtown locations like New York City and LA not in a South Fayetteville neighborhood of single-family homes and families. You may also

find this type of development where there is a successful mass transit system to rely on, for tenants who do not have cars. This does not fit.

This proposal does not meet the Unified Development Code Chapter 161.28(E) Setbacks. 25' Build To Zone (BTZ). It encroaches on 3 of the 4 sides. The 25' setback is the requirement that the building's street facing facade must be located at a set distance from the property line.

I urge the Commission to reject this proposal due to the fact:

1) the application does not comply with the zoning and development requirements of the Unified Development Code including:
   a) setback requirements, density of the buildable area, required parking and compounding a dangerous traffic condition.

The proposed development would create or compound a dangerous traffic condition in which the risks of accidents involving motor vehicles is significant due to the high traffic volume and nature of the traffic pattern.

We aim to preserve and protect the health, safety, and general welfare of our neighborhood, preserve and enhance the natural beauty of our streets, and create an attractive, environmentally sound and healthy landscape for our neighbors. That is why we have regulations for the design, establishment and maintenance of spaces impacted by developmental practices.

Sincerely,
Schuyler and Kelley Schwarting

URBAN LOFTS at NELSON HACKETT

309 South Block Ave. Fayetteville, AR. Project # LSD-2024-0011

Dear Donna Wonsower, AICP,

I live 1 block from this proposed project (160' away) and object to the size and density of it. The proposal of 163 units on 1.24 acres, which is very dense at 131 units/acre, is crazy for our family-oriented neighborhood. These are not lofts but micro-units. With the possibility of 2 tenants to a unit, this development could add an additional 326 cars to our small neighborhood streets because the entrance to these micro units is through our neighborhood. The proposed development would create or compound a dangerous traffic condition in which the risks of accidents involving motor vehicles is significant because of the high traffic volume and nature of the traffic pattern.
Due to the work on Nelson Hackett and E. Rock St, where there are now no turns from the south or going south, all residents living on Rock St, Mill Ave, S. Willow Ave, S Walker Rd, S Barton Ave wanting to travel to or from the Southwest now must traverse through this neighborhood on South St. right next to this proposed

development. Also, just down the street at 439 S. Church a new zoning was approved to add 12 more units. Hopefully they will have driveways and their own parking.

Also, there is not enough parking on this small lot to accommodate this many units when adding potential roommates and visiting friends. With 163 units and the potential for 326 residents and only 104 car spots. WOW! In fact, out of the 104 car spots, there are only 63 that are standard sized parking spots, 34 standard sized parking spots on site and 28 left on the street. That is not very many for 163 units if statistics are accurate.
SUV's, overwhelmingly, are the #1 car type sold in the United States. 2 of 3 vehicles sold last year were SUV's. These types of vehicles will not fit in a compact space. This will most definitely overflow to the neighboring streets. At the South Yard Lofts down the street on S School Ave, they all have assigned parking spaces.

Our neighborhood is full of families with small children and very active residents, who enjoy daily strolls and playing in their front yards and streets. Adding this many cars would completely disrupt the quality of life and would work against what our neighborhood strives to be.

We do not want campus dorm sized residential apartments in our neighborhood. These units are as small as 318 SF, about the size of a hotel room. To put it into context, the smallest type of apartments according to apartments.com are about 500 - 600 SF. These are almost half that size. Studio and efficiency apartments are usually located in very high-density downtown locations like New York City and LA, not in a South Fayetteville neighborhood of single-family homes and families. You may also find this type of development where there is a successful mass transit system to rely on, for tenants who do not have cars. This does not fit.
The site is going from 16 units and 48% tree canopy to 163 units and 5% tree canopy. You should not justify the removal of this many large trees (50) by saying the development would have killed the trees anyway. (5) over 30", (12) 20-29", (19) 10-19", (13)5-10".
Previous impervious cover for this site was 19% and they are proposing 79% impervious cover which will lead to increased storm run-off and taxing of our storm inlets. The storm inlets have a tendency to fill with leaves and debris with some inlets growing vegetation and small trees out of them. Having more cars on the street will reduce the efficiency of the street sweeper who tries to maintain our streets and drainage issues.

I urge the Commission to reject this proposal due to the fact:

1) It does not meet the Downtown Master Plan Strategies 3, 4, 5 or 6.
2) The plans do not reflect the correct number of parking spots.
    a) On Block Ave, it shows 3 on street parallel spots where there are only 2.
    b) The plans show 39 Compact Spaces where there are only 37 spaces.
3) This site is not eligible for parking space reductions of 40 spaces because:
    a) They are further than 0.25 miles from the bus stop. They are 0.3 miles uphill with a 100' elevation ascent. Over an 11-minute walk on a small sidewalk for a bus that stops there once per hour. 24 spaces should not be reduced and should be added back.
    b) Increased bicycle racks inside the apartments does not qualify for a reduction of 16 parking spaces.
4) It would create and increase traffic danger and congestion due to its increased density.
5) It would alter the population density and thereby undesirably increase the load on public services including water and sewer services on our old lines. We are already having to adjust our water usage along Huntsville Rd due to the City experiencing increased demand resulting in reduced or no water pressure for some customers. An ordinance was just approved that includes a 6 month moratorium on new water service connections.

6) the application does not comply with the development requirements of the Unified Development Code including:
   a) density of the buildable area, required parking and
   b) compounding a dangerous traffic condition.

Once the units are decreased to match the parking availability, we request:

1) if the AC units are on the roof, I urge the Commission to request siding to block these units.
2) Only have the construction equipment access off of Nelson Hackett and South St.
3) The variance requested in UDC Chapter 166.21(E)(1). Dumpsters, we request approval with conditions 1) that this dumpster only gets serviced during normal wake periods meeting the Quiet Hours ordinance and 2) that the dumpster is sized appropriately to only be serviced once per week.
4) Upgrade the old water line in the neighborhood that has broken over 10 times in the past couple of years and is currently leaking.
5) Repair the sink holes where the leaks have occurred.
6) Off-site tree mitigation, plant all of the tree caliper inches on this site with larger diameter trees.
7) The ability to have more reviews and comments from our neighborhood.

We aim to preserve and protect the health, safety, and general welfare of our neighborhood, preserve and enhance the natural beauty of our streets, and create an attractive, environmentally sound and healthy landscape for our neighbors. That is why we have regulations for the design, establishment and maintenance of spaces impacted by developmental practices.
We are in favor of some form of SMART development on this site but not without enough parking.

Sincerely,
Schuyler and Kelley Schwarting

City Of Fayetteville
Donna Wonsower
planning@fayetteville-ar.gov

First let me say, myself and many of the neighbors were excited to have a new development on this property. We were told it would be 3 - 4 story multi family, 60-80 units with a wine bar and retail on the street level. A beautiful entry to the neighborhood.

This was perfectly in line with the City's Downtown Master plan and a vision for healthy, happy living. More housing where people could live comfortably and work inner city.

We assumed they would be nice units and the residents would have amenities like a pool, weight room and common areas to congregate.

I've surveyed young professionals in our area about living in micro units with no amenities and it was a resounding NO, a cuss word with NO and it sounds like a prison. This is just a few of their comments, all were negative.

Lets call it what it is, STUDENT HOUSING. Dormitory micro sized units 300-400 sqft no private bedrooms. 163 units and only 106 car spaces. Leaving 57+ (57 units without spaces on site PLUS guest) cars to fill the neighborhood driving around looking for street parking. Crowding our already busy streets, as many neighbors park on the street hindering assessable roads for Fire, Ambulances, Trash pick up, mailboxes and street and gutter cleaning.

It will be dangerous for the many kids we have who play in the streets.

It's not the infill Fayetteville desperately needs. It's student housing without the support of the University of Arkansas for busy traffic times like move in and move out, parent weekends, football games, etc.

The developer is trying to maximize his dollar without taking into consideration the surrounding landowners of single family homes. We are are being adversely affected.

I ask the City to have the developer reduce the number of units and at a minimum match parking spaces to units/bedrooms.

I ask that the address of the property be changed to Nelson Hackett so all deliveries, Ubers drivers, Veorides, pick up/drop offs, waiting areas be done at the front of the property instead of through the neighborhood.

I ask the City do a traffic / parking study to the immediate 5 streets for the overflow parking and guest.

I ask the City to change the immediate 5 streets (Block, South, East, 4th and 5th) to no parking on one side for emergency vehicle access, mail delivery and trash pick up.

I ask the City to notify all residents of street cleaning days so cars can be moved so our drainage areas stay clear.

I ask the City to give all single family housing Resident Reserve Parking like was implemented in the Wilson Neighborhood, prior to street parking becoming a problem.

I also ask the City evaluate our failing infrastructure, water lines and sewer for needed upgrades on all streets before allowing a huge development that will further tax our system.

We understand we live on the edge of downtown of a thriving city. We welcome thoughtful infill and development for residents. We hope the City will hear our concerns so we can grow Fayetteville in a positive way.

Donna,

At the last Planning meeting regarding this project we discussed how we love our unique neighborhood. We are wonderfully located on the cusp of Downtown General and The Walker Park Neighborhood.

Our residents include homeowners and renters. Our residents are local artist who paint murals in town, teachers at Fayetteville Public Schools, Professors at the University, retired people, ballet dancers, Healthcare workers from Washington Regional and University students who have moved away from the campus lifestyle to continue their education while having a family and start their careers in Fayetteville. We also have so many KIDS. Kids of all ages, who play together on our streets.

This group of out of state developers does not see our neighborhood as a cohesive friendly place to live and work in Fayetteville.

Builder Jetton Berner, founder of University Lofts was quoted in TalkBuisness.net article titled the 'Wild, Wild West' of Northwest Arkansas stating "University Lofts is something we're really excited about right now." "We took the idea from the city of Detroit Revolution." "We believe students are looking for their own micro space units."

His mission statement is to develop all inclusive housing options in college towns. Student Housing.

One of the partners was interviewed in the Arkansas Business journal and he touted how this is a brilliant business model targeted at students.

We are not Detroit. Detroit has a vast and free mass transit system.

We are not the Wild Wild West! We are beautiful thriving town and a growing University Campus.

It is concerning how they recently rebranded University Lofts into Urban Lofts. It is concerning how they have left the property and neighborhood sidewalks in disarray after tearing down the 16 units that were originally on the site. It is concerning that the true owners are not listed on the Rezoning application.

University housing does not help with “affordable housing.” It artificially inflates housing cost.

There is plenty of open undeveloped land that the university owns, that is already on or close to the transit route to build more student housing, we should not look to a private developers to solve that problem.

Several articles over the past month have stated the University intends to build more student housing. They have identified and approved areas **North** of campus. Areas where they can easily expand the Razorback transit, areas where they can offer students on campus amenities, parking and food services.

The Fay Jones School is working on and exploring how to build affordable housing. Let’s use the University to our advantage instead of adversely affecting our neighborhood to solve the student housing problem. See Affordable Housing pdf attached.

On Sept. 12, 2024 listed on Zillow Fayetteville has 477 rentals available ranging from $600-3500 per month and 381 houses for sale ranging from $139k-4.7m. We do not have a housing crisis. We have an affordability problem.

This student apartment building is not the infill Fayetteville desperately needs. It’s student housing without the support of the University of Arkansas and University Police for busy traffic times like move in and move out, parent weekends, football games, parking violations, etc.

The developer is trying to maximize his dollar without taking into consideration the surrounding landowners of single family homes. **We are are being adversely affected.**

Please consider this property as part of our single family neighborhood. More density is expected but not to the detriment of our established neighborhood. It does not fit into the Downtown Master Plan nor the Walker Park Neighborhood plan. See attached Diversity of Housing pdf from the Walker Park Plan. This plan envisions owner occupied attached housing as a buffer between the commercial corridors and nodes and the predominately single-family nature of the interior of the neighborhood.

I ask if this project is approved as I asked before:

I ask the City do a traffic / parking study to the immediate 5 streets for the overflow parking and guest.

I ask the City to change the immediate 5 streets (Block, South, East, 4th and 5th) to no parking on one side for emergency vehicle access, mail delivery and trash pick up.

I ask the City to notify all residents of street cleaning days so cars can be moved so our drainage areas stay clear.

I ask the City to give all single family housing “Resident Reserve Parking” like was implemented in the Wilson Neighborhood, prior to street parking becoming a problem.

I ask the City to police the area for parking violations so the residents don’t have to be burdened by complaining to authorities.

I also ask the City evaluate our failing infrastructure, water lines and sewer for needed upgrades on all streets before allowing a huge development that will further tax our system.

In addition, with the increase in traffic I ask the city to provide safe school bus shelters within our neighborhood.

Thank you for not approving this project the first time.

Once again, thank you for your time.

Kelley Schwarting

Subject: Urban University Lofts LSD2024011

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Ms. Wonsower,

I live 1 block from this proposed Urban Lofts project and OBJECT to the size and density of it. The proposed 138 units on this small of a lot equates to 115 units per acre where all of the other lots in this great family oriented neighborhood are only 4 - 10 units/ acre.
With the possibility of 2 tenants to a unit, and potential of visiting friends and family, this development could add an additional 276 cars to our small neighborhood streets because the only entrances to this project is through our neighborhood.
We do not feel there is enough parking on this small lot to accommodate this many units. This will most definitely overflow to the neighboring streets.
There are only 36 Standard sized parking spots and 37 compact (non SUV)spaces. The rest are either ADA, motorcycle or On-Street spaces in which they would be taking the spaces in the street that are already being used by the existing homes in the neighborhood. By using the on-street

parking to try and satisfy the parking requirements, it would create a mad scramble for the existing homes to park close to their homes.
Our neighborhood is full of families with small children and very active residents, enjoying strolling and playing in their front yards and street. Adding this many cars would completely disrupt the quality of life and would work against what our neighborhood strives to be.

We do not want campus dorm sized residential apartments in our neighborhood. These units are as small as 318 SF, about the size of a hotel room. To put it into context, the smallest type of apartments according to apartments.com are about 500 - 600 SF. These are about half that size. Studio and efficiency apartments are usually located in very high-density downtown locations like New York City and LA not in a South Fayetteville neighborhood of single-family homes and families. You may also find this type of development where there is a successful mass transit system to rely on, for tenants who do not have cars. This does not fit.

I urge the Commission to reject this proposal again due to the fact:

1) the application does not comply with the Downtown Master Plan:

Master Plan Strategy #3 - create smart parking sustainable and efficient that enhances since of place.

Master Plan Strategy #4 - Develop smart rules that outperform current zoning & attract Desirable Development.

Master Plan Strategy #5 - create a series of interconnected special places.

Master Plan Strategy #6 - develop the experience-based economy of the downtown by expanding the focus on arts, culture and entertainment.

2) Does not meet the goals of the Walker Park Neighborhood Master Plan. We are already adding 1-4 units of infill to some empty lots but 111 units/acre is way too dense into our neighborhood. It would be different if it was only accessed from Nelson Hackett like what is being zoned up on N. College but this is only accessible through our neighborhood.

3) the site is not eligible for a parking discount due to the fact that it is greater than the required distance from a bus stop to qualify and over a 100’ elevation rise and only picks up once per hour.

4) it is not eligible for a parking space discount for adding bike racks inside the units. Also, bike racks are not allowed in the halls or under the stairs.

5) density of the buildable area, not enough required parking and compounding a dangerous traffic condition.

6) this neighborhood already has issues with our old leaking water mains and by adding so many units will only exasperate the water lines and adding to more leaks.

7) the site is removing a number of heritage trees (50) going from 48% tree canopy covered to 5%. You should not justify this massive removal by saying the development would have killed them anyway.

8) on-street parking on South St. is too close to the curve on the intersection of Nelson Hackett. Also, parking on Nelson Hackett at a dangerous curve is a site line issue.

9) the developers cover letter states that the current owners will benefit and no other landowners will be affected. This is not true. We will be adversely affected.

10) previous impervious cover was 19% and they are planning 79%. With the added street parking proposed, the streets will not be able to be adequately cleaned of leaves and debris which will cause more flooding potential.

11) with the change to Nelson Hackett and Rock St intersection, we now see more traffic traversing through the neighborhood and this will only make it worse.

The proposed development would create or compound a dangerous traffic condition in which the risks of accidents involving motor vehicles is significant due to the high traffic volume and nature of the traffic pattern.

We aim to preserve and protect the health, safety, and general welfare of our neighborhood, preserve and enhance the natural beauty of our streets, and create an attractive, environmentally sound and healthy landscape for our neighbors.

Please vote NO to this development.

Sincerely,
S. Schwarting

I do not want 163 units on block Street. The traffic is bad enough already without 163 more people and their vehicles! I'm 84 years old and have lived here most of my life. This is not the Fayetteville I grew up with.
Thank you
Joann Southern

Dear Planning Commission Members,

I am a current resident of south Fayetteville living on South street. I'm writing out of concern for the proposed project to build hundreds of micro unit apartments at the end of our street. This project would not only increase traffic and street congestion on our already overcrowded neighborhood street, but would also make the neighborhood unsafe for pedestrians and children. There is already limited space due to few driveways and garages in our neighborhood forcing residents to utilize street parking and no where near the needed spots to account for the 100 extra cars trying to find parking on our streets because of inadequate parking by the developer. I fear for the safety of all the children playing outside with the increased traffic. What I love about this neighborhood is the walkability and connectedness we have as neighbors. Every day our kids are riding bikes and walking to the creek without fear of being hit by a car. This neighborhood was not designed to handle this much traffic and I plead you to consider the consequences of this large development in a small quaint neighborhood. I'm all for affordable housing, but not at the cost of creating a traffic and safety hazard for a very functional and thriving neighborhood.

Thanks for your time and consideration,

Alison Taylor
7 W South St

Dear Donna,

My name is Courtney Thomas, and I live at 48 E. South Street in Fayetteville. I'm reaching out regarding the proposed Urban Lofts development at South x Nelson Hackett.

In short, I love living in this neighborhood for a number of reasons:
- its walkability to downtown Fayetteville (cafes, restaurants, etc) and open spaces (like Walker Park)
- There is a diversity of age ranges/life stages in our neighborhood -- older couples, younger couples, families, young professionals, etc. I know many of my neighbors and have positive relationships with them.
- The streets are relatively quiet, and I enjoy frequent walks through the neighborhood and feel safe doing so. I observe kids and families frequently riding bikes, playing basketball, and otherwise playing and enjoying time outside in the neighborhood. Plenty of folks walk their dogs and spend time riding bikes and walking in the neighborhood.

This neighborhood shines as a walkable, family-oriented neighborhood, and I would love to see it develop in a way that maintains this character as a place where folks who want to invest in the community and contribute to the character want to live. I have serious doubts that the currently proposed Urban Lofts development aligns with this character.

I also have serious traffic safety concerns caused by 100 or so cars that will have nowhere to park except on our old, narrow streets that were not designed for this. I also have concerns about traffic safety problems caused by an additional 800 or more vehicle trips per day throughout our neighborhood.

Thank you for your time.

Best,
Courtney

Courtney Thomas

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I'm writing to share my thoughts on the Urban Loft project being proposed between Nelson Hacket and the South Square neighborhood.

I'd like to thank the Planning Commission for denying the variances requested by the Urban Loft project and would like to reiterate a couple of the reasons why this is the wrong location for this development project. It all comes down to parking. If you haven't already, please take the opportunity to drive or take a walk through the adjacent neighborhood. The streets are narrow. Parking is already a challenge with driveways, mailboxes, and trash pick-up requirements. Urban Loft should not be permitted to rely on the neighborhood streets for their substantial overflow parking needs. It will cause a very significant problem that won't have any good solutions going forward. Public transportation, as it currently exists, shouldn't be counted on to take the place of a car. This continues to be either the wrong project or the wrong-size project for this piece of land.

This parcel can be developed without creating an unimaginable parking problem and this needs to remain a requirement. Thanks so much for your forward thinking on this project.

Appreciatively,

Jan Townsley
301 S. West Ave.

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission Members,

As a resident of east South Street I wanted to express my concern over the number of units planned at the end of the street and the impact that this apartment complex will have on **(i) traffic, (ii) parking and (iii) street safety for our children, not stated in order of importance**. East South Street, when I moved here, had no children, but now, on this small street of 14 homes, has six kids under the age of 10...at times we have had 14 children living here! The increased volume of cars resulting from this development must be addressed in terms of street safety for the children and residents.

While traffic flow/volume is a concern, so is parking.

At present, the College and South Street intersection of east South Street receives upwards of *eight* overflow vehicles nightly just from residents and their visitors in just *two of the* small homes that are closest to the College and east South intersection. Although those homes were built with driveways, the private parking did not accurately account for the number of actual inhabitants, overnight guests, or out of town visitors. This overflow at the end of this small street results from just 2 single family "small homes". I cannot imagine what 150+ apartment unit will do to the street parking situation on these narrow roads already experiencing limited parking on evenings when there are Razorback games or finals. Additionally, we have small business on our street that receives up to 10 vehicles during hours of operation. Not to mention the occasional overflow from game days and Crisis Brewing.

The City likely has made assumptions about what percentage of no-vehicle households would occupy the apartment building at the end of east South Street, but based on observation alone, it is clear that students in off-campus housing, and non-student renters, have cars and quite honestly need them because there is no easy access to public transportation.

Neighbors discuss "parking is as if we live in Chicago or Brooklyn" yet we don't, we moved into a small residential street in a college town, we invested in this street and have often been overlooked (where were our street lights and where are our speed bumps?). We endured detour traffic and fast speeds down our narrow street without consideration of residential safety. No speed bumps were put down, cars raced to the end of the street, and the traffic noice and congestion was notable. Noting the small and narrow streets, how can the City accommodate a 150+- unit building with only ~75% parking spaces, when real-life in Fayetteville informs us that we will likely have, at least, an average of 300+ vehicles seeking parking between 2-car

residents and their visitors. *Permit a housing complex, clearly Fayetteville is growing, but then require that the complex accommodates for real life parking scenarios to include the fact that so many of these apartments, in spite of their size, will house more than 1 individual and will be more than 1 car households with family and friends visiting.*

Also, sincerely and seriously sit back and imagine 150 cars trying to find parking on your neighborhood street and honestly indicate if that causes undue and unfair stress. (And be sure to note as you imagine this, that our neighborhood is small and cramped, not nearly as expansive as some of the newer neighborhoods.) In recent years, the trend for "tiny homes" has hit our neighborhood and we have seen that just that little shift has impacted quality of life in the neighborhood. Imagining even 20 more cars on east South Street is stressful for me -I imagine a chaotic street zipping with cars, needing to be ever vigilant with opening car doors, and crossing the streets, and delays up and down the street because the street is too narrow to accommodate parked cars and vehicles traveling in both directions, walking a few blocks with groceries and children just to get from the place where we could park our car to the house. We also have elderly persons on the street - are they expected to walk blocks to their home because they couldn't find parking on the street near their home? The idea of building apartments and not accommodating for parking seems irresponsible and is beckoning an unsafe and chaotic environment in our small neighborhood. I also expect that it will impact our resale value as we become known as the neighborhood without convenient parking. It just seems as if the Planning Commission is not making the best decision for those of us who have made our homes here and need to maintain our homes here.

All of the above addresses concerns over parking, but there are also concerns over noise pollution, traffic flow, air pollution that 800 +/- one way drives up and down the street will have on our safety, health and quality of life.

Another concern, of course, is providing for the safety of our children and residents – not only in terms of traffic safety, but also the increased safety that growing our small street population **sixfold,** from 25 to 150+ people, will require!

Respectfully,
R Vendetti
Resident of E South Street

Subject: RE: Urban Lofts Project

Good Evening,

The planning commission has only voted to reconsider the proposal at this point. The project was tabled at the August 26 Planning Commission in order to provide time for the applicant to re-notify the public for the September 23 Planning Commission meeting. I have reviewed the new notifications and have confirmed that the applicant has met all public notification requirements for the new meeting, The commissioners will re-discuss the proposal and any changes at that September 23 meeting.

I will save your email and ensure that it is included in the packet for their consideration at that meeting.

Best Regards,

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

September 13, 2024

Dear Donna,

This email pertains to LSD 2024-11, the proposed Urban Lofts housing project at the intersection of Nelson Hackett Boulevard, Block Avenue, 4th Street, and South Street being re-visited by the Fayetteville Planning Commission. I continue to oppose this project as it now stands.

1. I understand this topic was brought up again in a previous planning commission meeting and many commissioners had a change of heart. Why weren't the neighbors advised of this meeting? There are most likely rules that allow this, but I believe that when something of this magnitude is discussed, the affected neighbors should be notified of such a meeting!

2. I understand that the developer provided the Planning Commission with slick marketing material showcasing their projects in Jonesboro, Conway and Russellville. They appear to be nice communities. However, after looking at street views online, none of the existing complexes appear to adjoin established neighborhoods. They appear to be communities in and of themselves.

3. I understand the developer has reduced the number of proposed units. However, this reduction will not address the serious parking inadequacies and will not eliminate the very dangerous parking and traffic problems on nearby streets. During the first planning commission meeting, one of the commissioners said she would not support this project until Fayetteville established a parking management program. Has one been enacted since the last meeting? If not, why the sudden change of heart?

4. I have lived on South Street since 1997 and have witnessed the awesome re-birth of this neighborhood! With this re-birth, there has become more and more traffic. I have considered installing a functional driveway on my property so that I could park my car off of the street. Unfortunately, when there were cars parked on the street, it was EXTREMELY DANGEROUS for me to pull onto the street because the parked cars blocked my view of oncoming traffic. Having even more cars parked on South Street because Urban Lofts will not provide adequate parking for its tenants will make this situation even more dangerous.

5. I do not oppose apartments at this location, as Fayette Village was a neighbor for many years and parking was never a problem. Yes Fayetteville could use more housing, BUT a project of this magnitude at this location is not the right fit.

6. Please suggest that the developer reduce the size of their project so that the number of units matches the number of ON-SITE parking spaces.

Thank you!

Tony Wappel

Donna Wonsower
Fayetteville Planning Department

Good Morning Donna,

I hope this email finds you well.

This email pertains to the proposed large micro unit housing project proposed for the corner of Nelson Hackett Boulevard and South Street. I am opposed to the plan as it now stands.

There will be way too much traffic and too many parked cars on South Street. I have lived on South Street since 1997. As this street has many restored older homes that do not have driveways, we have had to park on the street. On at least 2 occasions since 1997, my car has been hit by oncoming traffic. I have tried parking off the street in an area of my yard that could be developed into a driveway, but when cars are parked on the street (most of the time even now), I cannot see oncoming traffic until I am off of my driveway space and in the street. This is an EXTREMELY DANGEROUS situation in which I feel like I could be hit anytime I pulled into the street. Having even more parked cars on South Street will make situations like this even more dangerous.

Also, since I have lived here, there have been 2 neighbors who have had heart attacks. One neighbor died and because of too many cars parked on the street, I could not get to my house for nearly an hour; the fire truck, ambulance, police, and coroner vehicles were blocking access, as they were parked in the middle of the street.

All of the excess cars that will have to park on an already busy South Street because there is no room at the nearby apartment complex parking lot will make it even more difficult for emergency vehicles to go down South Street.

One other concern related to excess traffic is that we have many more children living on the street.Too many cars parked on the street will obscure the view of these children.

There are many other issues with this proposed project, including very old water lines (that continue to break and flood our yards and houses) that will not support this project.

I do not oppose an apartment complex, as Fayette Village was our neighbor for many years and parking was never a problem. Yes, Fayetteville could use more housing, BUT a project of this magnitude at this location will prove to be a big mistake.

Please consider suggesting that the developer reduce the size of their project so that the number of units matches the number of ON-SITE parking spots.

Thank you.

Tony Wappel
11 E South Street

Dear Planning Commission Members,

My name is Sally Watson and I live at 37 E South St, Fayetteville AR 72701. I moved to Fayetteville in 2016 and bought an old home in this cute neighborhood. Children play together all the time on these blocks, just like when I was a kid. We walk our dogs twice a day around the neighborhood and many others do the same.

There is a developer trying to put in a complex that will simply have too many people for the size of these roads. There will not even be a dedicated onsite parking space for each unit. That's insane, there will be at least one car per unit without a doubt. Myself and others in our neighborhood have legitimate concerns about the safety of this development plan.

1-Chaos and traffic safety problems caused by 100 or so cars that will have nowhere to park except on our old, narrow streets that were not designed for this level of traffic. Already it is difficult for city service vehicles and delivery vehicles to squeeze by if there are cars parked on both sides of our street. And my street is the widest in the neighborhood! Some streets you can only park on one side and that is very limited as you cannot block mailboxes or driveways.

2-Chaos and traffic safety problems caused by an additional 800 or more vehicle trips per day throughout our neighborhood. Like I stated above this is a very well lived neighborhood. Children play, people walk everyday. If we have 800 plus more trips through this neighborhood we will without a doubt put children at risk, cause delays in essential services, and congest tiny streets that cannot handle that level of traffic. It will without a doubt create a serious safety hazard.

Please take the concerns of myself and my nieghbors into account when considering this development. This neighborhood can handle modest infill, but the proposed level is insane. Whatever ends up being built needs to have at a minimum one on site parking spot per unit. Minimum. Our streets will still be filled with visitors and second cars for the units. But they can't build a giant complex without providing enough in site parking for the residents. I appreciate your time and attention.

Sincerely,
Sally Watson

Subject: 309 S. Block Avenue LSD-2024-011

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Ms. Wonsower:

I'm writing out of concern that the construction project at 309 S. Block Avenue will negatively impact emergency fire and ambulance services, trash/recycling pick-up, mail delivery, street cleaning/repair, water and sewer infrastructure, existing resident street parking, traffic flow, and overall traffic safety in the south Fayetteville neighborhood near the project. The project, for many reasons, appears to fall short of meeting the criteria of Fayetteville's Downtown Master Plan.

I expect to see the above-stated concerns addressed in detail by the City Planning Commission at the upcoming Monday meeting. Thank you.
Sincerely,
Bruce L. Welsh, DDS

Dear Ms. Wonsower:
I'm writing in regard to the Urban Lofts project in south Fayetteville.The developers want to build 163 very small studio apartments, but only provide about 60 on-site parking spaces. I'm concerned that the apartment complex will create at least two very serious traffic and safety hazards.

1- At least 100 cars will have no place to park except on already crowded narrow neighborhood streets.
2-There will be at least 800 additional vehicle trips per day (Federal transportation data) on these older, narrow streets that were never designed for that much traffic.

The apartments will have no vehicle access to Nelson Hackett, only to Block Avenue and Fourth Street, and both streets are old and narrow. The additional traffic flow will adversely impact traffic safety in this residential family-oriented neighborhood.

If 800 more vehicle trips per day are added to these already overcrowded streets, children, pets, pedestrians, bicyclists, and, of course, automobiles will all be in increased danger.

Through the Walker Park Neighborhood Master Plan, adopted in 2008, the city has been nurturing and protecting our neighborhood for at least 16 years now.
As they had hoped, our neighborhood has blossomed into a very desirable place to live.

Gentle density and the organic approach in the Walker Plan have allowed individual properties to develop over time, promoting the overall success of housing in our town. *All this success could be lost with the Urban Lofts project on this site in this neighborhood*.

I hope the commission will consider the negative impact of this project on the safety and health of one of Fayetteville's most desirable neighborhoods.

Sincerely,
Bruce L. Welsh, DDS

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planner Donna Wonsower ... this communication is in regard to the 163 unit Large Scale Development at 309 S Block, awaiting approval by the Planning Commission.

I was unable to attend the first meeting of the City Council about this project but I most definitely wish my comments to be heard.

We have owned the property at 33 E 4th Street since 1982. We are two blocks away from the development, on a street most certainly will become a thoroughfare to the 163 units. Our family has lived in that house since then and still does. My wife's parents retired their in the early nineties and have since passed on. My wife and I lived there with our first daughter. My wife's disabled brother lived there until his passing. Currently, our daughter and 3 young grandchildren live there. Their ages are 12, 8 and 6 years old.

This place has been a true neighborhood for my family and our many neighbors. This neighborhood includes a very diverse group of people of all ages; professionals, working class , students and retired citizens of Fayetteville, i.e., educators, artists, musicians, dance and martial art instructors, bankers, city employees, craftsman and tradesman, University of Arkansas staff etc.

We believe that this Large Scale Development , as described in the plans, in our neighborhood will not be an improvement or enhancement in any way. Quite the contrary, we believe it will introduce many unnecessary problems. The FIRST and PRIMARY problem my family has with this project is TRAFFIC SAFETY. The likelihood of an enormous increase in traffic puts my three granddaughters and their many friends at great risk. With 300-400 sq ft units, this 163 unit dormitory-like housing will most likely attract student tenants and their friends and acquaintances without benefit of University oversight.

The increase in traffic will be very threatening to the children in this neighborhood. They are accustomed and habituated to living with, traveling thru, playing in and accommodating a neighborhood with far fewer cars than will arrive with the construction of this 163 unit development... by a factor of at least 4. And the addition, to this neighborhood, of so many new young drivers will add another dimension of risk as well.

Also, Emergency, Fire and Ambulance services will be impacted gravely, as will other services like Trash Pick-up, Street Cleaning and Mail Delivery. And much additional street parking will be required to accommodate a doubling or tripling of street side parking. Then consider the increase in toilet / sewer services on a very old City Sewer system. That would be a tripling or more of sewer capacity. ...

In summary, I can not think of single benefit this dormitory-like project will bring to this neighborhood. But it is very clear to me and my other neighbors that GREAT TRAFFIC RISK will arrive in our neighborhood with the arrival of this 163 micro efficiency Large Scale Development.

Thank you for your consideration. I hope to see you on Monday.

Subject: 309 S Block Ave / LSD-2024-011 Project Meeting

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission Members … this communication is in regard to the Large Scale Development proposal at 309 S Block Street which we are ABSOLUTELY OPPOSED to.

We have owned the property at 33 E 4th Street since 1982. We are two blocks away from the proposed development, on one of three streets that most certainly will become thoroughfares to this project. Our family has lived in that house since then and still does. My wife's parents retired their in the early nineties and have since passed on. My wife and I lived there with our first daughter. My wife's disabled brother lived there until his passing. Currently, our daughter and 3 young grandchildren live there. Their ages are now 13, 8 and 6 years old.

This 'South of the Square' part of the City has been a true neighborhood for my family and our many neighbors. This neighborhood includes a very diverse group of people; educators, artists, musicians, child care professionals, bankers, city employees, craftsman and tradesman, University of Arkansas staff etc.

We believe that this Large Scale Development in our neighborhood will NOT be an improvement or enhancement in any way whatsoever and will make NO CONTRIBUTION to the quality of life we enjoy. Quite the contrary, we believe it will introduce many unnecessary and dangerous problems. The FIRST and FORMOST problem my family has with this project is

TRAFFIC SAFETY. The likelihood of an ENORMOUS INCREASE IN TRAFFIC puts my three granddaughters and their many friends at great risk. This dormitory-like housing will certainly attract student tenants and their friends and acquaintances without benefit of University oversight. There are currently about 30 elementary age children and younger who reside here who have no familiarity with the kind of traffic this project most certainly will produce in their neighborhood. This will be absolutely overwhelming and dangerous to these children.

They are accustomed and habituated to living with, traveling thru, playing in and accommodating a neighborhood with far fewer cars than will arrive with the construction of this 163 bed development... by a factor of at least 8. And the addition, to this neighborhood, of so many new YOUNG COLLEGE AGE DRIVERS will add another dimension of risk as well.

Also, Emergency, Fire and Ambulance services will be impacted gravely, as will other services like Trash Pick-up, Street Cleaning and Mail Delivery as flood of street side parking occurs. Then consider the increase in toilet / sewer services on a very old City Sewer system. That would be a tripling or more of sewer capacity for this vintage neighborhood.

In summary, I can not think of single benefit this dormitory-like project will bring to this neighborhood. But it is very clear to me and my other neighbors that GREAT TRAFFIC RISK will arrive in our neighborhood with the arrival of this 163 bed Large Scale Development.

Thank you for your consideration in this matter. I hope to see you on Monday, Sept 23.

Subject: Urban lofts development

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hello planning commision members. My name is Bayard Blain, resident of 19 East 4th street Fayetteville, since 2011. I have 3 children who have growm up here and we've watched a rough neighborhood become a great place for kids and families. This development poses serious concerns with safety and parking and congestion in our neighborhood. The lack of proposed nessessary parking would compromise everything our neighborhood is valued for. 4th street is already problematic in that it's narrower than East and south streets so people have learned we only park on one side or emergency vehicles and mail trucks can't come on through, imagine adding a 100 cars trying to find parking as well. The proposed 800 vehicle trips a day don't factor in cars going in circles looking for parking and creating further problems. We know some kind of development will happen, but everyone in the neighborhood is against this, that I know of, except one person with financial ties. We who live here would like see a development that incorporates obvious parking needs for residents and doesn't try to maximize their profit margin by compromising the safety and flow of our neighborhood. This project would be a parasite on our neighborhood, taking everything like location and safety and downtown accessibility to later charge accordingly for that, while expecting the neighborhood to absorb their development excess. This project takes from us here and gives us back nothing. Lets please not let Fayetteville development be ruled by greedy parties looking to profit off the good name of our town.
Thanks
Bayard Blain

I am expressing my concern with the development plans for the Urban Lofts apartment complex. While I did not submit comment the first time this issue went before the Planning Commission, I am moved to share my thoughts after hearing the developers will be allowed to have their proposal reconsidered. **I oppose this development and ask the Commission to again vote down the proposal.**

It is my opinion that this development, while scraping by the letter of the law via multiple variances, poses a threat to the neighborhood due to the traffic/parking problems generated by the extreme density and inadequate vehicular accommodation. We have already expressed a target of ~50 units (using the current single-bedroom model) is welcomed by the neighborhood, and could fully accommodate all parking.

Background

I am a resident at 24 E 5th St., along with my wife and 3-month-old child. My wife has lived in this neighborhood on-and-off since birth and has had such a pleasant experience that we chose to raise our family here. We know of at least once family with young children on (literally) every single street and know this because we walk the entirety, including past this development property, each week. It is highly likely we will run across at least a half dozen others walking on any given day – we feel safe walking our families day and night and are a connected community.

Existing Parking/Traffic Issues

There are *already* negative parking and traffic concerns that affect us daily.

- High speed traffic cuts across E/W South St, as those outside the neighborhood cut through. There is already spillover parking on E. South St from new developments on S. College Ave (see attachment 1). These small homes *have* parking (just as the Urban Lofts will, to a degree), but the residents instead choose to park in our neighborhood out of convenience.
- Periodic events at Crisis Brewing Co. results in parking on both sides of the street, covering the entire extent of South St, much of 4th St, and both Block Ave and East Ave all the way to 5th St.

Street Width and Concerns Regarding Emergency/Delivery Vehicles

Neighbors have expressed concern over emergency and delivery vehicles being restricted by parking. If the Urban Lofts cannot fully accommodate all vehicles, these concerns are likely to be recurring reality.

Today, I parked on W 4th St/S Block St and took a picture of my vehicle parked across another. A UPS driver was unable to pull his vehicle between, so got out to ask me to move. But what if I wasn't there? What if it was an ambulance or fire truck?

The street is 20 feet in width. I measured the two vehicles at 75" in width. This left only 90" between the vehicles- too small for large vehicles to pass between! (See attachments 2-4).

(For reference, the approximate widths of large vehicles that would be unable to traverse:

- Ambulance: 98" (common Braun Type I & III on Ford chassis)
- Fire Truck: range from 96"-120"
- UPS box truck: 95.5")

Developer's Letter

The developer has submitted a letter to the Commission stating three "compromises as a show of good faith in support of our earnest hope to be good neighbors." I feel their points lack merit and are intended only as an empty gesture that attempts to placate Commissioner and resident concerns:

- The developer claims "it's important to point out that we are proposing more affordable 1-bed units." However, their single-bedroom units at their Jonesboro and Russellville complexes range from ~$1,250 - $1,900 a month. Do you consider that "affordable?" There are numerous entire *houses* in the neighborhood with lower rents.
    - They make a point on flexibility of their 1-bed vs 2- and 4- bed unit types, but this is a **red herring**, distracting from the concerns stated by neighbors.
- Point 3 claims "a commitment to fully manage parking that encourages car-free renters," but provides no details. "Compromises" include:
    - "Providing a discount on monthly rent for renters who do not require a parking spot."
        i. Reality: This only encourages people to street park, instead of pay for garage use.
        ii. Indeed, savvy renters can simply get a discount on rent by claiming to not require a spot, and simply park on our streets for free, without enforcement.
    - "Clearly stating in our lease agreements that renters should not plan to use on-street parking in the area as an alternative to our on-site accommodations."

    i. Reality: They will ask renters to make a “scout’s honor” promise, which is entirely unenforceable.
- There is no accounting for Guest parking. I have not heard this mentioned, but it can be presumed any of the ~~163~~ 138 residents’ guests will street park.

The developer concludes *“we would like to further request that the item be tabled to the next meeting to allow us sufficient time to notify members of the public.”* As a member of the public and this neighborhood, I can definitively state I have *not* been notified by the developers of their request to re-hear the application, nor of this public meeting, counter to their claim of offering these “in good faith.”

In Conclusion:

We are a young family that currently rent and hope to buy a home but cannot yet afford it. Due to high prices in Fayetteville, we *support* infill, including in our neighborhood! It is already happening, with townhomes on small lots already replacing single family homes on larger lots. We are *not* opposed to a larger development on the lot in question, but feel the density is far too high and brings a host of problems.

As stated in the first meeting, reducing the development to a target density of ~50 units (assuming the same single-bedroom model) is our goal.

Sincerely,

Johnie M Cagle

Subject: RE: Parking Examples (LSD-2024-0011)

Good Afternoon,

I recommend reaching out to engineering and/or the fire marshal's office for any questions specific to fire access or street turning (copied here). Both have reviewed the request for compliance with street standards and fire access and would be better equipped to discuss how the proposed development may impact adjacent streets. What I can say is that the development appears to be meeting ordinances and that, if approved, the plans will also go through a more detailed review by all departments with grading permit.

None of these examples are as extreme as what you're proposing for this project. None of them are relying on narrow neighborhood streets for overflow. Your proposed fix for the streets doesn't actually add parking. As it is, it's questionab;e as to whether a fire truck could get through these streets without wiping out a parked car.

On Tue, Aug 6, 2024 at 5:17 PM Wonsower, Donna <dwonsower@fayetteville-ar.gov> wrote:

Good Afternoon,

Please see below for some examples of other large multi-family developments. Please note that parking counts for multifamily dwellings are calculated by bedrooms, not the number of units. I have used that metric below for a more direct comparison. The proposed development on Nelson Hackett has 163 bedrooms on 1.3 acres, or roughly 125 bedrooms per acre.

Examples

- Atmosphere Apartments
  - 640 bedrooms on 3.41 acres (~188 bedrooms per acre)
  - 382 vehicle spaces + 42 motorcycle + 120 bike racks
- Cardinal Apartments
  - 480 bedrooms on 2.75 acres (~174 bedrooms per acre)
  - 391 parking spaces + 33 motorcycle spaces + 100 bike racks
- The Academy at Frisco Apartments
  - 673 Bedrooms on 2.96 acres (~227 bedrooms per acre)
  - 625 vehicle spaces + 72 motorcycle/scooter
  - Plus 8,800 square feet of commercial space

Each of these examples includes a parking garage, as does the proposed developmetn on Nelson Hackett. Please feel free to contact me with any questions.

Subject: Regarding Urban Lofts on Nelson Hackett

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission Members,

My name is Katherine Cloud and I live at 62 E. 5th St.

I have lived in this neighborhood since 2014. The best part of this neighborhood is that it is a safe neighborhood.

While I am in favor of increased housing and new builds in this neighborhood, I am extremely concerned about the proposed plans for the apartment complex in our neighborhood.

While I have a number of concerns, the most important is safety.

The streets in our neighborhood are narrow and can handle very few additional vehicles parking on the street. The streets are so narrow that only once side of the street can be used for parking. In the rare case that cars are parked on both sides it is dangerous for drivers and especially delivery and service vehicles to get through. The street parking is further limited by the driveways. If a car parks on the opposite side of the street from a driveway, the driveway is effectively blocked, as there is not enough space for the homeowner to back out of their driveway with someone parked across from the driveway. Additionally, space must be left between the corner stop signs and the cars parked, or it creates hazardous blind spots at the intersection, which can cause a traffic jam or accidents with only a few cars. The reason we are making it work now is that we know our neighbors and are considerate of these issues. There is very little space available for additional cars to park on the street due to the factors mentioned above. The proposal is about 100 parking spaces short. There are no places for these additional cars to park.

Additionally, this is a quiet residential neighborhood. The additional traffic of so many new vehicles including the residents and their visitors and guests will effectively make our narrow streets into busy thoroughfares. With the blind spots, and the street parking, service vehicles, and delivery trucks, this many additional cars will create safety issues.

While I support growth and new housing in this area, in this neighborhood, the scale of the project is poorly planned, with far too many units and a serious lack of parking.

Variances can and should be granted for reasonable requests. However these requested variances are not reasonable nor necessary. There are a number of reasonable plans that could be proposed for this property without the need for so many variances, without creating safety issues. There is no valid reason to grant these variances when the developers could simply propose a plan that fits within current city ordinances.

Please consider the safety of this historic neighborhood and vote against these variances.

Sincerely,

Katherine Cloud

Subject: Urban Lofts project on Nelson Hackett

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission Members,

Hi, I am Matthew Day. I live in the house that my wife and I own on South Block Avenue just north of MLK. I am writing because I am concerned about the planned Urban Lofts project at the corner where Nelson Hackett, South street, and Block Avenue come together. The parking and traffic on the street is already problematic and the planned development would make it worse. Often people park on both sides of the street, and visibility is not good, and there isn't enough room for two-way traffic. The planned development would make this worse. I commute by bicycle and on foot, and increased traffic on Block Ave would make this more dangerous (I was already in a back brace for three months this year due to an accident while commuting in the neighborhood). The sidewalks are overgrown and unreliable, so people often walk in the street here, and increased traffic would certainly result in injuries. I haven't heard about any plans from the city to improve the streets or sidewalks in this neighborhood, and if this development goes forward as is, this will be an urgent need. Don't allow these developers to dump a huge load of traffic and parking on a street system that can barely handle the current load.

Best regards,

Matt Day

(p.s. Hi Donna! I hope you are doing well.)

Subject: Large scale apartment project on South Block street. LSD 2024-001.

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

City of Fayetteville Planning Commission,

My name is Franklin Evarts. My wife Louise and I have lived at 11, West South Street for nearly 40 years. In this time we have seen many changes, and quite a bit of new development and growth in our neighborhood, the majority of it being good and well thought out. Twenty years ago there were hardly any children around and a good percentage of the properties were rentals. Now there are many families buying properties because of the unique eclectic, friendly, diverse qualities of our little neighborhood. There are families walking with strollers and many kids playing in the streets. We are firstly concerned about safety, especially for the neighborhood children and then our own personal property. The apartment proposal is much too large as is. South street, which the development will border, was the main thoroughfare from Nelson Hackett and South College while all the traffic calming work was being done and there was so much traffic, and cars constantly were traveling way too fast. That was temporary. Many of the homes on South street have no driveways so street parking is our only choice; this makes the street even more narrow. When there are cars parked across from each other only one car can pass through at a time. I am very concerned about the safety of the pedestrians especially kids that are always on the street. There is a sidewalk on only one side of the street, and we are very concerned about such a large increase in traffic and potential overflow parking. We worry about the infrastructure of the neighborhood. The water main lines and sewage lines are repeatedly being repaired. The streets are too small and narrow to accommodate a large influx of new traffic. We understand that neighborhoods

change. The proposed development is much too large and will negatively change our and many of our neighbors lives dramatically. Louise and I want to go on record to say we are not against safe, thought out, practical development.

Please consider these concerns when making your decision.

Thank you very much for your time and work for the city.

Sincerely,
Franklin Evarts and Louise Rozier

My main concern about this project is it's "non-consolidated" housing--meaning each separate unit (of 163) has a separate impact on parking and traffic. As a neighbor right up the street on South, I don't think the logistics of this fare well. Very short sighted.

Sincerely,
Darlene Graf

Hello, I am writing in regards to this proposed project that borders Nelson Hackett, Block, 4th, and South St.

I live on South Street. I am concerned about the size of this project and the influx of traffic thereof and lack of consideration for adequate parking.

Where will that many residents (163 apartments) park their cars? The proposed plan for parking is minimal leaving the residents of these streets having to navigate the overspill of apartment parking. This will also affect the swift movement of emergency vehicles when needed and trash pick-up, postal delivery: cars blocking every available curb space.

I am also concerned about infrastructure: mainly water. Will the city be proactive in replacing the old pipes with newer ones that could sustain the stress of that much more added use?
The pipes in front of my house have broken twice in the last two years, flooding my crawlspace.

The size of this project, without measured thought into the logistics of parking and traffic safety, is very short sighted. This needs to be addressed or this addition will be detrimental to the function/saftey of our neighborhood.

Sincerely, Darlene Graf (7 E. South St.)

To: Fayetteville Arkansas Planning Commission Members

I am writing in reference to a proposed development (LSD 2024-011) in my neighborhood, located one block from my home. I am **strongly opposed** to this! This development offers only monetary gain for the property owner. It in no way fits into our neighborhood. 163 micro units, 106 parking spaces (not all for cars) in NO way fulfills the need for housing. It only services the University's students and does not benefit our neighborhood. In fact, it adversely affects our neighborhood and does not meet the Downtown Master Plan's objectives. This neighborhood is old…the infrastructure is old. We have narrow streets and when cars are parked on both sides of the street (which this development would necessitate) emergency vehicles, fire trucks and ambulances cannot pass, putting us all at risk. Our neighborhood has older people and children, lots pets….the increased traffic would pose a danger to us all! With all those cars parked in our streets, the residents would lose space for visitors, or an extra vehicle, and mail service, trash and recycling pick up, street cleaning would be next to impossible.

Our neighborhood needs homes for residents not just for students. I do not understand why the trend in development favors only students. There is a loss of quality, beauty and neighborliness in the

development trends in this town. The housing of University students is the University's issue if they are not going to cap enrollment each year. Please don't let this trend to provide student housing ruin our city. Older people who want to be in town and downsize and young families who have jobs here, and people with lower income levels have no where to go because the current building trends do not provide appropriate housing for them! The infrastructure needs to be updated and addressed to meet the city's increasing population....a population that does not just consist of students. Our city is greatly impacted by the increasing number of cars on our streets.

We do have rental houses in our neighborhood that are rented by students and they benefit by having a neighborhood where we know each other if only to wave because we recognize each other. It fosters good will and a positive quality of life for all. The proposed development would diminish our quality of life. There has already been a code change of a property to RI-U just a block or so from this proposed development. That is going to change things dramatically....we DO NOT NEED this 163 unit "dormitory" with no parking to further ruin our neighborhood. I ask you to please consider the people of this neighborhood. Please do not allow this development!

Thank you.

Sincerely,

Deborah Griffin, M.Ed., L.P.C.

Subject: comments re: 309 S Block Avenue proposed project

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear planning committee,

I am a Fayetteville resident living near the proposed building at 309 S Block Ave and I am very concerned about the project. The proposal shows that there are 162 units but only 106 parking spaces, which means there aren't even enough spaces for all the people who live there, let alone any visitors they might have. I live only a block away, at 108 W 5th St., and my house doesn't have a driveway, so I have to rely on street parking. If residents from this new building don't have enough spaces for their cars in their parking lot, they will park in the street and I may not have a place to park my car in front of my own home if I get home late in the evening. The streets are also very narrow and I am worried about traffic safety and the safety of the neighborhood children. My next door neighbors both have kids who skateboard and play ball in the street because they are used to very little street traffic, and they aren't used to having so many cars around. Our street currently has very few cars that drive by and these kids have gotten used to being able to play in the street. I am worried that they will still go out there to play even with increased traffic because they have been able to do so for their whole lives and it's habit for them, but they won't be as safe anymore. There are also several places with lots of shrub overgrowth that grows right up to the edge of the street and creates blind corners and the increase in traffic with so many new residents will make these blind corners much more dangerous. This project should be scaled back so that there is room for more parking on site and there are at least as many parking spaces as there are units, if not more, to account for visitors to the building. This will also lead to less overflow parking and traffic into the neighboring streets.

Thank you for taking time to listen to my concerns!

Warmly,
Gwyn Hill
108 W 5th St.

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hello,
I'm a resident at 3 E 4th Street and am in favor of LSD 2024-011 scheduled for the Planning Commission meeting today, 8/12/24.

Our city is in desperate need for more non single-family housing types, especially within walking distance to services and goods. This site is an excellent location for multi-family housing as it is close to downtown and other civic resources such as the Fayetteville Public Library and Razorback Greenway trail system.

The number of units and parking ratio is not a concern for me. The surrounding streets have a lot of on-street parking already available and it would be encouraging to see more of the on-street parking utilized. It's become apparent that when cars are parked along the narrow streets of 4th and East, traffic speeds go down and the street is safer for kids to play (and they do!).

If during a declared housing crisis, we can't put apartments directly on highway 71B, inside of the downtown masterplan, where exactly can we put them?

I look forward to welcoming more neighbors to the Jennings Plus neighborhood, Casey Brewer Hoffman

Subject: Urban Lofts project on Nelson Hackett

Follow Up Flag: Follow up
Flag Status: Flagged

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Ms. Wonsower,

As concerned residents of the South Square neighborhood we are asking you to require the developer to dramatically scale back the Urban Lofts project on Nelson Hackett!

The developers sent a letter saying that they have made changes to the project, **but please don't allow yourself to be fooled.**

None of the things mentioned in the letter will do anything to fix the multiple traffic safety issues that the project will create.

The developers say that they have reduced the number of units from 163 to 138, but a look at the recently resubmitted plans clearly shows that they have just combined some units together, but the number of bedrooms has only been reduced by a very few (8). Therefore, **the number of cars the residents will bring to the apartments are still almost the same.**

The recently resubmitted plans unfortunately show **no increase in on-site parking**. This means that there will still be at least **100 cars that will have nowhere to park** except on the narrow, older streets that already have cars parking on them. Current residents often have trouble finding parking that's not blocking driveways, trash carts, recycle bins, mailboxes, etc.

There will still be 155 bedrooms, but only about 60 on-site parking spaces!

Furthermore, there will still be at least **800 additional vehicle trips per day** (Federal transportation data) on these narrow, older streets that were never designed for that much traffic.

In their letter the developers say that they will commit some of their units to low-income residents. **This is meaningless and unenforceable.** At the 8/26 Planning Commission meeting the City Attorney clearly stated that this is illegal; she said that Arkansas state law will prevent this from being enforced.

In the letter the developers also say that they have a plan to manage parking. Except for the designated ride sharing drop-off zone, the other points are **also meaningless and unenforceable.**

Everyone in our neighborhood is very concerned about how this project is being forced upon us.

The project site is zoned Downtown General, but because of the site's steep slope and the curve on Nelson Hackett the apartments will face and adversely interact with the fragile neighborhood instead of facing the primary street as is best practice in Downtown General projects.

A careful look at the plans shows that **there is a 12' to 6' deep and 24' to 8' wide pit right next to the sidewalk** that is next to Nelson Hackett. **This is not only a dangerous traffic hazard but it's also ugly!** Moreover, this **excessively deep and wide pit** works against the city's future plans to make Nelson Hackett attractive, safe, and inviting.

The apartments will have no access to Nelson Hackett- only to Block Avenue and Fourth street, and both streets are old and narrow. And all the Urban Loft's residents on-street cars and traffic mean that residents, delivery vehicles, fire trucks, and ambulances will have difficulty getting through the streets which will further compound the traffic hazard.

It's just common sense that if you overpack the streets with parked cars and then add 800 more vehicle trips per day to these overcrowded streets children, pets, pedestrians, bicyclists, and of course car drivers will all be in danger.

Also, the South Square neighborhood is already doing its share to help with Fayetteville's housing shortage. As an older house is removed, it's being replaced with two, three, or four new houses (which puts additional parking and traffic pressure on the old, narrow streets.

The Urban Lofts apartments density will be much more than 100 units per acre and will be right next to our neighborhood that is almost exclusively no more than 10 units per acre. There is no buffer zone (as is best practice).

Most of the Urban Lofts residents will not stay there for very long. These apartments will be like an extended stay hotel and/or a student dormitory. **All the units are furnished and nearly all are hotel room size.**

The project needs to be dramatically scaled back to less than 60 units. This would allow a minimum of at least one full size on-site parking space for each bedroom of each unit.

The Urban Loft Company is a chain, they already have four similar complexes. Two in Jonesboro, one in Russellville, and one in Conway. **All four of their existing complexes are in settings completely different than the one that they have chosen in Fayetteville. They are all on flat land, all have plenty of room for all their residents to park on-site, and all are in nearly empty areas.**

Look at theurbanloftco.com to see what the developers want to force into our neighborhood. Check out Google Maps and look at where each project is and what is **(and isn't!)** around it. Google Street View will give an even better look.

The city has been nurturing and protecting our neighborhood for at least 16 years now (Walker Park Neighborhood Master Plan, adopted in 2008). **As they had hoped, our neighborhood has blossomed into a very desirable place to live!** Gentle density and an organic approach in the Walker Plan have allowed individual properties to develop over time promoting the overall success of housing in our town. **All this success will be lost with the Urban Lofts project on this site in this neighborhood.** We've got a lot to lose if these out-of-town developers are allowed to take advantage of us and force their project into our fragile neighborhood.

My wife and I have lived in and owned property in the South Square neighborhood for 30 years. Our daughter, son-in-law, and our granddaughter live in a house that we own at 24 E. Fifth Street. We have many friends in that neighborhood that have a lot invested there.

Please stand with the neighborhood and require the developer to dramatically scale back the Urban Lofts project on Nelson Hackett!

I would be glad to provide more information or answer any questions that you have. I really appreciate you taking the time to read this and would welcome an opportunity to speak or text with you. **I'd really like to meet you at the project site and show you why this special neighborhood deserves your support!**

Sincerely,
Ron Hollinghead

Subject: Please take the time to reconsider the Urban Lofts apartments on Nelson Hackett!

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hi,
My name is Ron Hollingshead and I'm writing on behalf of my daughter, son-in-law, and their infant daughter who live in the house that we own at 24 E. Fifth Street. I'm also speaking on behalf of the many neighbors who are also concerned about this project.

Before it's too late, please take another (and much more careful look) at the plans for the Urban Lofts project on Nelson Hackett Boulevard before this Monday's Planning Commission meeting.

Be sure to consider the harmful effects that a project of this size will have on the surrounding fragile neighborhood.

The Fayetteville Planning Department, including Donna Wonsower, who is the planner for this project, needs to ask more questions and reconsider the approval of this LSD.

We request that for several safety and health reasons **the development needs to be scaled back or modified so that there is at least 1 on-site full-size parking space for each bedroom of each unit**. (This can't include compact parking spaces, motorcycle parking spaces, on street parking spaces, nor waivers for bicycle parking/racks, or for bus stops that are more than a quarter mile away)

Please look again at the plans- they contain many problems with parking.

Everyone who lives in that neighborhood knows this development would be a terrible mistake. We all agree that the city needs more affordable housing, but let's not sacrifice a functioning, cohesive, desirable, and affordable neighborhood in the process.

In its current form this project is certain to create serious ongoing safety, traffic, and health issues. The city and its residents will be forced to deal with these problems over and over.

<u>This is because the project is at least 100 parking spaces short of what it needs.</u>

The housing lots and streets in this old neighborhood were never designed for that much on street parking.

There isn't any way that the neighborhood can accommodate an additional 100 or more cars parking on the street.

It's already not easy to find on street parking in the neighborhood. This is because residents are already using a lot of the on-street parking spots, and there are so many driveways and other curb cuts that there aren't many additional on street spots left.

We ask that both the city staff and the Planning Commissioners put the project on hold until the neighborhood's concerns can be investigated and addressed.

We also ask that both the city staff and the Planning Commission go visit the neighborhood and see where these additional 100 plus vehicles parking on the street can fit without causing these problems:
***Safety- too many vehicles (especially newer pickups and SUV's) parked on both sides of narrow streets will make it impossible for our large fire trucks to get where they need to go.**
***Safety- ambulances may not be able to get where they need to go**
***Safety-driveways may often be blocked which prevents people from leaving home and may also contribute to accidents**
***Safety- streets clogged with cars will contribute to pedestrian, bicycle, and pet accidents**
***Safety-how will streets be cleaned?**
***Health-is the existing water and sewer infrastructure up to this new load?**
***Health- How will the garbage truck be able to reach its carts if most of them are blocked by parked cars?**
***Health- Collecting recycled materials will be much more difficult**
Also- mail carriers won't be able to reach the mailboxes

My wife, Martha and I have lived in and owned property in this neighborhood for 30 years now. My two children grew up there and now my baby granddaughter is growing up there. We've watched it change and improve into an affordable place where people are happy and eager to live.
Let's not risk ruining it with a development that isn't appropriate. I remember that many years ago one of the developers of this project got his start in that very neighborhood by building nice and appropriate housing there. That housing was helpful in getting this neighborhood onto the right path.
We're grateful for what he did then and are hoping that he can see that if this project is modified properly everyone can benefit.

Thanks for taking the time to consider this,
Ron Hollingshead

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To The Fayetteville Planning Committee:

I'm a fan of Fayetteville, including South Fayetteville... aka "Tin Cup" ... A special and unique area.

As a longtime homeowner, as well as a Graduate of the UofA, along with my three sons, I would request you vote against Project number LSD-2024-011. I go there often, and have several friends living and owning property in South Fayetteville.

Project number LSD-2024-011

is ill advised and inappropriate for this quiet and established neighborhood for those living there. Consider the impact on the infrastructure, traffic, parking and so much more...

The developer is trying to maximize his dollar without taking into consideration the huge change this will bring to surrounding landowners of single family homes in this quiet neighborhood.

Please reconsider where this type of housing for students should be built. **This project, placed in this neighborhood, is unfair and a bad idea.**

There are always solutions to be found.

Thank you for your time...

Ted,

Thank you for the input! I have copied Donna Wonsower and Melissa Boyd who are reviewing this project. I know there have been conversations regarding site lines at this location with respect to parallel parking. At the end of the day, if it is meeting Engineering standards, it is likely approvable.

Hi Jessie,
I was looking at the site plan for the lofts at Nelson Hacket. I go through that intersection frequently and think it is a bad idea to put the three parallel parking spaces where I indicate below. There is a lot going on at that intersection with drivers having to pay attention. Someone trying to park and then getting out of the car seems dangerous for all parties.
Thanks,
Ted

Subject: University Lofts. Opposition to the planned development on Nelson Hackett and Block stre

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hello planning commission

My name is Molly Jensen. I live at 312 S. Block Ave. directly across from the planned development named "University lofts." I am a long term resident of Fayetteville. In over 35 years I have always lived within walking distance of downtown.

I am writing today to let you know that I am an opposition to this development. There are huge traffic, safety, and health safety concerns that are not being addressed in the current plans and variances and approvals.

1-There are not enough parking spaces for every "loft" to have its own parking spot. Every apartment complex that I have viewed within a mile radius of this one has a single parking spot assigned for every bedroom. If you were to walk the neighborhood you would we have maybe 60 offstreet parking spots 20 to 30 of which are filled by current residence. That leaves approximately 30 spots for residence of the new development. This lack of parking will cause residents to have to cross Nelson Hackett Mlk and or college Street all of which have no on street parking. We are a very heavy neighborhood and this is an incredible safety issue. We don't have any stop signs nor speed bumps

2- according to the cities own plan, as you create wide sidewalks and bump outs you will cut that parking in half. I do not believe that anyone has taken this into account in the approvals.

3- what plans has the city taken to address the lack of infrastructure? How will trash and recycling be picked up with so much street parking. How will mail be delivered. I'm not sure anyone has walked through the neighborhood and noticed that block Street has no less than 10 patches where the Watermain breaks on a regular basis.

With 160+ tiny units you were going to literally quadruple the draw on the water and sewage in this neighborhood.

4. I am extremely concerned and would like to know or see the marketing research that was done concerning who the resident will be. This is clearly focused on college students or more importantly transient. Fayetteville residence I am truly disappointed in the short sightedness of staff and planning commission putting such an inappropriately dense housing, touching a fantastic and special neighbor .

5 - I think the neighborhood needs to have resident reserved parking.

I am not opposed to appropriate development, but I have yet to speak to anyone in the profession of planning architecture and housing that thinks 160 tiny unit efficiency apartment units would be appropriate for this location.

I urge Planning commission to table this and ask for a more appropriate development to be put forth for this downtown area.

Regards

Subject: Urban Lofts and South Square neighborhood development issues

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission Members:

My name is Molly Jensen, I live at 312 S Block. I have owned this property for 24 years and have lived here for 20 years following renovation. This neighborhood is very special. We bought our house so we could send our kids to Jefferson elementary school. When we bought our house and moved in with our 4-year-old son there were no other children in the neighborhood. Within just a few years there were several dozen children. Our neighborhood is so sought after as it is, I receive daily requests to purchase my house. Many days, like yesterday, I got two offers in the mail. We have all worked hard to maintain our houses and we are all very proud of our little hamlet. Our little neighborhood is so special and safe.

This will radically change if the Urban Lofts is approved. How will it change:

- Traffic safety and chaos. As one of the first neighborhoods built after the original town plat, our streets are very narrow and many of the properties here are so narrow they do not have driveways. Adding cars for over 100 apartments that will be dumped into our neighborhood would be irresponsible and cause many safety issues for the children in our neighborhood.
- Traffic safety issues are caused by all the cars that are not given appropriate parking within the complex. With over 100 apartments we are looking at up to 200 extra cars in the old neighborhood. This increased traffic will cause Health and Safety issues. How will our sewers handle the increase? Our water has failed at least twice this year already. how will our trash be picked up? How will emergency vehicles get through our streets?
- Traffic Safety - our little roads are not built for the number of cars traveling through our neighborhood each day. As a downtown general development, the apartment traffic should flow INTO DOWNTOWN GENERAL zoned areas. Not into our neighborhood conservation zoned neighborhood.
- Traffic safety and personal safety of new potential residents: There are easily 40 cars parked on our streets at night from current residents. As a consequence, Urban Loft residents (and current residents) will have to cross Highway 62, Nelson Hackett or College to find a parking spot outside our neighborhood increasing the chances of pedestrian/car accidents as well as personal safety concerns.

I am opposed to the current Urban Lofts design because it is INAPPROPRIATE for this site. Look at the other 4 projects this company has built - they are all on flat land WITH parking for all residents on site. This Fayetteville site calls for an appropriate project, something that would encourage neighborhood growth and interaction. One project will not solve our housing crisis, and our

neighborhood should not pay the price for Fayetteville trying to do so. Let's find a project that will enhance the neighborhood, increase everyone's property values, make the developers some money and be proud of their project.

With all the legal vicariances, they are trying to pour 10 gallons of sand into a 5-gallon bucket. An appropriate project would not require so much need to bend/break our current building standards. Please build on this site, just build something appropriate.

Regards,
M

Ms. Wonsower -

Please find below an email I sent to the Planning Commission and the two Ward 1 council members yesterday.

Thank you!
Carole Jones

---------- Forwarded Message ----------

Dear Planning Commissioners:

I am writing to you regarding the proposed Urban Lofts at Nelson Hackett. I am a Ward 1 Fayetteville resident. I have lived in Ward 1 since 1998. I am opposed to the proposed development for the following reasons:

The density seems too dense for the surrounding area.

The expected traffic from the proposed density seems as if it would overwhelm the surrounding streets and neighborhood. It also seems as though there would be some potential safety concerns since the proposed project is located along the curve at Nelson Hackett Blvd. Has a traffic study been performed?

The site is rather steep, making drainage and runoff a concern.

The existing water and sewer infrastructure may not be adequate.

The proposed on-site parking is of particular concern. I feel as though the idea of less parking is a good concept; however, continuing to allow residential developments to utilize off-site parking is a bad idea. This is still Arkansas, and almost everybody has a car! Our public transportation system is unsafe and unreliable. The last time I rode the bus, I had a very unsettling experience. I ride a bicycle for at least 50% of the trips I make, which is far more than most people I know. Yet I still own a car and must use a car for many trips. I believe that less parking for most commercial developments makes sense. I just do not like the idea of existing, single-family neighborhoods having to subsidize and accommodate dense residential housing.

I realize there is a housing shortage in Fayetteville. I am not opposed to new development or dense development or infill. I just feel as though this is not an appropriate location for this type of development. Less density at this site may make more sense.

Thank you for your consideration of my concerns.

Best,
Carole Jones, PE
2203 S Emma Ave
Fayetteville 72701

September 18, 2024

Dear Planning Commission Members:

I am writing in regard to LSD-2024-0011 (Urban Lofts). My husband, Jared Pebworth, and I have lived at 105 W Fifth Street just shy of 25 years. We have raised two children there (and are still raising one), and we enjoy our yard where we have kicked the soccer ball, grown countless gardens, picked a few apples and pears from our trees, and listened to the catbirds.

Yet what has been a small, quiet neighborhood, largely for working- and middle-class families, finds itself in danger of being completely altered due to the proposed LSD-2024-0011. Our streets are narrow, some homes lack driveways, and over the years, we have witnessed several occasions where emergency and utility vehicles have not been able to pass, because cars were parked on both sides of the road. When we first moved to our home, there were very few children nearby. Now we can count close to two dozen within a couple of blocks. They ride bikes and scooters, play soccer and street hockey, walk their dogs. Some are just learning to walk in their yards and on the sidewalks.

The Urban Lofts project, even with its small reduction in units, would cause chaos and traffic safety problems, endangering residents and their children. Many of us chose this area in the first place for the increasingly rare experience of quiet roads, kind neighbors, walkability, and, in some places, a tree canopy. The hundred or so extra cars owned and driven by the revolving population of renters at Urban Lofts will flood our already crowded streets, causing up to an additional 800 or more vehicle trips per day. Our neighborhood is not the place for this type of large-scale development. Though there may indeed be areas of 71B that could benefit from "revitalization," as Urban Lofts states in its letter of August 22, 2024 to the Planning Commission, our neighborhood is the very definition of vital. We work, we raise families, we take care of our homes and our neighbors, we pay our water and gas bills, along with our property taxes. We **live** here.

Though additional "workforce units," again from said letter, may be a legitimate concern, a development of that design and scale is not appropriate for the proposed site. Many neighbors and supporters attended and spoke at the last meeting where this project was discussed at length and the Planning Commission unanimously voted the project down 7-0. In that moment, all of you agreed to protect the integrity of one of Fayetteville's oldest and most authentic neighborhoods. If you allow this development to be built among our homes, you will negatively impact our immediate environment and our quality of life. And our neighborhood will never be the same again.

Sincerely,

Cindy King and Jared Pebworth

Please help save a Walker Park neighborhood with single family homes

Shared with Public

Developers from Jonesboro purchased an acre of land south of south st and east of Hackett road, location just north of MLK blvd. They want to build 167 apartments and only have parking for 100 cars, This is an old neighborhood with mostly old single family homes. We went to the last planning commission meeting, 35 residents testified regarding the narrow streets. Residents are concerned about heavy traffic which would happen with 67 cars parked on the narrow streets. There are many families living there with small children. The planning commission voted the project down. The developers have appealed their decision and will bring the project once again to the commission. I spoke with Fire Marshall Jeremy Ashley re what is required by the fire department for these small streets. Fire apparatus access roads cannot be less than 20 ft, exclusive of shoulders and curbs.
Marshal Ashley has seen the proposed plans and informed the developer that they would have to widen South st and 4th street in order for permission to on street parking. This would create hazards for the streets. The residents would accept the apartment complex but only if there is adequate parking on there grounds. I have not contacted water and sewer people as yet, which I intend to do. Any assistance you would be able to offer would be greatly appreciated, Marian Kunetka, 706 south College ave, Fay 72701 - phone 847-644-6510 (kunetka@uark.edu.

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I write regarding the Jonesboro developer who wants to build 167 loft apartments on property south of South street and east of Nelson Hackett blvd in the Walker Park neighborhood. He only plans to provide 100 parking places for this development and is requesting a code variance to allow on street parking for the remainder of the vehicles. I would imagine that there will be more than one resident per loft, which would add to the number of cars associated with this development.
This is an old established neighborhood, the majority of the homes are single family dwellings with many young children who play outside during good weather. On street parking for this many cars and trucks would be dangerous to to the current neighbors. This would not be required if the developer would provide adequate parking on the site. This could be accomplished by lowering the number of apartments to equal the parking spaces provided.
Please consider voting for established citizens and require on site parking.

Hi Donna and planning staff,

I'm writing to express a few concerns and observations about this proposed project.
I have long been aware of which parcels are zoned DG and expected that large scale development would happen there. It is my hope that the planning commission be realistic about the actual traffic and parking impact that this development will have.
I manage rental property in this neighborhood and know that all but one of my tenants drive to work, school and grocery shopping. They walk for recreation. Similar developments in the area have resulted in an increased burden on neighborhood street parking. When the parking rent is seperate from the unit rent, some residents opt to save money by parking on the street.There is insufficient bus service to this area to ease the car burden.
The infrastructure for utilities is insufficient. Particularly stormwater runoff and sanitary sewer.
Parking on Nelson Hackett potentially creates a traffic hazard.
This neighborhood has many properties zoned NC but it seems they are easily converted to higher density. This creates insecurity and unpredictable growth patterns.
The other minor thing I noticed in the plans is that a parcel that I own across Nelson Hackett is incorrectly identified as being fully owned by the city of Fayetteville. They only own a tiny portion of that parcel #765-07125-000 which of course would be ideal for more parking or road expansion in the future.

Best regards,
Rebecca LaTourette

Dear Planning Commission Members,

I have heard a lot about the new development at the intersection of South & Nelson Hackett. It is very nearby my home at 7 E 5th St. I have mixed feelings about what I know. It seems to me there is to be 160 units with only 60 parking spaces. I hope this to not be true. I am very happy to support development in downtown and want to see a thriving city, but I do not like the parking disparity. I believe there needs to be a greater requirement on the builder to provide adaquete parking for this new development either by lowering the number of units or increasing the amount of parking. I think exploring a basement parking garage that could house 200+ cars would make the most sense if the development wants to maintain 160 units. I personally would also love to see retail/commercial property on the ground level to give us restaurants, bars, coffee shops, and similar businesses to help us grow and give value back to the community and neighborhood I live in.

I hope these thoughts reach you in time.

Hello Donna and planning staff,

I'm contacting you to express my continuing concerns about the size of the proposed development and the inevitable huge increase in traffic, parking issues and pressure on insufficient infrastructure in the neighborhood. I own multiple lots, also zoned DG on the opposite side of Nelson Hackett Blvd. The trend that I am observing is increasing density without realistic planning for the cars and infrastructure in these areas. It also seems quite unfair to the folks on that side of the boulevard who bought into the concept of neighborhood conservation only to see many properties rezoned for infill which compounds the problems since everyone has at least one car.
Additionally, I ask that you consider the high probability of other denser uses of surrounding properties on the East side of Nelson Hackett. There are multiple properties zoned DG or for infill. Will they be turned down in the future because the area can't handle anymore density? Will you make Nelson Hackett 4 or 5 lanes to handle the traffic? Who pays for the new, wider streets, water and sewer upgrades for an entire neighborhood?
The increased traffic is the biggest concern. Most folks have at least one car and they like to drive.
As much as I would love to see my tenants walk to work, the store and school, they do not. It will take significant investment in public transportation to make some of the areas we have designated for high density have less vehicle impact on the historic old core of Fayetteville. It will also have to be economically painful to jump in a car to drive 3 to 5 blocks.
I will continue to watch as this town explodes with development. It's sad to think that the eventual economically best use of my property may be a giant, unattractive parking garage.

Best regards,
Rebecca LaTourette

Subject: Letter to planning commissioners against the Urban Loft variance

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Commissioners,

This is in relation to the proposed plan of the **Urban Loft Company** for their housing project at the corner of Nelson Hackett and South Street in the Walker Park area.

Although I understand there is a need for an increased supply of more residential possibilities in Fayetteville, what Urban Loft is considering will do more damage than good. As a nearby resident, I find that what they are proposing is totally contrary to the benefit of the immediate area and the city as a whole for several reasons.

But, first of all, I must say that all requested variances presented to your commission should be studied and looked at with fine tooth combs. Plans and ordinances were put in place because they were thought to be in accordance with the desires of the people to make Fayetteville the wonderful city it is. Asking for exceptions is exactly what Variances are asking; to change the earlier plans or ordinances that were deemed to be appropriate. Therefore, variances should be seen as inappropriate except in very special circumstances.

In this particular situation, there are several reasons to object to this proposal beside the fact that only marginal adjustments have been offered after the first and unanimous refusal. Here are just a couple that should be enough to decline this request for a variance:

1) The lack of the parking places for an additional 100 vehicles is going to more than become troublesome for the neighborhood and surrounding neighborhoods as well as for the proposed new residents. There's a reason for the ordinance that requires a ratio for parking places per bedrooms.

2) The proposed construction will necessitate the destruction of some beautiful trees that should be protected. Fayetteville loves its trees and cutting any big ones does more than adding to the heat sink cities have become. Trees do more than add shade and beauty but they also sequester carbon dioxide. Cutting them not only stops them from absorbing carbon dioxide but it causes them to release the CO2 they've absorbed. The regulations to replace old, stately trees with young ones will not make up the difference for decades. Clearly this is not the time to be adding to climate change.

I respectfully request that you vote to deny this request for a variance.

Ed Levi, resident of downtown Fayetteville

Subject: 309 S Block Ave LSD-2024-011 Project Concern

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Good Morning,

My name is Shawn Morris, I live at 114 W 5th Street, Fayetteville, AR 72701. I'm reaching out to voice my concerns about the 309 S Block Ave LSD-2024-011 Project.

I love Fayetteville and my neighborhood and I'm excited to see all the new construction that is happening in the region. I believe we need to build more houses in greater density to keep up with demand and keep prices affordable. However, the decisions we make to achieve this need to be smart and thoughtful. The proposed project off of Nelson Hackett is neither.

The builders are trying to fit too many units on too small of a lot leading to my concerns about parking, traffic, and trash. Fayetteville is still a car-dependent city and that is not changing any time soon which means every resident will have a car and that will spill onto multiple streets in the neighborhood. Additionally, our neighborhood already has a rat/mouse problem and the amount of waste that would be generated on the plot will exacerbate the issue.

I would welcome a project that is downsized, but as it stands today it is too many units and will have a negative impact on the neighborhood. I'm excited to attend the planning commission meeting on this topic on 8/12.

Thanks

Shawn Morris

Subject: 309 S Block Ave LSD-2024-001 Project Meeting

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I'm writing about the project planned at Block Street/Nelson Hackett/4th Street.

I live at 321 S. East Ave, one block west of Block Street. I bought my house almost 10 years ago. I'm a retired nurse and plan to live here until I die.

My neighborhood is a diverse, family-friendly place. I walk my dog at least 2 times a day and know many of the neighbors. People are frequently out and about walking dogs, jogging or walking. And there are a number of young children who play in the streets. There are two basketball hoops up and the children use them a lot.

I love this neighborhood and am horrified with the plan and how it will change the lives of everyone who lives here. I've spoken to many of the neighbors and none of them are in favor of this plan.

The number of units is shocking, knowing that traffic already is a big problem in our neighborhood. Cars racing up my street and Block Street frequently is very scary! I have to be careful with my dog, even though she is on a leash. And of course there are cats in the neighborhood that are at risk of being hit or run over.

Parking is also a problem. Some residents don't even have a driveway and need to park on the street. When Crisis Brewery has an event, every street is crowded and neighbors sometimes have no place to park. Adding 163 units (and people and probably cars) doesn't make sense!

I understand that there are only 106 total car parking spaces and overflow would be on our already busy streets. It sometimes is already a problem going down some streets where cars are parked on both sides. We have to think of safety - what if an ambulance needs to get through? And it will be harder for trash pickup and street cleaning.

Another problem is we have frequent water line breaks because of old pipes. Some of my neighbors have had flooding because of this. Right now there is a patch at the intersection of S. East Ave and 4th St. The patch has sunk, creating a fairly large hole that everyone has to drive around.

Because the planned units are so small, the population will probably be students or temporary people looking for something more appropriate and the turnover will be constant. I believe the units will degrade over time and this will affect or property values. Why not build fewer luxury apartments or small homes where folks will want to STAY and become part of our wonderful neighborhood? Or build fewer decent-sized apartments with retail underneath such as a coffee house, a wine bar, etc. that neighbors would enjoy going to?

Of course they will take down most of the old trees (we will miss that shade). I don't understand why this is not a priority when we are worried about climate change and everything that goes along with diverse nature.

All in all, I hope the planning folks take a better look at this and do what they would want in their OWN neighborhoods, which is a change in plan with fewer, larger apartments or small houses.

Thank you,
Karen Mueller

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

My name is Karen Mueller, and I'm writing to express my deep concerns (horror actually) about the proposed plan at South Street, Block Street and Nelson Hackett.

I live at 321 S. East Avenue, one block east of Block Avenue. I've lived in our neighborhood almost 10 years and it's the best neighborhood I've ever lived in. I'm 76 years old, a retired nurse, and plan to live in my house until I die.

The neighborhood is very diverse with folks of all ages. I know many of the neighbors because I usually walk my dog twice a day which enables me to meet and greet folks. I'm also a gardener so am outside frequently and can chat with folks who are walking by. We have many young children who play in the streets which is a joy.

I am very disturbed by the plan to build 163 units on the street behind me. That means **AT LEAST 163** more people on that **ONE BLOCK** behind me. It would entirely change the character and health of our neighborhood.

Traffic safety is already an issue. Cars frequently race up my street which is dangerous to people and pets.

Our streets are narrow and sometimes hard to get through. When Crisis Brewery has special events, cars fill the neighborhood, and some folks are unable to park in front of their homes during these events. Some residents don't even have a driveway.

Another problem is water pipe breaks which happen frequently. Some people have suffered flooding. I imagine with 163 more people, the water and sewer systems would be overloaded.

The loss of most of the trees on that block will devastate the park-like atmosphere and contribute to climate change.

I suggest that you please take a short 20-minute walk through the neighborhood and then imagine what it would be like for you if you lived here, with what is proposed.

I would rather have a reasonable number of homes or luxury apartments (perhaps above a coffee shop or wine bar or small store) with a bit of nature, places where people would want to stay instead of moving on.

I'm afraid that the proposed plan would devastate our wonderful neighborhood!

Thank you,

Karen Mueller

Dear planning commission members,

My name is Phoebe Ostner and I live at 312 S. Block, directly across the street from the proposed apartment complex. I was raised in this neighborhood and deeply cherish its unique, homely, sense of place. The reason south Fayetteville is important is that it preserves the essence of old-town Fayetteville. It is not particularly affluent or picture perfect, but it is walkable, neighborly, quiet, and community oriented. I believe we are an example of what makes people want to move to Fayetteville in the first place. We must preserve our hometown in this way.

Being a part of the downtown, we are not equipped to host a hundred or more cars from these apartments that are left to park on our old, narrow streets. Similarly, the traffic associated with housing of this proposed magnitude (800+ vehicle trips daily) poses safety concerns for everyone in the neighborhood, especially our young children who feel safe in our streets as they are now.

Please consider my perspective and
thank you for your time.

Phoebe Ostner

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hello Planning Commissioners and Staff,
I am writing to voice disagreement over the proposed Urban Lofts, LSD 2024-011. I live nearby at 312 South Block. The traffic danger of putting 162 units on 1.3 acres is severe in this location. That comes to 124 units per acre! The neighborhood is functioning great at 10 units per acre, well double the 4 units per acre in the sprawl-prone suburbs. These are small, narrow, neighborhood streets that cannot handle that type of traffic. We currently have small children, elderly, pet walkers, and even folks from other neighborhoods safely and happily walking these streets. This is a neighborhood experiencing a rebirth of sorts. This scale of development will hamper and cause a detrimental effect to our quality of life and degrade the neighborhood. 162 units estimating 20% significant others or roommates (a common attribute anywhere) could equal 200 neighbors. Even with the Planning Staff's hopes and dreams of only 80% of them bringing cars, that comes to 160 vehicles trying to drive, park, go places, all the things we do. There will be around 80 parking spaces provided which means over 100 folks will be fanning out all over the surrounding city blocks to park on our already crowded streets. This neighborhood should be held up as a symbol of success! Not punished for being located close to a major roadway! My wife and I are more than happy to welcome a neighboring complex that might be 40 units per acre, 50, or even 60 units per acre. Do many other neighbors show up to the Planning Commission welcoming that density? I doubt it. This is a density of 124 units per acre!

Please: use your discretion as granted to you by the Ark. State Legislature on any Large Scale Development: vote to table this proposal out of traffic danger. Request that the development team come up with a compromise: a lower density proposal that will add to the neighborhood, not take away from it.

Hello,

I am writing to express my support for the modified plans submitted for the Urban Lofts at Nelson Hackett.

The city just created a new zoning category called Urban Corridor which will allow up to 8 stories of development along College Avenue and other side streets if those properties are re-zoned accordingly.

This project is very small and respectful of the neighborhood by comparison, with the maximum height being 4 stories, and stepping down to 2 stories across the street from single family homes. There is no such consideration currently being given to single family homes in the new UC zoning proposed for much of 71B.

The project also shows good design, high-quality materials being used, and will serve as a bridge between South Fayetteville and downtown.

Finally, the property had been used as multi-family for the prior 50 years. My oldest brother and his wife lived there in the mid 1990s while they were attending graduate school, and the apartments were in bad

I am very much in favor of the project "Urban Lofts at Nelson Hackett".

I know the city has a valued interest in the re-vitalization efforts for the future, this project is vital within this corridor. This will be one of the first major projects for the re-vitalization efforts and one that is designed well for the future and its location!

Planning Commissioners

Please approve LSD-2024-0011, determining:

- In favor of variance to §166.11(A), Conformance to Plans and Regulations.
- In favor of variance to §166.05(F), Access Management.
- In favor of variance to §166.21(E)(1), Dumpster Location.
- In favor of variance to §172.04(C)(4): Parking Lot Location Standards.
- In favor of recommended right-of-way dedication.
- In favor of recommended street improvements.
- In favor of all other conditions as recommended by staff.

This project is located within the Historic Downtown Grid and the 71B Corridor. The proposed project density of 127 Units per acre is appropriate for this Corridor location in the Core of our Downtown Tier 1 Center. The design of this Multi-family Project is architecturally dramatic, with it's tallest architectural elements oriented on the Corridor and facing the Downtown Square. More importantly, the Project is sensitively stepped down in height where it faces the existing residential neighborhood.

The Project will also help introduce more needed resident population within the Downtown and the Nelson Hackett Section of the Corridor. This section of the Corridor has recently received some public artwork and will see other future pedestrian-friendly enhancements.

Parking may become a challenge for the adjacent neighborhood, just like it has been for many other neighborhoods in the Downtown. Where these parking challenges have been addressed, the establishment and enforcement of a Parking District has turned out to be one of the important approaches to be used.

Finally, the development of this proposed project can represent a critical first effort to insure that, if the City can successfully attract it's growing residential population within the Growth Concept Map's 40 Tier Centers and three Urban Corridors, it will be able to accommodate it's projected 2040 Population. All in

a way that will help enhance the City's Transit Readiness, Housing Affordability, protection of ecologically valuable features within the City's Enduring Green Network and the preservation of existing neighborhoods located outside of the Cores of the Tier Centers and Urban Corridors.

Dear Donna Wonsower,

I am a Fayetteville resident living near the proposed building at Nelson Hackett and South Street and I am very concerned about the project. The proposal shows that there are 162 units but only 106 parking spaces, which means there aren't even enough spaces for all the people who live there, let alone any visitors they might have. I live only a block away, at 108 W 5th St., and my house doesn't have a driveway, so I have to rely on street parking. If residents from this new building don't have enough spaces for their cars in their parking lot, they will park in the street and I may not have a place to park my car in front of my own home if I get home late in the evening.

The streets are also very narrow and I am worried about traffic safety and the safety of the neighborhood children. My next door neighbors both have kids who skateboard and play ball in the street because they are used to very little street traffic, and they aren't used to having so much traffic. There are also several places with lots of shrub overgrowth that grows right up to the edge of the street and creates blind corners and the increase in traffic with so many new residents will make these blind corners much more dangerous. This development will compound an already dangerous traffic problem, as there are many areas where the narrow streets and cars parked on both sides of the road create problems. Just yesterday someone parked in front of my mailbox and the mailman couldn't deliver my mail.

I urge you to reject the building as it is currently proposed. This project should be scaled back so that there is room for more parking on site and there are at least as many parking spaces as there are units, if not more, to account for visitors to the building. Our streets cannot safely handle the 100 + cars that will not have designated parking spaces.

Thank you for taking time to listen to my concerns!

Warmly,
Gwyn Hill
108 W 5th St.

Hello,
I live in the Jenning's Plus neighborhood and am in favor of LSD #2024-0011.

I am constantly reminded how lucky I am to live and work in this neighborhood. Lots of people don't get that privilege but you're not likely to hear their voices.

I'm writing this email for the future neighbors who don't get a loud enough say on the matter.

One of the many things that makes this neighborhood great is the carless lifestyle it offers. Being only 4 blocks south of the Fayetteville Square provides access to services, including the Fayetteville Public Library, the Razorback Greenway, the Mill District, AND our beloved neighborhood pub – Crisis Brewing. Proximity to these neighborhood services not only reduces vehicle miles traveled for safer streets, but also strengthens our community engagement.

This project's site is a textbook example of infill. The project's use unit perfectly aligns with the 71B's rezoning mission to provide Fayetteville residents with more housing in our downtown areas. The project's density is at an appropriate scale for the edges it serves and provides a diverse housing option we need.

Please consider voting in favor for more neighbors in Fayetteville without more sprawl, Casey B. Hoffman

CAUTION: This email originated from outside of the City of Fayetteville. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I am writing to oppose LSD-2024-0011 (URBAN LOFTS AT NELSON HACKETT), as it still is going to be a problem with parking for residents on the side streets that have nowhere else to park except off-street parking. The streets surrounding the proposed development are narrow and are already a problem for residents. I live in S Fayetteville and often visit my friends on Block. It's already hard to find a safe parking spot, meaning the streets are narrow.
I think there are lots of other options the developer should think about. I know they reduced the units, but it is still too large for this spot considering the surrounding neighborhood and the problems with parking on Nelson Hackett expansion of a cut in for parking. Let's not ruin the newly designed Nelson Hackett RD.
Please do not approve this development.

PC members and staff,

I live at 88 E 4th St, in the neighborhood of the proposed project on Nelson Hackett. I am in support of the project as proposed.

I appreciate the developer's efforts to structure their leases to encourage car-free living by charging more for units with a parking space, and would encourage the Planning Commission through their Long-Range Planning Committee to develop a standardized process for creating and enforcing a neighborhood parking district. This would provide the neighborhood a tool to utilize if the developer's parking projections and strategies do not result in a desirable outcome for the neighborhood.

Subject: PLEASE VOTE NO on Nelson Hackett LSD

Dear Planning Commissioners,

You've done it once, you can do it again. Vote no on this misguided project. If you know me, you know I'm all for density and infill as we go from being a town into being a city. But this project is trying to put 10 gallons in a 5 gallon bucket.

A block or two to the South and I would have no issues, but it doesn't take a traffic engineer or an expensive study to see that the scale of this project and it's limited access directly onto Nelson Hackett will overwhelm the surrounding small neighborhood streets, both with parking and traffic.

I understand you are under a lot of pressure to approve this, but please understand that this is YOUR decision and the idea that you must approve variances, or that it's on you to prove the traffic issue just seems wrong to me. If we are forced to hand out variances then why have them, what's the point. If someone can just say you must give me a variance then why are we even here? Why vote at all? It should be on the applicant to prove that this won't cause an issue not the other way around. And if it is required that we do a traffic study, then well, let's do one. Let's do this right. Let's not be cowed and pressured into decisions we know are not in the best interest of the city.

Thanks for all the hard work you do. These growing pains and related decisions are never easy. But sometimes the hardest decisions are the best ones.

Thanks and see you on the other side, Bob Stafford

shape then. I've attached a picture I took last year of the condition of the property as I drove through. I took this picture to send to my brother to show him what happened to where he used to live.

If this were proposed in my neighborhood, I would support it whole-heartedly and encourage my neighbors to do the same. Four stories with a step-down to two stories is a thoughtful way to address infill along 71 B where it is located near existing neighborhoods.

Thank you,

166.21 - Downtown Design Overlay District

(A) *Purpose.* The intent of this ordinance is to encourage good architectural form through the use of quality design and materials. The goal of the code is to promote functional architecture that creates attractive and usable space. Downtown Fayetteville has a rich architectural history spanning many decades and styles; therefore, architecture should be respectful of the existing built environment and should strive to enhance the public realm. A strong emphasis shall be placed upon designing and implementing sustainable and green architecture practices.

The Pit at Urban Lofts is not quality design nor usable space

(B) *Applicability.* The Downtown Design Overlay District applies to parcels of land located within the boundaries of the Downtown Design Overlay District. The Downtown Design Overlay District Architecture Standards are applicable in the following instances:

(1) If a conflict occurs between different standards, these standards shall supersede the City's Nonresidential Design Standards; Office, and Mixed Use Design and Development Standards in the Downtown Design Overlay District and College Avenue Overlay District.

(2) All new construction, additions or renovations shall comply with these standards regardless of whether the improvements require a permit; ordinary repairs and maintenance are not subject to these standards. Specifically, only the new construction or portions of the building that are being renovated shall comply with these standards.

(3) Building designs that strictly comply with these standards are to be considered approved for matters of aesthetics and shall not require further discretionary review for architectural character or

Executive Summary

Why a plan?

Towns are created step by step by many people. It is only possible to coordinate public and private effort in a great townmaking enterprise with some idea of *what the whole is meant to become* as it evolves. Fayetteville will build upon the proud legacy of its founders, and grow a more beautiful, more sustainable Downtown, with this plan.

The purpose of this document is to focus resources on things that will really make a difference. The Downtown Master Plan crystallizes the desires of Fayetteville's citizenry into buildable, functional visions, and provides do-able instructions for government and private investors. Intensive public involvement was used to create this blueprint for Downtown's next distinguished century.

Balance, above all, is the theme

The many authors of this plan have struggled to find equilibrium between equally important goals. They have demanded a balancing between predictability and flexibility in regulations. They have insisted on balancing automotive mobility and convenience with pedestrian comfort and achieving the desired urban image for the heart of the community. They sought a balance between preservation of the historic character and a spirit of new-ness, and allowed no trade-off between productive real estate and environmental sensibility. With this plan Fayetteville can have all these.

Building on History

Fayetteville has a great downtown to start with. The goal of this plan is to show how to add to what's been accomplished with new generations of timely upgrades. This is not a handbook for the slash-and-burn, slum-clearance / urban renewal plan of the kind that disassembled central cities a generation ago; this one's about *putting the traditional city back together.*

Basic Principles

Six fundamental strategies are established by the plan.

First, a *superbly walkable environment* should be produced and showcased as Downtown's hallmark. Second, it must be made a priority to get more people, including households of moderate and upper income, *living Downtown.* Third, Fayetteville needs to get *smart about parking*, so the need can be efficiently and sustainably met but the sense of place is enhanced, not weakened, in the process. Fourth, *smart rules* that outperform the existing zoning should be put in place to attract and secure a caliber of development worthy of Downtown. Fifth, an interconnected series of *special places* should be nurtured and celebrated as Downtown's signature public spaces and best addresses. Sixth, Fayetteville must recognize in all its actions that this part of the City has an *experience-based economy*, and thus continue to expand the focus on arts, culture and entertainment experiences as Downtown's drawing card.

Teamwork & Patience

The vision is compelling, but no one developer, group of elected officials, or agency can pull it off alone. This plan is assembled around the idea that *many coordinated actions* (large and small) by the City government, businesses, developers, neighbors, the University, and cultural organizations will gradually grow the Downtown the citizens want.

April 30, 2004

The plan looks both short term and long term. While the Illustrative Master Plan focuses on the long-term vision for the future of Downtown as a whole, and foretells a series of changes and initiatives that will be decades in the making, there are specific sites identified in the plan that are prime locations for initial projects in the very near future. Examples of projects & initiatives in the plan meant to be undertaken soon or in our generation are the infill of vacant and underutilized sites on Dickson Street, Block Avenue and West Avenue, enabled by a first generation of community parking facilities; redevelopment of the Mountain Inn property; creation of a sizable Downtown Park; and a "road diet" narrowing the bloated College Avenue / Archibald Yell Boulevard corridor into a tree-lined grand avenue. Longer term prospects in the plan include the framing of that 71-B corridor with substantial redevelopment of blighted properties along the reclaimed avenue; redevelopment of the Fayetteville City Hospital and Hillcrest Towers parcels; and completion of more shared parking facilities timed to match private infill development.

Implementation

The plan includes an interlocking series of implementation measures. There is an entire chapter devoted exclusively to implementation. In addition, throughout the key chapters there are green boxes entitled "Getting There" that provide detailed action steps at the end of each major section.

The primary official implementation steps are to:

A. Adopt a new set of land development regulations, a form-based code for the Downtown district, replacing the existing zoning.
B. Establish a tax-increment financing mechanism that will be used, among other things, to produce shared parking and enable public-private redevelopment partnerships.
C. Transform DDEP into a Business Improvement District.
D. Undertake a series of improvements to improve walkability and viability for business and housing, including returning certain key streets to two-way traffic.
E. Catalyze a shift from individual, inefficient surface parking lots to shared parking, parking structures, and to foster a park-once environment.

Stay the Course

Diligence and persistence in implementing this plan will reward Fayetteville with an inspiring Downtown scene, an ever higher quality of life, and continued economic prosperity.

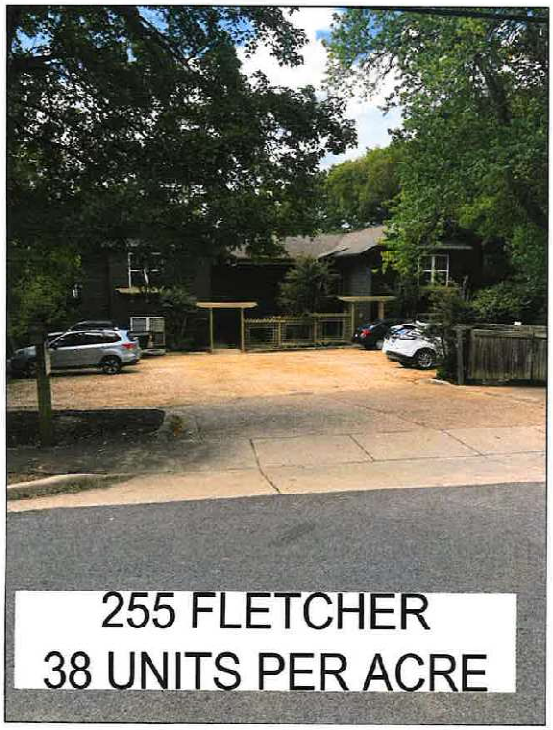
FAYETTEVILLE DOWNTOWN MASTER PLAN

Stage 3:
Buildings are built on both sides of the street, forming an urban relationship and transforming College Avenue into a spatially defined "urban room."

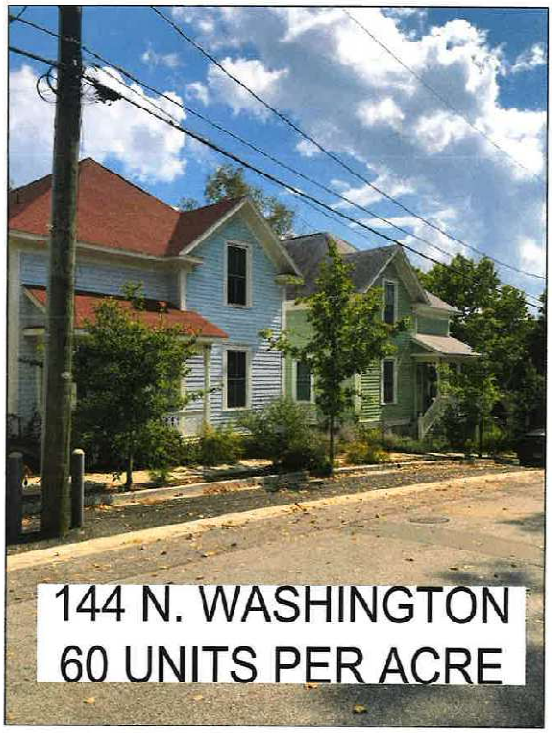
CAFE CONNECTION: SIDEWALK TOUCHING BUILDINGS

Stage 4:
The supermarket is improved by constructing a multi-story, mixed-use neighborhood grocery prototype. This picture depicts a traffic signal located at the intersection of College Avenue and Lafayette Street.



Stage 4 Alternative:
A roundabout, replacing the traffic signal, is introduced to tame traffic. The roundabout serves as a reminder that you have arrived in town and need to drive more slowly. A highly visible feature, such as public art, should be placed in the center of the roundabout and should be lit at night.

THERE IS NO PIT ALONG THE SIDEWALK IN THE FAYETTEVILLE MASTER PLAN; ONLY COMMERCE AND HOMES ADJACENT TO THE SIDEWALK



THE PIT MUST QUIT

WHY NOT THIS?

RE: **Council appeal of Planning Commission's Approval of Large-Scale Development on the corner of Nelson Hacket and South Street**

Three City Council Members have informed City Clerk Kara Paxton and my office that they wish to appeal the Planning Commission's approval of a proposed apartment complex (a Large-Scale Development) along Nelson Hacket Boulevard, South Street, and two other city streets. Only a single Council Member is necessary for such an appeal on behalf of a resident. Since D'Andre Jones was first to expressly agree to sponsor such appeal, he became the official sponsor. However, the attached email shows that both Council Member Turk and Council Member Stafford wish to be co-sponsors of this appeal. City Council sponsors of an appeal to the City Council are not legally required to vote in favor of the appeal at the City Council meeting.

The Planning Department will now need to prepare the record of the approval of this project at the Planning Commission and submit this information into Civic Clerk for the City Council's information. This appeal will most likely be heard at the November 7, 2024 City Council meeting.

Kara,

Reading this entire list of emails below, I conclude that Council Member D'Andre Jones has properly appealed the Planning Commission's decision to approve the Large Scale Development on the corner of Nelson Hackett boulevard and South Street on behalf of resident Louise Gamache upon my forwarding of this email to you. Council Member Jones properly referenced the proper code listing approval/rejection criteria for an LSD and his concern about traffic safety.

Teresa,

You may appeal this decision for a resident by emailing your appeal for the resident to the City Clerk's Office. The appeal must be accomplished by next Monday (ten business days from the Planning Commission's decision). You need to reference Section 166.02 (C)(2)(a) and discuss a possible violation of subsection (iv) "The proposed development would create or compound a dangerous traffic condition." I have attached copies of the relevant Code sections for your information. If you have further questions, please call me.

Subject: Lot at 4th St and South St, bordering on Nelson Hackett Blvd, plans and approval Sept. 23rd LSD-2024-0011

Dear Teresa: As a property owner and resident in Ward One on the south side, I am appalled by the approval to build on over 130 unit apartment complex with a parking lot to hold 72 cars on this lot which is just over an acre, on a hill off a busy road as well as building in parallel parking on Nelson Hackett Blvd. The residents and nearby residents spoke eloquently against this and I concur. It is a devastating money grab which will harm the existing neighborhood, pose dangerous traffic issues, congest a fragile historic area and harm the essential nature of this city. I ask that you appeal this decision on LSD-2024-0011 by the City Planning Board to allow the build yo proceed. If I and other concerned citizens of Fayetteville need to do more to stop this build, please let me know. Thank you.

RE: **Request for Legal Opinion**

Schuyler Schwarting emailed City Council Members an argument that the Large Scale Development for the Lofts that was approved by the Planning Commission should be denied by the City Council. This argument was confined to an argument that the proposed Loft's construction "would create or compound a dangerous traffic condition." Council Members Jones and Stafford asked me to review Schwarting's argument in a legal memo to the City Council. The following is my analysis as requested.

Schwarting's first argument is directed at the proposed parking on Nelson Hackett Avenue. The Planning Commission was also concerned about unprotected parking along Nelson Hackett with its substantial traffic and very curvy design. The Planning Commission then granted a variance to allow the road to be widened in front of the Lofts to add a buffer or slip lane so that drivers of parallel parked vehicles along the Lofts would not have to open their doors onto a traffic lane and also would have this slip lane to make parallel parking maneuvers safer.

If the variance is denied by the City Council so the slip or buffer lane is not allowed, parallel parking along Nelson Hackett would appear to create a dangerous traffic condition. These parking spots would then no longer be available to the Lofts. However, removing these parking spaces would not prevent the construction of the Lofts unless it lowered the required parking below the minimum required which I do not believe it would. Both the Planning

Commission and City Council (sitting with the same powers of the Planning Commission during an appeal) have great discretion when determining whether or not to grant a variance. This is especially true for the proposed parking along Nelson Hackett.

Traffic studies are not normally required for a Large Scale Development but was appropriate for this proposed project. The length of time and area considered in a required traffic study can vary depending on the proposed project. I leave this determination to our City's Planning and Engineering Departments.

I drive on South Street every workday to reach the Block Avenue in order to access the Town Center's parking deck. I am not certain that I know where the "pit adjacent to Nelson Hackett" that Schwarting refers to is located. If it is the area where South Street rises to intersect with Nelson Hackett, I know that this intersection has become much safer with the recent addition of a traffic signal. A traffic study for this intersection could provide data relevant to whether this is or would likely become a dangerous traffic condition sufficient to deny approval of a Large Scale Development. Any such determination of danger needs to be supported with factual data rather than merely conclusory arguments.

Any issue regarding fire access for this project is the responsibility of the Fayetteville Fire Department. Unless the Fire Department objects to the project's available fire access, this is not a proper objection that the City Council could consider.

Schwarting's objection that tenants would have "to travel through neighborhood streets to access the proposed development" is not an unusual situation for many Large Scale Developments in Fayetteville. It is also not a proper consideration in Schwarting's claim that the Lofts creates or compounds a dangerous traffic situation. Although the fact that existing residents may have to drive around the neighborhood looking for empty parking spaces can be quite aggravating, I do not believe such increased congestion without further proof can rise to level sufficient to meet the "create or compound a dangerous traffic condition" required to deny a Large Scale Development. The fact that some of these residential streets may have "unprotected turns" at their intersections is also insufficient grounds to justify reversal of the Planning Commission approval of the LSD. Facts, not conjectures, are required to deny the Large Scale Development approved by the Planning Department.

The City Council's approved redesign of the Rock Street intersection with College Avenue enforced with curbing the previous "no left turn" signs from Rock Street left onto Nelson Hackett. Most drivers heading up the hill on Rock

Street have long turned right toward North College or the Square. No Rock Street driver has legally turned left toward the Block Street intersection with Nelson Hacket for a long time. The new traffic signal at South Street and Nelson Hackett have encouraged more drivers seeking to go South or West to use the traffic signal at South Street for better protected access.

The occupation of the Lofts apartment building will certainly cause increased parking issues for existing residents. It also likely that the signalized intersection at South and Nelson Hackett will get more traffic than it currently handles. This is not really a problem caused by the Lofts project, but by the City Council approved *Code* sections that gives automatic reductions to developers to supply less than "one parking space per bedroom" for bike racks and bus stops at fairly distant locations. The Council may wish to make those variances to reduce required parking spaces below one per bedroom something that the Planning Department, Planning Commission, and City Council could grant rather than what a developer has unfettered discretion to use in order to reduce required parking spaces for a project's tenants. That reduction cannot be changed for the Lofts, but only for future developments if the City *Code* is amended.

CONCLUSION

(1) The variance granted by the Planning Commission for parallel parking on Nelson Hackett is within the City Council's power and discretion to approve or reject. Rejecting this provision will remove about eight parking places from the project's tenants who then will have to park somewhere else in the adjoining neighborhood.

(2) The other variances would also result in other lost tenant parking spaces. Again, this would cause more congestion and force more tenants to park on neighborhood streets.

(3) I believe that the Planning Department has stated that removing these variances will not support the rejection or disapproval of the Large Scale Development which can be constructed even if all approved variances were to be overturned by the City Council.

(4) Schuyler Schwarting has presented some well written and thoughtful arguments against the Planning Commission's decision to approve the Lofts' LSD project. However, I believe that there is currently insufficient facts and data to overturn the Planning Commission's approval of this Large Scale Development. Please remember my

cautions and the Arkansas Supreme Court's ruling that I have repeatedly warned previous City Councils about since 2002:

"If a proposed Large Scale Development meets the minimum standards of the Unified Development Ordinance, it must be approved even if every Alderman believes it is a terrible development unanimously opposed by the neighbors.

'When a subdivision ordinance specifies minimum standards to which a preliminary plat must conform, it is arbitrary as a matter of law to deny approval of a plat that meets those standards.' Richardson v. City of Little Rock Planning Commission, 295 Ark. 189, 747 S.W. 2d 116, 117 (1988).

If a denial is 'arbitrary as a matter of law', the City would be overturned in Court . . . ."

CITY OF FAYETTEVILLE ARKANSAS

CITY COUNCIL MEMO
2024-662

MEETING OF NOVEMBER 26, 2024

TO: Mayor Jordan and City Council

THRU: Paul Becker, Chief Financial Officer

FROM: Kevin Springer, Budget Director

SUBJECT: **2025 ANNUAL BUDGET AND WORK PROGRAM**

RECOMMENDATION:
Consider the Proposed 2025 Annual Budget & Work Program for adoption at the November 19, 2024 City Council meeting.

BACKGROUND:
Per section 14-58-201 of Arkansas code, on or before December 1 of each year, the mayor of all cities and incorporated towns having the mayor-council form of government shall submit to the governing body of the city or town, for its approval or disapproval, a proposed budget for operation of the city or town from January 1 to December 31 of the forthcoming year.

DISCUSSION:
The Proposed 2025 Annual Budget & Work Program will be distributed to City Council on Friday, November 1, 2024. Listed below is a schedule of hearing dates for the Proposed 2025 Annual Budget & Work Program.

Date	**Budget Meeting / Location**
Friday, November 8, 2024	Budget Discussion Meeting, Room 219 / Zoom
Tuesday, November 12, 2024	City Council Agenda Session, Room 219 / Zoom
Tuesday, November 19, 2024	City Council Meeting, Room 219 / Zoom
**Additional meetings to be scheduled if needed.*

(Page Left Blank Intentionally)

November 19, 2024

Members of the City Council and Citizens of Fayetteville:

I am pleased to submit the 2025 Annual Budget and Work Program for the City of Fayetteville. This budget has been prepared in accordance with the Arkansas Statutes and City Ordinances that require the Mayor, under the mayor-council form of government, to submit to the City Council the annual budget for approval. This budget allocates necessary funding for all municipal operations, as well as necessary adjustments to the Capital Improvements Program for 2025. Salary increases in 2025 will be considered in the first quarter of 2025 based on the completion and approval of a salary survey for uniformed personnel. The General Fund budget does, however, include a contingency amount for possible increases for salaries in that fund.

Once again, the current budget was formulated in the context of my primary budget goals considering current economic conditions.

2025 Budgetary Goals

My primary goals for 2025 continue to be:

- *To provide the same or increased levels of service to the citizens as previously delivered*
- *To pay City employees a competitive wage based on salary surveys*
- *To present a budget with necessary program requests and which includes other divisional increases required for personnel needs and inflationary cost increases*
- *To continue to provide services to the citizens in the most efficient and effective manner possible*
- *To fund necessary Capital Improvements as can be afforded*

Financial Environment

Although economic activities were comparably soft during 2024, sales taxes increased modestly compared to 2023, and building permit revenue has remained strong. HMR taxes also showed increases. The General Fund revenues for 2024 are estimated to be under budgeted amounts. We expect revenues to remain steady for 2025. Unemployment for the Fayetteville-Springdale-Rogers area is at 3.0% for July 2024, which compares favorably to the rest of the state and nation.

Conclusion

I believe that this budget is based on realistic revenue and expenditure estimates. This budget continues to provide for the best possible level of services while still providing sufficient reserves to meet a downturn, if experienced.

2024 has continued to be an extremely busy year for the City as many infrastructure projects continued. I am confident that with the Council's support, we will accomplish many additional improvements in 2025. The combined efforts of this Administration and City Council's continued support will allow us to again meet the challenges facing the City of Fayetteville in 2025 and to achieve continued growth into the future.

CITY OF
FAYETTEVILLE
ARKANSAS

November 19, 2024

Mayor Lioneld Jordan, Members of the City Council and Citizens of Fayetteville:

The budget being presented is the 2025 operating budget. It does not include re-budgets that represent programs approved and appropriated in prior years which, as of the end of fiscal 2024, remain uncompleted. Re-budgets also include amounts generated by previous bond issues in the Capital Project Funds which remain unspent as of December 31, 2024. Total re-budgets could be up to $200,000,000. These re-budgets will be presented for addition to the 2025 operating budget early in the first quarter of 2025.

The economy in Fayetteville has provided challenges due to inflationary cost increases and supply chain issues; however, the City has performed well in view of these issues. Estimates for 2024 General Fund revenue show increases over 2023 actuals from sales tax collections, property taxes, franchise fees and building permits. HMR, Parking and Airport revenues also displayed strength, and other funds have continued to perform well. Forecasted 2025 sales taxes are expected to be 3% more than the 2024 estimated amount, and residential and commercial building starts have increased in 2024. It is anticipated that permits for construction will remain steady in 2025. Total General Fund revenues are projected to remain flat compared to 2024 estimates as overall economic conditions for 2025 have the potential to be very volatile. Water and Sewer revenue collections have increased in fiscal 2024 and are expected to increase in 2025 as well. Fuel sales at the Airport are estimated to increase 2.7% in 2024 compared to 2023 and are expected to increase further in 2025 over 2024 estimates. Revenues for 2024 HMR tax collections are estimated to be approximately 2.8% over 2023, and revenues for 2025 are expected to be 2% more than 2024 collections. Franchise fees are currently estimated to increase 4% compared to 2023 and are expected to have a 1% increase in 2025. Most of these increases are expected to be due to inflation.

The 2025 General Fund budget represents a net expenditure increase of approximately $4 million from the 2024 adopted budget (see page VII for details). Personnel expenses account for the majority of the increase.

2025 ANNUAL BUDGET & WORK PROGRAM EXECUTIVE SUMMARY

This budget is formulated with the Enterprise Funds being budgeted on an accrual basis except for depreciation, which is not included in the budget, and both capital expenditures and bond principal payments, which are included in the expenditure budgets.

Governmental funds are budgeted on the modified accrual basis.

The total budget allocated by expenditure category is displayed in the following table.

Summary of Fund Expenditures by Category (In Dollars)

Category	Adopted 2024	Proposed 2025	Change In Dollars	2025 % of Total Budget
Personnel Services	$ 85,191,863	$ 90,554,018	$ 5,362,155	35.5%
Services & Charges	32,479,225	34,991,977	2,512,752	13.8%
WWTP Operations	13,298,046	14,110,846	812,800	5.6%
Purchased Water	13,000,000	16,096,900	3,096,900	6.3%
Internal Charges	9,241,522	10,741,191	1,499,669	4.2%
Fuel	9,034,786	8,059,595	(975,191)	3.2%
Materials & Supplies	7,984,122	8,840,607	856,485	3.5%
Maintenance	6,558,595	7,034,460	475,865	2.8%
Total Operating Expenses	176,788,159	190,429,594	13,641,435	74.9%
Debt Service	38,986,562	38,021,096	(965,466)	15.0%
Capital	23,026,769	21,535,659	(1,491,110)	8.5%
Transfers Out	2,875,510	4,129,651	1,254,141	1.6%
Total Expenses	$ 241,677,000	$ 254,116,000	$ 12,439,000	100.0%

The 2025 Budget is $254,116,000. This is an increase of 5% when compared to 2024, or approximately $12.4 million. The largest component of this increase is $5.36 million in Personnel Services, which is due to salary increases given in 2024 and new personnel added in 2024 and 2025.

The following table indicates the percentage of total budget allocated by funds.

Fund Totals as Percent of Total Operating Budget

	Adopted 2024		Proposed 2025		
	Budget	% of Total	Budget	% of Total	Difference
Funding Source					
General	$ 73,353,000	30.3%	$ 77,360,000	30.5%	$ 4,007,000
Water & Sewer	55,755,000	23.1%	61,778,000	24.3%	6,023,000
Sales Tax Bond	34,555,000	14.3%	33,077,000	13.0%	(1,478,000)
Recycling & Trash Collections	17,718,000	7.3%	18,728,000	7.4%	1,010,000
Sales Tax Capital Improvements	14,061,000	5.8%	14,037,000	5.5%	(24,000)
Shop	11,275,000	4.7%	12,807,000	5.0%	1,532,000
Street	10,344,000	4.3%	11,862,000	4.7%	1,518,000
Airport	5,516,000	2.3%	5,763,000	2.3%	247,000
Parks Development	5,127,000	2.1%	5,557,000	2.2%	430,000
Library Bonds 2017	2,809,000	1.2%	2,887,000	1.1%	78,000
Parking	2,183,000	0.9%	2,333,000	0.9%	150,000
Community Development Block Grant	1,639,000	0.7%	1,493,000	0.6%	(146,000)
Police Pension	1,470,000	0.6%	1,470,000	0.6%	0
Fire Pension Special	0	0.0%	1,462,000	0.6%	1,462,000
Fire Pension	1,445,000	0.6%	0	0.0%	(1,445,000)
Impact Fee	1,943,000	0.8%	922,000	0.4%	(1,021,000)
Drug Law Enforcement	815,000	0.3%	837,000	0.3%	22,000
HMR Tax Bonds 2014	707,000	0.3%	706,000	0.3%	(1,000)
TIF Bond	527,000	0.2%	606,000	0.2%	79,000
Parking Deck Bonds	384,000	0.2%	381,000	0.1%	(3,000)
Replacement & Disaster Recovery	40,000	0.0%	38,000	0.0%	(2,000)
Residential District Parking	11,000	0.0%	12,000	0.0%	1,000
	$ 241,677,000	100.0%	$ 254,116,000	100.0%	$ 12,439,000

An examination of the overall budget indicates that the General Fund is the largest fund being 30.5% of the total. The Water & Sewer Fund is second at 24.3% of the total. The combination of these funds is 54.8% of the total budget. The Sales Tax Bond Fund (budget to repay outstanding bonds) is 13% of the budget. Thus, the three largest funds represent over two-thirds of the total operating budget for the City.

An important part of this budget document is the City's Financial Policies delineated in pages 4 through 8 which are incorporated as a part of the budget. These policies include the following:

Revenue Policy
Expenditure Policy
Debt Policy
Reserve Policy
Investment & Cash Management Policy
Capital Improvement Policy
Financial Reporting Policy
Administrative Procedures to Adjust the Approved Budget

Overview of City's Major Funds:

General Fund is the major operating fund in the Governmental Fund category and is comprised of activities not accounted for specifically in other funds.

The traditional functions of government are included in the General Fund which include the following: general government services (Mayor's Administration, District Court, City Clerk and City Attorney), fire, police, finance, facilities management, animal services, telecommunications, parks and recreation, media services, library funding, engineering, planning, building safety, and information technology.

General Fund Revenue:

The General Fund revenue budget was based on the following assumptions:

- County Sales Tax is projected to increase at a rate of 3% over 2024 final estimates.
- City Sales Tax is projected to increase at a rate of 3% over 2024 final estimates.
- Property Taxes are projected to increase 10% over 2024 estimates based on current assessed valuation forecasted.
- Franchise Fees are projected to be 1% more than estimated collections for 2024.
- The All Other Revenues category is projected to decrease 28% compared to 2024 estimated collections. This is mainly due to grant revenue not being budgeted until the grant is awarded, which is normally mid-year.
- The revenue split for City Sales Tax remains at approximately 60% to General Fund operations and 40% to the Sales Tax Capital Fund.

Based on these revenue assumptions, the major revenue sources for the General Fund in 2025 are projected to be as follows:

City's Share of County Sales Tax		$25.87	million
City Sales Tax		19.85	million
Franchise Fees		7.85	million
Property Tax Millage		6.07	million
Intergovernmental Income		3.76	million
Charges for Services		4.03	million
Licenses & Permits		3.15	million
Fines & Forfeitures		1.12	million
Alcoholic Beverage Taxes		1.27	million
Investment Earnings		1.01	million
Other		0.34	million
	Total	$74.32	million

General Fund Expenditures:

The $4.2 million increase in the General Fund is due to 2024 salary, pension and insurance increases. Potential salary increases have been estimated and included in salary contingencies in this budget. This will be evaluated in the first quarter of fiscal 2025 based on the results of a salary survey for uniformed personnel. The administration is only requesting 6.60 new positions in this fund for 2025 at an annual cost of $538,476.

Budgeted payroll expenditures are based on full employment.

The significant changes in General Fund for 2025 compared to 2024 are as follows:

2024 General Fund Budget - Adopted	**$**	**73,353,000**
Additions:		
Personnel & Personnel Benefits		3,281,680
Software Maintenance/Lease		243,991
Motorpool		224,858
Fayetteville Public Library		178,000
Utilities & Telephone		99,794
Insurance - Vehicles & Property		83,656
Uniforms/Personal Equipment		65,832
Professional/Contract Services		40,820
Outside Agencies		44,071
Travel & Training		19,316
Building & Grounds Maintenance		14,239
		4,296,257
Reductions:		
Transfers		(79,359)
Materials & Supplies		(84,053)
Services & Charges		(39,414)
Equipment Maintenance/Fixed Assets		(86,431)
		(289,257)
2025 General Fund Budget - Proposed	**$**	**77,360,000**

Major budgetary challenges to be considered for General Fund in the future include:

- A consistent long-term method to incorporate annual wage increases in the adopted operation budget based on salary survey indications.
- A continued examination of the City's overall long-term revenue stream to match required maintenance expenditures and for needed capital expansion amounts.
- A plan to meet cost escalations caused by inflation if it continues to increase at rates higher than traditional norms.

The **Street Fund** is primarily financed by turnback revenues received from the State of Arkansas and turnback monies received from the County Road Millage Tax. State turnback is received from a half-cent sales tax levied by the State for State highways and bridges. State turnback also comes from motor fuel taxes collected by the State and returned to the City on a per capita basis. These monies are utilized to maintain and repair City streets, rights-of-way, drainage, traffic control and maintenance, and City owned sidewalks. Amounts are also allocated for public transit to Razorback and Ozark Transit systems from this fund.

State turnback, including the half cent transportation tax passed by statewide referendum, is projected at approximately $7.7 million for 2025. The City also receives 80% of the road millage levied by the Quorum Court on real and personal property located within the City. This should generate approximately $1.8 million. Administration is requesting 5.0 new positions in this fund for 2025.

The **Parking Fund** has been established to account for the revenue and expenses associated with the paid parking program. A revenue bond issue for the construction of a parking facility was issued in December of 2012. In addition to operating expenses, net revenue from this fund is pledged for payment of that bond issue. Revenues are being projected to remain flat compared to 2024 estimated collections.

The **Parks Development Fund** accounts for the revenue and expenditures of the Parks HMR tax approved by the voters in 1995 as modified by the 2010 referendum. The $5.5 million in planned expenditures for 2025 includes $1 million in capital improvements. The fund will have a balanced budget for 2025.

The **Impact Fee Fund** accounts for the revenues and expenditures related to the collection of water, wastewater, police, and fire impact fees. The collection of these fees is expected to be flat compared to 2024 estimated collections. These fees can only be used to address capital needs resulting from increased development.

The **Sales Tax Capital Improvements Fund** accounts for the revenue and expenditures of the City's sales and use taxes which are used for acquisition and improvement projects as well as equipment additions and replacements that are included in the City's five-year capital improvements program as adjusted. A total of 40% of City sales taxes provide the revenue base of this fund.

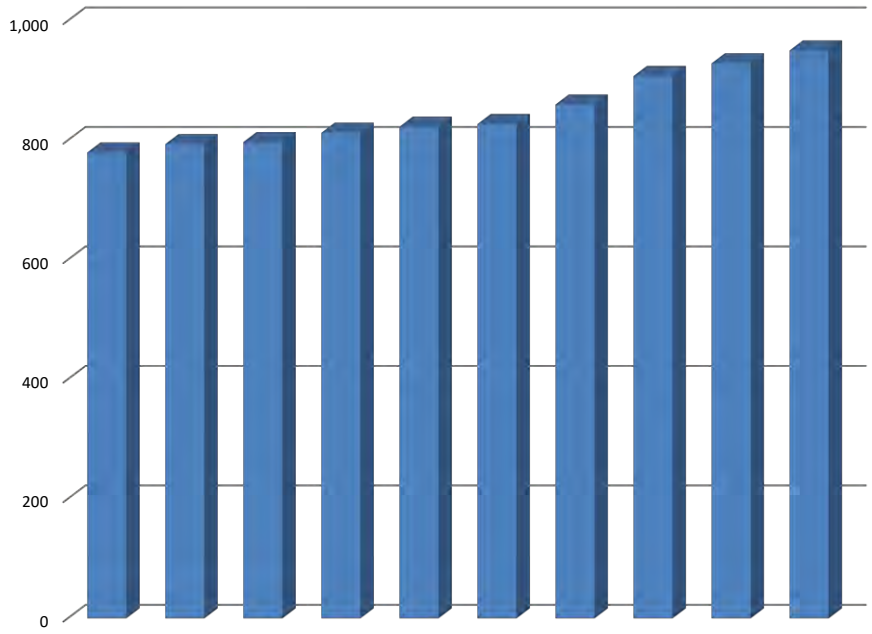
The **Water & Sewer Fund** accounts for the revenue sources as well as the operation and maintenance expenses of the City's water and sewer system. This includes water purchases from Beaver Water District, all water and sewer functions, the operation of the wastewater treatment plants, meter and backflow operations, and utilities financial services. The capital expenditure portion of this fund will be $8.6 million in 2025 as a backlog of capital improvement projects will be addressed in the coming year.

For 2025, the Water & Sewer Fund is projected to have an operating gain of $1.6 million, excluding depreciation expense and before capital expenditures. The water purchases for 2025 are budgeted at $16 million, which represents approximately 30.8% of total operating expenditures. The wastewater treatment plant operations represent the second largest expenditure for operations in the fund at $14.3 million, which represents 27.5% of the total operating expenses. This fund has a $7.9 million loss for 2025 after capital expenditures and debt service. Administration is requesting 8.0 new positions in this fund for 2025.

The **Recycling & Trash Collection Fund** is responsible for the operation of the City's solid waste collection and disposal, recycling program, and composting program. Revenues for the fund are obtained from fees levied for trash collection, recycling revenue, and container sales or leases. Recycled items also generate revenue for the system. For 2025, the Recycling & Trash Collection Fund is projected to have a gain of $28,000 before capital expenditures of $900,000. Administration is requesting 1.0 new position in this fund for 2025.

The **Airport Fund** provides for the operation and maintenance of the City's municipal airport. The Airport Fund's revenue is generated from fuel sales and rents and leases. Major capital improvements have traditionally been funded by state and federal grant programs. For 2025, the Airport Fund is projected to have a balanced budget before depreciation and capital expenditures of $283,000. Administration is requesting 1.0 new position in this fund for 2025.

The **Shop Fund** is an internal service fund that provides for the acquisition, maintenance, and replacement of equipment and vehicles utilized by the City's operating divisions. The Shop Fund's source of revenue is from charges to other City operating funds based on usage and replacement needs. The Shop Fund has a budgeted surplus of $6 million for 2025 after capital expenditures of $2.1 million. This surplus is needed for and restricted to future replacements of vehicles and equipment.



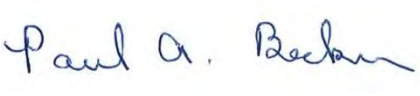
2025 Capital Budget

This plan contains a total of $31,416,500 for capital projects and capital related expenditures in 2025. A detailed listing of the projects planned for 2025 is included under the Capital and Debt section.

Position Control

During the 2024 fiscal year, 3.0 FTEs were added. For the 2025 budget, 21.60 FTEs are being requested.

Below is a 10 year history of total authorized positions by activity.



Fund	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	Change from Prior Year

CLOSING

The appropriations requested in this budget are the result of a collaborative effort among all City Division Heads, Department Directors, and City Budget Staff members. It is built on the policies, goals, and objectives outlined by the Mayor and City Council. It represents the financial and operational plan for the City of Fayetteville for 2025. The appropriations contained in this budget will provide for quality municipal services that meet the needs of the Citizens of Fayetteville and it is, hereby, submitted by the Mayor to the City Council for consideration and adoption.

FAYETTEVILLE ARKANSAS

Located in one of the fastest growing regions in the country, the City of Fayetteville is a progressive, business-friendly community at the cultural epicenter of Northwest Arkansas. Fayetteville is home to over 100,000 people, and is the second largest city in Arkansas.

With a median age of 28 years old, the City has attracted millennials and Gen-Xers alike from across the country.

These factors, plus the City's commitment to improving quality of life, make Fayetteville a prime location for retail and accommodation sector growth.

City of Fayetteville

Community Overview and Statistics

HISTORY

- Fayetteville's earliest recorded history was written by Frank Pierce in about 1819.
- By 1828, several families settled around Fayetteville.
- In 1870, Fayetteville became an incorporated city.
- In 1872, the University of Arkansas opened in Fayetteville.

LOCATION

- Fayetteville is the county seat of Washington County.
- It is 30 miles east of Oklahoma and 50 miles south of Missouri.
- Fayetteville is located near the tallest mountains in the Ozark Mountain Range.
- The City encompasses 56.12 square miles.

POPULATION / SIZE

- Current population estimate: 101,680 (US Census Bureau, July 1, 2023)[1]
- Fayetteville is the second largest city in the State of Arkansas.
- Fayetteville's median age is 28.5 years (2022 ACS 5-Year Estimate)[2]

REGIONAL MSA STATISTICS

- Population: 590,337 (2023)[3]
- Average Annual Unemployment Rate: 2.8% (June 2024)[4]
- Average annual wages: $53,810 (2022)[5]
- Median Household income: $73,364 (2022)[5]
- Poverty Rate: 10.9% (2022)[5]
- Business Establishments: 15,050 (2022)[5]

ECONOMIC OVERVIEW AND QUALITY OF LIFE

Located in one of the fastest growing regions in the country, the City of Fayetteville is the cultural epicenter of Northwest Arkansas. Fayetteville attracts millennials and adults alike from across the country. The quality-of-life Fayetteville offers plays a large role in its ever-growing population base. Northwest Arkansas is home to the headquarters for three of the state's top employers: Walmart, Tyson Foods and J.B. Hunt. The rapid growth of population and businesses is a product of the economic landscape that has produced a thriving business climate for the region.

PARKS, NATURAL RESOURCES AND CULTURAL AFFAIRS

- There are 75 Park properties maintained and 4,226 acres of park land and lakes.
- 116 miles of trails (numbers are rounded):
    - Hard-surface trails – 58 miles
    - Natural trails – 58 miles
- The Outdoor Fayetteville program was named the 2023 Natural Resources Program of the Year by the Arkansas Recreation and Parks Association. This experiential-based program is designed to offer outdoor recreation opportunities to individuals and families who may not have the equipment or experience needed to enjoy the outdoors.

City of Fayetteville
Community Overview and Statistics

INFRASTRUCTURE, TRANSPORTATION, and GROWTH

- Fayetteville is conveniently located for travel north and south by Interstate 49, which connects to Interstate 40 in Ft. Smith to the south and to Highway 412 to the north, which connects to Interstate 44 in Joplin. Both Interstate 40 and Interstate 44 are major east/west interstate highways.
- Fayetteville has an airport used primarily by private owners of airplanes. The City also has an easy commute to NWA Regional Airport, which provides nationwide commercial transportation.
- Through June 30, 2024, the City constructed 3.45 paving miles and 1,182 feet of sidewalk.
- The Utilities Department installed 1,277 new meters from July 2023 to July 2024.
- Through the second quarter of 2024, the City installed or acquired 25 miles of water and sewer pipe.

MEDICAL RESOURCES

- Washington Regional Medical Center
- University of Arkansas for Medical Sciences-Northwest Campus
- Veterans' Health Care System of the Ozarks
- Fayetteville Family Medical Center
- Northwest Health Physicians' Specialty Hospital
- Springwoods Behavioral Health Center
- Vantage Point Behavioral Health Hospital
- Neurosurgery Spine Center
- Encompass Health Rehabilitation Hospital
- Walker Heart Institute
- Willow Creek Women's Hospital

CONCLUSION

The City of Fayetteville is experiencing a vibrant and healthy economic climate, demonstrating steady growth over the past few years in all measurable indicators – from record increases in sales tax, building permits, and population growth to infrastructure development that provides building blocks for the future and sustains and enhances quality of life. Fayetteville is a progressive, business-friendly community and understands that it takes the partnership of the entire community to move its economic engine forward.

City of Fayetteville
Management Agenda Based on City Council Strategic Goals

Recommendations from the City Council's Fayetteville Vision 2050 strategic plan guide the City's future policy, actions and operations. The City Management Team aligned major project areas with each of the following goals in development of the 2025 budget. As in previous years, many 2025 goals are a result of the voter-approved $226 million infrastructure improvement bonds passed in April 2019. The City Management Team has thoughtfully developed the 2025 work plan to deliver the most value, benefit and service to Fayetteville residents and businesses.

Financially Sustainable Government

Revenues have been relatively soft in 2024 compared to budget, however, fiscal year 2024 is estimated to have an increase in sales taxes of approximately 1% for the City and 2.8% for the City's share of County sales taxes. In 2025, sales taxes are expected to have a 3% increase over 2024 collections. Hotel-motel-restaurant (HMR) tax collections are up approximately 2% compared to 2023 through August 2024, and building permits are up 8.8% for the same time period. Revenues in the enterprise funds have shown moderate increases in 2024 when compared to 2023, and we believe this will continue in 2025. Inflationary cost increases and supply chain issues have continued to bring unique challenges to the City. Revenue streams also tend to be volatile, and the short-term economic impact of these conditions remains uncertain.

Salary increases were approved in 2024 and are anticipated in 2025. This budget, therefore, demonstrates the City's commitment to recruit and retain a highly valued and productive work force. A salary survey will be completed for uniformed personnel in early 2025.

Although 2025 may continue to be economically volatile, the City has accumulated sufficient reserves to expand personnel increases necessitated by infrastructure expansion and population growth. The City of Fayetteville will continue to provide efficient and effective services to its residents through good money management.

Economic Vitality: Implementation of the City's new Economic Vitality Master Plan will begin in 2025, following three years of collaboration with Fayetteville residents, non-profit organizations and business owners. The plan outlines a range of goals, strategies and action items focused on three key areas: Small Business Entrepreneurship and Industry; Workforce Development, Employment and Economic Mobility; and Community Development.

Rooted in the plan's foundation of economic equity and inclusion, small business support services will be expanded to include specific programming, consulting and education for historically disadvantaged residents and members of the creative economy. Events and programming centered on small business support, retention and expansion are planned throughout the year.

A childcare-focused needs assessment will be conducted in early 2025, in recognition of stable care networks as critical infrastructure for Fayetteville's economic health.

Economic Vitality staff efforts in 2025 include deploying HUD HOME funding for quality, affordable housing projects. Proactive housing recruitment along 71B also will be a focal point.

Long Range Planning, Development Review and Permitting: After a record-breaking year, as measured by permit fee collections, Development Services and its constituent divisions anticipate ongoing development pressure in terms of applications, construction and inspections.

2025 will afford staff the opportunity to assess the impacts of sweeping ordinance changes made in previous years to the Unified Development Code. These include a clarification to the appeals process, ensuring fees are collected for projects that impact our Parks system, extending tree preservation standards to projects with potentially outsized canopy impacts and creating a non-discretionary review process to address unforeseen delays at permitting. Development Review's support of Long-Range Planning activities is intended to continue.

In 2025, Long Range Planning is anticipated to increasingly shift from its role from process improvement to plan implementation. This will focus most prominently on a Downtown Master Plan, but also will include elements of the 71B Plan, City Plan 2040 and Fayetteville's Heritage and Historic Preservation Plan. Given the persistence of the challenge, Long Range Planning anticipates continued investigation and data collection on housing needs to support the Administration, Planning Commission, City Council and the Mayor's Housing Crisis Task Force. Community expectations for plan implementation continue to focus on prioritizing goals related to housing production gaps.

In Building Safety, recently approved positions are anticipated to afford the division new opportunities for proactive outreach, public education, reduced review times and faster responses, with its focus remaining on permit review and inspections.

Planning and Development: National and international trends continue pointing to the expansion of Artificial Intelligence, worsening climate change and a persistent lack of housing affordability as some of the biggest challenges currently facing planners and policymakers. By prioritizing infill development and the creation of compact, complete and connected neighborhoods, planners balance development pressure on the region by placing a higher priority on developing the City's center, where infrastructures and services already exist.

Following larger site rezoning initiatives and ordinance changes completed in 2024, planners will continue to focus on housing needs through 2025 by implementing those plans and ordinances adopted by City Council. After reaching an amended cap in short-term rentals in the city, planners anticipate that 2025 may see more in terms of housing development geared toward students, longer-term tenants and university-affiliated needs. Parking standards and other development regulations that impact housing also will rise to prominence, particularly in central areas of the city. Tools such as the infill matrix continue to inform discretionary land use approvals, such as rezonings and conditional use permits.

Communications and Marketing: Increasing awareness and engagement around improvement projects, community events and enrichment opportunities continues to be a focus for Communications and Marketing staff in 2025. A key priority this year will be working with a cross-departmental team to understand and apply changes to the City's website and other digital properties to meet new federal requirements for website accessibility, which takes effect in 2026. Additionally, because of renovations in City Hall and the new City Hall Annex, Media Services staff are working to procure and install audio/video and recording equipment in two new public meeting spaces, as well as in City Council chambers.

Human Resources: In 2025, Human Resources (HR) will coordinate supervisory/managerial training and development by hosting two sessions of Leadership Lab, a 12- module managerial competency program for City supervisors and managers.

Performance management, specifically updating the performance evaluation process for merit-based staff, will be a focus in 2025. The HR team will work with an interdepartmental project team to streamline the performance evaluation processes and procedures.

Naturally Beautiful City, and a Fun and Safe City in Which to Live

The Fayetteville community is proud of its character and sense of place that has been nurtured and cultivated over many decades. It is used to promote tourism, lure businesses and industries, recruit students, faculty and researchers to the university and showcase what makes Fayetteville special. The community has been given a valuable opportunity through the Cultural Arts Corridor bond to create entirely new public spaces that enhance and celebrate Fayetteville's increasingly diverse and unique sense of place.

In 2025, The Ramble project continues with construction on the civic plaza and two buildings anchoring the plaza's north and south ends within the Upper Ramble. As this work progresses, Fayetteville residents can enjoy The Ramble's natural areas, improved pedestrian connections, trails and community events that showcase Fayetteville's artistic, cultural and environmental assets.

The City will adopt and begin implementation of the local cultural arts master plan in 2025. Fayetteville's first Arts and Culture Plan will showcase the city as a premier destination for the arts, with the goal of encouraging additional public support and cultural tourism. The plan will codify existing practices and prioritize the community's vision for the integration of art in our community.

Additionally, pilot projects will continue around community partnerships and art commissions throughout the city and its parks system, enriching and enlivening the quality of life for Fayetteville residents through gathering and placemaking.

Historic Preservation: Fayetteville's historic preservation is expected to continue strong progress forward in 2025 with the completion of the City's second historic context statement, for the Spout Spring neighborhood, which was funded in part by a grant from the Arkansas Historic Preservation Program (AHPP). The grant also is funding a Multiple Property Documentation Form and individual property nomination to the National Register of Historic Places for the University Heights and Haskell Heights neighborhood, which will be reviewed by the Arkansas State Review Board as a follow-up to the 2024 historic context statement completed for those neighborhoods. The City has successfully applied for an annual grant from AHPP every year since 2022 and will be looking to use that resource in 2025 to continue implementation of the Heritage and Historic Preservation Plan.

With the restoration work on the Woolsey Farmstead site and the Vernon & McIlroy-Moore Produce Warehouse (locally known as the Porter Produce Warehouse) demonstrating good stewardship of Fayetteville's historic places, attention on historic places continues to build with an increasing interest in knowing the stories and people behind the buildings being preserved today. Long Range Planning staff, the Black Heritage Preservation Commission and the Historic District Commission are engaging with community members to capture and document the stories of historic places, not only as individual

structures and sites, but also as collections of work associated with a particular neighborhood development or well-known Fayetteville architects. Historic markers, signs and website development are helping tell the story of Fayetteville to residents and visitors alike.

Parks, Natural Resources and Cultural Affairs: Construction of improvements to Walker Park and Bryce Davis Park, as well as construction of the first phase of Underwood Park, will begin in 2025. Construction on the Yvonne Richardson Community Center will be completed this year; this expansion will bring additional program opportunities at YRCC. Improvements to Buddy Hayes Park will come alongside the YRCC expansion and be completed in 2025.

Design plans will continue for Combs Park, Fayetteville's first river access park, with the first phase of construction anticipated in late 2025. Design work for Gulley Park improvements, including pickleball/tennis courts and a dog park, will begin in 2025.

Adult and youth sports leagues continue to be high-quality recreational offerings for the community. City-hosted running events, such as the Dickson Street Mile, continue growing in popularity. Tennis and pickleball programming will be expanded in 2025 with the completion of new courts at Wilson Park.

After more than 25 years, the City continues to partner with Fayetteville Public Schools to combine funding and share resources to jointly provide facilities that benefit all our residents for a variety of uses. Parks, Natural Resources and Cultural Affairs also has a long-standing partnership with the Fayetteville Boys & Girls Club and Walker Park Senior Activity and Wellness Center to provide recreational opportunities for residents of all ages.

Work will begin in 2025 to implement the Urban Forestry Master Plan.

The Parks Operations division continues to provide operations and facility improvements. Specific projects in 2025 will include:

- Coordinating with Osprey Initiative, LLC to perform stream cleanups and monitoring on 10 stream segments in town affected by unsanctioned camps and other waste and debris.
- Maintaining horticulture in the Upper Ramble as construction is completed.
- Improving the fishing pier and boat ramp areas at Lake Fayetteville.
- Restoring and improving natural habitat at properties located at Mt. Sequoyah Woods, Lake Fayetteville (Veteran's Park and Callie's Prairie), Scull Creek Trail, Lake Wilson and Lower Ramble to include invasive plant removal and control, prescribed burns and native plant establishment.
- Replacing fencing at Lewis and White River parks.
- Improving field drainage and turf at Kessler Mountain Regional Park soccer fields.
- Coordinating new tree plantings and tree replacements with Urban Forestry, Transportation and Engineering

Public Safety: The 2025 budget addresses public safety operations for Police, Fire and 911 Services, allowing each to provide essential emergency services to our growing community.

Community outreach, engagement and safety are paramount to the success of the Fayetteville Police Department (FPD). In 2025, FPD plans to establish the Community Response Unit, with the goal of

reducing violent and property crimes through increased community engagement. An expansion of the Crisis Intervention Response Team will allow for expanded outreach and response to persons experiencing crises. In partnership with Fayetteville Public Schools, two additional school resource officers (SROs) will be added to support the City Council's resolution of expanding SROs to every campus.

Capital needs in 2025 include allocations for police mobile computers and electronic ticketing printer replacements in all patrol vehicles. A multi-year project will begin in 2025 to replace police and fire radios that are no longer supported and serviced by the vendor. These critical technology improvements for public safety are vital to communications, operations and interoperability. Likewise, the purchase of unlimited cloud-based electronic storage for all digital evidence is critical for efficiency and accessibility, chain-of-custody documentation, transparency, security and disaster recovery. Other important capital needs include ballistic protection replacements for officers and a scheduled replacement of weapons.

Priority projects in 2025 include: hosting regional and statewide law enforcement training programs for both internal FPD personnel and our law enforcement partners; expanding recruitment and retention efforts to hire highly qualified employees; and replacing end-of-life computer equipment in patrol vehicles. To ensure continued excellence in public safety, leadership training for succession planning within the Fayetteville Police Department will be an area of focus. This investment is critical for developing future leaders who can uphold the department's values and effectively manage the evolving challenges of law enforcement.

Priorities for Fayetteville Fire Department in 2025 include ensuring adequate staffing levels to best distribute workload and continuing to improve the level of training provided to firefighters.

Fayetteville Fire Department capital needs for 2025 include allocations for fire technology equipment replacements, mobile radios, facility maintenance, firefighter safety equipment and fire apparatus replacements. This funding will aid in providing the department with needed information technology and radio communications necessary for daily operations. The relocation of Fire Station 2, a 2019 bond project, will be fully implemented in 2025, with heavy rescue, urban search and rescue and hazmat apparatus being moved to this location.

Greater Ease of Mobility with Effective Transportation Systems

Throughout 2025, implementation of the Mobility Plan will include the following:

- Expanding and maintaining the City's trail system, sidewalk network and roadways
- Expanding mobility options throughout downtown
- Funding of Ozark Regional Transit and University of Arkansas bus systems
- Improving intersections to increase capacity and movement of vehicles
- Implementing traffic-calming projects and evaluating implementations for effectiveness
- Upgrading signals at all intersections and standardizing to the latest technologies to allow more flexibility and functionality
- Continuing to refine the pavement maintenance workplan using the pavement inventory and condition assessment
- Exploring feasibility of additional parking districts near University of Arkansas campus and existing downtown border

- Updating lighting in and around surface parking lots
- Continuing to improve the balance of parking supply and demand by adjusting rates and regulations, where warranted
- Pursuing shared parking agreements with private parking facility owners
- Participating in the Downtown Fayetteville Coalition Board

Work will continue in 2025 on several transportation and mobility initiatives from the 2019 Street Improvement bond, including:

- Construction on the 71B Corridor – North St. to Sycamore St.
- Improvements to Millsap Rd./N. College Ave.
- Pedestrian improvements along West Ave., Prairie St. and other locations
- Design and right-of-way acquisition along Rolling Hills Dr./E. Appleby Rd./Plainview Dr.
- Coordination with developments on property adjacent to railroad crossings at Futrall Dr. and Shiloh Dr.
- Study and design work for the Stephen Carr Memorial Blvd. interchange
- Work on all projects included in the $25M Safe Streets and Roads for All Grant Program:
    - Maple St. Cycle Track
    - College Ave. – Sycamore to Township
    - School Ave. – MLK to 15th St.
    - Gregg Ave. – North St. to Fulbright Expy.
    - Joyce Blvd. – College Ave. to Crossover Rd.

Trail improvements planned for 2025 include:

- Mission Blvd. Trail (1 mile) – N. Rush Dr. to E. Viewpoint Dr.
- Midtown Trail Corridor (2 miles) – Steven Carr Memorial Blvd. to Woodland Ave.
- Drake St. (0.8 miles) – Protected bike lane and trail connection to the Razorback Greenway at Gordon Long Park – 1 million in federal funding for this project
- St. Paul Trail Improvements design to connect to the planned paddle park and areas east of the White River to the Razorback Greenway, partially funded by the multi-agency CPRG Grant through the EPA

Ecosystem Preservation

The City's ecosystem preservation goals focus on climate action planning, maintenance and preservation of our natural ecosystems and resources, pollution reduction initiatives and environmental protection policies, programs and projects.

Work in 2025 is structured around the recently adopted Climate Action Plan, which has two focus areas: Greenhouse Gas Emission Reduction and Nature-Based Solutions. The Sustainability team is focused on actions identified in the plan to further policies, programs and projects that reduce emissions and work to preserve and enhance our natural ecosystems and resources.

Ongoing work includes the implementation of an energy savings performance contract to improve the energy efficiency of the City's buildings and assets, as well as to add clean energy generation at City

facilities to complement the 10 MW solar energy production arrays at both wastewater treatment plants. Also underway is the development of another 3.7 MW of solar in continuation of efforts to achieve 100% clean electricity for City operations.

Staff continues to facilitate the installation of public electric vehicle charging stations around downtown and work with Fleet to support the transition to an electric fleet in the coming years.

Other areas of focus on ecosystem preservation and sustainability include:

- Reducing litter and improving waste diversion
- Expanding a voluntary food-waste recovery program
- Creating and providing technical assistance materials for businesses that participate in organics composting and the improvement of universal commercial organics recovery
- Restoring and maintaining streams
- Preserving and enhancing the water quality of City streams through stormwater and low-impact development infrastructure installation and maintenance
- Removing contaminants from the stormwater system using a sweeper program
- Executing urban forestry initiatives and habitat improvements through tree and native plantings and invasive plant removal
- Decommissioning and environmental cleanup of the old Fayetteville Police Department shooting range

Sustainability and Resilience has documented these and other citywide sustainability efforts through the U.S. Green Building Council's LEED for Cities initiative.

Well-Maintained Infrastructure and Facilities

City assets, such as buildings, roads, sidewalks, parks, trails and digital infrastructure, are important components of having well-maintained infrastructure and facilities. Several ongoing projects throughout 2025 will continue a focus on maintaining current infrastructure, including: building renovations, public meeting room technology, street repair (rehabilitation and construction), improved sidewalks for overall city walkability, improved parks and trail infrastructure, and long-term planning to improve efficiency and upkeep of all City facilities.

2025 Infrastructure Maintenance for Streets, Trails and Sidewalk development include:

- Coordinated deployment of smart city infrastructure in conjunction with ongoing City capital improvement projects
- Continuous pavement and sidewalk condition inventory assessment to develop multi-year pavement preservation and sidewalk improvement programs
- Design and construction of several major drainage projects in the Drainage Improvement bond
- Use of ultra-thin asphalt overlays where appropriate to extend pavement life and reduce lane-mile costs
- Recycling asphalt milling to reduce the need for new materials and the overall cost of asphalt purchased
- Facility improvements to provide additional space for the Traffic and Signal Operations group, Fleet Division and Parks Maintenance and Operations
- Enhanced sidewalks and crosswalk safety improvements near schools

- Expansion of street lighting throughout the city
- Electric vehicle charging station installation in various parking facilities
- Completion of the master plan update for the Fayetteville Executive Airport
- Door rehabilitation on airport T-hangars

2025 Drainage Maintenance projects to be funded from the Drainage Improvement bond include:

- Sunbridge Dr./College Ave.: This project will be constructed in two phases, with the first phase being from the outlet near N. Sawgrass Dr. to just upstream of N. Villa Blvd. Construction is underway and expected to continue until late 2025. This portion of the project is estimated to cost $5.8 million. The second phase of the project will include improvements to N. College Ave. and will be constructed when funding is identified.
- Fairlane St./Elmhurst Ave./McClinton St.: This project will be constructed in two phases, with the first phase being detention and low impact development features near the intersection of W. Martin Luther King Jr. Blvd. and E Huntsville Ave. Construction on the first phase is underway and will continue through the second quarter of 2025. This portion of the project is estimated to cost $600,000. The second phase will include culverts and other drainage improvements along S. Elmhurst Dr. and E. McClinton St. and will be constructed when funding is identified.
- Stream Restoration: This project includes the analysis and restoration of stream banks within the Clear Creek/Illinois River Watershed. A $300,000 grant for restoration efforts was awarded in August 2020 by the EPA. The first location planned for restoration is Niokaska Creek downstream of N. Azalea Terr. A second location on Scull Creek downstream of the Fulbright Expy. will be constructed if funding allows. The current bond allocates $100,000 as matching funds for the grant. Construction on Niokaska Creek is underway and will continue through early 2025.

2025 Water and Sewer Maintenance and Wastewater Treatment projects include:

- Repairing a 24-inch water transmission line from S. Futrall Dr. to S. School Ave.
- Beginning construction on the East Fayetteville Water Service Area Improvements project
- Beginning construction for the 11.5 mile, 48-inch West Transmission Main
- Completing the Greater Clabber Creek Area pressure management project
- Completing the water and sewer relocations for ARDOT highway improvements (Hwy 112, Hwy 16 and MLK Interchange)
- Completing design of the S. School Ave. waterline bottleneck correction
- Replacing the N. College Ave. water main from North St. to Sycamore St.
- Continuing work on Lake Fayetteville Spillway design
- Completing the Noland Wastewater Treatment Plant facility master plan
- Continuing the Advanced Metering Infrastructure program
- Replacing known, inferior plastic service lines throughout the service area
- Beginning and completing a water and sewer rate study
- Performing in-house replacement of aging infrastructure

2025 Recycling and Trash Collections focus areas include:

- Education on recycling, composting and other waste reduction/minimization
- Expanding commercial and multi-family residential recycling collection programs
- Refining and expanding food-waste collection and composting programs

- Completing a comprehensive waste audit of City-generated waste
- Continuing improvements to transfer station operations and recycling processing facility
- Implementing collection route optimization initiatives
- Completing a comprehensive rate study
- Decommissioning and environmental cleanup of the old Fayetteville Police Department shooting range
- Improving community access to household hazardous waste and electronic waste recycling services
- Exploring construction and demolition waste recycling partnerships

2025 Information Technology projects include:

- Providing technology support for all departments, including continual review of technology opportunities to improve operations and expansion of online services that increase access to City services
- Supporting current and future “Smart City” technology needs, including fiber conduit installations, public Wi-Fi and related technology infrastructure
- Streamlining login and registration process for public access to Development Services planning, permitting and inspection software
- Expanding the Laserfiche document imaging system to automate internal and external form submissions, including digital signatures, to reduce paper and decrease administrative time
- Managing the cybersecurity program to protect City assets and serving as a regional cybersecurity training hub to promote the collective defense of local government agencies
- Leveraging GIS as a spatial analysis tool for optimizing public safety resource allocation, supporting planning initiatives and assisting with disaster readiness
- Collaborating with state and regional 911 partners to implement Next Generation 911 technology within Central Dispatch
- Implementing a new volunteer management system
- Implementing a new time and attendance software
- Completing a Fire Station network upgrade to reduce monthly costs and improve performance
- Completing the initial phase of migrating key traffic signals from a wireless network to a fiber network for improved day-to-day and event-specific traffic management

2025 City Facilities Maintenance/Renovations/Improvements include:

- Replacing HVAC and systems for City facilities, such as the Fayetteville Town Center, Arkansas Air & Military Museum, Fayetteville Executive Airport, Parks Maintenance and the Walker Park Senior Activity & Wellness Center
- Completing the Yvonne Richardson Community Center addition
- Completing the Woolsey Farmstead restoration project and reconstruction of the potato smokehouse
- Completing City Hall renovations for offices and meeting rooms
- Removing and replacing the HVAC system in City Hall
- Completing the Fire Training Facility addition
- Completing the Porter Warehouse Stabilization project

- Continuing an accessibility survey project throughout City owned buildings, with analysis of Rock Street Annex, Yvonne Richardson Community Center, Animal Services, Courts Building, Sustainability and Parking Division offices
- Engaging a consultant to evaluate opportunities to include the White Hangar on the National List of Historic Places
- Working with Seven Hills Walker Family Residential Center to identify capital improvement project needs
- Renovating and reorganizing recently vacated space in the Development Services office area

Overall City Operations

The quality of overall operations is fundamental to the City's ability to successfully and efficiently serve the people of Fayetteville. The region's rapidly growing population generates ever-increasing demands on all areas of City services. Divisions will continue collaborating to explore staffing and operational efficiencies to meet these growing demands through cost-effective approaches that consider long-term goals and impacts. Communication between department heads to address cross-divisional projects, streamline processes, reduce red tape and barriers to service, and eliminate silo operations will continue to be key goals for ongoing organizational effectiveness at the City.

CITY OF FAYETTEVILLE, ARKANSAS
THE BUDGET PROCESS

The budgets of governmental funds (for example General Fund, Street Fund, and Parks Development Fund) are prepared on the modified accrual basis for revenues and expenditures. Under the modified accrual basis of accounting, revenues are recognized when they become both measurable and available. Expenditures are recorded when the related fund liability is incurred. The proprietary and trust fund types (Water & Sewer Fund, Recycling & Trash Collection Fund, and Airport Fund) are budgeted on a full accrual basis except for depreciation which is excluded and both capital purchases and bond principal payments which are included as expenditures. Not only are expenditures recognized when the liability is incurred but revenues are recognized when they are due and owing to the City (for example, water user fees are recognized as revenue when bills are produced). Agency funds are not budgeted since they are custodial in nature and do not involve measurement of results of operations.

The Comprehensive Annual Financial Report shows the status of the City's finances on the basis of "Generally Accepted Accounting Principles" (GAAP). This conforms to the way the City prepares its budget. Formal budgets exist for all funds and fund types, except agency funds, but the budget-to-actual comparison reports are prepared only for the governmental fund types (General, Special Revenue, and Capital Projects).

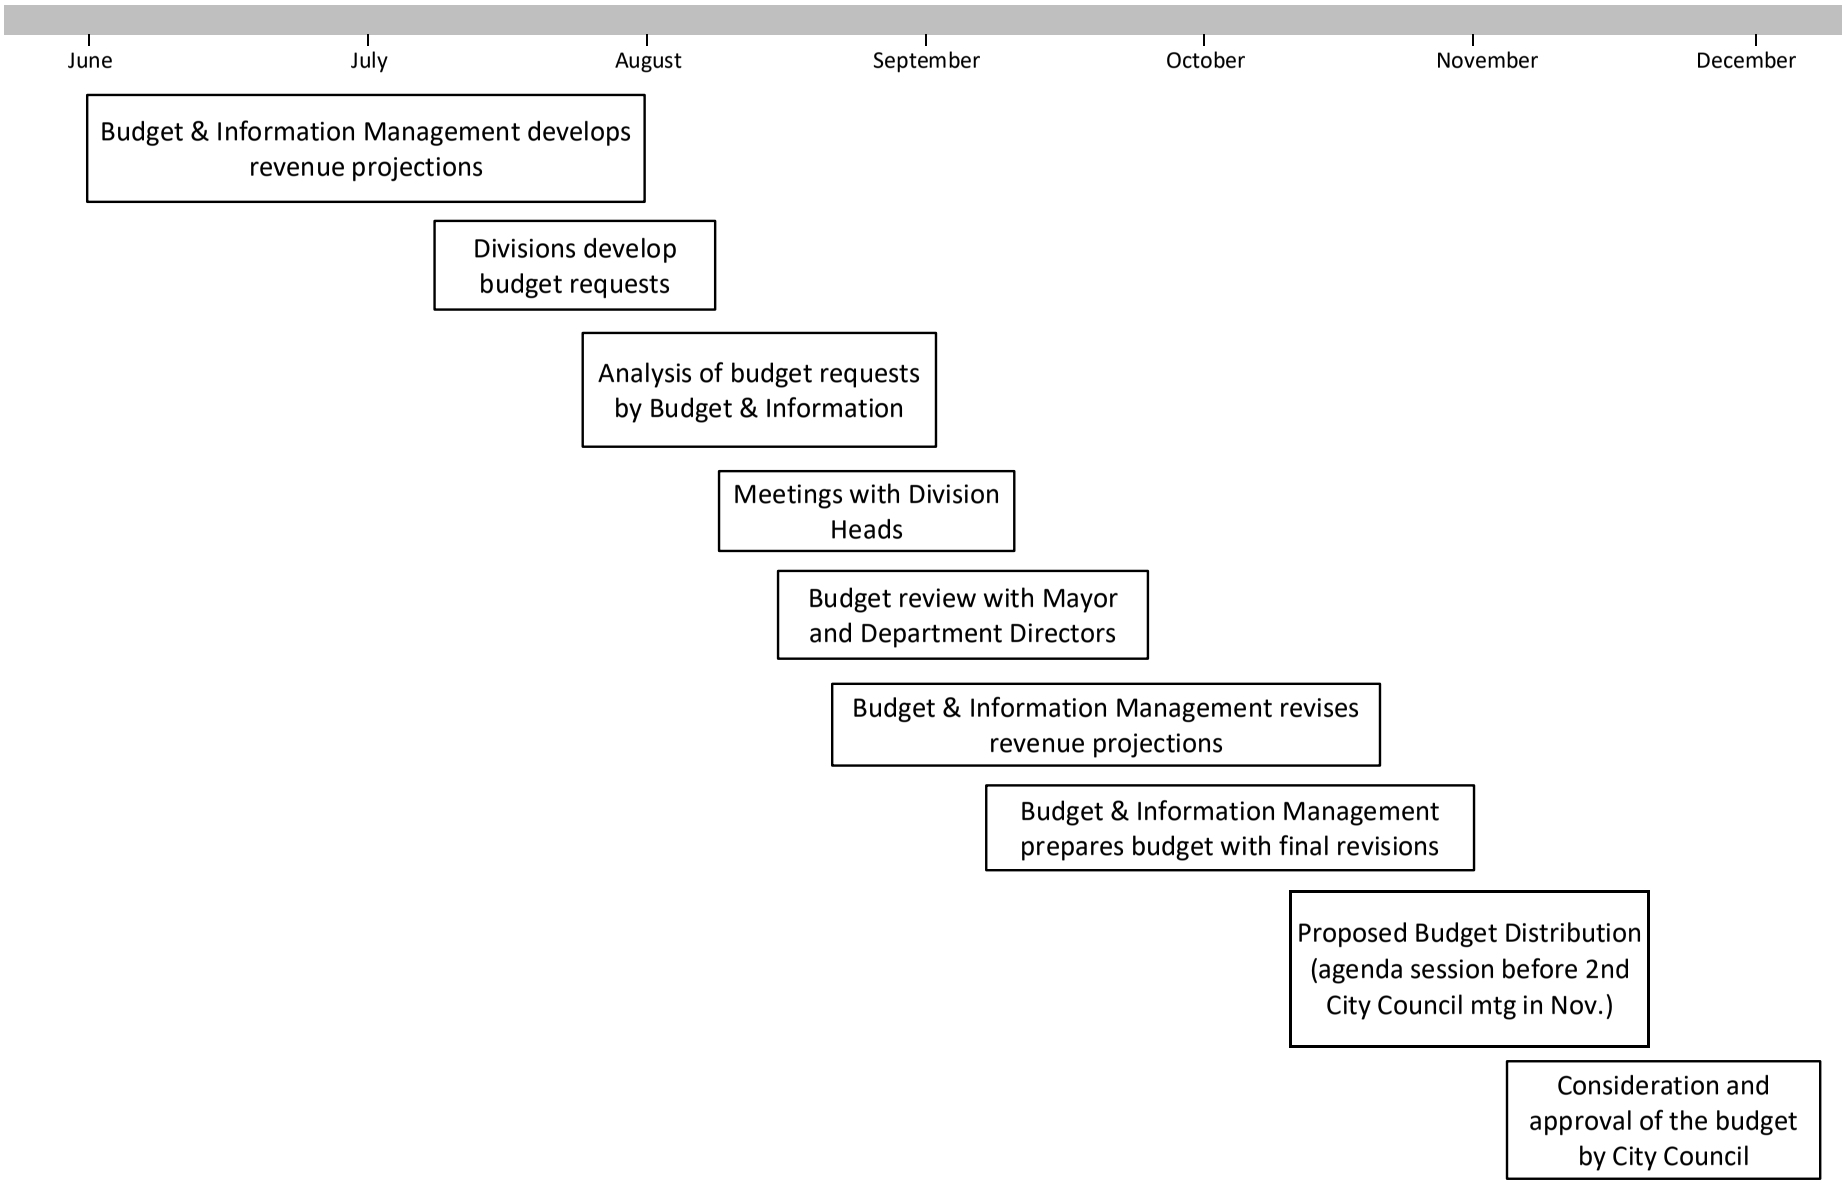
The Annual Budget and Work Program is a fiscal plan which presents the services which will be provided to the community and the funds needed to perform these services. The type and level of service is defined by the use of program objectives, which are further defined by performance measures. The Mayor is responsible for formulating the fiscal plan and presenting it to the City Council for approval and adoption. The key steps and dates in this process are described below:

1. **Budget Preparation, July**
   The budget is prepared using the City's financial software. Staff from the departments and divisions attend training for security access and instructions for the budget maintenance module. Target budgets are set for each fund and/or program. The target budget excludes service expansion requests and new personnel requests. These items are considered separately.

2. **Capital Requests, April - August**
   Five Year Capital Improvements modification requests are submitted for review and prioritization. Approval of the requests are based on a review of prioritized lists by the Chief Financial Officer and Budget staff to see if original cost and continuing costs are within the available funding range. Capital items with a cost greater than $5,000 should appear in the Five-Year Capital Improvements Programs.

3. **Budget Requests Submitted by Department/Division Heads, August**
   The Department/Division heads email notification to the budget staff after completing budget submissions requesting funding for their divisions. The budget staff then verifies that budget submissions are correct and within specified targets.

4. **Analysis of Each Proposed Program Budget, August to September**
   During this period, meetings, as needed, are conducted with each Department Director. At these meetings, the submitted program budgets are evaluated in their entirety and additions and cuts are made to balance the funds with the service requirements. The Proposed Budget and Work Program is the result of this process.



5. **Consideration and Approval of the Budget, November - December**
   The proposed budget is discussed with the Mayor beginning in August and through November. The Mayor presents the comprehensive Proposed Annual Budget and Work Program to the City Council in November. Public discussions on the budget are conducted at agenda sessions and City Council meetings beginning in November, and a special meeting is held before the second City Council meeting in November.

6. **Implementing the Budget, January**
   Using the Enterprise Resource Planning system, budget amounts are split into the projected funding level needed for each month. These work papers are input into the computer system to assist in the control of the adopted budget throughout the budget year.

7. **Adjusting the Budget, January - December**
   The budget may be adjusted throughout the budget year. Depending on the amount of the adjustment, approval may come from the Budget Director, Chief Financial Officer, Mayor or the City Council. A detailed explanation of the Budget Adjustment Policy is listed on pages 7 and 8.

The public meetings throughout the budget process are considered to be an essential part of the budget process as they are designed to solicit feedback from the City Council on the City's operations and services. In accord with continuing efforts to apprise the public of City activities, the Annual Budget and Work Program is made available for review by all interested persons at the Fayetteville Public Library and the City Clerk's Office. In addition, a downloadable version of the budget is found on the City's web site: http://www.fayetteville-ar.gov. Public notification of this information is made in a local newspaper and on the Fayetteville Government Channel. As always, the public is invited to attend all meetings, retreats, and hearings regarding consideration of the budget.

CITY OF FAYETTEVILLE, ARKANSAS
THE BUDGET PROCESS

CITY OF FAYETTEVILLE, ARKANSAS
FINANCIAL POLICIES

The purpose of this section is to present the policies that the City follows in managing its financial and budgetary affairs. These are general statements of policies, which represent long-standing principles, traditions, and practices that have guided the City in maintaining financial stability.

REVENUE POLICY

- The City will strive to maintain a broad and diversified revenue base that will equitably distribute the burden of supporting City services and will protect the City from short-term fluctuations in any one revenue source.
- The City will actively support economic and industrial development recruitment and retention efforts to provide for a solid revenue base.
- The City will maintain timely collection systems and implement necessary enforcement strategies to collect revenues from available sources.
- The City will establish user fees and charges for services, when feasible, at levels related to the cost of providing the services. The City will review the fees and charges on a periodic basis to determine the modifications needed to keep pace with the cost of providing the services.
- The City will establish, when feasible, self-supporting enterprise funds and internal service funds in which a relationship between revenues and expenditures clearly exists.
- The City will project revenues on a conservative basis so that actual revenues will consistently meet or exceed budgeted revenues.
- The City will maintain a budgetary control system and will prepare reports that compare actual revenues to budgeted amounts.
- The City will review annually and revise, where necessary, its cost allocation formula.
- The City will limit the designation of General Fund revenues for specified purposes to maximize flexibility in budgeting and revenue utilization.

EXPENDITURE POLICY

- Basic and essential services provided by the City will receive first priority for funding.
- The City will establish performance measurements for all program areas, when feasible. These measures will reflect the demand, workload capability, and projected outcomes for the program to accomplish its objectives.
- The City will strive to adopt a balanced budget, by fund, for all funds maintained by the City, in which total anticipated revenues must equal or exceed the budgeted expenditures for each fund. However, if this cannot be attained, the City will utilize unallocated fund reserves, which have been carried forward from prior years.
- The City will maintain a budgetary control system to ensure adherence to the adopted budget and will prepare reports that compare actual expenditures to budgeted amounts.
- The City will attempt to refrain from budgeting non-recurring or one-time revenue for ongoing expenses.
- The City will provide access to medical, dental, life, and long-term disability insurance for its employees. The cost for these benefits will be a shared responsibility between the City and its employees.
- The City will provide access to appropriate retirement plans for its employees. The City will make contributions for eligible employees at the percentage defined for each of the respective retirement plans.

DEBT POLICY

- The City will maintain a policy of full disclosure on financial reports and bond prospectus.

- The City will maintain communications with bond rating agencies and continue to strive for improvements in the City's bond rating.

- The City will pay for all capital projects and capital improvements on a pay-as-you-go basis using current revenues whenever possible. If a project or improvement cannot be financed with current revenues, long-term or short-term debt or capital leases will be recommended.

- The City will refrain from issuing long-term debt for a period in excess of the expected useful life of the capital project.

- The City will use special assessment revenue or other self-supporting bonds instead of general obligation bonds, when feasible.

- The City will seek refinancing of outstanding debt if it is determined that the City will benefit by reduced interest expense over the remaining life of the bonds of at least 3% of the principal being refunded.

- The City will require that General Fund and Street Fund debt service shall not exceed 10% of annual general and road tax revenues and the principal amount of General and Street Fund debt shall not exceed 5% of the assessed taxable property.

- Outstanding short-term debt and Amendment 78 debt obligations combined shall not exceed 5% of the City's taxable real property.

RESERVE POLICY

- The City will maintain a minimum reserve of sixty (60) days of annual regular general fund operating expenditures for the General Fund in Undesignated Fund Balance. The minimum unreserved General Fund Balance cannot be reduced without specific City Council Resolution.

- The City will maintain a minimum reserve of at least 10% of current year operating expenditures for the Street Fund in Undesignated Fund Balance. If existing reserves exceed the required level, such funds may be used to provide for non-recurring expenditures. The City will use monies in the 10% reserve only in times of emergency or fiscal and economic hardship.

- The City will attempt to maintain a cash and investments balance of not less than 10% of current year operating expenditures for all Enterprise Funds.

- The City will maintain a Shop Fund reserve necessary to fund the replacement and expansion of the City's vehicles and equipment.

INVESTMENT AND CASH MANAGEMENT POLICY

- The City will deposit all receipts on a timely basis.

- The City will strive to maximize the return on its investment portfolio without jeopardizing principal amounts.

- The City will limit its investments to the types of securities provided for by Arkansas statutes.

- The City will diversify its investments by maturity date to protect against market fluctuations.

- The City will purchase securities from qualified institutions based on competitive bids in an effort to obtain the highest available rates.

CAPITAL IMPROVEMENT POLICY

- The City will prepare and update, as needed, a five-year Capital Improvements Program (CIP), which will provide for the orderly maintenance, replacement, and expansion of capital assets.

- The CIP will identify long-range capital projects and capital improvements of all types, which will be coordinated with the annual operating budget to maintain full utilization of available revenue sources.

- When preparing the CIP, the City will seek to identify all viable capital projects and capital improvements required during the subsequent five-year period. These projects and improvements will be prioritized by year and by funding source. Every attempt will be made to match projects and improvements with available funding sources. Future operating costs

associated with a project or an improvement will also be given consideration in the establishment of priorities.

- The City will seek Federal, State, and other funding to assist in financing capital projects and capital improvements.

- The City will seek input from the public by holding public hearings in relation to the establishment of major projects and major project priorities.

- The City will incorporate the reasonable findings and recommendations of other City Boards, Commissions, Committees, and Citizen task forces, as they relate to capital projects and improvements.

FINANCIAL REPORTING POLICY

- The City's accounting system will maintain records in accordance with accounting standards and principles outlined by the Governmental Accounting Standards Board (GASB), Financial Accounting Standards Board (FASB), and the State of Arkansas.

- The City will employ an independent accounting firm to perform an annual audit of the City's finances and make the annual audit available to all required and interested parties. The audit shall be completed and submitted to the State of Arkansas within 210 days of the close of the fiscal year.

- The City will produce monthly and quarterly financial statements reporting the current periods' activity for all funds maintained by the City.

- The City will maintain an internal audit function, which will be charged with adopting and routinely monitoring internal controls of the City.

- The City will prepare an annual budget document that provides a basic understanding of the City's planned financial operations for the coming fiscal year. Copies of the proposed and final budget will be made available to all interested parties and opportunities will be provided for citizen input prior to final decisions on the budget.

- The City will seek annual renewal of the Government Finance Officers Association's (GFOA) Certificate of Achievement for Excellence in Financial Reporting and the Distinguished Budget Presentation Award.

CITY OF FAYETTEVILLE, ARKANSAS
ADMINISTRATIVE PROCEDURES
TO ADJUST THE APPROVED BUDGET

PURPOSE:

The procedures outlined in this section define, standardize, and set forth responsibilities for budget adjustments.

DEFINITION AND EXPLANATION:

During the fiscal year, needs arise for expenditure budget adjustments to enable divisions to adapt to changing conditions. There are two types of expenditure budget adjustments which can be defined as follows:

1) **Budget Adjustment** – this is a transfer from one category within a fund budget to another category. The fund total does not change.

2) **Budget Amendment** – this is an addition to the overall budget total of the fund. It increases the total expenditure amount authorized for the fund. Any budget amendment must be supported by an increase in revenue or come from available fund balance.

DEPARTMENT DIRECTORS AND DIVISION HEADS RESPONSIBILITIES:

All Department Directors and Division Heads are mandated to stay within each operational program budget as adopted and to stay within the total budget for each capital project. **Neither the Accounting nor Purchasing Divisions will process payments or purchase orders, which will cause a program or capital project to be over the annual budget amount.**

Each operational division is grouped into programs (i.e., Engineering - Administration, Engineering - Plans & Specifications, Engineering - Right-of-Way, etc.). Budget adjustments will be required in the following instances:

1) When the budgeted amount per operational program is exceeded (an offsetting adjustment must be made from another operational program).

2) When the budgeted amount for a capital project is exceeded (an offsetting adjustment must be made from another capital project or another program).

Requested adjustments to an operational program must be submitted on a budget adjustment form with sufficient justification for the need. Any changes in the personnel services category must meet the City's policy for raises, promotions, and staff increases.

BUDGET ADJUSTMENT APPROVAL PROCESS:

Budget Amendments

1) All budget amendments must be approved by the City Council other than mandatory redemptions and other expenditures delegated to a Bond Trustee via a bond trust agreement. Budget amendments appropriate additional revenue or allocation of reserves.

Budget Adjustments

1) Budget adjustments within categories, within divisions of a fund, can be made with the approval of the Budget Director (see page 10 for a division listing).

2) Budget adjustments between categories, within a division of a fund, can be made with the approval of the Budget Director and Chief Financial Officer.

3) Budget adjustments within the personnel services category between departments within a fund will be approved by the Budget Director, the Chief Financial Officer, and the Chief of Staff.

4) Budget adjustments between categories within an approved program will be approved by the Budget Director and the Chief Financial Officer.

5) All other budget adjustments must be approved by the City Council.

BUDGET AMENDMENT REPORTING:

As a matter of practice, staff will provide information regarding Budget Amendments to the City Council on a quarterly basis.

CITY OF FAYETTEVILLE, ARKANSAS
BUDGET ORGANIZATIONAL STRUCTURE

FUND

In governmental accounting, a fund is a fiscal and accounting entity with a self-balancing set of accounts, created and maintained for a particular purpose. It has transactions subject to legal or administrative restrictions. A separate budget is provided for each fund.

ACTIVITY

Activities are the major groups of items which are functionally related, regardless of the Department or Division that is responsible. This type of classification provides a useful Budget summary that is consistent even though changes in the organizational structure may occur.

DEPARTMENT

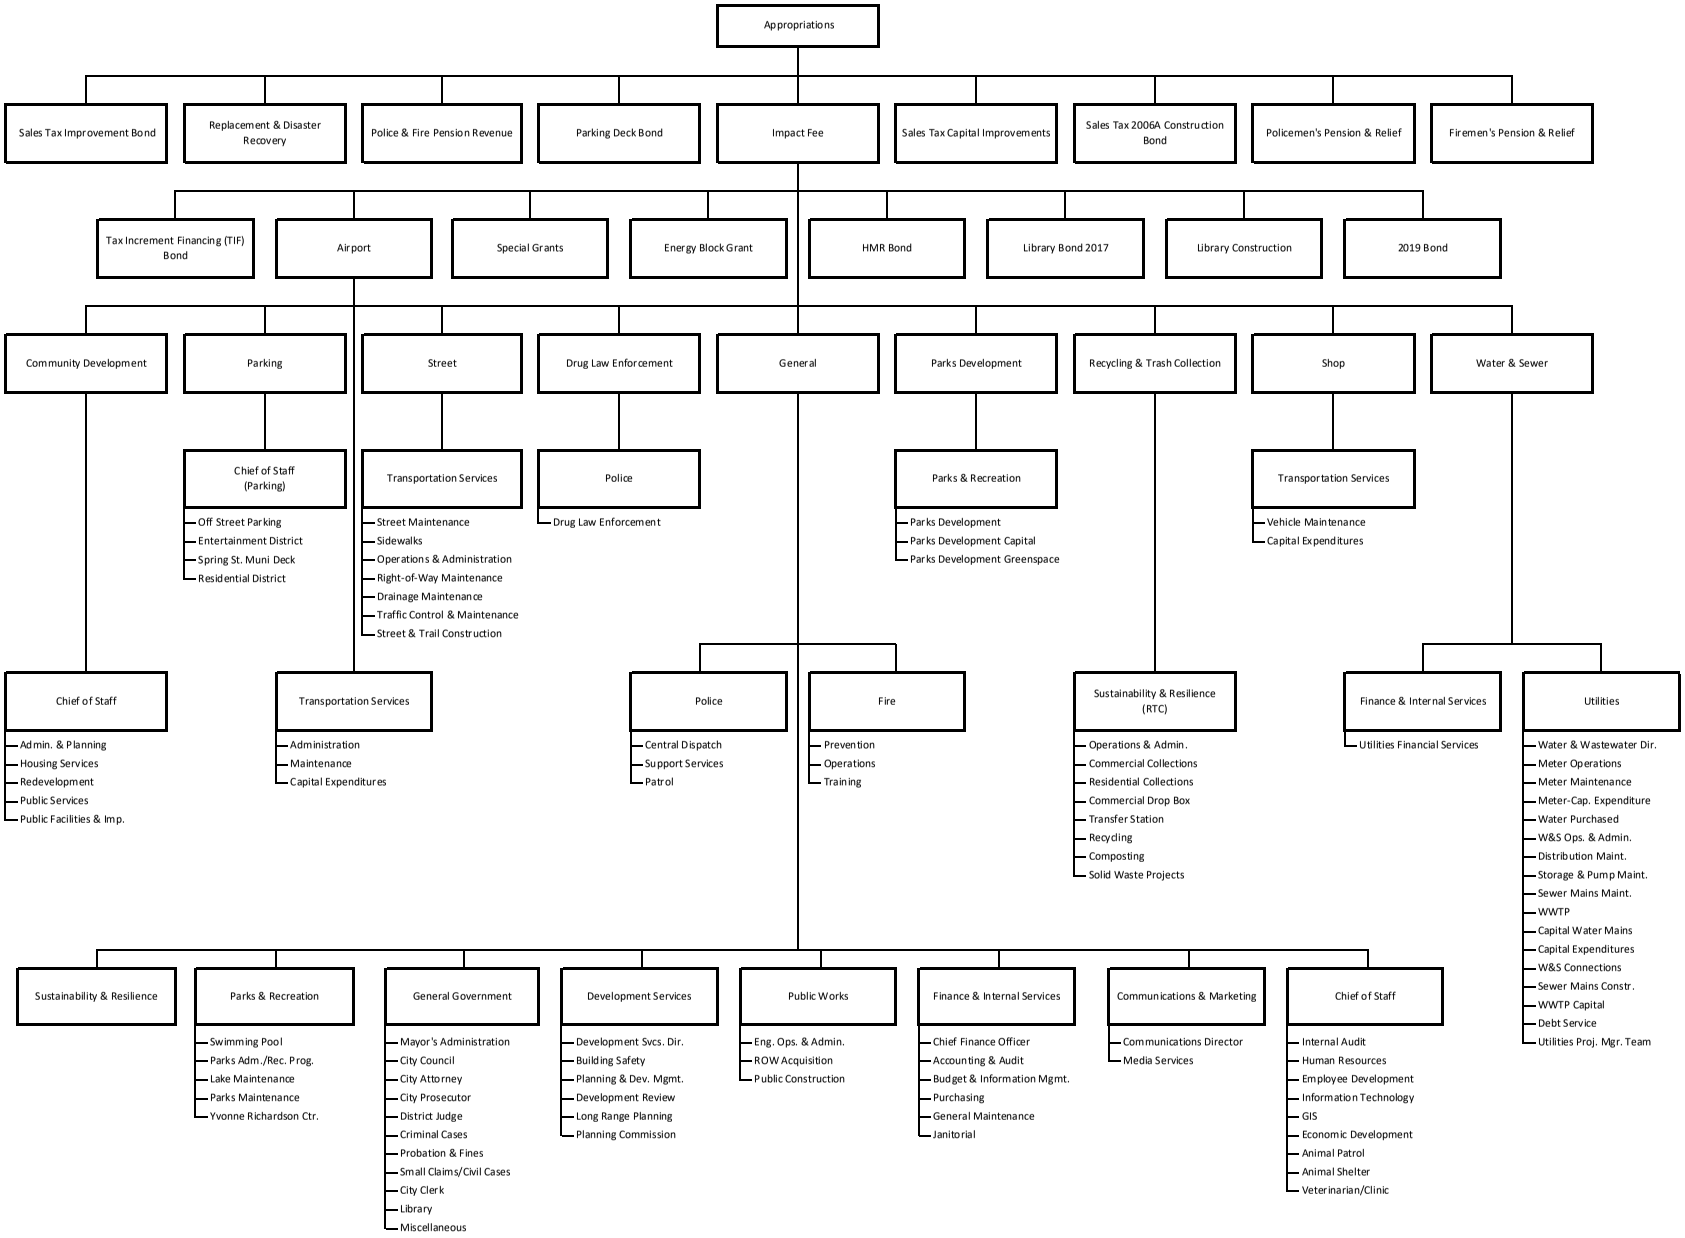
Departments are the major organizational sub-divisions. They have a broad overall purpose. The City of Fayetteville is organized into eleven operating departments: General Government, Police, Fire, Chief of Staff, Sustainability & Resilience, Parks & Recreation, Utilities, Development Services, Communications & Marketing, Transportation Services, and Finance & Internal Services. Each Department has a director who reports to the Chief of Staff except the Police and Fire Chiefs who report directly to the Mayor.

DIVISION

Divisions are the major operational areas of the City. Each Division has been assigned to one of the Departments listed above according to the type of activity it performs. For example, the Recycling & Trash Collection Division is part of the Sustainability & Resilience Department. A listing of divisions is on the following page.

PROGRAM

Programs are the operating units within the Division. Each program represents a specific type of activity within its Division aimed at providing a service for which the City is responsible. For example, the Recycling & Trash Collection Division contains the following programs: Administration, Commercial Collections, Residential Collections, Commercial Drop Box Collections, Transfer Station, Recycling, and Composting.



CATEGORY

Within each program, each expenditure item is grouped into a category of related expenditures. The budget for each program is listed by categorical total. Examples of a category include: Personnel Services, Materials and Supplies, Services and Charges, Maintenance, Motor Pool Charges, Capital, Transfers to Outside Agencies, Cost Reimbursements, and Operating Transfers.

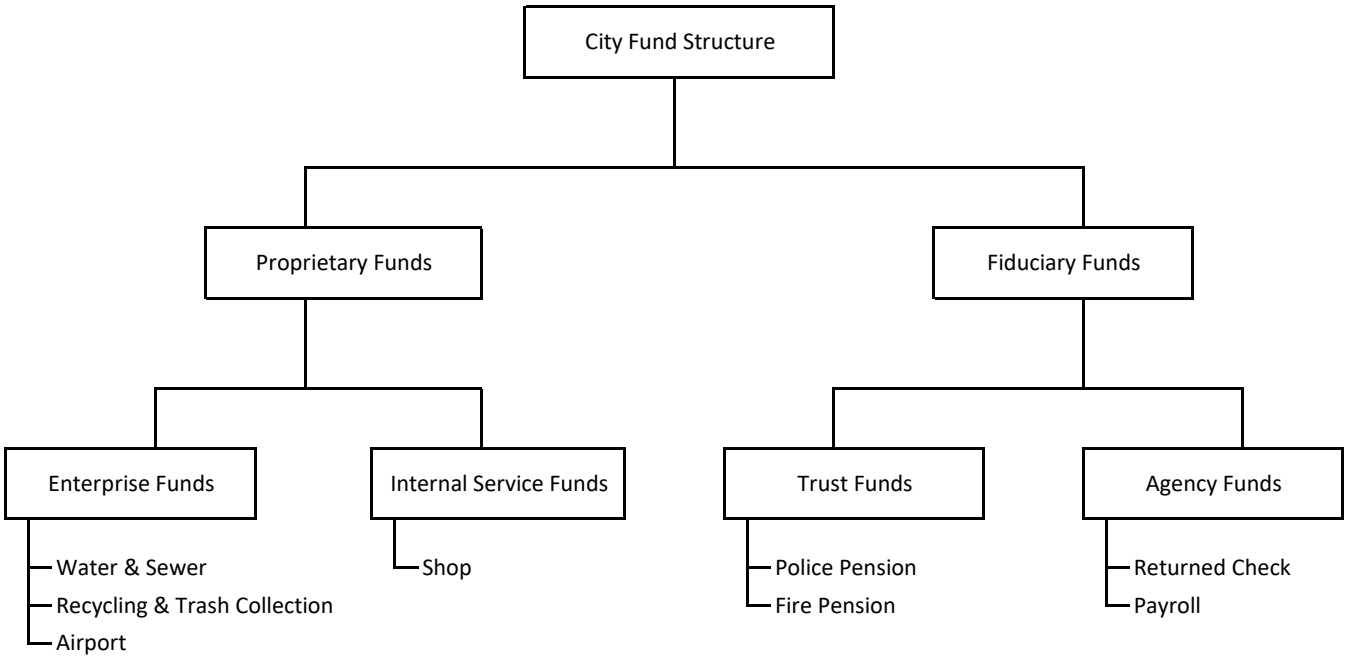
City of Fayetteville, Arkansas
Chart of Governmental Fund Types

As noted by the chart above, the City utilizes all four (4) major Governmental fund types: General, Special Revenue, Debt Service, and Capital Projects.

General Fund - General fund is the general operating fund of the City. It is used to account for all financial resources except those accounted for in other funds.



Special Revenue Funds - Special Revenue funds are used to account for the proceeds of specific revenue sources, which are designated or required to finance particular functions or activities of the City.

Debt Service Funds - Debt service funds are used to account for the accumulation of resources for, and the payment of, general long-term debt principal, interest and related costs other than debt service payments made by enterprise funds.

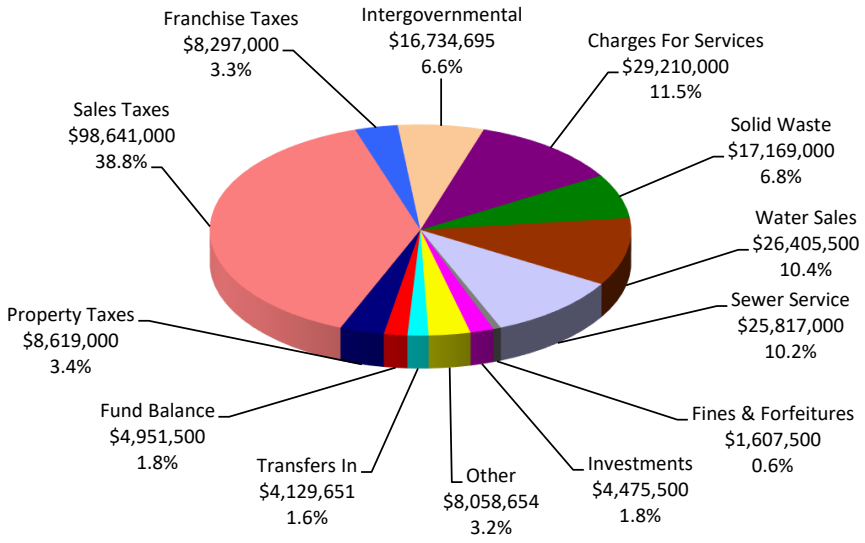
Capital Projects Funds - Capital projects funds are used to account for financial resources to be used for the acquisition and construction of assets of a relatively permanent nature other than those financed by proprietary funds.

As a note of explanation for the following combined statements, the revenues are listed by major source and the expenditures are listed by major department or service. The operation transfers are listed both in and (out).

City of Fayetteville, Arkansas
Chart of Proprietary and Fiduciary Fund Types

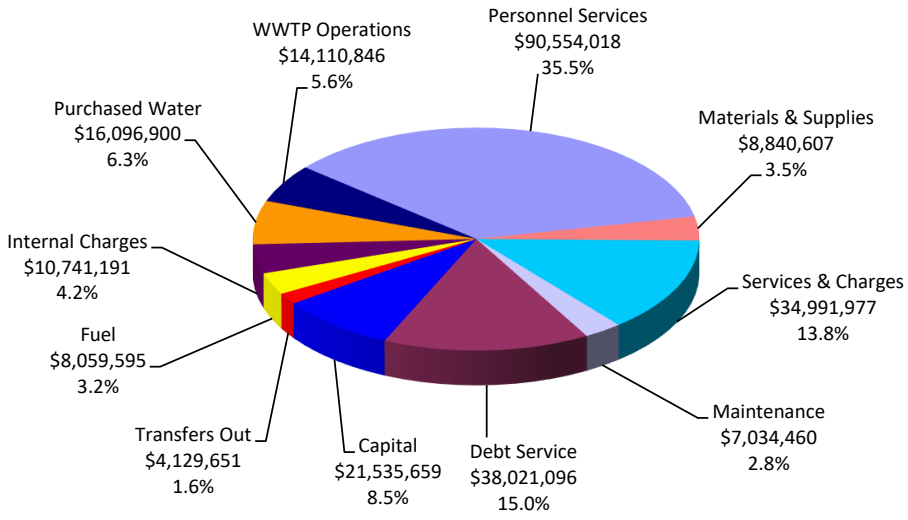
As noted by the chart above, the City utilizes the Enterprise and Internal Service funds in the Proprietary fund type and the Trust and Agency funds in the Fiduciary fund type.

Enterprise Funds - Enterprise funds are used to account for operations (A) that are financed and operated in a manner similar to private business enterprise, where the intent of the governing body is that the costs of providing goods or services to the general public on a continuing basis be financed or recovered primarily through user charges; or (B) where the governing body has decided that periodic determination of revenues earned, expenses incurred and/or net income is appropriate for capital maintenance, public policy, management control, accountability or other purposes.



Internal Service Funds - Internal service funds are used to account for the financing of goods or services provided by one division of the City to other divisions of the City, on a cost reimbursement basis.

Trust Funds and Agency Funds - Trust funds and agency funds are used to account for assets held by the City in a trustee capacity or as an agent for individuals, private organizations, other governments and/or other funds. Trust funds are accounted for in essentially the same manner as proprietary funds. Agency funds are custodial in nature and do not involve measurement of results of operation.



In reference to the following combined statements, the revenues are listed by major source and the expenses are listed by major department or service. Also shown are depreciation, non-operating revenue and (expenses), transfers in and (out), and net income.

City of Fayetteville, Arkansas

Sources of Funds for 2025
$254,116,000

Uses of Funds for 2025
$254,116,000

Note: The Sources of Funds chart includes revenues from all City funds. The Uses of Funds chart includes expenditures from all funds including capital expenditures in the Proprietary fund types. In compliance with GAAP, Proprietary fund balances do not reflect capital expenditures.

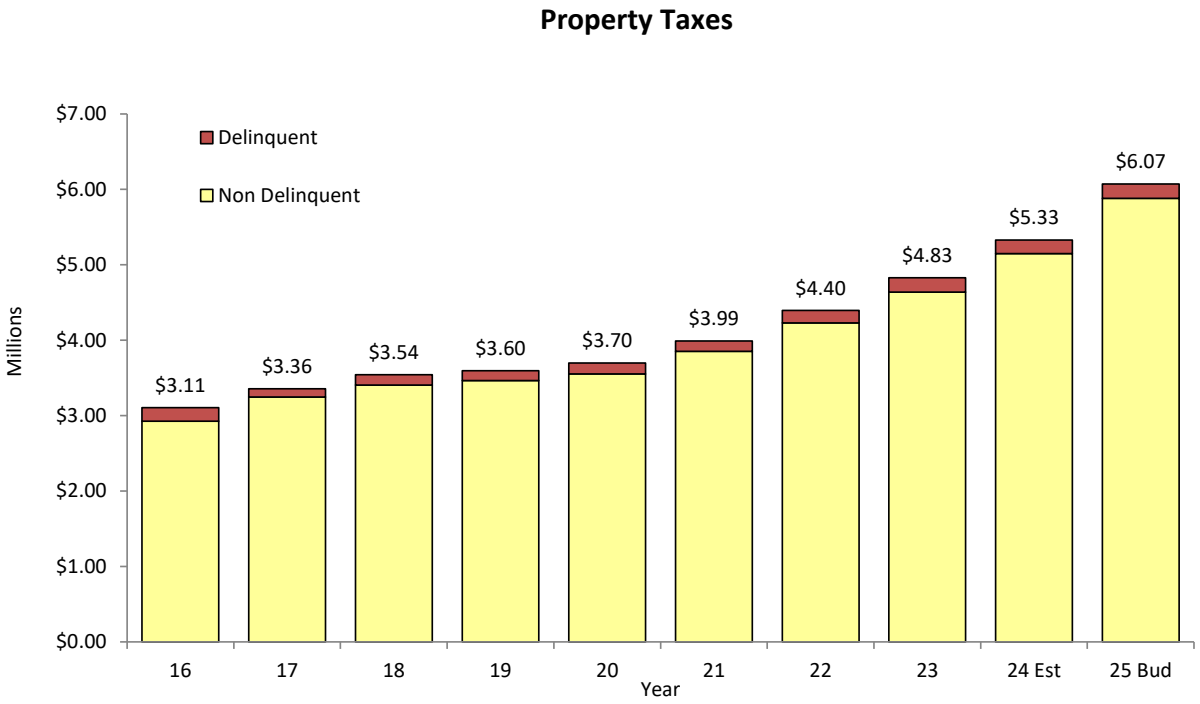
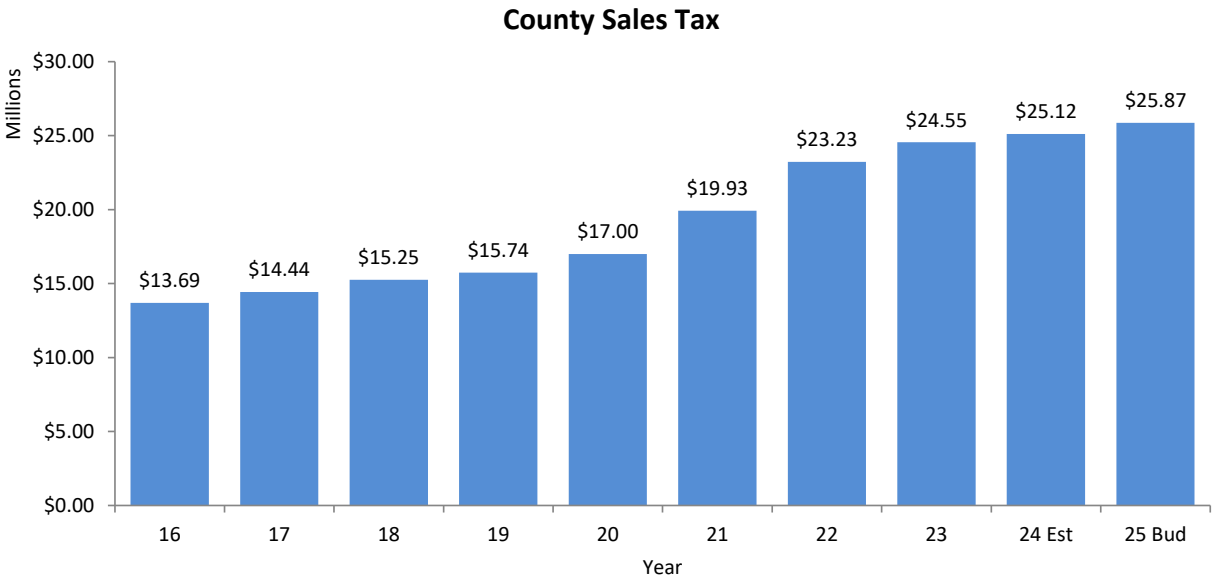
This comparison of adopted budgets is included to show the scope and growth of City operations in a multi-year format. This presentation is traditional but continues to include interfund transfers. Rather than restating all of the budgets, it is recommended that emphasis be placed on the significant entries, which are the individual funds. A more detailed discussion of each individual fund is included in the specific section devoted to that fund.

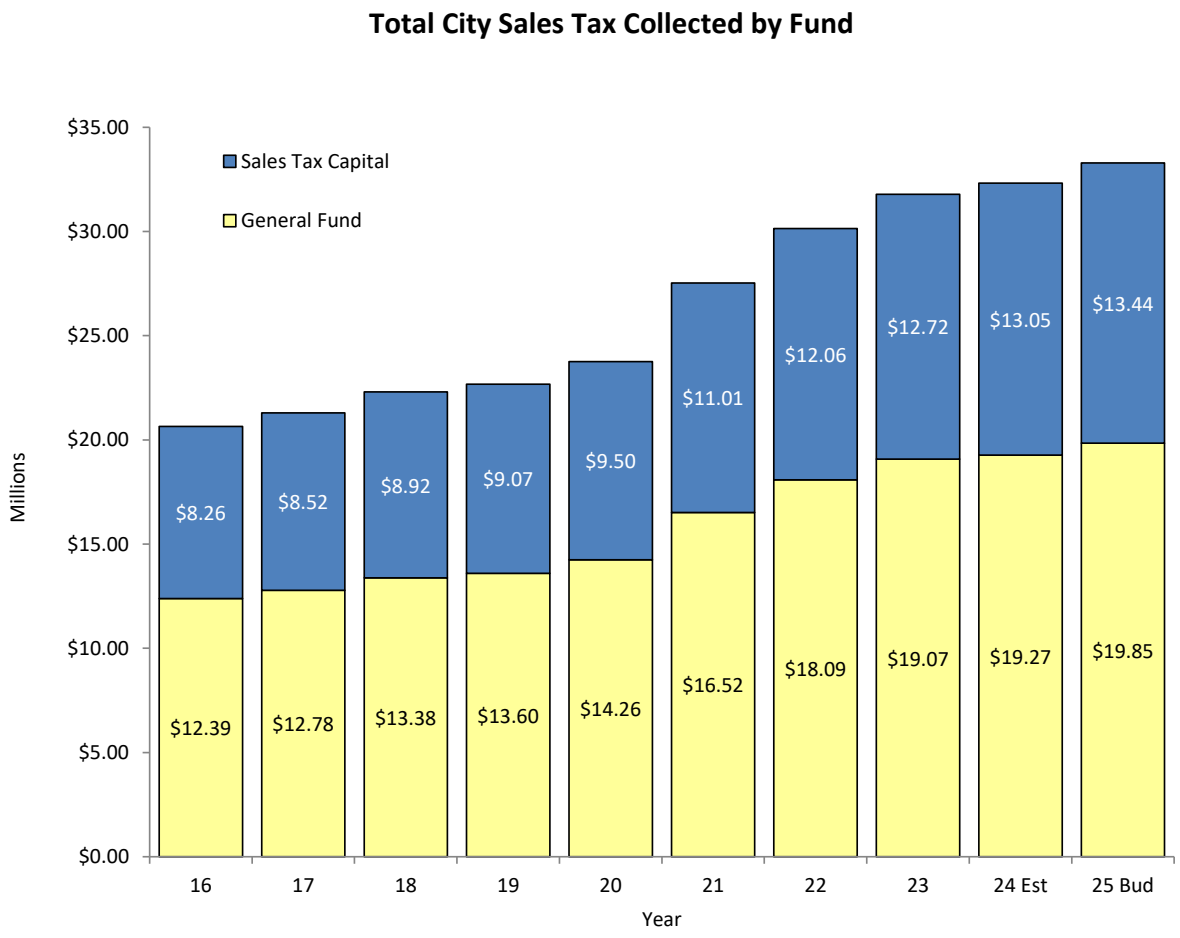


General Fund (1010)

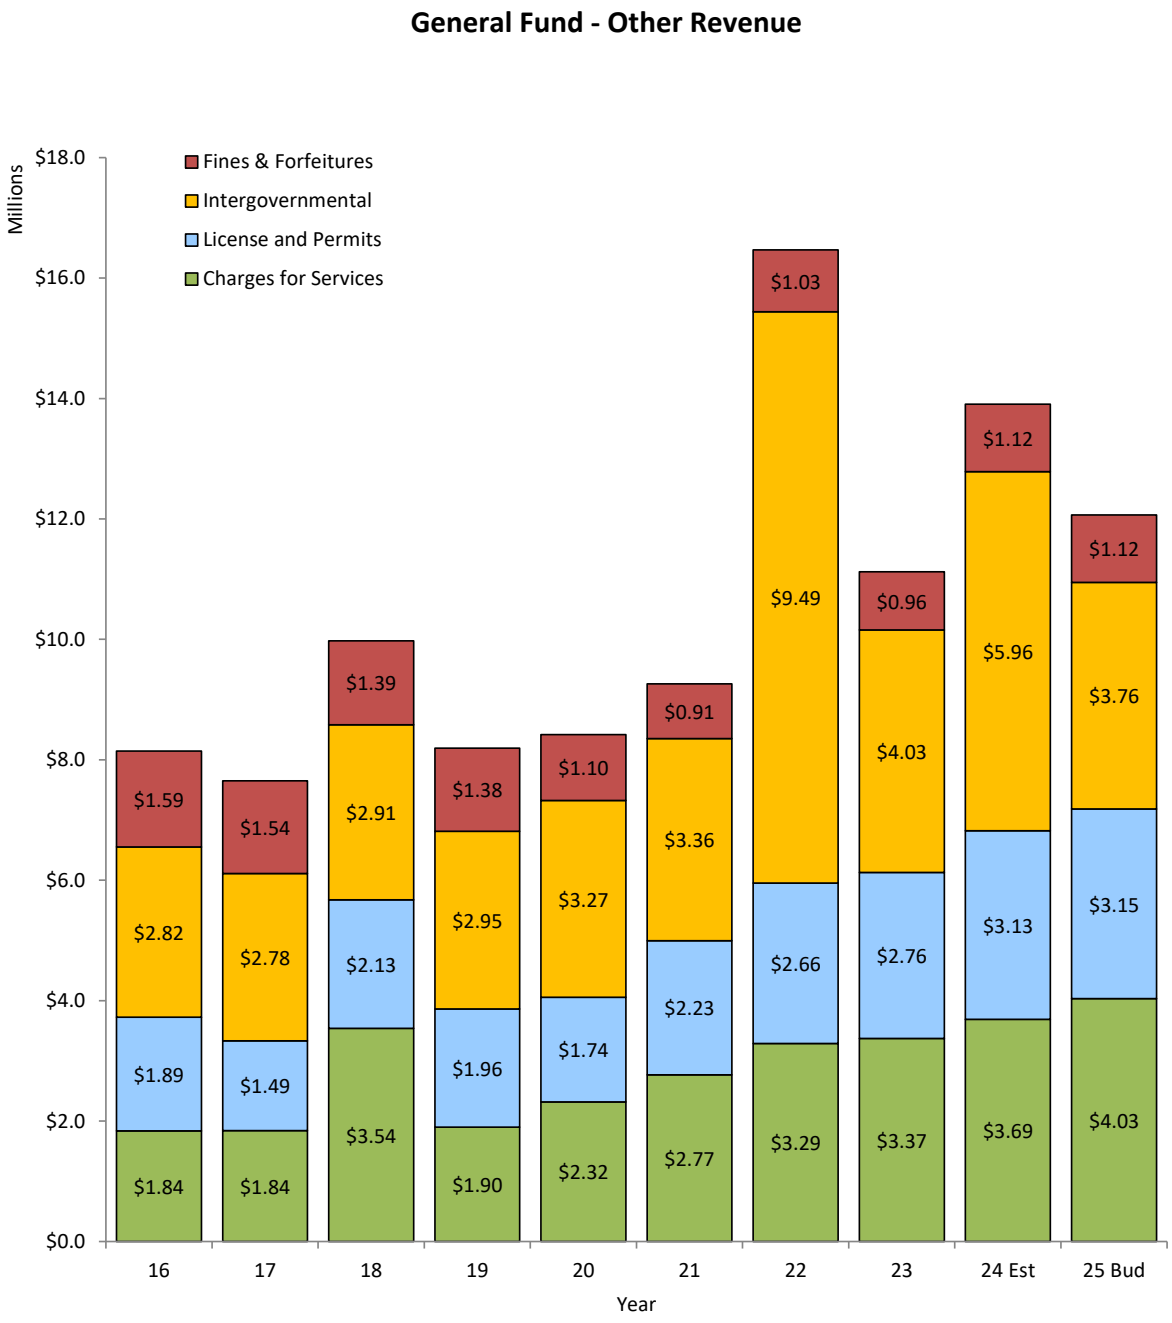
General Fund Revenues



Total estimated revenue available in 2025 to support the General Fund is approximately $74.32 million. Also, $3.04 million in fund balance is used as a source of funding for 2025. These overall General Fund Revenue projections are based on historical trend data, expected population increases, and current performance of the national, state, and local economies based on statistical information.

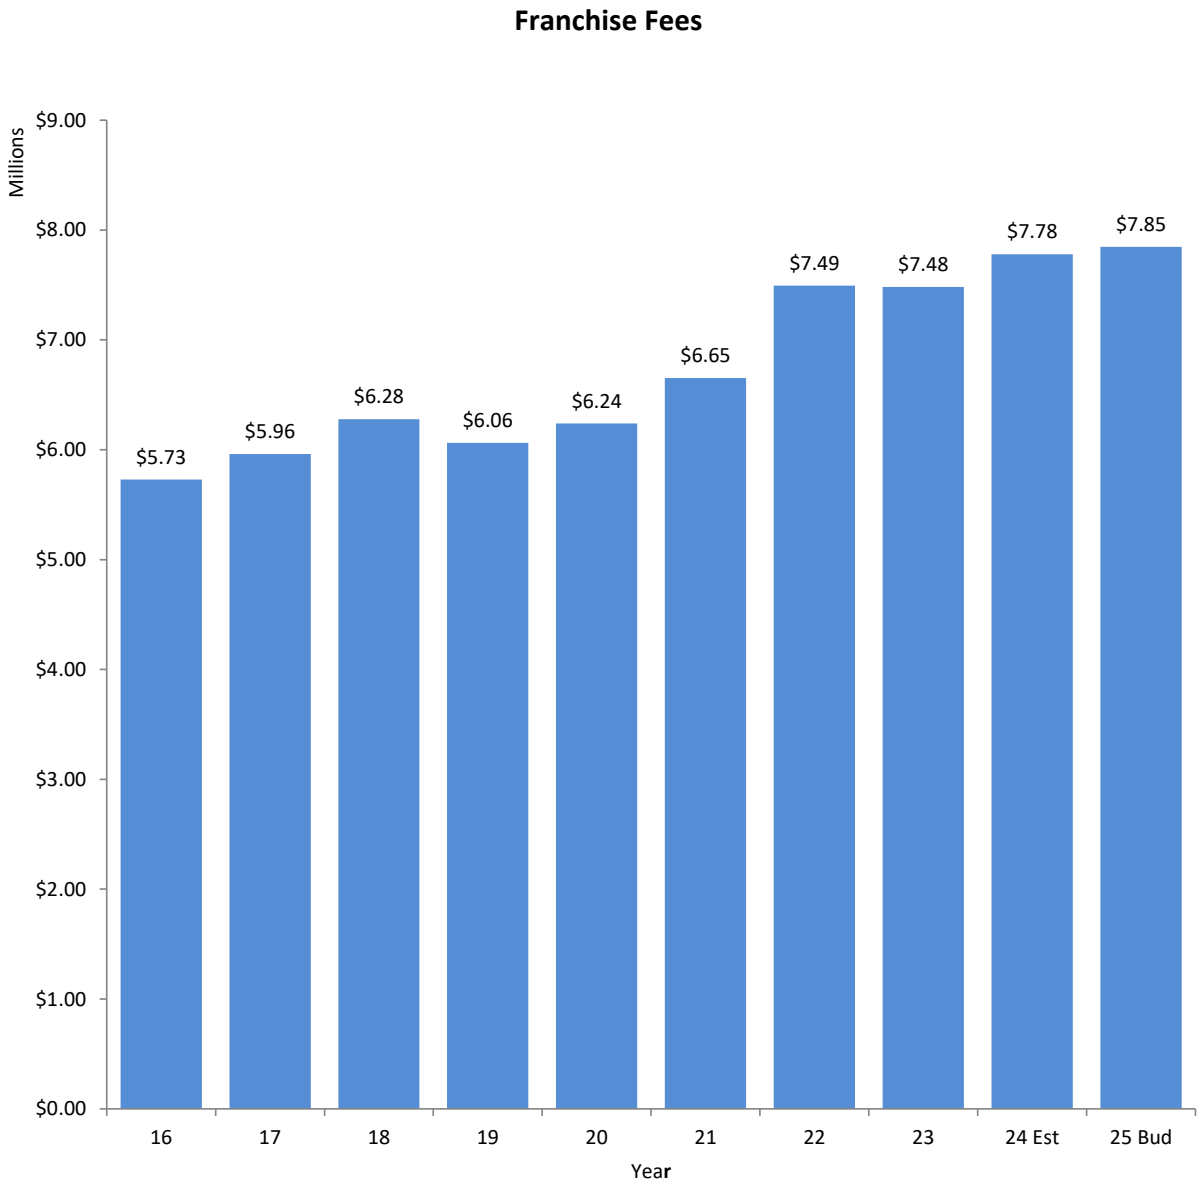


Property Taxes: Property Tax revenue makes up 8.2% of total General Fund Revenue. The tax rate currently approved is 2.3 mils. The City of Fayetteville has a discretionary limit of 5.0 mils, which is set by law. By law, millage decisions must be made by the end of October of each year by the City Council and filed with the County.



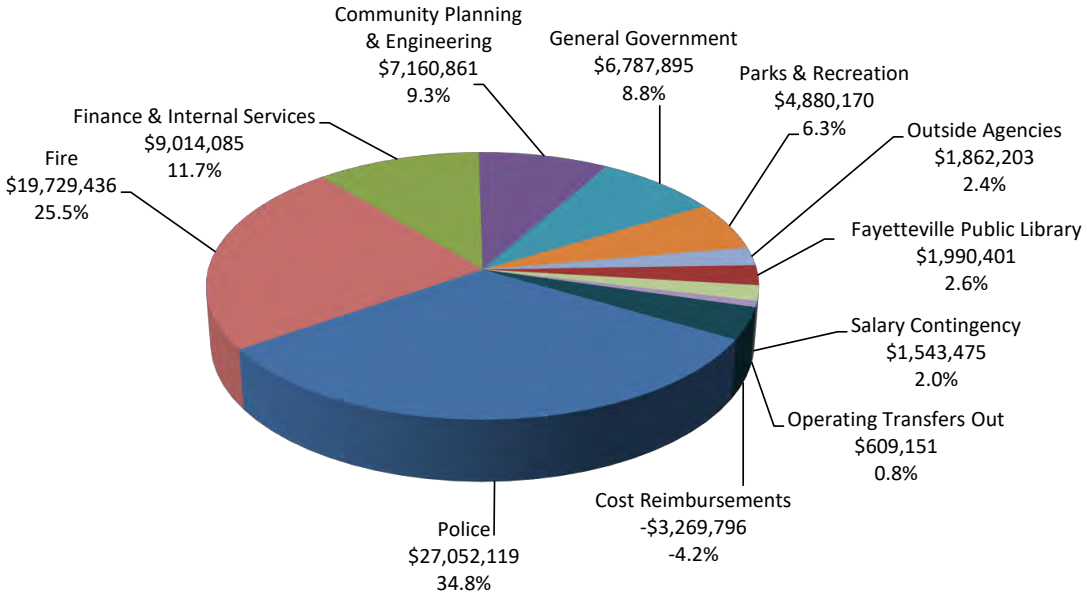
County Sales Tax: The largest source of General Fund revenue is the County Sales Tax at 34.8%. The City receives a prorated share (38.2%) of the 1% County Sales Tax based on population as of the most recent federal census. Sales Tax growth averaged 7.7% per year from 2013 to 2023. Budgeted 2025 revenue is projected to be 3% higher than the current 2024 estimated collections.

City Sales Tax: The second largest source of General Fund revenue is the City Sales Tax at 26.7% of total revenue. Sales Tax growth averaged 5.8% per year from 2013 to 2023. Estimates for 2024 are expected to be 2% higher compared to 2023 actual receipts, and the 2025 budget is estimated to be 3% over 2024 estimated collections. The 1% City Sales Tax revenue is divided between General Fund operations and capital. The current split, which began with the 2008 budget, is 60% for General Fund and 40% for Sales Tax Capital Improvements Fund.

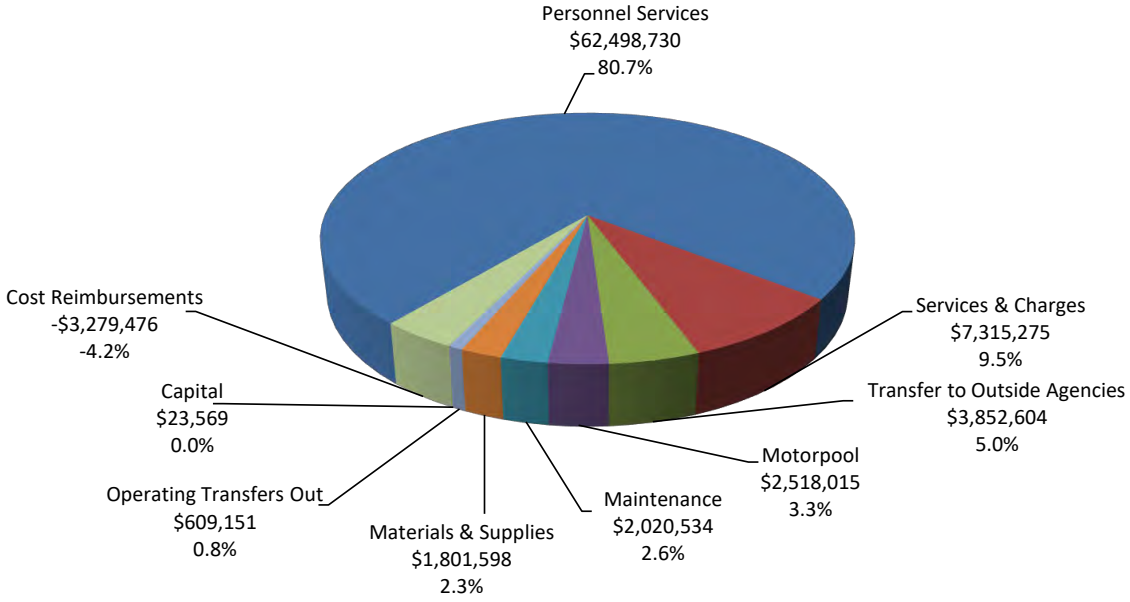


Other Revenues: Other Revenues (Licenses & Permits, Intergovernmental, Charges for Services, and Fines & Forfeitures) as a whole make up 16.2% of total General Fund revenue. The largest generator of Licenses & Permits Revenue is Building Permits which are projected to be flat in 2025 compared to estimated 2024 collections. The many other types of revenues and permits issued by the City are projected to be lower compared to 2024 collections. Intergovernmental revenues consist of State Turnback and State/Federal grants and are projected to be less in 2025 compared to estimated 2024 revenue. This is because grant revenue is not estimated until the actual grant is awarded, which is normally mid-year. Charges for Services consists of a multitude of fees such as parks and recreation fees, 911 reimbursements, and planning fees. Fines & Forfeitures revenues consist of court fines and are expected to be more than estimated 2024.

Franchise Fees: Franchise fees as a category make up 10.6% of total General Fund revenue. The City collects franchise fees from all utility companies in Fayetteville for the use of City Rights-of-Way. All of the franchise fee agreements reflect a percentage of gross utility revenue generated. Although franchise fees are a direct cost of the utilities business, all utilities except AEP (SWEPCO) and the City of Fayetteville's Recycling & Trash Collection and Water & Sewer Divisions show the fee as an additional item on the consumer's invoice. The 2025 budget is set to be higher than estimated 2024.



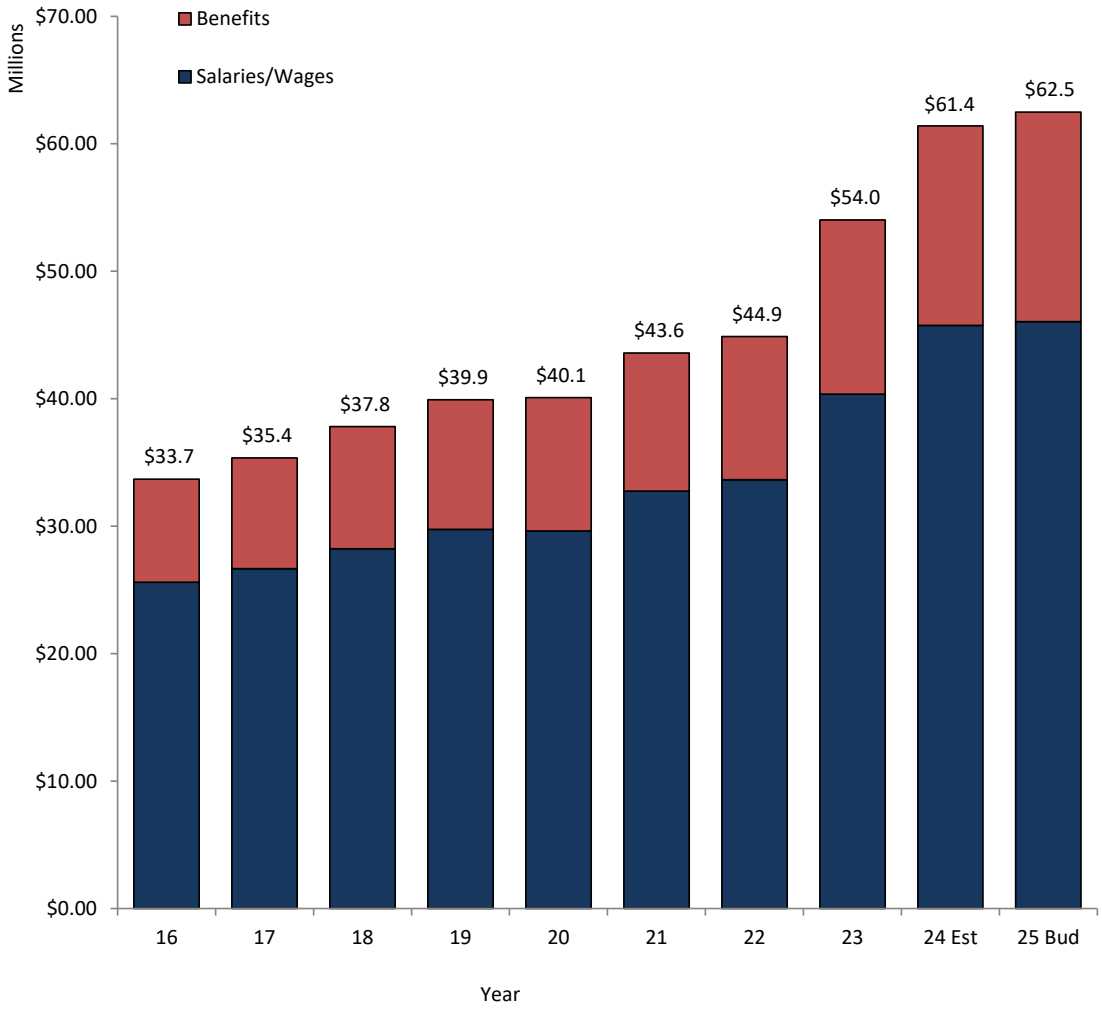
Currently, Black Hills Energy (formerly Source Gas) pays 3% of annual sales before taxes on residential and commercial customers and 1% on industrial customers. AT&T and Prairie Grove Telephone pay 4% of all access line billing. AT&T Video and Cox Communications pay 5% of annual gross sales on everything except internet access revenue. The Water & Sewer utility pays 4.25% and the Recycling & Trash Collection utility pays 3% on annual gross sales. AEP Electric and Ozarks Electric Co-Op pay 3% of gross revenues on domestic customers and 1% on industrial consumers.



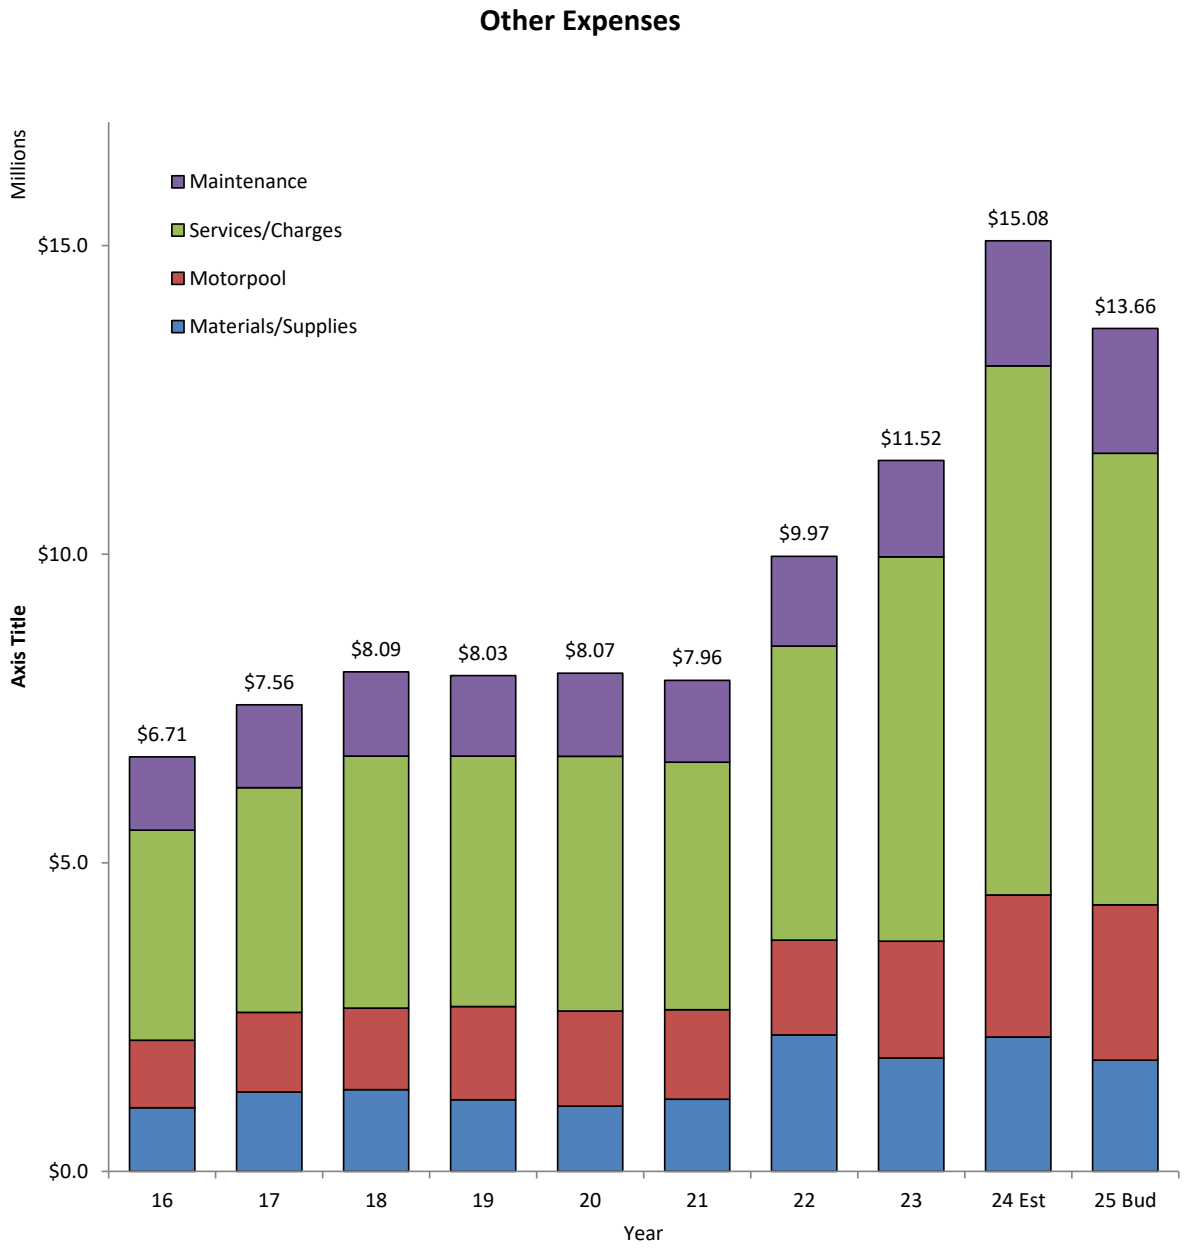
General Fund Expenses

Total uses of funds in 2025 for the City's General Fund totals $77,360,000. The charts below show the total General Fund expenditure budget by operating activity and expense category.

Uses of Funds by Activity for 2025
$ 77,360,000

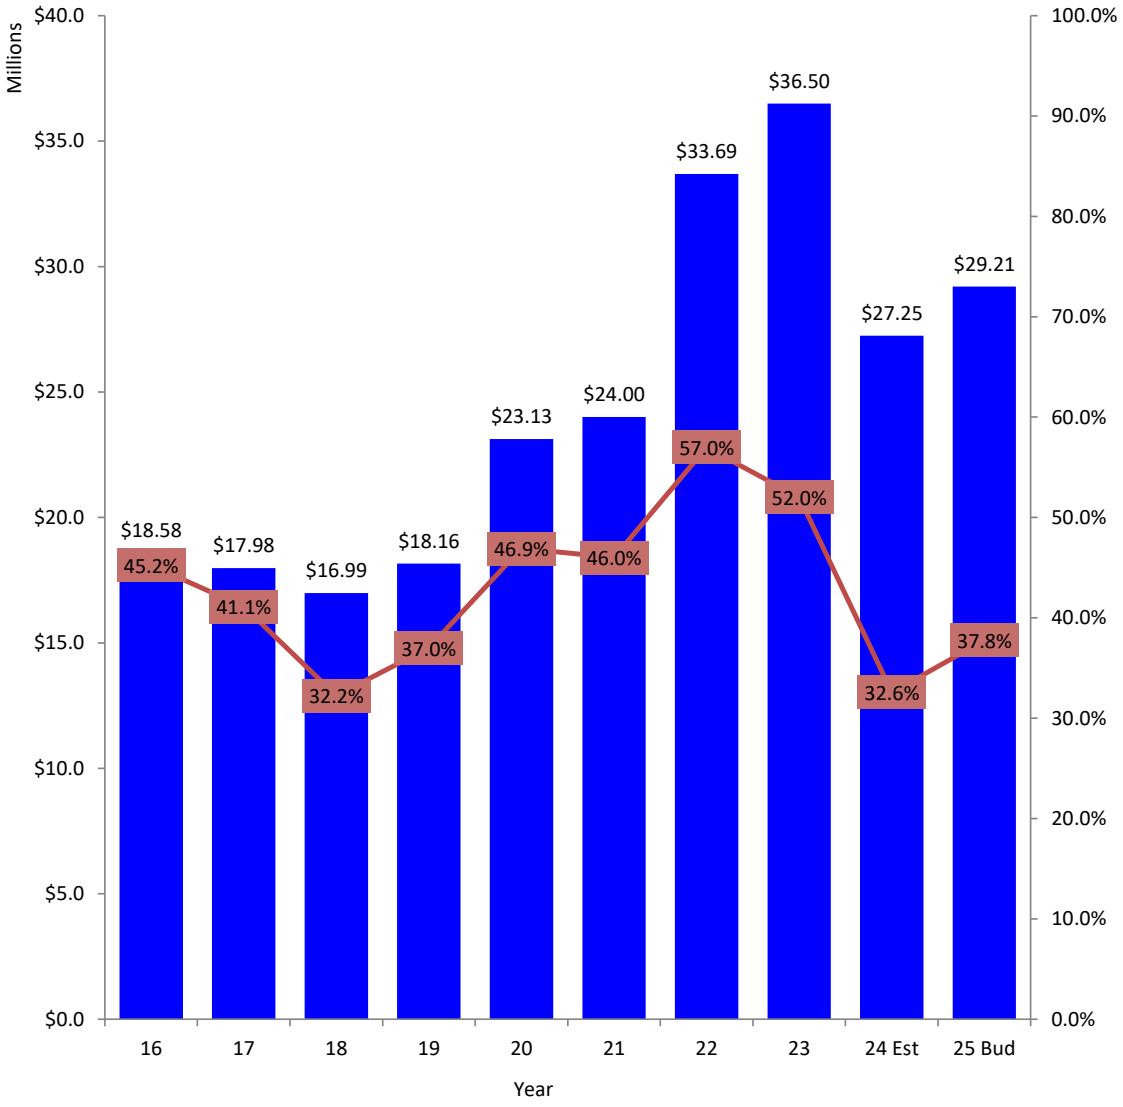


Uses of Funds by Category for 2025
$ 77,360,000



Personnel Services: Personnel Services represent the largest category of expense for the City's General Fund at 80.7%. Personnel Services include Salaries & Wages, Overtime, Insurance, Pension, and Worker's Compensation expenses. The Personnel Services category has averaged 6% growth per year from 2013 to 2023. A $1,543,475 contingency amount has been included in this budget for possible wage increases based on a salary survey due early next year.

Personnel Services



Other Expenses: All other expenses represent 19.3% of the General Fund expenditures for 2025. Major other expenses total 17.7% of the General Fund budget and include the Maintenance, Services & Charges, Materials & Supplies, and Motor Pool categories. The Services & Charges Category includes contract services, publications and dues, etc. and represents 9.5% of the total General Fund budget. The Materials & Supplies Category includes copier/printing charges, minor equipment, fuel, and office supplies and represents 2.3% of the total General Fund budget. The Maintenance Category includes building and grounds maintenance, software maintenance, and various other small maintenance accounts and is 2.6% of the total General Fund budget. The Motorpool Category represents 3.3% of the total General Fund budget.

General Fund - Fund Balance

The amount of minimum reserves to be maintained in undesignated fund balance for General Fund is sixty (60) days or 16.5% of annual regular general fund operating expenditures. The General Fund designation requirement was approved by the Fayetteville City Council on November 5, 2002 with Resolution 174-2002 and currently amounts to $12,764,400.

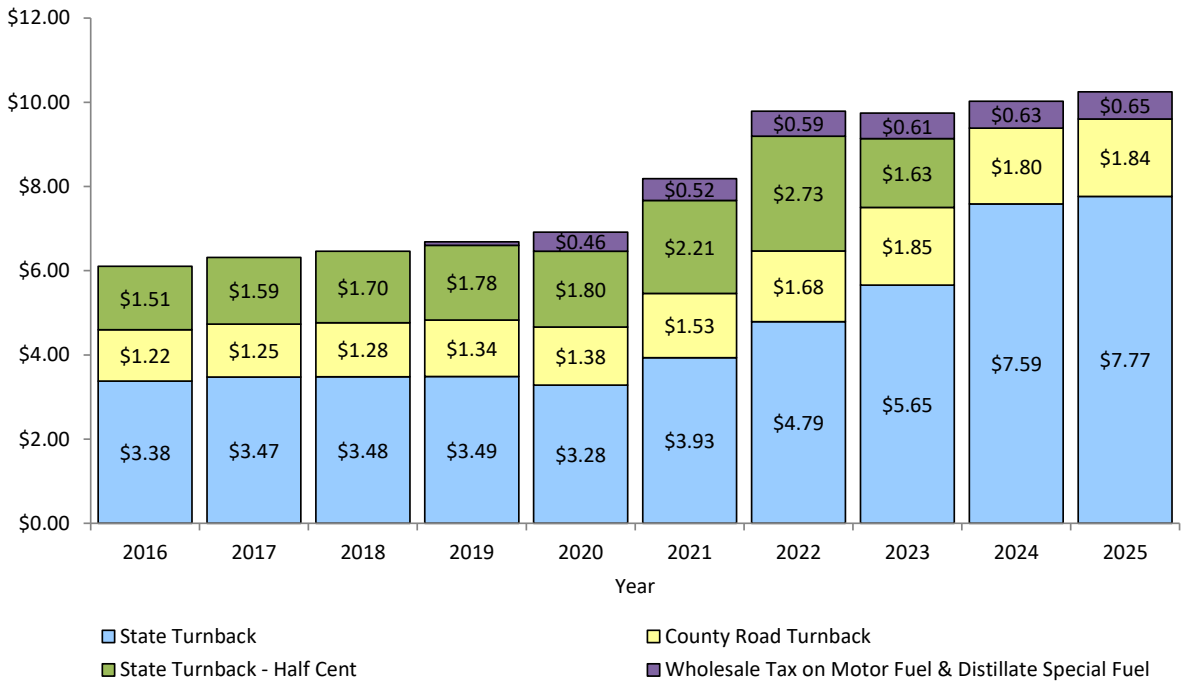
Street Fund (2100)

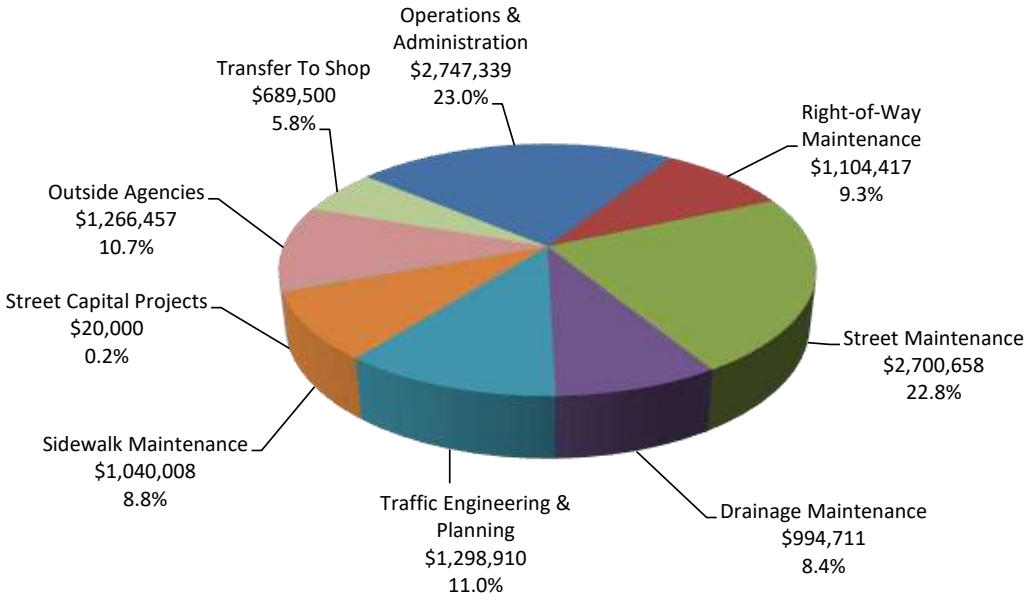
The Street Fund is primarily financed by turnback revenues received from the State of Arkansas, turnback monies received from the County Road Millage Tax, and turnback revenues from the wholesale sales tax on motor fuel and distillate special fuel which began in 2019. In 2023 the state began consolidating net turnback with the half cent sales tax. These monies are utilized to maintain and repair City streets, rights-of-way, drainage, traffic control and maintenance, and City owned sidewalks.



Street Fund Revenues

The majority of revenues for the Street Fund are motor fuel taxes collected by the State of Arkansas (state turnback) and returned to the City on a per capita basis. The City also receives state turnback from the state's half cent sales tax. In addition, the City receives 80% of the road millage levied by the Quorum Court on real and personal property located within the City. The current county levy is 1.1 mills. The county maximum allowable is 3.0 mills.

Sources of Funds for 2025
$11,862,000



Street Fund Revenue History

Street Fund Expenses

The primary purpose of funds expended from the Street Fund relate to the maintenance, repair and construction of streets within the City of Fayetteville. Associated drainage maintenance activities as well as street sweeping are also programs supported by the Street Fund.

Parking Fund (2130)

The Parking Fund accounts for funds received from meter revenues and parking lot rentals in the Downtown and Entertainment Districts. Expenses for the maintenance and operation of parking lots and parking spaces are paid from this fund.

The Parking Fund is also used to pay debt service for the 2012 Parking Improvements Revenue Bond Issue.

For 2025, this fund is expected to have an increase in fund balance of $13,000.

Community Development Block Grant Fund (2180)

The Community Development Block Grant Fund accounts for the community development grant funds received from the Federal Department of Housing and Urban Development. Amounts budgeted in 2025 represent the expected grant award.

In November 2015, the City received Special Needs Assistance Programs (SNAPS) grants from the Department of Housing and Urban Development for homeless assistance in the Fayetteville area. From that time forward, the City of Fayetteville has continued to administer that program.

American Rescue Plan Act (2246)

The American Rescue Plan Act of 2021 is intended to combat the COVID-19 pandemic, including public health and economic impacts. The Act provides local fiscal aid to support COVID-19 response efforts, cover increased expenditures, replenish lost revenue and mitigate economic harm from the COVID-19 pandemic. It can also be used to fund certain capital expenditures for Water and Sewer and water quality projects. Funds must be obligated by 2024 and expended by 2026.

The City of Fayetteville was awarded a total of $17,911,418. The entire amount has been obligated.

ARPA funds in the amount of $5,095,114 were receipted directly into the General Fund in December 2022 for revenue loss reimbursement.

Parks Development Fund (2250)

The Parks Development Fund accounts for the revenue and expenditures of the Parks HMR tax approved by the voters in 1995. The $5.6 million in planned expenditures for 2025 includes $1,000,000 in capital improvements.

In 2010, a Citywide referendum was held and voters approved the use of these funds for capital projects and maintenance activities. The use of Park Development Funds for promotional activities is no longer permitted. Expenditures for promotional activities must be financed by parks funds allocated in the General Fund.

The HMR tax revenues are expected to increase by 2% in 2025 compared to 2024 estimates.

Impact Fee Fund (2300)

The Impact Fee Fund accounts for the revenues and expenditures related to the collection of the water, wastewater, police, and fire impact fees. The intent of impact fee charge is to ensure new developments bear a proportionate share of the cost of capacity improvements and ensure that the proportional share does not exceed the costs of the demand for additional capacity that is reasonably attributable to providing these services and facilities to the use and occupancy of the new developments. Impact fees for 2025 are expected to be flat compared to the estimated 2024 amounts. Transfers are made to the appropriate expenditure fund when eligible programs are identified. The 2025 amounts budgeted represent projects identified in the Capital Improvements Plan (CIP).

Fire Pension Special Fund (2810)

The Board of Trustees of the Fayetteville Fire Relief and Pension Fund (Local Plan) elected to have its Local Plan administered by the Arkansas Local Police and Fire Retirement System (LOPFI) as stated by Resolution approved and signed on July 10, 2023 and was approved by City Council Ordinance #6676 on August 15,2023.

The Fire Pension Fund has accounted for the accumulation of resources for the pension benefit payments to qualified fire personnel. Operations of this fund were previously controlled by the Fire Pension Board. Revenues include the proceeds of a special City property tax and insurance premium tax distributions from the State. This has been accounted for by the City as a trust fund.

Beginning in 2024, the Fayetteville Fire Relief and Pension Fund (6810) will have previous operations transferred to the Arkansas Local Police and Fire Retirement System (LOPFI) and all City financial activity will occur within the Fire Pension Special Fund (2810).

Replacement & Disaster Recovery Fund (4270)

The Replacement & Disaster Recovery Fund accounts for general government monies accumulated and used for the purchase of equipment (primarily copiers) and in certain instances qualifying vehicle expansions. By policy, the fund also attempts to maintain a minimum reserve of $3 million dollars for disaster recovery.

Sales Tax Capital Improvements Fund (4470)

The Sales Tax Capital Improvements Fund accounts for the revenue and expenditures of the City's sales and use tax which is used for acquisition and improvement projects, as well as equipment replacements and additions that are included in the City's Five-Year Capital Improvements Program. The $14,037,000 in planned expenditures for 2025 provides for $14,025,000 in capital improvements. There is $12,000 allocated in this fund for audit costs. Many project allocations in this fund represent multiyear completion or fund accumulation programs which span several years. Therefore, large balances are reappropriated each year.

The capital portion of City Sales Tax revenue for 2025 is expected to be $385,000 over 2024 estimated collections. This is a increase of 3% compared to 2024.

Streets Project 2019 Bonds Fund (4602)

The Streets Project 2019 Bonds Fund (Phase I) accounts for the bond proceeds issued to finance all or a portion of the costs of right-of-way acquisition, design, construction, reconstruction, repair, resurfacing, straightening and width modification of certain City streets, which may include related sidewalk, traffic signal and control, lighting, curbing, guttering, bicycle lane, landscaping, drainage and safety improvements and related curbside pedestrian facilities such as bus pickup structures and concrete waiting pads.

The total approved authorization by the voters was $73,925,000 for all bond phases. The par amount of bonds issued in Phase I is $34,330,000. Appropriation of the unspent portion of these funds will be made through the re-budget process which will be considered by the City Council during the first quarter of 2025.

Water and Sewer Fund (5400)

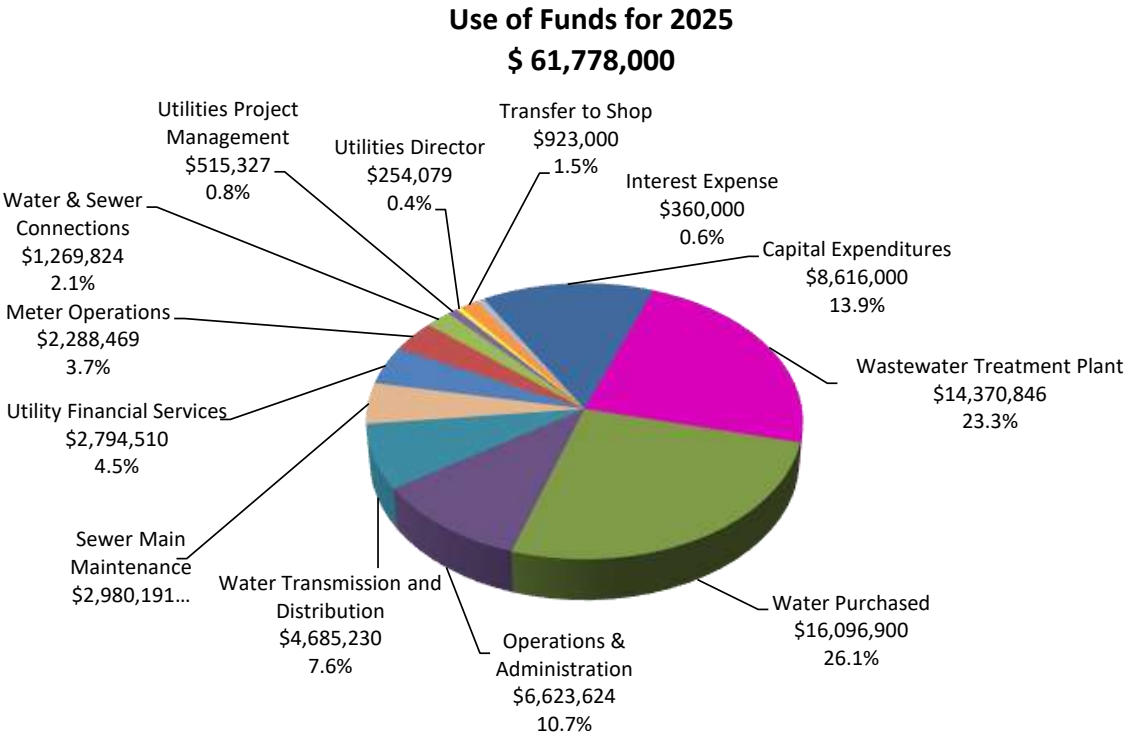
The Water & Sewer Fund accounts for the revenue sources as well as the operation and maintenance expenses of the City's water and sewer system. This includes water purchases from Beaver Water District, all water and sewer functions, the operation of the wastewater treatment plants, meter and backflow operations, and utility financial services. The 2025 Budget includes a significant amount in capital outlay at $8.62 million due to a backlog of needed projects; however, there are sufficient reserves to fund these projects.

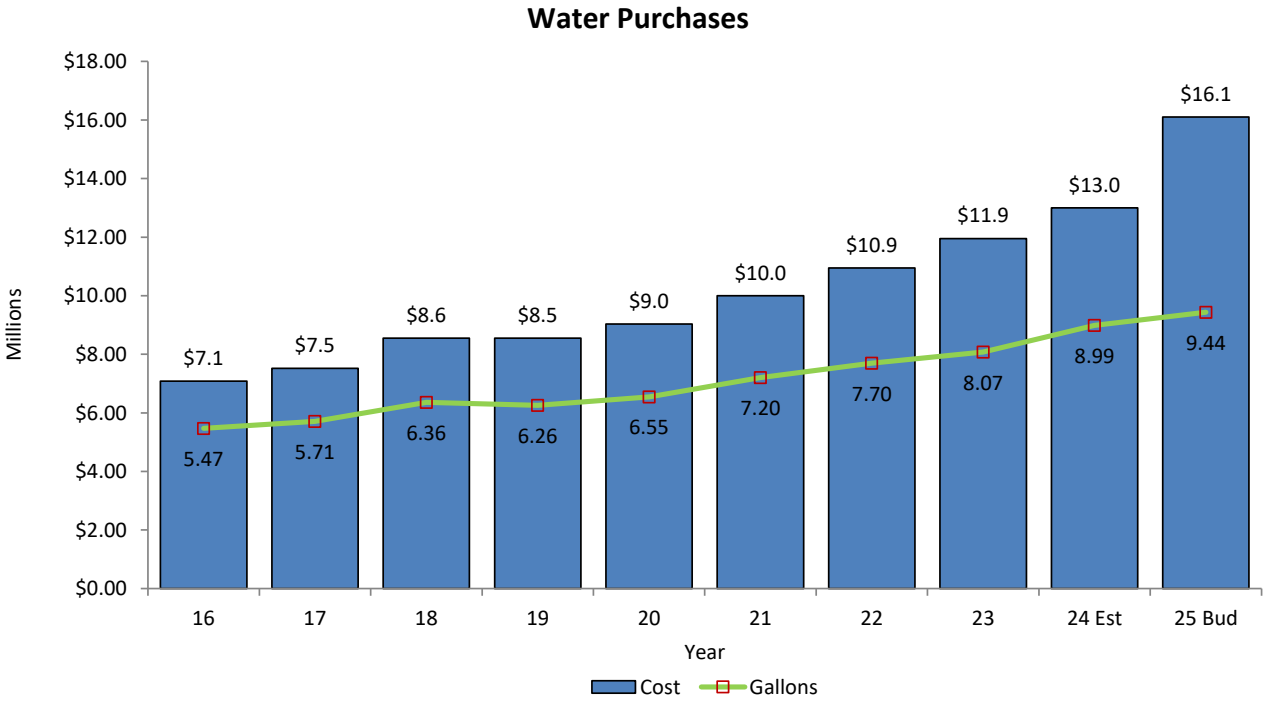
Water & Sewer Fund Revenues

For 2025, the Water & Sewer Fund is projected to have an operating gain of $1.6 million before capital expenditures on a cash basis. System user consumption projections for 2025 are expected to increase compared to 2024.

Sources of Funds for 2025
$ 61,778,000

Water Sales: Water sales revenue is based on metered customer usage of water and is one of the primary sources of revenue for the Water & Sewer Fund. Budgeted revenue for 2025 is projected to increase by 2% when compared to 2024.





Sewer Charges: Sewer service charge revenue is based on metered customer usage of water and is the other primary source of revenue for the Water & Sewer Fund. The budgeted revenue for 2025 is projected to increase by 2% when compared to estimated 2024.

Water & Sewer Fund Expenses

The wastewater treatment plant operations and water purchases are budgeted at $14.37 million and $16.1 million, respectively, for 2025. These two items represent 30.47% of the total operating expenses.

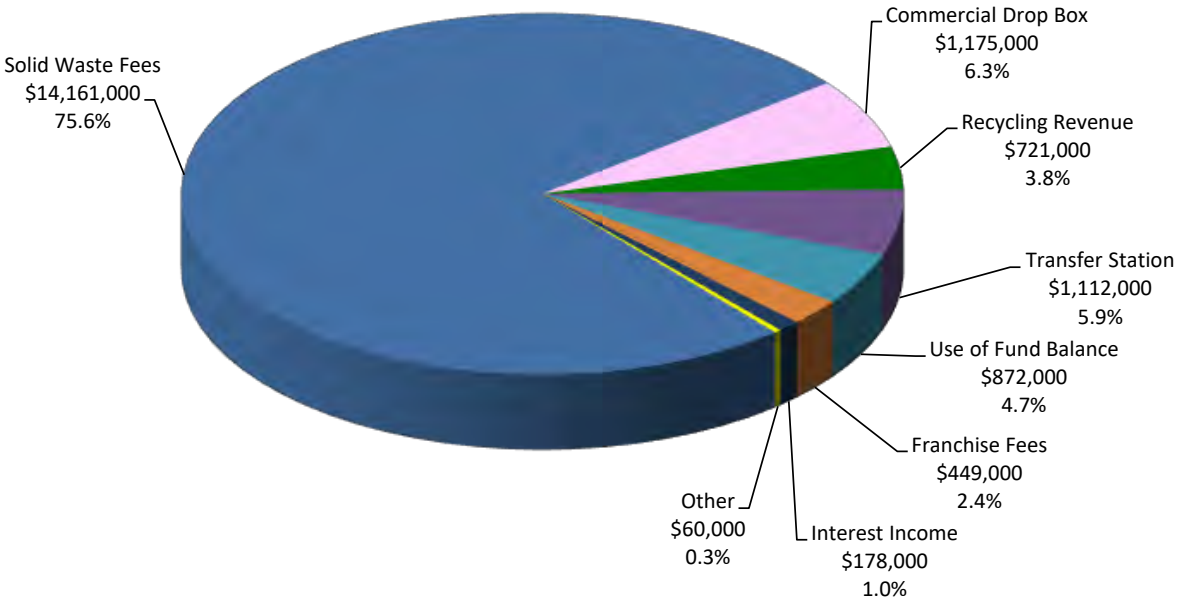
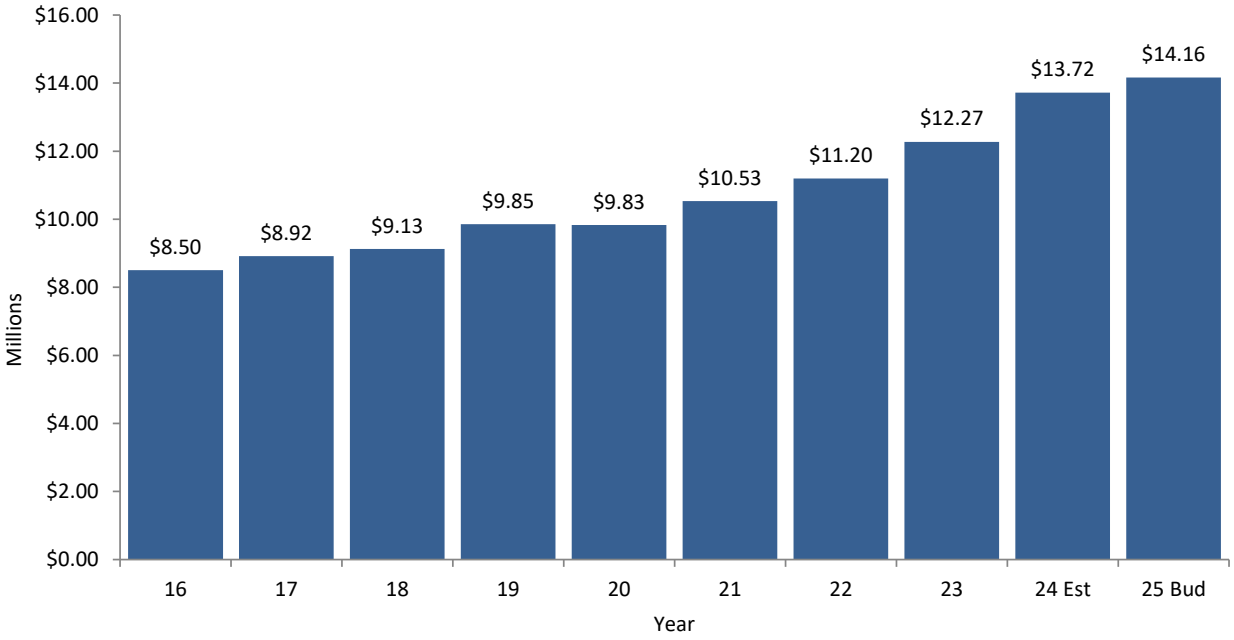
Recycling & Trash Collection Fund (5500)

The Recycling & Trash Collection Fund is responsible for the operation of the City's solid waste collection and disposal, transfer station, recycling program, and composting program. Revenues for the fund are obtained from fees levied for trash collection, recycling revenue, container sales or leases, and the transfer station. After capital expenditures, the fund will have a loss of $872,000. There are sufficient reserves to absorb this amount.



Recycling & Trash Collection Fund Revenues

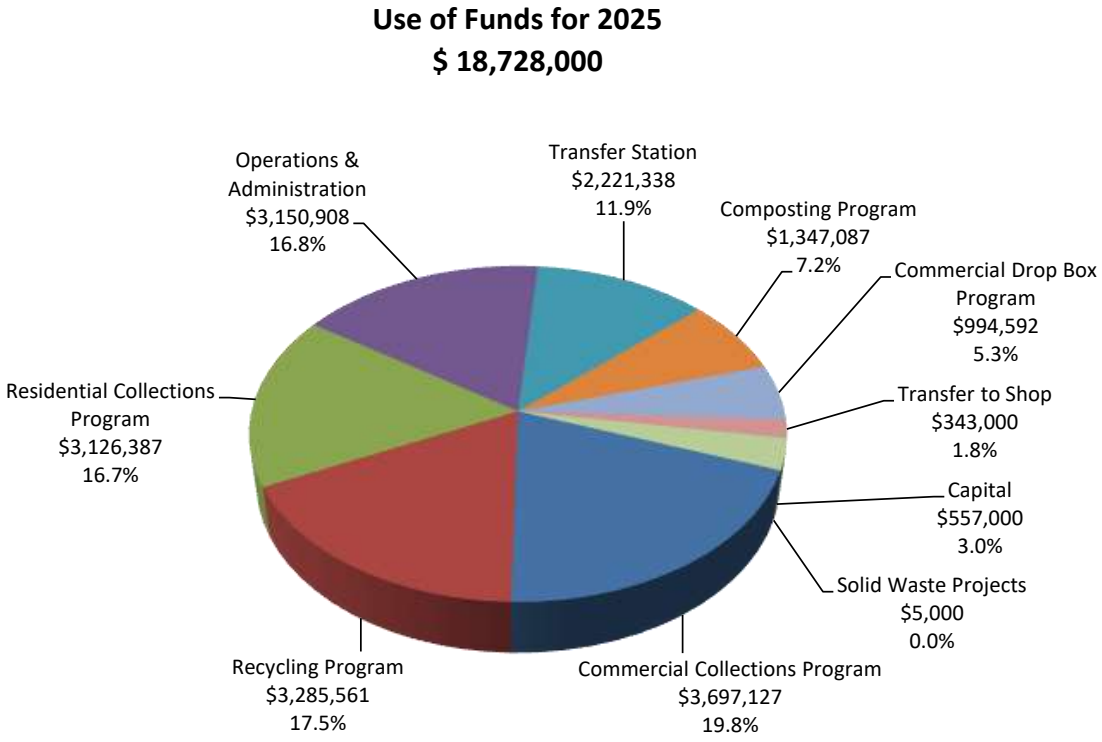
For 2025, the Recycling & Trash Collection Fund sources of funds are budgeted at $18,728,000. Solid Waste Fees make up the largest source of revenue at 75.6%.



Recycling Revenues

Recycling revenue includes the sale of materials collected at curbside and at the recycling centers. The estimated revenue for that program is $721,000 for 2025. However, a portion of the solid waste fees could also be attributable to recycling activity due to the decreased cost of disposing of those materials as trash. That portion is estimated to be approximately $2,025,000 for 2025.

Sources of Funds for 2025
$ 18,728,000



Solid Waste Fees: The 2024 revenue estimates are $1,449,000 over 2023 collections. The 2025 total revenues are projected to be higher compared to 2024 estimates by $442,000.

Recycling & Trash Collection Fund Expenses

Expenses for the Recycling & Trash Collection Fund are budgeted at $18,728,000 for 2025. The Commercial Collections Program makes up the largest segment of the budget at 19.8%.

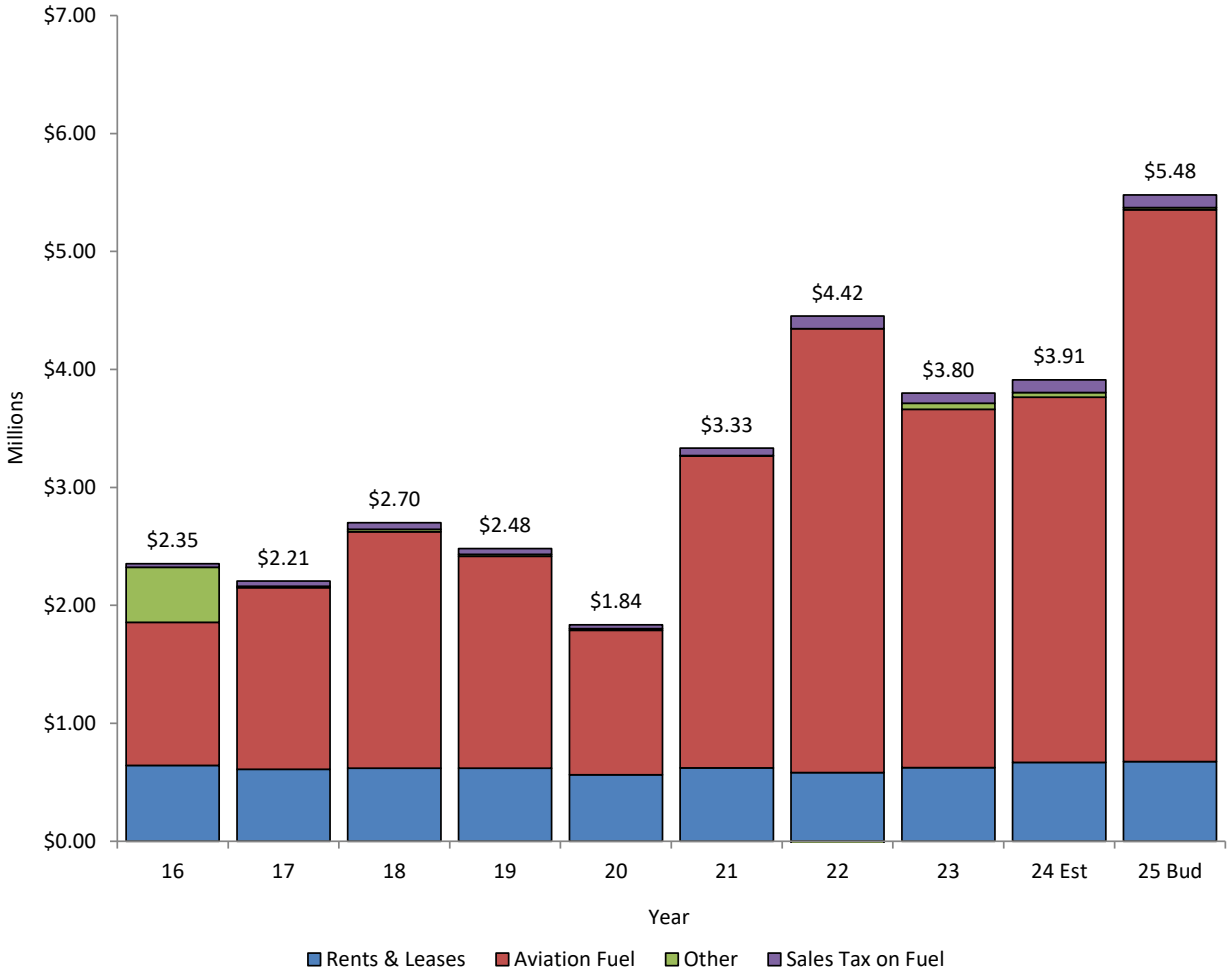
Airport Fund (5550)

The Airport Fund provides for the operation and maintenance of the City's municipal airport, Drake Field. The Airport Fund's revenue is generated from FBO fuel sales and rents and leases. After capital expenditures, the fund will have a loss of $-283,000.

Airport Fund Revenues



For 2025, the Airport Fund sources of funds are budgeted to be $5,763,000. Aviation Fuel revenue is projected to be $4,677,000 or 81.2% of the total revenue, as the City took over Fixed Based Operations in March of 2013. Rents and Leases make up the second largest source of revenue at 7.3%.

Sources of Funds for 2025
$ 5,763,000

Total Operating Revenue

This chart shows all of the Airport Fund's operating revenues by type. Primary revenues are comprised of Fuel Sales and Rents and Leases. During the fourth quarter of 2001, the City took over the Fixed Based Operator (FBO) functions and sold aviation fuel as it became a General Aviation airport. The selling of fuel continued until the last part of 2005 when the City contracted the operation of the FBO to an external company. The City again took over running the Fixed Based Operations (FBO) in March of 2013. Due to the FBO, Aviation Fuel has become the major source of revenue. A portion of the airport terminal building is leased by Skydive Fayetteville, a pilot training school, the U.S. Postal Service and several other business operations.

Police Pension Fund (6800)

The Police Pension Fund accounts for the accumulation of resources for the pension benefit payments to qualified police personnel. Operations of this fund are controlled by the Police Pension Board. Revenues include insurance premium tax distributions, a special City property tax, and special fees and forfeitures. This is accounted for by the City as a trust fund.

Fire Pension Fund (6810)

The Board of Trustees of the Fayetteville Fire Relief and Pension Fund (Local Plan) elected to have its Local Plan administered by the Arkansas Local Police and Fire Retirement System (LOPFI) as stated by Resolution approved and signed on July 10, 2023 and was approved by City Council Ordinance #6676 on August 15, 2023.

The Fire Pension Fund has accounted for the accumulation of resources for the pension benefit payments to qualified fire personnel. Operations of this fund were previously controlled by the Fire Pension Board. Revenues include the proceeds of a special City property tax and insurance premium tax distributions from the State. This has been accounted for by the City as a trust fund.

Beginning in 2024, the Fayetteville Fire Relief and Pension Fund will transfer revenue to the Arkansas Local Police and Fire Retirement System (LOPFI).

Shop Fund (9700)

The Shop Fund is an internal service fund that provides for all the acquisition and maintenance of equipment and vehicles utilized by the City's operating divisions. The Shop Fund's source of revenue is from charges to other City operating funds based on equipment and vehicle usage. Increases in 2025 operational costs can be attributed to additional parts and supply purchases, fuel expense, insurance, and contract services for repairs that cannot be performed by staff. These operational increases are a result of fleet expansions and increased equipment usage. On a cash basis, revenues will be greater than expenditures for 2025.

Shop Fund Revenues

Shop Charges (Replacement Charges, Motorpool and Maintenance Charges, Shop Overhead Charges, Shop Overhead Insurance Charges, and Fuel Charges) as a whole make up 94.8% of total Shop Fund. These revenues are budgeted at $14,710,000 for 2025. These revenues can be broken down in components as follows. The Replacement Charge ($8,267,000) is the amount Fleet Operations collects to purchase replacement vehicles and equipment. Motorpool and Maintenance Charges ($2,485,000), Shop Overhead Charges ($1,272,000) and Shop Overhead Insurance Charges ($430,000) are monthly fees user divisions pay to the Shop Fund for on-going maintenance. Fuel Charges ($2,256,000) represents revenue received from charging out the cost of gasoline to the user divisions.

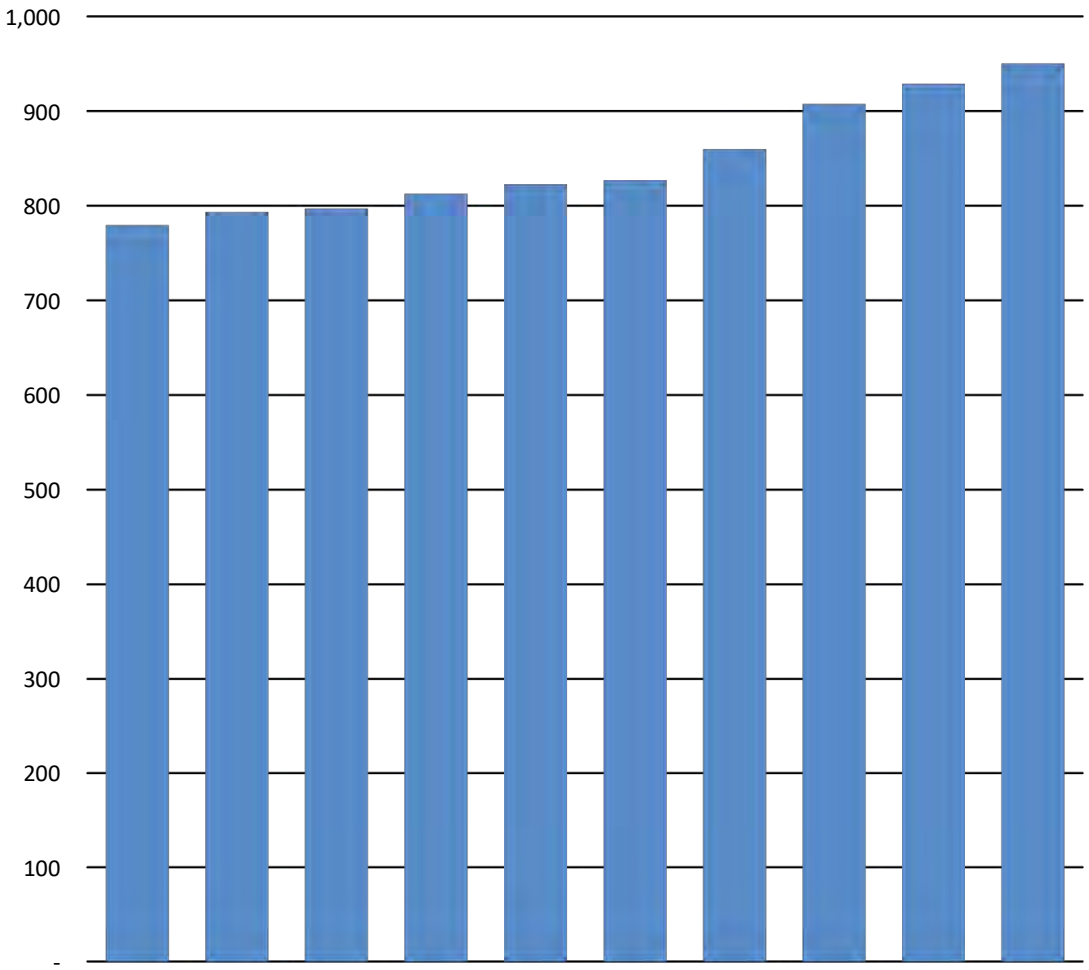
2025 BUDGET - TOTAL FTE ADJUSTMENTS		(0.55)	22.15
2025 BUDGET - TOTAL FTE			950.30

NOTES TO THE PERSONNEL VARIATION SUMMARY



1. A temporary Short-Term Rental Clerk was approved by City Council, via resolutions 142-24 and 200-24, in the Development Services division after the 2024 budget was adopted. This is a six-month term-limited position created to enforce the short-term rental ordinance's requirements and prohibitions. This position is funded out of the General Fund.
2. Two Social Services Advocates were approved by City Council, via resolution 276-23, in the Police division after the 2024 budget was adopted. These positions were created to add additional social workers to the crisis intervention team. The positions are funded by the 2023 Community Policing Development Crisis Intervention Team grant and the General Fund.
3. An Administrative Assistant is being added to the Animal Services division to assist with citizen services. Animal Services receives a substantial amount of phone calls per month. The new position will be dedicated to answering citizen service calls, processing adoptions and intakes, and helping customers in person. This position will be funded out of the General Fund.
4. An Administrative Assistant is being added to the Fire division to assist with compliance coordination. The Fire Department must follow various local, state, and federal regulations, including safety protocols, equipment maintenance, and response procedures. This role will be the main point of contact for understanding and implementing these regulations to ensure compliance. This position will be funded out of the General Fund.
5. A part-time Recreation Program Assistant II is being added to the Parks & Recreation division to assist with the coordination of events held at parks. There has been a significant increase over the past couple of years of community requests for park usage and special events. This position will focus on providing customer service with event organizers to ensure the park is adequately prepared for events. This position will be funded out of the General Fund.
6. Two Police Officer positions are being added to the Police division to be part of the crisis intervention team. These two additional officers will enable expansion of hours to serve those experiencing mental health crises. The positions will be funded out of the General Fund.
7. A Police Officer and a Police Sergeant are being added to the Police division to be assigned to the Fayetteville Public School District as School Resource Officers. Resolution 190-22 indicated the intent to add two additional School Resource Officers every year until Fayetteville Public Schools have one in each of their 16 public school facilities. With the addition of the two positions there will be 13 School Resource Officers. The positions will be funded by the Fayetteville Public School District and the General Fund.
8. A Crew Leader, a Maintenance Worker III, and two Maintenance Worker IV positions are being added to the Transportation division to form a sidewalk crew. Transportation receives a considerable number of service requests yearly. These positions will assist the division in completing the service requests and inhouse projects for the sidewalk program in a timely manner. These positions will be funded out of the Street Fund.
9. A Traffic Signal and Signage Technician is being added to the Transportation division. Increased workload due to additional projects and new construction has created a need for an additional Traffic Signal and Signage Technician. This position will help ensure all current and upcoming tasks are completed timely. This position will be funded out of the Street Fund.
10. A portion of the Financial Coordinator - Parks position will be transferred from the Parks & Recreation division to the Parks Operation division. The change will move .55 FTE, and that portion of the position will continue to be funded out of the Parks Development Fund.
11. A Staff Engineer is being added to the Utilities Director division to increase the efficiency and quantity of utility engineering services that can be performed internally. Water and Sewer currently has a backlog of capital projects. As the customer base increases the need for infrastructure increases. Utilities engineering work is driven by demand, aging infrastructure, and the need to meet newer standards. This position will help reduce the need for outside engineering services. This position will be funded out of the Water and Sewer Fund.

12. Two Maintenance Worker III positions, two Maintenance Worker IV positions, a Senior Crew Leader Water License, a Crew Leader II, and a Field Maintenance Supervisor are being added to the Water and Sewer Maintenance division to form a construction crew to address water loss and aging infrastructure. There has been a substantial increase in annual water leaks over the past five years that can be contributed to aging and undersized infrastructure and also polyethylene water service lines failing at an alarming rate. These positions will focus on the replacement of failing service lines and installation of new water and sewer infrastructure. These positions will be funded out of the Water and Sewer Fund.
13. A Customer Service Representative is being added in the Recycling and Trash Collection division to assist with citizen services in the front office. The workload of the existing Customer Service Representatives has increased tremendously due to customer/population growth. This position will manage customer calls, walk-in traffic, work orders, database entries, billing, and coordinating the pick-ups. It is expected that this position will reduce overtime. This position will be funded out of the Recycling and Trash Collection Fund.
14. A Maintenance Worker III is being added to the Airport Services division. The airport continues to grow at an unprecedented pace, both in traffic and infrastructure. Airport facilities continue to age, and over the last few years the airport has come into possession of several facilities they are responsible for maintaining. In addition, increasing regulatory pressures require tighter maintenance of grounds and wildlife programs, and increases in traffic are leading to additional wear and tear of fueling equipment and hangers. This position will cut down on the need to hire temporary contract labor to complete maintenance tasks. Funding for the position will be from the Airport Fund.

CITY OF FAYETTEVILLE, ARKANSAS
CAPITAL IMPROVEMENTS PROGRAM DIRECTIONAL INFORMATION

Introduction

The Capital Improvements Program (CIP) for the City of Fayetteville examines the infrastructure and capital needs of the City for the next five years. The CIP will be reviewed and updated on a biennial basis to reflect the changing needs of the community and changes in available monies for financing capital projects. The City's philosophy concerning the use of the CIP is that it should be considered as a financial planning tool that lists the City's capital improvement projects, places the projects in a priority order, and schedules the projects for funding and implementation. The CIP should be considered as a major policy tool for the Mayor and City Council.

Capital Improvement Policy

The CIP is approached as a valuable tool to be used in the development of responsible and progressive financial planning. The program is developed in accordance with the financial policies of the City. The policies and the CIP form the basis for making various annual capital budget decisions and support the City's continued commitment to sound, long-range financial planning and direction. The City's official Capital Improvements Policy is as follows:

- The City will prepare a biennial update of a five-year CIP, which will provide for the orderly maintenance, replacement, and expansion of capital assets.

- The CIP will identify long-range capital projects and capital improvements of all types, which will be coordinated with the annual operating budget to maintain full utilization of available sources.

- When preparing the CIP, the City will seek to identify all viable capital projects and capital improvements required during the subsequent five-year period. These projects and improvements will be prioritized by year and by funding source. Every attempt will be made to match projects and improvements with available funding sources. Future operating costs associated with a project or an improvement will also be given consideration in the establishment of priorities.

- The City will seek Federal, State, and other funding to assist in financing capital projects and capital improvements.

- The City will incorporate the reasonable findings and recommendations of the City's Boards, Commissions, Committees, and Citizens' task forces as they relate to capital projects and improvements.

What Projects are in the CIP

Projects and their cumulative component areas totaling $10,000 or more should be included in the CIP. Projects costing less than $5,000 are not considered capital and are funded through program operating budgets.

Projects in the CIP can include:

- obligations for labor and materials and contractors involved in completing a project
- acquisition of land or structures
- engineering or architectural services, professional studies, or other administrative costs
- expenses for City vehicles and equipment
- renovating or expanding City facilities, grounds, or equipment

Financing

The City finances capital improvements on, essentially, a pay-as-you-go basis utilizing revenue from the 1% City sales tax originally adopted in 1993, the 1% Parks Development (Hotel, Motel, Restaurant) sales tax as amended in 2010, and operating revenues from the Airport, Shop, Water & Sewer, and Recycling & Trash Collection funds. The 1% City Sales Tax revenue is divided between General Fund operations and capital. The current split, which began with the 2008 budget, is 60% for General Fund and 40% for Sales Tax Capital Improvements Fund. Until 2008, the split as established in 2003 was equal. In addition, long-term debt is considered and utilized only when the City faces a project that is of such importance and sufficient financial magnitude as to warrant a bond issue.

The CIP is not a financing document in and of itself. Rather, the CIP is utilized as a planning document that places projects in the annual budget whereby funds are appropriated for them by the City Council. Prior to actual initiation of project work, required contracts are presented to the Mayor or City Council, as appropriate, for final approval of expending funds.

Project Cost Determination

All projects are costed using a "Basis of Cost Estimate" table that provides the estimated basis used for the requested funds. If two or more basis of cost estimates are used to calculate a funding request, the estimate that represents the majority of the estimated funds is used.

Basis of Cost Estimate for CIP
Cost of Comparable Facility or Equipment
Rule of Thumb Indicator, Unit Costs
Cost Estimated by Engineer, Architect, or Vendor
Preliminary Estimate
Ball Park "Guesstimate"

Priority Selection of Projects

The CIP will rely on priorities defined by the Mayor, City Council, and City staff. As always, criteria such as government-imposed mandates, usefulness to the community, and impact on operational expenses will be reviewed in establishing priorities. A priority is assigned to each project by year and by funding source. Projects for which no funding is anticipated to be available will be placed on an "Unfunded Projects List," which will identify the cost of the project. This list identifies the project as being viable, but one for which no funding is presently available. Unfunded projects may be funded if actual revenue is above projected revenue, if costs on funded projects are below budget, or if another funding source is identified.

The Parks and Recreation Advisory Board, Airport Board, City Council Street Committee, City Council Water & Sewer Committee, and City Council Equipment Committee meetings all provide committee and public input and guidance regarding parks, streets, bridge and drainage improvements, water and sewer improvements, and equipment purchases planned for the next five years.

CITY OF FAYETTEVILLE, ARKANSAS
CAPITAL IMPROVEMENTS PROGRAM

Since 1988, the City of Fayetteville has produced a five year Capital Improvements Program (CIP). The CIP examines the infrastructure and capital needs of the City for the next five years. The CIP is reviewed and updated biennially to reflect the changing needs of the community and changes in available funding for financing capital projects. The CIP should be considered a financial planning tool that lists the City's capital improvement projects and schedules the projects for funding and implementation. The CIP should also be considered one of the primary policy making instruments utilized by the Mayor and City Council. The City's practice has been to adopt the CIP for the forthcoming five year period and then incorporate the projects for the following two years into the next two budget processes.

City of Fayetteville, Arkansas
2025 Capital Budget

Project Title & Description	Budgeted 2025
2100 - Street Fund	
2100.410.5500 - Street Projects	
Transportation & Fleet Building Improvements (18001): This project is for building and site repairs and energy efficiency updates to Transportation and Fleet Operations buildings and grounds. HVAC, lighting, plumbing, flooring, security improvements, exterior painting, roofing, and other site and facility repairs and maintenance are addressed as needed.	$ 20,000
2100.410.5500 - Total	20,000
2100 - Street Fund Total	$ 20,000
2130 - Parking Fund	
2130.430.9133 - Parking Management Projects	
Parking Lot Improvements and Overlays (06001): This project is to maintain the City's public parking lots. The City currently has twelve public parking lots and three City employee parking lots located in the Downtown Business and Entertainment Districts. The surface lots are asphalt that periodically require general maintenance such as crack seal, seal coat, re-striping, pot hole patching, and bumper block replacement. These lots also require a complete asphalt overlay on a less frequent basis.	25,000
Parking Infrastructure Improvements (18003): This project is to fund lighting, sidewalk, street tree, signage, landscaping, area maintenance, and small equipment purchases necessary to improve the walkability and enhance the overall experience within the downtown parking districts. This project also seeks to improve connectivity from remote parking lots and spaces to core destinations.	20,000
Parking Equipment Replacements (19001): This project is for the continued replacement of parking infrastructure and installation of upgraded equipment as technology continues to evolve. Equipment types include pay stations, single-space smart meters, sensors, license-plate recognition and other enforcement equipment, and signage.	15,000
Parking Deck Improvements (24001): This project is for the ongoing maintenance of the Spring Street Parking Deck, Meadow Street Parking Deck, Town Center Parking Deck, and the new parking deck to be located at Dickson/West. An additional $50,000 is being requested in 2024 to repair deteriorating portions of the south stairwell in the Spring Street Parking Deck caused by moisture and condensation.	30,000
2130.430.9133 - Total	90,000
2130 - Parking Fund Total	$ 90,000
2250 - Parks Development Fund	
2250.520.9255 - Parks Development Capital	
Community Park Improvements (13001): This project provides for renovations and enhancements to community parks based on the new Park System Master Plan. This project also supplements Parks bond projects.	1,000,000
2250.520.9255 - Total	1,000,000
2250 - Parks Development Fund Total	$ 1,000,000

City of Fayetteville, Arkansas
2025 Capital Budget

Project Title & Description	Budgeted 2025
2300 - Impact Fee Fund	
2300.300.9300 - Fire Impact Fees	
Fire Impact Fee Improvements (07003): The purpose of this project is to accumulate funding for fire projects that are associated with the increase in developments throughout the City. The funding for this project comes from impact fees collected from developments.	110,000
2300.300.9300 - Total	110,000
2300.720.9300 - Water Impact Fees	
Water Impact Fee Improvements (07002): The purpose of this project is to accumulate funding for water projects that are associated with the increase in developments throughout the City. The funding for this project comes from impact fees collected from developments.	464,000
2300.720.9300 - Total	464,000
2300.730.9300 - Wastewater Impact Fees	
Wastewater Impact Fee Improvements (07004): The purpose of this project is to accumulate funding for wastewater projects that are associated with the increase in developments throughout the City. The funding for this project comes from impact fees collected from developments.	348,000
2300.730.9300 - Total	348,000
2300 - Impact Fee Fund Total	$ 922,000
4470 - Sales Tax Capital Improvements Fund	
4470.060.8900 - Other Capital, Media	
Television Center Equipment (02061): This project is to replace and upgrade equipment at the Television Center. The equipment includes production technology, studio equipment and accessories, lighting, sound, signal processing, telecasting and streaming equipment, file storage, video archiving, field equipment, etc. The Television Center also provides support for the audio-visual needs of the Administration and City Departments/Divisions.	50,000
City Hall A-V Maintenance (18007): This project is for the replacement, repair or reconfiguration of audio-visual equipment in City Hall.	10,000
Digital Signage Implementation (18009): This project is to maintain, improve, and expand digital signage and visual messaging in City facilities. This includes signage service, upgrading or replacing existing displays, adding new display technologies and types, adding new signage locations, and offering interactive displays to better communicate to citizens and staff.	20,000
4470.060.8900 - Total	80,000
4470.080.8080 - Library Improvements	
Library Materials Purchases (02049): FPL collections strive to meet each Fayetteville resident's need for information; to help pursue life- long learning and cultural growth; to provide the means for thoughtful and productive participation by individuals and groups in the affairs of the community, the nation and the world; and to support the educational, governmental, cultural, recreational, and economic activities within the community. The collection size is approximately 390,000 items and is expected to grow by 15% annually with focuses on high demand titles and holds ratio reductions as well as supporting rotating collections in the library's new bookmobile collection.	675,000

City of Fayetteville, Arkansas
2025 Capital Budget

Project Title & Description	Budgeted 2025
Library Technology Equipment Replacements (04004): This project is to provide new and/or upgraded technology infrastructure and services to library staff and patrons. The technology replacement cycle is typically five years or less depending upon utilization.	160,000
Library Welcome Desks Replacement (25001): This project is to replace the Library's welcome desks which are damaged and unsightly.	100,000
4470.080.8080 - Total	935,000
4470.090.8900 - Other Capital, Miscellaneous	
City Clerk Document & Records Management (14003): The purpose of this project is to follow §31.30 of the City's code as well as all state and federal laws related to document retention of archived electronic, paper, or microfilmed records that are located in electronic storage or physical storage. This purpose also encompasses the purchase of hardware like, but not limited to, scanners, software, and creating processes that align with applicable laws.	5,000
Woolsey Homestead Historic Restoration (15008): This project is to reconstruct the Woolsey homestead, surrounding outbuildings, and cemetery back to the 1840's era to allow tours and educational events. The overall project is to create a tourism, educational, and historical preservation component. The property is close to the Woolsey Wet Prairie and trail system.	200,000
Apple (Porter) Warehouse Stabilization/Restoration (20001): This project is to stabilize and maintain the Porter Warehouse building at the corner of West Avenue and Spring Street.	150,000
Green Space Preservation (21016): This project will fund land purchases, conservation easements or other expenditures that would be used to fulfill the mission of the City's natural environment and ecosystems.	100,000
Climate Resiliency (22005): This project will fund implementation of the City's new Climate Action Plan. Funds may be used on projects for Carbon Sequestration & Storage, Climate Equity & Justice, Ecosystem Resilience & Adaptation, Ecosystem Services Improvements, Water Efficiency, Transportation Efficiency, Clean Energy, Energy Efficiency, Urban Heat Mitigation and Land Acquisition.	50,000
City Gym Improvements (24002): This project is to provide ongoing maintenance and purchase equipment and materials for the City Gym.	30,000
Downtown Master Plan (24003): This project will focus on the City's infrastructure investments in the Downtown area - including water, sewer, transportation, parking, green infrastructure and social infrastructure investments. Included in the proposed project scope is a market study, community engagement to develop an updated vision for Downtown, an evaluation of current Downtown infrastructure compared to development goals and requirements, and implementation steps from the citywide Heritage & Historic Preservation Master Plan.	400,000
PD Shooting Range Decommissioning (24004): This project will fund design and construction of lead remediation/stabilization and fill for the old Police Department shooting range near the Happy Hollow Complex. An earthen embankment has been used for many years as the backstop at the PD shooting range. The embankment which is located adjacent to the West Fork of the White River has tested positive for lead contamination.	150,000
4470.090.8900 - Total	1,085,000

City of Fayetteville, Arkansas
2025 Capital Budget

Project Title & Description	Budgeted 2025
4470.140.8900 - Other Capital, Facilities	
Building Improvements (02046): This project is for the maintenance and repair of City facilities. The proposed scope includes repair and replacement of HVAC systems, old or damaged roofs, and repair and maintenance of building exteriors. The project also provides for other improvements such as interior remodels which include painting, lighting upgrades, plumbing fixtures, ceilings, floor coverings, furniture replacement, window replacement/upgrades, and modifications to alarm systems.	631,000
Animal Services Improvements (14002): This project is for the maintenance and repair to the Animal Services building on Happy Hollow Road. Improvements include boiler replacement, drain replacement in the dog room, roof replacement, and the purchase of a generator.	15,000
Building Efficiency Improvements (15009): This project consist of clean energy, energy efficiency, weatherization and water conservation improvements to City properties. It includes clean and renewable energy projects, repair/replacement of inefficient HVAC equipment, lighting upgrades, insulation & window repair/replacement, electric vehicle charging station work and water efficiency projects.	50,000
7-Hills Walker Family Residential Facility (18004): This project is for facilities maintenance of the 7-Hills Walker Family Residential Facility. The repairs and/or replacements include windows, water heaters, lighting and security upgrades, interior finishes, millwork, exterior site improvements.	40,000
ADA Assessment of City-Owned Facilities (21008): This project is to procure the services of an accessibility consultant to perform assessments of City-owned buildings and sites in order to plan and complete any necessary improvements/corrections.	30,000
Downtown Campus Renovations (23003): This project is for the improvements of City buildings in the Downtown area, including roof, HVAC and significant office renovations to provide efficient use of space and future growth.	150,000
4470.140.8900 - Total	916,000
4470.170.8170 - Information Technology Improvements	
Geographic Information System (GIS) (02055): This project is to upgrade and expand the City's Geographic Information Systems (GIS) computer hardware, software, and data collection systems to accommodate growth in the system's applications and user base. This system provides necessary information for the 911 system, the Planning, Engineering, Economic Development, Water & Sewer, and Transportation divisions, and utility projects.	45,000
Local Area Network (LAN) Upgrades (02056): This project is to upgrade and expand the City's Local Area Network (LAN)/Network infrastructure. The LAN is used by every division in the City across thirty locations connecting approximately 900 devices. While most components of the LAN are on a 5 year lifecycle, consideration is given to increases in the system's user base and advances in technology that create a need for hardware and operating system upgrades.	25,000
Technology Equipment Replacements (02057): This project is for the replacement of desktop technology throughout the city, which includes PCs, laptops, scanners, printers, tablets, and miscellaneous desktop technology items that fall under a structured replacement schedule. This project is part of a larger replacement plan that is supported by CIP projects from enterprise funded departments and separate technology CIP's within Police and Fire.	230,000

Project Title & Description	Budgeted 2025
Telecommunication Systems Upgrades (04001): This project is for telecommunication system upgrades, VOIP telephone handset replacement, VOIP telephone related hardware, and new software that become available for users as well as for additional VOIP licenses needed to support the entire city's VOIP telephone system.	40,000
Fiber Optic Cable (09028): This project will interconnect City owned buildings with fiber and allow for added services such as video surveillance, access control, phones, and computers. This will allow for increased speeds and capacity with less reliance on leasing fiber from internet service providers, further reducing operating expenses.	110,000
Cyber Security (18005): This project is to provide comprehensive cyber security training across the City, helping to mitigate security risk and improve security posture. This holistic approach to cyber security provides internal and external penetration testing to ensure the network is as secure and protected as possible.	30,000
Security Cameras (24005): This project is to expand the City's existing video security camera system into additional parks, trail heads, parking facilities, Drake Field, traffic signals, and water/sewer locations.	25,000
Public Reporting Dashboard (24006): This project is to implement a public data dashboard that would provide a single location for the City to publish reports and performance measures, which will improve access to key information, improve the efficiency of developing public reports, and provide reports to the public that help tell the story of City operations.	36,000
Enterprise Application Improvements (24007): This project will provide funding for additional software licenses, support, and/or professional services to improve functionality for various City systems.	60,000
4470.170.8170 - Total	601,000
4470.200.8200- Police Improvements	
Police Facility Improvements (02047): This project is for major repairs and improvement of Police Department and Central Dispatch facilities, including but not limited to, tower sites, substations, storage, security door lock systems, fueling station and expansion for the police facilities.	25,000
Police Specialized Equipment (02062): This project is to replace various outdated and/or malfunctioning equipment used during police operations. Examples of this equipment include traffic control equipment, e-bicycle replacement, radar units, automated external defibrillators (AED), crisis negotiation equipment, training equipment and other items used in police operations.	37,000
Police Technology Improvements (06002): This is an ongoing project for the replacement of end of life, obsolete or malfunctioning information technology, including network servers and equipment, desktop computers, software, printers, and other peripheral equipment based on the City's Information Technology Division replacement schedule.	66,000
Police Unmarked Vehicle Replacements (06003): This project is to purchase unmarked vehicles that are a necessity for an effective Police Department. The Department utilizes unmarked vehicles for a variety of tasks, including gathering intelligence for investigation of narcotics, theft, vandalism, domestic terrorism, and civil disobedience; conducting pre-raid intelligence for the deployment of the Emergency Response Team; conducting alcohol enforcement patrols; and any activity that must be kept covert to be effective.	140,000

Project Title & Description	Budgeted 2025
Police Equipment Replacement (11006): This project provides for the replacement of operating equipment within all Police facilities, such as paper shredders, document scanners, uninterrupted power supplies, security/surveillance cameras, etc.	10,000
Police Ballistic Protection Replacement (13011): This project provides funding for the replacement of expired bulletproof ballistic vests for our officers and members of our Emergency Response Team.	168,000
Police Employee Gym (13028): This project is to maintain and add gym equipment to the Police department gym.	10,000
Police Weapon Replacement (15013): This project provides funding for the replacement of end of life weapons used by the Police Department including rifles and handguns and associated accessories.	421,000
Police Marked Vehicle Expansion (16007): This project is to expand the take-home vehicle program. This phase-in project will expand our patrol fleet with one vehicle per year for each year of the Capital Improvements Plan.	83,000
Police K9 Replacement (17005): This project is for the replacement of Police canines that have reached retirement age in the coming years. Police canines are a critical support service to the police department. Canines are used to locate missing persons, articles or narcotics, and track fleeing fugitives.	25,000
Police Radio Replacement (20004): Motorola has issued an "Intent to Cancel" notice for XTS/XTL radios. Parts and warranty will no longer be available for these radios. The Police Department has thirty-three 33 radios which will need to be replaced. Many of these radios will be 15 years old by the time of this project. This will ensure the same equipment is used throughout the department.	400,000
Police Firing Range Improvements (22001): This project provides funds for the annual maintenance and cleaning of the new police department indoor firing range. Maintenance includes a professional range cleaning bi-annually, annual professional cleaning contracts, air filter purchases, and mining of lead.	15,000
Police Public Safety Equipment (22007): This project provides for the replacement of the Police body worn camera (BWC) system, digital mobile video recorder (DMVR), the taser conducted energy weapons, and the interview room video recorder systems for the Police department. BWCs, DMVRs and tasers are an important component to police operations providing transparency of department actions to the public, allowing for review of uses of force, and ensuring accurate evidence collection for prosecution. All components are supplied by Axon in a public safety equipment package.	480,000
4470.200.8200 - Total	1,880,000
4470.300.8300 - Fire Improvements	
Fire Facility Maintenance (02006): This project is for major repairs to existing and future facilities. Repairs include but are not limited to roofing, plumbing or drainage repairs and replacements, remodeling, fencing, driveway replacements, generators, stability assessments, fire escape replacements, and structural repairs	125,000
Fire Apparatus Purchases - Shop Transfer (03019): This project is for the replacement of fire apparatus. The general guideline utilized for replacement of trucks is to serve for 10 years on the front line and five years in the reserve fleet.	980,000
Fire Technology Equipment Replacements (10017): This project will allow for the replacement of systems as they become technologically obsolete or inoperable.	46,000

City of Fayetteville, Arkansas
2025 Capital Budget

Project Title & Description	Budgeted 2025
Firefighting Safety Equipment (16002): This project includes the procurement/replacement of fire apparatus equipment, as well as other life safety equipment such as self-contained breathing apparatus (SCBA) & associated equipment, technical rescue equipment and auto extrication equipment.	105,000
Fire Mobile Radios (21001): This project is to update the existing radio system. Funds will be included for yearly Subscriber Mobile Radio Replacements. Additionally, funds are requested to allow for Radio System Upgrades/System Dispatch and associated equipment as needed.	300,000
4470.300.8300 - Total	1,556,000
4470.410.8410 - Transportation Improvements	
In-House Pavement Improvements (02052): This project provides resources for the systematic overlay of existing streets and includes curb cuts, curb and guttering, pavement striping, and preparation costs for overlays.	2,300,000
Sidewalk Improvements (02053): This project is to improve the connectivity of the sidewalk system by constructing new and repairing existing sidewalks.	1,050,000
Traffic Signal Improvements (02063): This project provides funding for the installation of new traffic signals, upgrades, and replacement of UPS back-up system batteries and reflective sign material mandated by the latest version of the FHWA Manual on Uniform Traffic Control Devices (MUTCD).	150,000
Wireless Traffic Signal Control (15018): This project provides for the implementation of a wireless Ethernet communication system for traffic signals (both data and video).	42,000
4470.410.8410 - Total	3,542,000
4470.520.8520 - Parks & Recreation Improvements	
Forestry and Outreach (22002): This funding is primarily targeted at planting approximately 1,000 new and replacement trees throughout the city annually. Funds will also be used to support plantings, such as supplies, irrigation and watering; and outreach efforts, such as Celebration of the Trees and Invasive Plant Bounty.	250,000
Public Art Commission (24009): This project seeks to enhance the cultural and artistic vibrancy of various public spaces across the community by installing a variety of public art, including sculptures, murals and infrastructure to support performing art. These projects are expected to create a sense of community pride and engagement, as residents will have multiple public artworks to appreciate and enjoy for years to come.	50,000
4470.410.8410 - Total	300,000
4470.521.8520 - Parks Operations Improvements	
Lights of the Ozarks (02001): The Lights of the Ozarks display is a Fayetteville tradition that spans nearly 30 years. Experience Fayetteville helps the City purchase lights each year. This project pays for lift rentals and other electrical supplies needed to install the display each year.	25,000
Parks Safety and ADA (15011): This project covers unexpected safety and/or ADA issues that come up which need to be corrected immediately.	30,000
Natural Resources Management (15012): This project will provide funding for a Natural Resource Management Plan, as well as invasive plant removal, prescribed burns, etc.	50,000

Project Title & Description	Budgeted 2025
Park Paving Improvements (16004): This project is for the routine maintenance of surfacing repairs, resurfacing treatments, restriping, wheel stops, etc. at the many parking lots within city parks for park and trailhead parking.	125,000
Parks Maintenance and Improvements (24010): These are large scale projects that exceed the funding capabilities of the normal operating budget and need to be addressed to avoid large scale deferred maintenance projects that result in inferior or dilapidated facilities and amenities that will require a total rebuild and major funds to remedy.	350,000
Parks Maintenance Building Improvements (24011): The existing Parks office needs renovations to accommodate Park Operations staff and the efficient use of newly available space vacated by other departments. An outside equipment and dry storage shed is also needed to prolong the life of equipment and store materials and topsoil out of the weather.	150,000
Trash Removal (24012): This project will fund contractors to clean up along the trail system and in the creeks.	300,000
4470.521.8520 - Total	1,030,000
4470.621.8810 - Bridge & Drainage Improvements	
Stormwater Quality Management (02097): This project provides funding for partnerships with Regional Planning for Stormwater Education, USGS water quality monitoring and stream gauges, Beaver Watershed Alliance and Illinois River Watershed Partnership, as well as other water quality needs and stream restorations.	180,000
Other Drainage Improvements (02108): This project is for drainage projects needed to mitigate flooding, repair and upgrade existing systems, cost share with developments when applicable, and for storm drainage materials for use in projects constructed by in-house crews. There is additional funding in 2024 for the Brookbury Stream Restoration.	220,000
Drainage Maintenance (11021): This project will fund drainage projects as needed.	50,000
4470.621.8810 - Total	450,000
4470.800.8820 - Street Improvements	
Cost Share / ROW / Intersection / Street Calming (02116): This project is for developer cost shares to complete street improvements associated with developments. This funding also pays for traffic calming installations per the Traffic Calming Policy and City Council Transportation Committee direction.	100,000
4470.800.8820 - Total	100,000
4470.800.8830 - Trail Improvements	
Trail Development (02016): This program provides funding for the development of paved trails based on the adopted Active Transportation Plan.	1,550,000
4470.800.8830 - Total	1,550,000
4470.800.8900 - Other Capital, Non-Departmental	
Audit Expense (47038): This project is to account for the portion of the audit cost that is allocated to the sales tax capital fund.	12,000
4470.800.8900 - Total	12,000
4470 - Sales Tax Capital Improvements Fund Total	$ 14,037,000

City of Fayetteville, Arkansas
2025 Capital Budget

Project Title & Description	Budgeted 2025
5400 - Water & Sewer Fund	
5400.720.1840 - Meter Operations Capital	
Water & Sewer Rate/Operations Study (02064): This project is to conduct periodical water and sewer rate studies. A rate study assesses the financial health of the Utilities Department, projects future operating and capital expenses needed to maintain the systems, and projects the future rates for customers that will generate sufficient revenues to cover operating and capital expenses and assure a sufficient level of cash reserves.	23,000
Water Meters (02065): This project is for the replacement of aged water meters, expansion meters for new water service, and for purchasing new meters with technological advancements over the older style meters.	1,000,000
Backflow Prevention Assemblies (02066): This project is for installation/replacement of backflow prevention assemblies at City facilities to meet the requirements of City ordinances and the Arkansas Department of Health regulations, as well as a third-party service to track, store, and report backflow preventer inspection data on approximately 12,000 residential installations.	28,000
Utilities Financial Services Improvements (03038): This project is for various improvements in office hardware, software, communications, computers, safety features, and office configuration for the Utilities Financial Services Division.	11,000
Water & Sewer Equipment Expansions (13019): This project is for the expansion equipment for the Water & Sewer Operations Division. This project is needed in anticipation of adding additional construction crews in the future. It is also needed to adhere to changing technologies within the Water & Sewer profession.	50,000
Utilities Technology Improvements (15019): This project is to upgrade technology in the Utilities Department, including but not limited to desktop devices, field iPads, failing or outdated PCs, printers, and scanners.	12,000
Water & Sewer Building/Office Improvements (15020): This project is for structural maintenance, repair, and improvements of the existing Water & Sewer operations building.	46,000
5400.720.1840 - Total	1,170,000
5400.720.5600 - Capital Water Mains	
Water & Sewer Impact Fee Cost Sharing (04039): This project involves all cases where impact fees are used to cost-share with, and thus supplement, other funding sources to increase capacity in either water distribution, pumping, and storage systems or the wastewater collection and treatment systems.	154,000
Water & Sewer Relocations - Bond Projects (11011): This project is for various water and sewer relocations for street bond and other transportation projects where the street bond fund does not have sufficient funds to cover the utility relocations. Projects are to be paid first from any remaining water/sewer revenue bond funds, if available. If it involves capacity increases, impact fee funds could be used, if available.	580,000
Water System Rehabilitation & Replacement (12009): This project provides for upgrading, replacing, or rehabilitating existing water infrastructure consisting of water storage, pumping, and distribution assets system wide. This project may use Water & Sewer funds, impact fees, and cost shares where appropriate. Additionally, a portion of the project balance will be utilized on rehabilitation and replacement of troubled areas that experience frequent leaks.	1,505,000

Project Title & Description	Budgeted 2025
Water Tank Improvements (14010): This project is to refurbish the existing water tanks and associated appurtenances as they get older. This ensures water quality and extends the life of the infrastructure.	940,000
Water Storage & Pump Station Maintenance (15021): The system wide water pump stations and grounds require maintenance. This project is used to replace generators and pumps, valves, etc.	100,000
5400.720.5600 - Total	3,279,000
5400.720.5700 - Sewer Mains Construction	
Sanitary Sewer Rehabilitation (02017): This project analyzes, repairs, upgrades, and replaces sewer collection system components to ensure adequate capacity and reduce storm and groundwater flows from entering the system. This project includes replacing, lining, and bursting existing sewer mains and manholes, installing main extensions and relief lines, capacity upgrades, upgrading the system model, purchasing easements, and sanitary sewer evaluation studies.	2,500,000
5400.720.5700 - Total	2,500,000
5400.730.5800 - Wastewater Plant Capital	
Building Improvements - WWTP (02032): This project is for structural maintenance, repair, and replacement of the existing buildings or parts of the buildings at each wastewater treatment facility.	300,000
Upgrade/Replace Lift Stations - WWTP (02068): This project is to maintain the lift stations for the wastewater treatment plants. The stations are exposed to extreme wear conditions and must be upgraded routinely.	300,000
Plant Pumps and Equipment - WWTP (02069): This project allows WWTP personnel to adapt to the needs of the daily plant operation to maintain compliance with effluent discharge standards.	955,000
Phosphorus Standards Management - WWTP (10027): This project supports efforts by the City operating independently or as part of a federal or state grant program to phosphorus or other stream changes that affect water quality, regulations, or wastewater plant discharge requirements.	50,000
Wastewater Treatment/Water Quality Improvements (13018): This project is for stream restoration and similar projects designed to maintain or improve water quality. This also includes maintaining the integrity of the projects previously performed.	96,000
5400.730.5800 - Total	1,701,000
5400 - Water & Sewer Fund Total	$ 8,650,000

City of Fayetteville, Arkansas
2025 Capital Budget

Project Title & Description	Budgeted 2025
5500 - Recycling & Trash Collection Fund	
5500.750.5080 - Solid Waste Projects	
RTC - Technology Equipment Replacements (02057): This project is for the replacement of failing and outdated personal computers (PCs), printers, and monitors.	5,000
RTC - Master Plan Expansion (18016): This project will support the continued implementation of the Solid Waste Reduction, Diversion, and Recycling Master Plan. This project will also maintain and repair the Transfer Station as required to conduct daily operations in compliance with the ADEQ permit.	600,000
RTC - Scale House Improvements (18017): This project is for improvements to the scale system to weigh vehicles using the transfer station and recycling facilities.	20,000
RTC - Route Optimization & RFID System (19004): This project is for vehicle locator telematics and service verification equipment for all trucks in the fleet.	10,000
RTC - Compost Site Improvements (20006): This project is to maintain, repair and expand the Compost Site as required to conduct daily operations in compliance with the ADEQ permit and to accommodate growth of the city.	200,000
RTC - Compactors & Containers (24013): This project is for the purchase of compactors and open top containers used for the collection and hauling of waste.	70,000
5500.750.5080 - Total	905,000
5500 - Recycling & Trash Collection Fund Total	$ 905,000
5550 - Airport Fund	
5550.760.3960 - Airport Capital Expense	
Airport Lighting Improvements (15026): This project is to replace the outdated and inefficient lighting in multiple locations at Drake Field, including but not limited to, the tarmac, parking lot, T-hangars, FBO hangar, and roadway lighting.	10,000
Airport Engineering Consultant Services (15029): This project is for Engineering Consultant Services to be utilized through various Federal and State Grant projects.	20,000
Airport Equipment Replacement (18019): This project is for the planned replacement of airport equipment, including the ARFF vehicle, Lav and Water Cart, and a GPU.	35,000
Airport Movement Pavement Rehabilitation (21010): This project will be used to provide funds for the City's match on grants.	138,000
Airport T-Hangar Rehabilitation (21011): This project will be used for a T-hangar Door Rehab and T-hangar Construction. These projects will be a combination of State and Federal Grants.	40,000
Airport Street Side Improvements (24015): This purpose of this project is to improve the public facing side of the airfield to include burying of utilities, sidewalk improvements, updated signage, landscaping and fencing improvements.	40,000
5550.760.3960 - Total	283,000
5550 - Airport Fund Total	$ 283,000

City of Fayetteville, Arkansas
2025 Capital Budget

Project Title & Description	Budgeted 2025
9700 - Shop Fund	
9700.770.1920 - Fleet Capital Improvements	
Fleet - Construction Equipment (02077): This project provides funding to replace construction equipment at the optimum time where the cost to maintain doesn't outweigh the cost to purchase new.	1,694,500
Fleet - Light / Medium Utility Vehicles (02078): This project provides funding to replace light/medium utility vehicles at the optimum time where the cost to maintain doesn't outweigh the cost to purchase new.	816,000
Fleet - Heavy Utility Vehicles (02079): This project provides funding to replace heavy utility vehicles at the optimum time where the cost to maintain doesn't outweigh the cost to purchase new.	535,000
Fleet - Other Vehicles / Equipment (02080): This project provides funding to replace vehicles and equipment not included in the other projects at the optimum time where the cost to maintain doesn't outweigh the cost to purchase new.	472,500
Fleet - Police / Passenger Vehicles (02081): This project provides funding to replace Police and passenger vehicles at the optimum time where the cost to maintain doesn't outweigh the cost to purchase new.	405,500
Fleet - Recycling & Trash Vehicles / Equipment (02082): This project provides funding to replace Recycling and Trash vehicles and equipment at the optimum time where the cost to maintain doesn't outweigh the cost to purchase new.	459,000
Fleet - Tractors / Mowers (02083): This project provides funding to replace tractors and mowers at the optimum time where the cost to maintain doesn't outweigh the cost to purchase new.	304,000
Fleet - Fire Apparatus (02084): This project provides funding to replace fire apparatus at the optimum time where the cost to maintain doesn't outweigh the cost to purchase new.	803,000
Transportation & Fleet Building Improvements (18001): This project is for building and site repairs and energy efficiency updates to Transportation and Fleet Operations buildings and grounds. HVAC, lighting, plumbing, flooring, security improvements, exterior painting, roofing, and other site and facility repairs and maintenance are addressed as needed.	20,000
9700.770.1920 - Total	5,509,500
9700 - Shop Fund Total	$ 5,509,500
Total Capital Improvements Program	$ 31,416,500

City of Fayetteville's Debt Position

The City of Fayetteville has established a practice and policy of paying for all capital projects and capital improvements on a pay-as-you-go basis using current revenues, whenever possible. If a project or improvement is of sufficient size and need that it cannot be financed with current revenues, long-term debt will be considered. The basis for this policy is that the City's commitment to infrastructure improvement and maintenance will be continued. The City also considers the cost versus the benefits of debt financing. A recommendation is made only when the benefits outweigh the costs. The City's debt policy also states that the City will attempt to refinance outstanding debt if a determination is made that the City will benefit by reduced interest expense over the remaining life of the bonds.

Like most municipalities, the City of Fayetteville borrows funds primarily through tax exempt municipal bonds. The City carefully analyzes each proposed bond issue to determine the need for the improvement, its useful life, and current and future revenues available to provide debt service. Existing debt service requires resources from both general governmental resources and enterprise fund resources.

Bond Ratings

The City's debt policy states that communications will be maintained with the bond rating agencies and that the City will continue to strive for improvements in the City's bond rating. Such communications are normally very important because usually, the higher rating a city has the lower the interest rate that must be paid. As such, the City will periodically confer with the rating agencies to update them on the financial status of the City.

The following schedule briefly describes the ratings provided by Standard & Poor for municipal bonds.

Ratings	Description
AAA	Best quality, extremely strong capacity to pay principal and interest.
AA	High quality, very strong capacity to pay principal and interest.
A	Upper medium quality, and strong capacity to pay principal and interest.
BBB	Medium grade quality, adequate capacity to pay principal and interest.
BB and Lower	Speculative quality, low capacity to pay principal and interest.

Description of Outstanding Bonds

Special Obligation Bonds

Property Tax Increment Interest Accretion Bonds (Highway 71 East Square Redevelopment District No. 1 Project), Series 2005 (Not Rated): The bonds are special obligations of the City payable solely from the Property Tax Increment of the District and monies in the funds and accounts established under the indenture. The proceeds of the bonds were issued for the purpose of financing the costs of acquisition of certain real property within the City, the demolition of existing structures thereon, site preparation in connection therewith and the construction of sidewalk and crosswalk improvements. The original issue amount was $3,725,000.

Sales and Use Tax Capital Improvement and Refunding Bonds, Series 2019A (AA-): The bonds are special obligations payable solely from and secured by a pledge of the receipts of a special, city-wide sales and use tax at the rate of one percent (1.00%). The proceeds of the bonds are for the purpose of defeasing and redeeming certain outstanding indebtedness of the City secured by sales and use taxes; financing all or a portion of the costs of certain street improvements, trail system improvements, drainage improvements, parks system improvements, City facilities improvements, arts corridor improvements, police facilities improvements and firefighting facilities improvements. The original issue amount was $124,425,000.

Sales and Use Tax Capital Improvement Bonds, Series 2022 (AA-): The bonds are special obligations payable solely from and secured by a pledge of the receipts of a special, city-wide sales and use tax at the rate of one percent (1.00%). The proceeds of the bonds are for the purpose of defeasing and redeeming certain outstanding indebtedness of the City secured by sales and use taxes; financing all or a portion of the costs of certain street improvements, trail system improvements, drainage improvements, parks system improvements, City facilities improvements, arts corridor improvements, and firefighting facilities improvements. The original issue amount was $74,340,000.

Sales and Use Tax Capital Improvement Bonds, Series 2024 (AA-): The bonds are special obligations payable solely from and secured by a pledge of the receipts of a special, city-wide sales and use tax at the rate of one percent (1.00%). The proceeds of the bonds are for the purpose of financing all or a portion of the costs of certain street improvements and parks system improvements. The original issue amount was $15,000,000.

Arkansas Ad Valorem Tax Library Expansion Bonds, Series 2017 (A): The Series 2017 Bonds are special limited tax obligations of the City secured by and payable solely from receipts of the Library Property Tax and the Special Tax Collections. The City will levy the Library Tax at the rate of one and two-tenths (1.20) mill (.0012) for collection in 2017 and continuously in each year thereafter until the debt is extinguished. The purpose of this bond issue was to expand and renovate the Fayetteville Public Library. The Series 2017 Bonds do not constitute an indebtedness of the City within the meaning of any constitutional or statutory debt limitation or restriction. The issuance of the Series 2017 Bonds shall not directly, indirectly or contingently obligate the City to levy or pledge any taxes whatsoever or to make any appropriation for the payment of the Series 2017 Bonds, except as described herein with respect to the Tax Receipts. The original issue amount was $26,500,000.

Revenue Bonds

Parking Revenue Improvement Bonds, Series 2012 (Not Rated): The bonds are payable solely from the net parking revenues. The bonds do not constitute an indebtedness of the City within the meaning of any constitutional or statutory debt limitation or restriction. The issuance of the Series 2012 Bonds shall not directly, indirectly or contingently obligate the City to levy or pledge any taxes whatsoever or to make any appropriation for the payment of the Series 2012 Bonds. The original issue amount was $6,220,000.

Hotel, Motel & Restaurant Gross Receipts Tax and Tourism Revenue Capital Improvement and Refunding Bonds, Series 2014 (A+): These bonds are special obligations of the City and were issued for the purpose of paying a portion of the costs of redeeming all of the outstanding Hotel & Restaurant Gross Receipts Tax Refunding Bonds, Series 2003 Bonds, paying a portion of the costs of expanding and renovating the Walton Arts Center and paying a portion of the costs of acquiring, constructing and equipping a regional park within the City. The bonds are payable solely from amounts received by the City from a 1% Hotel & Restaurant Gross Receipts tax. The original issue amount was $10,980,000.

City of Fayetteville, Arkansas
Computation of Legal Debt Margin
December 31, 2024

General Obligation Debt Limit

Debt margin is a calculation based on the assessed value of property located within the City limits. The debt limit is established by state statute and is limited to 20% of assessed value.

2024 Assessed Value		$ 2,602,102,979	*
Debt Limit - 20% of Assessed Value		520,420,596	
General Obligation Bonds Payable	$ -		
Less: Debt Service Fund	-		
Total Debt Applicable to Debt Limit		-	
Legal Debt Margin		$ 520,420,596	

Enterprise Fund Debt Limit (Revenue Bond Debt)

Enterprise fund debt is established by the cash flow for each enterprise fund. For example, the Water & Sewer Fund must be able to generate sufficient cash flows to meet normal operating and capital, as well as provide sufficient resources to meet the annual debt service requirements. Prior to issuing enterprise fund bonds, an analysis of current revenues and expenses is conducted to determine the revenues required to support a bond issue.

Special Obligation Bond Debt Limit

Special obligation bond debt is limited by the maximum amount the special source (such as sales tax) can generate within terms of bond covenants.

** Note: The assessed value does not include City utilities.*

* Assumes maximum exposure if no TIF bonds are redeemed until final maturity. Actual TIF bonds redeemed will be determined by the amount of tax collections and TIF bonds tendered pursuant to the TIF Bond Tender Offer redemption program.

City of Fayetteville, Arkansas
General Government & Miscellaneous Activity
Division Overviews and Performance Measures

Mayor's Administration

Division Overview

The Mayor is the elected Chief Executive Officer for the City of Fayetteville and is the presiding officer for the City Council. As Chief Executive Officer of the City, the Mayor has a statutory duty to oversee the enforcement of City policies, ordinances, administrative rules and state laws, as well as direct City offices and employees to discharge their duties. The Mayor accomplishes this task by providing and maintaining an open door policy for residents, business interests, and other interest parties to discuss City policies, concerns and requests.

Chief of Staff

Division Overview

This division is responsible for the management of the divisions that comprise the Operations Department. This program directs and manages these divisions in a manner that will minimize operational costs and provide excellent service to the customers of the department, which include the citizens of the community and internal City departments/divisions. This division is also responsible for the emergency management of significant emergency events that take place within the City of Fayetteville and manages those events to best utilize resources available, minimize risk to citizens, and ensure a fast response to hazards that impact the City.

Communications & Marketing

Division Overview

This division reports to the Chief of Staff and is the primary point-of-contact for dissemination of public information concerning City activities, programs, and special events and serves as the overall clearinghouse for public information to be provided to the City Council, press, and public. This division maintains the websites (internet and intranet) and the City's social media channels. The director is public policy advisor to the Mayor, develops working relationships that facilitate and promote the City's legislative agenda, and oversees the operations of the Division of Media Services.

City Attorney

Division Overview

This division provides general legal advice, drafts of ordinances, resolutions, contracts, and special services to the City Council, Mayor, Planning Commission, and Board of Adjustments, as well as City departments and staff. This office also represents the City in land condemnation and other civil cases in State and Federal courts and in appeals to State and Federal appellate courts.

City Prosecutor

Division Overview

This office investigates, prepares, and prosecutes cases set for court in District and Circuit courts and takes complaints, which results with a warning letter, issuing a prosecutor subpoena, filing a warrant, or closing the case. The City Prosecutor deals with all misdemeanor crimes as well as City Code violations, which occur within the Fayetteville city limits. The hot check program assists Fayetteville merchants and citizens in regaining lost revenue due to receiving checks returned by financial institutions for insufficient balance or account closed status (hot checks).

FY2024 Highlights & Accomplishments

1. Continued operating the Fingerprint collection equipment for Fayetteville District Court.
2. Collected victim restitution in the amount of $ 12,173.16 by end of July 2024.
3. Collected delinquent HRM taxes in the amount of $ 226,700.53 by end of June 2024.

FY2025 Objectives

1. Continue operating the Fingerprint collection equipment for Fayetteville District Court.

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Complaints	618	575	650	650
2. Code Complaints	264	200	275	325
3. Circuit Court Cases	11	20	20	20
4. Trials - District & Circuit Courts	51	50	50	50
5. Warrant Charges	369	400	400	400
6. Nonwarrant Charges	7,696	7200	8,500	8500
7. DWIs	1,356	1,450	1,375	1,375
8. Batteries - Domestic & Regular	438	400	400	400
9. Other Domestic Cases	164	200	200	200

Fayetteville District Court

Division Overview

The District Judge is an elected position responsible for the adjudication of all criminal and civil cases. This division provides a forum for the prompt resolution of cases filed. The criminal program is responsible for processing all criminal and traffic violations filed by area law enforcement agencies. The small claims and civil program provides a forum for citizens to file lawsuits to recover money or property valued at $25,000 or less. The Court Services Officer is responsible for all public service related programs, court security and issuance of all criminal commitments.

FY2024 Highlights & Accomplishments

1. Small claims and Civil cases continue to decline in that department. Criminal cases continue to increase in 2024 and the court expects the same in 2025.

FY2025 Objectives

1. Return the court to full staff to handle increase in case load and work on collections.

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Criminal Cases Filed	16,065	13,000	15,056	18,500
2. Civil Cases Filed	636	500	616	650
3. Criminal Cases Disposed of	14,784	16,600	17,728	19,200
4. Criminal Trial Settings	7,200	9,600	10,800	12,056
5. Fines/Costs Assessed	$3,391,662	$3,500,000	$3,870,200	$3,950,000
6. Fines/Costs Collected	$1,555,156	$1,750,000	$1,115,350	$1,505,250
7. Public Services Completed	2,580	3,200	3,250	3,322
8. Value of Public Services Completed	$38,700	$48,000	$48,750	$49,830

Economic Development

Division Overview

This division assists the Mayor, City Council, Chief of Staff, Department Directors, Division Heads, and staff in the execution and implementation of the City's guiding economic plan. As the City's economic development arm, the division manages the City's Entrepreneurship & Innovation services contract and functions as a liaison between the City and small businesses, employers, workers, and other community stakeholders. The division's core service areas include industry recruitment, retention, and expansion; workforce development and job skills training; and community development. This includes an emphasis on supporting Fayetteville's small business community, workforce development programming for residents who face persistent barriers, and growth concept oriented development. The division likewise supports the development of stable care networks and affordable housing opportunities and has begun working on childcare initiatives.

FY2024 Highlights & Accomplishments

1. Coordinated with multiple Community Housing and Development Organizations to explore affordable housing development or preservation projects for utilization of the City's HUD HOME funding.
2. Delivered the staff-developed Economic Vitality Master Plan to the Fayetteville City Council.
3. Developed and published a new Request for Proposals for entrepreneurial support services in order to maintain City-funded small business resources.
4. Completed standard operating procedures for all municipal economic vitality activities to ensure department continuity and consistent service delivery.

FY2025 Objectives

1. Begin implementation of the Economic Vitality Master Plan's Small Business, Workforce Development, and Community Development initiatives.
2. Incorporate workforce development and economic equity/mobility special projects into the department's BAU activities, including expansion of job training opportunities for municipal employment.
3. Pro-actively recruit and project manage housing, mixed-use development, and business projects with an emphasis on supporting the transformational 71B Corridor Plan.

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Net New Businesses Opened within Targeted Industry Sectors	207	250	225	200
2. Net New Jobs created within Targeted Industry Sectors	700	500	750	500
3. New Retail/Service establishments	99	100	100	125
4. Inquiries from prospective companies	83	100	75	100
5. Number of Businesses licensed	3,900	4,100	4,150	4,250
6. Number of employment projects	50	60	50	25
7. Number of business retention and expansion projects	80	50	113	50
8. Number of businesses, residents, and brokers assisted	225	250	410	250
9. Number of partner referrals made for residents and businesses	82	75	140	100

Media Services

Division Overview

This division operates the Fayetteville Government Channel (FGC), the Fayetteville Public Access Channel (FPTV) and the Fayetteville Education Channel. The City Television Center is equipped, maintained and configured with technologies suited for government, public access and education (PEG) television, video production and public training. This division also supports City Administration with internal and external media creation.

FY2024 Highlights & Accomplishments

1. Television Center internal server storage system reconfiguration & upgrade
2. New Annex building public meeting room A/V installation
3. Television Center studio camera update

FY2025 Objectives

1. City Hall Room 219 Room and A/V update/reconfiguration (postponed from 2024)
2. City Hall 1st Floor new public meeting room A/V installation

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. FGC Meetings Recorded	342	405	411	400
2. FGC Total Program Hours	485	360	345	350
3. FPTV Class Participations	338	305	280	275
4. FPTV Internal Produced Programs	903	915	1,006	945
5. FPTV External Produced Programs	875	890	974	910

Internal Audit

Division Overview

This division assists the Mayor, City Council, Department Directors, Division Heads, and staff in realizing a satisfactory operation to safeguard the resources and assets of the City. The Internal Auditor objectively reviews and appraises accounting and operating records and internal controls throughout the City, reports exceptions noted, and recommends practical and economic corrective actions to be taken. This program provides an independent evaluation of City activities in order to promote economy, effectiveness, and efficiency in the City by using sound management principles and by maintaining a high level of public trust and confidence in the City's staff and public officials to deliver desired and needed services.

FY2024 Highlights & Accomplishments

1. Reviewed 2023 Financial statements
2. Assisted with grant subrecipient monitoring
3. Completed the 2024 Audit Plan as approved by the Audit Committee
4. Assisted with implementation of new GASB reporting requirements

FY2025 Objectives

1. Review 2024 Financial statements
2. Assist with grant subrecipient monitoring
3. Complete the 2025 Audit Plan as approved by the Audit Committee
4. Assist with implementation of new GASB reporting requirements

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025

City Clerk/Treasurer

Division Overview

This division maintains the official records and public documents of the City. It also provides support for the City Council by preparing agendas and creating the minutes for the meetings. The City Clerk's Office maintains the City's Code of Ordinances, works in cooperation with the Washington County Election Commission in planning elections, and is responsible for the document retention schedule policy and procedures. This division maintains the City's Boards and Committees, schedules meetings for City rooms, and maintains a 12-month calendar of those meetings. The City Clerk also serves on the Policemen's Pension & Relief Board of Trustees, attends the meetings, prepares the agendas and correspondence, and records and creates the minutes for the meetings.

FY2024 Highlights & Accomplishments

1. Increased training/certifications of team members to stay updated with federal and state laws
2. Utilized 1 on 1 meetings to accurately evaluate team members and processes within the office
3. Focused on teamwork, comradery and correct utilization of technology to create transparency
4. Adaptation of team processes/technologies to ensure team resiliency within new area on 1st floor

FY2025 Objectives

1. Continue to provide training/certification opportunities for team members
2. Revamp process for requesting/scheduling a meeting room utilizing different technologies
3. Review/Evaluate/Update SOPs as changes happen within the City
4. Continued implementation of the new City Retention Schedule Policy
5. Continue to provide support to all city staff with agenda and non-agenda approvals

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Meetings Attended	408	393	426	409
2. Agendas & Minutes Prepared	67/27	65/35	84/42	72/36
3. Ordinances & Resolutions Passed	83/229	125/317	98/330	102/292
4. Committee Vacancies & Applicants	78/184	75/171	77/178	77/178

Chief Financial Officer

Division Overview

This division's primary purpose is to provide leadership and overall direction to the various divisions within the Finance & Internal Services Department. The Chief Financial Officer (CFO) establishes and directs budget parameters to accomplish the Mayor's overall goals and objectives for the fiscal year, advises the Mayor and/or City Council of citywide financial issues, and provides alternative solutions to financial problems or issues. The CFO is also responsible for the monitoring and management of the current year budget on a day-to-day basis and provides advice and support to the Mayor and Chief of Staff on an as-needed basis.

Human Resources

Division Overview

This division is committed to attracting and retaining a diverse, highly qualified and high performing, multi-generational workforce. A diverse and highly talented workforce will support the delivery of excellent services to the citizens of Fayetteville. Staff will administer a competitive total rewards package and support a work environment that is safe, healthy and enriching. Policies and practices will be administered and effectively communicated to support the City in meeting its goals through our most valuable resource - City employees.

FY2024 Highlights & Accomplishments

1. Started Leadership Lab Training
2. NeoGov Performance Review Standardization planning started
3. Expanded recruitment opportunities

FY2025 Objectives

1. 2 classes of Leadership Lab Training
2. NeoGov Performance Review Standardization finalized
3. Continued Recruitment Initiatives

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. New Hires	234	300	300	315
2. Employees Newly Eligible for Retirement Plans	85	130	122	150
3. Job Applications Processed	4,714	6,000	5,550	5,700

Accounting & Audit

Division Overview

The Accounting and Audit Division is responsible for maintaining accurate and timely financial information and reporting this information to the City Administration and to the public. The division oversees the external audit and prepares the Annual Comprehensive Financial Report.

FY2024 Highlights & Accomplishments

1. Successful external 2023 audit
2. Successful implementation of GASB 96 - Subscription-Based Information Technology Arrangement
3. Transitioned Accounts Payable vendors to ACH payments
4. Implemented online reporting for businesses for local tax collection

FY2025 Objectives

1. Successful external 2024 audit
2. Analyze and prepare 2024 Annual Comprehensive Financial Report utilizing new software
3. Update Accounting internal policies

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. External Audit	1	1	1	1
2. Funds Maintained	61	63	64	64
3. Financial Statements Prepared	26	26	26	26
4. Outstanding Bond Issues	6	6	8	9
5. Payrolls prepared	35	26	28	26
6. Pensions Distributed	12	12	12	12

Budget & Information Management

Division Overview

This division is responsible for preparing and monitoring the City's Annual Budget and Work Program, preparing the bi-annual update to the City's Capital Improvements Program and ensuring those funds are expended/expensed as appropriated by City Council. Additionally, the division performs special duties and conducts special studies as requested by the Chief Financial Officer, the Mayor, and the City Council. Finally, the division compiles and reviews performance measures and quarterly reports submitted by other City divisions to ensure the accuracy of the listed statistics relating to the budgeted performance measures.

FY2024 Highlights & Accomplishments

1. Assisted various divisions with special projects and reorganizations
2. Compiled quarterly Executive Management Reports
3. Received GFOA Distinguished Budget Presentation Award

FY2025 Objectives

1. Implement new Cost Allocation software
2. Provide accurate and timely customer service to City staff and citizens

Facilities Management

Division Overview

Facilities Management maintains City-owned buildings to provide a safe and sound working environment for employees and customers. This division also provides repair and replacement services on mechanical, electrical, and plumbing systems and performs custodial and other services on City-owned facilities to keep them in clean working order. Other duties of the division include safe entry and egress to buildings, securing facilities, and providing support for City programs and functions. Project Management services are also provided to ensure construction projects are delivered on time and within budget, adhere to industry quality standards, and meet the facility needs of our customers.

FY2024 Highlights & Accomplishments

1. Cultural Arts Corridor Plaza construction
2. Accessibility audit of five buildings within the downtown campus
3. YRCC Expansion
4. Fire Station 2 relocation construction
5. City Administration building office improvements
6. Porter Apple Warehouse stabilization
7. Woolsey Homestead Restoration: Sweet Potato Smokehouse Design/Bid
8. Roofing improvements to Recycling and Trash transfer station & Water and Sewer building
9. Energy Efficiency projects for City facilities
10. Re-roofing of Town Center, Rock Street Annex and City Administration buildings
11. Rock Street Annex renovation
12. City Hall HVAC replacement
13. Fire Training Expansion
14. Police Department West Avenue Sub-Station

FY2025 Objectives

1. Continuing City Hall building office & meeting room improvements
2. Accessibility audit of buildings including the Airport, Air & Military Museum, Town Center
3. Porter Apple Warehouse interior finish / improvements
4. Woolsey Homestead Restoration: Sweet Potato Smokehouse reconstruction
5. Recycling and Trash Collection transfer station expansion / firing range remediation
6. City Hall HVAC replacement - construction phase
7. Parks Maintenance equipment shed
8. YRCC Expansion
9. Fire Marshal office improvements
10. Development Services building renovation

Division Overviews and Performance Measures

Purchasing

Division Overview

This division is responsible for providing oversight of the procurement of commodities, construction, and professional services for all City departments. The Purchasing division also ensures compliance with state/federal procurement law, and city ordinances and policies, manages the City's Surplus disposal program, manages City-wide corporate accounts, as well as track and serve as administrators for City contracts. This division also manages the City's insured and self-insured property and liability programs. Management of the insured programs include the evaluation of insurance needs, risk management and assessment, purchase and renewal of insurance policies, and coordination of all losses and claims. Management of the self-insured program includes the judgement and damages from which all third-party liability and City property damages under deductibles or uninsured are paid.

FY2024 Highlights & Accomplishments

1. Efficiently managed contracts through Ionwave: Audit, renew, amend, solicit, and create new
2. Increased revenue generated from surplus sales through strategy, competition, and speed
3. Mitigated insurance premium increases and improved claim closeout

FY2025 Objectives

1. Reduce the number of auto accidents through training programs
2. Reduce p-card reconciliation and batch times through training and process improvements
3. Increase vendor participation of bids through outreach and information programs

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Purchase Orders Issued	984	1,000	1,000	1,000
2. Purchasing Card Transactions	18,903	17,000	18,000	18,000
3. Purchasing Card Volume	$16,839,512	$14,000,000	$17,000,000	$17,000,000
4. Surplus Auctions Conducted	162	100	100	100
5. Surplus Auction Volume	$998,183	$1,000,000	$1,000,000	$1,000,000
6. Formal Bids/RFPs/RFQs Requested	67	80	75	75
7. Bid/RFP/RFQ Volume	$103,229,562	$50,000,000	$50,000,000	$50,000,000
8. Insurance Claims Processed	120	100	100	100
9. Number of Vehicles and Equipment Insured	950	950	950	950

11. Active Renewable Contracts Managed	326	325	330	350

Information Technology

Division Overview

This division provides Information Technology (IT) and Geographic Information Systems (GIS) support for City divisions across 53 locations and approximately 900 user accounts. IT strives to ensure technology requests and projects are implemented in accordance with citywide goals and initiatives. IT focuses on implementing processes and procedures to ensure the effective and economical use of IT resources, while improving staff efficiency and improving services to the citizens of Fayetteville. Staff makes every effort to operate equipment to its maximum useful life, but also budgets enough funds to replace equipment when needed to ensure optimal efficiency. To manage the replacement of technology items, IT maintains an accurate inventory and standardized replacement schedule for technology-based products. GIS provides geographic information and geographic data management services to all City departments.

FY2024 Highlights & Accomplishments

1. Continued to automate processes and improve customer service through technology projects
2. Implemented online payments and improved reporting for HMR and SB payments
3. Provided technology support for bond projects (Ramble, Kessler, Parking, Fire Station, Trails)
4. Upgraded the City's utility billing online payment system
5. Provided mapping and analytical support of citywide strategic plans (Climate, Stormwater, etc.)
6. Improved access to technology for Police and Fire through new mobile applications

FY2025 Objectives

1. Continue to install fiber conduit as part of the City's overall digital strategy
2. Support major initiatives such as Climate Action plan and Stormwater Utility via GIS dashboards
3. Provide quarterly cybersecurity user training and host 3 CISA regional cybersecurity events
4. Complete migration of video security cameras to a single vendor to improve quality and management
5. Replace all Public Safety mobile computers as part of annual replacement schedule
6. Facilitate digitalization of services to improve efficiency, accessibility, and citizen satisfaction

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Service Requests - Desktop	1,125	2,500	2,500	2,500

Central Dispatch

Division Overview

This division is a 24-hour operation, which provides emergency and non-emergency call taking and dispatching for police, fire, and city services, as needed. The center is also the primary answering point for the City of Fayetteville's 911 calls, which includes transferring emergency calls to the appropriate agencies.

FY2024 Highlights & Accomplishments

1. Met National Emergency Number Association (NENA) call-answering standard by answering ninety percent (90%) of all 911 calls within fifteen (15) seconds and ninety-five percent (95%) within twenty (20)
2. Met National Fire Protection Association (NFPA) standard of processing ninety percent (90%) of fire calls within sixty-four (64) seconds and ninety-five percent (95%) within one hundred six (106) seconds.
3. Completed Quality Assurance each month to ensure proper call coding and handling.
4. Implemented Live 911 software which allows responders real time access to 911 calls.

FY2025 Objectives

1. Continue to meet the call-answering standards and fire standards for processing calls.
2. Ensure all trainees meet the state training standard to qualify for certification.
3. Complete Quality Assurance to meet National Center for Missing and Exploited Children (NCMEC) standards.
4. Begin the Police and Fire Radio Replacement project.

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Total Calls for Service	61,314	62,495	58,936	60,115

Police Department

Division Overview

The Fayetteville Police Department has 211 officers and staff, and provides a wide range of protection and enforcement services (patrol, investigative, community outreach, Central Dispatch, etc.) for our residents, visitors, and businesses. The department provides administrative control, logistical support, policy setting, and decision-making relative to all aspects of police operations. Crime reduction and service to our community remains the highest priority of the department, and community outreach and engagement are the foundation for maintaining positive relationships with those we serve. The CALEA and ALEAP accreditation processes ensure the department follows best police practices, and maintains the highest standards of excellence.

FY2024 Highlights & Accomplishments

1. Expanded and enhanced recruitment efforts to attract the most qualified applicants.
2. Achieved 4th accreditation from the Commission on Accreditation for Law Enforcement Agencies.
3. Completed and moved into new Cultural Arts Corridor police substation.
4. Utilized new training facilities to host specialized training for law enforcement for cost savings.
5. Expanded Crisis Intervention Response Team to assist individuals in crisis.

FY2025 Objectives

1. Enhance crime prevention strategies with the launch of the Community Response Unit.
2. Expand the CIRT program to address gaps in mental health crisis response coverage.
3. Invest in employee health and wellness, and recruitment and retention initiatives.
4. Increase supervisory personnel to strengthen accountability and oversight.
5. Support community policing initiatives through partnerships and engagement efforts.

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025

Fire Department

Division Overview

This department responds to all types of hazards encountered by citizens including fires, situations of entrapment, emergency medical calls, and hazardous materials incidents. The department's goal is to arrive on scene of every fire response in 6 minutes and 20 seconds or less, 90% of the time. This department is responsible for public education, code enforcement/building inspections and fire origin/cause investigations with the goal to investigate 100% of all fires, inspect commercial occupancies in addition to the state mandated inspections, and reach children and adults annually with seasonal safety messages and training. All personnel are provided with effective and realistic training based on fire and medical service standards, information analysis, and emergency response demands. The hazardous materials response program was established through an inter-local co-operation agreement between the City of Fayetteville and all cities, towns and rural areas within Washington County.

FY2024 Highlights & Accomplishments

1. Completion of Station #2 relocation
2. Full implementation of an alerting system for all fire stations
3. Formal accreditation by the Commission on Fire Accreditation International

FY2025 Objectives

1. Remodel of former Station 2 into equipment maintenance station
2. Implementation of the new heavy-duty rescue company in the new Station 2
3. Installation of fencing and gates at existing stations for enhanced security

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025

Development Services

Division Overview

The Development Services Department facilitates changes necessary to accommodate the community's anticipated rapid growth and expansion by continually assisting the community in adjusting its vision for the future, regulatory framework, and capital improvement projects. The Department ensures that developers, builders, and business entrepreneurs investing and building in the community are treated fairly and with consistency and predictability by coordinating the development review process. The Department works across divisional and departmental lines of authority to create a seamless, efficient, and lean regulatory framework and procedures.

FY2024 Highlights & Accomplishments

1. Completed user fee study to recognize levels of public subsidy for applications with the potential for increasing resources for permitting, review, code enforcement, and general responsiveness.
2. Maintained cross-divisional and cross-departmental support and collaboration through current and future planning efforts with Airport, Sustainability, Parks, and others within the City, as well as fostering relationships with public and private regional partners.
3. Developed and executed work plan items reflecting departmental and plan goals, including but not limited to, a 71B rezoning, housing data reporting, and downtown plan initialization.
4. Retained capacity for special projects, including local and regional grant applications, opportunities for collaboration, targeted studies, and ordinance changes.

FY2025 Objectives

1. Reinforce partnerships, including with regional planning, philanthropic groups, and other non-governmental or quasi-governmental groups, to focus on intermunicipal issues like housing.
2. Evaluate late-2024 process changes and positions created with the 2023 budget for improved review times and approvals.
3. Increase integration and collaboration of development reviewers, including with non-municipal entities like franchise utilities.
4. Identify and pursue funding for strategic goals, including comprehensive plan update/revision and development code re-write.

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Business Licenses - New	716	600	640	625
2. Business Licenses - Renewals	3,678	4,100	3,700	3,700

Development Review

Division Overview

This division manages the administration and enforcement of zoning and development regulations for the City and its planning area; provides professional services and advice to the Mayor, the City Council, the Planning Commission, committees, and other City divisions involved in growth management; processes all land use activity and reviews building permits to ensure compliance; performs field analysis and inspection; formulates recommendations; responds to public inquiries and complaints; and issues violation notices when necessary. As growth continues at high rates, funds are organized to support the essential functions necessary to comply with notification requirements, public hearings, research, and reporting activities. Increased efficiency, productivity, and consistency are priorities for this program.

FY2024 Highlights & Accomplishments

1. Continued to work with Long-Range Planning on appropriate changes to the Unified Development Code to improve process
2. Maintained staff to improve institutional knowledge in the division

FY2025 Objectives

1. Continue to improve process through ordinance changes, staffing, and improved institutional knowledge.
2. Engage more proactively with development community and stakeholders on process improvements.

Long Range Planning

Division Overview

Long Range Planning staff is responsible for changes to the City's zoning code, drafting new ordinances that work toward achieving the goals of City Plan 2040, and coordinating with the citizens and stakeholders of Fayetteville.

FY2024 Highlights & Accomplishments

1. Historic Context Statement for University Heights/Haskell Heights neighborhoods
2. New historical marker recognizing Nelson Orr
3. $40,000 in CLG grant funding for two new historic preservation projects
4. Permit-Ready Building Design Program included in the national Housing Accelerator Playbook
5. Brought forward rezoning of nearly 600 acres along the 71B corridor to allow housing

FY2025 Objectives

1. Launch Downtown Master Plan re-write
2. Successful application for CLG grant funding, completion of HCS, MPDF, and NR nomination
3. Update to the Fayetteville Housing Assessment
4. Regional Greenway planning and sub-area planning project participation and coordination
5. Define purpose and need for comprehensive plan and Unified Development Code updates

Engineering

Division Overview

This division is responsible for all in-house professional engineering design services and contract management of outside engineering and construction services; design review and oversight of waterline, sanitary sewer, storm sewer, drainage, sidewalk, trail, and street projects; engineering design criteria and specifications for all infrastructure work within the City; and technical review of all subdivisions, lot splits, and small and large scale developments for compliance with the City's design criteria. As a participant in the National Flood Insurance Program, this division provides flood hazard program administration and plan review, as well as EPA Phase II NPDES stormwater and erosion control program development and permit compliance. The Active Transportation Manager is responsible for planning design, permitting, and other tasks related to the Trail Construction Program. Other services include acquiring property, easements, and rights-of-way and maintaining those records; providing services for the sale or purchase of property; providing inspection and construction management services for projects designed and/or constructed by City staff; and reviewing compliance on sidewalks and driveways.

FY2024 Highlights & Accomplishments

1. Completion of Phase 1 of Mission Trail from Old Wire to North Street
2. Began construction on Midtown Corridor (Phase 2)
3. Complete cost share with developer for sections of Sang Street Trail & Hamestring Creek Trail
4. Complete Razorback Greenway reroute trail around the Park Hotel in the Upper Ramble
5. Began construction on Prairie and West project

FY2025 Objectives

1. College Avenue (North to Sycamore) Construction
2. Millsap/College Int and Hemlock Construction
3. Completion of Midtown Corridor (Phase 2) Construction
4. Complete Phase 1 & II of Mission Trail from Viewpoint Dr. to North Street
5. Complete the Drake Street Trail Connection
6. Design of Persimmon Trail from Betty Joe to Rupple Road
7. Construction of the Maple Street Improvements and Trail - Garland to Razorback Greenway

Sustainability & Resilience

Division Overview

This department is focused on guiding the City of Fayetteville towards becoming a resource efficient community of livable neighborhoods that meets present needs while providing opportunities to support the long term health, well-being and prosperity of future generations. The department develops and implements policies and projects that can be quantified through a triple bottom line accounting framework focused on social, environmental and financial performance metrics. The department also provides support and research services to other City departments and divisions and the City Council.

FY2024 Highlights & Accomplishments

1. Constructed additional solar arrays on City property/buildings
2. Began City of Fayetteville fleet electrification
3. Completed construction of The Ramble Civic Plaza (Phase 2)
4. Completed Energy Performance Services Contract construction work on City buildings
5. Adopted and began implementation of Fayetteville Climate Action Plan

FY2025 Objectives

1. Complete construction of additional large ground mount solar
2. Continue implementation of Fayetteville Climate Action Plan
3. Begin implementation of Climate Pollution Reduction Grant with regional partners
4. Assist with waste reduction initiative implementation
5. Continue to pursue federal grant opportunities

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Policy Analysis/Ordinance Adoption	6	6	3	6
2. Intra-Division Projects/Collaborations	17	19	24	19
3. Energy Efficiency & Renewable Energy Projects	14	13	11	7
4. Grants and Award Applications	7	8	6	6

Building Safety

Division Overview

The Building Safety Division promotes and protects the health, safety, and welfare of the citizens of Fayetteville by assuring that buildings are designed and constructed in accordance with current local, state, and national building codes. The division serves the community by performing inspections and consultations on-site and investigating complaints from the public. The division is also responsible for maintaining a building code reference library, archiving construction documents, and posting construction related information and statistics to the City website.

FY2024 Highlights & Accomplishments

1. Maintained continuous improvement efforts
2. Analyzed all building permit fees and associated fees
3. Revised and updated SOPs and other policies & procedures
4. Created a City Code schedule and program for public information/notification

FY2025 Objectives

1. Maintain continuous improvement efforts
2. Continue to revise and update SOPs and other policies & procedures
3. In-House training program
4. Public outreach program for city and building codes

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Building Permit Applications	1,790	2,000	2,050	1,900
2. Building Permits Issued	1,482	1,800	1,875	1,750
3. Single-Family Permits	730	850	900	800
4. Commercial Permits	110	75	85	65
5. Addition & Alteration Permits	320	560	420	500
6. Inspections Performed	24,566	27,000	28,500	29,000
7. Total Issued Permits - All Types	6,760	7,450	8,800	8,000

Community Resources

Division Overview

This division is responsible for planning and implementation of projects/programs funded in whole or in part by the HUD Community Development Block Grant (CDBG) and the HUD Special Needs Assistance Programs (SNAPS). The division provides assistance for low and moderate income residents and case management/housing for the homeless. The Equity Program is responsible for researching, planning, and training to ensure that everyone in Fayetteville is treated in fair, equal, and inclusive manner.

FY2024 Highlights & Accomplishments

1. Improved 10 housing units and maintained affordable housing stock
2. Provided taxi coupons to 17 elderly and disabled residents
3. Kept Hearth Program at full capacity
4. Developed Welcome Week Event - Welcome Fayetteville

FY2025 Objectives

1. Improve 15 housing units - maintain affordable housing stock
2. Assist 15 elderly and disabled residents with taxi coupons
3. Keep Hearth Program at full capacity

Animal Services

Division Overview

This division handles the processing of animal redemptions and adoptions, and educates the public regarding responsible animal ownership. The program provides 24-hour emergency services and enforces the Arkansas Rabies Control Act and City Ordinances. The program provides a clinic staffed with a veterinarian that allows for the animals adopted from the shelter to be spayed/neutered and the operation of an income based low cost spay/neuter clinic for City residents.

FY2024 Highlights & Accomplishments

1. Increased efforts for outreach to low income citizens to provide additional services
2. Continued to maintain a euthanasia rate of less than 10%

FY2025 Objectives

1. Continued to maintain a euthanasia rate of less than 10%
2. Increased effort to reunite pets in the field, rehome pets outside of shelter and increase fosters

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Fayetteville Strays Intake	961	1,100	1,100	1,100
2. Fayetteville Owner Surrenders Intake	356	400	360	360

Transportation Services

Division Overview

This division manages and coordinates construction and maintenance of rights-of-way, streets, sidewalks, trails, drainage, and traffic control within the City. Also managed by this division are In-House Pavement Improvements, Sidewalk Improvements, and Trail Development projects which are funded in the City's Sales Tax Capital Fund.

FY2024 Highlights & Accomplishments

1. Replaced 4,000 feet of sidewalks
2. Maintained existing street network through the overlay program
3. Expanded maintenance and repair of drainage infrastructure

FY2025 Objectives

1. Improved walkability and safety by replacing deteriorated sidewalks and installing access ramps
2. Resurface 13 miles of city streets
3. Continue to expand the trail network throughout the city

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. ROW Brush/Tree Trimming Hours	1,569	3,000	1,000	2,000
2. ROW Mowing Hours	6,119	7,000	7,000	7,000
3. Tons of ROW Litter Removed	19.78	30	16	25
4. Street Sweeper Debris (Tons)	579.56	1,000	1,000	1,000
5. Asphalt Overlay (Miles)	10.01	13.00	8	10.00

Parking Management

Division Overview

The division implements parking rules and enforces parking regulations for the Downtown, Entertainment, and Residential Districts. The division is responsible for increasing public awareness of ordinances which regulate parking and responding to the needs of citizens regarding inquiries and complaints concerning parking matters. The division also manages prepaid event parking for the Walton Arts Center and TheatreSquared and oversees the City's special event permitting process.

FY2024 Highlights & Accomplishments

1. Increased mobile app adoption rate to account for 47% of all parking transactions
2. Advised Downtown Fayetteville Coalition as City representative on Board
3. Opened new West Ave. Deck and updated event parking process

FY2025 Objectives

1. Explore feasibility of additional parking districts near UA campus and existing downtown border
2. Update lighting in surface lots
3. Pursue shared parking agreements with private parking facility owners

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Estimate of Tickets to be Issued	15,226	23,000	24,600	24,000

Fleet Operations

Division Overview

This division is responsible for the maintenance and replacement of vehicles and equipment to ensure safety and proper performance during operation. The total fleet size of 905 vehicles consists of 330 automotive assets which include sedans, SUVs, Emergency Response vehicles and motorcycles, and work trucks; 119 Over the Road Class 7-8 trucks (including all fire apparatus and recycling and trash trucks); and 456 off-road, specialized equipment, trailers and construction equipment. In-house maintenance is supported by sublet operations such as major accidents, engine rebuilds, automatic transmission repairs or larger operator responsible repairs.

FY2024 Highlights & Accomplishments

1. Shop expansion completed with additional personnel for increased bays
2. Increased on-time preventative maintenance services and repairs surpassing historical highs
3. Decreased vehicle down-time for all departments surpassing historical highs

FY2025 Objectives

1. Install generator tracking telematics and vehicle AVL/telematics on all rolling stock assets to increase preventative and predictive maintenance compliance
2. Continue planning for possible Electric Vehicle infrastructure and replacements where utilization and application allow
3. Continue achieving record uptime/availability and preventative maintenance compliance Fleet wide

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Repair Requests	3,795	7,500	4,600	5,000
2. Vehicle/Equipment Repair Hours	17,406	22,000	23,100	23,500
3. Preventive Maint. Service & Inspections	2,199	2,500	2,800	3,000

Parks, Natural Resources and Cultural Affairs

Division Overview

Parks, Natural Resources and Cultural Affairs (PNRCA) plans for and provides facilities and programs centered around recreation, green spaces, art and culture. These spaces provide a "third space" for Fayetteville residents and visitors to enjoy a wide range of experiences that support individuals' mental and physical health and provide opportunities for socialization through events such as the Dickson Street Mile, YRCC and other summer camps, Square to Square bike ride, and interaction at hundreds of team sporting events, as well as opportunities to improve the environment through tree plantings and tree giveaways such as Celebration of the Trees. PNRCA helps build Fayetteville's social capital.

FY2024 Highlights & Accomplishments

1. Began construction on the YRCC expansion project and completed Wilson Pickleball Courts
2. Completed construction on Gulley Park playground area and Lake Fayetteville ballfields
3. Began aquatics study
4. Bid construction on Bryce Davis, Underwood, and Walker community parks
5. Began design of Combs White River Park and Lake Fayetteville Nature Trail
6. Completed the Urban Forestry Master Plan
7. Completed the Arts and Culture Master Plan

FY2025 Objectives

1. Construct phase one of Walker, Bryce Davis and Underwood Community Parks
2. Complete design of Combs River Park
3. Begin Phase 3 bond projects at Gulley and Combs River Park
4. Plant 463 trees in parks and other public spaces
5. Purchase high priority land for parks
6. Complete aquatic study
7. Create new activations for the entirety of the Ramble and install the first major public art commissions

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Park Properties / Acreage Maintained	74 / 4,204	74 / 4,202	74 / 4,214	74 / 4,214

Utilities Director

Division Overview

This division is responsible for the management of two divisions - Water, Sewer & Meter Maintenance and Wastewater Treatment Plants (WWTPs) - and coordinates various capital improvement projects. Program outcomes relate to drinking water quality, environmental protection, customer services, and adequate infrastructure. Departmental performance includes tangible and intangible measures with key indicators coming from trackable accomplishments, project advances, issue resolutions and reduction in non-revenue water. The project management team is also included in this division.

FY2024 Highlights & Accomplishments

1. Received results of Noland WWTP Facility Master Plan
2. 24-inch waterline slipline repair on Futrall Dr
3. Advanced West Water Transmission Line project from Elm Springs to Fayetteville

FY2025 Objectives

1. Work toward completion of the west transmission main
2. Work toward completion of ARDOT water & sewer relocation projects

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Water Purchased	$11,948,648	$13,000,000	$14,160,330	$15,331,900
2. Capital Expenditures	$10,566,300	$27,172,806	$27,257,422	$34,005,821
3. Ending Total Net Assets	$398,825,000	$380,000,000	$403,350,900	$405,500,000

Utilities Financial Services

Division Overview

Utilities Financial Services provides monthly billing services to utility customers and collects various revenues for the City. Utility billings include charges for water, sewer, fire protection, recycling and trash, and other charges related to these services. Over 51,000 utility accounts are maintained through monthly billing and the collection of payments across multiple payment channels. City revenues collected include impact fees, court fines, building permits, HMR taxes, and parking tickets. These revenues are reconciled daily by Utilities Financial Services. This division is also responsible for all accounting and financial work/review for operations and capital for the Water and Sewer Fund.

FY2024 Highlights & Accomplishments

1. Updated utility bill online payment modules, giving customers the ability to create accounts, see more billing detail, schedule payment day, or make a one time payment

FY2025 Objectives

1. Updated over the counter payment gateway to help City employees to have more tools to enter, review and reconcile revenues receipted into Tyler Cashiering.
2. Streamline the Leak Adjustment review process to allow customers to submit leak adjustment review requests online.

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Utility Bills Processed	579,208	560,000	580,000	585,000
2. On/Off and Internal Orders Processed	30,084	33,750	30,000	32,000
3. New Accounts Added	1,254	1,000	1,100	1,160
4. Utility Payments Processed	524,267	515,000	525,000	530,000
5. Utility Deposits Processed	7,949	8,000	8,200	8,200
6. Other Cash Receipts Processed	130,697	125,000	125,500	126,000
7. Total Utility Customers Billed	50,091	50,000	51,225	52,000

Water & Sewer Maintenance

Division Overview

This division manages the operations, maintenance, and safety of the water distribution system, water storage tanks and pump stations, sewer mains and manholes, meter reading and maintenance, backflow prevention, both wastewater treatment plants, and new service connections.

FY2024 Highlights & Accomplishments

1. Abandon 14" water line near Curtis Ave and the 36" water line near N. Makeig Ct. to avoid leaks
2. Replaced 1,100' of 6" water line on Green Acres Rd. from N. College to E. Poplar St.
3. Applied root kill treatment to 11,512' of sewer line
4. Installed approximately 4,000 cellular water meters

FY2025 Objectives

1. Address water loss utilizing a newly formed construction crew to replace failing water service lines
2. Replace 900' feet of 2" water line on Woodlawn Dr
3. Apply root kill treatment to a minimum of 10,000' of sewer line reducing the risk of sewer overflows
4. Continued the cellular water meter changeout program with the goal of installing over 4,500 meters

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Water Leaks Repaired	1,210	1,250	1,400	1,650
2. Water Line Constructed (Feet)	0	3,000	3,460	1,000
3. Fire Hydrants Repaired/Installed	35	75	50	60
4. Sewer Lines Cleaned (Feet)	650,169	900,000	1,000,000	1,100,000
5. Sewer Line Replaced/Sliplined (Feet)	10,000	9,500	500	1,000
6. New Water/Sewer Connections	242	350	250	300
7. Meters Read	566,267	564,295	596,794	613,590
8. Meters Installed	3,288	5,400	4,000	4,500
9. Meter Accounts	47,188	49,795	49,732	51,132
10. Meters Tested	4,237	5,400	5,300	5,500
11. Backflow Devices Tested	154	180	134	24

Wastewater Treatment

Division Overview

This division manages the operations, maintenance, safety, and compliance of the wastewater treatment facilities, lift stations, SCADA operations, water tanks, pump stations, and the Biosolids Management Site. Additionally, this division monitors and maintains the Woolsey Wet Prairie Wetlands Site.

FY2024 Highlights & Accomplishments

1. Completed integration and automation of the BMS belt dryer
2. Implemented and tracked dryer maintenance tasks
3. Reviewed and developed capital plan for Noland plant based on final master plan
4. Implemented West Side and Noland WRRF's new NPDES Permits
5. Storm Water and No Discharge Permit Renewal application

FY2025 Objectives

1. Develop a capital plan for the Noland Plant based on results of the Facility Master Plan
2. Transition to a new contract operator for the treatment facilities
3. Continue to tune in the belt dryer for optimum performance

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Contract Demand/Workload	$8,012,792	$8,476,468	$8,476,468	$8,898,968
2. Average MGD Treated	15.1	14.6	14.6	14.3
3. Average BOD Loading (lbs/day)	24,439	25,500	23,601	22,660
4. Average TSS Loading(lbs/day)	20,224	22,000	21,608	21,967

Aviation

Division Overview

This division manages the Fayetteville Municipal Airport (Drake Field) to FAR Part 139 Standards, administers Federal and State Aviation Grant funding, and oversees capital development projects, the self-serve fuel facility, tenant leases, and the FBO.

FY2024 Highlights & Accomplishments

1. Fuel Rehab
2. Master Plan Update
3. Taxiway E Extension-Design Phase
4. T-hangar Infrastructure Improvement

FY2025 Objectives

1. ARFF Truck Replacement
2. Street Side Improvements
3. Terminal Building Improvements
4. Equipment Expansion

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Fuel Dispensed (Gallons)	692,402	1,017,100	1,017,100	1,017,100
2. Number of Operations (Landings/Take Offs/Taxi)	25,507	32,000	32,000	32,000

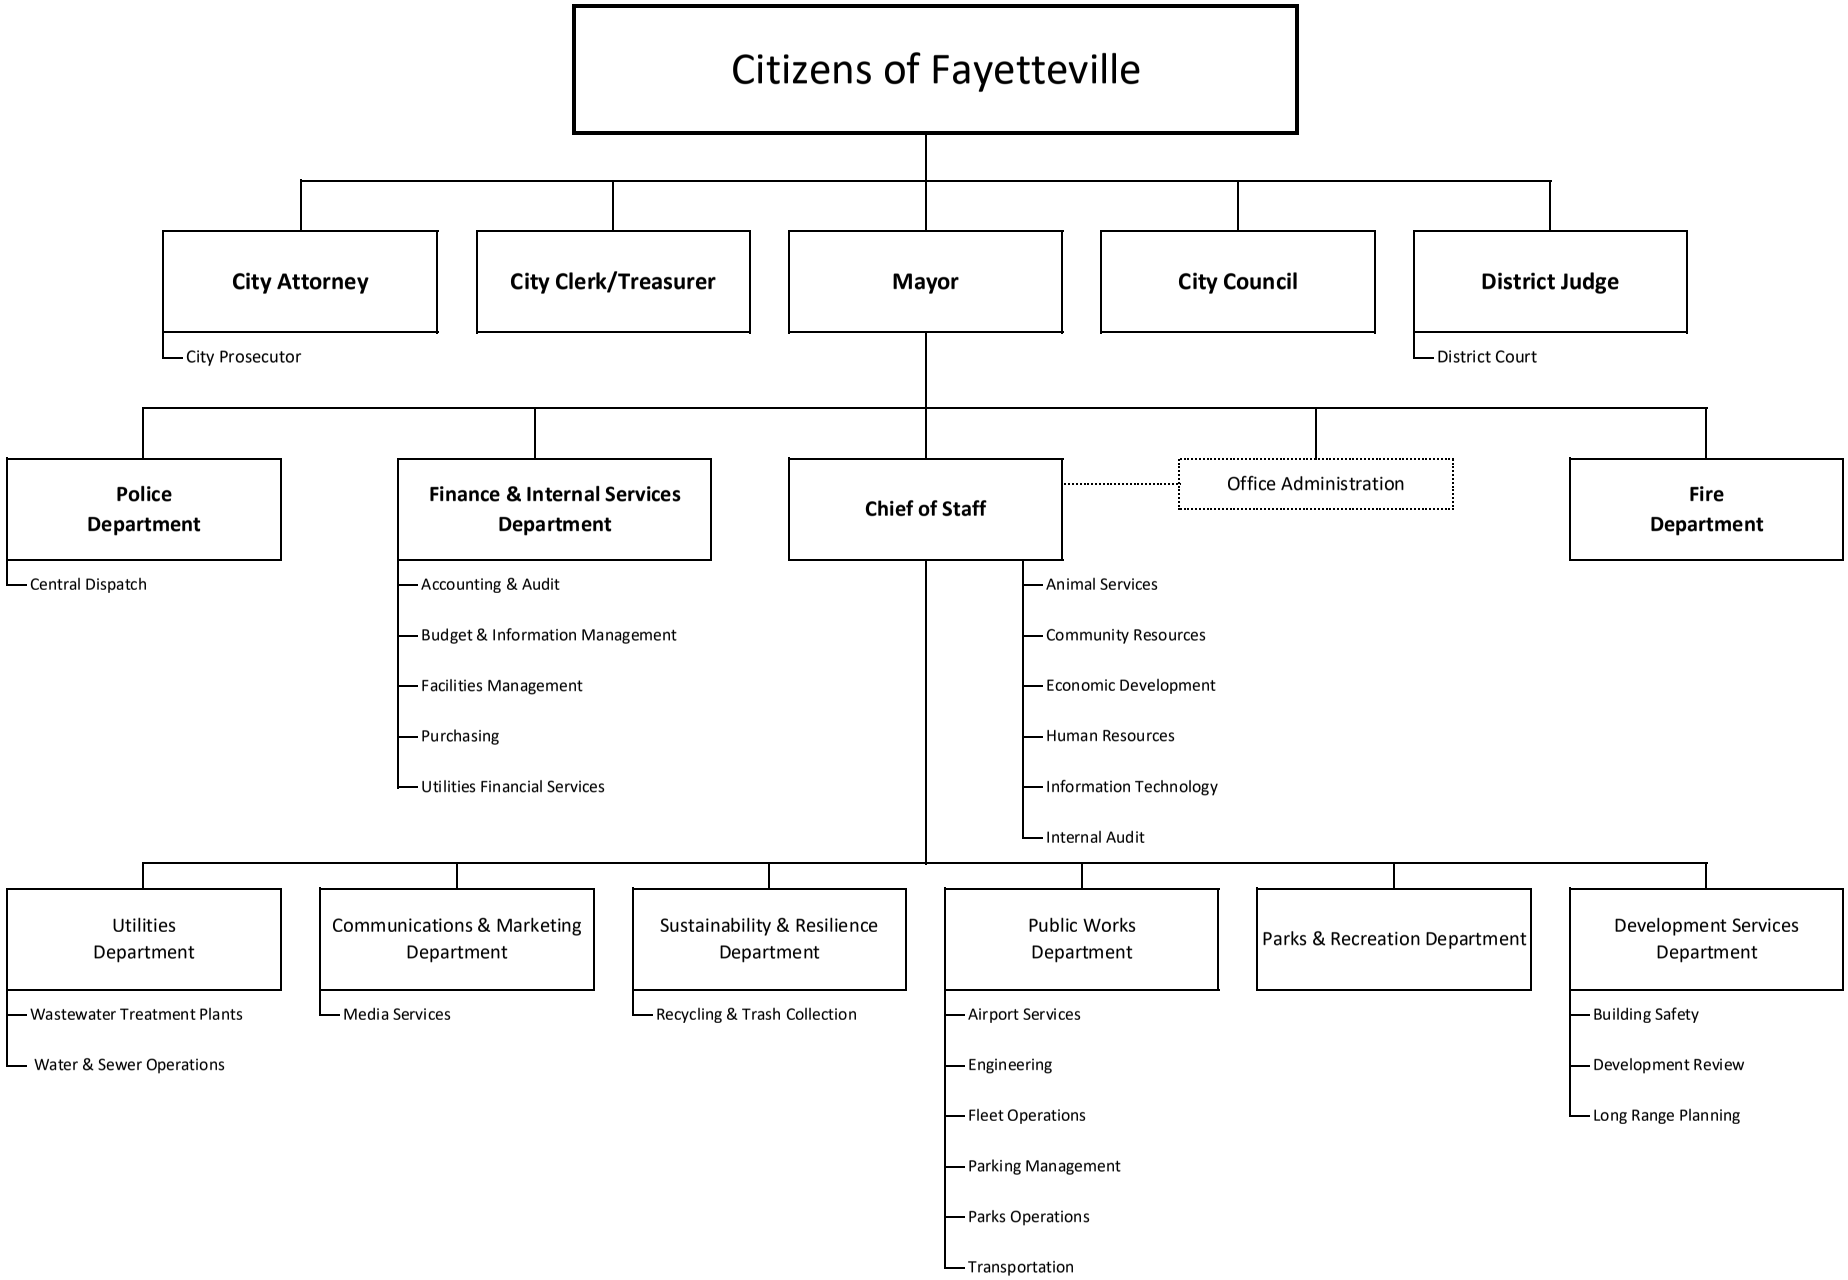
Recycling Trash Collection

Division Overview

This division provides for the collection, transportation, disposal, processing and marketing of trash and recyclables generated within the City. In addition to the commercial and residential collections of trash, recyclables and yard waste, the division also administers other services including bulky waste curbside collection, ward bulky waste clean ups, an Adopt-a Street litter program, apartment recycling, and special event trash and recycling services. Educational programs are provided and include the Recycle Something and Waste Not Use Less campaigns designed to create behavior change toward more sustainable behaviors.

FY2024 Highlights & Accomplishments

1. Increased landfill diversion with recycling and composting program growth
2. Increased large and small apartment recycling program
3. Continued improvements to Transfer Station operations and recycling processing facility
4. Worked with NWA Council and Regional SW Districts for improving landfill diversion programs
5. Working with Auditing firm to audit Franchise Waste Haulers
6. Hired Consulting firm to begin RTC Rate Study



FY2025 Objectives

1. Continued efforts to remediate the old Police Shooting range to be used for RTC operations
2. Continued good inspect behaviors to decrease operator charges
3. Complete RTC Rate Study
4. Continue to increase recycling participation
5. Continue to increase composting programs
6. Explore construction and demolition waste recycling opportunities

Performance Measures	Actual 2023	Budgeted 2024	Estimated 2024	Budgeted 2025
1. Commercial Accts - Dumpster	1,433	1,430	1,437	1,440
2. Commercial Accts - Carts	615	700	605	650
3. Commercial Accts - Cardboard	310	305	316	320
4. Commercial Accts - Recycling Bins	270	275	273	275
5. Commercial Accts - Dumpster Recycling	45	46	42	46
6. Apartment Recycling - Units	3,086	4,000	4,000	4,000
7. Residential Carts Collected	26,519	27,000	26,884	28,000
8. Total Drop Box Loads Pulled	4,040	4,000	4,200	4,200
9. Landfilled Waste	77,438	89,000	80,000	82,000
10. Recycling/Compost Tonnage Diverted	11,904	12,000	9,735	11,000
11. Compost/Mulch Sold - Cubic Yards	10,489	11,000	10,981	12,000

GLOSSARY

ACCOUNTING SYSTEM. Records and procedures that discover, record, classify, and report information on the financial position and operations of a governmental unit or any of its funds.

ACCRUAL. Revenue and expenses are recorded when they are incurred.

AD VALOREM. A basis for levy of taxes upon property based on value.

AGENCY FUND. A fund consisting of resources received and held by the governmental unit as an agent for others.

APPROPRIATION. An authorization granted by the board to incur liabilities for specific purposes.

ASSETS. Probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.

BALANCED BUDGET. A budget balanced by fund, means the total anticipated revenues are equal to or exceed the budgeted expenditures for that fund.

BOND. A written promise to pay a specified sum of money, called the face value or principal amount, at a specified date or dates in the future, called the maturity date(s), together with periodic interest at a specified rate.

BOND DISCOUNT. The excess of the face value of a bond over the price for which it is acquired or sold.

BOND PREMIUM. The excess of the price at which a bond is acquired or sold over its face value.

BONDED DEBT. The portion of indebtedness represented by outstanding bonds.

BUDGET. A financial operating plan consisting of estimates of proposed expenditures for a given period and the proposed means of financing them.

BUDGET CONTROL. The control or management of the approved Budget for the purpose of keeping expenditures within the limitations of available appropriations and available revenues.

BUDGET DOCUMENT. The instrument used by the budget-making authority to present a comprehensive financial program to the appropriating body.

BUDGET MESSAGE. A general discussion of the budget as presented in writing by the Mayor to the City Council. The message contains an explanation of the principal budget items and recommendations regarding the financial policy for the coming year.

CAPITAL BUDGET. This budget deals with large expenditures for capital items normally financed by borrowing. Usually capital items have long-range returns, useful life spans, are relatively expensive, and have physical presence such as buildings, roads, sewage systems, etc.

CAPITAL IMPROVEMENT. Any property, asset, or improvement with an estimated value greater than five thousand dollars, and estimated life or usefulness of one or more years, including land, interest therein and including constructions, enlargements, and renovations.

CAPITAL IMPROVEMENT PROGRAM. An approach or technique for identifying and forecasting capital outlay decisions that a government expects to make over a five-year period.

CAPITAL OUTLAY. Expenditures that result in the acquisition of or addition to fixed assets.

CAPITAL PROJECTS FUND. A fund created to account for all resources to be used for the acquisition or construction of designated fixed assets.

CASH. Legal tender or coins that can be used in exchange for goods, debt, or services. This includes the value of assets that can be converted into cash immediately

CONSTRUCTION WORK IN PROGRESS. The cost of construction work that has been started but not yet completed and placed in service.

CONTINGENCY FUND. Funds set aside for unforeseen expenses of uncertain amounts or funds set aside for identified expenses, such as salary increases, but for which amounts are uncertain.

CONTRACTUAL SERVICE. An agreement to perform a service or task by external organizational units. A group of accounts which cover the above as well as travel and training and other miscellaneous services.

DEBT SERVICE. The amount of money necessary to pay interest on an outstanding debt, the principal of maturing bonds, and required contributions to a sinking fund for term bonds.

DEBT SERVICE FUND. A governmental type fund used to account for accumulations of resources that are restricted, committed, or assigned to expenditures for principal and interest.

DEMAND. Demand is the external factor that demonstrates the "need" for a program. Demand data enables decision-makers to adjust services and costs to respond to changes in direction for the service.

DEPARTMENT. Departments are the major organizational subdivisions. They have a broad overall purpose. In the City of Fayetteville organization structure, each department is comprised of one or more divisions.

DEPRECIATION. Expiration in the service life of fixed assets, attributable to wear and tear, deterioration, action of the physical elements, inadequacy, and obsolescence.

DESIGNATED FUND. Funds created to account for assets set aside for a specific purpose.

DIVISION. Divisions are the major functional sub-divisions and correspond roughly to the departmental hierarchy used by the City. Each Division reports to one or more departments.

EFFECTIVENESS. Effectiveness data enables decision-makers to see that quality does not suffer as productivity increases, and that constituents are satisfied with services.

ENCUMBRANCE. An account used to record the estimated amount of contracts, salary commitments and purchase orders that are chargeable to an appropriation.

ENTERPRISE FUND. A fund established to finance and account for the acquisition, operation, and maintenance of governmental facilities and services which are entirely or predominantly self-supporting by user charges.

EXPENDITURE. Under the current financial resources measurement focus (modified accrual basis), decreases in net financial resources not classified as other uses.

EXPENSE. An outflow of resources that results in the consumption of net assets by the entity during the reporting period.

FIDUCIARY FUND. Any fund held by a governmental unit as an agent or trustee.

FISCAL YEAR. A 12-month period of time to which the annual budget applies and at the end of which a governmental unit determines its financial position and the results of its operations.

FIXED ASSET. Long-term assets that are intended to be held or used, such as land, buildings, machinery, furniture, and other equipment. Fixed assets depreciate.

FRANCHISE TAX. Fees levied on a corporation in return for granting a privilege sanctioning a monopoly or permitting the use of public property, usually subject to regulation set by the governing body.

FULL-TIME EQUIVALENT POSITION (FTE). A part-time position converted to the decimal equivalent of a full-time position based on 2,080 hours per year. For example, a summer lifeguard working for four months, or 690 hours, would be equivalent to .33 of a full-time position.

FUND. A fiscal and accounting entity with a self-balancing set of accounts recording cash and other financial resources, together with all related liabilities and residual equities, or balances, and changes therein, which are segregated for the purpose of carrying on specific activities or attaining certain objectives in accordance with special regulations, restrictions, or limitations.

FUND BALANCE. Fund equity of a fund or in Governmental Funds, the amount assets exceed liabilities. Unrestricted Fund Balances are available for appropriation.

FUND EQUITY. The excess of assets over liabilities. A portion of the equity may be reserved, restricted or designated; the remainder is undesignated Fund Balance.

GENERAL FUND. A fund used to account for all transactions of a governmental unit that are not accounted for in another fund.

GOAL. A goal is a statement of desired conditions to be maintained or achieved through the efforts of an organization. Actual total achievement may be impossible, but the goal is a standard against which to measure progress toward ideal conditions. A goal is a definition of results toward which the work of the organization is directed.

GOVERNMENTAL FUND. A generic classification of funds used to account for activities primarily supported by taxes, grants, and similar revenue sources.

GRANT. A contribution by one governmental unit to another unit. The contribution is usually made to aid in the support of a specified function or for the acquisition or construction of fixed assets.

INCOME. A term used to represent the excess of revenues earned over the expenses incurred in carrying on an enterprise operation.

INTERGOVERNMENTAL REVENUE. Revenue from other governments. Grants, entitlements, and shared revenues are types of intergovernmental revenue.

INTERNAL SERVICE FUND. A fund established to finance and account for services and commodities furnished by a designated department to other departments. Amounts expended by the fund are reestablished from either operating earnings or by transfers from other funds.

INVESTMENT. Securities held for the production of income in the form of interest and dividends.

LIABILITY. Probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.

LINE-ITEM. A detailed classification of an expense or expenditure classified by object within each Division.

LONG-TERM DEBT. Debt with a maturity of more than one year after the date of issuance.

MODIFIED ACCRUAL BASIS. Governmental funds use the modified accrual basis of accounting. Revenues are recognized in the period in which they become both available and measurable. Expenditures are recognized at the time a liability is incurred.

NET INCOME. A term used in governmental enterprise to designate the excess of total revenues over total expenses.

NONOPERATING EXPENSE. Proprietary fund expenses incurred in performance of activities not directly related to supplying the basic service by a governmental enterprise.

NONOPERATING INCOME. Proprietary fund income that is not derived from the basic operations of such enterprises.

OBJECT CODE. Expenditure classification according to the types of items purchased or services obtained; for example, personnel services, materials and supplies, contractual service, and capital.

OBJECTIVE. An objective is a decision about the amount of progress to be made within a specified period of time. It states in measurable and quantitative terms the results to be achieved within a specified time and plans the incremental steps to achieve the goal.

OPERATING TRANSFER. Legally authorized interfund transfers from a fund receiving revenue to the fund that makes expenditures.

ORDINANCE. A formal legislative enactment by the governing board of a municipality. If it is not in conflict with any higher form of law, such as a state statute or constitutional provision, it has the full force and effect of law within the boundaries of the municipality to which it applies.

PERFORMANCE BUDGET. A budget which relates appropriations to work loads. By featuring unit measures, performance budgets are believed to express official and citizen interest in the managerial value of efficiency.

PERFORMANCE MEASURES. Performance measures provide a means of identifying the level of service provided. Performance measures include a measurement of Demand, Workload, Productivity, and Effectiveness.

PROGRAM. Operating units within a Division. Each program represents a specific type of activity within its Division aimed at providing a service for which the City is responsible.

PROGRAM BUDGET. A budget which relates appropriations to goals. Budget makers practicing this approach strive to appropriate sums to non-organization, goal-oriented cost centers. Program budgeting is believed to express official and citizen interest in planning and in the effective use of resources.

PROGRAM OBJECTIVES. A program objective is a decision about the amount of progress to be made within a specified period of time in reducing the gap between real conditions and the ideal conditions described in the Program Description. It states in measurable quantitative terms the results to be achieved within a specified time and plans the incremental steps to achieve them.

PRODUCTIVITY. Unit cost (productivity data) enables decision-makers to measure efficiency, as opposed to total expenditures. Productivity unit costs can also be used to quickly estimate the cost of adding more service or savings realized from reductions in service.

PROPRIETARY FUND. Sometimes referred to as "income-determination" or "commercial-type" funds. Examples are enterprise and internal service funds.

RESERVE. An account that records a portion of the fund equity that must be segregated for some future use and which is not available for further appropriation or expenditure.

RETAINED EARNINGS. The accumulated earnings of an enterprise or internal service fund that have been retained in the fund and that are not reserved for any specific purpose.

REVENUE. Additions to fund financial resources other than from interfund transfers and debt issue proceeds.

SPECIAL REVENUE FUND. A fund established to account for revenues from specific taxes or other earmarked revenue sources that by law are designated to finance particular functions or activities of government.

TAX. A compulsory charge levied by a governmental unit for the purpose of raising revenue. These revenues are used to pay for services or improvements provided for the general public benefit.

UNRESERVED FUND BALANCE. The amount remaining in a fund that is not reserved for some future use and which is available for further appropriation or expenditure.

USER CHARGE. A charge levied against users of a service or purchasers of a product of an enterprise or internal service funds.

WORKLOAD. Workload data answers the question about how much service is being provided, as well as how output is meeting service demand. Workload data is also the basis, along with total expenditures, for unit cost or productivity indicators.

CITY OF FAYETTEVILLE ARKANSAS

CITY COUNCIL MEMO
2024-705

MEETING OF NOVEMBER 26, 2024

TO: Mayor Jordan and City Council

THRU: Susan Norton, Chief of Staff
Jonathan Curth, Development Services Director

FROM: Britin Bostick, Long Range Planning/Special Projects Manager

SUBJECT: **RZN-2024-0051: Rezoning (W. MARTIN LUTHER KING JR. BLVD AND S. SMOKEHOUSE TRL/D&B OF NORTHWEST ARKANSAS LLC, 595): Submitted by GAVIN SMITH CIVIL ENGINEERING for property located southeast of the intersection of W. MARTIN LUTHER KING JR. BOULEVARD AND S. SMOKEHOUSE TRAIL in WARD 1. The property is zoned RPZD, RESIDENTIAL PLANNED ZONING DISTRICT and contains approximately 4.49 acres. The request is to rezone the property to CS, COMMUNITY SERVICES.**

RECOMMENDATION:
City Planning staff and the Planning Commission recommend approval of a request to rezone the subject property as described and shown in the attached Exhibits 'A' and 'B'.

BACKGROUND:
The subject property is located in southwest Fayetteville, just southeast of the intersection of W. Martin Luther King Jr. Boulevard and S. Smokehouse Trail on the south side of W. Martin Luther King Jr. Boulevard. The property contains one parcel totaling 5.59 acres which is undeveloped and zoned UT, Urban Thoroughfare and RPZD, Residential Planned Zoning District. Hydric soils are not present, and no protected streams or FEMA-designated floodplain and no Hillside/Hilltop Overlay District are present on site. Prior to June 2023, the property was zoned CS, Community Services. At that time, the current RPZD designation was sought to develop the site for hospitality purposes.

Request: The request is to rezone 4.49 acres of the total 5.59 acres of the subject property from RPZD, Residential Planned Zoning District to CS, Community Services.

Public Comment: Staff has not received public comment on this request.

Land Use Compatibility: Staff finds that the requested rezoning is compatible with surrounding land uses. The subject property is located in west Fayetteville near the southeast corner of the intersection of W. Martin Luther King Jr. Boulevard, S. Rupple Road, and S. Smokehouse Trail. A rezoning to CS, Commercial Services, would allow similar residential development and commercial uses in an area that currently allows a mix of residential and commercial uses. The property's current zoning, RPZD, allows for development that staff finds to be also consistent with current development and zoning patterns in that area given the large lots with low intensity residential development and protected recreation areas to the south. Prior to the rezoning to RPZD in 2023, the subject property had both CS and R-A zoning, and the proposed rezoning would be similar to prior zoning, with additional land area to the south of the prior CS zoning district incorporated.

Land Use Plan Analysis: Staff finds that a rezoning to CS would be consistent with the City's adopted land use plans. City Plan 2040's Future Land Use Map designates the property as City Neighborhood. These areas are intended to support a wide variety of housing and commercial types in walkable urban neighborhoods. Despite the higher zoning entitlements of many nearby properties, the subject property does have an infill score of 4-5 due to the necessary infrastructure for higher intensity development not yet being installed.

CITY PLAN 2040 INFILL MATRIX: City Plan 2040's Infill Matrix indicates a score range of **4-5** for this site. The following elements of the matrix contribute to the score:

- Adequate Fire Response (Station 6, located at 900 S. Hollywood Ave.)
- Near Water Main (18-inch main, W. Martin Luther King Jr. Boulevard)
- Near City Park (Holland Park, Kessler Mountain Regional Park)
- Near Paved Trail (Side Path Trail)
- Appropriate Future Land Use (City Neighborhood)

DISCUSSION:
At the October 28, 2024 Planning Commission meeting, a vote of 8-0-0 forwarded the request to City Council with a recommendation of approval. Commissioners Payne and McGetrick provided the motion and second respectively. The commissioners cited future land use compatibility and staff recommendations as noted in the report as reasons for approval.

BUDGET/STAFF IMPACT:

RE: Rezone of Part of Parcel #762-16280-000 – LEGAL DESCRIPTION

LEGAL DESCRIPTION OF PARCEL #762-16280-000:

A PART OF THE NORTHWEST QUARTER OF THE SOUTHEAST QUARTER AND A PART OF THE NORTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 24, TOWNSHIP 16 NORTH, RANGE 31 WEST, WASHINGTON COUNTY, ARKANSAS, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS, TO-WIT: BEGINNING AT AN EXISTING STONE MARKING THE SOUTHEAST CORNER OF SAID NORTHWEST QUARTER OF THE SOUTHEAST QUARTER AND RUNNING THENCE N87°36'10"W 96.00' TO AN EXISTING REBAR, THENCE N01°55'39"E 742.00' TO AN EXISTING REBAR ON THE SOUTH RIGHT-OF-WAY OF U.S. HIGHWAY #62 (MARTIN LUTHER KING JR. BOULEVARD), THENCE ALONG SAID RIGHT-OF-WAY THE FOLLOWING: N75°58'23"E 57.56' TO AN EXISTING REBAR, S89°47'42"E 82.40' TO AN EXISTING REBAR, N59°44'38"E 26.76' TO AN EXISTING REBAR, THENCE LEAVING SAID SOUTH RIGHT-OF-WAY S01°54'39"W 294.94', THENCE S78°55'38"E 147.57', THENCE S30°52'00"E 293.27', THENCE S01°55'11"W 213.44' TO THE SOUTH LINE OF SAID NORTHEAST QUARTER OF THE SOUTHEAST QUARTER, THENCE ALONG SAID SOUTH LINE N87°36'10"W 369.02' TO THE POINT OF BEGINNING, CONTAINING 5.59 ACRES, MORE OR LESS. SUBJECT TO THAT PORTION IN MARTIN LUTHER KING JR. BOULEVARD MASTER STREET PLAN RIGHT-OF-WAY ON THE NORTH SIDE OF HEREIN DESCRIBED TRACT AND SUBJECT TO ALL OTHER EASEMENTS AND RIGHTS-OF-WAY OF RECORD.

.

LEGAL DESCRIPTION OF AREA TO BE REZONED:

A PART OF THE NORTHWEST QUARTER OF THE SOUTHEAST QUARTER AND A PART OF THE NORTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 24, TOWNSHIP 16 NORTH, RANGE 31 WEST, WASHINGTON COUNTY, ARKANSAS, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS, TO-WIT: BEGINNING AT AN EXISTING STONE MARKING THE SOUTHEAST CORNER OF SAID NORTHWEST QUARTER OF THE SOUTHEAST QUARTER AND RUNNING THENCE N87°36'10"W 96.00' TO AN EXISTING REBAR, THENCE LEAVING SAID SOUTH LINE N01°55'39"E 436.64', THENCE N76°15'06"E 166.64', THENCE S01°54'39"W 2.06', THENCE S78°55'38"E 147.57', THENCE S30°52'00"E 293.27', THENCE S01°55'11"W 213.44' TO THE SOUTH LINE OF THE NORTHEAST QUARTER OF THE SOUTHEAST, THENCE ALONG SAID SOUTH LINE N87°36'10"W 369.02' TO THE POINT OF BEGINNING, CONTAINING 4.49 ACRES, MORE OR LESS. SUBJECT TO ALL EASEMENTS AND RIGHTS-OF-WAY OF RECORD.

CITY OF FAYETTEVILLE ARKANSAS

PLANNING COMMISSION MEMO

TO: Fayetteville Planning Commission

THRU: Gretchen Harrison, Senior Planner

FROM: Britin Bostick, Long Range Planning/Special Projects Manager

MEETING DATE: October 28, 2024 updated w/ meeting results

SUBJECT: **RZN-2024-0051: Rezoning (W. MARTIN LUTHER KING JR. BLVD AND S. SMOKEHOUSE TRL/D&B OF NORTHWEST ARKANSAS LLC, 595):** Submitted by GAVIN SMITH CIVIL ENGINEERING for property located southeast of the intersection of W. MARTIN LUTHER KING JR. BOULEVARD AND S. SMOKEHOUSE TRAIL. The property is zoned RPZD, RESIDENTIAL PLANNED ZONING DISTRICT and contains approximately 4.49 acres. The request is to rezone the property to CS, COMMUNITY SERVICES.

RECOMMENDATION:
Staff recommends forwarding **RZN-2024-0051** to the City Council with a recommendation of approval.

RECOMMENDED MOTION:
*"I move to forward **RZN-2024-0051** to the City Council with a recommendation of approval."*

BACKGROUND:
The subject property is located in southwest Fayetteville, just southeast of the intersection of W. Martin Luther King Jr. Boulevard and S. Smokehouse Trail on the south side of W. Martin Luther King Jr. Boulevard. The property contains one parcel totaling 5.59 acres which is undeveloped and zoned UT, Urban Thoroughfare and RPZD, Residential Planned Zoning District. Hydric soils are not present, and no protected streams or FEMA-designated floodplain and no Hillside/Hilltop Overlay District are present on site. Surrounding land uses and zoning are depicted below in *Table 1*.

Table 1:
Surrounding Land Uses and Zoning

Direction	Land Use	Zoning
North	Undeveloped	UT, Urban Thoroughfare
South	City Park/Single-Family Residential	R-A, Residential Agricultural
East	Undeveloped	R-A, Residential Agricultural/UT, Urban Thoroughfare/CS Community Services
West	Undeveloped/City Park	R-A, Residential Agricultural/UT, Urban Thoroughfare

Request: The request is to rezone 4.49 acres of the total 5.59 acres of the subject property from RPZD, Residential Planned Zoning District to CS, Community Services.

Public Comment: Staff has not received public comment on this request.

INFRASTRUCTURE AND ENVIRONMENTAL REVIEW:

Streets: The subject area does not have public street frontage. The overall property has frontage to W Martin Luther King Jr Boulevard, a partially improved regional link high activity street, with asphalt paving and curb and gutter. Any street improvements required in these areas would be determined at the time of development proposal.

Water: Public water is not available to the subject area. The overall property has access to an 18" water line that is present along the south side of W Martin Luther King Jr Boulevard.

Sewer: Sanitary Sewer is not available to the subject area or the overall property.

Drainage: The subject property does not lie within a FEMA-designated floodplain and no protected streams are identified on the subject property or surrounding properties. Hydric soils are not present on site. The subject property is not located within the Hillside/Hilltop Overlay District. Any additional improvements or requirements for drainage will be determined at time of development.

Fire: Fire apparatus access and fire protection water supplies will be reviewed for compliance with the Arkansas Fire Prevention Code at the time of development. Station 6, located at 900 S. Hollywood Ave., protects this site. The property is located approximately 1.8 miles from the fire station with an anticipated drive time of approximately 5 minutes using existing streets. The anticipated response time would be approximately 7.2 minutes. Fire Department response time is calculated based on the drive time plus 1 minute for dispatch and 1.2 minutes for turn-out time. Within the City Limits, the Fayetteville Fire Department has a response time goal of 6 minutes for an engine and 8 minutes for a ladder truck.

Police: The Police Department did not comment on this request.

Tree Preservation:

The proposed zoning district, CS, Community Services, requires **20% minimum canopy preservation**. The current zoning district, RPZD, Residential Planned Zoning District, requires **25% minimum canopy preservation**.

CITY PLAN 2040 FUTURE LAND USE PLAN: City Plan 2040 Future Land Use Plan designates the property within the proposed rezone as **City Neighborhood**.

City Neighborhoods are more densely developed than residential neighborhood areas and provide a mix of non-residential and residential uses. This designation supports the widest spectrum of uses and encourages density in all housing types, from single family to multi-family. Non-residential and commercial uses are primarily located at street intersections and along major corridors. Ideally, commercial uses would have a residential component and vary in size, variety and intensity. The street network should have a high number of intersections creating a system of small blocks with a high level of connectivity between neighborhoods. Building setbacks and landscaping are urban in form with street trees typically being located within the sidewalk zone.

CITY PLAN 2040 INFILL MATRIX: City Plan 2040's Infill Matrix indicates a score range of **4-5** for this site with a weighted score of **5** at the highest level. The following elements of the matrix contribute to the score:

- Adequate Fire Response (Station 6, located at 900 S. Hollywood Ave.)
- Near Water Main (18-inch main, W. Martin Luther King Jr. Boulevard)
- Near City Park (Holland Park, Kessler Mountain Regional Park)
- Near Paved Trail (Side Path Trail)
- Appropriate Future Land Use (City Neighborhood)

FINDINGS OF THE STAFF

1. A determination of the degree to which the proposed zoning is consistent with land use planning objectives, principles, and policies and with land use and zoning plans.

Finding: ***Land Use Compatibility:*** **Staff finds that the requested rezoning is compatible with surrounding land uses. The subject property is located in west Fayetteville near the southeast corner of the intersection of W. Martin Luther King Jr. Boulevard, S. Rupple Road, and S. Smokehouse Trail. A rezoning to CS, Commercial Services, would allow similar residential development and commercial uses in an area that currently allows a mix of residential and commercial uses. The property's current zoning, RPZD, allows for development that staff finds to be also consistent with current development and zoning patterns in that area given the large lots with low intensity residential development and protected recreation areas to the south. Prior to the rezoning to RPZD in 2023, the subject property had both CS and R-A zoning, and the proposed rezoning would be similar to prior zoning, with additional land area to the south of the prior CS zoning district incorporated.**

Land Use Plan Analysis: **Staff finds that a rezoning to CS would be consistent with the City's adopted land use plans. City Plan 2040's Future Land Use Map designates the property as City Neighborhood. These areas are intended to support a wide variety of housing and commercial types in walkable urban neighborhoods. The property does have a low infill score of 4-5 as this area has higher-intensity zoning entitlements but has not yet seen a lot of the necessary infrastructure for higher intensity development.**

2. A determination of whether the proposed zoning is justified and/or needed at the time the rezoning is proposed.

Finding: **Staff finds that there is sufficient justification for rezoning the property from RPZD to CS. Staff finds that the proposed rezoning is compatible with surrounding properties and consistent with the City's future land use plans. It is also consistent with the zoning of the property prior to the rezoning to RPZD in 2023.**

3. A determination as to whether the proposed zoning would create or appreciably increase traffic danger and congestion.

Finding: **A rezoning from RPZD to CS has the potential to minimally increase vehicular traffic in the area when considering that the property is currently entitled for similar residential development, and the area proposed to be**

rezoned has several constraints. Between 2019 and 2023, one traffic crash was reported adjacent to the property and forty-seven crashes, four with suspected minor injury, eight with possible injury, and forty-four with no apparent injury, were reported on W, Martin Luther King Jr. Boulevard between with intersections with S. Camelia Lane and S. Rupple Road.

4. A determination as to whether the proposed zoning would alter the population density and thereby undesirably increase the load on public services including schools, water, and sewer facilities.

Finding: **Rezoning the property from RPZD to CS has minimal potential to alter the population density given the size of the property and surrounding zoning and uses, although CS in combination with other similarly zoned parcels could allow for increased residential or commercial development. Given the property's proximity to public streets, and water, staff finds that the proposed rezoning is not likely to undesirably increase the load on public services. Sewer improvements would be needed for future development, however. Any necessary upgrades or improvements to existing infrastructure would be determined at the time of development. Fayetteville Public Schools did not comment on this request.**

5. If there are reasons why the proposed zoning should not be approved in view of considerations under b (1) through (4) above, a determination as to whether the proposed zoning is justified and/or necessitated by peculiar circumstances such as:

   a. It would be impractical to use the land for any of the uses permitted under its existing zoning classifications;

   b. There are extenuating circumstances which justify the rezoning even though there are reasons under b (1) through (4) above why the proposed zoning is not desirable.

Finding: **N/A**

RECOMMENDATION: Planning staff recommend forwarding RZN-2024-0051 to the City Council with a recommendation of approval.

161.22 Community Services

(A) *Purpose.* The Community Services District is designed primarily to provide convenience goods and personal services for persons living in the surrounding residential areas and is intended to provide for adaptable mixed use centers located along commercial corridors that connect denser development nodes. There is a mixture of residential and commercial uses in a traditional urban form with buildings addressing the street. For the purposes of Chapter 96: Noise Control, the Community Services district is a commercial zone. The intent of this zoning district is to provide standards that enable development to be approved administratively.

(B) *Uses.*

(1) *Permitted Uses.*

Unit 1	City-wide uses by right
Unit 4	Cultural and recreational facilities
Unit 5	Government facilities
Unit 8	Single-family dwellings
Unit 9	Two-family dwellings
Unit 10	Three (3) and four (4) family dwellings
Unit 13	Eating places
Unit 15	Neighborhood Shopping goods
Unit 24	Home occupations
Unit 25	Offices, studios and related services
Unit 26	Multi-family dwellings
Unit 40	Sidewalk Cafes
Unit 41	Accessory dwellings
Unit 44	Cluster Housing Development
Unit 45	Small scale production
Unit 46	Short-term rentals

Note: Any combination of above uses is permitted upon any lot within this zone. Conditional uses shall need approval when combined with pre-approved uses.

(2) *Conditional Uses.*

Unit 2	City-wide uses by conditional use permit
Unit 3	Public protection and utility facilities
Unit 14	Hotel, motel and amusement services
Unit 16	Shopping goods
Unit 17	Transportation, trades and services
Unit 18	Gasoline service stations and drive-in/drive-through restaurants
Unit 19	Commercial recreation, small sites
Unit 28	Center for collecting recyclable materials
Unit 34	Liquor stores
Unit 35	Outdoor music establishments
Unit 36	Wireless communication facilities*
Unit 42	Clean technologies

(C) *Density.* None.

(D) *Bulk and Area Regulations*.

(1) *Lot Width Minimum.*

Dwelling	18 feet
All others	None

(2) *Lot Area Minimum.* None.

(E) *Setback regulations*.

Front:	A build-to zone that is located between 10 feet and a line 25 feet from the front property line.
Side and rear:	None
Side or rear, when contiguous to a single-family residential district:	15 feet

(F) *Building Height Regulations.*

Building Height Maximum	5 stories

(G) *Minimum Buildable Street Frontage.*50% of the lot width.

PLANNED ZONING DISTRICT-2023-0002: (SOUTHEAST OF W. MARTIN LUTHER KING JR BLVD AND S. SMOKEHOUSE TRAIL/SWEET BAY AT KESSLER, 596):

AN ORDINANCE TO APPROVE A RESIDENTIAL PLANNED ZONING DISTRICT ENTITLED PZD-2023-002 FOR APPROXIMATELY 4.49 ACRES LOCATED SOUTHEAST OF WEST MARTIN LUTHER KING, JR. BOULEVARD AND SOUTH SMOKEHOUSE TRAIL IN WARD 1

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby approves PZD-2023-02 as described in Exhibits "A", "B" and "C" attached to the Planning Division's Agenda Memo which allows the development of 2.93 acres for residential units, 0.49 acres for parkland dedication, and 1.07 acres for primarily natural preservation.

Section 2: That the official zoning map of the City of Fayetteville, Arkansas is hereby amended to reflect the zoning criteria change provided in Section 1 above.

CITY COUNCIL MEMO
2023-776

MEETING OF JUNE 6, 2023

TO: Mayor Jordan and City Council

THRU: Susan Norton, Chief of Staff
Jonathan Curth, Development Services Director

FROM: Jessica Masters, Development Review Manager

DATE:

SUBJECT: **PZD-2023-0002: Planned Zoning District (SOUTHEAST OF W. MARTIN LUTHER KING JR BLVD AND S. SMOKEHOUSE TRAIL/SWEET BAY AT KESSLER, 596): Submitted by GAVIN SMITH for property located SOUTHEAST OF W. MARTIN LUTHER KING JR BLVD AND S. SMOKEHOUSE TRL. In WARD 1. The property is split zoned R-A, RESIDENTIAL AGRICULTURAL, CS, COMMUNITY SERVICES, and UT, URBAN THOROUGHFARE and contains approx. 5.59 acres. The request is to rezone 4.49 acres of the property to a PLANNED ZONING DISTRICT.**

RECOMMENDATION:
City Planning staff and the Planning Commission recommend approval of a request to rezone the subject property as described and shown in the attached Exhibits 'A' and 'B'.

BACKGROUND:
The subject property is located in west Fayetteville, southeast of the intersection of W. Martin Luther King Jr. Blvd and S. Rupple Road. While a leg of the overall property has frontage along W. Martin Luther King Jr. Blvd, the area in question is about 300 feet south without access to a public street. Undeveloped and mostly covered in tree canopy, there is an approximately 7% slope upward as the portion of the property in question moves south. The entire property is outside of the Hillside Hilltop Overlay District.

Proposal: The applicant requests to rezone the property to a Residential Planned Zoning District with three Planning Areas, as described below:

- **Planning Area #1 – 2.93 acres:** The intention of this planning area is to provide cabin-style single-family homes at a maximum density of 10 units per acre that are clustered and concentrated to leave additional room in the planning area for parking, detention, and utilities. The allowable uses are similar to but more limited than those allowed in other single-family zoning districts such as RSF-4 or NC, Neighborhood Conservation.
- **Planning Area #2 – 0.49 acres:** This planning area is intended for parkland dedication. The area in question currently includes a portion of a downhill mountain biking trail. Parkland dedication would be required to be evaluated by the Parks and Recreation Advisory Board, and a full evaluation of its suitability for City acquisition would take place during the large-scale development process. The permitted uses are similar to those in the P-1, Institutional zoning district.

- **Planning Area #3 – 1.07 acres:** This planning area is intended for natural preservation. There are limited uses permitted, but it does allow for cultural and recreational facilities and other city-wide uses by right.

Public Comment: Staff received minimal public comment on the request, limited primarily to inquiries, and no comments of outright support or opposition. No public comment was offered at the Planning Commission meeting.

Land Use Compatibility: Staff finds the applicant's request to be compatible with existing surrounding land uses. While zoned for higher entitlements generally, the area in question is minimally developed and well-forested. The applicant's request reflects an incremental increase in density and intensity that both respects the natural features of the site (the slope into Kessler Mountain), while also leaving room at the northern portion of the site for higher intensity uses allowable by-right in its current zoning district. The separation of the PZD into three planning areas indicates a specific intention to work within the confines of existing amenities on the site, including a mountain bike trail that runs into the adjacent property to the west. That same property is also pending transfer to the City of Fayetteville Parks and Recreation Department. The proposed use of single-family cabins is architecturally compatible with the surrounding environment as well. The applicant's request would also allow for short-term rentals. However, since the overall planned zoning district is strictly residential and does not include any commercial or mix of uses, staff finds that any cabins that would like to pursue a short-term rental would require a conditional use permit.

Land Use Plan Analysis: Staff finds that the request is consistent with the City's land use and zoning plans. Recently, the City Council adopted a new street section for Smokehouse Trail to incorporate on-street parking to the adjacent mountain biking trails, including the Fayetteville Traverse. Further, the proposal respects the Future Land Use map distinction by leaving the existing UT zoning as is, to allow for higher intensity uses in the future. Staff finds that the proposal meets City Plan 2040 goals by making appropriate infill a high priority; the infill score for the site is currently quite low, so inserting single-family cabins in the area acts as a good transitional development to future high-density development. The proposal also capitalizes on proximity to the trail network.

CITY PLAN 2040 INFILL MATRIX: City Plan 2040's Infill Matrix indicates a low infill score for the subject property of 4. The elements vary by the area of the property being considered, and include the following:

- Adequate Fire Response (Station #6, 990 S. Hollywood Avenue)
- Near City Park (Centennial Park)
- Near Paved Trail (S. Rupple Road)
- Appropriate Future Land Use (City Neighborhood Area)

DISCUSSION:

At the May 8, 2023 Planning Commission meeting, a vote of 8-0-0 forwarded the request to City Council with a recommendation of approval, with conditions as recommended by staff. Commissioner Garlock made the motion and Commissioner Brink seconded. Conversation on the item centered mostly around whether short-term rentals would need a conditional use permit in the PZD, and staff explained that short-term rentals are typically permitted by-right in every zoning district since Type 1s (owner-occupied) are always allowed where there are residential uses, and that Type 2s (permanent short-term rentals) would need to acquire a conditional use permit. Commissioner Brink felt that the smaller house type may lend itself to a short-term rental use, though was compatible with the surroundings , and Commissioner Garlock commented that the smaller

housing type met a specific housing need. In the intervening time between the Planning Commission meeting and the City Council meeting, the applicant made minor changes to the PZD booklet as recommended by staff, and also moved all short-term rentals, or STRs, to a conditional use in Planning Area 1. Commissioners in favor found that the level of development was incremental in nature, and there were no votes in opposition. No members of the public spoke during the meeting.

BUDGET/STAFF IMPACT:

File #: 2023-776

PZD-2023-0002: Planned Zoning District (SOUTHEAST OF W. MARTIN LUTHER KING JR BLVD AND S. SMOKEHOUSE TRAIL/SWEET BAY AT KESSLER, 596): Submitted by GAVIN SMITH for property located SOUTHEAST OF W. MARTIN LUTHER KING JR BLVD AND S. SMOKEHOUSE TRL. In WARD 1. The property is split zoned R-A, RESIDENTIAL AGRICULTURAL, CS, COMMUNITY SERVICES, and UT, URBAN THOROUGHFARE and contains approx. 5.59 acres. The request is to rezone 4.49 acres of the property to a PLANNED ZONING DISTRICT.

AN ORDINANCE TO APPROVE A RESIDENTIAL PLANNED ZONING DISTRICT ENTITLED PZD-2023-002 FOR APPROXIMATELY 4.49 ACRES LOCATED SOUTHEAST OF WEST MARTIN LUTHER KING, JR. BOULEVARD AND SOUTH SMOKEHOUSE TRAIL IN WARD 1

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby approves PZD-2023-02 as described in Exhibits "A", "B" and "C" attached to the Planning Division's Agenda Memo which allows the development of 2.93 acres for residential units, 0.49 acres for parkland dedication, and 1.07 acres for primarily natural preservation.

Section 2: That the official zoning map of the City of Fayetteville, Arkansas is hereby amended to reflect the zoning criteria change provided in Section 1 above.

RE: Legal description of an area of land for a PZD on a portion of "Adjusted Tract 2" from Property Line Adjustment survey 2021-33895

LEGAL DESCRIPTION FOR PZD:
A PART OF THE NORTH HALF OF THE SOUTHEAST QUARTER OF SECTION 24, TOWNSHIP 16 NORTH, RANGE 31 WEST, WASHINGTON COUNTY, ARKANSAS, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS, TO-WIT: BEGINNING AT AN EXISTING STONE MARKING THE SOUTHEAST CORNER OF THE NORTHWEST QUARTER OF THE SOUTHEAST QUARTER OF SAID SECTION 24 AND RUNNING THENCE ALONG THE SOUTH LINE THEREOF N87°36'10"W 96.00' TO AN EXISTING REBAR, THENCE LEAVING SAID SOUTH LINE N01°55'39"E 436.64', THENCE N76°15'06"E 166.64', THENCE S01°54'39"W 2.06', THENCE S78°55'38"E 147.57', THENCE S30°52'00"E 293.27', THENCE S01°55'11"W 213.44' TO THE SOUTH LINE OF THE NORTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SAID SECTION 24, THENCE ALONG SAID SOUTH LINE N87°36'10"W 369.02' TO THE POINT OF BEGINNING, CONTAINING 4.49 ACRES, MORE OR LESS. SUBJECT TO ALL EASEMENTS AND RIGHTS-OF-WAY OF RECORD.

Sweet Bay @ Kessler

Revised 5/8/2023

A: Ownership:

D&B of Northwest Arkansas, LLC

PO Box 1146

Farmington, AR 72730

B. Scope & Project

Project Description:

The total property is 5.59 acres. The Planned Zoning District is for the rear 4.49 acre portion of the property. Currently the property, roughly a boot shape, includes 3 different zonings. The front of the project lot borders MLK and is zoned as UT: Urban Thoroughfare; 1.10 acres (19.7%). The middle portion is zoned CS: Community Services; 2.69 acres (48.1%). The rear of the Project is zoned R-A: Residential-Agricultural; 1.80 acres (32.2%).

This proposal only unifies and rezones the back 2 sections, from CS and R-A to RPZD. The front portion will remain UT and be developed for a commercial use appropriate to the frontage. The purpose of this Rezone is to uniformly develop the back portion of the site. Currently the small portion of land at the rear has less than the minimum 2 acres for even a single home. Every effort has been made to tone down the development style of the proposal towards a balanced use of the forested toe of Kessler Mountain.

Scope:

(25) cabin like single family residences and associated roads, parking, natural spaces, and public utilities.

C. General Project Concept

1. Site Major Elements Considerations:
   i. Flexibility – This proposal offers an alternative not available directly though other zoning. By squeezing the parking areas together and distributing the houses on only those portions of land suitable for construction without regard to street frontage, this plan utilizes the site for a residential use, while maximizing and preserving the maximum amount of natural space.
   ii. Compatibility – The surrounding properties are undeveloped, with a high development possibility to the north and a low possibility to the south. This project incorporating a medium density with an emphasis on tree preservation and natural space serves as a gradual transitional area between the undeveloped forest of Mount Kessler and the intense corridor of MLK.
   iii. Harmony – Several design considerations for this project were tree preservation and maintaining the character of the land including the medium mature woodlands and transitional ecological succession character of the former farmland.
   iv. Variety –This PZD offers variety because it includes a preservation approach for the onsite wooded drainage channels, includes a preservation area around the existing bike trail, and includes several small pods of houses that each have a group orientation to create 4 to 5 separate micro communities.
   v. No negative impacts – This project does not create negative impacts for future developments on adjacent properties. The natural drainage pattern changes and other changes are mitigated within the boundary of the site.
   vi. Coordination – The neighboring property owners were all introduced to the project and given an opportunity to discuss the project. Several meetings were held with the owner of the corner property to discuss access. Both the trailblazer group (current owner) and the Fayetteville parks department were approached and invited to give input on the design and location of the PZD proposal. A loose association of the residential neighbors in the nearest neighborhood were

contacted. A presentation was given to them about the proposed development and a subsequent input session to hear their opinions.

vii. Open space – This proposal includes several natural areas adjacent to streams and focuses small clusters of residential units around shared open space and tight porch paths and orients the rears toward natural areas creating a front porch community feel. Neighbors must pass their neighbors' front doors on the way to their cars but can also find privacy.

viii. Natural features – Several natural intermittent channels and trees occupy the site. These areas are left as they are. Tree Preservation is discussed below.

ix. Future Land Use – Please see item J discussed below.

x. Special Features – This land is currently undeveloped. The site is now wooded but was previously farmland. The land is currently not utilized.

xi. Recognized Zoning Considerations – There are no recognized zoning considerations for this site.

2. Streets

Streets are 26' wide asphalt.

3. Trail and Pedestrian Connectivity

A proposed section of the trail would come to the site where it borders MLK giving residents direct access to the greenway system. The immediate trail connectivity would make car-less bicycle living feasible for the adventurous.

4. Lot Layout

This project is conceived as a single owner rental project without any proposed subdivision of lots.

5. Undisturbed Natural Buffer areas

The existing intermittent runoff channels on the site were carefully avoided and buffered against development. Trees adjacent to and in the channels have been left in place. Stream crossings are minimal and situated perpendicular for minimum disturbance.

6. Tree Preservation Areas

A giant and ancient oak tree was immediately identified as a critical tree for preservation. Many aspects of the unconventional layout of the site can be traced directly back to this tree and centering the development around it. Tree preservation areas are also intermittent channel buffering areas. The site layout was predicted to avoid work in and near the channels and preserving tree cover in a strip around the channels. PZDs require 25% of the canopy to be preserved. This proposal preserves slightly more than 30% as presented.

7. Stormwater Detention Areas and Drainage

Stormwater detention is achieved using porous gravel reservoirs situated beneath permeable paver parking areas. For greater rainstorm events like to the 50 and 100 year storms the parking lot is also designed to hold up to 6" of water, which is a great enough quantity to attenuate storm flows, but not enough to flood cars or damage property. Preliminary stormwater models show that the site as designed provides the required stormwater detention and water quality treatment required by the Drainage

Criteria Manual. Stormwater calculations and design will be verified and reviewed as part of a subsequent large-scale development, so while the presented design accounts for stormwater, the city will have additional opportunities for comment, review, and approval.

8. Fire Access and Fire Code

The cabins and roads as shown in the proposed exhibit meet all applicable requirements for fire apparatus access. The roads are 26’ wide. Turn radii are 28’ or greater. Road length from Appendix D compliant turn-arounds are 150’ or less. Two separate fire access roads connect the site to the street system, one at the front of the site to MLK and a second proposed drive connecting to Smokehouse Trail to the west.

9. Site Grading

The parking lots are situated parallel to the natural contours so that slight cut grading up hill and fill grading downhill allows the parking to the flat and double as detention areas. Each cabin is conceived as an elevated slab that preserves the adjacent native grade. Connection paths would be at grade. Necessarily flat areas to connect ADA parking to ADA units are situated on the lower parking area where the native grade is natural much flatter. This technique of following the contours for the graded elements reduces the amount of site grading and soil disturbance usually associated with a development of this size and density.

D. Site Areas

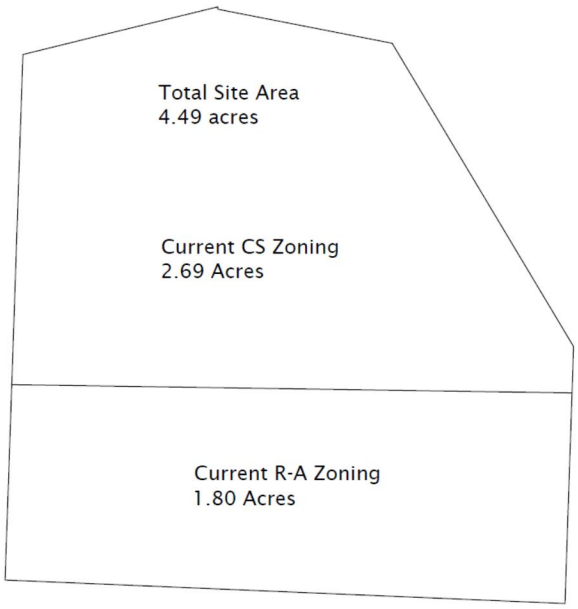

Figure 1 - Site Area of Current Zoning

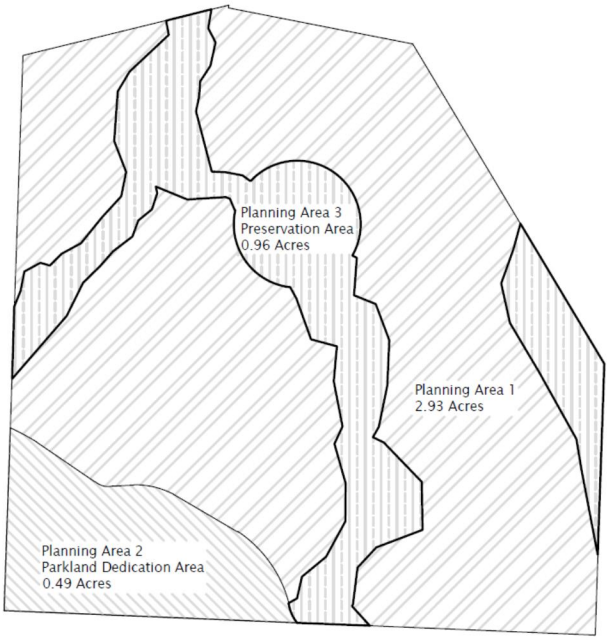

Figure 2 - Site Area of Proposed PZD

Existing CS

Proposed Planning area 1 – Single Family Residential

Proposed Planning Area 2 – Parkland Dedication

Proposed Planning Area 3 – Preservation Area

161.03 - District R-A, Residential-Agricultural

(A) *Purposes.* The regulations of the agricultural district are designed to protect agricultural land until an orderly transition to urban development has been accomplished; prevent wasteful scattering of development in rural areas; obtain economy of public funds in the providing of public improvements and services of orderly growth; conserve the tax base; provide opportunity for affordable housing, increase scenic attractiveness; and conserve open space.

(B) *Uses.*

(1) *Permitted Uses.*

Unit 1	City-wide uses by right
Unit 3	Public protection and utility facilities
Unit 6	Agriculture
Unit 7	Animal husbandry
Unit 8	Single-family dwellings
Unit 9	Two-family dwellings
Unit 37	Manufactured homes
Unit 41	Accessory dwellings
Unit 43	Animal boarding and training
Unit 46	Short-term rentals

(2) *Conditional Uses.*

Unit 2	City-wide uses by conditional use permit
Unit 4	Cultural and recreational facilities

Unit 5	Government facilities
Unit 20	Commercial recreation, large sites
Unit 24	Home occupations
Unit 35	Outdoor Music Establishments
Unit 36	Wireless communications facilities
Unit 42	Clean technologies

(C) *Density.*

Units per acre	One-half (½)

(D) *Bulk and Area Regulations.*

Lot width minimum	200 feet
Lot Area Minimum:	
Residential:	2 acres
Nonresidential:	2 acres
Lot area per dwelling unit	2 acres

(E) *Setback Requirements.*

Front	Side	Rear
35 feet	20 feet	35 feet

(F) *Height Requirements.* There shall be no maximum height limits in the R-A District, provided, however, if a building exceeds the height of one (1) story, the portion of the building over one (1) story shall have an additional setback from any boundary line of an adjacent residential district. The amount of additional setback for the portion of the building over one (1) story shall be equal to the difference between the total height of that portion of the building and one (1) story.

(G) *Building area.* None.

(Code 1965, App. A., Art. 5(1); Ord. No. 1747, 6-29-70; Code 1991, §160.030; Ord. No. 4100, §2 (Ex. A), 6-16-98; Ord. No. 4178, 8-31-99; Ord. No. 5028, 6-19-07; Ord. No. 5128, 4-15-08; Ord. No. 5195, 11-6-08; Ord. No. 5238, 5-5-09; Ord. No. 5479, 2-7-12; Ord. No. 5945 , §3, 1-17-17; Ord. No. 6015 , §1(Exh. A), 11-21-17; Ord. No. 6427 , §§1(Exh. C), 2, 4-20-21)

Editor's note— Ord. No. 6625 , §1 adopted December 6, 2022, "determines that Section 2 of Ordinance 6427 (Sunset Clause) be amended so that Ordinance 6427 and all amendments to Code Sections ordained or enacted by Ordinance 6427 shall automatically sunset, be repealed and become void on December 31, 2023, unless prior to that date the City Council amends this ordinance to repeal or further amend this sunset, repeal and termination section."

161.22 - Community Services

(A) *Purpose.* The Community Services District is designed primarily to provide convenience goods and personal services for persons living in the surrounding residential areas and is intended to provide for adaptable mixed use centers located along commercial corridors that connect denser development nodes. There is a mixture of residential and commercial uses in a traditional urban form with buildings addressing the street. For the purposes of Chapter 96: Noise Control, the Community Services district is a commercial zone. The intent of this zoning district is to provide standards that enable development to be approved administratively.

(B) *Uses.*

(1) *Permitted Uses.*

Unit 1	City-wide uses by right
Unit 4	Cultural and recreational facilities
Unit 5	Government facilities
Unit 8	Single-family dwellings
Unit 9	Two-family dwellings
Unit 10	Three (3) and four (4) family dwellings
Unit 13	Eating places
Unit 15	Neighborhood Shopping goods
Unit 24	Home occupations
Unit 25	Offices, studios and related services
Unit 26	Multi-family dwellings
Unit 40	Sidewalk Cafes
Unit 41	Accessory dwellings

Unit 44	Cluster Housing Development
Unit 45	Small scale production
Unit 46	Short-term rentals

Note: Any combination of above uses is permitted upon any lot within this zone. Conditional uses shall need approval when combined with pre-approved uses.

(2) *Conditional Uses.*

Unit 2	City-wide uses by conditional use permit
Unit 3	Public protection and utility facilities
Unit 14	Hotel, motel and amusement services
Unit 16	Shopping goods
Unit 17	Transportation, trades and services
Unit 18	Gasoline service stations and drive-in/drive-through restaurants
Unit 19	Commercial recreation, small sites
Unit 28	Center for collecting recyclable materials
Unit 34	Liquor stores
Unit 35	Outdoor music establishments
Unit 36	Wireless communication facilities*
Unit 42	Clean technologies

(C) *Density.* None.

(D) *Bulk and Area Regulations.*

(1) *Lot Width Minimum.*

Dwelling	18 feet
All others	None

(2) *Lot Area Minimum.* None.

(E) *Setback regulations.*

Front:	A build-to zone that is located between 10 feet and a line 25 feet from the front property line.
Side and rear:	None
Side or rear, when contiguous to a single-family residential district:	15 feet

(F) *Building Height Regulations.*

Building Height Maximum	5 stories

(G) *Minimum Buildable Street Frontage.*50% of the lot width.

(Ord. No. 5312, 4-20-10; Ord. No. 5339, 8-3-10; Ord. No. 5462, 12-6-11; Ord. No. 5592, 6-18-13; Ord. No. 5664, 2-18-14; Ord. No. 5735, 1-20-15; Ord. No. 5800 , §1(Exh. A), 10-6-15; Ord. No. 5921 , §1, 11-1-16; Ord. No. 5945 , §§5, 7—9, 1-17-17; Ord. No. 6015 , §1(Exh. A), 11-21-17; Ord. No. 6223 , §1, 9-3-19; Ord. No. 6409 §1, 2-2-21; Ord. No. 6427 , §§1(Exh. C), 2, 4-20-21; Ord. No. 6497 , §1, 10-19-21)

Editor's note— Ord. No. 6625 , §1 adopted December 6, 2022, "determines that Section 2 of Ordinance 6427 (Sunset Clause) be amended so that Ordinance 6427 and all amendments to Code Sections ordained or enacted by Ordinance 6427 shall automatically sunset, be repealed and become void on December 31, 2023, unless prior to that date the City Council amends this ordinance to repeal or further amend this sunset, repeal and termination section."

RPZD Sweet Bay @ Kessler
Proposed Zoning

Planning Area 1	Single Family Residential Area.

(A) *Purposes.* *The purpose of this planning area is to provide single family living in a manner that increases community interaction by clustering houses and minimizing ecological disturbance by concentrating parking, detention, and utilities. This PZD creates a buffer between the low density and mostly undeveloped slope of Kessler Mountain and the high intensity of the rapidly growing MLK corridor connecting Fayetteville and Farmington.*

(B) *Uses*

(1) *Permitted Uses.*

Unit 1	City-wide uses by right
Unit 3	Public protection and utility facilities
Unit 8	Single-family dwellings
Unit 41	Accessory dwellings

(2) *Conditional Uses.*

Unit 2	City-wide uses by conditional use permit
Unit 4	Cultural and recreational facilities
Unit 24	Home occupations
Unit 46	Short-term rentals

(C) *Density*

Units Per Acre	10

(D) *Bulk and Area Regulations*

Lot Width Minimum	None	
Lot Area Minmum	Residential	None
	Nonresidential	None
Lot Area per dwelling unit	None	

(E) *Setback Regulations*

Front	Side	Rear
15 feet	15 feet	15 feet

(F) *Height Requirments.*

3 stories

(G) *Building Area.*

None

RPZD Sweet Bay @ Kessler
Proposed Zoning

Planning Area 2	Park Land Dedication Area

(A) *Purposes.* *The purpose of this planning area is to create an area of park land. This area includes a part of a trailblazers downhill mountain biking trail. Trailblazers is currently in the process of donating the adjacent property to the city for the use of a downhill mountainbiking park. This area is proposed to be dedicated to the City during the large scale development of the subject property for this PZD.*

(B) *Uses*

(1) *Permitted Uses.*

Unit 1	City-wide uses by right
Unit 4	Cultural and recreational facilities
Unit 5	Government Faclities

(2) *Conditional Uses.*

Unit 2	City-wide uses by conditional use permit
Unit 3	Public protection and utility facilities
Unit 36	Wireless communication facilties
Unit 42	Clean technologies

(C) *Density*

Units Per Acre	N/A

(D) *Bulk and Area Regulations*

Front	Side	Rear
30 feet	20 feet	25 feet

(F) *Height Requirments.*

There shall be no maximum height limit, provided, however, if a building exceeds the height of two (2) stories, the portion of the building that exceeds two (2) stories shall have an additional setback from any boundary line of an adjacent residential district. The amount of additional setback for the portion of the building over two (2) stories shall be equal to the difference between the total height of that portion of the building, and two (2) stories.

(G) *Building Area.*

On any lot the area occupied by all buildings shall not exceed 60% of the total area of such lot. Accessory ground mounted solar energy systems shall not be considered buildings.

F. Site Analysis

The site is covered evenly by a mixture of scrub to medium mature stands of oak/hickory forest on the lower toe of the Mount Kessler hill.

G. Recreational Facilities

The site is near both hiking trails in the hills above the old smokehouse and bike trails on the neighboring property owned and operated by trail blazers. The regional greenway system comes to the site.

H. Reason for Rezoning

The purpose of this Rezone is to uniformly develop the back portion of the site. This proposal only unifies and rezones the back to 2 sections, from CS and R-A to this PZD. The front portion will remain UT and be developed for mixed commercial use appropriate to the frontage.

I. Relationship to Adjacent Properties

To the North is ultimately MLK Boulevard, but the Large-Scale Development after this rezoning would include a proposed development of small size cluster of commercial spaces.

To the West are two properties, the northern is currently under review for a proposed gas station/convenience store, and the southern is owned by trailblazers and contains bike trails. This project would build an access between these two properties and a trail head for the trailblazer property.

To the East is a currently vacant property that was previously approved for an expansive RV park.

To the South is a lot owned by trailblazers that they are currently offering for sale.

J. Comprehensive Land Use Plan

The entirety of this site is designated as “City Neighborhood” in the 2040 Master Plan and is shown as such on the City’s “future Land Use Plan. The City Plan lays out guiding policies for City Neighborhood. This project complies with the lands use plan by providing:

1. Adequate infrastructure
2. Trail connectivity for walking and biking
3. ADA compliant mixed use
4. Appropriate density for the site
5. Streets and walking paths that suit the land
6. Encourage neighborliness
7. Vernacular materiality of built structures

K. Impact on City Services

This project would add to the water and sewer infrastructure of the city. This project would require trash services.

L. Conceptual Description

1. Screening and Landscape

The proposed landscape material for Sweet Bay @ Kessler shall share the Ozark – Woodland character of the surrounding areas by using plant species native to this region. The landscape palette will range from large shade trees, ornamental trees, to low, space-defining plantings that respond and reflect its context to Mt. Kessler Park. Provided buffers shall meet the required widths and materials as listed in the City of Fayetteville Code of Ordinances. The property is surrounded by commercial or residential-agricultural zones and will not negatively impact the adjacent properties.

2. Traffic Circulation

Traffic will enter the site via an existing curb cut along MLK.

3. Parking Standards

Parking shall be per the minimum requirements for the residential uses in the Unified Development Code in regard to standard spaces and ADA spaces, 2 spots per unit, with 2 ADA spaces.

4. Perimeter treatment

Where possible vegetation shall be left around the perimeter of the site.

5. Sidewalks

Concrete sidewalks shall connect the residential units to the public right of way with a continuous path.

6. Streetlights

Streetlights shall be added as required along streets for minimum lighting requirements. Parking lots shall include lighting. All outdoor lighting shall meet the requirements as set forth in UDC section 176, Outdoor Lighting, and shall be down cast and shielded.

7. Water

Water shall connect to the site via the mains along MLK. All water improvements shall be per the standard details and specifications of the city, reviewed by the city, and contingent upon approval of the Arkansas Department of Health.

8. Sewer

Sewer shall connect to the site via the manhole located at the intersection of MLK and Smoke House trail via a new main built in the existing easement along MLK. The existing easement contains an easement that has sufficient width to include a sewer main with appropriate offset. All water improvements shall be per the standard details and specifications of the city, reviewed by the city, and contingent upon approval of the Arkansas Department of Health.

9. Streets and Drainage

Streets shall be asphalt, 26' in width and capable of support heavy vehicles including fire trucks and trash trucks. Parking areas shall be permeable paver basin structures with void space gravel detention. Roofs shall be hard piped to parking basins. To the greatest extent possible natural surface drainage patterns shall be preserved. Drainage improvements shall meet the requirements of the Drainage criteria manual.

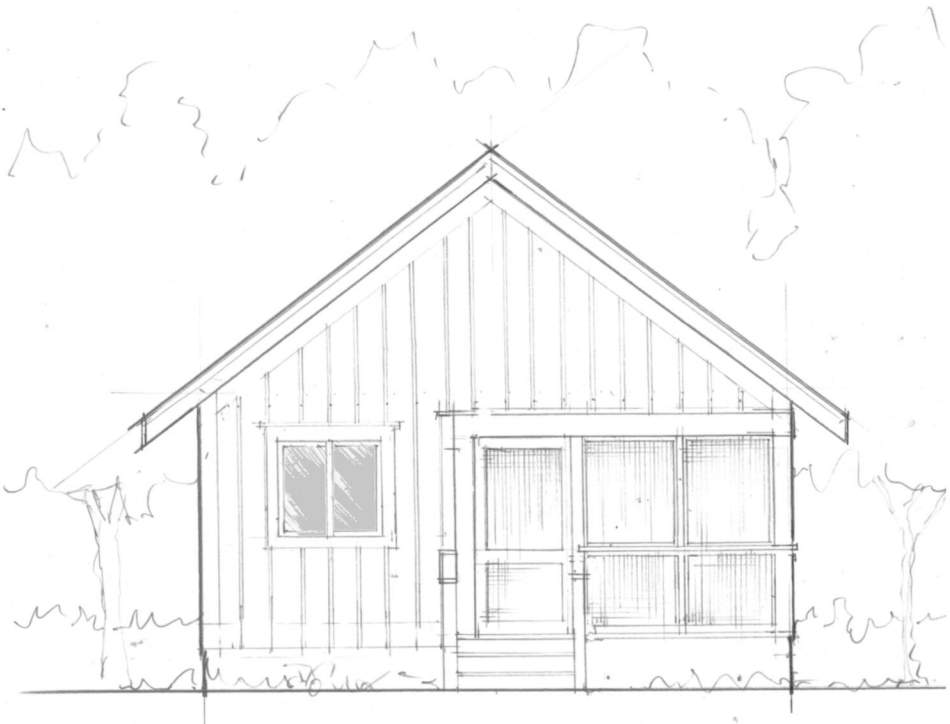
10. Construction of Non-residential Facilities

This PZD is primarily residential in nature. While some non-residential uses are listed in the permitted and conditional uses, no non-residential use is being considered.

11. Proposed Signage

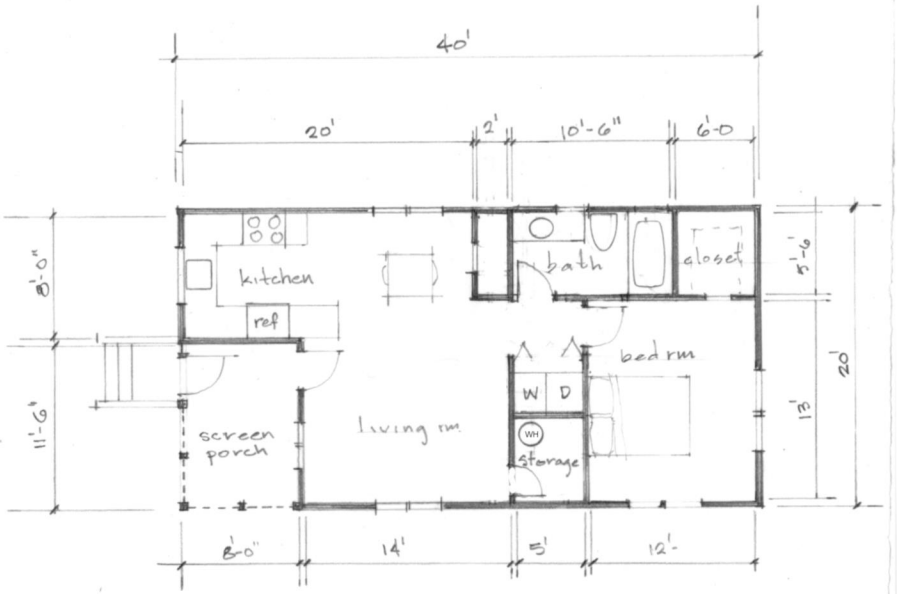
No signage is proposed. Any and all signage shall meet the requirements as set forth in Unified Development Code section 174.

12. View Protection



The site is isolated from direct public view by the neighboring properties.

13. Covenants, Trusts, and Homeowner Association



No covenants and no homeowner association are proposed. All common areas and maintenance shall be performed by the owner.

M. Architectural Standards

-Architectural standards shall generally reflect elevations as submitted.

RE: Rezone of Part of Parcel #762-16280-000 – Rezoning Request Letter

Dear Planning Staff,

Gavin Smith Civil Engineering (Applicant), of D&B of Northwest Arkansas (Owner), are requesting a Rezoning on part of a parcel within the City Limits of Fayetteville Arkansas.

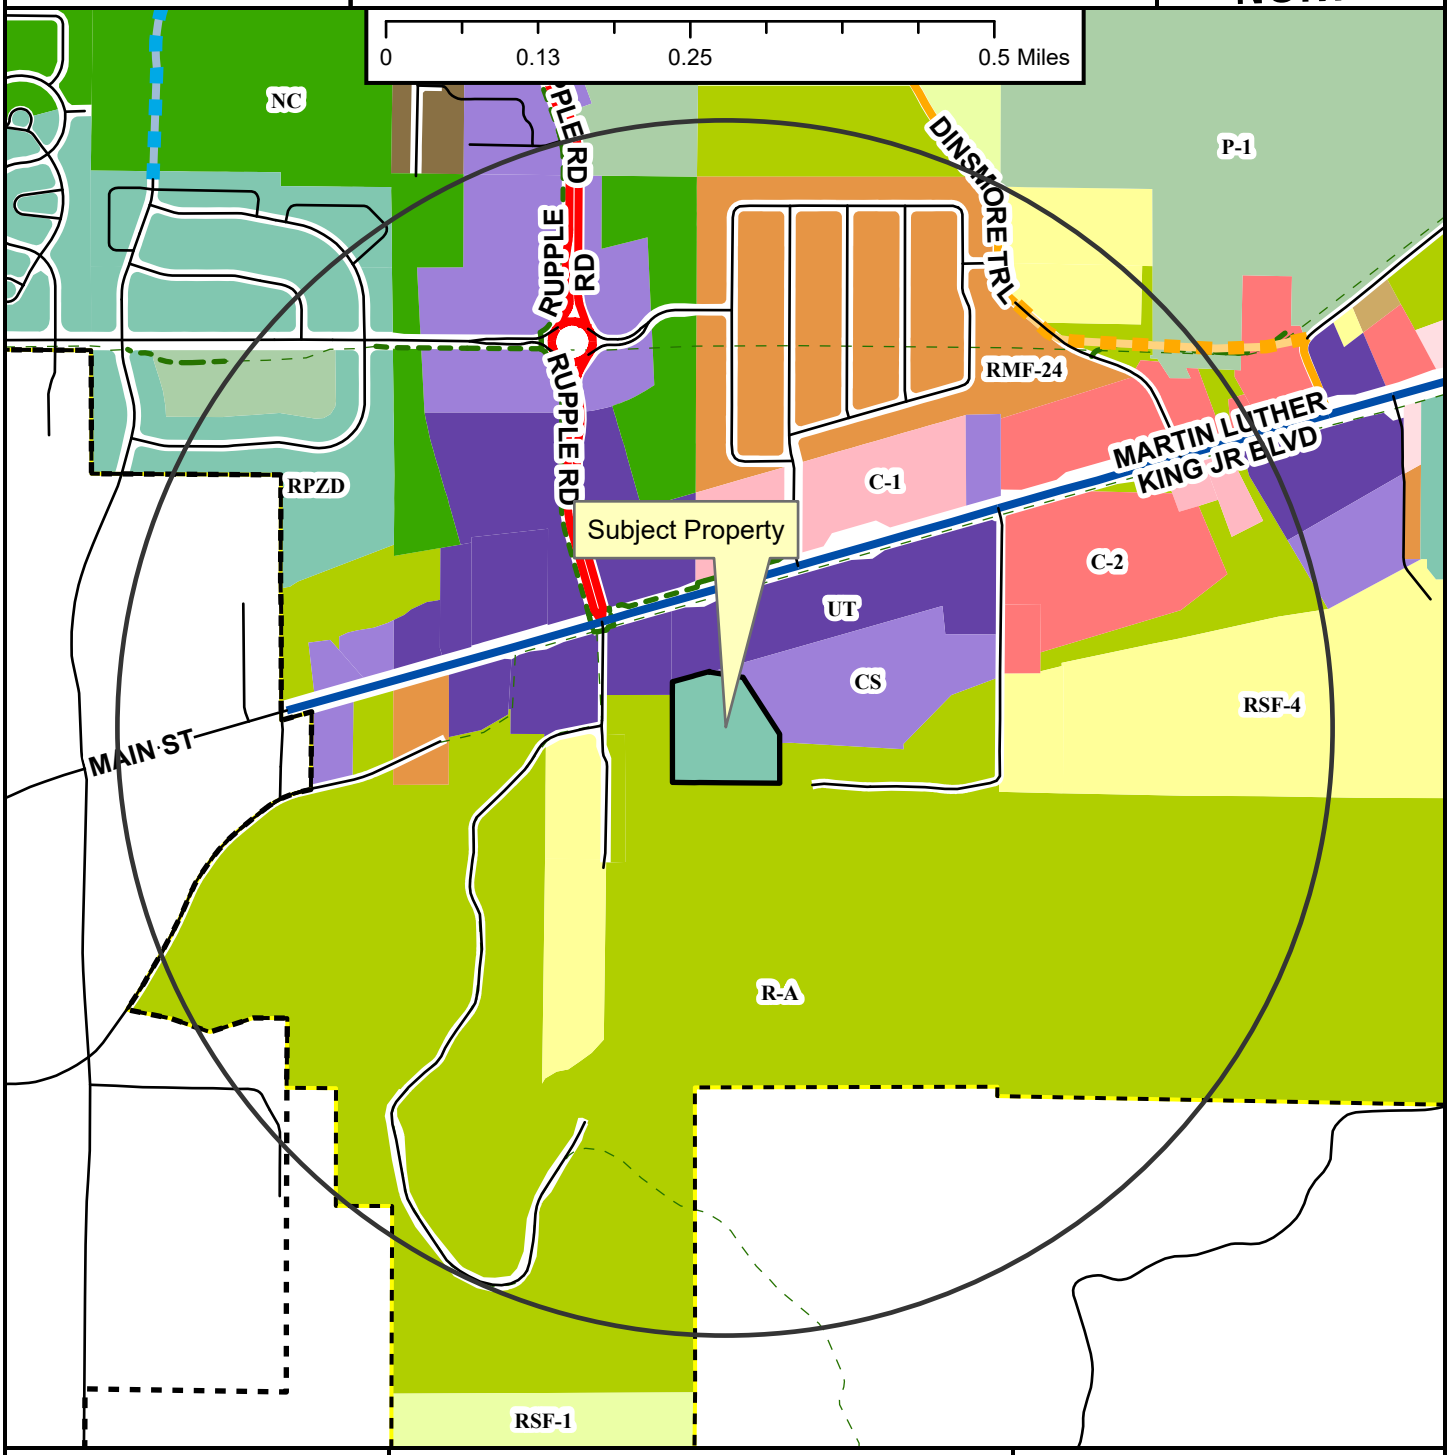
The property subject to the requested rezoning is 5.59 acres on West Martin Luther King Boulevard, approximately 300 feet East of the intersection of South Rupple Road and South Smokehouse Trail, on the south side of West MLK Blvd. The subject property is assigned Washington County Parcel #765-16280-000, and is currently vacant/undeveloped.

The southern 4.49 acres of Parcel #765-16280-000, which is the area subject to this Rezoning request, is currently zoned as a Residential Planned Zoning District. The zoning designation was approved as PZD-2023-0002 at the June 6, 2023 City Council meeting. The remaining 1.10 in the northern portion of property has a zoning designation of Urban Thoroughfare.

The Applicant and Owner are requesting a rezoning of the 4.49 acres currently under the RPZD to be rezoned to CS, Community Services. The RPZD allows for permitted Use Units 1, 3, 8, and 41, and conditional use Units 2, 4, 24, & 46. A rezoning to Community Services also aligns with the Future Land Use designation of City Neighborhood Area, which encourages greater density as well as Non-Residential and Commercial uses. The rezoning of this area will allow for a significant increase in Permitted and Conditional uses, providing greater flexibility in the future development of this property.

The surrounding zoning designations of the proposed rezoning are a mixture of Urban Thoroughfare along Martin Luther King Boulevard, Community Services directly to the east, Residential-Agricultural to southeast, south, and west. A rezoning to Community Services is compatible with the surrounding area's zoning designations, and therefore will not adversely affect or conflict with the surrounding land uses.

The Applicant and Owner/Developer look forward to discussing this rezoning with Staff throughout the review process. Please contact the Applicant if there are any immediate questions or concerns regarding this application.



Thank You,
Jason Young

CITY OF FAYETTEVILLE ARKANSAS

CITY COUNCIL MEMO
2024-747

MEETING OF NOVEMBER 26, 2024

TO: Mayor Jordan and City Council

THRU: Susan Norton, Chief of Staff
Chris Brown, Public Works Director

FROM: Matt Mihalevich, Active Transportation Manager

SUBJECT: **Safe Streets and Roads for All Grant Agreement**

RECOMMENDATION:
Staff recommends approval of Grant Agreement with the United States Department of Transportation's (USDOT) Federal Highway Administration (FHWA) for acceptance of a grant through the Safe Streets and Roads for All (SS4A) program, approval of a budget adjustment recognizing $25,000,000 in federal-aid funding and $1,250,000 in funding from the University of Arkansas, establishing a new fund (2235) to account for the proceeds of the grant, authorizing the Mayor to sign additional grant documents as necessary to implement the projects and approval of two full time staff positions to manage the federal-aid funding requirements.

BACKGROUND:
The Bipartisan Infrastructure Law (BIL) established the new Safe Streets and Roads for All (SS4A) discretionary program, with $5 billion in appropriated funds over 5 years, 2022-2026. The SS4A program funds regional, local, and Tribal initiatives through grants to prevent roadway deaths and serious injuries. The SS4A program supports the U.S. Department of Transportation's National Roadway Safety Strategy and our goal of zero roadway deaths.

Fayetteville was awarded Federal funding in the amount of $25 million through the SS4A program in December 2023. Funding was approved for Fayetteville's Vison Zero Strategy which focuses on five infrastructure projects as well as community education and awareness programming to be implemented over a five-year period. The University of Arkansas will be contributing half of the required matching funds for the Maple Street Project in the amount of $1,250,000.

DISCUSSION:
The five street sections identified on the high injury network for safety improvements funded through the SS4A grant are: W. Maple Street Garland Ave to Gregg Ave), N. College Avenue (Sycamore St. to Township St.), South School (M.L.K. Blvd to 15th St.), N. Gregg Ave. (North St. to Drake St.) and E. Joyce Blvd. (College Ave to Crossover Rd.) The design of these projects will use the Safe System Approach to reduce and eliminate fatal and serious injury crashes on our transportation system.

In addition to infrastructure improvements, the SS4A funding includes $500,000 for education and awareness. This funding will be used for a variety of safety outreach programs including strategic marketing campaigns, bicycle safety equipment, crosswalk awareness, professional training and resources a for a vision zero task force.

Due to the large scale of this program, two full-time staff positions are needed to support the federal grant administration and project coordination of the Safe Streets and Roads for All grant. This includes managing all aspects of the SSFA grant including the consultant contracts, timeline, reimbursements, procurement and meeting all the requirements from the Federal Highway Administration. Costs associated with these two positions are included in the five-year budget and approved by FHWA.

BUDGET/STAFF IMPACT:
The required 25% match of $7,250,000 has been budgeted through the Street Bond. The staff positions are one Federal Aid Project Manager and one Federal Aid Project Coordinator to be funded for a 5-year period by the SS4 grant. $1,250,000 in matching funds for Maple Street will be contributed by the University of Arkansas for the Maple Street Project.

Because the financial activity will not begin until next year, the Budget Adjustment will be posted on January 1, 2025.

Safe Streets and Roads for All Grant Agreement

A RESOLUTION TO AUTHORIZE ACCEPTANCE OF A DEPARTMENT OF TRANSPORTATION FEDERAL HIGHWAY ADMINISTRATION GRANT IN THE AMOUNT OF $25,000,000.00, THROUGH THE SAFE STREETS AND ROADS FOR ALL PROGRAM, TO APPROVE A GRANT AGREEMENT WITH THE FEDERAL HIGHWAY ADMINISTRATION, TO APPROVE TWO NEW FULL TIME STAFF POSITIONS TO MANAGE THE FEDERAL-AID FUNDING REQUIREMENTS, AND TO APPROVE A BUDGET ADJUSTMENT ESTABLISHING A NEW FUND TO ACCOUNT FOR THE PROCEEDS OF THE GRANT

WHEREAS, the Bipartisan Infrastructure Law (BIL) established the new Safe Streets and Roads for All (SS4A) discretionary program, with $5 billion in appropriated funds over 5 years, 2022-2026 to the U.S. Department of Transportation's National Roadway Safety Strategy and our goal of zero roadway deaths; and

WHEREAS, Fayetteville was awarded Federal funding in the amount of $25 million through the SS4A program in December 2023 for Fayetteville's Vison Zero Strategy which focuses on five infrastructure projects as well as community education and awareness programming to be implemented over a five-year period; and

WHEREAS, the University of Arkansas will be contributing half of the required matching funds for the Maple Street Project in the amount of $1,250,000.00; and

WHEREAS, the five street sections identified on the high injury network for safety improvements funded through the SS4A grant are: West Maple Street Garland Avenue to Gregg Avenue, North College Avenue (Sycamore Street to Township Street), South School (M.LK. Blvd to 15th Street), North Gregg Avenue (North Street to Drake Street) and East Joyce Boulevard (College Avenue to Crossover Road) using the Safe System Approach to reduce and eliminate fatal and serious injury crashes on our transportation system; and

WHEREAS, in addition to infrastructure improvements, the SS4A funding includes $500,000.00 for education and awareness. This funding will be used for a variety of safety outreach programs including strategic marketing campaigns, bicycle safety equipment, crosswalk awareness, professional training and resources for a vision zero task force; and

WHEREAS, due to the large scale of this program, two full-time staff positions are needed to support the federal grant administration and project coordination of the Safe Streets and Roads for All grant; and

WHEREAS, the required 25% match of $7,250,000.00 has been budgeted through the Street Bond.

NOW THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby authorizes Mayor Jordan to accept a grant from the Department of Transportation (USDOT) Federal Highway Administration (FHWA) in the amount of $25,000,000.00.

Section 2: That the City Council of the City of Fayetteville, Arkansas hereby authorizes Mayor Jordan to sign a Grant Agreement with the Federal Highway Administration to implement the Safe Streets and Roads for Fayetteville, Arkansas – Accelerating Change Toward Vision Zero Project and further authorizes the Mayor to sign additional documents as necessary to receive the grant funds.

Section 3: That the City Council of the City of Fayetteville, Arkansas hereby authorizes and approves the addition of two full-time staff positions to manage the federal-aid funding requirements.

Section 4: That the City Council of the City of Fayetteville, Arkansas hereby approves a budget adjustment, a copy of which is attached to this Resolution, establishing a new fund (2235) to account for the proceeds of the grant.

Safe Streets and Roads for Fayetteville, Arkansas - Accelerating Change Toward Vision Zero

Applicant: City of Fayetteville

City of Fayetteville, Arkansas

SS4A Award: $25,000,000

Project Description

The City of Fayetteville is awarded funds to implement its Vision Zero strategy, which addresses safety problems in the City's most critical transportation corridors. These roadways were constructed using outdated auto-oriented designs that invite high-speed driving and lack basic infrastructure for non-vehicular use. These roadways have been identified on Fayetteville's high-injury network, which represents just 12 percent of Fayetteville's roadway miles but accounts for 60 percent of fatal and serious-injury crashes.

This project will implement five major capital improvement projects on high-injury corridors, paired with a community-wide education and awareness campaign (funded as a supplemental planning and demonstration activity). The five major projects will implement Proven Safety Countermeasures including improved lighting and corridor access management; appropriate speed limits; roundabout installation; dedicated left- and right-turn lanes at intersections; and vulnerable road user countermeasures including raised medians, pedestrian refuge islands, road diets, sidewalks, bike lanes, rectangular rapid-flashing beacons, and crosswalk visibility enhancements.

GRANT AGREEMENT UNDER THE
FISCAL YEAR 2023 SAFE STREETS AND ROADS FOR ALL GRANT PROGRAM

This agreement is between the United States Department of Transportation's (the "**USDOT**") Federal Highway Administration (the "**FHWA**") and the City of Fayetteville, Arkansas (the "**Recipient**").

This agreement reflects the selection of the Recipient to receive a Safe Streets and Roads for All ("**SS4A**") Grant for the Safe Streets and Roads for Fayetteville, Arkansas – Accelerating change towards Vision Zero.

The parties therefore agree to the following:

ARTICLE 1
GENERAL TERMS AND CONDITIONS

1.1 General Terms and Conditions.

(a) In this agreement, "**General Terms and Conditions**" means the content of the document titled "General Terms and Conditions Under the Fiscal Year 2023 Safe Streets and Roads for All ("SS4A") Grant Program,", which is available at https://www.transportation.gov/grants/ss4a/grant-agreements under "Fiscal Year 2023." Articles 7–30 are in the General Terms and Conditions. The General Terms and Conditions are part of this agreement.

(b) The Recipient acknowledges that it has knowledge of the General Terms and Conditions. Recipient also states that it is required to comply with all applicable Federal laws and regulations including, but not limited to, the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (2 CFR part 200); National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 et seq.); and Build America, Buy America Act (BIL, div. G §§ 70901-27).

(c) The Recipient acknowledges that the General Terms and Conditions impose obligations on the Recipient and that the Recipient's non-compliance with the General Terms and Conditions may result in remedial action, termination of the SS4A Grant, disallowing costs incurred for the Project, requiring the Recipient to refund to the FHWA the SS4A Grant, and reporting the non-compliance in the Federal-government-wide integrity and performance system.

ARTICLE 2
APPLICATION, PROJECT, AND AWARD

2.1 Application.

Application Title: Safe Streets and Roads for Fayetteville, Arkansas – Accelerating Change Towards Vision Zero

Application Date: 07/07/2023

2.2 Award Amount.

SS4A Grant Amount: $25,000,000

2.3 Federal Obligation Information.

Federal Obligation Type: Multiple

2.5 Grant Designation.

Designation: Implementation

ARTICLE 3
SUMMARY PROJECT INFORMATION

3.1 Summary of Project's Statement of Work.

Fayetteville's Vision Zero Strategy includes five distinct infrastructure catalyst projects and a community-wide education and awareness campaign. The education and awareness campaign schedule will consist of 1 year of planning and development and 4 years of implementation. Education & awareness funding may be allocated immediately upon approval of the grant agreement to begin selection of consultants and campaign development.

The City of Fayetteville may use hourly rates of City staff time tracked as being in support of SS4A projects as eligible expenses counting toward local matching funds. Additional staff position(s) may also be added for project planning, design, administration, and management of the SS4A grant associated projects.

The infrastructure projects are at various levels of readiness and each project schedule will be independent of other projects' status. Separate NEPA approval will be requested for each infrastructure project and construction is planned to proceed on each project regardless of other projects phasing or NEPA status.

The project will be completed in three phases as follows:

1) Base Phase: Pre-NEPA:
   a. Project 1: College Avenue: Conceptual/preliminary design was completed prior to grant award. Environmental documentation, public review of the preliminary design, and other necessary activities will be completed as required for NEPA approval.
   b. Project 2: S. School Avenue: Corridor study and conceptual design was completed prior to grant award; traffic study and analysis, environmental documentation, and public involvement will be completed in this phase to confirm or modify the concept from the study. Documents for approval of NEPA requirements will be developed.
   c. Project 3: W. Maple Street: Design and NEPA documentation have been developed prior to grant award. Public Involvement and review of design and environmental documentation will be completed in this phase.
   d. Project 4: E. Joyce Blvd: Corridor study to determine most effective safety countermeasures, preliminary design, public engagement, and environmental documentation.
   e. Project 5: N. Gregg Ave: 32 months: Corridor study to determine most effective safety countermeasures, preliminary design, public engagement, and environmental documentation.
   f. Supplemental Action Plan Education and Awareness) Activities: Development and implementation of plan.

2) Option Phase 1: Final Design, Right-of-Way, and Utility Relocation: Development of construction plans and acquisition of necessary rights of way and easements. Procurement of a construction manager for some or all project segments. Each project segment noted in the previous section will proceed as an independent project with separate obligation schedule.

3) Option Phase 2: Construction: Construction of each segment as noted above will proceed; procurement by use of standard bidding procedures or by alternative methods of procurement will be determined as each project proceeds, obligation of funds will be requested by project.

3.2 Project's Estimated Schedule.

Fayetteville's Vision Zero Strategy includes five distinct infrastructure catalyst projects and a community-wide education and awareness campaign. The education and awareness campaign schedule will consist of 1 year of planning and development and 4 years of implementation. Education & awareness funding may be allocated immediately upon approval of the grant agreement to begin selection of consultants and campaign development.

The infrastructure projects are at various levels of readiness and each project schedule will be independent of other projects' status. Separate NEPA approval will be requested for each infrastructure project and construction is to proceed on each project regardless of other projects phasing or NEPA status.

Construction on Maple Street is scheduled to begin 6 to 12 months after the agreement date as Maple Street improvements are fully designed and are expected to be eligible for a categorical exclusion for NEPA approval. Construction is expected to be completed in 12 months; therefore, final completion for Maple Street is expected within 24 months of the project agreement date.

College Avenue and S School Ave improvements have conceptual design. These two projects are expected be ready for NEPA approval in 27 months from agreement date and ready for construction in 35 months. Final completion date is expected in 48 months. Joyce Blvd and Gregg Ave are at the beginning stages of public input and conceptual design comprehensive design and are expected to have NEPA Approval in 32 months, construction in 33 months, and complete construction in 52 months.

The community-wide education campaign will inform key decision makers and members of the public in understanding Vision Zero principles and the Safe System Approach. These efforts may include but not be limited to: purchase of radar speed feedback and other supplementary safety signage on high injury corridors, a Vision Zero public service announcement campaign, staffing of city or regional Vision Zero program manager position, a "Twenty is Plenty" messaging campaign, reporting and website services to support a Vision Zero Taskforce, professional development workshops training and seminars for City and University of Arkansas staff and other local transportation professionals.

(Remainder of this Page Left Blank Intentionally)

Implementation Schedule (Construction)

Milestone	Schedule Date
Planned NEPA Completion Date:	Project 3: W Maple Street, May 31, 2025 Project 1: College Ave, June 30, 2026 Project 2: S School Ave June 30, 2026 Project 5: N Gregg Ave November 31, 2027 Project 4: E Joyce Blvd November 31, 2027
Planned Construction Start Date	Project 3: W Maple Street, September 30, 2025 Project 1: College Ave, June 30, 2027 Project 2: S School Ave, June 30, 2027 Project 5: N Gregg Ave, November 30, 2027 Project 4: E Joyce Blvd, November 30, 2027
Planned Construction Substantial Completion and Open to Public Use Date:	Project 3: W Maple Street, September 30, 2026 Project 1: College Ave, June 30, 2028 Project 2: S School Ave, June 30, 2028 Project 5: N Gregg Ave, November 31, 2028 Project 4: E Joyce Blvd, November 31, 2028
Planned SS4A Final Report Date:	December 31, 2028

Implementation Schedule (Non-Construction)

Milestone	Schedule Date
Planned NEPA Completion Date:	N/A
Planned Activity Completion Date:	December 31, 2028
Planned SS4A Final Report Date:	December 31, 2028

3.3 Project's Estimated Costs.

(a) Eligible Project Costs

Eligible Project Costs	
SS4A Grant Amount:	$25,000,000
Other Federal Funds:	$0
State Funds:	$0
Local Funds:	$7,250,000
In-Kind Match:	$0
Other Funds (University of Arkansas):	$1,250,000
Total Eligible Project Cost:	$33,500,000

(b) Cost Classification Table – Planning and Demonstration Grants with demonstration activities and Implementation Grants Only

Cost Classification	Total Costs	Non-SS4A Previously Incurred Costs	Eligible Costs
Administrative and legal expenses	$1,000,000		$1,000,000
Land, structures, rights-of-way, appraisals, etc.	$1,130,000		$1,130,000
Architectural and engineering fees	$1,700,000		$1,700,000
Project inspection fees	$550,000		$550,000
Construction	$26,133,000		$26,133,000
Equipment	$100,000		$100,000
Miscellaneous	$400,000		$400,000
Contingency	$2,487,000		$2,487,000
Project Total	**$33,500,000**		**$33,500,000**

(c) Indirect Costs

Indirect costs are allowable under this Agreement in accordance with 2 CFR part 200 and the Recipient's approved Budget Application. In the event the Recipient's indirect cost rate changes, the Recipient will notify FHWA of the planned adjustment and provide supporting documentation for such adjustment. This Indirect Cost provision does not operate to waive the limitations on Federal funding provided in this document. The Recipient's indirect costs are allowable only insofar as they do not cause the Recipient to exceed the total obligated funding.

ARTICLE 4

RECIPIENT INFORMATION

4.1 Recipient Contact(s).

Chris Brown
Public Works Director
City of Fayetteville, Arkansas
113 W Mountain Street
Fayetteville, AR 72701
479-575-8207
cbrown@fayetteville-ar.gov

4.2 Recipient Key Personnel.

Name	Title or Position
Chris Brown	Public Works Director
Steven Dodson	Deputy CFO
Lyssie Koscheski	Accounting Manager – Bond, Contract & Grant Reporting
Matt Casey	Engineering Design Services Manager
Matt Mihalevich	Active Transportation Manager
Dane Eifling	Mobility Coordinator

4.3 USDOT Project Contact(s).

Safe Streets and Roads for All Program Manager
Federal Highway Administration
Office of Safety
HSSA-1, Mail Stop: E71-117
1200 New Jersey Avenue, S.E.
Washington, DC 20590
202-366-2822

Valera.McDaniel@dot.gov

ARTICLE 5
USDOT ADMINISTRATIVE INFORMATION

5.1 Office for Subaward and Contract Authorization.

USDOT Office for Subaward and Contract Authorization: FHWA Office of Acquisition and Grants Management

SUBAWARDS AND CONTRACTS APPROVAL

Note: See 2 CFR § 200.331, Subrecipient and contractor determinations, for definitions of subrecipient (who is awarded a subaward) versus contractor (who is awarded a contract).

Note: Recipients with a procurement system deemed approved and accepted by the Government or by the Agreement Officer (the "**AO**") are exempt from the requirements of this clause. See 2 CFR 200.317 through 200.327.

In accordance with 2 CFR 200.308(f)(6), the recipient or subrecipient shall obtain prior written approval from the USDOT agreement officer for the subaward, if the subaward activities were not proposed in the application or approved in the Federal award. This provision is in accordance with 2 CFR 200.308(f)(6) and does not apply to procurement transactions for goods and services. Approval will be issued through written notification from the AO or a formal amendment to the Agreement.

The following subawards and contracts are currently approved under the Agreement by the AO. This list does not include supplies, material, equipment, or general support services which are exempt from the pre-approval requirements of this clause.

5.2 Reimbursement Requests

(a) The Recipient may request reimbursement of costs incurred within the budget period of this agreement if those costs do not exceed the amount of funds obligated and are allowable under the applicable cost provisions of 2 C.F.R. Part 200, Subpart E. The Recipient shall not request reimbursement more frequently than monthly.

(b) The Recipient shall use the DELPHI iSupplier System to submit requests for reimbursement to the payment office. When requesting reimbursement of costs incurred or credit for cost share incurred, the Recipient shall electronically submit supporting cost detail with the SF-270 (Request for Advance or Reimbursement)

or SF-271 (Outlay Report and Request for Reimbursement for Construction Programs) to clearly document all costs incurred.

(c) The Recipient's supporting cost detail shall include a detailed breakout of all costs incurred, including direct labor, indirect costs, other direct costs, travel, etc., and the Recipient shall identify the Federal share and the Recipient's share of costs. If the Recipient does not provide sufficient detail in a request for reimbursement, the Agreement Officer's Representative (the "**AOR**") may withhold processing that request until the Recipient provides sufficient detail.

(d) The USDOT shall not reimburse costs unless the AOR reviews and approves the costs to ensure that progress on this agreement is sufficient to substantiate payment.

(e) In the rare instance the Recipient is unable to receive electronic funds transfers (EFT), payment by EFT would impose a hardship on the Recipient because of their inability to manage an account at a financial institution, and/or the Recipient is unable to use the DELPHI iSupplier System to submit their requests for disbursement, the FHWA may waive the requirement that the Recipient use the DELPHI iSupplier System. The Recipient shall contact the Division Office Lead Point of Contact for instructions on and requirements related to pursuing a waiver.

(f) The requirements set forth in these terms and conditions supersede previous financial invoicing requirements for Recipients.

ARTICLE 6
SPECIAL GRANT TERMS

6.1 SS4A funds must be expended within five years after the grant agreement is executed and DOT obligates the funds, which is the budget period end date in section 10.3 of the Terms and Conditions and section 2.4 in this agreement.

6.2. The Recipient demonstrates compliance with civil rights obligations and nondiscrimination laws, including Titles VI of the Civil Rights Act of 1964, the Americans with Disabilities Act (ADA), and Section 504 of the Rehabilitation Act, and accompanying regulations. Recipients of Federal transportation funding will also be required to comply fully with regulations and guidance for the ADA, Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, and all other civil rights requirements.

6.3 SS4A Funds will be allocated to the Recipient and made available to the Recipient in accordance with FHWA procedures.

6.4 The Recipient of a Planning and Demonstration Grant that involves a demonstration activity agrees to provide an assessment of each demonstration activity and update the existing Action Plan, which will incorporate the information gathered in the Action Plan's list of projects or strategies and/or inform another part of the existing Action Plan. The Recipient also agrees that demonstration activities are temporary in nature and must be removed and/or ended following the conclusion of the project if the assessment of the demonstration activities does not affirm that the activities provide safety benefits.

6.5 The Recipient of an Implementation Grant agrees to update its Action Plan within two years of the date of this agreement to: align with all Comprehensive Safety Action Plan components in Table 1 of the SS4A FY 2023 NOFO corresponding with any "no" responses in the Self-Certification Eligibility Worksheet; ensure that the Action Plan's safety focus includes all road users, including pedestrians, bicyclists, and motor vehicle safety; and ensure that the Action Plan was last updated not more than three years prior.

6.6 The Recipient acknowledges that it is required to conduct certain environmental analyses and to prepare and submit to FHWA, or State with applicable NEPA Assignment authority, documents required under NEPA, and other applicable environmental statutes and regulations before the Government will obligate

funds for Option Phase 1 under this agreement and provide the Recipient with a written notice to proceed with Option Phase 1.

6.7 The Government's execution of this agreement does not in any way constitute pre-approval or waiver of any of the regulations imposed upon Recipient under the applicable Federal rules, regulations and laws regarding SS4A projects undertaken in accordance with the terms and conditions of this agreement. The Recipient shall comply with all applicable Federal requirements before incurring any costs under this agreement.

ATTACHMENT A
PERFORMANCE MEASUREMENT INFORMATION

Study Area: City Boundaries of Fayetteville Arkansas
Baseline Measurement Date: December 31, 2024
Baseline Report Date: December 31, 2028

Table 1: Performance Measure Table

Measure	Category and Description	Measurement Frequency and Reporting Deadline
Safety Performance [for Implementation Grants and Planning and Demonstration Grants with demonstration activities]	Fatalities: Total annual fatalities in the project location(s)	Annually and within 120 days after the end of the period of performance
Safety Performance [for Implementation Grants and Planning and Demonstration Grants with demonstration activities]	Serious Injuries: Total annual serious injuries in the project location(s) [if available]	Annually and within 120 days after the end of the period of performance
Safety Performance [for Implementation Grants and Planning and Demonstration Grants with demonstration activities]	Crashes by Road User Category: Total annual crashes in the project location(s) broken out by types of roadway users involved (e.g., pedestrians, bicyclists, motorcyclist, passenger vehicle occupant, commercial vehicle occupant)	Annually and within 120 days after the end of the period of performance
Equity [for all Grants]	Percent of Funds to Underserved Communities: Funding amount (of total project amount) benefitting underserved communities, as defined by USDOT	Within 120 days after the end of the period of performance
Costs [for all Grants]	Project Costs: Quantification of the cost of each eligible project carried out using the grant	Within 120 days after the end of the period of performance

Measure	Category and Description	Measurement Frequency and Reporting Deadline
Outcomes and Benefits [for Implementation Grants and Planning and Demonstration Grants with demonstration activities]	Quantitative Project Benefits: Quantification of evidence-based projects or strategies implemented (e.g., miles of sidewalks installed, number of pedestrian crossings upgraded, etc.)	Within 120 days after the end of the period of performance
Outcomes and Benefits [for Implementation Grants and Planning and Demonstration Grants with demonstration activities]	Qualitative Project Benefits: Qualitative description of evidence-based projects or strategies implemented (e.g., narrative descriptions, testimonials, high-quality before and after photos, etc.)	Within 120 days after the end of the period of performance
Outcomes and Benefits [for Implementation Grants and Planning and Demonstration Grants with demonstration activities]	Project Location(s): GIS/geo coordinate information identifying specific project location(s)	Within 120 days after the end of the period of performance
Lessons Learned and Recommendations [for all Grants]	Lessons Learned and Recommendations: Description of lessons learned and any recommendations relating to future projects or strategies to prevent death and serious injury on roads and streets.	Within 120 days after the end of the period of performance

ATTACHMENT B
CHANGES FROM APPLICATION

Describe all material differences between the scope, schedule, and budget described in the application and the scope, schedule, and budget described in Article 3. The purpose of Attachment B is to clearly and accurately document any differences in scope, schedule, and budget to establish the parties' knowledge and acceptance of those differences. See Article 11 for the Statement of Work, Schedule, and Budget Changes. If there are no changes, please insert "N/A" in Section 3.3 of the table.

Scope: No changes from application.

Schedule: No changes from application.

Budget: The SF-424C form was corrected for the cost estimate for Project 3: W Maple Street. The design of the irrigation was an error. The cost is for the installation of the irrigation and not the design. The overall budget amounts did not change.

The table below provides a summary comparison of the project budget.

	Application		**Section 3.3**	
Fund Source	$	%	$	%
Previously Incurred Costs (Non-Eligible Project Costs)				
Federal Funds	0	0	0	0
Non-Federal Funds	0	0	0	0
Total Previously Incurred Costs	0	0	0	0
Future Eligible Project Costs				
SS4AFunds				
Other Federal Funds		0		0
Non-Federal Funds				
Total Future Eligible Project Costs				
Total Project Costs				

ATTACHMENT C
RACIAL EQUITY AND BARRIERS TO OPPORTUNITY

1. Efforts to Improve Racial Equity and Reduce Barriers to Opportunity.

The Recipient states that rows marked with "X" in the following table align with the application:

X	A racial equity impact analysis has been completed for the Project. *(Identify a report on that analysis or, if no report was produced, describe the analysis and its results in the supporting narrative below.)*
	The Recipient or a project partner has adopted an equity and inclusion program/plan or has otherwise instituted equity-focused policies related to project procurement, material sourcing, construction, inspection, hiring, or other activities designed to ensure racial equity in the overall delivery and implementation of the Project. *(Identify the relevant programs, plans, or policies in the supporting narrative below.)*
	The Project includes physical-barrier-mitigating land bridges, caps, lids, linear parks, and multimodal mobility investments that either redress past barriers to opportunity or that proactively create new connections and opportunities for underserved communities that are underserved by transportation. *(Identify the relevant investments in the supporting narrative below.)*
X	The Project includes new or improved walking, biking, and rolling access for individuals with disabilities, especially access that reverses the disproportional impacts of crashes on people of color and mitigates neighborhood bifurcation. *(Identify the new or improved access in the supporting narrative below.)*
	The Project includes new or improved freight access to underserved communities to increase access to goods and job opportunities for those underserved communities. *(Identify the new or improved access in the supporting narrative below.)*
	The Recipient has taken other actions related to the Project to improve racial equity and reduce barriers to opportunity, as described in the supporting narrative below.
	The Recipient has not yet taken actions related to the Project to improve racial equity and reduce barriers to opportunity but intends to take relevant actions described in the supporting narrative below.
	The Recipient has not taken actions related to the Project to improve racial equity and reduce barriers to opportunity and will not take those actions under this award.

2. Supporting Narrative.

The City of Fayetteville has adopted the Northwest Arkansas Comprehensive Safety Action Plan which incorporates equity analysis to identify communities that have disproportionate safety impacts. Fayetteville's Safe Streets for All Vision Zero Strategy projects included multimodal mobility improvements that proactively create new connections and opportunities for underserved communities.

The project includes improvements for walking, biking, and rolling for individuals with disabilities. All five projects' areas are in underserved areas and are planned to add sidewalks, protected bicycle infrastructure, crosswalks, reducing vehicular speeds and reallocation of space away from automobiles toward pedestrians and other vulnerable road users.

ATTACHMENT D
CLIMATE CHANGE AND ENVIRONMENTAL JUSTICE IMPACTS

1. Consideration of Climate Change and Environmental Justice Impacts.

The Recipient states that rows marked with "X" in the following table align with the application:

X	The Project directly supports a Local/Regional/State Climate Action Plan that results in lower greenhouse gas emissions. *(Identify the plan in the supporting narrative below.)*
	The Project directly supports a Local/Regional/State Equitable Development Plan that results in lower greenhouse gas emissions. *(Identify the plan in the supporting narrative below.)*
	The Project directly supports a Local/Regional/State Energy Baseline Study that results in lower greenhouse gas emissions. *(Identify the plan in the supporting narrative below.)*
	The Recipient or a project partner used environmental justice tools, such as the EJScreen, to minimize adverse impacts of the Project on environmental justice communities. *(Identify the tool(s) in the supporting narrative below.)*
	The Project supports a modal shift in freight or passenger movement to reduce emissions or reduce induced travel demand. *(Describe that shift in the supporting narrative below.)*
	The Project utilizes demand management strategies to reduce congestion, induced travel demand, and greenhouse gas emissions. *(Describe those strategies in the supporting narrative below.)*
	The Project incorporates electrification infrastructure, zero-emission vehicle infrastructure, or both. *(Describe the incorporated infrastructure in the supporting narrative below.)*
	The Project supports the installation of electric vehicle charging stations. *(Describe that support in the supporting narrative below.)*
	The Project promotes energy efficiency. *(Describe how in the supporting narrative below.)*
	The Project serves the renewable energy supply chain. *(Describe how in the supporting narrative below.)*
	The Project improves disaster preparedness and resiliency *(Describe how in the supporting narrative below.)*
X	The Project avoids adverse environmental impacts to air or water quality, wetlands, and endangered species, such as through reduction in Clean Air Act criteria pollutants and greenhouse gases, improved stormwater management, or improved habitat connectivity. *(Describe how in the supporting narrative below.)*
	The Project repairs existing dilapidated or idle infrastructure that is currently causing environmental harm. *(Describe that infrastructure in the supporting narrative below.)*
	The Project supports or incorporates the construction of energy- and location-efficient buildings. *(Describe how in the supporting narrative below.)*
	The Project includes recycling of materials, use of materials known to reduce or reverse carbon emissions, or both. *(Describe the materials in the supporting narrative below.)*

	The Recipient has taken other actions to consider climate change and environmental justice impacts of the Project, as described in the supporting narrative below.
	The Recipient has not yet taken actions to consider climate change and environmental justice impacts of the Project but will take relevant actions described in the supporting narrative below.
	The Recipient has not taken actions to consider climate change and environmental justice impacts of the Project and will not take those actions under this award.

2. Supporting Narrative.

Fayetteville's Energy Action Plan outlines the City's goals for reducing greenhouse gas emissions and sustainable transportation alternatives. Fayetteville's SS4A Vizion Zero strategy includes addition of sidewalks, protected bicycle infrastructure and transit improvements which will allow people safely engage in zero-emission active mobility.

Fayetteville's Vision Zero Strategy is focused on retrofitting existing streets in Fayetteville's High-Injury Network and will have negligible environmental impacts. All implementation areas avoid adverse environmental impacts and are within existing dilapidated or underutilized roadways.

ATTACHMENT E
LABOR AND WORKFORCE

1. Efforts to Support Good-Paying Jobs and Strong Labor Standards

The Recipient states that rows marked with "X" in the following table align with the application:

	The Recipient demonstrates, to the full extent possible consistent with the law, an effort to create good-paying jobs with the free and fair choice to join a union and incorporation of high labor standards. *(Identify the relevant agreements and describe the scope of activities they cover in the supporting narrative below.)*
	The Recipient or a project partner has adopted the use of local and economic hiring preferences in the overall delivery and implementation of the Project. *(Describe the relevant provisions in the supporting narrative below.)*
	The Recipient or a project partner has adopted the use of registered apprenticeships in the overall delivery and implementation of the Project. *(Describe the use of registered apprenticeship in the supporting narrative below.)*
	The Recipient or a project partner will provide training and placement programs for underrepresented workers in the overall delivery and implementation of the Project. *(Describe the training programs in the supporting narrative below.)*
	The Recipient or a project partner will support free and fair choice to join a union in the overall delivery and implementation of the Project by investing in workforce development services offered by labor-management training partnerships or setting expectations for contractors to develop labor-management training programs. *(Describe the workforce development services offered by labor-management training partnerships in the supporting narrative below.)*
	The Recipient or a project partner will provide supportive services and cash assistance to address systemic barriers to employment to be able to participate and thrive in training and employment, including childcare, emergency cash assistance for items such as tools, work clothing, application fees and other costs of apprenticeship or required pre-employment training, transportation and travel to training and work sites, and services aimed at helping to retain underrepresented groups like mentoring, support groups, and peer networking. *(Describe the supportive services and/or cash assistance provided to trainees and employees in the supporting narrative below.)*
	The Recipient or a project partner has documented agreements or ordinances in place to hire from certain workforce programs that serve underrepresented groups. *(Identify the relevant agreements and describe the scope of activities they cover in the supporting narrative below.)*

	The Recipient or a project partner participates in a State/Regional/Local comprehensive plan to promote equal opportunity, including removing barriers to hire and preventing harassment on work sites, and that plan demonstrates action to create an inclusive environment with a commitment to equal opportunity, including: a. affirmative efforts to remove barriers to equal employment opportunity above and beyond complying with Federal law; b. proactive partnerships with the U.S. Department of Labor's Office of Federal Contract Compliance Programs to promote compliance with EO 11246 Equal Employment Opportunity requirements and meet the requirements as outlined in the Notice of Funding Opportunity to make good faith efforts to meet the goals of 6.9 percent of construction project hours being performed by women and goals that vary based on geography for construction work hours and for work being performed by people of color; c. no discriminatory use of criminal background screens and affirmative steps to recruit and include those with former justice involvement, in accordance with the Fair Chance Act and equal opportunity requirements; d. efforts to prevent harassment based on race, color, religion, sex, sexual orientation, gender identity, and national origin; e. training on anti-harassment and third-party reporting procedures covering employees and contractors; and f. maintaining robust anti-retaliation measures covering employees and contractors. *(Describe the equal opportunity plan in the supporting narrative below.)*
X	The Recipient has taken other actions related to the Project to create good-paying jobs with the free and fair choice to join a union and incorporate strong labor standards. *(Describe those actions in the supporting narrative below.)*
	The Recipient has not yet taken actions related to the Project to create good-paying jobs with the free and fair choice to join a union and incorporate strong labor standards but, before beginning construction of the project, will take relevant actions described in the supporting narrative below.
	The Recipient has not taken actions related to the Project to improving good-paying jobs and strong labor standards and will not take those actions under this award.

2. Supporting Narrative.

For construction of the Project, the City of Fayetteville will contract services through a competitive bidding/selection process in accordance with relevant laws and City Policy. Workforce and labor standards are incorporated with the City's purchasing review process, which requires compliance with all Federal and State regulations, including Equal Employment Opportunity (EEO), Disadvantaged Business Enterprise (DBE), and OSHA. The City's Economic Vitality Department is a key partner in managing economic growth driven by development and transportation, including the provision of programming that helps residents pursue high-wage, high-skill, high-demand (H3) jobs. As part of its periodic economic development strategic planning efforts, the City has identified several target industries—including infrastructure—which will be used to guide alignment of the City's future investments in workforce training, K-12 career and technical education, and industry partnership building.

The five catalyst projects associated with this Project will directly benefit Fayetteville's primary commercial districts to better connect hundreds of local businesses and to enable multi-modal access to critical community services. Improvements to N. College Avenue and S. School Avenue will support the implementation of the City's 71B Corridor Plan, which reimagines the region's primary transportation

route and artery of commerce by applying the concept of corridor urbanism. Investment in a safer, multi-modal transportation network better connects workers, students, and residents to the place where they live and work. This Project likewise provides more equitable access to the region's primary engine for economic development, the University of Arkansas, by improving access to the Razorback Greenway.

CRITICAL INFRASTRUCTURE SECURITY AND RESILIENCE

1. Efforts to strengthen the Security and Resilience of Critical Infrastructure against both Physical and Cyber Threats.

The Recipient states that rows marked with "X" in the following table are accurate:

X	The Recipient demonstrates, prior to the signing of this agreement, effort to consider and address physical and cyber security risks relevant to the transportation mode and type and scale of the activities.
	The Recipient appropriately considered and addressed physical and cyber security and resilience in the planning, design and oversight of the project, as determined by the Department and the Department of Homeland Security.
X	For projects in floodplains: The Recipient appropriately considered whether the project was upgraded consistent with the Federal Flood Risk Management Standard, to the extent consistent with current law, in Executive Order 14030, Climate-Related Financial Risk (86 FR 27967), and Executive Order 13690, Establishing a Federal Flood Risk Management Standard and a Process for Further Solicit and Considering Stakeholder Input (80 FR 6425).

2. Supporting Narrative.

The City of Fayetteville's Electronic Communication Policy and Procedures addresses privacy, downloading and installing software, file storage, backups, shared devices and all relevant risks associated with electronic transmission of information, documents and funds.

College Avenue is the only project corridor identified in Fayetteville's Vision Zero Strategy that crosses a floodplain. The roadway uses an existing box culvert crossing of Sublet Creek, stormwater will continue to be directed through existing culverts and storm drains, no drainage upgrades are included in project scope.

OMB Number: 4040-0008
Expiration Date: 02/28/2025

BUDGET INFORMATION - Construction Programs

NOTE: Certain Federal assistance programs require additional computations to arrive at the Federal share of project costs eligible for participation. If such is the case, you will be notified.

COST CLASSIFICATION	a. Total Cost	b. Costs Not Allowable for Participation	c. Total Allowable Costs (Columns a-b)
1. Administrative and legal expenses	$ 1,000,000.00	$	$ 1,000,000.00
2. Land, structures, rights-of-way, appraisals, etc.	$ 1,130,000.00	$	$ 1,130,000.00
3. Relocation expenses and payments	$	$	$
4. Architectural and engineering fees	$ 1,700,000.00	$	$ 1,700,000.00

Budget Detail Form – Construction Programs

Lead Recipient	*City of Fayetteville*
Program Name	*2023 Safe Streets and Roads for All*
Project Title	*Safe Streets and Roads for Fayeteville, Arkansas – Accelerating Change Towards Vision Zero*

PURPOSE

This form is intended to solicit budgetary details from organizations receiving financial assistance (e.g., federal funding) from the Federal Highway Administration (FHWA). These details are necessary for the FHWA Office of Acquisition & Grants Management (HCFA) to document that elements contained in the proposed budget for the anticipated federal award are ***Allowable***, ***Allocable***, and ***Reasonable***, as defined in Title 2 of the Code of Federal Regulations, Part 200 (2 CFR Part 200 Subpart E Cost Principles).

This form is ***not*** intended to duplicate information contained in the recipient's application, as submitted. Should the application, as submitted, contain any of the applicable information requested below, recipients may insert that data into this form, or provide a citation for its location in the application, to include the document title, section, and page number.

STANDARD FORMS

If the forms submitted in the application contain outdated and/or revised information, please provide the Standard Forms (SFs) listed below. Forms are available at: **https://www.grants.gov/forms/forms-repository/sf-424-family**

Those SF's include the following:

- **SF-424:** Application for Federal Assistance
- **SF-424C:** Budget Information – Construction Programs **Updated SF-424C Provided**

PROJECT BUDGET SUMMARY

Table 1 -- Project Budget Summary – See Attachment A for detailed summary

Cost Classification	Federal Share ($)	Non-Federal Share ($)	Total Costs ($)
Administrative and Legal Expense	$746,268.66	$253,731.34	$1,000,000.00
Land, structures, rights-of-way, appraisals, etc.	$843,283.58	$286,716.42	$1,130,000.00
Relocation expenses and payments	$0.00	$0.00	$0.00
Architectural and engineering fees	$1,268,656.72	$431,343.28	$1,700,000.00
Other architectural and engineering fees	$0.00	$0.00	$0.00
Project Inspection fees	$410,447.76	$139,552.24	$550,000.00
Site Work	$0.00	$0.00	$0.00
Demolition and Removal	$0.00	$0.00	$0.00
Construction	$19,502,238.81	$6,630,761.19	$26,133,000.00
Equipment	$74,626.87	$25,373.13	$100,000.00
Miscellaneous	$298,507.46	$101,492.54	$400,000.00
Contingencies	$1,855,970.14	$631,029.86	$2,487,000.00
Total Project Costs*	**$ 25,000,000.00**	**$ 8,500,000.00**	**$ 33,500,000.00**

Total Project Costs Row above contain auto-sum formulas. After entering estimated costs, select the table and press F9 to update those totals. ***These totals must align with those contained in the SF-424 and SF424C. If they do not, those forms must be revised and resubmitted to FHWA.

COST SHARE

Provide a table with the sources of cost share, the type of cost share and the amounts.

Cost Share Sources Table

Entity	*Type of Cost Share*	*Amount ($)*
University of Arkansas	**Direct construction funding contribution – Maple Street**	$ **1,250,000.00**
City of Fayetteville	**Local Sales Tax Funding**	**$7,250,000.00**

i. **Evidence of Commitment**: Provide letters of commitment from entities providing cost share, to include the pledged amount from each entity.

Attachment B – Funding commitment Letter from Chancellor Charles Robinson.
(Note: Letter says 10% match from U of A, this was based on an early 20% overall match. We are actually matching 25% with local funds so the actual commitment will be 12.5% ($1,250,000) from the U of A.

COST CLASSIFICATION

1) Administrative and legal expenses
(Note: Sections 1a to 1f are for costs budgeted for the lead applicant/recipient only.)

a) Personnel

i. General: Does the recipient's project budget contain costs for the lead recipient's personnel within the administrative expenses?

☒ Yes ***(Complete Section below)***

☐ No ***(Move on to 1.c. Travel Section)***

ii. Personnel Summary Table: Provide a budget table that includes the anticipated lead recipient's personnel costs and basis of personnel estimate. See Appendix A for an example of a Personnel summary table if needed.

Labor Category	*Hourly Labor Rate ($)*	*Estimated Hours*	*Estimated Personnel Costs ($)*
Federal Aid Project Manager	$35.00	10,400	$364,000
Federal Aid Project Coordinator	$31.00	10,400	$322,000
City of Fayetteville Other Staff	$31.00	1,717	$53,277
Total Estimated Personnel Costs		**22,517**	**$739,277**

iii. Escalation Rate: Identify the annual direct labor escalation rate and its basis. Indicate when and how escalation will be calculated/implemented.

4% annual escalation rate included and averaged across a five-year period.

b) Fringe Benefits

i. General: Does the lead applicant/recipient's project budget contain direct costs for the lead recipient's fringe benefits within the administrative expenses?

☒ Yes ***(Complete Section below)***

☐ No ***(Move on to 1.c. Travel Section)***

ii. Fringe Benefit Summary Table: Provide the lead recipient's fringe benefit rate(s), basis of the fringe rate, and anticipated total costs. See Appendix A for an example of a Fringe Benefits summary table if needed.

Basis of Rate (Labor Category or Individual Labor)	*Estimated Total Direct Labor Costs ($)*	*Period (FY)*	*Fringe Benefit Rate (%)*	*Estimated Fringe Benefits Costs ($)*
Federal Aid Project Manager	$364,000	FY25-30	35.5%	$125,000
Federal Aid Project Coordinator	$322,000	FY25-30	35.5%	$116,600
City of Fayetteville Other Staff	$53,277	FY25-30	35.5%	$19,123
Total Estimated Fringe Benefits Costs				**$260,723**

Total Estimated Personnel Costs $1,000,000

Total Benefits including

iii. **Supporting Documentation**: Provide evidence verifying that the basis fringe rate has been approved within the organization. Examples could include a letter or other document from the cognizant authority (e.g., CFO or Controller) within the recipient's organization.

<u>Attachment C</u> - June 28th 2024 E-mail from City of Fayetteville Deputy CFO Steven Dotson

c) Travel

i. **General**: Does the recipient's project budget contain costs for the lead applicant/recipient's travel within the administrative expenses?
   - ☐ Yes ***(Complete Section below)***
   - ☒ No ***(Move on to 1.d – Equipment Section)***

ii. **Travel Summary Table**: Provide a budget table that includes the anticipated travel costs. See Appendix A for an example of a Travel summary table if needed.

d) Equipment

i. **General**: Does the recipient's project budget contain acquisition costs for the lead recipient's equipment within the administrative expenses?
   - ☐ Yes ***(Complete Section below)***
   - ☒ No ***(Move on to 1.e - Supplies Section)***

ii. **Equipment Summary Table:** Provide a budget table that includes the anticipated acquisition equipment costs. See Appendix A for an example of an Equipment summary table if needed.

e) Supplies

i. **General**: Does the recipient's project budget contain costs for the lead recipient's supplies within the administrative expenses?
   - ☐ Yes ***(Complete Section below)***
   - ☒ No ***(Move on to 1.f – Indirect Costs Section)***

ii. **Supplies Summary Table**: Provide a budget table that describes the estimates for all planned supply purchases. See Appendix A for an example of a Supplies summary table if needed.

f) Indirect Costs

i. **General**: Does the lead recipient's project budget contain lead recipient's indirect costs within the administrative expenses?
   - ☐ Yes ***(Complete section below)***
   - ☒ No ***(Move on to 1.g – Legal Expenses Section)***

ii. **Rate Type**:
☐ Approved indirect cost rate according to 2 CFR Part 200 ***(See 8.iii)***
☒ No current negotiated (including provisional) rate and elects to use de minimis rate of 10% of modified total direct costs (MTDC) on all Federal awards in accordance with 2 CFR 200.414 (f).

iii. **Indirect Cost Rate Supporting Documentation:** Provide the Negotiated Indirect Cost Rate Agreement, Proposal, or Cost Allocation Plan, as applicable. (Note: No documentation is required to justify the 10% de minimis indirect cost rate per CFR 200.414(f))

iv. **Indirect Costs Summary Table:** Provide the lead recipient's indirect rate(s) and anticipated total costs. See Appendix A for an example of an Indirect Costs summary table if needed.

g) Legal Expenses

i. **General**: Does the recipient's project budget contain costs for the lead recipient's legal expenses?
☐ Yes ***(Complete Section below)***
☒ No ***(Move on to Section 2. - Land, structures, rights-of-way, appraisals, etc.)***

ii. **Legal Expenses Summary Table**: Provide a budget table that describes the estimates for all planned legal expenses. See Appendix A for an example of a Legal Expenses summary table if needed.

2) Land, Structures, Rights-of-Way, Appraisals, etc.

i. **General**: Does the project budget contain any land, structures, rights-of-way, appraisals costs?
☒ Yes ***(Complete section below)***
☐ No ***(Move on to Section 3* - Relocation expenses and payments)**

ii. **Land, Structures, Rights-of-Way, Appraisals, etc. Summary Table**: Provide a budget table that includes the anticipated land, structures, right-of-way, and appraisals costs. See Appendix A for an example of a Land, Structures, Rights-of-Way, Appraisals, etc. summary table if needed.

Element	*Brief description of each element and location*	*Basis of the estimate for each element*	*Estimated Land, Structures, Rights-of-Way, Appraisals, etc. Costs ($)*
Right-of-way	College Ave.	Market Estimate	$500,000.00
Right-of-way	S. School Ave.	Market Estimate	$380,000.00
Right-of-way	Joyce Blvd.	Market Estimate	$150,000.00
Right-of-way	Gregg Ave.	Market Estimate	$100,000.00
Total Estimated Land, Structures, Rights-of-Way, Appraisals, etc. Costs			**$1,130,000.00**

3) Relocation Expenses and Payments

i. General: Does the project budget contain any relocation expenses and payment costs?

☐ Yes ***(Complete section below)***

☒ No ***(Move on to Section 4 –* Architectural and engineering fees*)***

ii. Relocation Expenses and Payments Summary Table: Provide a budget that includes the anticipated Relocation expenses and payments costs. See Appendix A for an example of a Relocation Expenses and Payments summary table if needed.

4) Architectural and Engineering (A/E) Fees

Summary: As applicable, this section should include A/E design fees that are not part of the construction contract that are intended to be contracted out separately or performed by the recipients/subrecipients.

i. General: Does the recipient's project budget contain costs for A/E design fees?

☒ Yes ***(Complete section below)***

☐ No ***(Move on to Section 5 - Other architectural and engineering fees)***

ii. A/E Summary Table: Provide a summary table showing the cumulative amount for all the A/E costs and proposed type of competitive procurement method for each contract. See Appendix A for an example of an A/E summary table if needed.

Entity Name	*Work to be Performed/ and Project Section/Task (2 - 3 sentences)*	*Proposed Type of Competitive Procurement Method*	*Estimated A/E Costs ($)*
To Be Determined	Pre NEPA and Design for College Ave., S. School Ave., Maple St., Joyce Blvd., & Gregg Ave.	Qualifications Based	$1,700,000.00
Total Estimated A/E Costs*			**$1,700,00.00**
* Total Costs row above contains an auto-sum formula. After entering estimated costs, **select the table and press F9 to update total**.			

***Some of this work will be preformed in-house by the City of Fayetteville**

iii. **Supporting Documentation**: Provide a detailed budget/supporting documentation for each contractor/consultant/recipient/subrecipient listed in the A/E summary table.

The detailed budget/supporting documentation could be one of the following formats:

- **Cost/Price Analyses**: Detailed cost/price analysis with direct labor, fringe, travel, equipment, supplies, others, and indirect costs. (See Section 1. Administration and Legal fees for additional information required for these cost elements)
- **Independent Estimate:** Provide a current copy of the independent cost estimate or provide the name of the budget file if the cost estimate was provided in the application.
- **Percentage-Based Estimation Justification**: If percentage is being used to estimate the contractor/consultant, provide the basis/justification of percentage being used on the estimated budget. Note, a detailed cost/analysis will be required prior to receiving offers on the proposal if the amount exceeds the Simplified Acquisition Threshold (SAT).

The City of Fayetteville has seen a range of design fee percentages with recent Transportation Projects. Examples of these are College Ave Phase 1 at 15%, Millsap Drive at 8.5%, Center/Harmon Intersection at 5.2% and the Midtown Corridor Project at $7.2%. We evaluated the amount of design work needed and based the work on these previous project examples to establish the following percentages shown in the table below.

Project Name	Percentage of Estimated Construction Cost for Design	Status
N. College	**5%**	**Preliminary Complete - Final design needed**
S. School	**15%**	**Concept Design needs updated and final design**
Maple St.	**1%**	**Design Complete – Only NEPA needed**
Joyce Blvd.	**12%**	**Full design needed**
Gregg Ave.	**17%**	**Full design needed**

5) Other Architectural and engineering (A/E) fees

Summary: As applicable, this section should include archeologist fees, materials testing fees, surveying fees, and etc. that are not part of the A/E contract or the construction contract that either is contracted out separately or performed by the recipients/subrecipients.

i. **General**: Does the recipient's project budget contain costs for Other A/E fees?
☐ Yes ***(Complete section below)***
☒ No ***(Move on to Section 6 - Project Inspection fees)***

ii. **Other A/E Summary Table:** Provide a summary table showing the cumulative amount for all the Other A/E costs and proposed type of competitive procurement method for each contract. See Appendix A for an example of an Other A/E summary table if needed.

iii. **Supporting Documentation**: Provide a detailed budget/supporting documentation for each contractor/consultant/recipient/subrecipient listed in the Other A/E summary table.

The detailed budget/supporting documentation could be one of the following formats:

- **Cost/Price Analyses:** Detailed cost/price analysis with direct labor, fringe, travel, equipment, supplies, others, and indirect costs. (See Section 1. Administration and Legal fees for additional information required for these cost elements)
- **Independent Estimate:** Provide a current copy of the independent cost estimate or provide the name of the budget file if the cost estimate was provided in the application.
- **Percentage-Based Estimation Justification:** If percentage is being used to estimate the contractor/consultant, provide the basis/justification of percentage being used on the estimated budget. Note, a detailed cost/analysis will be required prior to receiving offers on the proposals if the amount exceeds the Simplified Acquisition Threshold (SAT).

6) Project Inspection fees

Summary: As applicable, this section should include project inspection fees performed by an A/E or by the recipients/subrecipients. These fees would not be part of the costs listed in Section 4 - A/E fees.

i. **General**: Does the recipient's project budget contain costs for Project Inspection fees?
☒ Yes ***(Complete section below)***
☐ No ***(Move on to Section 7 – Site Work)***

ii. **Project Inspection Summary Table:** Provide a summary table showing the cumulative amount for all the Project Inspection costs and proposed type of competitive procurement method for each contract. See Appendix A for an example of a Project Inspection summary table if needed.

Entity Name	***Work to be Performed and Project Section/Task***	***Proposed Type of Competitive Procurement Method***	***Estimated Project Inspection Costs ($)***
To Be Determined	Project Inspection for the entire project	Request for Proposal (RFP)	$550,000.00
Total Estimated Project Inspection Costs*			**$550,000.00**
***Total Costs row above contains an auto-sum formula. After entering estimated costs, **select the table and press F9 to update total**.			

*Note: Some Inspection may be by City staff inspectors.

iii. **Supporting Documentation**: Provide a detailed budget/supporting documentation for each contractor/consultant/recipient/subrecipient listed in the Project Inspection summary table.

The detailed budget/supporting documentation could be one of the following formats:

- **Cost/Price Analyses**: Detailed cost/price analysis with direct labor, fringe, travel, equipment, supplies, others, and indirect costs. See Section 1. Administration and Legal fees for additional information required for these cost elements.
- **Independent Estimate**: Provide a current copy of the independent cost estimate or provide the name of the budget file if the cost estimate was provided in the application.
- **Percentage-Based Estimation Justification:** If percentage is being used to estimate the contractor/consultant, provide the basis/justification of percentage being used on the estimated budget. Note, a detailed cost/analysis will be required prior to receiving offers on the proposals if the amount exceeds the Simplified Acquisition Threshold (SAT).

25% of the design fee was used for estimating the inspection costs. This percentage is based on inspection of two recent projects in Fayetteville, Industrial Drive and Center/Harmon. Local consultant McClelland Consulting Engineers did full project management, and the cost was approximately 50% of the design costs. For these SS4A projects, we have deducted the construction management because City staff or design consultants will be covering this work, so we reduced the percentage to 25% for construction inspection only.

7) Site Work

Summary: As applicable, this section should include site work costs that are not part of the larger construction contract and are contracted out separately or performed by the recipients/subrecipients.

i. General: Does the recipient's project budget contain costs for Site Work?
☐ Yes ***(Complete section below)***
☒ No ***(Move on to Section 8 – Demolition and Removal)***

ii. Site Work Summary Table: Provide a summary table showing the cumulative amount for all the Site work costs and proposed type of competitive procurement method for each contract. See Appendix A for an example of a Site Work summary table if needed.

iii. Supporting Documentation: Provide a detailed budget/supporting documentation for each contractor/recipient/subrecipient listed in the Site Work summary table.

The detailed budget/supporting documentation could be one of the following formats:

- **Cost/Price Analyses:** Detailed cost/price analysis with direct labor, fringe, travel, equipment, supplies, others, and indirect costs. See Section 1. Administration and Legal fees for additional information required for these cost elements.

- **Independent Estimate:** Provide a current copy of the independent cost estimate (e.g., engineer's estimate) or provide the name of the budget file if the cost estimate was provided in the application.
- **Other Documentation:** If an independent estimate is not available, explain how the budget estimate was formulated or provide documentation that supports the cumulative amount.

8) Demolition and Removal

Summary: As applicable, this section should include demolition and removal costs that is not part of the larger construction contract and is contracted out separately or is performed by the recipients/subrecipients.

i. General: Does the recipient's project budget contain costs for Demolition and Removal?

☐ Yes ***(Complete section below)***
☒ No ***(Move on to Section 9 – Construction)***

ii. Demolition and Removal Summary Table: Provide a summary table showing the cumulative amount for all the Demolition and Removal costs and proposed type of competitive procurement method for each contract. See Appendix A for an example of a Demolition and Removal summary table if needed.

iii. Supporting Documentation: Provide a detailed budget/supporting documentation for each contractor/recipient/subrecipient listed in the Demolition and Removal summary table.

The detailed budget/supporting documentation could be one of the following formats:

- **Cost/Price Analyses:** Detailed cost/price analysis with direct labor, fringe, travel, equipment, supplies, others, and indirect costs. See Section 1. Administration and Legal fees for additional information required for these cost elements.
- **Independent Estimate:** Provide a current copy of the independent cost estimate (e.g., engineer's estimate) or provide the name of the budget file if provided in the application.
- **Other Documentation:** If an independent estimate is not available, explain how the budget estimate was formulated or provide documentation that supports the cumulative amount.

9) Construction

Summary: As applicable, this section should include construction costs that is contracted out separately or is performed by the recipients/subrecipients.

i. General: Does the recipient's project budget contain costs for Construction?

☒ Yes ***(Complete section below)***

☐ No ***(Move on to Section 10 – Equipment)***

ii. Construction Summary Table: Provide a summary table showing the cumulative amount for all the Construction costs and proposed type of competitive procurement method for each contract. See Appendix A for an example of a Construction summary table if needed.

Entity Name	***Description of Work***	***Proposed Type of Competitive Procurement Method****	***Anticipated Project Delivery Type*****	***Estimated Construction Costs ($)***
To Be Determined	General contractor to perform construction for **College Ave.**	Sealed Bid	Design-Bid-Build	**$8,910,000.00**
To Be Determined	General contractor to perform construction for **S. School Ave.**	Sealed Bid	Design-Bid-Build	**$3,573,000.00**
To Be Determined	General contractor to perform construction for **Maple Street Improvements**	Selection RFP Request for Proposal with Qualification and Price	Construction Manager/General Contractor (CM/GC)	**$9,250,000.00**
To Be Determined	General contractor to perform construction for **Joyce Blvd.**	Sealed Bid	Design-Bid-Build	**$2,765,000.00**
To Be Determined	General contractor to perform construction for **Gregg Ave.**	Sealed Bid	Design-Bid-Build	**$1,635,000.00**
Total Estimated Construction Costs***				**$26,133,000.00**

*If a noncompetitive procurement is necessary, indicate the circumstance that applies in accordance with 2 CFR 200.320(c) and request approval, if applicable**.**

****Design-Bid-Build or Design-Build or Construction Manager/General Contractor (CM/GC (as known as Construction Manager at Risk (CMAR)))

*****Total costs row above contains an auto-sum formula. After entering estimated costs, **select the table and press F9 to update total**.

iii. Supporting Documentation: Provide a detailed budget/supporting documentation for each contractor/recipient/subrecipient listed in the Construction summary table.

The detailed budget/supporting documentation could be one of the following formats:

- **Cost/Price Analyses:** Detailed cost/price analysis with direct labor, fringe, travel, equipment, supplies, others, and indirect costs. See Section 1. Administration and Legal fees for additional information required for these cost elements.

- **Independent Estimate:** Provide a current copy of the independent cost estimate (e.g., engineer's estimate) or provide the name of the budget file if provided in the application.

***Cost Estimation is based on bid tabulations from recently bid construction projects in the City of Fayetteville including Harmon & Center intersection, Archibald Yell improvements, Midtown Corridor and College Avenue (North St. to Sycamore). Detailed cost estimates based on the bid tabulations is provided in the attachments as shown below.**

(i) **College Avenue** – See **Attachment D**
(ii) **South School –** See **Attachment E**
(iii)**Maple Street Improvements –** See **Attachment F**
(iv)**Joyce Blvd.** – See **Attachment G**
(v) **Gregg Ave.** – See **Attachment H**

- **Other Documentation:** If an independent estimate is not available, explain how the budget estimate was formulated or provide documentation that supports the cumulative amount.

10) Equipment

Summary: As applicable, this section should include equipment costs that is not part of the larger construction contract or administrative expenses section and is contracted out separately.

i. General: Does the recipient's project budget contain acquisition costs for the project equipment?

☒ Yes ***(Complete Section below)***
☐ No ***(Move on to 11 - Miscellaneous)***

ii. Equipment Summary Table: Provide the anticipated acquisition equipment costs and basis of the estimate.

Expense Category	Specifications/Details	5-Year Budget
Speed Awareness (radar feedback sign equipment on high-injury network roadways)	MUTCD Compliant high visibility sign with programmable digital display minimum 24"x30" sign with minimum 12" digital characters. Procured through City of Fayetteville standard low-bid process according to 2CFR, installed by City of Fayetteville crews in locations on High Injury roadways. For State highway locations, a permit will be obtained and will comply with ARDOT standards. All materials be purchased through the City of Fayetteville's standard procurement process and according to 2CFR. Final quantities of materials will be determined by unit cost to be determined through competitive process based on available budget. Cost estimate is based on public available vendor cost sheets.	$100,000

11) Miscellaneous

Summary: The "Miscellaneous" cost classfication may include, but is not limited to, any additional fees (e.g., TERO fees for Federally Recognized Tribe Recipients) that will be assessed against the total project cost. Miscellaneous items are not part of any costs in the sections above.

i. **General**: Does the recipient's project budget contain Miscellaneous costs?
   ☒ Yes ***(Complete section below)***
   ☐ No ***(Move on to 12 - Contingencies)***

ii. **Miscellaneous Costs Summary:** Describe the estimates for all items in the 'Miscellaneous' cost classfication, including:

Miscelaneous Costs Category is being used for the Vision Zero Education & Awareness with a total cost of $400,000.00. Expense categories are described with specifications and detailed in Attachment J. Procurement of all items will be in accordance with 2CFR.

12) Contingencies

i. **General**: Does the project budget contain Contingencies costs for the construction project?
   ☒ Yes ***(Complete section below)***
   ☐ No ***(Move on to Certifications)***

ii. **Contingency Amount**: Provide the anticipated contingencies amount/percent for the Site Work costs, Demolition and Removal costs, and construction costs for the project.

Project	Percentage of Estimated Construction Cost	Total Cost
North College	**11.6%**	**$1,030,240.00**
South School	**12%**	**$428,760.00**
***Maple Street**	**5.4%**	**$500,000.00**
Joyce Blvd.	**12%**	**$331,800.00**
Gregg Ave.	**12%**	**$196,200.00**
	Total	**2,487,000.00**

***Maple Street has fixed contingency cost of $500,000.00 or 5.4%**

iii. **Basis of Estimation**: Provide a brief justification how the amount/percent was determined.

The contingencies below are based on the level of previous design development that has already been completed specific to the project. Contingency percentage is based on the estimated construction cost per project that was generated from recent bid tabulations of construction projects in Fayetteville and provided on Attachments D through H.

CERTIFICATIONS

To the best of its knowledge, the recipient certifies the following:

1. The costs and information detailed above are correct and complete for the purposes set forth in the associated application for Federal Assistance.

2. The budget detailed above does not include any previously incurred expenses, or costs to be incurred before the time of award and obligation, unless otherwise approved.

3. The recipient confirms that the proposed cost sharing amount complies with 2 CFR § 200.306 (Cost sharing or matching).

4. The recipient certifies that it does not have any potential or actual conflicts of interest, as defined in 2 CFR § 200.112 and by 2 CFR § 200.318, to disclose.

5. The recipient certifies that its financial management is in accordance with 2 CFR § 200.302 and has written procedures/policies in place.

6. The recipient has established and documented procedures that are consistent with 2 CFR 200 Subpart D - Property Standards 2 CFR § 200.310-316, for the equipment and real property required under a federal award or subaward.

7. The recipient has established and documented procurement procedures that are consistent with applicable State, local, and tribal laws and regulations and 2 CFR 200 Subpart D - Procurement Standards 2 CFR § 200.317-327, for the acquisition of property or services required under a federal award or subaward.

8. All proposed costs in the budget are allowable in accordance with 2 CFR § 200.403, reasonable in accordance with 2 CFR § 200.404, and allocable per 2 CFR § 200.405 for the purpose of the federal award.

9. The recipient certifies that its indirect costs is in accordance with 2 CFR 200 Subpart E - Direct and Indirect (F&A) Costs 2 CFR § 200.414-415.

Title: Public Works Director

Expense Category	Specifications/Details	5-Year Budget
Consultant Fees (campaign design and strategy development)	City of Fayetteville will contract qualified marketing and mass communication professional services to develop a strategic planning document for the education and awareness campaign to include guidance on allocation of advertising funds effective messaging and compliance with Federal 2CFR requirements. Cost is estimated based on similar programs in the Region.	$50,000
Advertisements (print, radio, digital, signage)	Strategic purchase of mass and targeted marketing space in a print, radio, online and signage. Placement of public service announcements and messages to be determined by strategic plan. Cost is estimated based on local market rates.	$105,000
Contract Services (media production, videography, photography, graphic design)	A professional media company will be selected acording to 2CFR to produce marketing materials, educational video content, photography and graphic design elements to be distributed on City communicaition platforms and marketing campains. City of Fayetteville Media Services division may produce some or all of the video content. Cost estimated based on similar marketing campaigns in the Region.	$65,000
Bicycle and Micromobility Safety (bicycle helmets, lights)	Materials to be procured by city of Fayetteville through standard low-bid process (minimum of 3 quotes) and according to 2CFR. Materials to be distributed to the public by the City and no cost limited to one of each item per person. Bike Helmets must meet Consumer Product Safety Commission (CPSC) standards and incorporate Multi-directional Impact Protection System (MIPS) technology. Bicycle lights must be LED, include rechargeable battery and emit a minimum of 500 lumens. All products will comply with Buy America requirements. Cost is estimated based on vendor product sheets. Quantities of materials will be determined by unit cost to be determined through competitive process based on available budget.	$60,000
Pedestrian Safety (SafeAcross campaign)	The SafeAcross campaign created by the City of Springfield, Missouri offers resources and materials to educate the public on the importance of pedestrian safety. Funding to purchase signage and materials specific to this program has been estimated based on costs from Springfield.	$50,000
Professional Training (Vision Zero and Safe System framework workshops/seminars for public employees, designers, traffic engineers and public officials)	City of Fayetteville will contract qualified professional services from an education consultant firm with substantial experience and expertise in Vision Zero and Safe System Approach to conduct in-person trainings/workshops that will comply with American Public Works Association (APWA) Continuing Education Credit Standards or Certificate Workshops standards. The goal is to train approximately 300 people with an emphasis on participation from those who are engaged in the operation, management and design of Fayetteville's transportation network. Cost is estimated based on similar trainings in the Region.	$30,000
Vision Zero Taskforce (road safety auditing, annual reports, meetings, demonstration projects)	Funds to be used provide resources for a Vision Zero Taskforce (VZT) comprised of approximately 5 City staff. VZT will be tasked with post-crash responses for fatal and serious injury crashes and may initiate demonstration projects using low-cost temporary materials to evaluate possible interventions using proven safety countermeasures to reduce risks on high-injury network streets. VZT will provide an annual report of KSI crashes in Fayetteville. Cost is estimated based on recent quick build projects in Fayetteville.	$30,000
Outreach Expenses (mailers, tabling materials, literature)	City will procure materials and provide staff support to be used for in-person public engagement outreach activities to distribute bicycle lights/helmets and other educational materials at a minimum of 5 public events per year. Cost is estimated based on vendor price sheets.	$10,000
Total		**$400,000**

CITY OF FAYETTEVILLE ARKANSAS

CITY COUNCIL MEMO
2024-687

MEETING OF NOVEMBER 26, 2024

TO: Mayor Jordan and City Council

THRU: Chris Brown, Public Works Director

FROM: Alan Pugh, Staff Engineer

SUBJECT: **Adoption of Chapter 52, Stormwater Management and Water Quality Utility, of the City of Fayetteville Code or Ordinances establishing a Stormwater Management and Water Quality Fund.**

RECOMMENDATION:
Staff recommends adoption of Chapter 52, Stormwater Management and Water Quality Utility, of the City of Fayetteville Code or Ordinances establishing a Stormwater Management and Water Quality Fund

BACKGROUND:
Like many cities throughout the state and nation, the City of Fayetteville experiences issues with management of its stormwater utility system. These issues stem from many sources including, but not limited to, compliance with the mandated Municipal Separate Stormwater System (MS4) requirements, aging infrastructure, maintenance of system capacity, personnel to perform systematic inspections and the lack of formal drainage systems in many older areas of the City. To address these concerns, the City has historically funded the stormwater program through the Sales Tax Capital Improvement Program (CIP) and the Street Fund for capital and operational/maintenance functions, respectively. However, there are many needs within the City that require funding from these sources and, at least in recent years, the funding for stormwater has been inadequate to comprehensively address stormwater management within the City. To develop a comprehensive solution, additional funding is required for personnel and equipment as well as multiple capital projects, many of which will require more than $1 million dollars for each project. Given the current levels, it would take many years to address just one of those projects.

In June 2018, the City Council recognized these needs and approved a consultant contract for a feasibility study (Resolution 131-18) and amended that agreement on two occasions (Resolutions 209-19 and 250-19) to provide additional investigation and details. That study was completed in August 2019 and updated in 2022 with more recent program costs, impervious area and associated fees. The Council also passed a resolution of intent to establish a stormwater utility in July 2022 (Resolution 157-22).

DISCUSSION:
The study recognized several areas that are currently underfunded, with the gap between the funding and actual costs to provide the services increasing every year. These needs include categories such as:

- operation and maintenance
- engineering and planning
- regulatory compliance

- capital improvement projects

The costs associated with these categories were based on a level and extent of service agreed upon by council early in the program discussions as well as estimates of future regulatory compliance costs and expansion of the stormwater system as Fayetteville continues to grow. The costs associated with the recommended stormwater utility program can be found below.

Program Costs	**Current Budget**	**Additional Needs**	**Total Program**
Operation and Maintenance	$998,441	$1,508,000	$2,506,441
Engineering and Planning	$67,000	$122,000	$189,000
Regulatory Compliance	$193,000	$274,000	$467,000
Stormwater CIP	$200,000	$913,400	$1,113,400
Administrative	$0	$324,000	$324,000
Total	**$1,458,441**	**$3,141,400**	**$4,599,841**

In response to the completed study and the need to find a sustainable funding source for the stormwater management program, City staff has drafted Chapter 52, Stormwater Management and Water Quality Utility, for consideration by City Council. The proposed ordinance would establish an equitable funding source based on impervious areas, which can be directly correlated to the impact of any given property to the stormwater system. The fee is proposed to be billed to sewer users with the City limits in a tiered system. Properties with greater impervious areas would have a higher fee than smaller properties due to the increased impact to the system. If there are multiple sewer customers on a single property, the total impervious area would be allocated across those customers and the appropriate portion of the total fee billed to each customer.

The proposed fee would provide funding, in addition to that already being allocated from existing sources, to operate and maintain as well as improve and expand the stormwater system. The fee tiers are as shown below.

Tier	Tier Range (by square footage of impervious area on a property)	Billing Units	Initial Monthly Fee ($1.35 per unit)
1	0≤2,000	1.25	$1.69
2	>2,000 to ≤ 3,500	2.75	$3.71
3	>3,500 to ≤ 5,000	4.25	$5.73
4	>5,000 to ≤ 6,500	5.75	$7.76
5	>6,500 to ≤ 8,000	7.25	$9.79
6	>8,000	Per Calc	Billing Unit x Rate

This fee will close the existing funding gap and will fund a program to adequately manage stormwater within the City of Fayetteville. The proposed program presents a sustainable and equitable method of funding. Staff have worked closely with the City Attorney's office throughout the process and has modified the program to address the concerns that have been raised.

Staff have also worked to clarify the impact of this ordinance on the residents of Fayetteville. With the previous resolution of intent to implement the stormwater utility, the council also approved additional funding to complete the utility billing database and billing tool that would allow residents to search for their address and determine the proposed fee. This tool was made available on November 7, 2024, and the sanitary sewer account holders were notified by email if one was on file with the City or post card if no email was available.

This process also allowed staff to take a closer look at the previously identified approximately 13% of the impervious area that was not previously allocated to a property with a sanitary sewer account. Each property was looked at individually during this process and the majority were able to be linked to an adjacent parcel. Currently, 7% of properties with impervious area have not been linked to a parcel with sanitary sewer service. These can be attributed to properties on the fringes of the City that may have a water service but be on septic, stand-alone parking areas and those properties that are exempted at the advice of the City Attorney.

BUDGET/STAFF IMPACT:
The proposal would initially generate approximately $3 million in additional funding to be allocated to the Stormwater Management and Water Quality program.

File #: 2024-687

Adoption of Chapter 52, Stormwater Management and Water Quality Utility, of the City of Fayetteville Code or Ordinances establishing a Stormwater Management and Water Quality Fund.

AN ORDINANCE TO ENACT CHAPTER 52: STORMWATER MANAGEMENT UTILITY FEE INTO THE FAYETTEVILLE CODE OF ORDINANCES

WHEREAS, during the last two decades, the frequency and intensity of major rain storms striking Fayetteville has continued to increase dramatically; and

WHEREAS, the City of Fayetteville has worked diligently with our available revenues to improve and enhance our stormwater management facilities, but unfortunately flooding problems have continued as global warming has increased and created ever larger rain storms threatening to overwhelm our existing stormwater management facilities; and

WHEREAS, the City Council of Fayetteville has enacted improved stormwater management requirements for new developments, but yet even larger and continual investments into the City's stormwater management facilities are necessary to better handle the increasing rain storms that continue to intensify in number and in the amount of rainfall they deliver to Fayetteville; and

WHEREAS, state law now authorizes cities to enact Stormwater Management Utilities to equitability, fairly, and efficiently raise revenue needed to fund necessary stormwater management facilities to better protect citizens' homes, businesses, and institutions from the increasing dangers of flooding that we face now and which is likely to continue increasing in the future; and

WHEREAS, the proposed **Stormwater Management Utility Fee** Chapter has been carefully crafted to ensure it is fair and reasonable and bears a reasonable relationship to the benefits conferred on those paying for and receiving its services.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby determines and finds that **Chapter 52: Stormwater Management Utility Fee** with its **Sustainable Credit Framework** provision is fair and reasonable and bears a reasonable relationship to the benefits conferred on those paying for and receiving its services.

Section 2: That the City Council of the City of Fayetteville, Arkansas hereby enacts **Chapter 52:**

Stormwater Management Utility Fee into the *Fayetteville Code of Ordinances*.

EXHIBIT A

CHAPTER 52: STORMWATER MANAGEMENT UTILITY FEE

ARTICLE I – GENERAL PROVISIONS

52.01 - Purpose

The Stormwater Management Utility Fee is hereby established to create an equitable, efficient, and dedicated funding source for stormwater management services in the City of Fayetteville and provide for the safety, preserve the health and promote the prosperity of Fayetteville residents, businesses and institutions. The purposes for the Stormwater Management Fee further include:

(A) To establish an equitable, fair, efficient and dedicated funding source for stormwater management services in the City of Fayetteville, Arkansas in addition to other taxpayer funds so that better long-range planning can be achieved.

(B) To lessen or deter hazards to persons, property and the environment caused by increased runoff, obstructions to drainage and introduction of excessive silts, debris and pollutants into the drainage system, lakes, ponds, streams, rivers and other water bodies in the City of Fayetteville, and to otherwise promote the public health, safety and welfare of the public.

(C) To fund the City's MS4 Stormwater Management Program for which it is expected to require a series of minimum control measures and report on their progress annually. In addition to new measures with each 5-year permit renewal, the City is projected to meet the population threshold of 100,000 by no later than 2030 and would be designated a medium MS4 community, triggering additional mandated activities.

(D) To administer the National Flood Insurance Program and its Community Rating System which provides property owners with credits to reduce their flood insurance premiums,

(E) To equitably and legally address drainage needs, also known as stormwater management, to protect public health, safety, and welfare and to reduce flooding on city streets thereby ensuring access of emergency vehicles to all properties within the City during flood events, by providing resources for construction, maintenance, and operation of stormwater facilities.

(F) To implement additional watershed improvements of the City's waters in general, and specifically, that of Beaver Lake, the City's drinking water source, and the Illinois River.

52.02 - Definitions

The following definitions shall apply to this chapter:

Billing Unit shall mean the unit by which stormwater utility bills are calculated. A single billing unit shall be equal to 1,000 square feet of impervious area.

Customer shall mean all persons or entities to whom the Stormwater Management Utility Fee is properly billed. A customer is further defined as a person or an entity billed for sanitary sewer services within the City limits.

Credit shall mean a conditional, renewable reduction in the amount of the fee owed by a customer in accordance with the Sustainable Credit Framework.

Public customer shall mean a local public agency including property of a school district within the City of Fayetteville.

Public Stormwater System shall mean all stormwater conveyance systems located within the City of Fayetteville right-of-way or public drainage easements. All other stormwater conveyance systems shall be considered Private Stormwater Systems.

Stormwater Management Utility Fee is the utility fee authorized by state law to provide necessary funds for a city to adequately address stormwater problems and needs through an equitable and fair utility fee derived from an expert analysis of the amount of impervious surface of each property which causes increased stormwater runoff that needs to be managed by the city to reduce or prevent flooding problems for our citizens and businesses.

52.03 - Applicability

(A) The stormwater utility fee shall apply to all real property within the territorial jurisdiction of the City of Fayetteville for which sanitary sewer is provided by the City and upon which the City may constitutionally and legally assess such stormwater utility fee.

(B) City-owned real property constituting the municipal drainage system, including public streets, public rights-of-way, drainage facilities, and related infrastructure is not served by a sanitary sewer and thus is not subject to a stormwater utility fee.

(C) The requirements of this chapter do not relieve landowners, developers, other individuals, and entities from their responsibility for complying with the obligations of other portions of the Unified Development Code.

52.04—52.05 - Reserved

ARTICLE II – STORMWATER MANAGEMENT UTILITY FUND

52.06 - Establishment of a Stormwater Management Utility Fund

Pursuant to A.C.A. § 14-235-201 and other state law, the City of Fayetteville hereby creates a fund entitled the "Stormwater Management Utility Fund" for the purpose of segregating, identifying, and controlling revenues and expenses for operation of the City of Fayetteville Stormwater Management Program and other storm-related equipment, construction, materials, supplies or services attributable to these functions. The following revenue sources shall be deposited in said fund:

(A) All revenue collected by or on behalf of the Stormwater Management Utility Fee.

(B) Revenue from contributions in-lieu of onsite detention or from developers as contributions for required off-site drainage improvements, which may include bridge assessments.

(C) Any interest earned on monies held in the Stormwater Management Utility Fund.

(D) Any other revenue as may be determined appropriate by the City Council, including but not limited to general revenue, bond and grant proceeds.

These revenues shall be used exclusively for the purposes listed in Article I – General Provisions.

EXHIBIT A

52.07 – Authorization of a Stormwater Management Utility Fee

The Stormwater Management Utility Fee is a utility fee that is hereby authorized to be charged on most real property within the City of Fayetteville, Arkansas. The fee shall be billable to the City's Sewer Utility customers. The rate structure for the utility fee shall:

(A) Be based on the square footage of impervious area on a property,

(B) Be owner / customer type (residential, commercial, etc..)-neutral,

(C) Use a billing unit of 1,000 square feet of impervious area,

(D) Slot property within the following six-tier billing unit structure:

Tier	Tier Range (by square footage of impervious area on a property)	Billing Units	Initial Monthly Fee (Billing Unit times Billing Rate)
1	Less than 2,000	1.25	$1.69
2	2,001 to 3,500	2.75	$3.71
3	3,501 to 5,000	4.25	$5.73
4	5,001 to 6,500	5.75	$7.76
5	6,501 to 8,000	7.25	$9.79
6	More than 8,000	See (F)	See (F)

(E) For Tiers 1 through 5, the billing unit in the chart shall be multiplied by the billing rate per unit rounded down to the nearest cent.

(F) For Tier 6, properties with impervious area greater than 8,000 square feet, the actual impervious area is divided by 1,000 and multiplied by the monthly rate per billing unit.

(G) The initial rate per billing unit shall be $1.35. This rate shall be increased by 3% per year beginning in the January 2026 billing period. No rates shall increase after 2031 without a further rate study.

(H) Fees for sewer customers on properties with multiple sewer accounts shall be based on the individual sewer customer's percentage of total impervious area of the property or properties that may be attributed to the customer's account, included any areas of parking, common use areas, or other impervious area on the attributable properties.

(I) Sewer customers or property owners may apply to have the fee for their property mitigated or reduced by the Sustainable Credit Framework.

52.08 – Initial Charge for the Stormwater Management Utility Fee

The initial assessment of the Stormwater Management Utility Fee established shall be charged beginning one year after the effective date of the ordinance.

52.09 – Level and Extent of Service Policies

The level of services funded by the Stormwater Management Utility Fees are dependent upon the amount of revenue generated by this Utility Fee, as well as possible general fund, sales tax bond, grants and other sources. These revenues shall fund the operation and maintenance, engineering and planning, regulatory compliance, stormwater capital improvements and administration of the City of Fayetteville's MS4 Program. The most recently adopted version of the City of Fayetteville Drainage Criteria Manual and Green Stormwater Practices will serve as the basis for the extent of stormwater service related to:

(A) Public roads, public rights of way and public detention ponds(detention pond maintenance limited to activities necessary for proper functionality),

(B) Drainage features within existing dedicated public easements (excluding private commercial detention ponds).

(C) These services extend to the downstream end of the first private infrastructure connected to the City of Fayetteville's drainage system.

(D) Prior to City accepting responsibility for any private stormwater system, its owner must dedicate a drainage easement to the City of sufficient size as determined by the City to allow access to and work on the drainage facilities with appropriate equipment. The City Engineer shall determine the sufficiency of the width and extent of easements.

52.10 - Reserved

ARTICLE III – ADMINISTRATION

52.11 – Administration and Appeals

(A) The City Engineer is responsible for the interpretation and administration of this chapter.

(B) Owners may appeal the initial amount of the Stormwater Management Utility Fee credit allowed denial of exemption or other dispute to the City Engineer, who shall determine the validity of any such appeal. The City Engineer shall set forth the requirements of any such appeal in the Drainage Criteria Manual. The City Engineer shall report the amount of any requested credit to be allowed in writing to the appellant and maintain such record by the Engineering Department for at least one year.

(C) After exhausting administrative means with the City Engineer, customers desiring to further appeal of an impervious area estimate, fee or credit can be heard by The City Water and Sewer Committee pursuant to Chapter 155: Appeals."

52.12 – Sustainable Credit Framework

(A) A Sustainable Credit Framework will be established by the City Council that provides all Stormwater Management Utility customers with an opportunity to reduce their normal fees. Customers may qualify for renewable fee reductions by demonstrating activities or stormwater practices that increase the water quality and thereby reduce the water quality and quantity burden imposed on the City of Fayetteville's drainage system. Activities eligible for credit include the following:

(1) Compliance with an industrial stormwater permit.

(2) Public customers that establish contracts, or Interlocal Cooperation Agreements, with the City under § 25-20-104 will receive a credit recognizing the value of their public efforts to reduce stormwater runoff, in accordance with the terms of the interlocal agreement.

(3) Using shared parking lots to minimize the creation of new impervious area

(4) Property retrofits using Water Quality, Flood, and Tree Mitigation Measures from the Drainage Criteria Manual.

(5) Attendance at approved Stormwater Education Program and Stormwater Stewardship Activities.

(6) Demonstration of no direct discharge of stormwater.

(B) The final Sustainable Credit Framework, including appropriate application forms and instructions, will be developed and available to customers a minimum of 6 months in advance of the effective date of the initial collection of the Stormwater Management Utility Fee.

52.13 - Billing and collection

The Stormwater Management and Fee shall be administered and collected in the same manner as the City's sewer utility.

52.14—52.15 - Reserved

Fayetteville, AR 72701

RE: Support for Stormwater Utility

Dear City of Fayetteville Council Members,

I am writing to express strong support for the implementation of a stormwater utility in Fayetteville and its positive impact on the Beaver Lake watershed. Beaver Watershed Alliance is a 501c3 nonprofit watershed group, formed in 2011, working to protect, enhance and sustain Beaver Lake and the integrity of its watershed. We work closely with the City of Fayetteville and residents to engage the public in conservation stewardship, work alongside city staff to install green infrastructure and have celebrated many success stories in water quality achievements over the past decade. However, with the growth outpacing the resources for water quality protection and restoration needs, we believe that this initiative is crucial for the future of water quality in the Town Branch watershed and West Fork watershed, which are major tributaries to Beaver Lake, and an additional safeguard to keep high-quality drinking water rates low for residents.

Increased urbanization and land development have led to a rise in stormwater runoff, which poses significant threats to water quality and ecosystem health. Pollution from sediment, nutrients, and contaminants can degrade water quality, harm aquatic life, and jeopardize public health. Sediments are costly to the drinking water utilities to remove and dispose.

By implementing a stormwater utility, Fayetteville can take proactive measures to mitigate the adverse effects of stormwater runoff and protect the integrity of the Beaver Lake watershed. The revenue generated from a stormwater utility fee could be invested in critical infrastructure projects, including green infrastructure, detention pond management, and erosion control measures, which help to reduce runoff volume and pollutant loads. Additionally, funding can support educational programs and outreach efforts to raise awareness about the importance of watershed stewardship and encourage sustainable practices among residents and businesses.

We urge you, as members of the City of Fayetteville Council, to consider the positive outcomes from the implementation of a stormwater utility as a critical step towards safeguarding the Beaver Lake watershed and ensuring a sustainable future for generations to come. Your leadership and commitment to environmental stewardship will not only benefit our community and watersheds today but leave a legacy of conservation and responsible resource management in our region.

Thank you for your attention to this matter, and we look forward to seeing the City of Fayetteville continue as a leader in stormwater management and water quality protection.

Sincerely,

Becky Roark
Executive Director
Beaver Watershed Alliance

The Source is a quarterly publication of Beaver Water District

STORMWATER UTILITY MAKES SENSE

By Dr. James A. McCarty, Environmental Quality Manager

In March of 2006, the first agreement was signed between the City of Fayetteville and Beaver Water District (BWD) for the protection of Beaver Lake. This particular agreement centered around potential changes to the discharge permit for the Noland Wastewater Plant and focused on efforts both the City and BWD would do to help reduce nonpoint source nutrients from entering our drinking water supply. That first agreement started what is now a long history of cooperation to protect Beaver Lake and includes two additional agreements. Several of our more notable successes stemming from our cooperation include: the continued efforts by the Noland Wastewater Plant to keep phosphorus concentrations in their effluent well below permitted values, multiple stream-restoration projects along the West Fork and White River with matching contributions from BWD and the City, cooperation on low impact development projects, and most recently, the joint purchase of 225 acres of floodplain property along the West Fork White River in southeast Fayetteville.

In 2018, the City let BWD know that they would be pursuing a study to look at the feasibility of forming a Stormwater Utility. The entire concept was unfamiliar to most people at the time, but the basics of the idea made sense; stormwater infrastructure and maintenance is underfunded, and with a backlog of projects contributing to flooding issues and water quality threats to Beaver Lake, a stormwater utility could help mitigate those issues.

As the study unfolded over the next couple of years and a framework for how a stormwater utility could operate was defined, it became clear that this type of structure could significantly improve water quality. The landowners within the city each have a certain amount of impervious cover on their property which does not allow rainfall to soak in, leading to runoff. The runoff has to be accounted for within the city's stormwater infrastructure, to ensure that it flows properly and reduces flooding risk. This infrastructure is not just the traditional concrete infrastructure for stormwater management, hundreds of miles of pipe/drainage ways underneath the city that carry stormwater off

streets to local streams, it is also the city required stormwater detention, retention, and low impact development features in developments. The city would charge customers a rate based on the total impervious area of their land. This makes sense as the more impervious area one has, the higher the cost to the city to deal with the stormwater runoff from the property.

While most of the proposed funding would be slated for maintenance of existing infrastructure and addressing flooding issues after heavy rain, much of the activity would have a positive impact on water quality. When properly functioning and maintained, concrete infrastructure, water retention/detention ponds, and low impact development features can all be effective at

reducing high flow during storm events and thus, reducing transport of sediments, nutrients, and chemicals to our drinking water supply. This summer, the Fayetteville City Council elected to continue funding updates to the original study and the development of an ordinance for the Stormwater Utility. It has been almost six years since BWD was first made aware of these efforts, and at times it has been a slow process, but now it feels like there is finally light at the end of the tunnel. Beaver Water District continues to support the efforts of the City of Fayetteville to protect Beaver Lake, and the District hopes that the example set by the new Stormwater Utility and other water quality efforts is followed by others. We have a strong history of collaboration and water quality protection to draw from and are looking forward to what comes next.

May 7, 2024

Dear Fayetteville City Council,

I am writing to express support of the Illinois River Watershed Partnership (IRWP) for the implementation of the stormwater utility fee as proposed by the city to support stormwater infrastructure maintenance, operations, water quality monitoring, and other stormwater infrastructure investment needs. Our region's water quality is increasingly impacted by land cover and land use changes, increasing precipitation, and inadequate stormwater management functionality. Addressing stormwater volume and quality has become increasingly crucial not only for our communities and the region's economy but also for our neighbors downstream.

City staff have dedicated many hours to researching the proposed stormwater utility fee, including consulting with IRWP and other partners, that aims to raise necessary funds dedicated to stormwater management, a vital tool for addressing stormwater impacts. Most of the City of Fayetteville's stormwater infrastructure is designed to manage floods. However, this stormwater utility will enable the city to maintain existing stormwater infrastructure, retrofit detention ponds, upgrade surface materials, stabilize streambanks, enhance riparian areas, and add vegetated strips and ditches, bioswales, and other proven best management practices. These types of investments are effective at managing stormwater by simultaneously protecting water quality and downstream property owners located throughout the City and on Clear Creek, Goose Creek, and other tributaries that convey stormwater away from Fayetteville. By developing a sustainable source of funds to invest in stormwater infrastructure, the city is also committing to progress toward meeting the Environmental Protection Agency (EPA) water quality standards, addressing flooding risks caused to downstream property owners and communities.

The City of Fayetteville added 464 acres of impervious area within city limits between 2018 and 2022. With these rates of growth, a modest 1-inch storm is resulting in approximately 5.6 million gallons of additional stormwater runoff in Fayetteville (Table 1).

Table 1: Gallons of Runoff in 1-inch Rain in Natural vs. Urbanized Land Cover

Evapotranspiration	Infiltration	Runoff
Natural Ground Cover		
40% (5,039,782.4)	50% (6,299,728)	10% (1,259,945.60)
Impervious Land Cover (75%-100%)		
30% (3,779,836.8)	15% (1,889,918.4)	55% (6,929,700.8)
-1,259,945.60 gallons	**-4,409,809.60 gallons**	**+5,669,755.20 gallons**

Note: 1 inch rain, 1 acre = 27,154 gallons, 464 acres x 27,154 gallons, 12,599,456 gallons of water.

By funding stormwater practices that improve evapotranspiration, infiltration, and reduce runoff, downstream flooding can be significantly reduced and water quality can be improved. Reductions in nutrients and pollutants can be achieved through the implementation of various green infrastructure BMPs. A summary of estimated reductions are below.

Table 2: Summary of Nutrient and Pollutant Reductions by BMP[1]

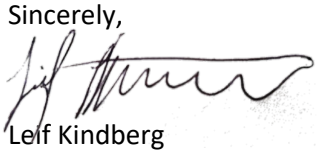
Nutrient Reductions:	**Pollutant Reductions:**
Nitrogen (N): Green roofs: 50-60% Bioretention cells: 40-70% Vegetated swales: 20-70% Phosphorus (P): Green roofs: 50-60% Bioretention cells: 40-70% Vegetated filter strips: 30-90%	Sediment: Vegetated filter strips: 37-95% Permeable pavement: 60-90% Heavy Metals (e.g., copper, lead, zinc): Bioretention cells: 50-80% Infiltration trenches: 50-90% E. coli Wetland basin 64-86%

These estimates can vary depending on factors such as design, climate, soil conditions, and maintenance practices. However, green infrastructure BMPs consistently demonstrate significant reductions in nutrients and pollutants compared to traditional stormwater management techniques, making them valuable tools for improving water quality in urban areas.

We commend the city for thoroughly considering the equity in development of this fee. Currently, it is evident that the burden of stormwater falls disproportionately on lower-income residents who may lack the means to address stormwater issues on their properties. By establishing a stormwater utility fee, we can ensure that the costs are shared more fairly among all residents, thus promoting equity within our community.

Furthermore, we commend the efforts to implement a modest annual increase to the fee. This approach provides stability while allowing for adjustments to keep pace with evolving needs and inflation.

I also want to emphasize the potential for partnerships in addressing stormwater management with the many robust conservation organizations servicing Fayetteville. Since a credit system for reduction of impervious surface area is outlined, there are ways IRWP, the city, and others can work together to decrease runoff, educate citizens, and achieve other benefits like ecosystem services, cultural heritage perpetuation, add social infrastructure, and increase biodiversity and resilience in the urban landscape. By involving property owners and developers, we can collectively work towards reducing impervious surface areas where unnecessary and implement green infrastructure solutions that enhance community benefits, reduce heat island effects, and improve surface and groundwater quality. Initiatives such as loan programs for low or no-interest stormwater funds can incentivize developers to incorporate low-impact practices into their projects, reducing maintenance costs and benefiting both the environment and the community. Homeowners can take advantage of educational opportunities



[1]Sources: International Stormwater BMP Database: 2020 Summary Statistics; Minnesota Stormwater Manual, Median pollutant removal percentages for several BMPs; Barnstable/Yarmouth, United States Environmental Protection Agency (EPA), Nitrogen-reducing Green Infrastructure in Environmental Justice Communities; Abimbola, O. et al, (2021), Modeling and Prioritizing Interventions Using Pollution Hotspots for Reducing Nutrients, Atrazine and E. coli Concentrations in a Watershed; and other sources.

and cost-share programs through IRWP and other partners to install practices that qualify for credit. Program opportunities, for example, like through a partnership with the Arkansas Department of Agriculture - Natural Resources Division utilizing Clean Water State Revolving Funds.

In conclusion, I urge the Fayetteville City Council to move forward with the implementation of a stormwater utility fee. As with Hot Springs, it will take a few years to implement and begin realizing the benefits to residents. However, there are many deferred stormwater projects that need to be addressed before the next rainfall. By taking proactive steps now, the city can better protect our community, enhance quality of life, and sustainably manage stormwater for the benefit of all.

Thank you for considering our perspective on this important matter.

Sincerely,

Leif Kindberg

Resolution: 143-24

File Number: 2024-1836

INTENT TO ENACT STORMWATER UTILITY FEE (RESOLUTION OF INTENT):

A RESOLUTION OF INTENT TO ENACT A STORMWATER UTILITY ORDINANCE AND ESTABLISH A STORMWATER MANAGEMENT AND WATER QUALITY FUND, AUTHORIZE ADDITIONAL SERVICES RELATED TO IMPLEMENTATION AND PUBLIC OUTREACH, AND TO APPROVE A BUDGET ADJUSTMENT

WHEREAS, the Engineering Division, the City Council Stormwater Committee, and the City Council Water & Sewer Committee have studied our community's growing need to improve our stormwater management services; and

WHEREAS, with the help of a professional consultant with extensive experience in creating Stormwater Utilities supported by appropriate and fair utility fees, these City Council committees and Engineering staff have devised the fairest Stormwater Management Utility Fee possible and recommend this ordinance to the full City Council for passage; and

WHEREAS, the City Council has determined that the Stormwater Utility Fee is necessary to equitably and efficiently fund stormwater management services in order to provide for the safety, preserve the health, and promote the prosperity of Fayetteville residents, businesses, and institutions; and

WHEREAS, the City Council also agrees with and adopts all the purposes explained in § 52.01 – **Purpose** of the proposed new code section; and

WHEREAS, additional services authorized with this resolution of intent include development of the billing database and billing tool that would allow property owners and residents to view their proposed fee as a portion of the continued public outreach efforts, which could include engaging a consultant or additional temporary staff.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby expresses its intent to enact **Chapter 52 Stormwater Management Utility Fee** as shown in Exhibit A attached hereto and made a part hereof.

Section 2: That the City Council of the City of Fayetteville, Arkansas hereby approves a budget adjustment, a copy of which is attached to this Resolution, to appropriate funds for additional services including development of the billing database and a billing tool to allow property owners and residents to view their proposed fees.

PASSED and APPROVED on May 21, 2024

CITY COUNCIL MEMO
2024-1836

MEETING OF MAY 21, 2024

TO: Mayor Jordan and City Council

THRU: Chris Brown, Public Works Director

FROM: Alan Pugh, Staff Engineer

SUBJECT: **Approval of a resolution of intent to adopt Chapter 52, Stormwater Management and Water Quality Utility, of the City of Fayetteville Code or Ordinances establishing a Stormwater Management and Water Quality Fund, authorization to perform additional services and approval of a budget adjustment**

RECOMMENDATION:
Staff recommends approval of a resolution of intent to adopt Chapter 52, Stormwater Management and Water Quality Utility, of the City of Fayetteville Code or Ordinances establishing a Stormwater Management and Water Quality Fund, authorization to perform additional services and approval of a budget adjustment.

BACKGROUND:
Like many cities throughout the state and nation, the City of Fayetteville experiences issues with management of its stormwater utility system. These issues stem from many sources including, but not limited to, compliance with the mandated Municipal Separate Stormwater System (MS4) requirements, aging infrastructure, maintenance of system capacity, personnel to perform systematic inspections and the lack of formal drainage systems in many older areas of the City. To address these concerns, the City has historically funded the stormwater program through the Sales Tax Capital Improvement Program (CIP) and the Street Fund for capital and operational/maintenance functions, respectively. However, there are many needs within the City that require funding from these sources and, at least in recent years, the funding for stormwater has been inadequate to comprehensively address stormwater management within the City. To develop a comprehensive solution, additional funding is required for personnel and equipment as well as multiple capital projects, many of which will require more than $1 million dollars for each project. Given the current levels, it would take many years to address just one of those projects.

In June, 2018, the City Council recognized these needs and approved with a consultant contract for a feasibility study (Resolution 131-18) and amended that agreement on two occasions (Resolutions 209-19 and 250-19) to provide additional investigation and details. That study was completed in August of 2019 and updated in 2022 with more recent program costs, impervious area and associated fees. The Council also passed a resolution of intent to establish a stormwater utility in July of 2022 (Resolution 157-22)

DISCUSSION:
The study recognized several areas that are currently underfunded, with the gap between the funding and actual costs to provide the services increasing every year. These needs include categories such as:

- Operation and Maintenance
- Engineering and Planning

- Regulatory Compliance
- Capital Improvement Projects

The costs associated with these categories were based on a level and extent of service agreed upon by council early in the program discussions as well as estimates of future regulatory compliance costs and expansion of the stormwater system as Fayetteville continues to grow. The costs associated with the recommended stormwater utility program can be found below.

Program Costs	Current Budget	Additional Needs	Total Program
Operation and Maintenance	$998,441	$1,508,000	$2,506,441
Engineering and Planning	$67,000	$122,000	$189,000
Regulatory Compliance	$193,000	$274,000	$467,000
Stormwater CIP	$200,000	$913,400	$1,113,400
Administrative	$0	$324,000	$324,000
Total	**$1,458,441**	**$3,141,400**	**$4,599,841**

In response to the completed study and the need to find a sustainable funding source for the stormwater management program, City staff has drafted Chapter 52, Stormwater Management and Water Quality Utility, for consideration by City Council. The proposed ordinance would establish an equitable funding source based on impervious areas, which can be directly correlated to the impact of any given property to the stormwater system. The fee is proposed to be billed to sewer users with the City limits in a tiered system. Properties with greater impervious areas would have a higher fee than smaller properties due to the increased impact to the system. If there are multiple sewer customers on a single property, the total impervious area would be allocated between those customers and the appropriate portion of the total fee billed to each customer.

Staff have worked closely with the City Attorney's office throughout the process and has modified the program to address the concerns that have been raised. The City Attorney has expressed concern over the legality of billing federal, state and county governments, and recommended that they be exempted. Staff has included a revised monthly fee that reflects this recommendation. The monthly fee is estimated to go to $1.35 per billing unit with those exemptions, which is a slight increase from the $1.30 per billing unit discussed previously. That change is reflected in the table below and in the attached draft of Chapter 52.

The proposed fee would provide funding, in addition to that already being allocated from existing sources, to operate and maintain as well as improve and expand the stormwater system. The fee tiers are as shown below.

Tier	Tier Range (by square footage of impervious area on a property)	Billing Units	Initial Monthly Fee ($1.35 per unit)
1	0≤2,000	1.25	$1.69

2	>2,000 to ≤ 3,500	2.75	$3.71
3	>3,500 to ≤ 5,000	4.25	$5.73
4	>5,000 to ≤ 6,500	5.75	$7.76
5	>6,500 to ≤ 8,000	7.25	$9.79
6	>8,000	Per Calc	Billing Unit x Rate

This fee will close the existing funding gap and will fully fund a program to adequately manage stormwater within the City of Fayetteville. The proposed program presents a sustainable and equitable method of funding.

The additional services authorized with this proposal would include development of the billing database and billing tool that would allow property owners and residents to view their proposed fee as a portion of the continued public outreach efforts. This could include engaging a consultant and/or additional temporary staff. If a consultant is engaged, the contract for the services will be brought back to the council. However, council would be authorizing and to authorize the addition of up to 3.0 temporary full-time equivalent positions for the GIS and utility financial services to backfill existing employees related with the implementation of a Stormwater Utility with this resolution.

This would bring the City one step closer to implementing the program. The anticipated schedule moving forward would be for the billing tool to be available to the public by October of this year and for the council to consider the ordinance adopting the program prior to the end of the year with the goal of the fee being included on sanitary sewer bills by August of 2025. Additional funding is anticipated to be necessary at the time of adoption of Chapter 52 for aerial imagery and impervious data in order to establish the baseline of impervious area for the program.

BUDGET/STAFF IMPACT:
The proposal would initially generate approximately $3 million in additional funding to be allocated to the Stormwater Management and Water Quality program.

EXHIBIT A

CHAPTER 52: STORMWATER MANAGEMENT UTILITY FEE

ARTICLE I – GENERAL PROVISIONS

52.01 - Purpose

The Stormwater Management Utility Fee is hereby established to create an equitable, efficient, and dedicated funding source for stormwater management services in the City of Fayetteville and provide for the safety, preserve the health and promote the prosperity of Fayetteville residents, businesses and institutions. The purposes for the Stormwater Management Fee further include:

(A) To establish an equitable, fair, efficient and dedicated funding source for stormwater management services in the City of Fayetteville, Arkansas in addition to other taxpayer funds so that better long-range planning can be achieved.

(B) To lessen or deter hazards to persons, property and the environment caused by increased runoff, obstructions to drainage and introduction of excessive silts, debris and pollutants into the drainage system, lakes, ponds, streams, rivers and other water bodies in the City of Fayetteville, and to otherwise promote the public health, safety and welfare of the public.

(C) To fund the City's MS4 Stormwater Management Program for which it is expected to require a series of minimum control measures and report on their progress annually. In addition to new measures with each 5-year permit renewal, the City is projected to meet the population threshold of 100,000 by no later than 2030 and would be designated a medium MS4 community, triggering additional mandated activities.

(D) To administer the National Flood Insurance Program and its Community Rating System which provides property owners with credits to reduce their flood insurance premiums,

(E) To equitably and legally address drainage needs, also known as stormwater management, to protect public health, safety, and welfare and to reduce flooding on city streets thereby ensuring access of emergency vehicles to all properties within the City during flood events, by providing resources for construction, maintenance, and operation of stormwater facilities.

(F) To implement additional watershed improvements of the City's waters in general, and specifically, that of Beaver Lake, the City's drinking water source, and the Illinois River.

52.02 - Definitions

The following definitions shall apply to this chapter:

Billing Unit shall mean the unit by which stormwater utility bills are calculated. A single billing unit shall be equal to 1,000 square feet of impervious area.

Customer shall mean all persons or entities to whom the Stormwater Management Utility Fee is properly billed. A customer is further defined as a person or an entity billed for sanitary sewer services within the City limits.

Credit shall mean a conditional, renewable reduction in the amount of the fee owed by a customer in accordance with the Sustainable Credit Framework.

Public customer shall mean a local public agency including property of a school district within the City of Fayetteville.

Public Stormwater System shall mean all stormwater conveyance systems located within the City of Fayetteville right-of-way or public drainage easements. All other stormwater conveyance systems shall be considered Private Stormwater Systems.

Stormwater Management Utility Fee is the utility fee authorized by state law to provide necessary funds for a city to adequately address stormwater problems and needs through an equitable and fair utility fee derived from an expert analysis of the amount of impervious surface of each property which causes increased stormwater runoff that needs to be managed by the city to reduce or prevent flooding problems for our citizens and businesses.

52.03 - Applicability

(A) The stormwater utility fee shall apply to all real property within the territorial jurisdiction of the City of Fayetteville for which sanitary sewer is provided by the City and upon which the City may constitutionally and legally assess such stormwater utility fee.

(B) City-owned real property constituting the municipal drainage system, including public streets, public rights-of-way, drainage facilities, and related infrastructure is not served by a sanitary sewer and thus is not subject to a stormwater utility fee.

(C) The requirements of this chapter do not relieve landowners, developers, other individuals, and entities from their responsibility for complying with the obligations of other portions of the Unified Development Code.

52.04—52.05 - Reserved

ARTICLE II – STORMWATER MANAGEMENT UTILITY FUND

52.06 - Establishment of a Stormwater Management Utility Fund

Pursuant to A.C.A. § 14-235-201 and other state law, the City of Fayetteville hereby creates a fund entitled the "Stormwater Management Utility Fund" for the purpose of segregating, identifying, and controlling revenues and expenses for operation of the City of Fayetteville Stormwater Management Program and other storm-related equipment, construction, materials, supplies or services attributable to these functions. The following revenue sources shall be deposited in said fund:

(A) All revenue collected by or on behalf of the Stormwater Management Utility Fee.

(B) Revenue from contributions in-lieu of onsite detention or from developers as contributions for required off-site drainage improvements, which may include bridge assessments.

(C) Any interest earned on monies held in the Stormwater Management Utility Fund.

(D) Any other revenue as may be determined appropriate by the City Council, including but not limited to general revenue, bond and grant proceeds.

These revenues shall be used exclusively for the purposes listed in Article I – General Provisions.

EXHIBIT A

52.07 – Authorization of a Stormwater Management Utility Fee

The Stormwater Management Utility Fee is a utility fee that is hereby authorized to be charged on most real property within the City of Fayetteville, Arkansas. The fee shall be billable to the City's Sewer Utility customers. The rate structure for the utility fee shall:

(A) Be based on the square footage of impervious area on a property,

(B) Be owner / customer type (residential, commercial, etc..)-neutral,

(C) Use a billing unit of 1,000 square feet of impervious area,

(D) Slot property within the following six-tier billing unit structure:

Tier	Tier Range (by square footage of impervious area on a property)	Billing Units	Initial Monthly Fee (Billing Unit times Billing Rate)
1	Less than 2,000	1.25	$1.69
2	2,001 to 3,500	2.75	$3.71
3	3,501 to 5,000	4.25	$5.73
4	5,001 to 6,500	5.75	$7.76
5	6,501 to 8,000	7.25	$9.79
6	More than 8,000	See (F)	See (F)

(E) For Tiers 1 through 5, the billing unit in the chart shall be multiplied by the billing rate per unit rounded down to the nearest cent.

(F) For Tier 6, properties with impervious area greater than 8,000 square feet, the actual impervious area is divided by 1,000 and multiplied by the monthly rate per billing unit.

(G) The initial rate per billing unit shall be $1.35. This rate shall be increased by 3% per year beginning in the January 2026 billing period. No rates shall increase after 2031 without a further rate study.

(H) Fees for sewer customers on properties with multiple sewer accounts shall be based on the individual sewer customer's percentage of total impervious area of the property or properties that may be attributed to the customer's account, included any areas of parking, common use areas, or other impervious area on the attributable properties.

(I) Sewer customers or property owners may apply to have the fee for their property mitigated or reduced by the Sustainable Credit Framework.

52.08 – Initial Charge for the Stormwater Management Utility Fee

The initial assessment of the Stormwater Management Utility Fee established shall be charged beginning one year after the effective date of the ordinance.

52.09 – Level and Extent of Service Policies

The level of services funded by the Stormwater Management Utility Fees are dependent upon the amount of revenue generated by this Utility Fee, as well as possible general fund, sales tax bond, grants and other sources. These revenues shall fund the operation and maintenance, engineering and planning, regulatory compliance, stormwater capital improvements and administration of the City of Fayetteville's MS4 Program. The most recently adopted version of the City of Fayetteville Drainage Criteria Manual and Green Stormwater Practices will serve as the basis for the extent of stormwater service related to:

(A) Public roads, public rights of way and public detention ponds(detention pond maintenance limited to activities necessary for proper functionality),

(B) Drainage features within existing dedicated public easements (excluding private commercial detention ponds).

(C) These services extend to the downstream end of the first private infrastructure connected to the City of Fayetteville's drainage system.

(D) Prior to City accepting responsibility for any private stormwater system, its owner must dedicate a drainage easement to the City of sufficient size as determined by the City to allow access to and work on the drainage facilities with appropriate equipment. The City Engineer shall determine the sufficiency of the width and extent of easements.

52.10 - Reserved

ARTICLE III – ADMINISTRATION

52.11 – Administration and Appeals

(A) The City Engineer is responsible for the interpretation and administration of this chapter.

(B) Owners may appeal the initial amount of the Stormwater Management Utility Fee credit allowed denial of exemption or other dispute to the City Engineer, who shall determine the validity of any such appeal. The City Engineer shall set forth the requirements of any such appeal in the Drainage Criteria Manual. The City Engineer shall report the amount of any requested credit to be allowed in writing to the appellant and maintain such record by the Engineering Department for at least one year.

(C) After exhausting administrative means with the City Engineer, customers desiring to further appeal of an impervious area estimate, fee or credit can be heard by The City Water and Sewer Committee pursuant to Chapter 155: Appeals."

52.12 – Sustainable Credit Framework

(A) A Sustainable Credit Framework will be established by the City Council that provides all Stormwater Management Utility customers with an opportunity to reduce their normal fees. Customers may qualify for renewable fee reductions by demonstrating activities or stormwater practices that increase the water quality and thereby reduce the water quality and quantity burden imposed on the City of Fayetteville's drainage system. Activities eligible for credit include the following:

(1) Compliance with an industrial stormwater permit.

(2) Public customers that establish contracts, or Interlocal Cooperation Agreements, with the City under § 25-20-104 will receive a credit recognizing the value of their public efforts to reduce stormwater runoff, in accordance with the terms of the interlocal agreement.

(3) Using shared parking lots to minimize the creation of new impervious area

(4) Property retrofits using Water Quality, Flood, and Tree Mitigation Measures from the Drainage Criteria Manual.

(5) Attendance at approved Stormwater Education Program and Stormwater Stewardship Activities.

(6) Demonstration of no direct discharge of stormwater.

(B) The final Sustainable Credit Framework, including appropriate application forms and instructions, will be developed and available to customers a minimum of 6 months in advance of the effective date of the initial collection of the Stormwater Management Utility Fee.

52.13 - Billing and collection

The Stormwater Management and Fee shall be administered and collected in the same manner as the City's sewer utility.

52.14—52.15 - Reserved

RE: Support for Stormwater Utility

Dear City of Fayetteville Council Members,

I am writing to express strong support for the implementation of a stormwater utility in Fayetteville and its positive impact on the Beaver Lake watershed. Beaver Watershed Alliance is a 501c3 nonprofit watershed group, formed in 2011, working to protect, enhance and sustain Beaver Lake and the integrity of its watershed. We work closely with the City of Fayetteville and residents to engage the public in conservation stewardship, work alongside city staff to install green infrastructure and have celebrated many success stories in water quality achievements over the past decade. However, with the growth outpacing the resources for water quality protection and restoration needs, we believe that this initiative is crucial for the future of water quality in the Town Branch watershed and West Fork watershed, which are major tributaries to Beaver Lake, and an additional safeguard to keep high-quality drinking water rates low for residents.

Increased urbanization and land development have led to a rise in stormwater runoff, which poses significant threats to water quality and ecosystem health. Pollution from sediment, nutrients, and contaminants can degrade water quality, harm aquatic life, and jeopardize public health. Sediments are costly to the drinking water utilities to remove and dispose.

By implementing a stormwater utility, Fayetteville can take proactive measures to mitigate the adverse effects of stormwater runoff and protect the integrity of the Beaver Lake watershed. The revenue generated from a stormwater utility fee could be invested in critical infrastructure projects, including green infrastructure, detention pond management, and erosion control measures, which help to reduce runoff volume and pollutant loads. Additionally, funding can support educational programs and outreach efforts to raise awareness about the importance of watershed stewardship and encourage sustainable practices among residents and businesses.

We urge you, as members of the City of Fayetteville Council, to consider the positive outcomes from the implementation of a stormwater utility as a critical step towards safeguarding the Beaver Lake watershed and ensuring a sustainable future for generations to come. Your leadership and commitment to environmental stewardship will not only benefit our community and watersheds today but leave a legacy of conservation and responsible resource management in our region.

Thank you for your attention to this matter, and we look forward to seeing the City of Fayetteville continue as a leader in stormwater management and water quality protection.

Sincerely,

Becky Roark

CITY OF FAYETTEVILLE ARKANSAS

CITY COUNCIL MEMO
2024-759

MEETING OF NOVEMBER 26, 2024

TO: Mayor Jordan and City Council

THRU: Kit Williams, City Attorney

FROM: Kit Williams, City Attorney

SUBJECT: **AN ORDINANCE TO AMEND § 111.30 RETAIL**

RECOMMENDATION:
Amend § 111.30 **RETAIL** to authorize Sunday sales of alcoholic beverages.

BACKGROUND:
A citizens' petition presented the question to Fayetteville electors whether or not to allow Sunday sales of alcoholic beverages for off-premises consumption from 10:00 a.m. until midnight. A majority of Fayetteville voters agreed to authorize such sales of alcoholic beverages for off-premises consumption from 10:00 a.m. until midnight on Sundays.

DISCUSSION:

BUDGET/STAFF IMPACT:
N/A

ATTACHMENTS: Agenda Request - Kit Williams (#3), Current Law - 111.30 (#4), Memo Amendment of 111.30 (#5)

File #: 2024-759

AN ORDINANCE TO AMEND § 111.30 RETAIL

AN ORDINANCE TO AMEND § 111.30 RETAIL TO AUTHORIZE SUNDAY SALES OF ALCOHOLIC BEVERAGES FOR OFF-PREMISES CONSUMPTION FROM 10:00 AM UNTIL MIDNIGHT AND TO ENACT AN EMERGENCY CLAUSE

WHEREAS, a citizens' petition presented the question to Fayetteville electors whether or not to allow Sunday sales of alcoholic beverages for off-premises consumption from 10:00 a.m. until midnight; and

WHEREAS, a majority of Fayetteville voters agreed to authorize such sales of alcoholic beverages for off-premises consumption from 10:00 a.m. until midnight on Sundays.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby amends § 111.30 (A)(2) and (B)(2) *Hours of Operation* by repealing these subsections in their entirety and enacting the replacement subsections (A)(2) and (B)(2) as follows:

"(2) *Hours of Operation.* It shall be unlawful for any person to sell or offer to sell any controlled beverages for off-premises consumption before the hour of 7:00 a.m. or after the hour of 11:00 p.m. on Monday through Thursday, before 7:00 a.m. or after the hour of 12:00 midnight on Friday and Saturday, and before 10:00 a.m. or after midnight on Sunday, at any hour on Christmas Day, or during any twenty-four (24) hour period designated an emergency by the Mayor or the City Council."

Section 2: Emergency Clause. That the City Council of the City of Fayetteville, Arkansas hereby determines that this ordinance should and will become effective on December 6, 2024 to obey the will of the voters on November 5, 2024 to allow Sunday sales of alcoholic beverages for off-premises consumption and to protect the peace and welfare of our citizens and businesses.

ORDINANCE OR RESOLUTION TITLE AND SUBJECT:

AN ORDINANCE TO AMEND § 111.30 **RETAIL** TO AUTHORIZE SUNDAY SALES OF ALCOHOLIC BEVERAGES FOR OFF-PREMISES CONSUMPTION FROM 10:00 AM UNTIL MIDNIGHT AND TO ENACT AN EMERGENCY CLAUSE

APPROVED FOR AGENDA:

Kit Williams

Nov 12, 2024
Date

Current law

111.30 Retail

(A) *Retail Liquor Off-Premises Permit.* Authorizes the purchase of spirituous and vinous beverages from any person holding a valid wholesale liquor permit and the sale of such beverages at retail to consumers for consumption off the premises; any holder of a liquor off-premises permit may also purchase malt liquors containing more than 5% alcohol by weight from either persons holding a wholesale beer permit or a wholesale liquor permit, and sell such beverages to consumers for consumption off the premises described in the permit. It shall be unlawful for any person to accept retail orders for any spirituous, vinous, or malt liquors for delivery outside of the premises of the store operated by such person.

(1) *Permit Fee.* There is hereby levied an annual permit fee of $250.00 for each and every retail liquor dealer engaged in the business of selling or dispensing, at retail any vinous (except wine), spirituous, or malt liquors for off-premises consumption.

(2) *Hours of Operation.* It shall be unlawful for any person to sell or offer to sell any controlled beverages for off-premises consumption before the hour of 7:00 a.m. or after the hour of 11:00 p.m. on weekdays, after the hour of 12:00 midnight on Friday or Saturday and at any hour on Sunday, on Christmas Day, or during any twenty-four (24) hour period designated an emergency by the Mayor or the City Council.

(B) *Retail Beer and Light Wine Off-Premises Permit.* Authorizes the purchase of beer, light wine, or malt liquor containing less than 5% alcohol by weight from wholesalers holding a valid permit and the sale of such controlled beverages for consumption off the premises described in the permit.

(1) *Permit Fee.* For the privilege of selling beer and light wine, at retail, for off premises consumption, there is hereby levied an annual permit fee as follows:

(a) For a retailer whose annual gross sales of beer and/or light wine do not exceed $1,000.00, the permit fee shall be $15.00.

(b) For a retailer whose annual gross sales of beer and/or light wine exceed $1,000.00, the permit fee shall be $15.00 plus ½¢ for each dollar of gross sales in excess of $1,000.00.

(c) The permit fee for a new applicant with no sales history shall be $40.00.

(d) For the purpose of renewing an existing permit, annual sales shall be the actual gross sales for the previous calendar year. If the permittee has not been in operation for a full year at December 31st of the previous year, annual sales shall be determined by dividing the total actual sales by the number of months of operation and multiplying the result by twelve (12).

(e) If a new permit was issued between January 1st and June 30th, the first renewal rate (due on June 30th of the issue year) shall be $40.00.

(2) Hours of operation. It shall be unlawful for any person to sell or offer to sell beer or light wine for off-premises consumption before the hour of 7:00 a.m. or after the hour of 11:00

Current law

p.m. on weekdays, after the hour of 12:00 midnight on Friday or Saturday, at any hour on Sunday, on Christmas Day, or during any twenty-four (24) hour period designated an emergency by the Mayor or City Council.

(C) *Retail Beer and Light Wine On-Premises Permit.* Authorizes the purchase of beer, light wine, or malt liquor containing less than 5% alcohol by weight from a wholesaler holding a valid permit and the sale of such controlled beverages for consumption on or off the premises described in the permit.

(1) *Permit Fee.* There is hereby levied an annual permit fee of the same amounts and computed in the same manner as the annual fees for retail beer and light wine off-premises in §111.30(B) above.

(2) *Hours of Operation.* It shall be unlawful for any person to serve, sell, offer for sale, or give away for consumption on-premises any beer or light wine between the hours of 1:00 a.m. and 7:00 a.m. on Monday through Saturday, on Sunday except during the hours of 10:00 a.m. until midnight, on Christmas Day, or during any twenty-four (24) hour interval designated an emergency period by the Mayor, City Council, or any person acting in the Mayor's or the City Council's capacity.

(D) *Private Club Permit.* Authorizes the purchase of any controlled beverages from persons holding an off-premises retail liquor or beer permit who have been designated by the director of the State Alcoholic Beverage Control Board as a private club distributor, and authorizes the dispensing of such beverages for consumption on the premises of the private club to members and guests only of the private club. (Private clubs holding a retail beer on premises permit may purchase beer, light wine, or malt liquor containing not more than 5% alcohol by weight from holders of valid wholesale beer permits).

(1) *Permit Fee.* For the privilege of operating a private club within the city, there is hereby levied an annual permit fee of $250.00. For any new private club permit issued between January 1st and July 1st, the fee shall be $125.00.

(2) *Supplemental Beverage Tax.* In addition to the $250.00 per year permit fee, there is hereby imposed and levied a city supplemental tax of five percent upon the annual gross receipts which are derived by such private club from charges to the members and/or their guests for the following services:

(a) For the preparation and serving of mixed drinks; and

(b) For the cooling and serving of beer, light wine, and wine.

The city's supplemental beverage tax is in addition to the state supplemental tax on private clubs and shall be paid to the appropriate city official, shall be due monthly at the same time that the state supplemental tax is due, and shall be accompanied by one (1) copy of the state supplemental tax return. If any permittee shall fail to remit the supplemental tax within the time period that the state tax is due, a penalty of 12½% of the tax due shall be due and payable in addition to the tax.

RE: **Amendment of § 111.30 Retail to Authorize Sunday Sales of Alcoholic Beverages for Off-Premises Consumption**

I am proposing two amendments of § 111.30 **Retail** because the City is legally required to remove the existing prohibition of Sunday sales of alcoholic beverages for off-premise consumption by the Fayetteville voters' approval of that issue. Two subsections of 111.30 **Retail** must be amended: (A)(2) and (B)(2). (A)(2) concerns sales of liquor for off-premises consumption. (B)(2) concerns sales of beer and wine for off-premises consumption. The *Hours of Operation* subsections need to be amended to allow the Sunday sale of alcoholic beverages for off-premises consumption from 10:00 a.m. until midnight as approved by the voters.

I have attached the proposed ordinance to amend these subsections for your convenience.

CITY OF FAYETTEVILLE ARKANSAS

CITY COUNCIL MEMO
2024-758

MEETING OF NOVEMBER 26, 2024

TO: Mayor Jordan and City Council

THRU: Kit Williams, City Attorney

FROM: Kit Williams, City Attorney

SUBJECT: **AN ORDINANCE TO AMEND ORDINANCE 6710 AND TO DECLARE AN EMERGENCY**

RECOMMENDATION:
The Ordinance Review Committee recommends extending the sunset date to allow for consideration of amendments to the City's short-term rental regulations and to allow the continued operation of short-term rentals until July 1, 2025 at 7:00 p.m.

BACKGROUND:
The sunset clause in Ordinance 6427, which was passed on April 20, 2021, provides that the ordinance "and all amendments to Code sections ordained or enacted by this ordinance shall automatically sunset, be repealed, terminated, and become void twenty (20) months after the passage and approval of this ordinance, unless prior to that date, the City Council amends this ordinance to repeal this sunset, repeal and terminations section." Ordinance 6625, which was passed on December 6, 2022, amended Ordinance 6427 so that the ordinance "and all amendments to Code Sections ordained or enacted by Ordinance 6427 shall automatically sunset, be repealed, and become void on December 31, 2023, unless prior to that date the City Council amends this ordinance to repeal or further amend this sunset repeal and termination section." Ordinance 6710 passed on November 21, 2023 amended the sunset provision of Ordinance 6625 which provided that all amendments to the code sections ordained or enacted by Ordinance 6427 shall automatically sunset, be repealed, and become void on December 31, 2024, unless prior to that date the City Council amends this ordinance to repeal or further amend this sunset, repeal and termination section.

DISCUSSION:
The Ordinance Review Committee recommends extending the sunset date to allow for consideration of amendments to the City's short-term rental regulations and to allow the continued operation of short-term rentals until July 1, 2025 at 7:00 p.m.

AN ORDINANCE TO AMEND ORDINANCE 6710 AND TO DECLARE AN EMERGENCY

AN ORDINANCE TO AMEND ORDINANCE 6710 PASSED ON NOVEMBER 21, 2023 TO EXTEND THE SUNSET CLAUSE EFFECTIVE DATE TO JULY 1, 2025 AT 7:00 P.M. AND TO DECLARE AN EMERGENCY

WHEREAS, the sunset clause in Ordinance 6427, which was passed on April 20, 2021, provides that the ordinance "and all amendments to Code sections ordained or enacted by this ordinance shall automatically sunset, be repealed, terminated, and become void twenty (20) months after the passage and approval of this ordinance, unless prior to that date, the City Council amends this ordinance to repeal this sunset, repeal and terminations section"; and

WHEREAS, Ordinance 6625, which was passed on December 6, 2022, amended Ordinance 6427 so that the ordinance "and all amendments to Code Sections ordained or enacted by Ordinance 6427 shall automatically sunset, be repealed, and become void on December 31, 2023, unless prior to that date the City Council amends this ordinance to repeal or further amend this sunset repeal and termination section"; and

WHEREAS, Ordinance 6710 passed on November 21, 2023 amended the sunset provision of Ordinance 6625 which provided that all amendments to the code sections ordained or enacted by Ordinance 6427 shall automatically sunset, be repealed, and become void on December 31, 2024, unless prior to that date the City Council amends this ordinance to repeal or further amend this sunset, repeal and termination section; and

WHEREAS, the Ordinance Review Committee recommends extending the sunset date to allow for consideration of amendments to the City's short-term rental regulations and to allow the continued operation of short-term rentals until July 1, 2025 at 7:00 p.m.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby determines that Ordinance 6427 (Sunset Clause), Ordinance 6625 (extending Sunset Clause) and Ordinance 6710 (extending the Sunset Clause) be amended so that Ordinance 6427 and all amendments to Code Sections ordained or enacted by Ordinance 6427 shall automatically sunset, be repealed and become void on July 1, 2025 at 7:00 p.m. unless prior to that time and date the City Council amends this ordinance to repeal or further amend this sunset, repeal and termination section.

Section 2: That the City Council of the City of Fayetteville, Arkansas hereby determines that this ordinance should become effective without delay because allowing the City's short-term rental regulation to expire will likely lead to unregulated and illegal operation of short-term rentals not subject to the City's life safety standards and insurance requirements, such that an extension of the sunset clause is necessary for the public peace as well as the health and safety of Fayetteville residents. Therefore, the City Council hereby declares an emergency exists such that this ordinance shall become effective immediately upon its passage and approval.

Sent: Tuesday, November 12, 2024 12:15 PM
To: Hertzberg, Holly <holly.hertzberg@fayetteville-ar.gov>
Cc: Barnes, Stacy <sbarnes@fayetteville-ar.gov>
Subject: sunset clause extention

Holly,

Attached is the proposed ordinance extending the Short-term rental code sunset date to July 1, 2025 at 7:00 PM. Assuming the STR code is what the city council decides is fine to make permanent on July 1st , we should be able to safely enact the amended code with all previously approved changes at the meeting immediately after the current code will have been automatically voided. We will need an emergency clause then so there will not be a gap long enough to cause any problems for the short-term rentals previously allowed under our current regulations.

Anyway, I have attached the ordinance to extend the current code until July 1st as recommended by the Ordinance Review committee. Also attached is the Agenda Request form for your signature as chair of the Ordinance Review Committee. This is for the December 5th City Council Meeting.

You can sign now and scan it back to me, or I will also have it with me for tonight's meetings.

Thanks,

Kit

RE: **Extending the sunset clause of the Short-Term Rental Ordinance and Code to July 1, 2025**

The Ordinance Review Committee unanimously agreed that the City Council should extend the sunset clause date to July 1, 2025. This should be after the State Legislature Session has adjourned and we can consider any changes in state law that could affect short-term rental regulations.

If no state law changes have been enacted, I hope we will have been able to make any further changes to the *Fayetteville Code* and be safe to enact the fully amended code without any further sunset provision.

ORDINANCE NO. _____

AN ORDINANCE TO AMEND ORDINANCE 6710 PASSED ON NOVEMBER 21, 2023 TO EXTEND THE SUNSET CLAUSE EFFECTIVE DATE TO JULY 1, 2025 AT 7:00 P.M. AND TO DECLARE AN EMERGENCY

WHEREAS, the sunset clause in Ordinance 6427, which was passed on April 20, 2021, provides that the ordinance "and all amendments to Code sections ordained or enacted by this ordinance shall automatically sunset, be repealed, terminated, and become void twenty (20) months after the passage and approval of this ordinance, unless prior to that date, the City Council amends this ordinance to repeal this sunset, repeal and terminations section"; and

WHEREAS, Ordinance 6625, which was passed on December 6, 2022, amended Ordinance 6427 so that the ordinance "and all amendments to Code Sections ordained or enacted by Ordinance 6427 shall automatically sunset, be repealed, and become void on December 31, 2023, unless prior to that date the City Council amends this ordinance to repeal or further amend this sunset repeal and termination section"; and

WHEREAS, Ordinance 6710 passed on November 21, 2023 amended the sunset provision of Ordinance 6625 which provided that all amendments to the code sections ordained or enacted by Ordinance 6427 shall automatically sunset, be repealed, and become void on December 31, 2024, unless prior to that date the City Council amends this ordinance to repeal or further amend this sunset, repeal and termination section; and

WHEREAS, the Ordinance Review Committee recommends extending the sunset date to allow for consideration of amendments to the City's short-term rental regulations and to allow the continued operation of short-term rentals until July 1, 2025 at 7:00 p.m.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby determines that Ordinance 6427 (Sunset Clause), Ordinance 6625 (extending Sunset Clause) and Ordinance 6710 (extending the Sunset Clause) be amended so that Ordinance 6427 and all amendments to Code Sections ordained or enacted by Ordinance 6427 shall automatically sunset, be repealed and become void on July 1, 2025 at 7:00 p.m. unless prior to that time and date the City Council amends this ordinance to repeal or further amend this sunset, repeal and termination section.

Section 2: That the City Council of the City of Fayetteville, Arkansas hereby determines that this ordinance should become effective without delay because allowing the City's short-term rental regulation to expire will likely lead to unregulated and illegal operation of short-term rentals not subject to the City's life safety standards and insurance requirements, such that an extension of the sunset clause is necessary for the public peace as well as the health and safety of Fayetteville residents. Therefore, the City Council hereby declares an emergency exists such that this ordinance shall become effective immediately upon its passage and approval.

AN ORDINANCE TO AMEND § 118.01 (E)(1) and (2) OF THE FAYETTEVILLE CODE TO SIMPLIFY AND CLARIFY THE DEFINITIONS OF SHORT-TERM RENTAL, TYPE 1 AND SHORT-TERM RENTAL, TYPE 2

WHEREAS, the Ordinance Review Committee has unanimously forwarded the simplified and clarified definitions of Short-Term Rental, Type 1 and Short-Term Rental, Type 2 for City Council Consideration.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby amends § 118.01 (E)(1) and (2) of the Fayetteville Code by repealing them in their entireties and enacting replacement 118.01 (E)(1) and (2) as follows:

"118.01 (E)(1)
Short-Term Rental, Type 1.
A short-term rental is where the owner or long term tenant occupies the principal dwelling or the accessory dwelling unit as their primary full time residence for at least nine months of each calendar year and rents the remaining portion of their residence or their accessory dwelling unit as a short-term rental. An applicant for a Type 1 Short-Term Rental shall provide a copy of the property's Homestead Tax Credit, long term lease agreement or other comparable evidence of long-term residency to the City to prove the long-term residency requirement. The long-term occupant of the property is responsible for the management and control of occupants in the short-term rental, Type 1 to ensure no adverse effects or problems are inflicted upon residential neighbors.

118.01 (E)(2)
Short-Term Rental, Type 2.
If a desired Short-Term Rental does not qualify as a Short-Term Rental, Type 1, a property owner may seek to be approved as a Short-Term Rental, Type 2. A new Short-Term Rental, Type 2 may be permitted in residential zoning districts pursuant to the requirements of § 163.18 and in non-residential and mixed-use zoning districts pursuant to § 164.26. All Short-Term Rentals, Type 2 must also comply with requirements of § 118.01 (E)."

CITY COUNCIL MEMO
2024-760

MEETING OF NOVEMBER 26, 2024

TO: Mayor Jordan and City Council

THRU: Jessica Masters, Development Review Manager
Jonathan Curth, Development Services Director
Susan Norton, Chief of Staff

FROM: Wesley Frank, Planner

SUBJECT: **VAC-2024-0025: Vacation (639 W. MARTIN LUTHER KING JR BLVD/UNIVERSITY OF ARKANSAS, 522): Submitted by DEVELOPMENT CONSULTANTS INC for property located at 639 W. MARTIN LUTHER KING JR BLVD in WARD 1. The property is zoned I-1, HEAVY COMMERCIAL & LIGHT INDUSTRIAL and contains approximately 0.08 acres. The request is to vacate 0.08 acres of utility easement.**

RECOMMENDATION:
Staff recommends approval of this item as shown in the attached Exhibits 'A' and 'B', and with the following conditions of approval:

1. Any damage or relocation of existing facilities will be at the property owner/developer's expense, and
2. This vacation will not take effect until after the building served by the existing fire hydrant has been demolished.

BACKGROUND:
The subject property is located in central Fayetteville, on the south side of W. Martin Luther King Jr. Blvd. between Hill and Lt. Col. Leroy Pond Avenues to the west and east respectively. The property is owned by the University of Arkansas, and is developed with several existing, new, and under construction structures associated with the University's arts district. The property is zoned I-1, Heavy Commercial and Light Industrial, and is not part of an overlay.

Request: The applicant has applied to vacate 0.08 of utility easement which bisect this property.

DISCUSSION:
City staff recommend in favor of the requested easement vacation, with the conditions listed above. The applicant has submitted all necessary approvals with no objections.

BUDGET/STAFF IMPACT:

VAC-2024-0025: Vacation (639 W. MARTIN LUTHER KING JR BLVD/UNIVERSITY OF ARKANSAS, 522): Submitted by DEVELOPMENT CONSULTANTS INC for property located at 639 W. MARTIN LUTHER KING JR BLVD in WARD 1. The property is zoned I-1, HEAVY COMMERCIAL & LIGHT INDUSTRIAL and contains approximately 0.08 acres. The request is to vacate 0.08 acres of utility easement.

AN ORDINANCE TO APPROVE VAC-24-25 FOR PROPERTY LOCATED AT 639 WEST MARTIN LUTHER KING JR BOULEVARD IN WARD 1 TO VACATE 0.08 ACRES OF UTILITY EASEMENT

WHEREAS, the City Council has the authority under A.C.A. § 14-54-104 to vacate public grounds or portions thereof which are not required for corporate purposes; and

WHEREAS, the City Council has determined that the following described portion of utility easement is not required for corporate purposes.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby vacates the portion of utility easement as described in Exhibit B attached to the Planning Department's memo.

Section 2: A copy of this Ordinance duly certified by the City Clerk along with the map attached as Exhibit A to the Planning Department's memo shall be filed in the office of the Washington County Circuit Clerk.

Section 3: This vacation approval is subject to the following conditions:

1. Any damage to or relocation of existing facilities will be at the property owner/developer's expense; and
2. This vacation will take effect after the building served by the existing fire hydrant has been demolished.

Written request and narrative to accompany petition packet for the
WATERLINE EASMENT VACATION at 639 W. MLK JR BLVD, City of Fayetteville, Arkansas.

To: The Fayetteville City Planning Commission

On behalf of the landowners, I am petitioning the Fayetteville City Planning Commission to accept the waterline easement vacation of the waterline easement located at 639 W. MLK JR BLVD, parcel number 765-13012-000, in the City of Fayetteville, Arkansas.

This property is currently the University of Arkansas School of Art Annex and will be the future home of the University of Arkansas Windgate Galleries.

By accepting this waterline easement vacation request, the current owners would benefit, and no other landowner would be adversely affected.

The public interest and welfare would not be adversely affected by accepting this waterline easement vacation request.

Chase Henrichs, PE, Development Consultants, Inc.

PETITION TO VACATE PART OF A WATER EASEMENT LOCATED IN PART OF THE NE ¼ NW ¼ OF SECTION 21, AND PART OF THE SE ¼ SW ¼ , SECTION 16, ALL IN TOWNSHIP 16 NORTH, RANGE 30 WEST, CITY OF FAYETTEVILLE, WASHINGTON COUNTY, ARKANSAS.

CITY OF FAYETTEVILLE, ARKANSAS

TO: The Fayetteville City Planning Commission and

The Fayetteville City Council

We, the undersigned, being all the owners of the real estate abutting the easement hereinafter sought to be abandoned and vacated, lying in part of the NE ¼ NW ¼ , Section 21, and part of the SE ¼ SW ¼ , all in Township 16 North, Range 30 West to the City of Fayetteville, Arkansas, a municipal corporation, petition to vacate an easement which is described as follows:

Waterline Easement Vacation Description

Part of the NE1/4 NW1/4 of Section 21 and part of the SE1/4 SW1/4 of Section 16, all in Township 16 North, Range 30 West, City of Fayetteville, Washington County, Arkansas, being more particularly described as follows:

Commencing at the aforesaid Northwest corner of the NE1/4 NW1/4 of section 21; Thence S 64°05'15" E, a distance of 507.77 feet to the intersection of the East right of way line of Hill Avenue and the Northerly right of way line of the Santa Fe Pacific Corporation c/o Burlington Northern Santa Fe Railroad; Thence N 02°40'45" E along said East right of way line of Hill Avenue, a distance of 114.72 feet; Thence N 01°43'05" E along said East right of way line of Hill Avenue, a distance of 44.24 feet to a filed waterline easement filed at instrument #2021-00031336; Thence along said easement and continuing N 01°43'05" E along said East right of way line of Hill Avenue, a distance of 15.21 feet; Thence N 82°12'22" E, a distance of 270.50 feet; Thence N 39°25'04" E, a distance of 22.37 feet; Thence N 51°°6'49"W, a distance of 7.43 feet to the Point of Beginning, Thence continue N 51°56'49"W, 25.46 feet; Thence N 07°57'14" W, a distance of 33.02 feet; Thence N 53°19'48" W, a distance of 36.23 feet; Thence N 02°59'14" E, a distance of 131.40 feet; Thence N 43°08'25" E, a distance of 43.81 feet; Thence S 46°51'35" E, a distance of 15.00 feet; Thence S 43°08'25" W, a distance of 38.33 feet; Thence S 02°59'14" W, a distance of 117.88 feet; Thence S 53°19'48" E, a distance of 34.47 feet; Thence S 07°57'14" E, a distance of 33.23 feet; Thence S 51°56'49" E, a distance of 40.32 feet; Thence S 38°03'10" W, 15.00 feet to the Point of Beginning, containing 0.08 of an acre more or less.

That the abutting real estate affected by said abandonment of the water easement are parcels 765-13012-000, 765-13007-000, and 765-13008-000 all belonging to the University of Arkansas.

The petitioners pray that the City of Fayetteville, Arkansas, abandon and vacate the above-described real estate, subject, however, to the existing water easements as

required, and that the above-described real estate be used for their respective benefit and purpose as now approved by law.

The petitioners further pray that the above-described real estate be vested in the abutting property owners as provided by law.

WHEREFORE, the undersigned petitioners respectfully pray that the governing body of the City of Fayetteville, Arkansas, abandon and vacate the above described real estate, subject to said water easements, and that title to said real estate sought to be abandoned be vested in the abutting property owners as provided by law, and as to that particular land the owners be free from the easements of the public for the use of said water.

CITY OF FAYETTEVILLE ARKANSAS

CITY COUNCIL MEMO
2024-762

MEETING OF NOVEMBER 26, 2024

TO: Mayor Jordan and City Council

THRU: Susan Norton, Chief of Staff
Jonathan Curth, Development Services Director

FROM: Kylee Cole, Long Range & Preservation Planner

SUBJECT: **PZD-2024-0007: Planned Zoning District (8049 W. WEDINGTON DR/ BUFFALO LEASING LLC, 432): Submitted by D&W CONTRACTORS for property located on 8049 W. WEDINGTON DR. in WARD 4. The property is zoned R-A, RESIDENTIAL-AGRICULTURAL and contains approximately 3.85 acres. The request is to rezone the property to a PLANNED ZONING DISTRICT.**

RECOMMENDATION:
City Planning staff and the Planning Commission recommend approval of a request to rezone the subject property as described and shown in the attached Exhibits 'A' and 'B'.

BACKGROUND:
The subject property is in west Fayetteville, approximately 0.37 miles east of the intersection of N. 85th Ave. and W. Wedington Dr. The property was annexed into Fayetteville city limits and rezoned to its current designation in 2006. It contains approximately 3.85 acres and is zoned R-A, Residential-Agricultural. The property is currently developed with a single-family dwelling and outbuilding and is not part of any overlay or master planning areas. In December 2023, the property was purchased by the current owner with the intent of using it as the office for D&W Contractors. When the applicant applied for a commercial business license at the property, staff noted that the property did not have appropriate entitlement for a commercial office use, leading to the request to rezone the property to a Planned Zoning District.

*Request:*The applicant requests to rezone the property to a Planned Zoning District with one Planning Area, as described below:

- **Planning Area #1 – 3.85 acres:** The intention of this planning area is to permit the adaptive reuse of the existing single-family home for a commercial office.

Public Comment: To date, staff has received no public comment on this item but did receive one general inquiry about the nature of the request.

Land Use Compatibility: Staff finds the applicant's request to be compatible with existing surrounding land uses. An existing nonconforming commercial property, which has housed an auto salvage since at least 2003, is located to the east and south. Single-family properties are located to the north and west. Approximately 0.30-mile west is a C-1 zoned undeveloped property. The applicant's request is not proposing a change in density from the current R-A zoning, but adding Use Unit 21: Warehousing and Wholesale and Use Unit 25:

Offices, Studios, and related services which are not permitted or conditional uses in the current zoning. Staff finds that these added uses are likely compatible with the surrounding land uses.

Land Use Plan Analysis: Staff finds that the request is consistent with the City's land use and zoning plans. The proposed PZD is substantially similar to what could be developed by right under the existing zoning district, with the notable exception of allowing Use Unit 21 and 25 by right. Staff finds that the proposal aligns with the future land use designation for the property. This property is designated as a Rural Residential Area in City Plan 2040. Notably, many areas with this designation were once outside of the City and have historically hosted a variety of agricultural, small-scale commercial, and light industrial uses. This proposal will allow for the flexible use of land on the periphery of the city until an orderly transition to urban development can be accomplished, which may support Goal #2 of City Plan 2040, to discourage suburban sprawl.

CITY PLAN 2040 INFILL MATRIX: City Plan 2040's Infill Matrix does not include any factors associated with this property.

DISCUSSION:
At the November 12, 2024 Planning Commission meeting, a vote of 9-0-0 forwarded the request to City Council with a recommendation of approval. The commissioners cited future land use compatibility and staff recommendations as noted in the report as reasons for approval.

BUDGET/STAFF IMPACT:

The property is zoned R-A, RESIDENTIAL-AGRICULTURAL and contains approximately 3.85 acres. The request is to rezone the property to a PLANNED ZONING DISTRICT.

AN ORDINANCE TO APPROVE A PLANNED ZONING DISTRICT ENTITLED PZD-2024-007 FOR APPROXIMATELY 3.85 ACRES LOCATED AT 8049 WEST WEDINGTON DRIVE IN WARD 4

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF FAYETTEVILLE, ARKANSAS:

Section 1: That the City Council of the City of Fayetteville, Arkansas hereby approves PZD-2024-07 as described in Exhibits “A” and “B” attached to the Planning Division’s Agenda Memo which allows the development of 3.85 acres of a Planned Zoning District to change the use of the existing single-family home to a commercial office.

Section 2: That the official zoning map of the City of Fayetteville, Arkansas is hereby amended to reflect the zoning criteria change provided in Section 1 above.

MEETING: November 12, 2024 updated w/ meeting results

SUBJECT: **PZD-2024-0007: Planned Zoning District (8049 W. WEDINGTON DR/ BUFFALO LEASING LLC, 432):** Submitted by D&W CONTRACTORS for property located on 8049 W. WEDINGTON DR. The property is zoned R-A, RESIDENTIAL-AGRICULTURAL and contains approximately 3.85 acres. The request is to rezone the property to a PLANNED ZONING DISTRICT.

RECOMMENDATION:
Staff recommends forwarding **PZD-2024-0007** to City Council with a recommendation of approval.

RECOMMENDED MOTION:
*"I move to forward **PZD-2024-0007** to City Council with a recommendation of approval, with conditions as outlined by staff."*

BACKGROUND:
The subject property is in west Fayetteville, approximately 0.37 miles east of the intersection of N. 85th Ave. and W. Wedington Dr. The property was annexed into Fayetteville city limits and rezoned to its current designation in 2006. It contains approximately 3.85 acres and is zoned R-A, Residential-Agricultural. The property is currently developed with a single-family dwelling and outbuilding and is not part of any overlay or master planning areas. In December 2023, the property was purchased by the current owner with the intent of using it as the office for D&W Contractors. When the applicant applied for a commercial business license at the property, staff noted that the property did not have appropriate entitlement for a commercial office use, leading to the request to rezone the property to a Planned Zoning District. Surrounding land uses and zoning is depicted in *Table 1.*

Table 1: Surrounding Land Use and Zoning

Direction	Land Use	Zoning
North	Single-Family Residential	R-A, Residential Agricultural
South	Commercial (Auto Salvage)	R-A, Residential Agricultural
East	Commercial (Auto Salvage)	R-A, Residential Agricultural
West	Single-Family Residential	R-A, Residential Agricultural

Proposal: The applicant requests to rezone the property to a Planned Zoning District with one Planning Area, as described below:

- **Planning Area #1 – 3.85 acres:** The intention of this planning area is to permit the adaptive reuse of the existing single-family home for a commercial office.

Public Comment: To date, staff have received no public comment on this item but did receive one general inquiry about the nature of the request.

INFRASTRUCTURE:

Streets: The subject area has access to W. Wedington Dr. (State Hwy. 16), and unimproved Regional Link Street with asphalt paving and open ditches along the property's frontage. Any street or drainage improvements required in these areas would be determined at the time of development.

Water: Public water is available to the subject area. The subject property is within Washington Water Authority's service area and there appears to be a 6" water line along the property's W. Wedington Dr. frontage.

Sewer: Sanitary Sewer is not available to the subject area.

Drainage: No portion of the subject area lies within a FEMA floodplain, a protected stream, Hillside-Hilltop Overlay District, or contain hydric soils.

Fire: Station 7, located at 835 N. Rupple Rd., protects this site. The property is located approximately 4 miles from the fire station with an anticipated drive time of approximately 6 minutes using existing streets. The anticipated response time would be approximately 8.2 minutes. Fire Department response time is calculated based on the drive time plus 1 minute for dispatch and 1.2 minutes for turn-out time. Within the City Limits, the Fayetteville Fire Department has a response time goal of 6 minutes for an engine and 8 minutes for a ladder truck. Fire apparatus access and fire protection water supplies will be reviewed for compliance with the Arkansas Fire Prevention Code at the time of development.

Police: The Police Department did not comment on this request.

Tree Preservation:

The proposed PZD, Planned Zoning District, requires **25% minimum canopy preservation.** The current zoning district R-A, Residential-Agricultural requires **25% minimum canopy preservation.**

CITY PLAN 2040 FUTURE LAND USE PLAN: City Plan 2040 Future Land Use Plan designates the property within the proposed rezone as **Rural Residential.**

Rural Residential Areas recognize existing low-density large lot development but are identified to encourage the conservation and preservation of woodlands, grasslands, or agricultural lands that are sparsely settled. These areas may or may not have adequate street and water infrastructure or public services, such as police and fire protection to support urban or suburban densities and development patterns.

CITY PLAN 2040 INFILL MATRIX: City Plan 2040's Infill Matrix does not include an infill score for this property.

FINDINGS OF THE STAFF

1. A determination of the degree to which the proposed zoning is consistent with land use planning objectives, principles, and policies and with land use and zoning plans.

Finding: ***Land Use Compatibility:*** **Staff finds the applicant's request to be compatible with existing surrounding land uses. An existing nonconforming commercial property, which has housed an auto salvage since at least 2003, is located to the east and south.[1] Single-family properties are located to the north and west. Approximately 0.30-mile west is a C-1 zoned undeveloped property. The applicant's request is not proposing a change in density from the current R-A zoning, but adding Use Unit 21: Warehousing and Wholesale and Use Unit 25: Offices, Studios, and related services which are not permitted or conditional uses in the current zoning. Staff finds that these added uses are likely compatible with the surrounding land uses.**

Land Use Plan Analysis: **Staff finds that the request is consistent with the City's land use and zoning plans. The proposed PZD is substantially similar to what could be developed by right under the existing zoning district, with the notable exception of allowing Use Unit 21 and 25 by right. Staff finds that the proposal aligns with the future land use designation for the property. This property is designated as a Rural Residential Area in City Plan 2040. Notably, many areas with this designation were once outside of the City and have historically hosted a variety of agricultural, small-scale commercial, and light industrial uses. This proposal will allow for the flexible use of land on the periphery of the city until an orderly transition to urban development can be accomplished, which may support Goal #2 of City Plan 2040, to discourage suburban sprawl.**

2. A determination of whether the proposed zoning is justified and/or needed at the time the rezoning is proposed.

Finding: **Staff finds that the proposed rezoning is justified as it aligns with the City Plan 2040 Future Land Use designation for the site.**

3. A determination as to whether the proposed zoning would create or appreciably increase traffic danger and congestion.

Finding: **The proposed PZD is not likely to have a significant impact on traffic danger or congestion in the area. Vehicular access will be from W. Wedington Dr. and no increase in density is proposed.**

4. A determination as to whether the proposed zoning would alter the population density and thereby undesirably increase the load on public services including schools, water, and sewer facilities.

[1] Aerial photos for this area are only available beginning in 2003, when the auto salvage appears to be well established. Washington County Assessor records indicate the property has been under the same ownership since 1974, and the salvage operation may be much older than 2003.

Finding: **The proposed PZD would not alter the population density in a way that would undesirably increase the load on public services. Staff finds that any lack of water and sewer facilities currently are of a limited concern.**

5. If there are reasons why the proposed zoning should not be approved in view of considerations under b (1) through (4) above, a determination as to whether the proposed zoning is justified and/or necessitated by peculiar circumstances such as:

a. It would be impractical to use the land for any of the uses permitted under its existing zoning classifications;

b. There are extenuating circumstances which justify the rezoning even though there are reasons under b (1) through (4) above why the proposed zoning is not desirable.

Finding: **N/A**

Sec. 161.35. Planned Zoning Districts (PZD)

(B) *Purpose.* The intent of the Planned Zoning District is to permit and encourage comprehensively planned zoning and developments whose purpose is redevelopment, economic development, cultural enrichment or to provide a single-purpose or mixed-use planned development and to permit the concurrent processing of zoning and development. The City Council may consider any of the following factors in review of a Planned Zoning District application.

(1) *Flexibility.* Providing for flexibility in the distribution of land uses, in the density of development and in other matters typically regulated in zoning districts.
(2) *Compatibility.* Providing for compatibility with the surrounding land uses.
(3) *Harmony.* Providing for an orderly and creative arrangement of land uses that are harmonious and beneficial to the community.
(4) *Variety.* Providing for a variety of housing types, employment opportunities or commercial or industrial services, or any combination thereof, to achieve variety and integration of economic and redevelopment opportunities.
(5) *No negative impact.* Does not have a negative effect upon the future development of the area;
(6) *Coordination.* Permit coordination and planning of the land surrounding the PZD and cooperation between the city and private developers in the urbanization of new lands and in the renewal of existing deteriorating areas.
(7) *Open space.* Provision of more usable and suitably located open space, recreation areas and other common facilities that would not otherwise be required under conventional land development regulations.
(8) *Natural features.* Maximum enhancement and minimal disruption of existing natural features and amenities.
(9) *Future Land Use Plan.* Comprehensive and innovative planning and design of mixed use yet harmonious developments consistent with the guiding policies of the Future Land Use Plan.
(10) *Special Features.* Better utilization of sites characterized by special features of geographic location, topography, size or shape.
(11) *Recognized zoning consideration.* Whether any other recognized zoning consideration would be violated in this PZD.

Findings: **As outlined in previous findings, staff finds that the proposal is generally in line with the factors that may be considered with a Planned Zoning District. The proposed PZD is particularly well suited to meet the flexibility, harmony, no negative impact, and natural feature tenets of the ordinance. This proposal emphasizes flexibility by using the existing R-A zoning as a basis and only adding the minimum uses needed to facilitate the business use, without inclusion of undesirable uses permitted in some other zoning districts. Harmony, no negative impact, and natural features are prioritized as the proposal intends to preserve the full 25% required tree canopy preservation, including a vegetative buffer area along the western property line to provide screening from adjacent properties.**

RECOMMENDATION: Staff recommends forwarding **PZD-2024-0007** to City Council, with a recommendation of approval, with conditions as outlined below.

Conditions of Approval:

1. Compliance with UDC 177 Landscape Regulations shall be reviewed with the associated development plans;

2. All signage shall meet the requirements as set forth in UDC section 174.

3. Any parking lots must meet all standard design and development standards as outlined in the Unified Development Code, including, but not limited to, paving and construction, dimensional standards, landscape requirements, and drainage requirements;

4. This approval does not grant permit approval for any future development. Review and approval of development plans and permits shall be required in accordance with city code.

CITY OF FAYETTEVILLE ARKANSAS

Urban Forestry Memo

TO: Buffalo Leasing, LLC

THRU: Kylee Cole, Long Range Planner

FROM: Melissa Evans, Urban Forester

MEETING DATE: October 16, 2024

SUBJECT: **PZD-2024-0007: BUFFALO LEASING:** Submitted by D&W Contractors for property located at 8049 W. Wedington Dr. The property is zoned R-A, RESIDENTIAL-AGRICULTURAL and contains approximately 3.65 acres. The request is for the property to be zoned PZD, PLANNED ZONING DISTRICT.

RECOMMENDATION:

Urban Forestry Staff recommends approval of PZD-2024-0007 since tree preservation has been addressed in the booklet. The applicant states that, “PZDs require 25% of the canopy to be preserved.”

Since the south side of site is heavily forested, it is highly recommended that as many trees be preserved as possible to meet the minimum requirement for preservation. The buildings, parking, utilities, and other infrastructure elements should be designed around the trees. Preserved trees should be considered to be placed in Tree Preservation Easements.

Trees at the edges of the property need to be preserved in a minimum of 30’ wide areas to help prevent tree loss and die-back on adjacent properties with trees. It is likely that many of the trees on the edges will decline and die. Preservation areas along the property lines should be widened to accommodate tree preservation, and this needs to be considered on the east side of the property.

The PZD booklet does not state that the project will be in compliance with Ch. 177 Landscape Regulations, but they must be met also, including street trees along public or private streets and parking lot trees.

Dear Planning Commissioners,

Please accept the following request to rezone the property at 8049 W. Wedington Dr. to a Planned Zoning District. The purpose of this rezone is to permit the property to be used as the office and storage facility for our business D&W Contractors is a construction contractor involved with historical preservation, residential remodeling, and custom home building. D&W has been in business since 2016. D&W has employs 10 office and management personnel and 7 employees in the field. The CPZD is needed because no existing districts align with the future land use designation for the property, existing zoning districts contain undesirable uses that are not compatible with the area, and requests for existing zoning districts are unlikely to garner support of staff, planning commission, and city council.

Development plans are limited to the modification of the existing house into office space for 10 employees and modification of the outbuilding for storage of materials. Future plans may include expansion of the office or storage and widening of driveway by install a culvert pipe and filling ditch.

Thank you for your consideration,

Garret Reck
D&W Contractors
8049 W. Wedington Dr.
Fayetteville, AR 72704-6143

CPZD Request

Project Description: The total property is approximately 3.85 acres. The proposed CPZD is for the entirety of the property, which is currently zoned R-A, Residential – Agriculture. The purpose of this rezone is to permit the property to be used as the office and storage facility for our business D&W Contractors is a construction contractor involved with historical preservation, residential remodeling, and custom home building. D&W has been in business since 2016. D&W has employs 10 office and management personnel and 7 employees in the field. The CPZD is needed because no existing districts align with the future land use designation for the property, existing zoning districts contain undesirable uses that are not compatible with the area, and requests for existing zoning districts are unlikely to garner support of staff, planning commission, and city council.

Scope: Modify the existing house into office space for 10 employees and modify outbuilding for storage of materials. Future plans may include expansion of the office or storage and widening of driveway by install a culvert pipe and filling ditch.

Legal Description Part of the Southeast quarter of the Southwest quarter of Section nine (9) in Township sixteen (16) North of Range thirty one (31) West, being more Particularly described as starting 208.7 feet East of the North West corner of said Forty acre tract for a point of beginning, and running, thence East 526.6 feet, thence South 874 feet, thence West 526.6 feet, thence North 874 feet to the point of beginning, containing 10.58 acres, more or less. Subject to that part within the right-of-way of State Highway #16, a/k/a West Wedington Drive and any other easements of record.

LESS AND EXCEPT:

A part of the Southeast Quarter of the Southwest Quarter of Section 9, Township 16 North, Range 31 West, Washington County, Arkansas, and more particularly described as beginning at a point 358.71 feet East of the Northwest corner of said 40 acre tract; thence East 173.6 feet; thence S. 1°23'33" W., 874.0 feet; thence West 323.6 feet; thence N. 1°23'33" E., 583.6 feet; thence East 150.0 feet; thence N. 1°23'33" E., 290.4 feet to the point of beginning, containing 5.493 acres, more or less, and subject to that part within the rightof-way State Highway #16 and any other easements of record.

B. Scope & Project
   a. Project Description: The total property is approximately 3.85 acres. The proposed CPZD is for the entirety of the property, which is currently zoned R-A, Residential – Agriculture. The purpose of this rezone is to permit the property to be used as the office and storage facility for our business D&W Contractors is a construction contractor involved with historical preservation, residential remodeling, and custom home building. D&W has been in business since 2016. D&W has employs 10 office and management personnel and 7 employees in the field. The CPZD is needed because no existing districts align with the future land use designation for the property, existing zoning districts contain undesirable uses that are not compatible with the area, and requests for existing zoning districts are unlikely to garner support of staff, planning commission, and city council.
   b. Scope: Modify the existing house into office space for 10 employees and modify outbuilding for storage of materials. Future plans may include expansion of the office or storage and widening of driveway by install a culvert pipe and filling ditch.

C. General Project Concept
   a. Considerations:
      i. Flexibility – This proposal offers an alternative not available directly through other zoning. By using the existing R-A zoning and adding the minimal necessary use additions, this plan utilizes this site for a commercial use without the inclusion of undesirable uses permitted in other zoning districts.
      ii. Compatibility – This proposal would not affect the character of the area, since it already contains a variety of residential and nonresidential uses as proposed in this CPZD. The adjacent properties are noted as a fencing contractor and used car lot.
      iii. No adverse effects – This project does not create negative impacts for existing or future developments on adjacent properties.
      iv. Coordination – The neighboring property owners were all introduced to the project and our justification for the request.
      v. Natural features – Several trees occupy the site. Tree preservation shall be at the standard 25% preservation of canopy for a PZD. A undisturbed vegetated buffer area can be maintained along property lines to the west to provide screening between adjacent properties.
      vi. Future Land Use: This property is designated as a Rural Residential Area in City Plan 2040. The City Plan lays out guiding principles for a Rural Residential Area. Notably, many areas with this designation were once

outside of the City and have historically hosted a variety of agricultural, small-scale commercial, and light industrial uses. The rural residential land future land use designation includes guidelines that proposed development should utilize alternative development patterns such as cluster or conservation subdivisions to achieve compatibility with surrounding areas. Similarly, this proposal will allow allowing for the flexible use of land on the periphery of the city until and orderly transition to urban development can be accomplished.

vii. Special Features: No special features of geographic location, topography, size or shape are located on this parcel.

viii. Recognized Zoning Considerations: No other recognized zoning consideration would be violated in this PZD.

b. Streets, Trail and Pedestrian Connectivity, Lot Layout, Stormwater Detention Areas & Drainage, Fire Access & Fire Code, Site Grading: No development is proposed for the site.

c. Tree Preservation Areas: No tree preservation easements are proposed, but PZDs require 25% of the canopy to be preserved.

D. Planning Area
The entire 3.85-acre property is proposed as a single planning area.
Site plans and attached below.

E. Existing and Proposed Zoning Standards

Existing Zoning Detail:

161.03 District R-A, Residential-Agricultural

(A) *Purposes.* The regulations of the agricultural district are designed to protect agricultural land until an orderly transition to urban development has been accomplished; prevent wasteful scattering of development in rural areas; obtain economy of public funds in the providing of public improvements and services of orderly growth; conserve the tax base; provide opportunity for affordable housing, increase scenic attractiveness; and conserve open space.

(B) *Uses*.

(1) *Permitted Uses.*

Unit 1	City-wide uses by right
Unit 3	Public protection and utility facilities
Unit 6	Agriculture
Unit 7	Animal husbandry
Unit 8	Single-family dwellings
Unit 9	Two-family dwellings
Unit 37	Manufactured homes
Unit 41	Accessory dwellings
Unit 43	Animal boarding and training
Unit 46	Short-term rentals

(2) *Conditional Uses*.

Unit 2	City-wide uses by conditional use permit
Unit 4	Cultural and recreational facilities
Unit 5	Government facilities
Unit 20	Commercial recreation, large sites
Unit 24	Home occupations
Unit 35	Outdoor Music Establishments
Unit 36	Wireless communications facilities
Unit 42	Clean technologies

(C) *Density.*

Units per acre	One-half (½)

(D) *Bulk and Area Regulations.*

Lot width minimum	200 feet
Lot Area Minimum:	
Residential:	2 acres
Nonresidential:	2 acres
Lot area per dwelling unit	2 acres

(E) *Setback Requirements.*

Front	Side	Rear
35 feet	20 feet	35 feet

(F) *Height Requirements.* There shall be no maximum height limits in the R-A District, provided, however, if a building exceeds the height of one (1) story, the portion of the building over one (1) story shall have an additional setback from any boundary line of an adjacent residential district. The amount of additional setback for the portion of the building over one (1) story shall be equal to the difference between the total height of that portion of the building and one (1) story.

(G) *Building area.* None.

Proposed PZD Detail:

(A) *Purposes.* The purpose of this CPZD is to provide opportunities for single-family dwellings, agricultural uses, and low-intensity commercial uses that are typical in formerly unincorporated areas.

(B) *Uses*.

(1) *Permitted Uses.*

Unit 1	City-wide uses by right

Unit 3	Public protection and utility facilities
Unit 6	Agriculture
Unit 7	Animal husbandry
Unit 8	Single-family dwellings
Unit 9	Two-family dwellings
Unit 21	Warehousing and wholesale
Unit 25	Offices, studios, and related services
Unit 37	Manufactured homes
Unit 41	Accessory dwellings
Unit 43	Animal boarding and training
Unit 46	Short-term rentals

(2) *Conditional Uses*.

Unit 2	City-wide uses by conditional use permit
Unit 4	Cultural and recreational facilities
Unit 5	Government facilities
Unit 20	Commercial recreation, large sites
Unit 24	Home occupations
Unit 35	Outdoor Music Establishments
Unit 36	Wireless communications facilities
Unit 42	Clean technologies

(C) *Density.*

Units per acre	One-half (½)

(D) *Bulk and Area Regulations.*

Lot width minimum	200 feet
Lot Area Minimum:	
Residential:	2 acres
Nonresidential:	2 acres
Lot area per dwelling unit	2 acres

(E) *Setback Requirements.*

Front	Side	Rear
35 feet	5 feet	35 feet

(F) *Height Requirements.* There shall be no maximum height limits in the District, provided, however, if a building exceeds the height of one (1) story, the portion of the building over one (1) story shall have an additional setback from any boundary line of an adjacent residential district. The amount of additional setback for the portion of the

building over one (1) story shall be equal to the difference between the total height of that portion of the building and one (1) story.

(G) *Building area.* None.

F. Zoning Comparison

Zoning Standards	Existing Zoning: R-A, Residential-Agricultural	Proposed PZD
Density	½ per acre	½ per acre
Setbacks	Front: 35 Feet Side: 20 Feet Rear: 35 Feet	Front: 35 Feet Side: 5 Feet Rear: 35 Feet
Height	None.	None.
Building Area	None.	None.

G. Site Analysis: Several trees occupy the site. There are no other known natural resources or natural or manmade hazards.

H. Recreational Facilities: None.

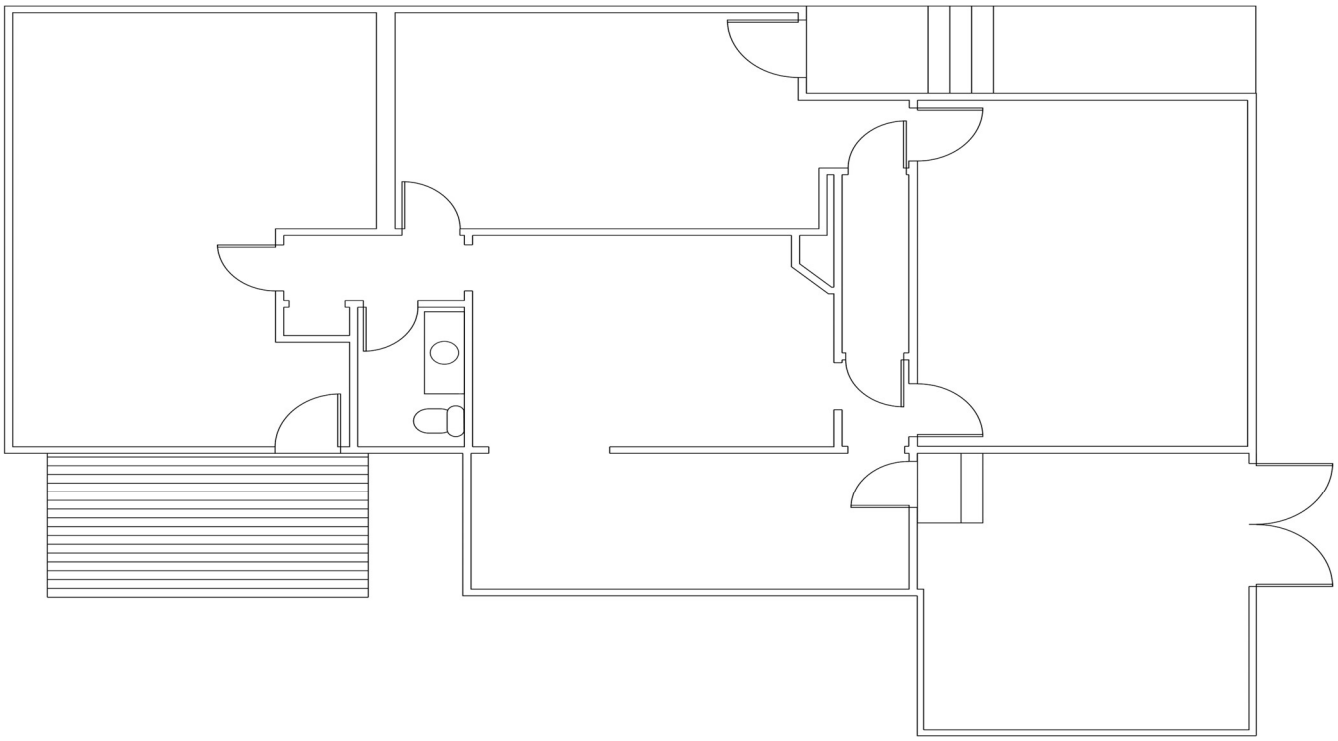
I. Reason for Rezoning: The purpose of this rezone is to permit the property to be used as a contractor's office, which is not a currently permitted or conditional use.

J. Relationship to Adjacent Properties:
The property abuts W. Wedington Dr., designated as a Regional Link Street in the Master Street Plan, to the north. To the west is a 5.8-acre residential property. To the east and south is a 10.5-acre commercial property that was the former location of ABC Auto and includes an office, warehouse/shop, and auto salvage yard.

K. Land Use Plan: This property is designated as a Rural Residential Area in City Plan 2040. The City Plan lays out guiding principles for a Rural Residential Area. Notably, many areas with this designation were once outside of the City and have historically hosted a variety of agricultural, small-scale commercial, and light industrial uses. Although not wholly aligned with this plan designation, this project complements the Plan by providing:

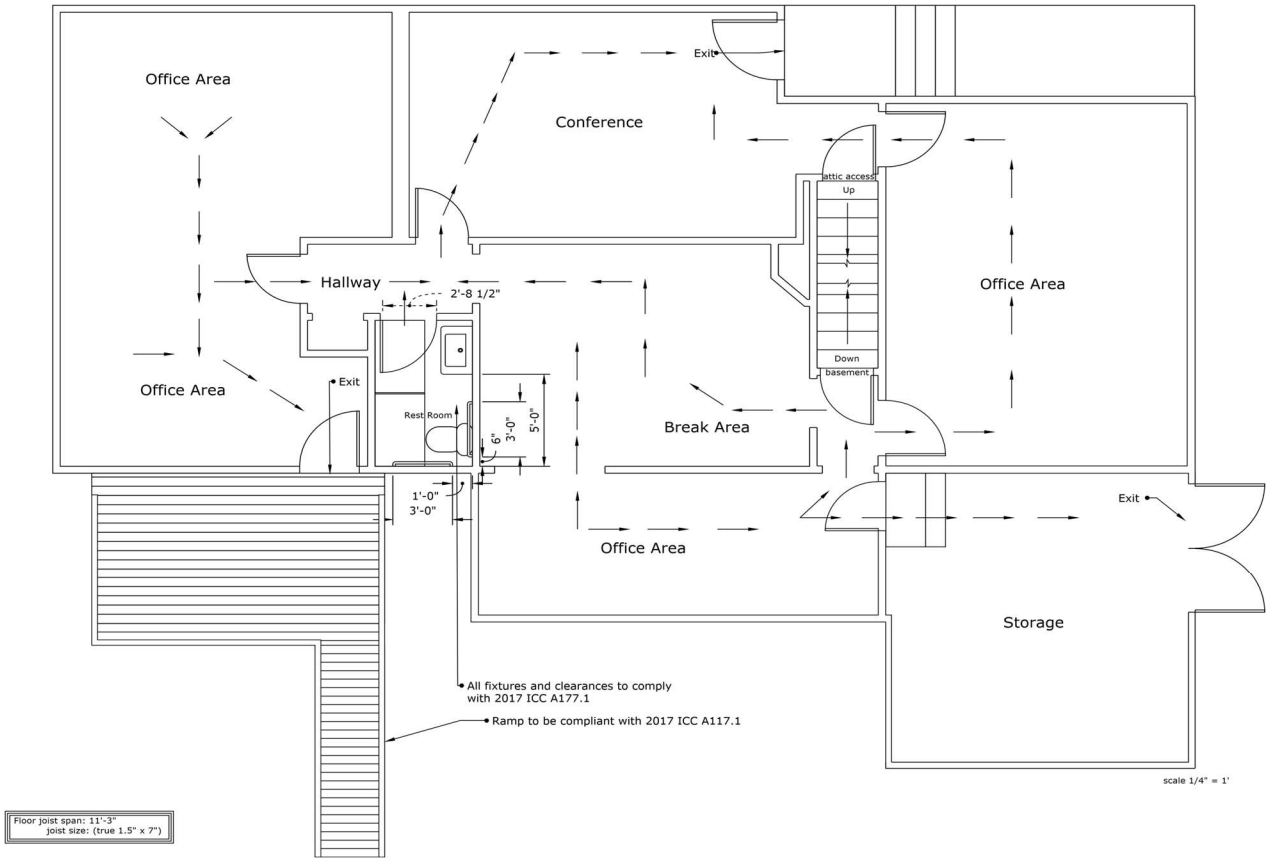
   a. An opportunity to preserve and protect small-scale business (similar to principle #4).

   This proposal also aligns with Goal #2 of City Plan 2040, to discourage urban sprawl, by allowing for the flexible use of land on the periphery of the city until and orderly transition to urban development can be accomplished.



L. Existing Infrastructure:
   a. Water: Washington County Water Authority
   b. Sewer: Septic
   c. Streets: The property abuts W. Wedington Dr., designated as a Regional Link Street in the Master Street Plan, to the north.

Legal Description of 8049 W. Wedington



Part of the Southeast quarter of the Southwest quarter of Section nine (9) in Township sixteen (16) North of Range thirty one (31) West, being more Particularly described as starting 208.7 feet East of the North West corner of said Forty acre tract for a point of beginning, and running, thence East 526.6 feet, thence South 874 feet, thence West 526.6 feet, thence North 874 feet to the point of beginning, containing 10.58 acres, more or less. Subject to that part within the right-of-way of State Highway #16, a/k/a West Wedington Drive and any other easements of record.
LESS AND EXCEPT:
A part of the Southeast Quarter of the Southwest Quarter of Section 9, Township 16 North, Range 31 West, Washington County, Arkansas, and more particularly described as beginning at a point 358.71 feet East of the Northwest corner of said 40 acre tract; thence East 173.6 feet; thence S. 1°23'33" W., 874.0 feet; thence West 323.6 feet; thence N. 1°23'33" E., 583.6 feet; thence East 150.0 feet; thence N. 1°23'33" E., 290.4 feet to the point of beginning, containing 5.493 acres, more or less, and subject to that part within the rightof-way State Highway #16 and any other easements of record.

Legal Description of 8049 W. Wedington
Part of the Southeast quarter of the Southwest quarter of Section nine (9) in Township sixteen (16) North of Range thirty one (31) West, being more Particularly described as starting 208.7 feet East of the North West corner of said Forty acre tract for a point of beginning, and running, thence East 526.6 feet, thence South 874 feet, thence West 526.6 feet, thence North 874 feet to the point of beginning, containing 10.58 acres, more or less. Subject to that part within the right-of-way of State Highway #16, a/k/a West Wedington Drive and any other easements of record.
LESS AND EXCEPT:
A part of the Southeast Quarter of the Southwest Quarter of Section 9, Township 16 North, Range 31 West, Washington County, Arkansas, and more particularly described as beginning at a point 358.71 feet East of the Northwest corner of said 40 acre tract; thence East 173.6 feet; thence S. 1°23'33" W., 874.0 feet; thence West 323.6 feet; thence N. 1°23'33" E., 583.6 feet; thence East 150.0 feet; thence N. 1°23'33" E., 290.4 feet to the point of beginning, containing 5.493 acres, more or less, and subject to that part within the rightof-way State Highway #16 and any other easements of record.
Ramps and Landing Details
405.2 Slope.
Ramp runs shall have a running slope greater than 1:20 and not steeper than 1:12.
Exception: In existing buildings or facilities, ramps shall be permitted to have slopes steeper than 1:12 complying with Table 405.2 where such slopes are necessary due to space limitations.
405.5 Clear width.
The clear width of a ramp run shall be 36 inches (915 mm) minimum. Handrails and handrail supports that are provided on the ramp run shall not project into the required clear width of the ramp run.
Exception: Within employee work areas, the required clear width of ramps that are a part of common use circulation paths shall be permitted to be decreased by work area equipment provided that the decrease is essential to the function of the work being performed.
Ramps shall have landings at the bottom and top of each ramp run.
Landings shall comply with Section 405.7.
405.7.3 Length.
Landings shall have a clear length of 60 inches (1525 mm) minimum
405.7.2 Width.
Clear width of landings shall be at least as wide as the widest ramp run leading to the landing.
405.7.1 Slope.
Landings shall have a slope not steeper than 1:48 and shall comply with Section 302.
Pathway Details
403.1 General.
Walking surfaces that are a part of an accessible route shall comply with Section 403.
403.5 Clear width.
The clear width of an accessible route shall comply with Section 403.5.1, 403.5.2, 403.5.3 or 403.5.4 as applicable.
The clear width of an exterior accessible route shall be 48 inches (1220 mm) minimum.
03.3 Slope.
The running slope of walking surfaces shall not be steeper than 1:20. The cross slope of a walking surface shall not be steeper than 1:48
403.4 Changes in level.
Changes in level shall comply with Section 303.
403.2 Floor surface.
Floor surfaces shall comply with Section 302.

Received From Housing Task Force @ Agenda Session. 5:55 P.M 11/26/24

Mayor's Housing Crisis Task Force
Initial "First Steps" Recommendations
November 26, 2024

(FOCUS: RENTERS)

1. **Security Deposit Alternative** – City code amendment either (1) mandating or (2) incentivizing landlords to provide alternative option to upfront security deposit for renters. Options are open-ended but may include "flex" deposit surety company (https://flexdeposit.com/spa/home), non-profit assistance, etc. It will be important to understand the cost to tenants with various credit histories to ensure that any services recommended, required or incentivized through this policy are not usurious.
    a. **Staff Contact**: Community Resources
    b. **Staff Feedback**: Support as long as flex deposit surety company costs are not usurious.
    c. **Presenter**: Josh Carson

2. **Utility Deposit "Sharing"** – Work with city and/or utilities to prepare streamline paperwork allowing Landlord to share/assign its utility deposit on its rental units to the benefit of incoming renter. Landlord will provide the upfront deposit, and the utility will simply switch the already-paid deposit to renter benefit when renter transfers utilities helping save renter money out-of-pocket. Same paperwork will revert deposit back to Landlord upon tenant exit. Streamlined paperwork should be non-controversial and help landlord with administration.
    a. **Staff Contact:** Community Resources, Utilities (to be consulted)
    b. **Staff Feedback:** Community Resources supports.
    c. **Presenter:** Josh Carson

3. **Landlord Engagement and Outreach** - Convene all stakeholders currently working to engage landlords, including the City's Community Resources Division, Fayetteville Housing Authority, local Department of Veteran's Affairs and NWA Continuum of Care to understand current efforts to encourage acceptance of Housing Choice Vouchers, and to identify barriers and opportunities to increasing the availability of voucher-assisted housing.
    a. **Staff Contact**: Community Resources, Fayetteville Housing Authority (to be consulted)
    b. **Staff Feedback**: City conducts its own landlord outreach for Hearth program. Support for efforts to coordinate and align landlord engagement and outreach efforts. Preference for Fayetteville Housing Authority to lead.

c. **Presenter:** Keaton Smith

4. **Legal Options for Tenant Protections** - Engage a specialist in Arkansas landlord-tenant law to evaluate state statutes and document what a municipality can and cannot do to support renter's rights and tenant protections. Recommended options for outside counsel include Lynn Foster in Little Rock and Marshall Prettyman in Fayetteville.
    a. **Staff Contact**: Community Resources, City Attorney (to be consulted)
    b. **Staff Feedback**: Community Resources supports.
    c. **Presenter:** Keaton Smith

5. **Review and Grow Existing City Housing Programs** – Increase funding to the City's Community Resources Division and/or Economic Vitality Division in the 2025 budget to expand the amount of CDBG and HOME dollars available for housing services and housing development.
    a. **Staff Contact**: Community Resources, Economic Vitality
    b. **Staff Feedback**: Currently, 20% of CDBG admin (approximately $100,000) is used for program administration. Covering this with City General funds would allow this $100,000 to be added to CDBG budget for housing services and development.
    c. **Presenter**: Keaton Smith

(FOCUS: COST & AVAILABILITY OF HOUSING)

6. **Self-hire inspectors** – Code amendment to allow developers/builders **the option** in lieu of waiting on city inspectors to engage their own third-party certified engineer (or similar) to inspect and submit to city. This would shorten construction timelines and reduce uncertainty for builders, which reduces a barrier to housing construction. This would also free up the time of city inspectors for other projects, which reduces the need to add staff positions, thus reducing salary expenses for the city.
    a. **Staff Contact**: Building Safety, Public Works (to be consulted)
    b. **Staff Feedback**: Inspectors would need to be ICC certified and may be more expensive than City inspectors. Increased cost of inspection could be balanced by faster turn-around times in some cases.
    c. **Presenter:** Josh Carson

7. **Fee-in-lieu for publicly owned infrastructure** – There are instances when public infrastructure may be constructed at a higher quality and at a lower cost by City crews, rather than piece-meal by developers. Amend code (or recommend utilization of current code if already in place) to allow developer/builder (1) to obtain engineer estimate for certain code-required on-site improvements (e.g. sidewalks, road upgrade, etc.) and (2) pay

that estimated amount to city for city's future installation, thereby (3) allowing builder to proceed without making those improvements to save time and expedite completed units. This would reduce uncertainty and shorten construction timelines for housing providers.

a. **Staff Contact**: Public Works, Development Services
b. **Staff Feedback**: While many details remain to be worked out, Public Works and Development Services feel this is worthy of further discussion.
c. **Presenter:** Josh Carson

8. **Legal Options for Development Incentives** - Engage land use and housing attorney to evaluate state statutes and document what a municipality can and cannot do to support and fund public or private housing development. This would include development incentives and potential uses for bond funding.
    a. **Staff Contact**: City Attorney (to be consulted)
    b. **Staff Feedback**:
    c. **Presenter**: Josh Carson

9. **Graduated Impact Fees** – The burden on city infrastructure is directly related to house size and proximity to existing services. A large house with six bathrooms creates more potential water and sewer load than a small cottage with two bedrooms and one bathroom. Police and Fire protection and Public Park use is similar for small versus larger homes, but may differ based on proximity to these public resources. Impact fees should reflect these realities. Doing so would reduce barriers to building smaller, more efficient housing, thus increasing housing choice and reducing cost of construction and sale price. As a first step, the City could hire a consultant to conduct a City impact fee analysis and make formula-based recommendations for changes.
    a. **Staff Contact**: City Attorney (to be consulted), Development Services
    b. **Staff Feedback**: Development Services supports hiring a 3rd party consultant to conduct impact fee analysis.
    c. **Presenter:** Rob Sharp

10. **Streamline & Expedite Permitting Process** – Condensed permit release/approvals times would allow development and construction to move more quickly, saving money and reducing costs for producers and their buyers while expediting availability of new inventory. Making the process more simple and predictable helps providers navigate projects and expectations with consistency. These changes would be particularly beneficial for small-scale, incremental developers. How do we continue to improve this process? Ask the experts – City staff. Staff has good ideas that can improve and streamline the development review process. As a first step, the City could hire a 3rd party facilitator to plan a cross-departmental summit with City development review staff. This conversation would invite internal staff feedback in a collaborative space, catalogue existing strengths

and ongoing initiatives, and implement opportunities for improvement within the development review process.

a. **Staff Contact**: Building Safety, Public Works, Development Services, Economic Vitality
b. **Staff Feedback**: Multiple staff members agreed that permitting timelines are lengthier than optimal. All parties agree that there are a variety of reasons that impact these timelines, including but not limited to staffing levels, project complexity, department workload, and applicant experience. Staff members pointed to several staff-initiated improvements that have already been implemented or are in process, and welcomed further discussion on the topic.
c. **Presenter:** Rob Sharp

11. **Enforce Residential Neighborhood Parking Regulations** – Document clear process for citizens to establish, maintain, and enforce residential neighborhood parking districts. Goal is to proactively address concerns of existing neighborhoods directly adjacent to corridors and neighborhood centers targeted for redevelopment, such as the 71B corridor.
    a. **Staff Contact**: Development Services, Planning Commission, Public Works (to be consulted), Fire (to be consulted)
    b. **Staff Feedback**: This was discussed at Long Range Planning Subcommittee, but more work remains to be done.
    c. **Presenter**: Rob Sharp

12. **Revise Residential Parking Requirements** – Administrative approval option for small projects seeking parking requirement reductions. Similar to success of reduction in commercial parking requirements, a reduction of residential parking requirements – particularly for small-scale projects – will make more efficient use of existing infrastructure, reduce sprawl, preserve green space, expedite new housing availability, promote greater diversity/versatility of design and development options, and reduce costs.
    a. **Staff Contact**: Development Services, Planning Commission
    b. **Staff Feedback**: This was discussed at Long Range Planning Subcommittee, but more work remains to be done.
    c. **Presenter**: Rob Sharp

13. **Remove Barriers to Construction of Small Houses, Cottages, & ADUs** – Re-define lot frontage requirements in code to allow additional "frontage" qualifications. Alleys and Multi-Use Trails should qualify as frontage. This would allow small and multi-generational housing units to be built facing alleys and multi-use trails, which increases housing choice and reduces infrastructure cost. This would also have the effect of encouraging alternative transportation, which reduces cost of living for residents and improves public health.

a. **Staff Contact**: Development Services, Planning Commission
b. **Staff Feedback**: Support in concept. These proposed changes were discussed at the November 21st Planning Commission's Long Range Planning Subcommittee.
c. **Presenter**: Rob Sharp

14. **Accelerate Public-Private Partnerships** - Direct Economic Vitality department to create a map of all tax-exempt property in the City, with a focus on developable land and potential public-private partnerships. The map would include land owned by the City of Fayetteville, University of Arkansas, Fayetteville Public Schools, Washington County, churches and non-profits. Direct Economic Vitality to lead inter-departmental infrastructure assessment project to highlight easily developable sites and sites in need of infrastructure investment – both publicly owned land and privately owned land within targeted development areas, such as 71B and Neighborhood Centers.
    a. **Staff Contact**: Economic Vitality, Development Services, Public Works (to be consulted)
    b. **Staff Feedback**: Economic Vitality has already created this map and supports a cross-departmental effort. Development Services supports this as well.
    c. **Presenter**: Keaton Smith

15. **Nurture Local Real Estate Entrepreneurs and Incremental Development** – Issue RFQ/RFP inviting applicants to form a cohort of local developers to pilot the Permit-Ready Building Program as quickly as possible after program launch. Developers would document their experiences with the program as case studies. Potential incentives for participating developers include availability of publicly-owned land identified in #14, mentorship and support from ULI's REDI program and/or Incremental Development Alliance, and financial support from a Guaranty Fund provided by local philanthropy. Goals include supporting local real estate entrepreneurs, promoting the innovative new Permit-Ready Building program, encouraging on-the-ground examples to be built as quickly as possible, and driving learning and continuous improvement around the Permit-Ready program through early implementation.
    a. **Staff Contact**: Economic Vitality, Development Services
    b. **Staff Feedback**: Economic Vitality and Development Services support in concept.
    c. **Presenter**: Keaton Smith

16. **Build Local Affordable Housing Development Capacity** - Support training, capacity building, pilot programs, and implementation projects for local non-profit and for-profit developers pursuing funding from ADFA housing programs such as HOME and Low-Income Housing Tax Credit. The goal is to increase the number of local developers who have experience utilizing federal housing programs.
    a. **Staff Contact:** Economic Vitality

b. **Staff Feedback:** Support
c. **Presenter:** Keaton Smith

(FOCUS: COMMUNITY ENGAGEMENT / OUTREACH / ADVOCACY)

17. **Proactively Address Student Housing Concerns** – Initiate twice yearly meetings between UA Housing, UA Facilities, and appropriate City departments to discuss housing needs, trends, issues, and potential public-private partnerships. Survey peer college towns – particularly those with growing enrollment - to understand and document various approaches to differentiating between student and non-student rental properties. This would include a review of policy options that reduce the risk of student rental housing becoming concentrated in existing neighborhoods.
    a. **Staff Contact**: Economic Vitality; Task Force Member Nick Thorn to lead this research project, working with Long-Range Planning, Planning Commission, and other stakeholders.
    b. **Staff Feedback**: Support
    c. **Presenter**: Keaton Smith

18. **Leverage Community Volunteer Skill Sets and Support** - Consider launching Skills-Based Volunteering or Time Bank initiative to support existing housing efforts with local volunteers who wish to share expertise in data/systems integration, micro-targeting on social media, marketing, and other needs identified by local housing non-profits. Goal is to leverage interested volunteers in our community to help local non-profits build capacity. For example, individuals with shopper marketing expertise could help housing organizations micro-target first-time homebuyers who may be close to qualifying for the purchase of their first home.
    a. **Staff Contact**: Community Resources
    b. **Staff Feedback**: Support
    c. **Presenter**: Keaton Smith

19. **Expand Local Government Incentive Options by Improving State Policy** – Work with Arkansas Municipal League to amend Act 685 to allow incentivizing housing projects within the Local Economic Development Enhancement Act.
    a. **Staff Contact:** Economic Vitality
    b. **Staff Feedback:** Support
    c. **Presenter:** Keaton Smith

20. **"Home Helpers" Expo (Monthly/Quarterly)** – City, non-profit and/or business sponsored recurring info event to connect those that need homes with those that provide, build, finance, and find homes. This event could include builders, landlords, non-profit organizations, funding agencies, lenders, realtors, insurers, planners, designers, and many others to not only promote their business and products to people who may need them, but to create a direct connection to and dialogue on the topic of housing and the needs of the market. A potential first step would be to convene the Mortgage Bankers Association, Home Builders Association, Realtors Association, Arkansas Renters United, Circles NWA, Habitat for Humanity of Northwest Arkansas, Partners for Better Housing, Community Development NWA, Real Estate Investors NWA, Urban Land Institute NWA, and other relevant stakeholders to plan and organize this effort for maximum positive impact.
    a. **Staff Contact**: Community Resources
    b. **Staff Feedback**: Is this for the public, or is it a forum for stakeholder collaboration? For stakeholders, there is an existing City Connections event being convened by Community Resources and Fayetteville's local affiliate of the Arkansas Community Foundation that includes over two dozen local non-profits who support under-resourced and at-risk community members in various ways. If the event is targeted to the general public, it will likely require the City to allocate budget resources to a non-profit who would organize the event. Answer: the intent is a public-facing event.
    c. **Presenter**: Josh Carson
